CHIEF EXECUTIVE

NEW DELHI **FINANCE COMPANY** **TERMS NEGOTIABLE**

We are a large multi-unit, multi-product group of companies with interests in CONSUMER ELECTRONICS, HOME APPLIANCES, ELECTRONIC COMPONENTS, TRADING, EXPORTS, FINANCIAL SERVICES etc., backed by technological support from world leaders in various product lines. Our manufacturing units located in various states of the country are equipped with the most modern and advanced facilities supported by nearly 50 sales offices and depots throughout the country, handling more than 1500 dealers. Our team of nearly 3000 personnel comprises large numbers of professionals in various disciplines including engineering, management, finance etc.

We have turned in excellent working results in all our activities over the past 7 years and have consistently commanded a major share of the national market in our product segments. We are now poised for a major expansion and diversification in our activities with fresh investments of around Rs. 100 crores in the coming 12 months. These are proposed to be financed through our considerable internal resources as well as public issues and institutional borrowings. Our current group turn over of around Rs. 400 crores is expected to double at the end of 3 years.

In view of our growth plans, the expansion and diversification of our FINANCIAL SERVICES activities has assumed high priority. We are, therefore, looking for an outstanding leader to take overall charge of these activities. The incumbent shall head the Public Limited Company already promoted for these activities and shall report to the Board of Directors comprising of eminent and renowned persons from banking and finance. He shall be expected to chart the directions and course of our highly ambitious plans to convert them into large market shares, business and profits. He shall be responsible for all operations including mobilisation and management of resources, marketing of services, general management, growth and profitability of the Company. He shall be supported by a team of professionals for various activities.

Chartered Accountants/MBAs (Finance) from reputed institutions in India or abroad with over 15 years experience of which atleast 5 years at senior positions in similar functions in reputed Banks/Financial Services Companies would be suitable. Excellent track record of achievements in conceptualising and marketing innovative financial services, aggressive selling and commercial skills and man-management would be decisive factors in selection. Preferred Age Group — around 40 years.

Please apply within 10 days with full biographical details and record of achievements alongwith a recent passport size photograph to :

Box No. AA/343/LO/3
BUSINESS INDIA
59, Regal Building, Connaught Circus, New Delhi-110 001

All applications will be treated in strict confidence.

MARKETING & SALES CONSULTANCY

CHALLENGING OPPORTUNITIES IN INTERNATIONAL TRADE

Our client is a professional multi-unit group with an annual turnover of over Rs. 25 crores. For its proposed diversification in various product lines in Foreign Trade, it requires outstanding persons

EXPORT MANAGERS

The selected candidates shall be dynamic result oriented professionals. Having 5-7 years of thorough experience in similar capacity in reputed export houses in either of the following product lines :

- **Leather Garments & Leather Goods**
- **Shoe uppers & Shoes**
- **Grey & Processed Fabrics & Madeups**
- **Readymade Garments & Knitwear**
- **Woven Carpets and Handicrafts**
- **Herbal Cosmetics**

Each export manager will be totally responsible for settingup, generating and executing new business. He would hold independent charge of his division and run it as a profit centre. Ideal candidates should have thorough knowledge of the product, markets and sourcing -- having good contacts with suppliers and buyers.

INCHARGE FOREIGN OFFICES

In order to provide impetus to its international marketing efforts the group also has ambitious plans to open offices abroad with RBI approval.

We are looking for executives who have proven track record in International Trading and have acquired at least 6 years' experience by working for a reputed organisation. Besides heading the foreign office, the responsibilities shall include generation of business enquiries, their follow up and getting them converted into orders by coordination with the HQ.

Full knowledge of dealing in one or more product lines mentioned above is essential. Experience of having worked in foreign offices, knowledge of foreign language shall be given definite weightage.

FASHION DESIGNERS, PRODUCTION MANAGERS, FASHION CO-ORDINATORS, DOCUMENTATION STAFF & STENOGRAPHERS

may also apply for absorption against future requirements.

The salary and perquisites would compare with the best in the industry and would not be a limiting factor for the right candidates.

Please apply with detailed resume, clearly mentioning your product line along with the post applied for.

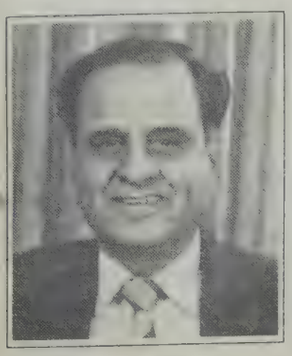
LOOKING FOR A CHANGE???

Our clients — leaders in industries related to chemical, engineering, plastics and pharmaceuticals, are looking for bright candidates in the field of project engineering, field sales, marketing, finance, materials management and HRD. The openings range from level of management trainees upto the position of Divisional Managers and General Managers.

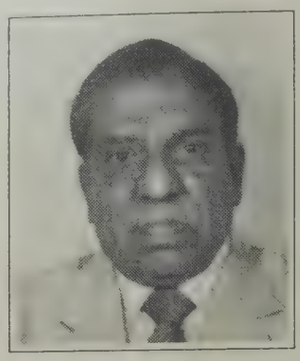


Applications are invited for the above positions from qualified candidates for placement at locations mainly in Bombay, Ahmedabad, Pune and Hyderabad. Remuneration will be handsome and packaged to retain talent.

Please apply in full confidence with complete bio data, remuneration drawn and expected, post and preferred location, within fifteen days to:

M.V. Badami

BA BADAMI ASSOCIATES
Management Consultants



Post Box No. 9842, Bandra, Bombay - 400 050.

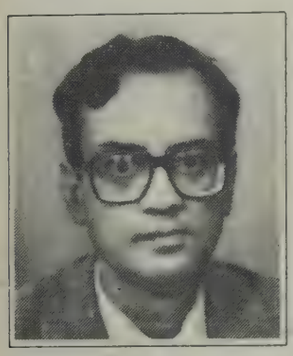
K.V. Krishnamurthy has been appointed chairman of the Indian Institute of Packaging.

H.J. Dave has assumed charge as executive director, operations, of Indian Oil Corporation's refineries and pipelines division.

R. Soundararajan has assumed charge as director, power, of Neyveli Lignite Corporation Ltd.

Ramesh N. Somai has taken over as president of Premier Auto Electric Ltd.

P.R. Raghavan has been promoted as executive director, marketing, of Steel Authority of India Ltd. **C.S. Mohan** has been promoted as executive director, growth division.

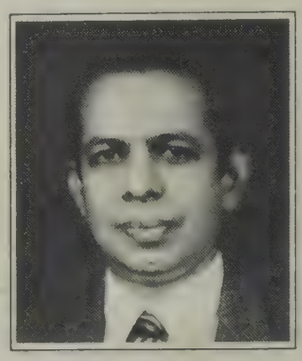


S.K. Gupta has taken over as chairman and managing director of MECON.

Vinayak Bapat has been appointed vice-president, finance, of IGE Ltd.

G. Mullick has taken over as general manager of Indian Oil Corporation's southern region. **N. V. Krishnamohan** has assumed charge as additional general manager, projects, of the refineries and pipelines division.

A. Tankha has taken over as manager, western India, of the Hongkong and Shanghai Banking Corporation.



K.S.B. Sanyal has joined the UNDP as special adviser on private sector development in India.

Tapan Ghosh has joined Khaitan Hostombe Spinels Ltd as president, finance.

Kailash Mehta has taken over as chief executive of HMG Financial Services Company Pvt Ltd.

K.L. Kumar has been made officiating chief executive of Cochin Refineries Ltd.

Ravish Chopra has assumed office as deputy chief executive officer of the Hongkong and Shanghai Banking Corporation in India.

ASSOCIATIONS

Rajesh V. Shah and **K.K. Nohria** have been elected chairman and deputy chairman, respectively, of the Confederation of Enginering Industry, western region.
R.C. Bhargava and **Siddharth Shriram** have been elected chairman and deputy chairman, respectively, northern region.

Lalit Sangtani and **S.K. Choudhury** have been elected president and general secretary, respectively, of the Builders' Association of India.

J. Rakhecha has been elected chairman of the Jute Balers' Association.

Prakash H. Mahtani has been elected vice-president of the Indian Shoe Federation.

The touch of an expert

ama Bijapurkar, *34, is deputy managing director of the Marketing and esearch Group (MARG)*

ama Bijapurkar has mastered the art of rategic thinking. She needed to, being in harge of running Stratedge, the strategy upport division of the market research ompany. Stratedge offers an integrated pproach to formulating business strate- es for its clients considering both the xternal realities of the market place and he clients' internal strengths and priori- es.

With companies getting more market nd customer driven, Bijapurkar feels hat this is a logical extension of market esearch. As a freshly minted MBA from he Indian Institute of Management IIM) Ahmedabad, she stumbled into the ld via advertising, "the glamour end of he business".

Not for women. In 1977, she recalls, here were not many opportunities for omen seeking a career in marketing. In- eed, a number of campus recruiters ad- ed the postscript, "women need not pply." Then Lintas India, the ad agency here she worked as an account execu- ve decided to set up a research division – Pathfinders. This provided Bijapurkar ith "a seat of the pants experience", for, s she says, "the business was new and we ere new to the business". After four ears of such 'schooling', she teamed up ith three colleagues from the IIM Cal- tta to set up an independent market re- earch unit called Mode.

The next six years were devoted to uilding Mode Services into an 'A' league esearch company with "a problem solving orientation". Ironically, as the the third largest in the business, Mode was at that time a direct competitor to Marg. Eventually, Bijapurkar sold her stake in Mode and opted out of what she calls "the entrepreneurial niche".

She then entered into "a marriage of convenience" as research consultant with Hindustan Lever Ltd. "This was like entering a candy shop, every imaginable resource was available," she says. Here Bijapurkar began to work in an unusual area: analysis of competitive advantage. She distinguishes between competitive analysis and competitive intelligence. The latter is tactical in nature, while the former implies trying to understand what makes a competitor's business tick.

It wasn't long before the service business with its wider canvas of different products and client companies began to lure her again. When the MARG offer came along, what attracted her about her old rival was that the company had evolved from its entrepreneurial phase into the institutional building phase.

Starting up an operation. She joined as director with the corporate responsibility of a start-up operation — the new strategy division, Stratedge. Ten months later she was elevated to deputy managing director. This was shortly after a mass exodus from MARG's qualitative research division, Quest. Bijapurkar, however, insists that Quest contributed as much to the total kitty in 1990-91 as last year.

Bijapurkar sees the market research business as that of decision support and not just data supply. She would like to ensure that MARG doesn't forcibly fit its technology to their clients' needs. All this, of course, means that she has little time for other interests. "The line between the office and home is a little blurred," she admits. What she has conscientiously found time for in the past five years is her teaching assignment at her old alma mater — IIM where she is a visiting professor.

More recently, at the annual seminar of the Market Research Society of India, her paper was judged the best. But Bijapurkar shrugs modestly, "I've been lucky because people have been willing to chance me with an open brief." Perhaps they were just comfortable about being in expert hands.

■ NAAZNEEN KARMALI

FRONTRUNNERS

In nine years, **Tarun Saigal**, 32, has risen from the position of a management trainee to that of chief dealer, foreign exchange & investment banking division, Grindlays Bank, Bombay. A commerce graduate from Calcutta University, Saigal had joined the bank in 1982. After one year's training, he became an assistant account manager.

In 1985, Saigal was transferred to Bombay and put in charge of the treasury. Two years later, he helped to set up the treasury in Madras. Now that he has been promoted to the post of a senior dealer, the entire overseas dealing of the bank comes under his purview.

Managing the foreign currency risk of the bank is not easy, he feels, but it is certainly challenging. "One has to take quick decisions as things change by the minute," Saigal says.

— M. S.

Partha Mukherjee, 32, rural market development manager at Colgate Palmolive (India) Limited, is in charge of developing a market for Colgate's products countrywide. His duties include creating a new market as well as enlarging the existing marketshares. "The potential for growth in the rural market is huge — much larger than in the urban market," says he.

A graduate of IIT Kharagpur and IIM Ahmedabad, Mukherjee started his career with Voltas in 1981, from where he moved to Colgate as product manager in 1986. Two years later, he became senior product manager in charge of dentifrice products. His ascent to the present position took place early this year.

Mukherjee also teaches consumer and marketing management at K.C. College of Management Studies, Bombay. Swimming, tennis and football takes care of his spare time.

— S. A.

The beginning

MRF VC PI

f a great finish

MRF's technology - the power behind great finishes, on gruelling race tracks and rally routes. Now, there's yet another great finish by MRF - MRF Vapocure - the 10 minute room temperature curing surface coating that guarantees an impeccable finish for any surface - glass, plastics, wood, ceramics and metals. MRF Vapocure - a great finish in the true spirit of MRF. Brought to you in technical collaboration with Vapocure Ltd. of Australia, MRF Vapocure does not need high temperature baking as in conventional methods presently required for industrial paint finishes. It saves on capital costs and floor space, speeds up production time, uses labour efficiently and has the ability to coat partially and fully assembled items. And what's more it can coat heat sensitive materials which till now couldn't be painted.

MRF does it again

Going beyond tyres

ROHA

Dream turns nightmare

It was meant to be a window to Maharashtra's industrial progress. Twenty five years later, the chemical zone at Roha — the first of its kind in the country — is turning out to be an embarrassment for the state government. The reason: the Roha industrial estate is beset with a host of problems.

As a result, out of the 50 units originally promoted, 17 are on the verge of closure and the remaining healthy companies prefer expanding in other industrial zones. Members of the Roha Industrial Association (RIA) — who claim to have been promised the moon by the State Industrial and Investment Corporation of Maharashtra (SICOM) and the Maharashtra Industrial Development Corporation (MIDC) — are crying foul. Says B.V. Gandhi, RIA's honorary secretary, "We had pinned so much hope on this zone. But we have been badly let down by the government."

Located 150 kms away from Bombay off the Bombay-Goa highway, the industrial area at Roha has been developed by MIDC over 240 hectares of land. The location was ideal: equidistant from Bombay and Pune. In order to attract business houses to this virgin land, SICOM offered a number of incentives like interest-free loans.

Deepak Tolani

Roha Industrial Estate: lack of proper infrastructure and (inset) *: B. V.Gandhi*

The first to bite was Pune-based Sudarshan Chemicals which set up a pigments plant over 84 acres in 1974. Soon others followed: Excel Industries, Colour-Chem, Bombay Dyeing, Caprihans, Dharamsi Morarji, Wellman Industries and Nirlon Limited, among others. In all, these companies have invested about Rs.150 crore into the zone with their collective turnover reaching Rs.250 crore. Yet, they bemoan the lack of proper infrastructure.

Just as it had promised, MIDC has made arrangements for plentiful supply of water, the Kundalika river nearby being an ideal source. But the units are not happy about the power supply position. "There are many power fluctuations and when the voltage drops below 440 volts, we have to switch off many of our machines," says Vasant Rathi, resident director, Sudarshan Chemicals.

MIDC has also slipped in one other area, so very vital for chemical industries: collection of effluent and its disposal. MIDC has laid a grid of underground pipes for collecting effluents treated by the individual companies. The effluent is stored into a common tank and then disposed off into an estuary of the Kundalika river at a point 8.2 kms away.

However, the cast iron pipe carrying effluents over this long stretch has worn out due to age with a new pipeline expected to have come up by June last year. The problem is in the 200 metres length of the pipe which runs under land owned by local politicians in Roha village. These politicians have apparently stalled the implementation of the line. Sources in SICOM say that the pipe will be diverted through another route by arranging a loop around the disputed area.

Another major handicap is lack of proper transport facilities. The condition of roads being what they are, the slow movement of raw materials and finished goods to and from the markets eats into precious production time. "As a result of the transportation bottlenecks, we suffer a lot when a machine breaks down and we have to go for spares," says S.D.Vaidya, general manager at Colour-Chem's Roha works. "Thus, the downtime on my 30-year-old plant at Thane and this 10-year-old plant at Roha is nearly the same."

Solutions exist

The transportation problem could have been sorted out through a proper railway network. But there are only two trains every day on the single track between Roha and Diva, three hours away on the main line. RIA members hope that when the rail line is extended upto Mangalore, there will be much more activity on the network. But when that will come about is anybody's guess.

If transport is difficult, telecommunication is a nightmare. The companies have been crying hoarse for an STD link but to no avail. The only way to reach the outside world is through lightning calls, each of which takes about three hours to materialise.

The RIA members are also peeved about a number of other issues. The major ones among them.

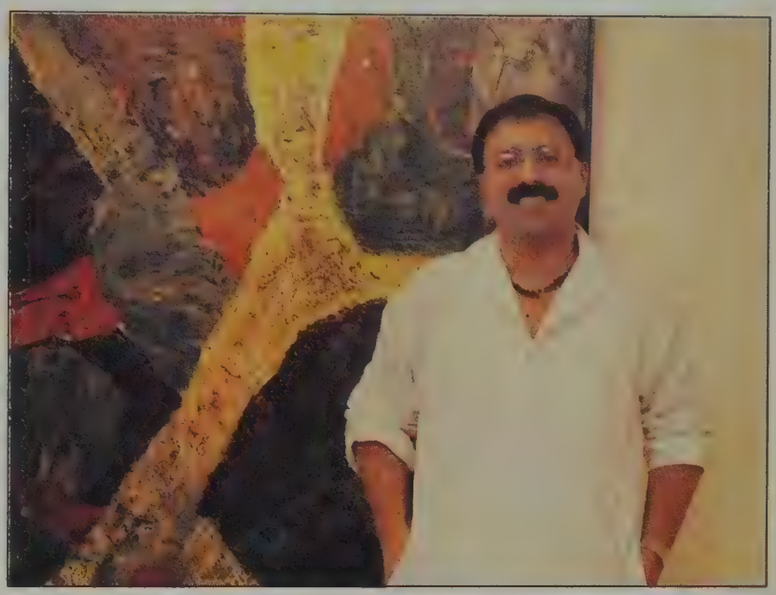
- Difficulty in getting skilled labour.
- Payment of electricity bills at Pen, 50 kms away.
- A fire station without any fire officer.
- The Sanjay Gandhi Hospital lying closed for the last two years due to administration problems.
- A police station manned by only two constables with one of them a trainee on deputation for a year.

It is for these reasons that even though it has about 10 acres of vacant land on hand, Bombay Dyeing does not have any plans of expanding in Roha. Sudarshan Chemicals is setting up its new pigments factory in Mahad. A few others are contemplating shifting to Lote Parashuram, 130 kms away but which boasts of facilities like telex and STD.

Those who have no option but to stay behind are now becoming a bit philosophical about the whole thing. "Let's forget what's happened here and pray that the newer industrial zones do not end up with our kind of problems," says a disgruntled Roha-based industrialist.

But that is no solace for the many others who have invested heavily in this area, only to find that the dream they had hoped to share with the governmental agencies has turned into a nightmare. ■

RAJU BIST



Many successful industrialists turn to politics these days. K.K. Birla and Kamal Morarka are good examples. Joining their ranks is **O.P. Jindal** (of Jindal Strips, who is setting up a steel plant at Daitari). He is running for the Hissar assembly seat in Haryana in the forthcoming elections. The ticket has come from the Haryana Vikas Party floated by Bansi Lal. And by the looks of it he seems to have a good chance of getting elected.

What is a prominent foreign bank doing with Indian classical music? **R.J. Edgar**, chief executive of ANZ Grindlays explains his bank's sponsoring of "Kala Sangam", a three-day programme of Indian classical dance and music, thus: "This is to identify ourselves with India." The bank pays for the artistes' fees (past performers have included Bismillah Khan, Bhimsen Joshi, Kishori Amonkar and Amjad Ali Khan), and the collection from the ticket sales is donated to a charity organisation. Adds Edgar, "We have been in India since 1854 and believe that the heritage of Indian classical music and dance requires to be nurtured."

"It is not my advertising side which brought me to Madras," says **Ola Ronngardh Larsson**, business development manager and a member of the board of Saatchi and Saatchi Laurent Business Communications, Stockholm, Sweden. Then what was he doing in Madras? Talking to motorcycle manufacturer Enfield about the possibility of using the company's rugged Bullet 500 to tour India. Larsson and 10 others would like to travel all over the country around December. "I think India will be a very interesting country to tour," says Larsson, who is on his first visit here. "I want to encounter something new. It will help me in my own work to relate more to the big wide world."

The Bombay-based *Midday*, *The Independent* and *The Illustrated Weekly* will soon carry copies of *Connoisseur*, a four page monthly tabloid devoted to the fine arts delivered free of cost. And readers will have to thank **Ashish Nagpal**, owner of Bombay's Hotel President and one of the biggest art dealers of the country. "I want to spread art awareness and hence I am distributing the bulletin gratis," he says. Nagpal's other plans include the setting up of "Classic Source", an "art-for-investment" shop aimed at the middle class buyer. At this outlet, paintings priced between Rs.1,500 and Rs.7,000 will be sold.

Phiroz Wazifdar, proprietor of Studio Windsor in south Bombay, is emphatic that his paintings are not fakes but "re-creations". The studio sells reproductions of old masters like Rubens, Rembrandt and Botticelli, each costing between Rs.8,000 and Rs.33,000. Today, with a large order bagged from London and a possible Australian deal, the architect turned art enthusiast is sitting pretty. Says Wazifdar, "If we have sold a Mona Lisa in Bombay, we will never sell another Mona Lisa in the same city." The reason: "In this way we are able to control our quality."

How to think positive when there's no power.

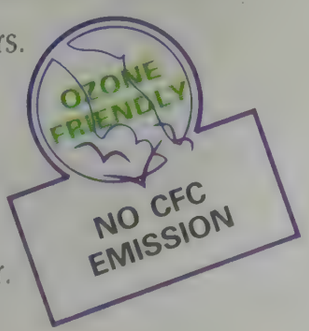
Thermax invites you to switch to steam-operated vapour absorption machines.

Discover the No.1 cooling alternative. A power-saving solution that has silently but swiftly revolutionized energy management — Thermax-Sanyo Vapour Absorption Machines.

The No.1 Power Saver

Our vapour absorption machines aren't powered by scarce, costly power. (A godsend in the worsening energy crunch.) So you can put your power to productive use. And for process and space cooling, use our machines. Thermax has already installed over 23,000 tonnes of steam-operated refrigeration capacity in three years!

The No.1 Cost-efficient Machine



Since our machines operate on waste heat or live steam (even steam at 0.5 kg/cm^2 g will do), they work out to be extremely cost-efficient. In fact, they save 30% energy on every ton of refrigeration capacity. You also get the option of generating steam through a wide variety of inexpensive fuels like bagasse, coal, wood, husk, etc. The benefits of negligible maintenance. (No moving parts). And the relief of noise-free operation.

The No.1 Financial Option

Financially too, you can relax. Your operating costs are lower by 50%. Also 100% depreciation in the first year itself, leaves your cash flow undisturbed.

The No.1 Environment Protector

The Thermax-Sanyo machines are even environment-friendly. They do not emit chlorofluorocarbons (CFC) like conventional compression chillers. A blessing, since India is participating in the worldwide effort to ban all CFC emitting machines to save the ozone layer.

The No.1 Indian Best Seller

These machines are the collaboration of Thermax and Sanyo, Japan. Together, we bring you the only indigenously manufactured and completely factory-tested vapour absorption machine. No wonder, over 60 well-established organisations across India form our clientele. They have discovered that positive thinking was never so powerful.

India's largest refrigeration machine (1400 TR) manufactured by Thermax for Bhilai Steel Plant

"We have the confidence of our capability"

The Jawaharlal Nehru Port Trust (JNPT), set up at Nhava Sheva on the mainland across Bombay's harbour to provide state-of-the-art facilities for bulk and containerised shipping cargo, has yet to take off after two years of operations. The JNPT chairman, Vice-Admiral R.P. Sawhney, talks to Sekhar Seshan of Business India *about the hi-tech port's teething troubles and its prospects*

There don't seem to be many workers around. Why?
Our high level of mechanisation ensures that we have only three people to do the work of 30. The manpower bill at Bombay port accounts for 55 per cent of the revenue earning; in my port, it is only seven per cent.

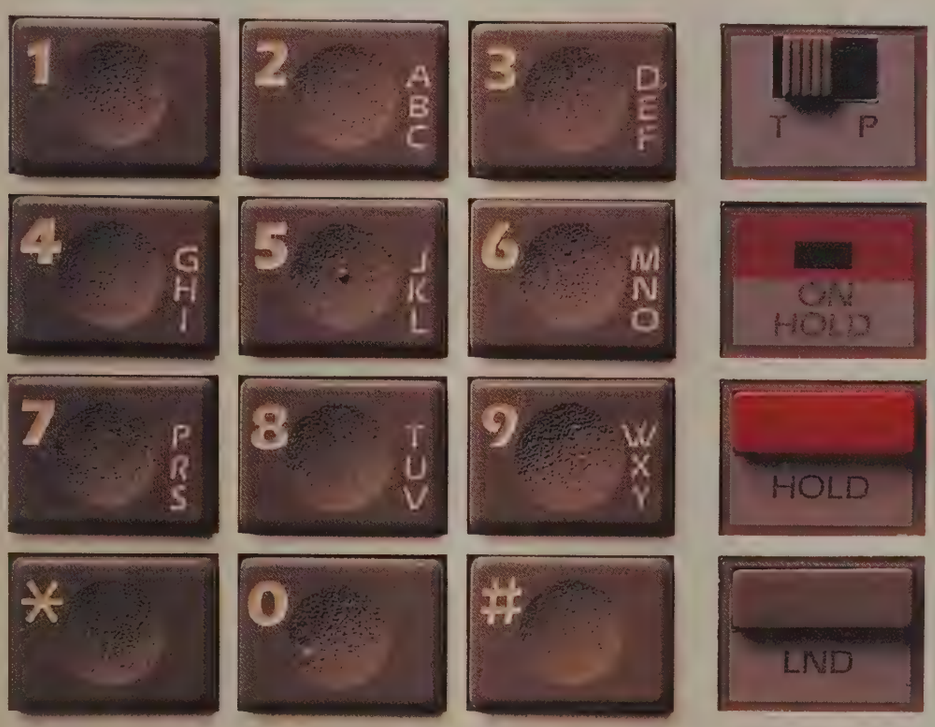
How does this measure up to the government's professed commitment to providing more jobs?
Right now, we have about 1,200 employees. But the potential for indirect employment is phenomenal — the discharge rates from our bulk silos for foodgrains, fertilisers and sulphur can be up to 1,200 tonnes per day, which means 500 trucks being loaded every day and 14 trains every month.

What about the local people affected by the setting up of the port?
We have employed about 500 PAPs (project affected persons). We have also spent Rs.2.6 crore on rehabilitation works. And though the law says that all rehabilitation is to be done by the Maharashtra government and we have only to pay the district administration, we have even given monetary grants to provide technical training to PAPs.

Are you doing anything to protect the environment that has been degraded by construction and other activity?
We have allowed Rs.8.6 crore for the greening of this area over five years. I am also in dialogue with the state government's social forestry department to cultivate mangroves around the port. Of the 2,400 hectares we have, 800 hectares are supposed to be greened by us; our scheme is being monitored by the environment department very closely. This is going to be one of the most beautiful ports in the world!

Will your performance be as beautiful?
In the year which we have just finished (1990-91), our turnover of bulk cargo has been remarkably high. We had a target of 1.1 million tonnes for finished fertilisers and raw materials, but achieved 1.3 million tonnes. This was an improvement of 338 per cent over the previous year — mind you, with only 50 per cent berth occupancy. For our container terminal, unfortunately, we have not done as well: we had set a target of 1.44 million tonnes, but achieved only 600,000 tonnes, with 18 per cent berth occupancy. But even this was 62 per cent more than last year's figure.

Considering the poor performance in 1989-90, improvements over those achievements do not mean much. What does the future look like?
In the first year of operation, the port's capacity itself was not up to the mark. Also, you must realise that targets are based on so many situations, like the import-export policy ruling out foodgrains imports means zero achievement at my bulk terminal. The planned targets for 1992-93 are three million tonnes of bulk and 2.75 million tonnes of container cargo. As per our existing trends, we are reasonably sure of being able to achieve this; or at least have the capacity.



What exactly are you doing to ensure this?
The first thing is, you must have a good commodity to sell. Our container terminal today is performing at a level which is definitely comparable with Colombo, though Singapore is better. We are four times better than Bombay port, though that's not saying much. We will go in for aggressive marketing because now we have the confidence of our capability. Recently, four shipping companies have come to us; I'm expecting another three. One thing is for sure, we will never be accused of not doing our best.

You seem to be facing resistance from middlemen who are wary of shifting from Bombay because they will lose their scope for underhand transactions. How will you tackle this?
This port is absolutely oriented towards the customer. There is no hanky-panky. So, yes, some of the clearing agents are reluctant to come here. My strategy is to get as many lines operating as possible to Europe and the West — once I achieve that, they will have no choice.

How much will the proposed relaxation in the Cabotage law help JNPT?
It will give us a tremendous boost. The law was introduced to protect Indian coastal shipping, which was planned to grow to 26 million tonnes by the end of the Seventh Plan period, and 48 million tonnes under the Eighth Plan. Unfortunately, the growth hasn't been enough. Today, Colombo and Dubai get 35 to 40 per cent of their container traffic from Bombay, Kandla and other Indian ports for trans-shipment. JNPT is capable of handling this, because we have the draught to take bigger ships of up to third-generation container carriers, which no other port on the west coast can. Foreign lines want adequate business, in a time-bound programme. Their ships move like express trains, they want guaranteed schedules and loading rates. We have the capacity to handle 24 containers an hour, and can load or unload a ship in a fraction of the time other ports take. But there is not a single Indian shipping line capable of shifting containers along the coast.

NOVA

CONVERSATION PIECE.

Now that you have your own phone connection, and the option of choosing your own instrument, consider the NOVA range from Natelco.

Ignore, for a moment, the fact that its sleek, streamlined looks can complement any decor.

And concentrate, if you will, on its sophisticated features instead.

Oversize dial buttons easy on the fingers.

A switchable tone and pulse for use on any type of line.

A hold with LED indication. One-button redial facility.

Ringer volume control.

A flap-top directory for frequently dialled numbers.

And a convenient wall-mount facility to boot.

Little wonder, then, that the NOVA range is fast becoming the talk of the town.

Need we say more?

With effect from the issue dated 27 May 1991, Business India has been compelled to revise its cover price from Rs.8 to Rs.10. The subscription rate (in India) has simultaneously been increased to Rs.205. We were compelled to take this decision in view of the constant increases in production costs, particularly the cost of paper.

We hope our readers will bear with us. Business India, of course, continues to offer its readers excellent value for money.

LETTER FROM THE PUBLISHER

In the early hours of Thursday, 9 May, Hotchand Gopaldas Advani passed away suddenly but peacefully. It is always difficult to write about a person close to you, particularly immediately after his death. But for me he was the single most important influence.

If asked to set out, in a few words, what were the values he stood for, I would say integrity, service to society, selflessness, the innate goodness of individuals, caring for individuals and austerity and simplicity. And it was clear to all that he lived by these values.

As a lawyer at the Bar, this sense of values was transparent. He passionately believed in the courts and was always confident that ultimately justice would be done. It was this respect for the judiciary as an institution that kept him working at his profession right till the end.

It was these values and beliefs that also led him into a wide variety of social activities. But the colleges he helped set up were his priority. He believed that knowledge and hard work were the foundations for progress and the upliftment of society. He also fundamentally believed in institutions and not the projection of individuals.

It was this broad social vision that allowed him to interact constantly with every grouping within the Sindhi community. Yet, despite being respected by all sections of the community, by whom he was affectionately referred to as *Dada*, he rose above the communal or parochial.

As a student of history, he would put individuals and events into a larger and more long-term perspective which allowed for an objective view. If you spoke to him in terms of years, he spoke to you in terms of decades. If you spoke of decades, he spoke of lifetimes.

Finally, his view on life was governed by a deep and abiding spirituality.

This is a legacy he has left behind.

My two brothers who are partners and my colleagues share these sentiments.

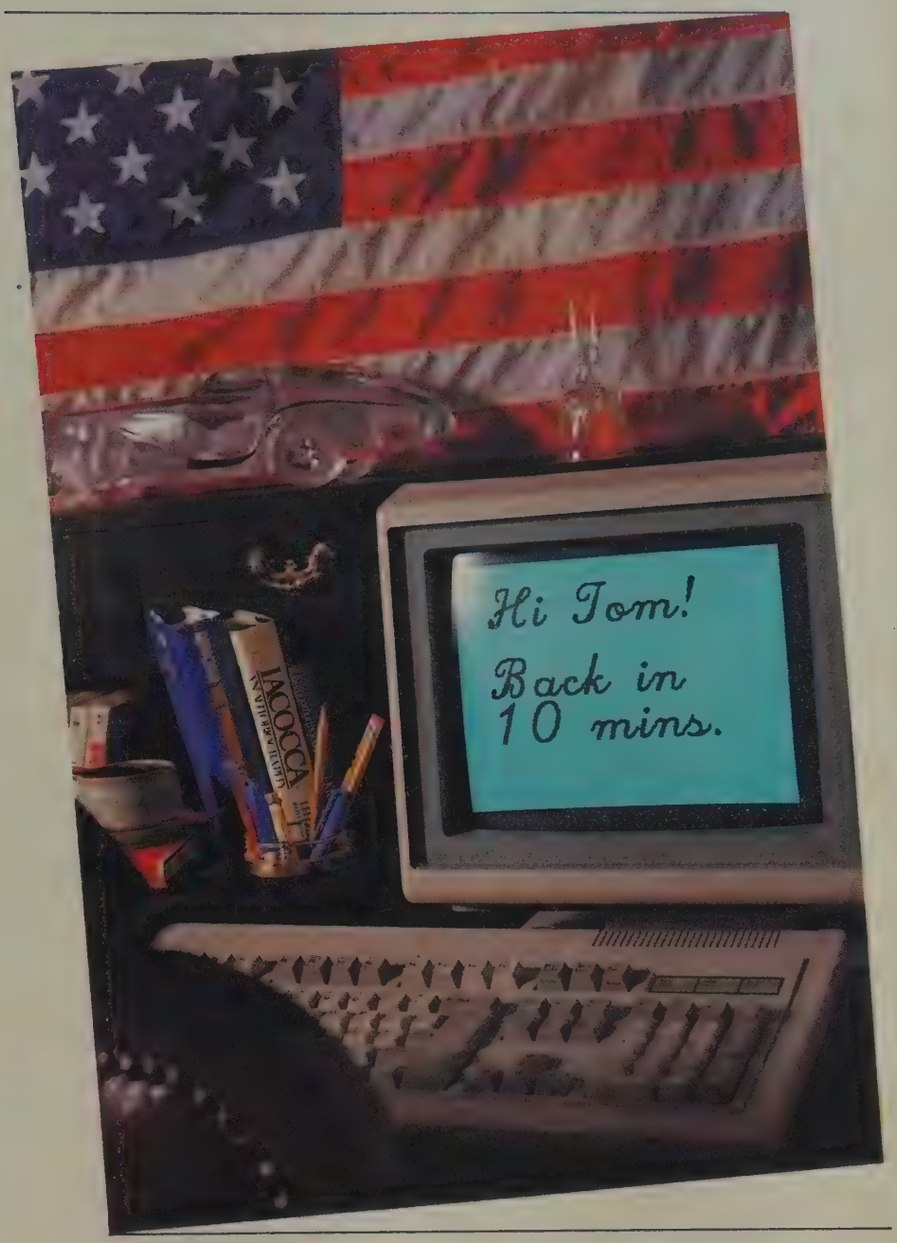
Ashok H. Advani

INTRODUCING VOLTA

DUCTABLE SPLITS

Voltas. The leaders in air conditioning have made yet another major breakthrough. With the new Voltas Ductable Split. ▼ An air conditioner so advanced, it blends beautifully with your plush decor. Without breaking your windows. Without blurring your view. Simply because in the new Voltas Ductable Split, the condensing unit is placed outside the room. While the cool air is directed into the room from multiple indoor units through matching grilles. ▼ Which ensure efficient, uniform air flow. ▼ And better cooling. ▼ No hot spots. No freezing corners. ▼ Just like central air conditioning. And like central air conditioning just turn on the remote switch and all you will hear is pin drop silence. ▼ No vibrations. No rattling. ▼ The Voltas Ductable Split. ▼ An air conditioner so advanced so contemporary — so much a part of your lifestyle.

NOW A SPLIT AIR CONDITIONER SO ADVANCED, IT HAS THE LOOK, FEEL AND SOUND OF CENTRAL AIR CONDITIONING.



VOLTAS

DUCTABLE SPLIT AIR CONDITIONERS THE FINE ART OF CLIMATE CONTROL

• Net tightens

In your editorial on Rep Licences (15 April), a half-baked analysis on the subject shows a lopsided picture of foreign exchange racketeering. It is good that the RBI has finally tied up Rep Licences with bank certification requirements. Non repatriation of export proceeds is a growing menace. RBI should lay down stiff guidelines for quick feedback regarding payment for goods exported within six months so that culprits are nabbed before they exhaust cash compensatory support and other export incentives. Now, with RBI forcing Rep Licence users to obtain a bank certificate to show that export proceeds have been fully repatriated, the net has been tightened.

• Unfair to the readers

Business India has reduced the space allotted for publishing readers' views — 'Letters to the Editor' — to one page. As one of the few national-level magazines which provides an outlet to readers' views, it is sad that you have reduced the space.

V. MOHAN RAO
Warangal

• Not foreign

This refers to 'Competition in store' (Economic Outlook, 18 March). Please note that the institute mentioned in the penultimate paragraph of this article is the National Institute of Fashion Technology, New Delhi and not foreign technology as mentioned therein.

MALINI THADANI
Delhi

• Whither "concern"?

I feel that, unions need to be treated like children (Labour, 18 March). They should be given enough freedom to develop themselves, but at the same time, on certain issues, they must be carefully guided.

With reference to the TISCO model, we must remember that industrial relations in TISCO was inspired by the vision of Jamshetji Tata, who emphasised the need for a "genuine concern for employees" in an organisation. This is a concept missing in most Indian organisations today, creating an atmosphere of labour unrest. The responsibility of indicating the value of "genuine concern of employees", no doubt, lies with the person at the apex of the organisation who must realise that mere gimmicks do not pay.

SHABBIR MERCHANT

• Commendable

It is refreshing to see that the International Management Institute (IMI), Delhi, was set up to cater to the needs of the growing number of professionals who couldn't go in for a two-year MBA course (Institutions, 18 March). Though expansion is limited due to inadequate funding, its international eye-catching debut is commendable.

If an expansion drive is in the offing, establishing an IMI in Bangalore or Madras could be highly beneficial to the managerial force in the south. The present curriculum could also include a few seminars on the psychology and behavioral process of workers and employees amidst changing corporate strategies.

PRIYA GEORGE

• Overcoming the forex shortage

In his article 'The golden solution' (Economy, 4 March) Sudhir Mulji suggests that the government insists on fixing the price for the purchase of foreign exchange, obviously lower than the free-market price. The consequence of this policy is that the economy is permanently short of foreign exchange and liquid assets while, on the other hand, bullion continues to be smuggled into the country.

My suggestion is that first, foreign exchange be purchased from NRIs at 10 per cent over the fixed rate. Second, export earnings be converted at 7 per cent above the fixed rate. Third, exchange released for imports be at 15 per cent above the fixed rate (as in case of the FTS scheme). And finally, bullion be allowed for import by licensed dealers at a premium of 15 to 20 per cent over the international prevailing rate.

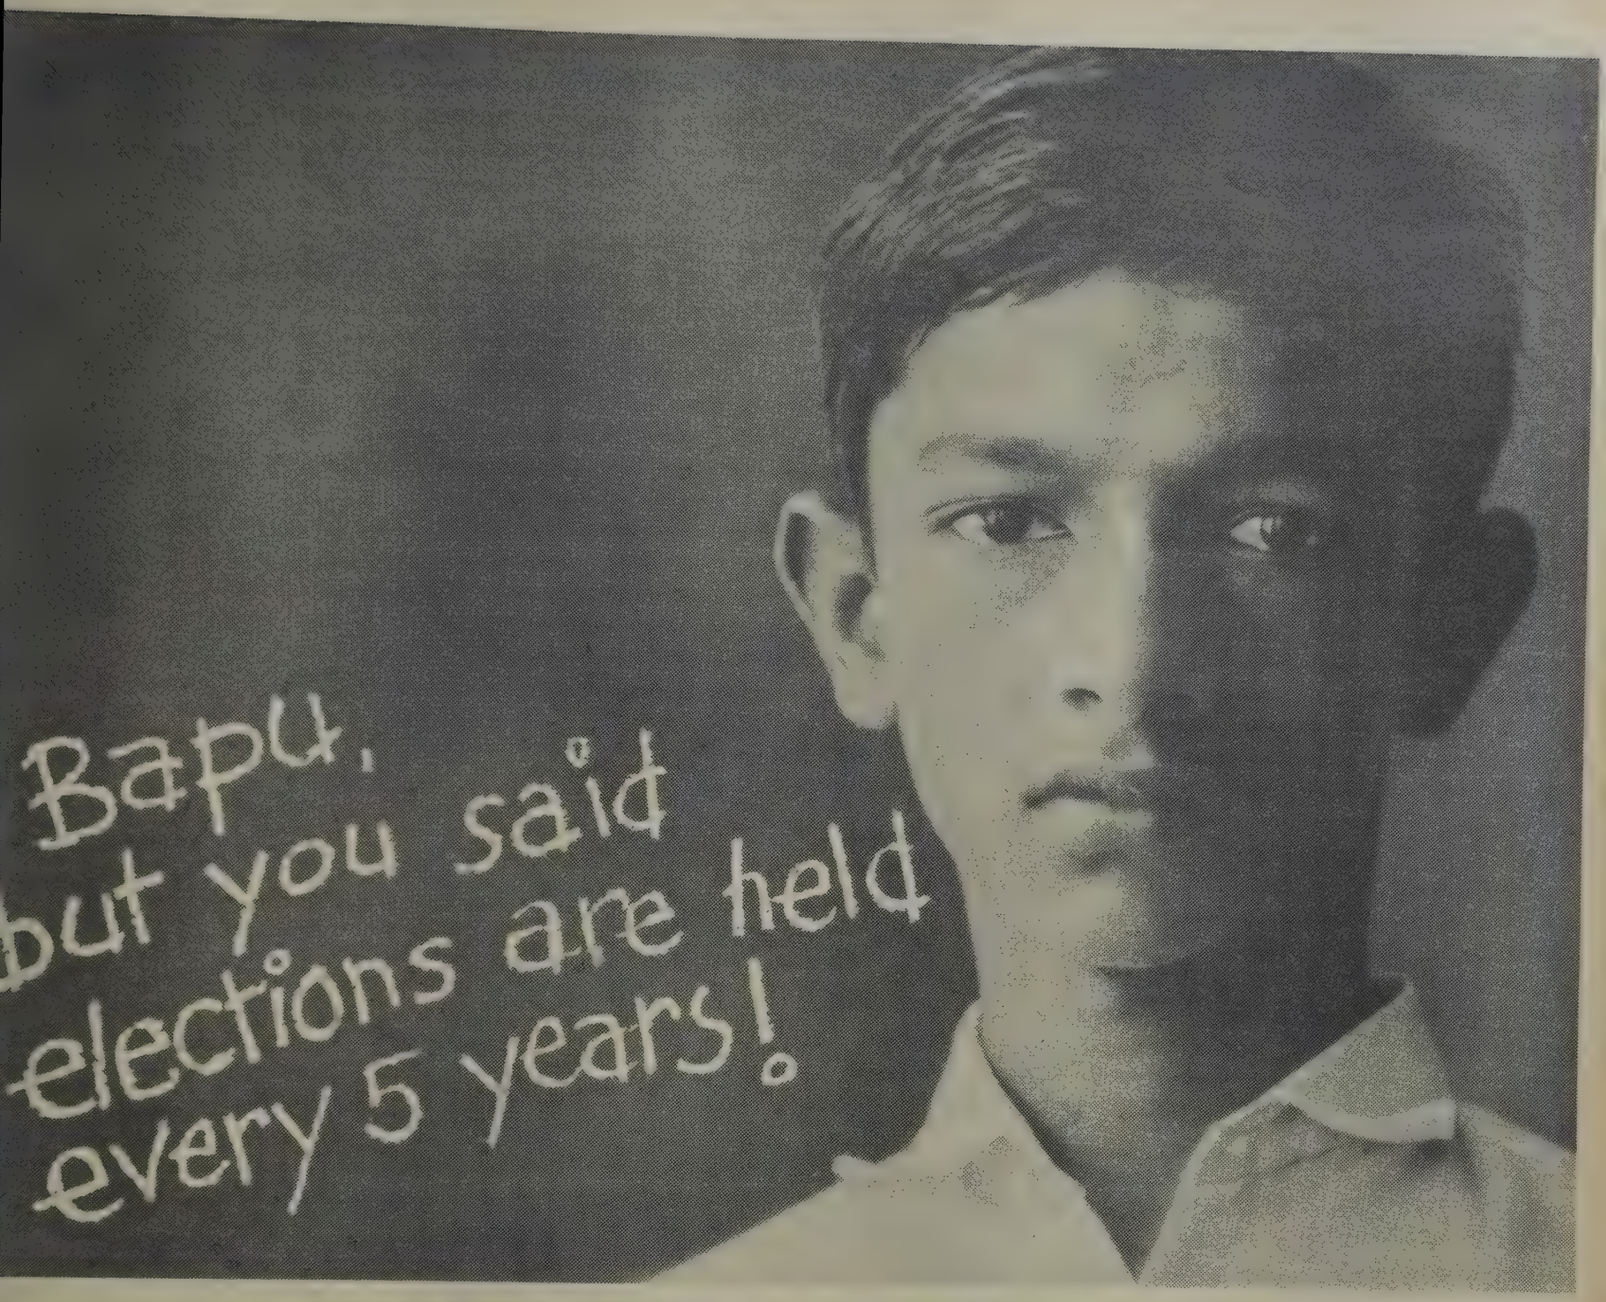
• Better, not bitter

The item 'Shakti's bitter pill' (Listening Post, 7 January) giving details about efforts made by Shakti Sugars Ltd to secure the three ailing sugar mills on lease from the Orissa government is totally incorrect.

Shakti Sugars signed an agreement on 9 January 1991 with the Orissa government to take over on lease the Baramba Co-operative Sugar Industries Ltd at Barambaghaur in Cuttack District, Orissa, on terms advantageous to both. The Baramba Co-operative was incurring losses since its inception because of inefficient management and inadequate supplies of cane.

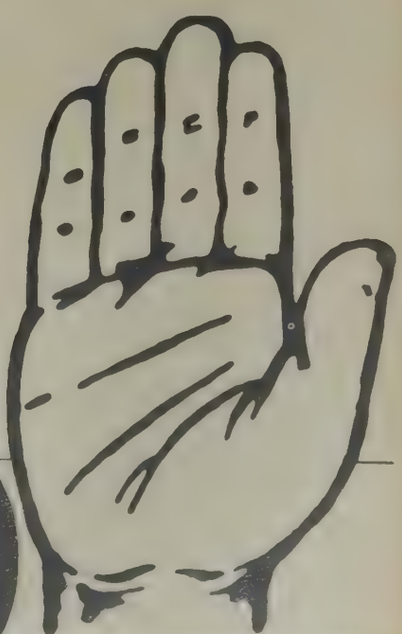
Under the arrangement, the state government will be in a position to repay loans taken by the Baramba Co-operative with interest and also make a profit in the bargain. It is therefore not correct to state that it will be incurring a loss of Rs.9 crore just because it will be getting only Rs.13 crore in 10 years against the total cost of Rs.22 crore in interest and depreciation. Actually, there is a provision in the agreement for scaling down payments in the event of the government getting Rs.22 crore even in seven years through Shakti Sugars managing to increase the quantity of cane crushed in a season substantially in the next three or four years.

What is more, the state government will be assured of a definite income which will increase with the quantity of the cane crushed. The development of cane cultivation in the area will benefit farmers and workers in the factory will have an assured income.



C.S. MAHADEVAN
Madras

Nagesh Rao replies: The item was filed before the signing of the agreement between Shakti Sugars and the Orissa government, by virtue of which it took over the sick Baramba Co-operative Sugar Industries on lease.

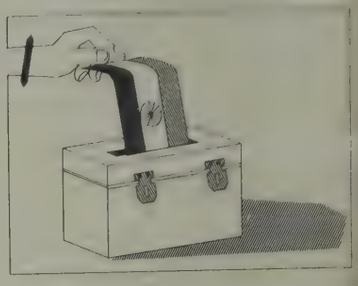


The fact is that Shakti Sugars was keen on, and in fact actively lobbied for, the takeover of all the three sick co-operative sugar mills at Baramba, Nayagarh and Bargarh. The state government did not respond favourably to this; hence the Nayagarh Sugar Mills was given on lease to Dharani Sugars Ltd.

In fact, a section of the ruling party politicians, in tandem with some state government officials, had bypassed the high-level committee set up to finalise the deal with Shakti Sugars. But a rival group of ruling party politicians pointed out to chief minister Biju Patnaik the "liberal terms" on which the sugar mills were being leased out to Shakti Sugars. The CM, in turn, asked the management of Shakti Sugars to come up with fresh proposals. It was then that official sources pointed out that the earlier terms had left out other depreciation costs, interest and state government investments in the Baramba Mill and computed that the state government would be losing about Rs.9 crore.

After all this hue and cry, the present terms, referred to in the letter above, were evolved and the agreement with Shakti Sugars finally signed.

ONLY A STABLE GOVERNMENT
CAN REASSURE THE PEOPLE THE SANCTITY OF
THEIR MANDATE.



VOTE STABILITY

VOTE CONGRESS (I)

Issued by The General Secretary (Incharge Publicity), All India Congress Committee (I) 24, Akbar Road, New Delhi

A passionless election

The common — often hopeful — refrain is that election fever is picking up. In fact, it is still remarkably low, unlike the passionate elections of 1984 and 1989.

No issues and no passion imply an uncertain outcome. Bookmakers who predicted an outright Congress majority just six weeks ago and a demolished BJP have since modified their odds in favour of a hung Parliament and a significant presence for the BJP. This probably reflects the well-known "underdog syndrome" with no basis for either the old or new predictions. In other words, the outcome remains as uncertain as it was six weeks back — except for the minor certainty (in the minds of the press, at least) that the ruling party (the SJP) is irrelevant, a fact which has led the SJP to take a detached view of the elections, knowing that these do not concern it in any way.

All this is a fundamental change from the past. Since at least the early seventies, the Congress has been the party of power brokers. In other words, every vested interest, be he rich industrialist or sugar baron, slumlord or coal mafia don or community priest, all were accommodated in proportion to their power bases. In this way, all the powerful people came together under the Congress banner and swept the elections by exercising their power to gather votes. In this way, the Congress won almost all the elections held so far, the only defeats occurring when the masses were aroused by particularly prominent social issues.

While the masses are cool, the politicians are more aroused than ever. V.P. Singh and the BJP, in particular, are articulating social issues that they hope were buried deep within peoples' psyches and will now surface sufficiently enough to change voting patterns. One result has been an extraordinary circumspection on the part of politicians to the possible sensitivities of the population. For example, we have the situation where a well-known social critic gets lambasted for his views on a particular person — although at the same forum, an equally well-known critic gets away with calling a whole section of the minorities "extraordinarily stupid".

Why is the passion less this time around when communal and caste divides have caused thousands of deaths all over the country over the past five years? The answer is obvious from every opinion poll: these consistently show that the issues that matter most to the silent majority are prices and jobs. Communal and caste divides matter only to politicians and are often issues created by them.

Yet, the economic issues of prices and jobs are dealt with only casually on the campaign trail and in an often contradictory fashion in party manifestoes. It should be obvious to even the casual observer that the campaign continues to be populist and emotional, not for the common man's understanding and certainly not for posterior reckoning.

In other words, all political parties with the exception of the SJP which, being irrelevant, can afford to be honest — thus still persist in trying to sell the fiction that under their rule it will be happiness all the way — the "all-gain-no-pain" situation. It is doubtful if the electorate will buy this line.

The results of this election could well convince politicians that the electorate has undergone a transition from responding to slogans to responding to issues. This may mean a hung Parliament in the short-run but over the long-run, it would be a welcome change. What we need are less passionate elections and more dispassionate decisions.

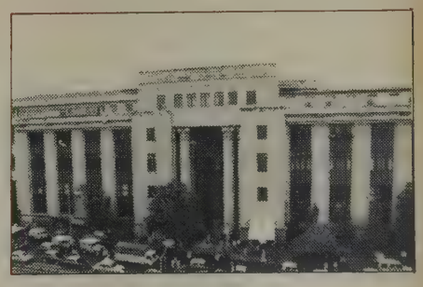
Of dubious behaviour, rainy insects

The Supreme Court judgment on the Larsen & Toubro mega-issue case illustrates two fundamental weaknesses of our capital market system in protecting the public's interest. The first relates to the role of the Controller of Capital Issues (CCI) and the second to the role of the public financial institutions. The CCI speedily approved a Rs.920-crore mega-issue (later reduced to Rs.820 crore) of Larsen and Toubro in 34 days in late 1989. It normally takes at least two months to approve larger issues, and this was the largest yet. Defending its role, the CCI argued in court that its responsibilities do not go beyond ensuring that the approved issue is not so patently impracticable nor so financially risky as to amount to a fraud on the public. This it did by insisting that the utilisation of the funds should be with the approval of the IDBI. Second, and somewhat oddly, it obtained an undertaking from the Reliance group that after receiving the suppliers' credit for Reliance's gas-cracker project (for which the bulk of the L&T funds were raised), they would not raise this amount from the market a second time around.

This undoubtedly negative role of the CCI was one that the Supreme Court had itself supported in 1989 in response to a challenge to the Reliance Petrochemicals Rs.594-crore issue, noting further that "to require that the CCI should probe in-depth into the technical feasibilities and financial soundness

of the proposed projects (for which the funds will be used) or the sufficiency or otherwise of the security offered ... may be to burden him with duties for the discharge of which he is as yet ill-equipped".

Even within its limited purview, the CCI failed on two counts. As Justice Kasliwal observed, the intention of the issue was to siphon an amount of Rs.635 crore out of the issue of Rs.820 crore for funding the turnkey projects of the Reliance group. This, he noted, "was worth noticing by the CCI at the time of granting consent", something it did not do. The second job it did not do but should have was to "see that the capital available for investment at any given time (was) sized and allocated according to the national priorities, and in the changed socio-economic conditions of the country to secure a balanced investment of the country's resources in industry, agriculture and social services." Given the need to look at such complex social objectives along with the noted limitations of an omnibus body like the CCI, it is better, therefore, to have an organisation like the proposed Securities and Exchange Board of India that is dedicated to protecting the public interest to approve public issues.



The public financial institutions equally failed in their role as protectors of public interest. As Justice Ray observed, "the manner in which the financial institutions (UTI, LIC, GIC) sold those 39 lakh equity shares of L&T ... leads to the conclusion that such (a sale) had been made to help the Ambanis to acquire the shares of L&T in a circutious way... All these circumstances taken together clearly spell some doubt whether the transfer of such a huge number of 39 lakh shares by the public financial institutions was for public interest and was made on purely business principles".

Justice Kasliwal is even harsher on the role of BOB Fiscal Services Limited, another public sector financial institution. Noting that Bank of Baroda's chairman, Premjit Singh was closely linked to the house of Ambanis through his son, Harinder Singh, who owns a company whose only business is the texturising of partially oriented yarn of Reliance Industries under a buyback arrangement, he added, "... one (can) draw a legitimate inference that BOB Fiscal was brought into existence merely to act as a conduit and was merely an interloper to affect the transfer of 39 lakh shares of public financial institutions in favour of Ambani group and their satellite firms. It came into existence like a rainy insect and lived out its utility after acting as a conduit..."

It is not difficult to see why the institutions failed. Large financial institutions have enormous power in determining resource allocations. When that power is usurped by politicians, the result is as above. Our government has argued that by centralising financial muscle with public financial institutions and by requiring capital issues approval by a public body, the types of scams that Milken joined with financial institutions to perpetrate in the United States can be avoided.

The truth is the reverse. It is easier for a politician to usurp the authority of a financial institution that is publicly owned because its management is bounden to the government for every aspect of its existence. The independendence of such institutions is a myth. Like a dictatorship, a centralised publicly controlled financial system requires an almost impossible level of integrity at all levels if it is to work. Dilution of government control, and not just partial divestment, is the sensible solution.

The 36.5 per cent industry

RBI's much expected announcement of a hiked incremental Cash Reserve Ratio — the percentage of new time and demand deposits that banks must deposit with the RBI — came 20 days after its credit policy which sought to control liquidity growth through a mix of price controls and credit rationing. The new measure, in contrast, impounds about Rs.2,000 crore of liquidity from the system.

A "bold stroke to curtail demand", indeed, as the RBI would have it. But is the banking system an animal at the chopping block to welcome such bold strokes which mean that for every additional rupee deposit, a bank gets to use only 36.5 paise? Already, unable to compete with other attractive investment avenues, such as equity-linked schemes for which no such ratios apply, the new measure will further damage its health.

Also, the banking industry's incentive to collect deposits will be affected, and it will turn to other avenues over which the RBI has no control.

The effectiveness of the RBI's measure will thus be reduced, given the huge liquidity outside its purview. Nevertheless, the effect of all the RBI's liquidity reduction measures over the past two months — hikes in import cash margins, higher lending rates, lower food credit deposit ratios and, now, the incremental CRR hike — will be less credit for industry.

The RBI could have been more sensible. Given the comfortable food stocks position, could not food credit have been controlled? Instead of being tough only on opposition state governments for exceeding their overdraft limits, why not be equally tough on the Centre — which, all said and done, is the root cause of the problem?

If these questions sound rhetorical, here are two more: can this country's central bank ever act independently of the Central government? And cannot the governor of the Reserve Bank be given constitutional status, and not hold his office at the pleasure of the Central government?

Deifying a mobike

As a part of an advertisement campaign, B.G. Motors of Dharwad authorised dealers for Kinetic Engineering Ltd of Pune, organised a *rath yatra*. But this one had a Luna Magnum bike on the pedestal in place of Lord Jagannath. And the occasion was the launch of this bike in north Karnataka on 5 March 1991.

Around 100 Luna Magnums were sold within a few days after the event in Dharwad and Hubli. The organisers offered a special surprise gift for the purchase of every Luna Magnum.

M. SRINVASA RAO

A smart move

In marketing there is always scope for innovation. Raj Travels did just that. Their cue was in fact a queue. While people wait outside the American Centre, Bombay, for their imigration and visa clearance, Raj Travels' marketing team comes along in a van and distributes a cup of tea or coffee and two biscuits, along with a newspaper (you can choose any paper ranging from *The Times of India* to the *Bombay Samachar*) and their travel brochure, free. No strings attached, yet if you want their assistance you're welcome. Say, for instance you don't know how to fill up the form or you want to know something about New York, you can have the info on the spot. And their marketing strategy is not devoid of civic sense either. The used plastic cups of tea/coffee chucked away by the people standing in the queue, are collected in a bag and carried away. So that the Consulate people have no reason to complain.

According to Lalit Seth, managing director of Raj Travels', not only has the company received excellent feedback, but their client base too has increased since they started visiting the American Centre.

Strategies for success?

"Strategic alliances have truly become all the rage," says Helmut Mauchen, head of Nestlé. Yet in reality they have always been around. Competitors have always acted together with the aim of safeguarding their independence in sectors of research and development (R&D) and have worked closely in the manufacture and making of their products.

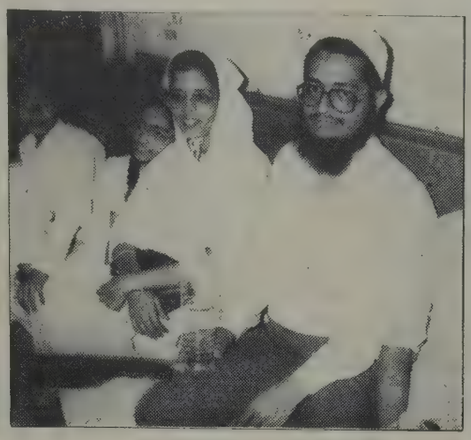
After World War II, for instance, Bosch decided on a definite policy of granting licences to Japanese firms to get a footing in the promising but hard-to-break-into Japanese car market.

Bosch, specialising in fitting out cars, acquired a minority interest in their partners in Japan who had taken up licences. In this way, Bosch kept their competitors in the Far East under control, particularly as regards fuel injection systems.

In the thirties Siemens and AEG for instance, worked together in alliance in Telefunken which they both managed. Later, it became obvious that the possibilities for radio technology were illimitable and both, off their own bat, pushed ahead in this sector — in communications technology for example. Their co-operation had to fall by the wayside.

Globalisation also helped boost strategic alliances. In sectors such as microelectronics, computers, aviation and space industry, the alternatives were either to be promoted to "a global player" or to be forced out of markets in the long-term as R&D costs were increasing rapidly.

A strategic alliance has its advantages if a company is trying to strengthen its position in a specific area. An example of this is the Siemens — IBM co-operation. Last year the two companies tied up to develop the 64-megabyte chip.



Apart from its collaboration with IBM, Siemens has linked up with almost the whole of the *creme de la creme* of the international electronics industry in order to "achieve a leading position in world markets in its core fields of interest", as Karlheinz Kaske, head of Siemens puts it.

But not all strategic alliances are successful. Mauchen of Nestlé is convinced that when one partner has a greater interest in the alliance, things go sour. Co-operation between the American telecom giant AT&T and the computer firm Olivetti came to grief recently on just this point.

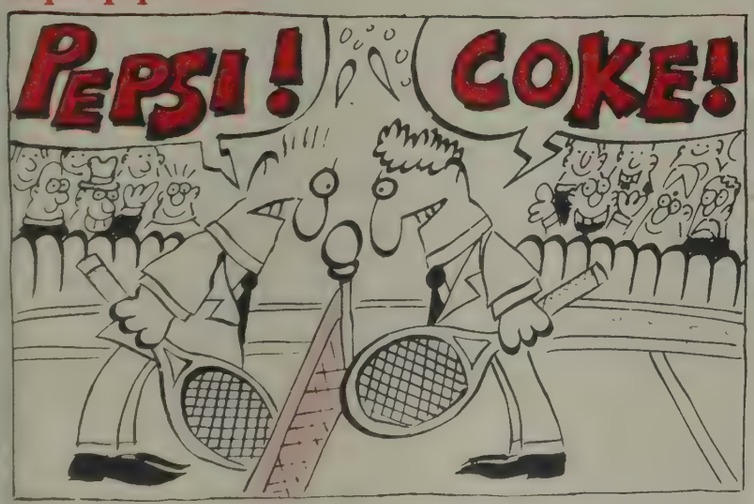
McKinsey, the world famous management consultancy organisation, looked closely at 49 international strategic alliances and found that only 26 were successful for both partners. In the others only one partner profited from the alliance, and 16 ended in total failure.

More than a thirst quencher

Last fortnight, passengers of the Bhagalpur Express and Varanasi Express encountered a pleasant experience at the Victoria Terminus, Bombay. Some 30 employees of the Punjab National Bank, western region, were distributing water in polymer bottles. At one bottle per family, PNB distributed some 3,000 bottles. But one bottle of water could hardly quench the passengers' thirst during the entire journey. Yet, the feeling that somebody just cared won PNB much goodwill. The bottles also had 'Chinta Nivaran Yojana', PNB's latest scheme, printed on them.

The scheme is specifically designed for migrant workers from MP, UP, Bihar and other such places. Under this scheme, the customer has to open two accounts with PNB — one at his place of work and the other at his home town — to ensure risk free and quick money transfers. A real boon for the much harassed workers who fear theft of their life's earnings every time they travel with cash. So who says the customer is a forgotten entity in banks?

Owning responsibility



While companies would give their right arm to win a prospective customer, when it comes to owning responsibility for a faulty product, they wash their hands-off it.

Recently however, two companies had to concede to their customer's demands reluctantly though.

Kelvinator which had supplied a defective fridge to its customer agreed to replace it when the customer threatened to take legal action, after complaint after complaint went unheaded.

In another case, Modi Business Machines Ltd, which initially refused to accept the cancellation of an order and make a refund thereof, finally ended up not only paying a refund of Rs.16,569 but interest of Rs.789 as well.

Pepsi pips cake

Coca Cola is the official drink at all NEC World Youth Cup tennis championships worldwide. But this time as the tournament was being held in India, Coca Cola could not be served — the drink not being available in India.

So the Indian sponsors chose Lehar Pepsi, as their official drink, instead.

Now Pepsi being Coca Cola's rival, a distressed Coca Cola immediately dispatched its representative to India to convince the Indian sponsors not to have Pepsi on the stalls. Any other drink, according to them, would do.

Finally, however, it was Pepsi that was to be the official drink. Parle products, being the only other rival in the Indian market, must have cursed their luck.

RB
Bombay

Thwarting the taxmen

The 100 per cent tax-free benefits offered by Mutual Funds, UTI, LIC, etc, are of little use if you don't have the stipulated amount that makes you entitled to these concessions.

In view of this, LIS, an organisation sponsored by the LIS Educational and Charitable Trust, has started a ten-monthly instalment scheme. Any tax-payer desiring to save and not pay tax on income can join the scheme and contribute a fixed sum every month for ten months. At the end of the ten months your savings are ripe for harvest, and a plough back in 100 per cent tax-free schemes.

There is no interest payable on the amount deposited by the individual, but each contributor gets free lottery tickets worth 10 per cent of the amount contributed every month. If you win the lottery, the money is yours of course.

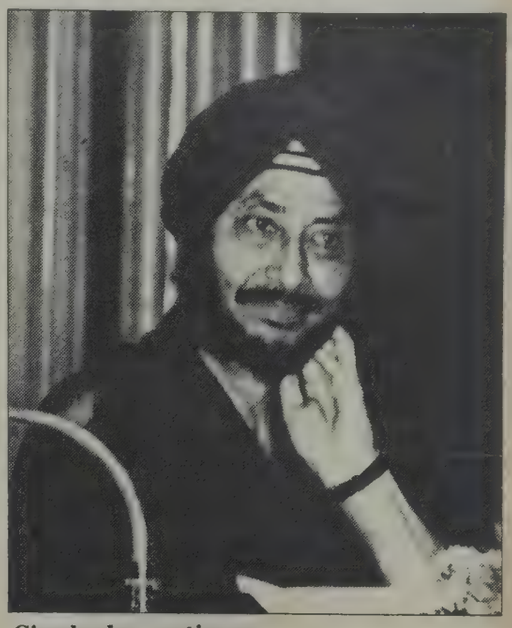
MAA COMMUNICATIONS 1402

Indian Seamless' new role

Indian Seamless Metal Tubes Ltd appears to be reaching for the skies. In a totally unrelated diversification, they have set up a new company at Hosur, Tamil Nadu, for the manufacture of gliders. It is the only private-sector company with a licence to make gliders in India. They plan to make the latest design gliders of composite material, like gloss fibre or carbon fibre and have already tied up with a German company for knowhow. The first glider is expected to roll out early next year. According to a company source, there is an international market for about 2,000 gliders every year.

Jindal's stroke of luck



What started as an experimental project for Sajjan Jindal, joint managing director of Jindal Strips, has turned out to be a money-spinner for the group. Jindal, along with his team of engineers, decided to set up their own small galvanised steel plant using indigenously developed technology. And they have been so successful that a Rs.5-crore plant is already under production at Tarapur producing 3,500 tonnes of galvanised steel a month, since January. Equivalent capacity plants imported by the likes of Ispat have cost Rs.30 crore. A new company called Nalwa International has been set up and it will have a turnover of Rs.100 crore this year.

Pillai's new gameplan

Britannia Industries is currently negotiating with Hershey, the US chocolate giant, to export 30 million pounds of peanut butter annually. The value of the export will be in the region of Rs.100 crore of which 40 per cent will be value-added. The export will start within 18 months of the signing of the deal. Eventually, this peanut butter plant however will become part of Rajan Pillai's Coke operation in India. Pillai is also negotiating with the Mars Chocolate group for a similar kind of deal.

A dream being fulfilled

Bharat Gears may be on the verge of realising every Indian auto component manufacturer's dream: tying up with an international giant as a OEM supplier. The Bombay-based manufacturer is about to clinch a big deal with General Motors (GM) for the supply of transmission gears and crown and pinion sets. G. Shanker, vice-president, exports, at Bharat Gears has already visited the GM headquarters thrice and Raunaq Singh, chairman, once. Recently, a high level GM delegation was down at the Bharat Gears plant at Mumbra on the outskirts of Bombay. The deal should provide a fillip not only to Bharat Gears' exports programme but also to that of the entire Indian auto ancillary industry.

Singh: dream tie-up

Jindal: home-made success

Panic in the markets

The latest information about the IMF-loan conditionalities doing the rounds in the financial markets is the one-shot devaluation of the rupee by early July. The information caused panic in the markets and there was a scramble for forward covers. This naturally pushed the premia levels up. Banks advised clients not to go in for forward to forward rollovers. Many bankers feel that the rupee will slide to Rs.25 per US dollar by the last quarter of 1991.

Is this one of those cases of prophecies being self-fulfilling?

More surprises at ICI

After ICI sold its Crescent House building in Bombay's Ballard Estate to the Ambanis, old-timers at ICI have been finding it difficult to adjust to the downsizing of their offices.

Now there may be yet another surprise in store. This time, it is believed that the very pucca headquarters building of ICI in Calcutta is being put on the block.

Well, well, after all times do change!

SPECIAL 301

The sheriff and the fall guy

Given its privileged status as the largest economy in the world for much of the later part of this century, the United States has not hesitated to flex its economic and political muscle. But if the Russian capitulation to capitalism and the recent taming of Saddam Hussein have increased its political leverage, record budget deficits and declining exports have caused significant economic damage. This has had a twofold effect. Americans feel more vulnerable about their economy now than they have have ever done before. They are also more willing to openly use their political clout for achieving domestic economic objectives.

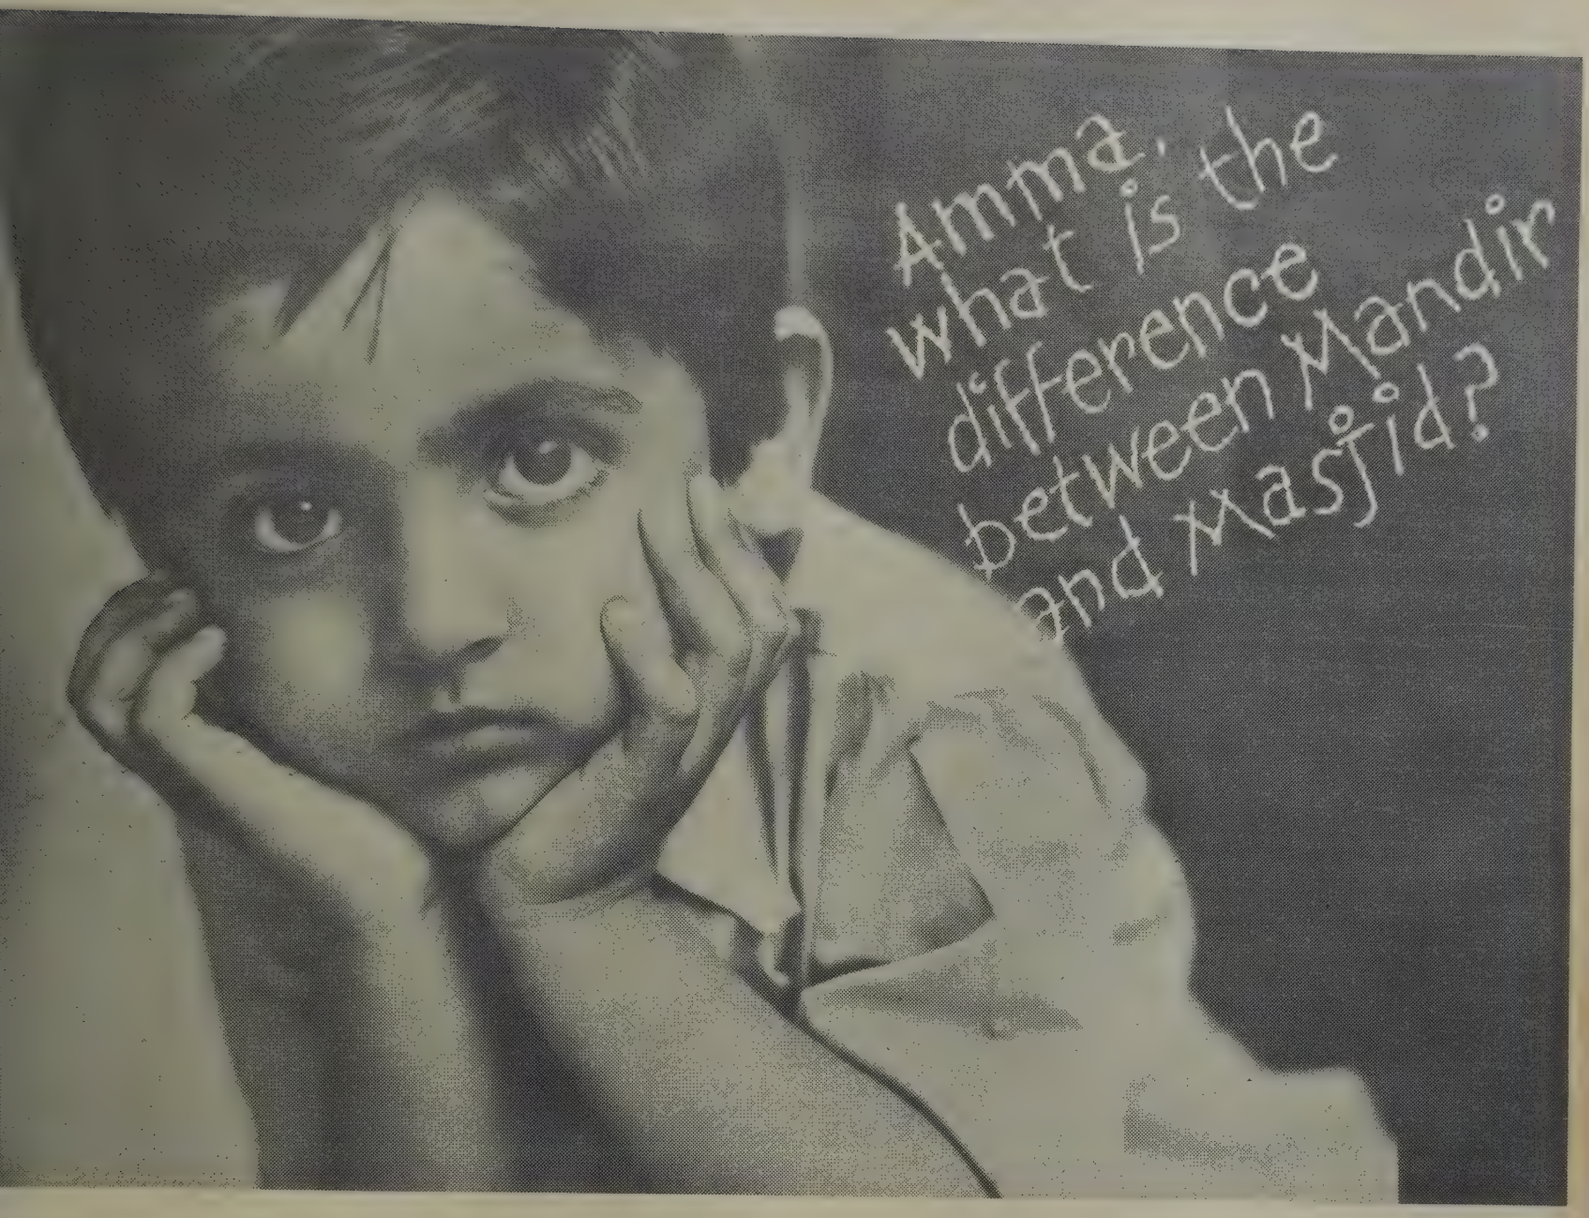
The Trade and Competitiveness Act, passed by the US Senate in 1988, clearly reflects this. It gives the US trade representative two statutory weapons, Super 301 and Special 301, that can be used to unilaterally threaten "unfair" trading partners with retaliation. In theory, this implies the Trade Representative can behave like a frontier town sheriff; dispense justice by shooting from the hip.

Countries like India who have been threatened by these provisions have reacted as if this were what Carla Hills, the present trade representative, had actually done. On the other hand, many Americans have felt that charged to be a US marshall, Hills has been a wimp; more ready to blow a whistle than draw a gun. The truth, as always, lies somewhere in between.

Government inaction. It is true that Hills put India on a Super 301 watchlist on May 25, 1989, citing the government's restrictions on foreign investments and its ban on foreign insurance companies as the main reasons. (see Cover Feature, *Business India*, 12 June, 1989). But the Indian government did absolutely nothing beyond claiming that the issues she had raised were multilateral rather than bilateral. In the event, Hills wound up her probe towards the end of 1990. And the government was complimented on having told the US off. On 26 April this year, Hills got at India again, invoking Special 301.

The reasons for her actions are clear. Super 301 is a provision that attempts to force foreign countries into making changes in trade policy that cannot come about unless their economies undergo radical change. And as Hills found, from her experience with India, even the US cannot really dictate structural economic change to its trading partners. However, Special 301 is an entirely different weapon. In its use, if not in its intent, it is admirably suitable for immediate arm-twisting. By reacting in the manner in which it did in 1989, the Indian government thus invited the present US action.

Given the agreed principle of multilateralism in the General Agreement on Tariffs and Trade, it is clear there is a political reason for India being listed along with Thailand and China in the Special 301 list of countries that inadequately protect American intellectual property rights. The Americans say that India's restrictive laws cost them $126 million annually, hardly enough for special concern. But India is a convenient political non-entity to be flogged for its laws while bigger offenders are exempted. Both Thailand and China have considerable leverage with the US (through ASEAN and the UN Security Council, respectively). Just as Brazil got off the earlier Super 301 list (of countries that restrict American exports) by offering concessions that will not be fully effective until the year 2005, so too, it is argued, will Thailand and China after minor concessions.



But behind the politics, there are real issues. India's patent law that protects processes but not products — and which has been a boon to pharmaceutical exports — hurts technologically developed countries more than developing ones. America has argued that its domestic manufacturers, who face product patent laws at home, are thus unfairly hurt.

Better to talk. Should India talk to the US on this, perhaps using a possible review of its patent laws as a bargaining chip? This would clearly be a sensible course of action. The US is India's largest trading partner, so bilateral dialogue can hardly hurt. Also, to prevent the retaliation that will come in six to nine months if nothing is done — punitive tariffs on our gems and jewellery and cotton textile exports, for example — India needs to correct the US impression that India has done nothing for the protection of intellectual property since the Indian Patents Act was passed in 1970. For example, software is now protected by the 1884 amendment in the Indian Copyright Act and satellite communications and integrated circuits are protected by international conventions to which India is a signatory.

It has long been argued at home that India is not politically in a position to push its own agenda — such as the phasing out of MFA or manpower exports — in bilateral talks with the US. On the other hand, Mexico has shown that an agenda for liberalisation can convince US trade officials and yield significant payoffs in reducing its foreign debt burden. If the US is similarly willing to discuss a wider range of issues than just intellectual property rights, there is absolutely no harm in India talking to it.

Equally important, we should accept that India's international status as a political lightweight is entirely because of its internal economic mess. If the economy were strong and able to export significant quantities to the US, it would be to the Americans' disadvantage to penalise India by imposing stiff duties on Indian imports, a fact well appreciated for Japanese products. Our government should realise this and realise also that so long as its laws continue to choke internal economic development, we are and will remain easy victims.

■ NAVAL B. GHIARA

CONGRESS (I) BELIEVES
THAT ALL RELIGIONS ARE EQUAL.
AND ONLY A STABLE GOVERNMENT CAN
ENSURE PEACE AND HARMONY.

VOTE STABILITY

VOTE CONGRESS (I)

MEGA CORP/B/91

Issued by The General Secretary (Incharge Publicity), All India Congress Committee (I) 24, Akbar Road, New Delhi

First break the rules.

Venture capital is "equity support, to fund new concepts that involve a high risk and, at the same time, have high growth and profit potential."

In the US, venture capital has propelled new ideas to major commercial successes. Some prominent examples: Apple, Lotus, DEC, Federal Express, Domino Pizza.

Venture capital in India

TDICI was the first to bring the concept of venture capital to India. TDICI's venture capital assistance comes in the form of equity and quasi-equity instruments, structured to suit your individual needs.

You retain the first option of buying back TDICI's shares.

A complete business relationship

TDICI takes into account the three most important aspects of a project. Originality. Feasibility. Growth.

To this, TDICI injects venture capital custom-designed for you.

It also places at your disposal other support services which you may require from time to time.

You will find that TDICI is a patient partner. Its involvement long-term and complete, without being demanding or interfering.

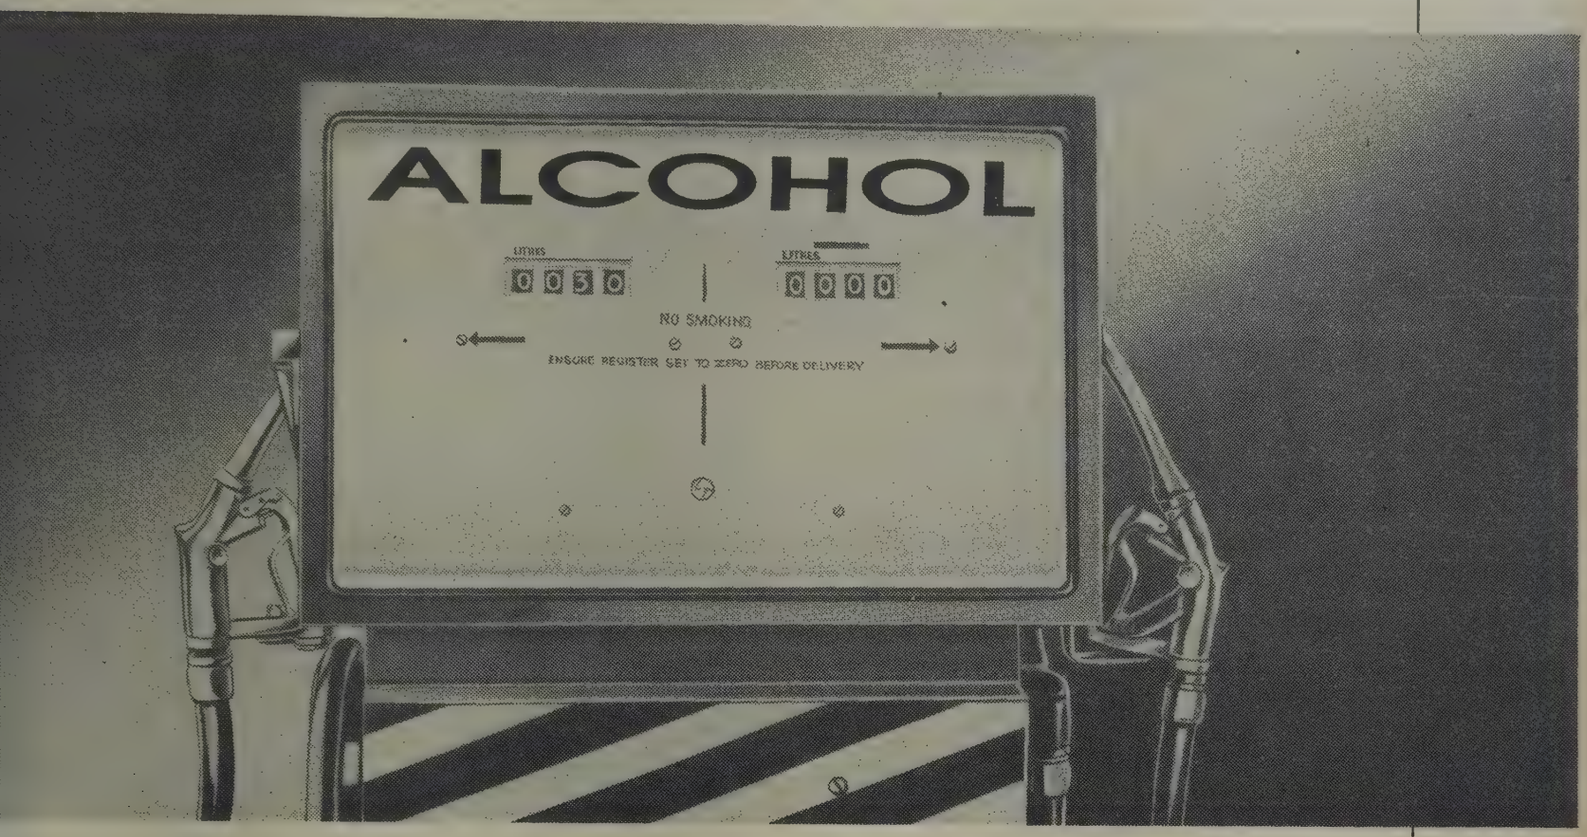
You deal with qualified professionals: people who empathize with you.

The big business idea

Almost all the companies assisted by TDICI have one of two things in common: a spectacular track record or a promising one.

If your project shows originality and growth potential, TDICI puts forward finance in the form of venture capital.

Take for example :



Anamak, the EOU that uses computer aided systems to manufacture garments.

Automac, the people who brought vending machines to India.

Unicorn Biotek, the hybrid seed producers.

Praj Counseltech, the specialists in fermentation

Then talk to TDICI.

and distillation systems.

Computer Garage, India's best known computer maintenance company.

Mastek, the software professionals.

Gum India, a leader in gum confectioneries.

All these people have broken an old rule of small business: don't tread the unknown.

If you too believe that originality is the first step to success, and if you have a business plan, get in touch with TDICI in Bangalore or in Bombay.

You will be glad that you did.

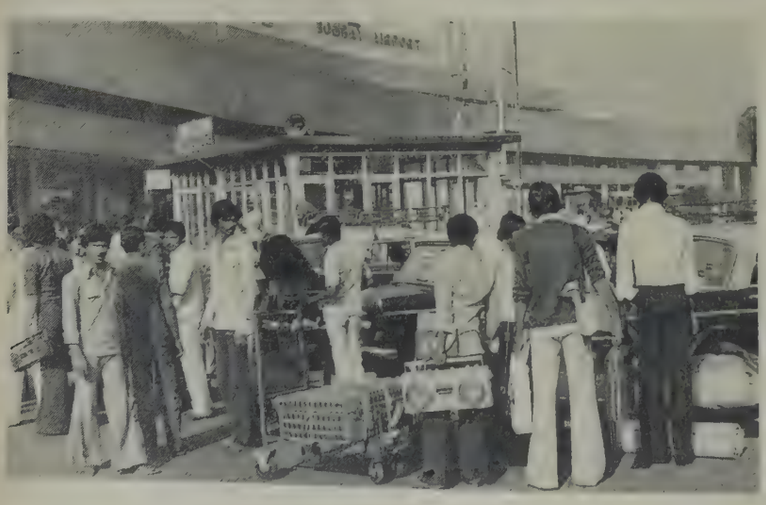
TDICI. Big money for big ideas.

MACOMMUNICATIONS

ECONOMY

Tax collections low



Revenue collections have fallen short of the revised budget estimates by more than Rs.1,000 crore in 1990-91. The shortfall in the collection of corporate taxes has especiallly been heavy. One of the reasons cited for the large gap between the revised estimates and the actual collection was the large amount of refunds made.

$3m. Kuwaiti contract

The Kuwaiti government has awarded a $3 million contract to India for repairing their damaged telephone system. Two hundred technicians from Telecommunication Consultancy India Ltd (TCIL) will go to Kuwait to execute the order. The commerce ministry is of the view that this and other potential contracts will help wipe out India's growing trade deficit.

Bombay Customs net more

The Bombay Customs collectorate, the biggest in the country, has collected a net revenue of Rs. 7,364 crore. The customs department attributes this to the fact that the entire customs house worked on all Saturdays since December 1990 and everyday since 15 March 1991.

Work on Plan shelved

Work on the Eighth Plan has stopped as the planners are awaiting the outcome of the forthcoming election and the finalisation of possible external assistance deals in the near future. As things stand, the planners believe that work on the Eighth Plan might well begin in 1992-93. The interim period is being considered as a plan holiday.

$700 million aid

Major donor countries and the World Bank may lend up to $700 million to India. This will help the country to tackle its BoP crisis.

Germany to give soft loans

Germany has decided to give India concessional loans, following discussions between the two countries. The loans are on soft terms — 0.75 per cent with a repayment period of over 40 years including a grace period of ten years. Concessional aid will be to the tune of DM 685 million (Rs.795 crore).

India under Special 301

The US government has put India on its Special 301 trade hit list for its failure to protect US intellectual property — patents, copyrights and trademarks. The US announcement said that India has been identified because it provided an inadequate level of patent protection, including a very short term of protection and overly broad compulsory licensing provisions. China and Thailand are also on the list.

According to the 1991 national trade estimate report on foreign trade barriers, Indian officials have not responded positively to repeated US proposals for changes in India's patent, trademark and copyright laws.

Export target for handicrafts up

Export of handicrafts including hand-knotted carpets are estimated to have increased by 17.5 per cent to Rs.1,130 crore this year, as against Rs.961 crore in the previous year. Keeping in view this good export performance, the government has fixed the export target for 1991-92 at Rs. 1,440 crore.

CORPORATE

Indo-Rama's EOU

Indo-Rama Synthetics India Ltd is setting up a 100 per cent export oriented unit for the manufacture of cotton and polyester cotton yarn. With an installed capacity of 24,960 spindles, it will cost Rs.34.13 crore. Located at Pithampur in Madhya Pradesh, the unit has already commenced trial production.

The company is also planning to diversify into automobile tyres and tube making.

HNL to expand

Hindustan Newsprint Ltd, a public sector company, has drawn up a Rs.100-crore expansion plan to raise annual newsprint production by March 1994. This will cost the company Rs.70 crore. The company is also setting up a Rs.30-crore recycling plant to utilise waste paper as raw material.

TCS launch postponed

Tata Consultancy Services has postponed the launch of its low cost business management computer software package. Scheduled for release this month, it will now be launched in June for the Indian market and in August for the international market. A 17-member team has worked for 10 months exclusively on the package code named "Product X". TCS has earmarked Rs.1.5 crore for a high-profile launch which had to be postponed due to the general elections later this month.

Ban withdrawn

The Indian government and the Sumitomo-led consortium of five Japanese companies have agreed to settle through arbitration the controversy over the alleged payment of commission to a New Delhi-based company in the ONGC pipes deal. Last month, the government decided to lift the ban on dealings with the Japanese companies involved in the controversy. Official sources say that the decision will come to force only after the government and Sumitomo formally sign the agreement leaving the matter to

bitration.The law ministry is alising the draft agreement d procedures for arbitration.

ew vehicle from &M

ahindra & Mahindra is plan-ng to launch a 2,500 cc petrol-iven Jeep-type vehicle. The trol engine has been devel-ed and designed in-house

th technical help from AVL, Austrian firm. The vehicle ll have both military and civil-n uses.

M&M is also upgrading its ex-ing LCV with a longer chassis d redesigned driver cabin, d plans to launch the 504 ck-up vehicle with Peugeot sistance.

isleri for USSR

sleri Beverages Ltd has gned joint venture agree-ents with three Soviet con-rns for setting up soft drink anufacturing plants in the SSR. As per the agreement, e Soviet partners will produce ums Up, Limca, Citra and Goldspot, all locally bottled in the USSR.

Bisleri, which is a subsidiary of Parle (Exports) Ltd, will set up a plant which will produce 30,000 bottles of beverages an hour.

HLL supplies for Unilever

Hindustan Lever Ltd will source the entire worldwide requirement of Pears soap for Unilever, its UK parent. For this purpose, the company is setting up a new Rs. 19-crore plant at Khamgaon in Maharashtra. It will begin operation in two years. Hindustan Lever is expected to earn export earnings worth between Rs. 10 to 12 crore from this.

IPCL's export to China

With a 30-tonne export consignment to China, Indian Petrochemical Corporation (IPCL) became the first Indian company to export acrylic fibres. The trial order was clinched against competition from Japanese and European firms which presently dominate the 200,000-tonne Chinese market for synthetic fibres. IPCL has plans to export 15,000 tonnes acrylic fibres and yarn per year.

BILT takes Titaghur over

Ballarpur Industries Ltd (BILT) of the Thapar group has signed an MoU with the Orissa government for transfer of assets and liabilities of the Titaghur Paper Mill number three. BILT had earlier accquired the Sewa Paper Mill, also in Orissa. The company plans to invest Rs.150 crore for the acquisition and rehabilitation of these two mills.

INDUSTRY

Foodgrain production up

Foodgrain production for the period 1990-91 is a million tonnes higher than the targeted level of 176 million tonnes This indicates a 3.44 per cent increase over the previous year. The foodgrain target for 1991-92 is estimated at 182.5 million tonnes. Keeping this growth rate in mind, it is hoped that the agricultural sector as a whole will grow at the rate of about 4 per cent in the coming years.

Several drugs banned

The Union ministry of health and family welfare has banned several combination drugs. The reason given is that there is no therapeutic justification for them and that their use is a health hazard. The banned drugs include fixed dose combinations containing more than one antihistamine, liquid oral tonics containing glycerophosphates or other phophates and preperations containing more than 20 per cent alcohol.

Boost to farm goods exports

The commerce ministry is working on major initiatives to give a boost to farm goods exports. The ministry is of the view that value-added exports are preferable to exports in bulk form, to generate a sizeable export surplus. Other areas requiring keen attention are building transportation systems and infrastructural changes.

DoS seminar

The department of steel recently organised a seminar on "coke for private sector pig iron and steel plants" to discuss the requirements and availability of coke for pig iron manufacturers. The projected demand for pig iron for foundaries in the country is likely to be 3 mt by

IT TAKES SOMEONE REALLY BIG TO MAKE A CAPACITOR THIS SMALL.*

The Company that has achieved the largest manufacturing capacity in India.... The Company that offers the widest range in India...now widens its range and sets new standards in miniaturisation.

A new sub-miniature aluminium electrolytic capacitor of only 4 mm dia and 7 mm length,specially designed for use in electronic equipment where space is at a premium.

Manufacturers of hearing aids, micro motors, hand held remote controllers, VCRs/VCPs, personal portable stereo cassette systems, flash guns, automotive electronic equipment will now be able to meet their needs for these capacitors, in India.

Punsumi, as before, is bringing you another high quality, high precision product, developed through its own in-house R&D and Engineering, using the latest technology and the most sophisticated machinery — offering yet another import substitute.

*** Actual size 4 mm dia x 7 mm length** * FOR THE FIRST TIME IN INDIA.

Punsumi

THE LEADING EDGE IN CAPACITOR TECHNOLOGY.

everest/d91/PIL/51

1994-95 and 4 mt by 1999-2000. As against this, the availability projections are 1.7 mt and 1.1 mt, respectively. The corresponding coke requirement to meet the above additional pig iron demand would be 1.3 mt in 1994-95 and 2.9 mt in 1999-2000.

Textile export targets

Textile export targets for 1991-92 have been fixed at Rs.10,085 crore, 37.6 per cent higher than last year's targets.

Of these, cotton textiles constitute Rs.2,775 crore and ready-made garments Rs.5,800 crore.

For wool and woollens, silk textiles, man-made textiles and coir products, the targets fixed are Rs.200 crore, Rs.500 crore, Rs.750 crore, and Rs.60 crore, respectively.

Jute mills for restructuring

Twelve jute mills located in West Bengal have been identified to be restructured for manufacture of diversified jute products for exports. The product range, the break-up of production for each mill, machinery and equipment required, and the investment outlays have also been identified.

The Indian Jute Industry's Research Association, Calcutta, has announced that they will set up a product development wing to help jute mills in identifying items which would have an export thrust and have specifications of internatonal standards.

DoE to push for parks

The DoE is planning to reduce export obligations for firms dealing in the software technology parks. The companies will be required to export 200 per cent of the value of imported equipment instead of the existing 300 per cent. In order to give a push to the non-starter software technology park scheme, DoE has decided to provide a ready infrastructure in order to attract both Indian and foreign firms. The DoE will install earth stations costing around Rs.15 crore in the 15 parks to augment data communication facilities.

Coal reserves for 150 years

The country's gross coal reserves have touched the 192 billion tonne mark following fresh explorations by the Central Coal Mine Planning Institute. The reserve has increased by 16 billion tonnes since January 1989. At the current rate of consumption of 400 mt per annum, the total coal stock is expected to last another 150 years.

LABOUR

Safety awards to workers

Minister of state for labour Ramji Lal Suman gave away the national safety and Vishwakarma awards for 1988 and

1989 to about 160 workers for their outstanding performance in safety consciousness. The minister said that the government is taking a number of steps to improve safety standards and workers' health. These include strengthening of legislation and the system of enforcement including training, research and consultancy.

Golden handshake for BCCL workers

About 197 miners of Bharat Coking Coal Ltd (BCCL) have sought voluntary retirement under Coal India Ltd's golden handshake scheme. According to a company spokesman, the miners have been given provident fund, gratuity, and payment against their leave and remaining years of service. The company has set a target of 5,000 voluntary retirement under the scheme during the current financial year. The golden handshake is intended to do away with surplus workforce, particularly of those workers who are old and infirm.

Time limit extended

The government has extended the time limit of three months for opening an account under the deposit scheme for retiring employees of public sector companies. Those employees who received retirement benefits before January 1991 may open an account till 30 June 1991. Those employees who retired after January 1991 may also open an account within three months of receiving retirement benefits before 30 June 1991.

Court order on dock board

The Orissa High Court has directed the Paradip Port Trust to constitute a dock labour board at the port instead of administering its cargo handling scheme under section 42 (I) (a) of the Major Port Trust Act, 1963. The judgement said a reference to the 1948 Act showed that after a cargo handling scheme was framed, a dock labour board was to be established to administer the same.

Lockout resolved

The month-old lockout at Calcutta Metro Rail Construction has finally been resolved. This is a result of the tripartite discussions between the Hindustan Construction Company (HCC), the HCC Workmen's Union and the Paschim Banga Niram Karmi Union. According to the settlement, the legal aspects of the retrenchment of 139 workmen on in December 1990 will be examined by the labour secretary. HCC has agreed to reemploy the highly skilled/ skilled retrenched workmen in future projects. Considering the importance of the project to the nation, the parties agreed to cooperate with each other and not allow any kind of agitation during the period of construction.

NPCC settlement approved

The labour ministry has approved the National Project Construction Corporation's (NPCC) wage settlement. The agreement covers over 3,000 workmen of the public sector undertaking which is under the ministry of water resources.

However, some of the workers' unions which were bypassed in the negotiations allege that injustice has been done to reinstated, retrenched and terminated workers in the settlement concluded with the NPCC Ltd Employees Federation. These workers were not being given back wages and other legitimate benefits like continuity of service, provident fund and gratuity, the union alleged. A spokesperson of the union, however, admitted that the retrenched workers had accepted the management's offer of compensation.

LANDMARKS

Awarded, to Suresh Krishna, chairman and managing director, Sundram Fasteners, Madras, the prestigeous Sir Jehangir Ghandy Medal for Industrial Peace, by the Jamshetpur-based Xavier Labour Research Institute. His company has a unique record of not having lost a single man-day in 25 years to any labour dispute. Past recipients of the award includes J.R.D. Tata, Russi Modi and P.N. Bhagwati.

Appointed, Vasant Gowariker, the distinguished space scientist, as advisor to the prime minister on science and technology. He was earlier secretary, department of science and technology as also chairman of the Council of Meteorological and Atmospheric Sciences, director, Vikram Sarabhai Space Centre, Trivandrum and visiting professor at the Stanford University, California.

Resigned, Rajan Jetley, former managing director of Air India from his post as the president and chief operating officer of the Singapore-based Britannia Industries Ltd, the holding company of Britannia India Ltd and several other food companies in Asia and New Zealand controlled by Rajan Pillai. Jetley who made the widely publicised transition to Britannia last year has now set up his own aviation and tourism-related consultancy in Singapore called Indo-Pacific Business & Management Consultancy. He will continue to be an advisor to Britannia Industries.

Died, A.H. Bhiwandiwalla, the founder of Great Eastern Shipping Company Ltd, at the age of 78. A leading commodities and sugar trader, he helped found Great Eastern, India's most successful private sector shipping company, in 1948, but later had very little to do with the management.

Died, Gouri Shankar Pandey, 51, senior general manager of IDBI Bombay, in charge of the rehabilitation department. Pandey was in Delhi on 26 April for a board meeting when he was killed in a bomb blast along with two others at the capital's *Palika Bazar.*

Died, P.R. Roy, 54, a leading nuclear scientist, father of plutonium metallurgy in India and director,materials, of the BARC, of a massive heart attack. Roy, a Padma Shri awardee, had played a crucial role in the country's underground peaceful explosion at Pokhran in 1975. He was also the first Indian metallurgist to handle the unique man-made metal plutonium.

SONY

NOW DIAL A SONY VHS

In its new VHS video cassette recorders, Sony offers you a uniquely simple video operating feature: a Dual Mode Shuttle Ring. Instead of pressing different buttons, now all you do is turn Sony's new shuttle ring for a variety of tape transport functions : play, forward or reverse slow, normal, double speed, cue/review, FR picture search... Amazing, isn't it? It's also amazingly simple! That's not all. You will find a lot of the advanced features you have come to expect from Sony in the two VCRs. So, get your hands on one now and find out why people are saying 'Yes' to Sony VHS.

ANIL LAMBA

Lamcon Finance and Management Services, Pune, which trains business executives in finance, has so far trained over 500 executives from TELCO, Air

India, Hindustan Ciba Geigy and other reputed companies. The company usually organises short duration seminars and workshops, but has for the first time started a long duration (three months) training programme in finance. "It is aimed at executives or businessmen who need to know about finance but can't go back to college to learn the fundamentals," says Anil Lamba, Lamcon's director. The response to the course has been very encouraging. Lamcon has launched the course in two batches and still has not been able to accommodate everybody.

PANNA DOSSA

For entrepreneur and textile designer Panna Dossa, winner of the "Woman Of The Year" award constituted by the Indian

Merchants Chambers' Ladies' Wing, life has been a long affair with colours. At 15, she began attending fabric painting classes and while in her early twenties, started selling sarees she had painted. What began as a hobby is today a full-fledged business with a Rs.8 lakh turnover. A remarkable achievement for a woman from an orthodox family, married off at the age of 14 and with little formal education. Dossa's clients have ranged from Air India to Indira Gandhi. Besides running Kalindi, her outlet in Bombay, she designs sarees for well-known mills like Century and Khatau and has held exhibitions in Bangkok and the UK. Her future ambition: "To create a new design everyday."

SANJAY MARIWALA

Kancor Flavours and Extracts Limited, a subsidiary of BOI Limited, has recently tied up

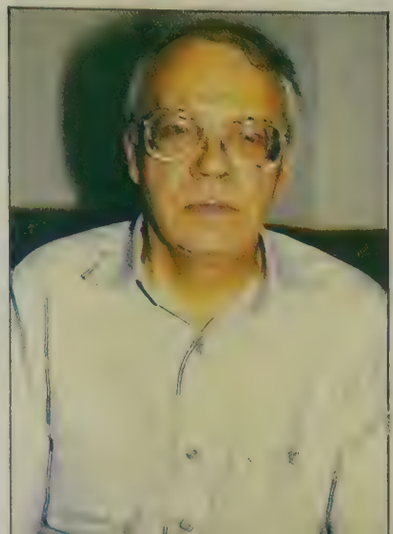
with McCormick Co of the US, a Fortune 500 company. With a 40 per cent equity stake in the new company, McCormick will market all Kancor products. Kancor, in turn, will supply the American company with its requirements of oleoresins, used for imparting flavour to spices. Apart from this, the overseas company will also provide managerial support and technical assistance. In order to meet global requirements, Kancor is building a modern new plant at Angamaly, near Cochin and expanding all its current facilities, at an investment of Rs.3 million. According to managing director Sanjay Mariwala, the company should touch a turnover of Rs.15 crore in 1991-92, most of it through exports.

NIREN SUCHANTI

According to a recent study of the Indian capital market, Pressman Advertising and Marketing Pvt Ltd has handled the largest number of public issues and accounted for 25.4 per cent

of the capital raised during the year. Though Pressman offers a gamut of services like handling public relations, making audio visual films and undertaking market research, it is mainly known for its innovative work in the specialised field of financial advertising. Says director Niren Suchanti, "We handled 30 issues during the last as well as the current year. But since there were a less number of issues this year, we feel we have done better."

AJAY PIRAMAL



Last year, Gujarat Glass Limited, a company manufacturing soda lime and borosilicate glass containers for the pharmaceutical industry merged with Ajay Piramal's Bombay-based Nicholas Lab Ltd, a company primarily into health care and pharmaceutical formulations. As a part of the merger deal, shareholders of Gujarat Glass got one fully paid-up equity share of Nicholas Laboratories for every two of theirs. Last fortnight, Nicholas also declared one bonus share for every one share held in the company. The merger, says Piramal, generated operating managerial synergies. With a capital investment plan of Rs.40 crore including setting up of a full-fledged modern formulation plant, expansion of

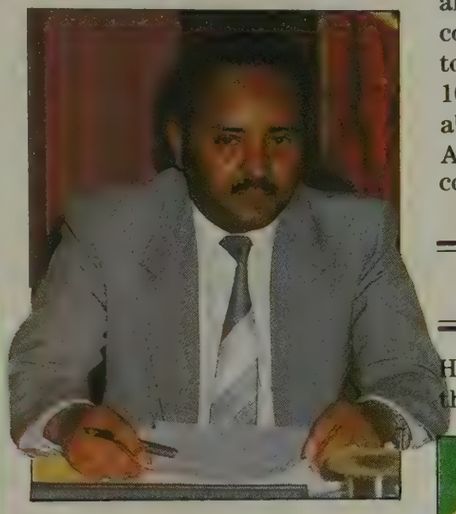
the glass vial manufacturing capacity and future expansion into the transparent bottle manufacturing, Piramal hopes to give good returns to his investors. Says he, "We have the advantages of proven technology and low gestation periods and thus our business risks are low."

CHARLES MAST

The US consul general Charles Mast's visit to the city last month was an affirmation of the growing importance of Pune as an industrial centre. Speaking

on the post-Gulf war implications on Indian business, Mast said, "The Kuwaitis are going to spend $ 60-100 billion over the next decade on restoration work but it is too early to say which countries will bag the orders as civic order has still to be restored." Regarding India's foreign exchange problem, Mast said that India should focus on getting more private foreign capital rather than loans which have to be serviced regularly.

PETER COLE



Founded in 1972, British Executive Services Overeas (BESO) is a charitable organisation which provides advisory services on various industries.

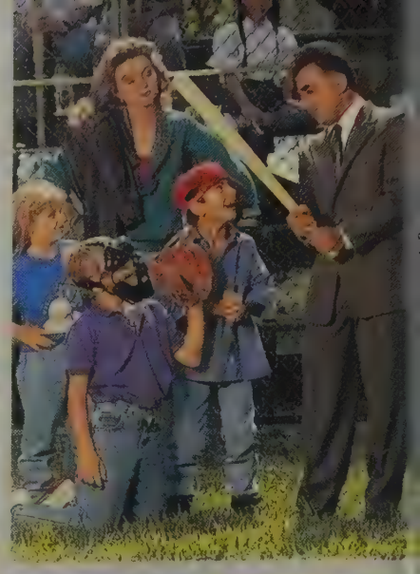
"The objective of the company is to improve managerial skills, increase efficiency and advise on quality control, planning, strategy, and marketing," says Peter Cole, BESO's director (operations) who was in Bombay recently. Based in Britain, the organisation has 2,000 registered volunteers, most of whom are retired professionals from diverse fields. Any organisation around the world requiring advice can write to BESO in response to which a representative will be sent. His travelling expenses are borne by BESO whilst the host only has to look after the local accommodation, food, etc. "Our role is purely advisory. We do not promote British goods and services," emphasises Cole. Since its inception BESO has taken 1,700 assignments from 17 countries.

ZAWDI BIRADU

India's exports to Ethiopia are valued at Rs.12.5 crore. Imports from this African nation, however, are nil. To set the balance right, a four-member delegation recently came from Ethiopia.

Says Zawdi Biradu, the leader of the delegation, "We see a lot of scope for collaborations." The delegation members were keen that Indian companies participate in joint ventures in Ethiopia. Shortage of funds need not be an issue for, according to Biradu, the World Bank, IMF and the EEC nations could provide credit lines.

HUBERT ISSAURAT



The commercial director of SNF Floerger, Hubert Issaurat, was in India to inaugurate the AP-based Polyelectrolyte India Ltd., a joint venture of Ion Exchange (India) Ltd, the well-known water treatment company and SNF Floerger (France), the second largest manufacturer of flocculant polymers, extensively used in process industries for solid-liquid seperation. SNF has a 40 per cent equity in the new company, whose project cost for the first phase is around Rs.1.5 crore. Issaurat is confident that they will be able to meet the current demand of 1000 tonnes and "might even be able to export this polymer to Africa and the neighbouring countries by the year-end."

LUCIANO BENETTON

He has been called the best and the brightest that Italian capitalism has had to offer in the eighties. Starting out in 1965 at the age of 27 in the small northern Italian town of Treviso, Luciano Benetton, helped along by his two brothers and a sister, created a colourful fashion empire that is spread over 80 countries and over 5,000 outlets and recorded sales of over $ 1.2 billion last year. He was in India last week to further consolidate Benetton's already sizeable presence here. Dalton Fashions, its local franchisee, now sells through 20 outlets spread all over the country including smaller cities like Surat and Panaji and had sales of over Rs.40 crore last year. The number of outlets is to be doubled by next year and a new range of clothes for women and children to be introduced. "Though the quality of the products made here need to be improved, the potential for our company is good here," Luciano said in Bombay.

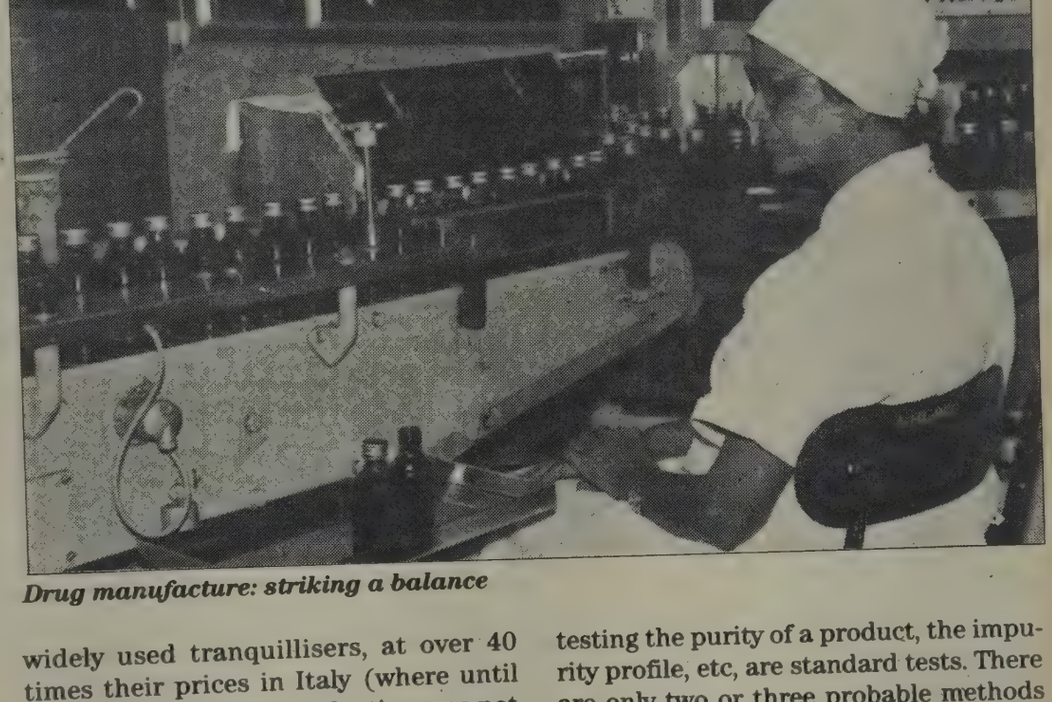
DRUGS AND PHARMACEUTICALS

A problem of protecting patents

The recent US decision to place India under the Special 301 provision of the Omnibus Trade and Competitiveness Act of 1988 has created a sense of foreboding among Indian drugs and pharmaceutical manufacturers. India, along with China and Thailand, had been identified as violators of US intellectual property rights (IPR), the US grievance being particularly strong in the case of pharmaceuticals.



India manufactures a host of drugs, including cephalosporins, cardio vascular, anti-ulcer drugs, etc, which are still under patent in the US. "Our contention is that a balance has to be struck between rewarding creativity and safeguarding public interest, particularly in India, where the level of poverty does not allow high drug prices," says Mahendra Dadha, president of the Indian Drug Manufacturers Association (IDMA).

Pragmatic Act. Until 1970, when the Indian Patents Act came into force, drug prices ruled high. But the Act took an extremely pragmatic view of the issue. In order to provide cheap medicines for the masses, production in the country of essential drugs was not to be prevented, under any circumstance. The result was that India made remarkable progress, particularly in the manufacture of bulk drugs.

For example, in the case of Ibuprofen, an anti-inflammatory drug, Indian manufacturers have been able to effect considerable cost reduction to emerge as world leaders in this drug. Indian consumers have, of course, benefited from this cost reduction. "Today, drug prices in India are among the cheapest in the world. Price control apart, the applied research carried out by several drug companies has ensured that prices are pegged at a low level," says Dadha.

The prevailing opinion is that drug prices will shoot up to the international level, once India accedes to US demands. And this difference in prices is substantial. Thus, Bromocyptine (2.5 mg strength) is priced at Rs.7.45 per tablet, against Rs.25.80 per tablet overseas. In the case of Atenolol (50 mg strength), used against blood pressure, international prices rule at Rs.9.52 per tablet, while the Indian price is Rs.1.53 per tablet. Such examples abound. A significant component of the overseas price goes towards payment of royalty for the patent.

Further, instances of companies holding the patent and prescribing unrealistic prices are not unknown. A recent instance cited is that of Roche Products, a British subsidiary of Hoffman La-Roche AG of Basel, Switzerland. Roche was selling, to the British National Health Service, two patented products used in the formulation of Librium and Valium, both widely used tranquillisers, at over 40 times their prices in Italy (where until very recently, patent production was not available).

Drug manufacture: striking a balance

High cost. Anxiety among Indian manufacturers stems from the fact that no Indian company in the industry works on basic research, primarily due to the high costs involved. Most Indian companies pick up products 'for development' when the foreign company begins marketing this drug. By this time the drug is patented — most US companies apply for patent just prior to carrying out extensive human trials. With the data regarding the composition of the drug, which is available in trade and scientific journals, Indian R&D units arrive at the correct manufacturing processes, and concentrate on improving yields and reducing costs.

Between January 1985 and December 1990, 163 drugs were cleared for sale for the first time in India — the result of applied research by Indian companies. In reality, these manufacturers have no other option because the track record of Indian National Laboratories in the area of basic research has been dismal. Over the last decade only two new drugs — Gungulipid (to reduce cholesterol levels) and Enfenamic Acid (an anti-arthyritic drug) — have been produced. And, according to industry sources, these products have not been successful commercially.

Therefore, Indian manufacturers would like to differentiate between patents for processes, and patents for products. This is because data like method of testing the purity of a product, the impurity profile, etc, are standard tests. There are only two or three probable methods based on the structure of the components. Classifying such 'processes' under 'the undisclosed data' category, it is felt, would jam the brakes on R&D.

"During the period of the patent, drugs will have to be imported at the prices dictated by the patent holders," warns Dadha, who perceives a monopoly of the industry by the multinationals. Current Indian imports of drugs are of the value of Rs.350 crore, against domestic sales of the order of Rs.6,000 crore. This situation could change dramatically. Given the drug price control on the one hand, and the dominance in the production of patented drugs by the multinationals, the fear is that most Indian companies will flounder.

Attendant responsibility. In India, the government, through the drug controller, grants permission for the manufacture of new drugs. "In instances of contravention, the government will also be a guilty

party, with the attendant responsibility of sharing the penalty," says Dadha.

The US has demonstrated that it means business. Ibuprofen has been removed from duty-free entry. This will result in a decline in the export of the drug. But most Indian manufacturers prefer punitive action to a dilution of the patent laws. Over the last few years, Brazil, Mexico, South Korea, Taiwan and Saudi Arabia have changed their patent laws under US pressure. How far should considerations for intellectual property limit the disperal of intellectual and scientific knowledge? And should the Indian consumer, struggling under increasing prices on every front, bear the brunt on this front too? Unfortunately, the answer lies with the powers-that-be who sit not here, but abroad.

■ DHARANI K. PANI

MTNL

Changing attitudes

It seems few have anything complimentary to say about the Mahanagar Telephone Nigam Ltd (MTNL), its telephones, or its personnel. And all it does, under the circumstances, is beat its collective breast and plead *mea culpa*. But now, hopefully, things will change — at least on the personnel front.

The communications behemoth had opted for a well-planned training programme for its 3,563 operators and 397 supervisors in all the special services, to bring about a conscious change in attitudes, skills and productivity. This programme, conducted by the MMC School of Management, Bombay, under the guidance of its founder N.N. Athreya and S.V. Pandit, was started in 1987 and ended in 1990. It was aimed at instilling the "voice with a smile" orientation.

Pandora's box. When the pilot training programme started in 1987, the trainers stumbled onto a regular Pandora's box of problems and constraints. And these were not just at the operators' level, but at the supervisors and management level too. So, what started as a training programme became, in fact, 'action research', with an opportunity for all concerned to air their views.

MMC had video-taped a random sample of subscribers' opinions and this was shown to the operators, as also a video tape of the managements' expectations. In turn, a group of randomised subscribers were taken around the Prabhadevi exchange, to see for themselves how the operators worked and the constraints present. The mutual feedback was unique and of enormous help.

The biggest problem is absenteeism. At any given time, it hovers between 30 to 40 per cent and, during summer vacation and festivals, it goes up to 50 per cent. Special services are not answered for the simple reason that they are unmanned — in this ease 'unwomaned'.

This stems from the policy of hiring only women. But the socio-cultural background from which these ladies come makes heavy demands on their time as wives and mothers. Night shifts too are a problem. Also, only local people are hired and an SSC pass is sufficient. Most come from vernacular medium and are not proficient in English. Worse still they have to put in years of service before being made permanent. Besides all this, MMC's initial study revealed the following:

- The '180' operators book an average of 110 calls a day each; of these 45 to 50 calls are effective. The others do not materialise because the called parties are not available or the lines are faulty.
- A '197' operator takes around 225 calls per day. Though the retrieval has become easier with computerisation, additions or deletions are often not fed in on time. The operator then has to deal with disgruntled subscribers for no fault of hers.
- Each '199' operator answers around 150 calls per day.
- During the Ramzan month, morning alarm has a load of about 3,500 wake-up calls between 3.30 and 4.30 am. Computerised calls are not appreciated by many, who specifically demand a manual wake-up call.

The logistics for training had to be worked out in this context, without disrupting an already fluid picture with high absenteeism. So the operators were taken out in groups of 10 or 12, for two hours a day for five consecutive days. According to Athreya, "Every day, an operator gets at least 100 opportunities to give a good feeling and get a good feeling." So voice modulation, language felicity, standard responses, managing time and stress, understanding rising expectations and translating them into productivity, and yoga exercises were all included in the programme.

How has this programme helped in improving the skills of operators or changing their attitudes. Says B. Sivaramakrishnan, area manager, long distance, "The training has certainly created an awareness for behaviour and attitude changes." He also feels that all sections of MTNL have tried to better their past performance, despite 1989-90 being a "bad" year. There has been a sharp rise in inland booked calls from 7.62 million calls in 1986-87 to 7.81 million calls in 1989-90. The number of 'effective' calls in 1986-87 were only 5.08 million; that went up to 5.75 million in 1989-90.

Says Radha Patil, five years an operator, "In two hours I can attend to over 100 calls, but not all will be effective. We try.

A telephone exchange: trying to deliver the goods

The line may be busy or faulty. I feel good where I help a subscriber." Most agree that the idea of "exercise" is good but not practical. In a seven-and-a-half-hour shift, with a 55-minute break, the work load does not permit any slack.

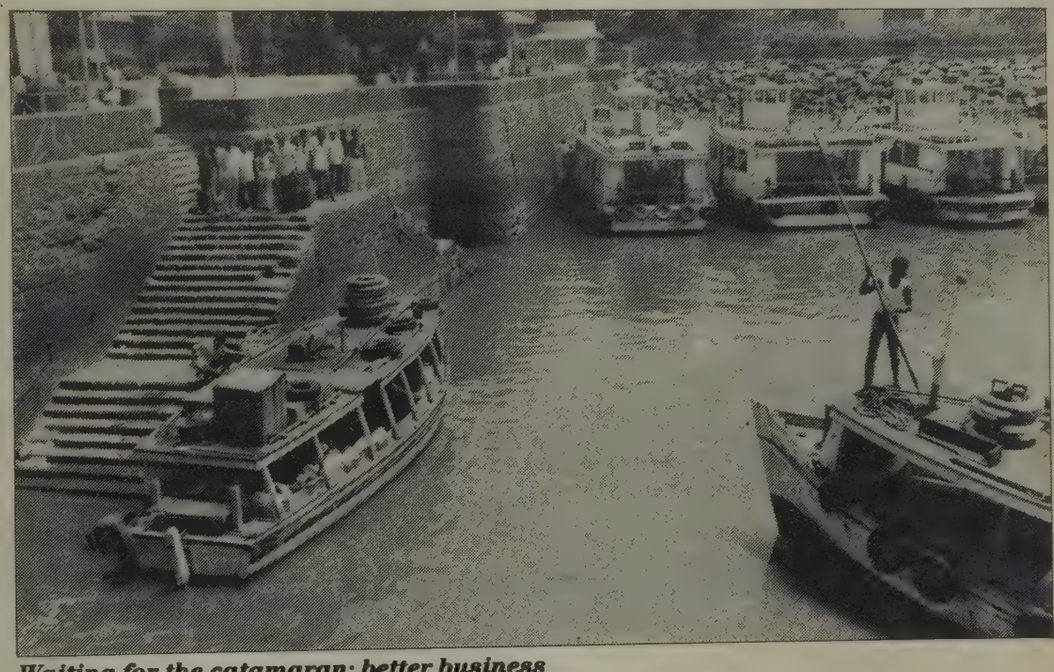
Maximum *gaalis*. Says Kalpana Taldeja, who has put in 26 years of service, "In the test room posting, the work is different. You have to just pick the fault cards and pass them on to the lines people. But we get maximum *gaalis* on 198, as if every line breakdown is our personal fault." Says Ujwala Kotasthane, "We have gained more knowledge but all the ideas cannot be followed. With console lights dancing continuously, 10 signals coming in at a time, we have to mechanically deal with subscribers."

Many felt that supervisors have to be more understanding in granting leave, even half day leave if need be.

Sumati Vayude, 57, senior supervisor on the verge of retirement after 34 years, has some incisive comments, "Operators need to be trained constantly to be tuned to public needs. But this caring and commitment must be for all — supervisors and management too, as well as technical staff. For example, an operator should know about number changes in the shortest possible time. Often, everyone pays lip service to training. Role excellence needs to be ingrained in everyone".

Despite the millstones of antideluvian equipment, quantum leaps in demand and volume of traffic, a militant workforce and perennial resource crunch, MTNL is trying to deliver the goods. This training for change in its human resources is a small step, but a significant one in the right direction.

PADMA RAMNATH



BOMBAY HARBOUR CRUISES

A dream comes true

The Maharashtra Tourism Development Corporation's (MTDC) privatisation efforts, which began in 1989, has borne fruit once again. It has brought together the launch owners operating harbour cruises at the Gateway of India in Bombay. And the limited company they have formed has placed an order for a modern 65-ft catamaran.

A long cherished dream of the MTDC's dynamic chairman-cum-managing director Dev Mehta, the plan had been repeatedly delayed, high investment (Rs.60 lakh) and differences among the launch owners being the main reasons. Envisaged as an important adjunct to the corporation's other tourism promotion and infrastructure development activities, it was both a move to initiate the modernisation of the decades-old harbour cruise fleet as well as to cater to the sophisticated tastes of foreign tourists. A detailed feasibility report prepared by a local auditor had declared the project viabile.

Persistent efforts. Following Mehta's persistent efforts, the Gateway Elephanta Pleasure Tours and Travels Ltd was formed by 90 launch owners last year, as a registered company. The shares held by each member was directly proportional to the number of launches owned by him.

Waiting for the catamaran: better business

The company placed an order for a catamaran with Praga Marine Pvt Ltd of Cochin last October. Delivery of the vessel is expected by mid 1992, says U.M. Panchi, the new company's managing director. A quarter of the estimated Rs.60 lakh cost has been put up by the shareholders while the rest has been advanced by the Maharashtra State Finance Corporation, he added.

The indigenously built new craft incorporates a modern twin-hull fibreglass design which is presently used in the lagoons of Kerala. It will provide luxury cruises within the harbour as well as operate to Elephanta island regularly. Equipped with a fully-stocked bar and a cafeteria, it will have a seating capacity of 100. It will also be available for conferences, parties and local night charters, Panchi said.

The ticket rates for the cruises will be finalised only after the catamaran is delivered but they are expected to be substantially higher than those at present. Deluxe launches charge Rs.40 per head for a round trip to Elephanta as against the ordinary rate of Rs.25. The introduction of this catamaran will mean a significant improvement in the services offering a genuinely luxurious and cleaner alternative to the launches available at present.

As part of the original proposal, the MTDC was supposed to simultaneously order another catamaran and lease it to the new company. A sum of Rs. 50 lakh had also been sanctioned to the corporation by the Central government for this purpose but the decision, it is learned, has been deferred for some time. "We will see the performance of the first vessel and only then go in for the second one," said an MTDC official.

Not enough. The operators expect the catamaran to handle about 10 per cent of the present Elephanta tourist traffic, says Panchi. Currently it is estimated that 1,500 tourists visit Elephanta on a weekday and nearly 4,000 a day on weekends. According to Panchi, the boat will run 250 days a year, leaving out the monsoon months.

Meanwhile, the jetty at Elephanta is being modified to handle this new craft. The work costing Rs.3.2 crore is, according to the MTDC spokesman, expected to be completed by November this year.

The 88 deluxe launches operating the cruises from the Gateway of India are not

fully employed as there are not enough tourists for them. The situation is growing steadily worse with more launches adding to the fleet. The operators are faced with a slow but certain squeeze by the market forces. The introduction of the modern catamaran and the formation of the company, with a lot of organisational and managerial advice from the MTDC, it is hoped, will bring about an improvement in both the capacity utilisation as well as profitability of the business.

BOILERS

Lack of steam

For a 'priority' sector item, the boiler and the boiler manufacturing industries hardly seem to be getting the recognition they deserve. With an approximate turnover of Rs.200 crore in the small and medium sectors and approximately Rs.900 crore in the large sector, the industry is beset with problems both internal and external. And much of this is because of user and general government apathy.

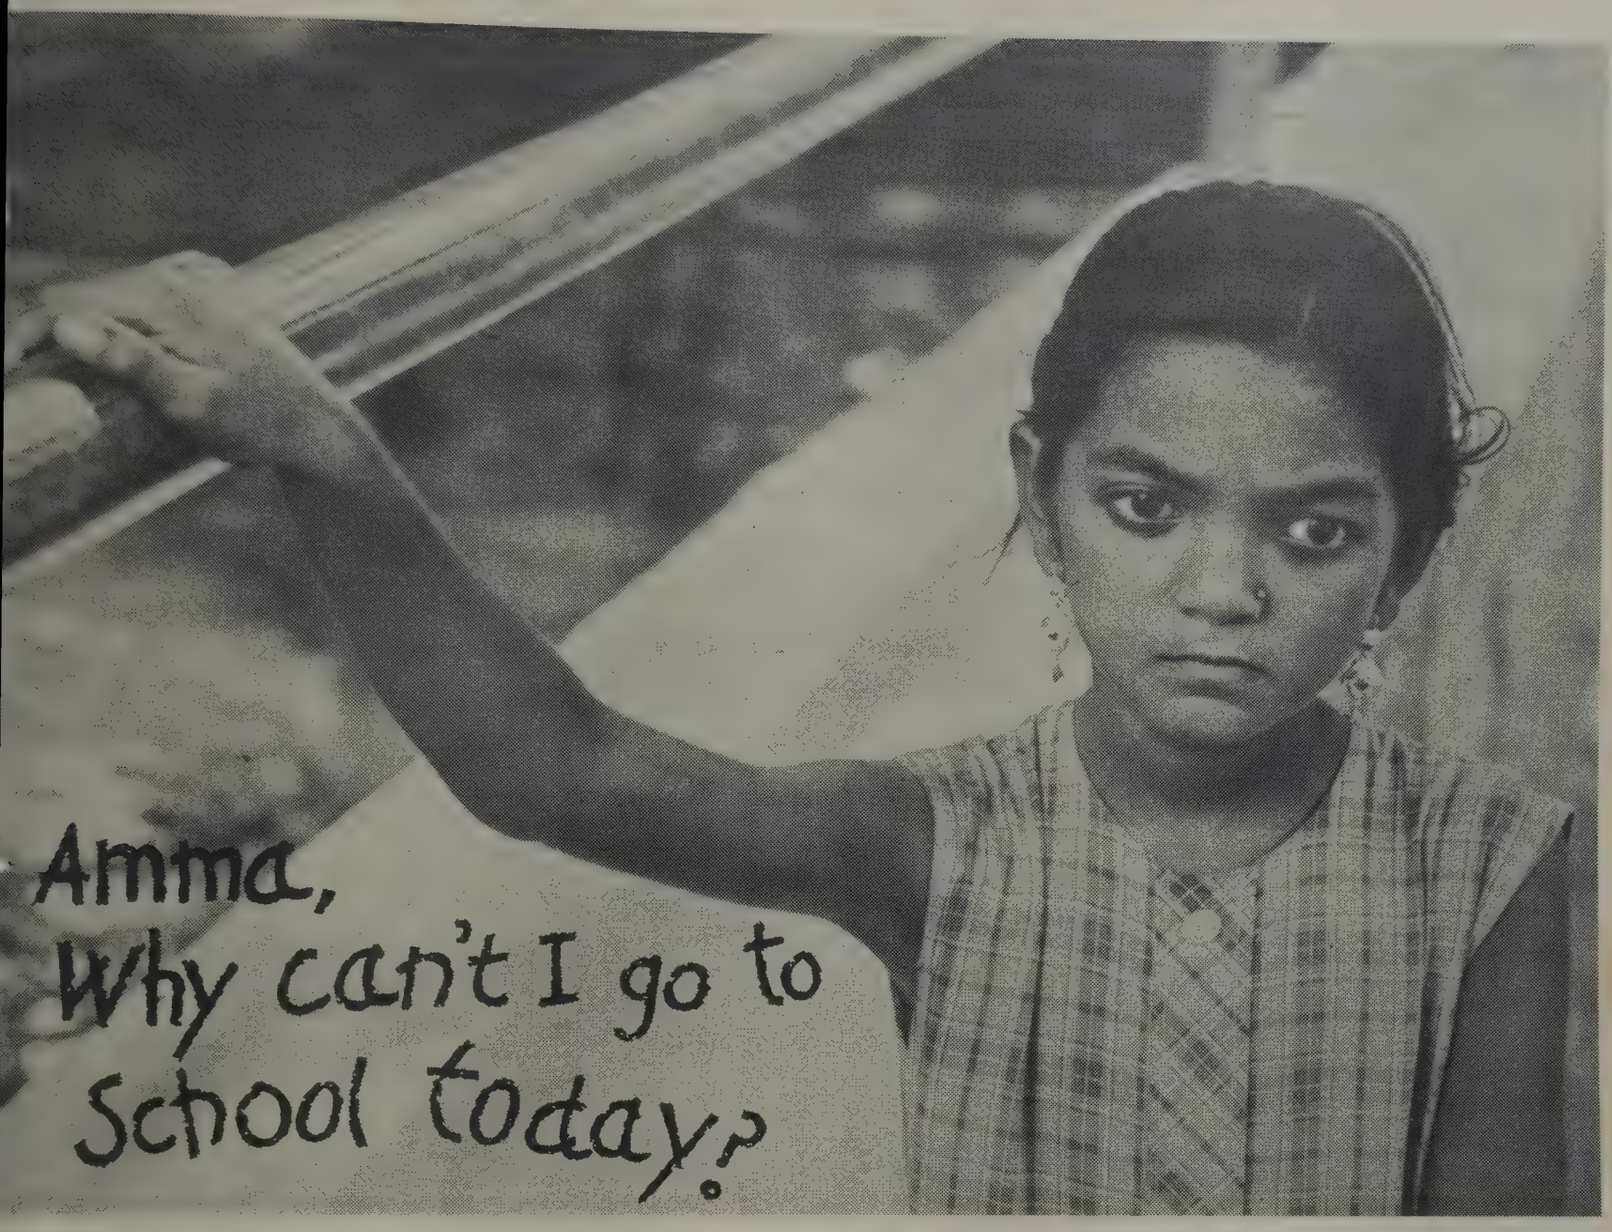
At least three large boiler manufacturers have shut down in the recent past for reasons ranging from low margins to unorganised fly-by-night operators cutting into their markets with cheap, inefficient boilers.

The industrial boiler's primary function is to provide energy in the form of steam — a must for most industries. There are two types of boilers — those with capacities exceeding 22.75 litres, which come under the purview of the Indian Boiler Act 1923, and the 'baby' or exempted boilers with capacity less than 22.75 litres. Generally referred to as non-IBR (Indian Boiler Regulations) boilers, the latter do not come under the purview of the Act. Further, boilers may be oil-fired, coal-fired (not permitted in cities like Bombay), agro-waste fired or electric/electrode boilers.

Oil guzzlers. Approximately half the existing boilers are of the low efficiency oil-fired type. Says Nozer Desai, managing director of Laxmi Boilers and a firm crusader for fuel conservation and efficiency, "The country loses in the order of Rs.640 crore every year due to inefficient boilers." And the reasons are quite obvious. Says H.R. Wankhade, deputy chief inspector of boilers for Maharashtra state, "In terms of efficiency, a new state-of-the-art boiler works at around 88 per cent efficiency compared to an old Lancashire boiler which works at 40 per cent." And there are many boilers of the latter type still in operation.

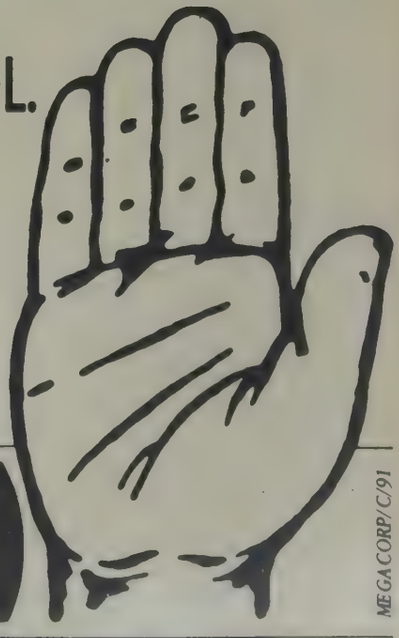
Ironically, even as boiler manufacturers bag export orders and collaborations for state-of-the-art boilers, they are not given much importance locally. Partly represented by the All India Boiler Manufacturers Association (AIBMA), the entire industry congregates only once a year under the auspices of the Central Boiler Board (CBB). At their annual meeting at Calcutta, concluded a short while ago, the issue of efficiency was a major item in the agenda for the first time. But legislation is still to come. Says V.K. Goel, secretary of the CBB, "Efficiency is still a grey area for CBB and discussions are going on to bring it under the board's purview."

According to manufacturers, as of now, at least 2,000 of the approximate 3,500 boilers in the state of Maharashtra need replacing. User apathy and ignorance on the part of the boiler inspector's office are quoted by manufacturers as the main reason behind the regression in the industry. Corruption is said to be rampant, affecting not only the efficiency standards but leading to safety violations and accidents.



Wankhade says that boilers explode due to shortage of water and other factors for which the user is solely to blame. He, however, dismisses corruption and says it is very rare.

Vinod Shah of Vinosha Boilers, on the other hand, insists that every inspector is corrupt. He insists that the boiler inspectors harass both manufacturers and users. Since inspectors have to pass the boiler certificates, they use every opportunity to extort money. Since the certificate has to be obtained before a boiler is delivered, the manufacturer often has no choice but to pay up. "Otherwise our money is stuck for months," says Shah, who sees no way out of the situation. Though Shah manufactures non-IBR boilers, and does not come under the purview of the Act, he too has to get a certificate from the boiler inspector which certifies his boiler as being legally exempted from the IBR. "And there too I am harassed," says a beligerent Shah.



Illegal boilers. Shah puts the number of illegal non-IBR boilers as running into several hundreds; no comment, however, is forthcoming from the inspector's office regarding this. Made in crude workshops and assembled without any technical knowhow, these boilers are potential safety hazards, apart from being highly inefficient. Most accidents involve illegal boilers and are never reported because it would mean closing down the factory. And yet, these boilers continue to be sold and used. Says Shah, "The other day a buyer asked me if I coat my boilers in gold for my price." The same buyer will get a cheap illegal boiler for perhaps one-third the price. The attitude is all that matters. With users claiming that old boilers are

Only half the existing boilers are fuel-efficient

ONLY A STABLE GOVERNMENT CAN ENSURE
SAFETY AND SECURITY FOR PEOPLE

An Electronics Insurance Policy. For The Price Of A Box Of Diskettes.

Yes, it costs so little to insure your valuable electronic equipment. Sophisticated medical equipment like CAT Scanners, ECG and X-ray Machines, Industrial Electronic Instruments and Computers can all be covered by this policy. Against sudden, accidental loss or damage. The policy also offers similar cover to external data media like disks, tapes and printers. And just in case the unforeseen happens, it even covers the extra expenses you have to pay to get your work done. With electronic equipment becoming a high value investment, their protection becomes more important. UI's insurance cover makes it easier, and the premium is affordable. Quite a small price to pay for an assured future. Just get in touch with any of UI's 1120 offices for more details.

ELECTRONIC EQUIPMENT INSURANCE POLICY

"working just fine", it is obvious that there is a dire need to educate them. One organisation, the Petroleum Conservation Research Association (PCRA), of New Delhi, which could have played a major role in this regard is seen as more or less passive; an attitude which has angered manufacturers. "They (PCRA) are hopeless," says a manufacturer. "They do not even bother to educate me, how will they educate the user?"

There is an urgent need for development of non-conventional sources of energy. But even as manufacturers offer several fairly viable options, the pitfalls are several. Oil is preferred because of its convenience. For example, an oil-fired boiler can be switched on and off conveniently, compared to a coal-fired boiler, which works like a railway steam engine. Also, so far, oil is relatively easily available, unlike agro-wastes. And due to high transport costs, agro-wastes would find application only in areas where they are generated. Gas, which is a good pollution-free fuel, is available only in select areas like Surat and Ankleshwar. Says Rusi Engineer, chairman of AIBMA, "We were promised gas in Bombay six years back. The state government was also keen. But nothing has materialised."

The original boiler regulation Act dates back to 1929, when there was no indigenous manufacture and safety was the only issue. And like most other British framed Indian Acts and laws, except for a few modifications, things have not changed much. And as long as nothing is done in this regard, the industry is not likely to do well in the near future.

■ GOVINDRAJ ETHIRAJ with MADHUMITA BOSE in Calcutta

RURAL MARKETING FAIR

A unique experiment

In March this year, students from the marketing association of the Xavier Institute of Management conducted the Third Rural Marketing Fair at Harirajpur, a village about 25 km from Bhubaneswar. The fair dispensed with the traditional method of market research based on questionnaires. Instead, it introduced specially-designed marketing games from which researchers obtained valuable insights into consumer psychology.

The games were built around simple themes: airgun shooting and hoopla for example. There were also others, such as the game of bullockcarts to see if rural consumers are aware of the fact that soaps have different weights. This game involved a race of toy bullock-carts loaded with soaps of different weights. Results showed that rural consumers knew the difference in the weight of soaps well.

Unique effort. S. Govindrajan, the association's co-ordinator, explains that such a fair makes sense. Many companies have realised that there is a vast potential in the rural markets especially for consumer products like toothpastes and detergents. So, 80 per cent of the participants in the fair were consumer product companies.

The marketing fair at Harirajpur was unique because it was held to coincide with the *dola yatra*, a local festival for which around 200,000 people converge. So it had plenty of rural visitors. However, the disadvantage in this was the fact that they were mainly from coastal Orissa; so the conclusions drawn from their behaviour do not reflect the real picture of the rural market.

Nevertheless, top notch companies participate in this fair. This year's participants included Ampro Biscuits, Amul, Asian Paints, HMT, Reckitt & Coleman and Tata Tea. Among the companies that took part in 1990 were Crompton Greaves, Hindustan Lever, ITC and Shaw Wallace. Another welcome addition this year was the the participation of banks and government departments. This year's wide participation is indeed remarkable, for in the first fair, held in 1989, all clients were drawn only from Bhubaneswar!

The benefits of the rural fair are two-fold — companies get authentic, unbiased data about rural markets at a minimal cost. And the members of the marketing association gain valuable experience. They interact with clients, getting first hand experience of market research and a feel of the burgeoning rural market.

So, what are the broad conclusions that can be drawn, now that the fair has been held for three years running? One, the price-quality relationship is clearly understood in the rural areas; they know the higher the price, invariably the better the quality. Two, brand awareness about low involvement products like tea, soaps and toothpastes is becoming very high. And three, the world-of-mouth message still remains powerful.

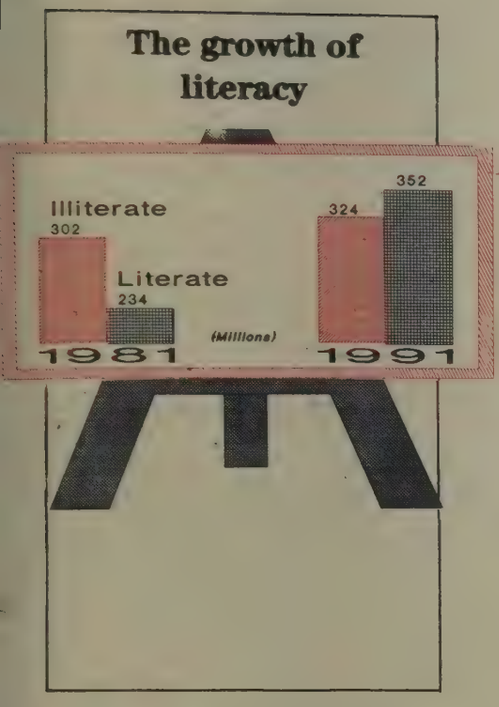
SUNFLOWER

MEETING THE FUTURE

Business India Exhibitions, a division of the Business India Group, publishers of Business India, inside outside and the India magazine has organised several exhibitions over the last few years. These exhibitions have been runaway successes and are highly regarded by the industries they serve, making Business India Exhibitions one of the leading organisers of exhibitions in the country today.

The Business India Group invites you to participate at the following events:



CALENDAR OF EVENTS

1991	EVENTS
2-4 August Bangalore	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside.
23-25 August Madras	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside.
20-22 September New Delhi	**INT.EX** plus **The Furniture & Furnishing Special** brought to you by inside outside.
3-5 October Bangalore	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
24-26 October New Delhi	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
21-24 November Bombay	**INT.EX** an exhibition of building material and interior design products brought to you by inside outside. This is the largest trade fair of its kind.
12-14 December Bombay	**Careers Fair** — Expanding horizons in professional careers brought to you by Business India.
Dates to be announced Bombay	**The Money Show** — A personal investment and financial services exhibition brought to you by Business India.
1992	
Dates to be announced Bombay	**The Motor Show** — an exhibition of automobiles, service equipments, spare parts and accessories for the automobile industry brought to you by Business India.
6-9 February Bombay	**The Furniture & Furnishing Special** The largest exhibition of furniture, furnishing materials and accessories brought to you by inside outside.

The literacy population nexus

The provisional results of the 1991 census indicate very ominous trends. The country's population was enumerated at 844 million, up by 161 million over the 1981 level. This works out to an annual increase of 2.1 per cent over the period, which is not significantly different from the 2.2 per cent growth in the sixties and seventies. This means that in absolute terms the annual increase has gone up from 15 million in 1981 to almost 18 million in 1990. If the current rate of growth continues India will be the most populous nation in the world by the year 2025 AD.

This high growth rate in population belies the efficacy of the various family-planning programmes undertaken and the thousands of crores spent over the years. The Sample Registration Data suggests that during 1980-82 and 1987-89, birth rates declined by almost three points from 33.8 to 31.3. But this decline was partly neutralised by a fall in the death rate from 12.3 to 10.7.

Merit in change

The interesting and relevant aspect of the census is the literacy rate. The 1991 census has modified the practice of computing literacy by including only those above the age of seven as against the total population. There is merit in this change as children are not expected to begin their schooling before the age of seven. Literacy thus computed on an all-India basis was 52.11 per cent. Among the states, Kerala has a literacy rate of just over 90 per cent (one estimate puts it at 100 per cent), followed by Tamil Nadu (63.72 per cent) and Maharashtra (63.05 per cent). The laggards are Bihar (38.54 per cent), Rajasthan (38.81 per cent) and UP (41.71 per cent).

While the national literacy rate is dismal the female literacy rate is a tragedy. It is a mere 39.42 per cent, while the male literacy rate is 63.86 per cent — an increase of 13.28 per cent and 32.50 per cent respectively between the two census periods (1981-91). In absolute terms however the number of female illiterates increased by 16.3 million as against 15.8 million in the case of males.

Illiteracy is one of the major causes of backwardness and the root cause for exploitation. According to an Asian Development Bank study, economic growth and social indicators are co-related. Therefore, it is efficacious to channel resources into education which builds human capital, instead of concentrating on redistributing wealth in the name of egalitarianism and equity.

India's record on spending for education is pathetic. The total expenditure on education in India for the greater part of the period between 1980-81 to 1990-91, as a percentage of gross domestic product (GDP) at current prices, has hovered between 2.8 and 3.8 per cent. It was stagnant at around 3 per cent during the early eighties, but has improved marginally since 1987-88. But as a percentage of total government expenditure, expenditure on education declined from a high of 13 per cent in 1982-83 to 11.1 per cent in 1990-91. In contrast other developing countries like Ghana (25.7 per cent) and Kenya (21.5 per cent) spend much more.

Share of education falls

The share of education in the total plan outlay has declined from 7.9 per cent during the First Plan period to 3.6 per cent in the Seventh Plan. Expenditure on higher education has shown a sharp rise from 9 per cent in the First Plan to around 25 per cent in the Fourth Plan to 12 per cent in the Seventh Plan. But the increase in the share of higher education has been at the expense of primary education whose share fell from 56 per cent in the First Plan to only 29 per cent in the Seventh Plan.

The population growth in the last decade has shown the limitations of family planning. Social indicators clearly show that there exists a strong nexus between literacy rates and population growth. The more literate a population, the slower its growth. Also, it has been found that consumption levels increase with the education level of the chief wage earner.

Clearly greater emphasis will have to be given to primary education in the backward areas of the country if the government is serious about developing its human resources.

ASPI CONTRACTOR

■

...THEY'RE NOW GAINING CURRENCY ABROAD.

Two years ago, as part of its diversification programme, NTPC started its consultancy wing.

Taking advantage of its considerable experience in the generation and transmission of electricity.

Today, it is the leading consultancy organisation in the country's power sector.

Adding to its growing reputation abroad, by securing some very enviable assignments. Including a very recent one in Dubai.

And has orders totalling over Rs. 50 crore.

All this, on top of another record-breaking performance in 1990-91.

A net profit of Rs. 605 crore. The highest by any public sector undertaking outside the oil sector.

The generation of 46,879 million units of electricity, registering an increase of nearly 15% over the previous year.

The addition of 2,213 cct kms to the EHV transmission network, taking the total to over 15,000 cct kms.

The aggregate generation of over 25% of the total electricity generated by thermal power units throughout the country.

And the addition of 312 MW, taking the total installed capacity to 10,125 MW — in just 15 years.

Work anyone can be proud of.

Even those who don't earn foreign currency.

In the last decade (1981 to 1990), production of refrigerators increased four-fold to an estimated 1,120,000 per annum. The industry has been growing at an average rate of between 10 to 13 per cent per annum.

The major refrigerator manufacturers are Kelvinator, Godrej, Voltas and Allwyn. Kelvinator and Godrej control 82 per cent of the market. With the entry of Videocon, the sales war is going to hot up further.

Wholesale price index. The all commodities index increased by 0.68 per cent during the month under review. In primary articles there was a sharp increase of 12.1 per cent in the price index of fibres. In manufactured products, edible oils and metal products were up 2.9 per cent and 3.8 per cent respectively.

(1981-82 = 100)

	6 Apr '91	9 Apr '91	7 Apr '90	% change over month	% change over year
All commodities	191.9	190.6	172.2	0.68	11.44
Primary articles	197.5	196.2	168.8	0.66	17.00
Manufactured products	189.3	188.1	175.5	0.63	7.86

Consumer price index. The consumer price index for industrial workers which has risen continuously for the past 12 months seems to have stabilised in February 1991 at 202. The index for certain non-manual workers was also steady during this period.

	Feb '91	Jan '91	Feb '90	% change over month	% change over year
Industrial workers (1982 = 100)	202	202	175	—	15.4
Urban non-manual workers (1984-85 = 100)	169	169	145	—	14.96

Bullion prices and stockmarket index. The price of gold was up by Rs.184 (5.2 per cent) during the month under review. Silver was up 3.58 per cent. Due to institutional support the BSE index increased by 4.35 per cent.

	3 May '91	5 Apr '91	3 May '90	% change over month	% change over year
Gold (Bombay)	3,712	3,528	3,510	5.21	5.75

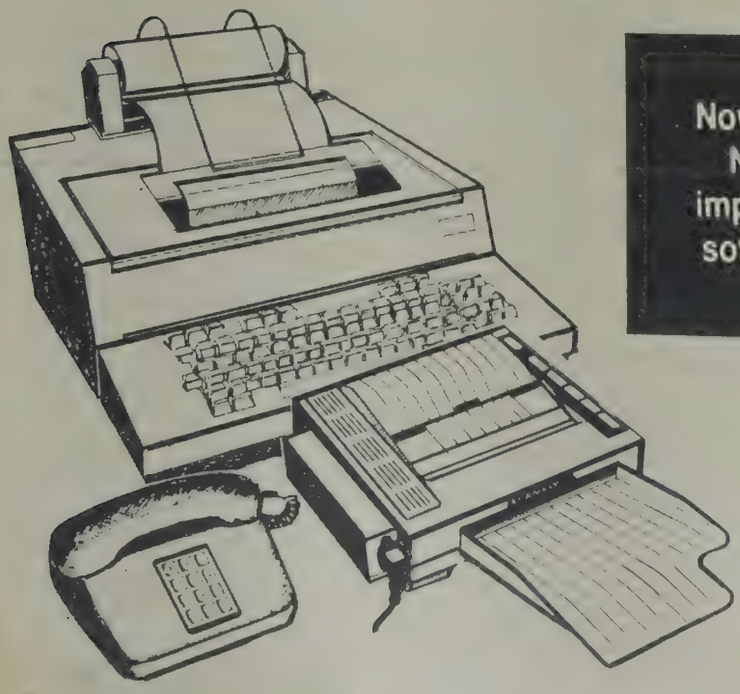
Cut Your Phone Bills: Install Aurelec PC-Telex

Only Rs. 6,999/-
(exclusive of local sales tax, octroi, installation and training)

The cheap and convenient computer-age way to get your message across: Aurelec's PC-Telex card.

Although cheaper and more reliable than the phone, the telex is rarely used if you have to make do with a clumsy electromechanical telex machine, but with Aurelec's PC-Telex card, your computer makes your telex usage more attractive than your phone or Fax, with greater efficiency and far lower costs!



With a vast experience gained from over 1,000 installations, a vastly improved software and unique "no quibble" 30-days money back guarantee, you owe yourself a demo. Contact Aurelec for the address of your nearest dealer. We've got over 20 dealers throughout India.

- New improved software
- fast to install, easy to use
- pays for itself in rental saved and cheaper night transmissions tariff
- fits snugly INSIDE your PC and does not use up a serial port
- lets you use your PC normally
- superior immunity to noisy lines
- full multi-user support on LAN's
- superior features like:
  - password security
  - text editor with abbreviator
  - automatic reference numbering
  - 2 queues: normal & priority
  - group dialling
  - bills with estimated costs and department-wise break-up
  - user friendly menu driven software
- TRC approved
- Unique 30-day money back guarantee

Hungary and the manifestoes

AMIT MITRA

If we are all tired of the repititive rhythms of electoral promises and bored to death by 'manifesto studies' it is time to rise above the local Indian scene and rethink our economic policy options on the basis of international experiences. Particularly interesting for India is the case of the Republic of Hungary.

A nation that was plagued by a variety of economic problems and depressed over incremental and ineffectual policy reforms, Hungary finally took the plunge in 1988. It braved the most radical and far-reaching polito-economic changes seen in recent history — a phenomenon that was called a "bloodless revolution" by its President who visited India last month. The question is: can India draw any concrete lessons from the recent Hungarian experiences? Further more, could the 'manifesto writers' of our political parties have utilised any of these lessons in formulating the economic reform packages of their respective parties?

After the Second World War, the pro-Soviet communists of Hungary took over power and swiftly nationalised all private industry and introduced Soviet style central planning. However, they faced constant public dissent and were often compelled to initiate cycles of economic policy 'reforms'. The most tragic case of public dissent was the 'people's revolution' in 1956 which was brutally crushed by Soviet tanks and armour, notwithstanding Jawaharlal Nehru's pleadings with the Soviets for restraint.

By 1967, the Hungarian communists had realised that the Soviet economic model had failed miserably to yield the desired economic results. And so they initiated the New Economic Mechanism (NEM), a Hungarian *perestroika* much before Gorbachev. The NEM, announced on 1 January 1968 was to 'liberalise' and 'transform' the Hungarian economy *without* giving up state ownership of industry or central planning or for that matter, the one party communist rule! While it did "... create more elbow-room for market influences and motivation linked to profitability," says Bela Kadar, now the commerce minister of Hungary, the NEM's attempts to bring about change without discarding the old institutions failed to bring the desired results. Then came the era of "managerial socialism".

Slow and torturous reforms were spread over 1978-88, strangely echoing many of the themes being discussed in India today. For example, the idea of making public sector enterprises (PSEs) more efficient through the formation of "holding companies" of the government arose out of this Hungarian debate. (Does the Arjun Sengupta Report of 1985 recommending 'holding companies' for Indian PSEs ring a bell?!) The issue of more autonomy to PSEs was hotly debated and tried in Hungary. Making PSEs more accountable was discussed and attempted. (Familiar refrains!) While there was some loosening of the central planning system, and small private businesses had begun to emerge, substantive results from "managerial socialism" remained illusive.

Thus came the inevitable — a 'U' turn of the entire politico-economic system, transcending the boundaries of mere 'reform'. By the end of 1988, the white clouds of a 'bloodless revolution' had gathered over Hungary. First, came the shift from a one-party communist state to a pluralistic electoral democracy akin to that of India. Then came the legal rights to privately own and operate companies of any size. (No MRTP Act is in sight in Hungary yet!)

Phenomenal growth

The result from these liberal laws was a phenomenal growth of the number of private enterprises. From a mere 450 limited liability companies in Hungary in April 1989, the number swelled to 12,000 by October that year. The total number of private ventures of all types jumped from 14,427 at the end of 1989 to 23,257 by the end of 1990. These staggering growth figures suggest that even decades of stifling communist rule cannot wipe out a latent entrepreneural spirit.

Finally, came the radical liberalisation of the laws on foreign investments. For example, no permit is now required to establish a 49 per cent foreign-owned joint venture in Hungary. (Are you nostalgically reminded of Ajit Singh's industrial policy resolution of 31 May 1990, which proposed 40 per cent foreign equity without licence, but never got through our Parliament?!) A foreign company in Hungary can now hold even 100 per cent of equity in the export industries. Perhaps, equally important is the fact that profits can be repatriated out of Hungary up to a 100 per cent by a foreign company in the currency in which the investments were originally made. Hungary has obviously discarded the empty rhetoric of 'self-reliance' which for us in India, always came with a hefty foreign aid package!

What were the results of these radical policy initiatives in Hungary? Hungary saw the inflow of over $500 million of foreign working capital during the year 1990 while India received a meagre $180 million in 1988. With a population of only 10 million, against India's 850 million, the inflow of $500 million of capital in a year into Hungary is truly mind-boggling.

The lessons from the economic experiments in Hungary over the last two decades can lend a

The author is director, Policy Unit of Business India, *and former director, Center for Asian Studies, Franklin & Marshall College, USA*

powerful and critical perspective to a re-reading of the manifestoes of our political parties. Many ideas tried and discarded by Hungary seem to have found a place of pride in our manifestoes. For example, the National Front wants only to make "... public sector more efficient, providing them with professional management". Recall that Hungary had tried this option during the period of "managerial socialism" and had failed. The BJP's bolder pronouncements would like to make "public sector productive and profitable...." More easily said than done. And then, the BJP may grudgingly invite equity participation in some PSEs "... with adequate safeguards". These so called safeguards are bound to make a mockery of the proposal once the Indian bureaucracy, and particularly the Mr. Can't-Be-Dones in it get their hands on it.

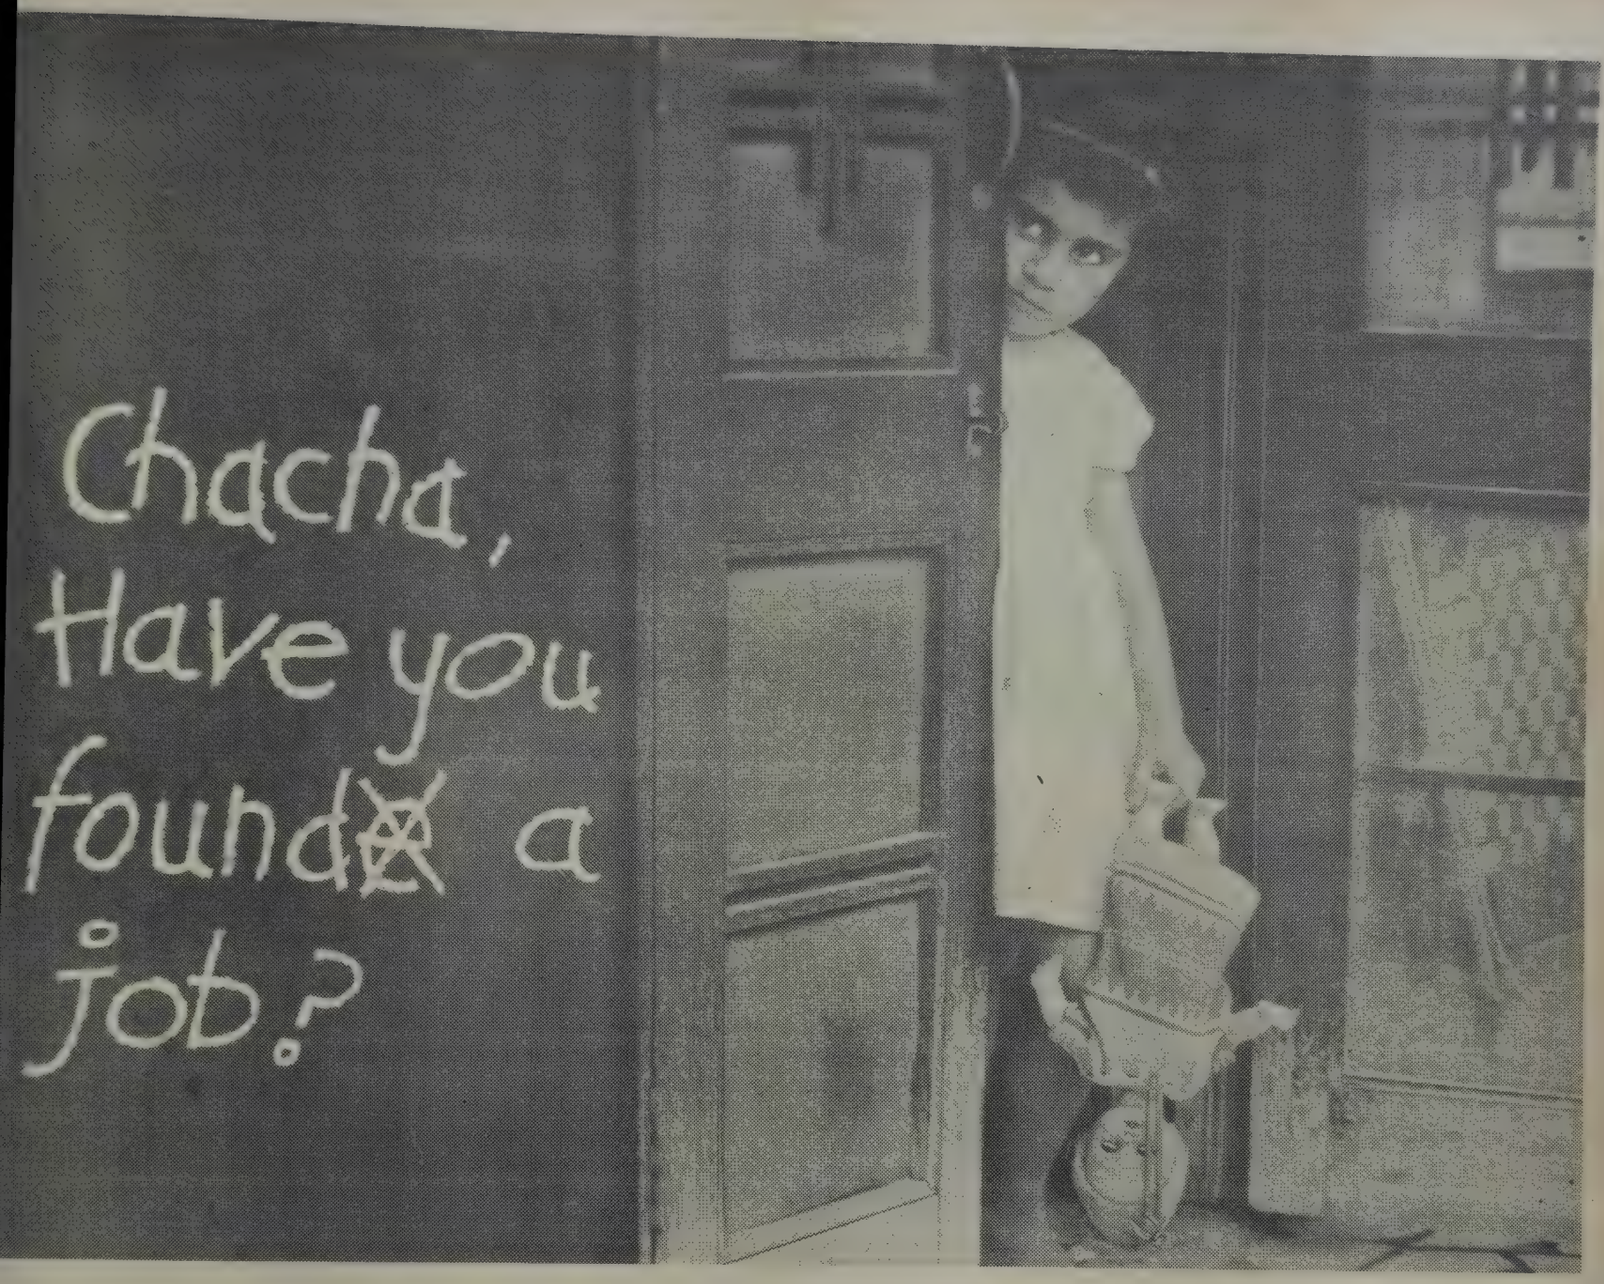
The boldest of the proposals on the PSE issue appears in the manifesto of the Congress (I) which had obviously taken note of Margaret Thatcher's successful politico-economic strategy of broadening the base of support for liberalisation. Congress (I) promises to offer stocks of PSEs to workers and small and medium investors within the first year of its governance and withdraw — read de-nationalise — PSEs within the first thousand days from areas where the private and joint sectors have developed suitable capabilities.

Unfortunately, the proposal falls short in specificity. The Congress (I) could have learnt a lesson from the Hungarian case on this point. Hungarians too began privatisation without specificity and soon began to stumble and fail. It is then that they appointed a minister for privatisation, solely to de-nationalise 30 per cent of Hungary's PSEs by 1995.

The most puzzling is the position taken on PSEs by the manifesto of Chandra Shekhar's party. The very same party which decided to divest 20 per cent of the holdings of the PSEs while in government, now tells us that "productive assets under social ownership and control have to be enlarged". Does this serious contradiction imply that we ought not to take the manifestoes of the SJP seriously at all?

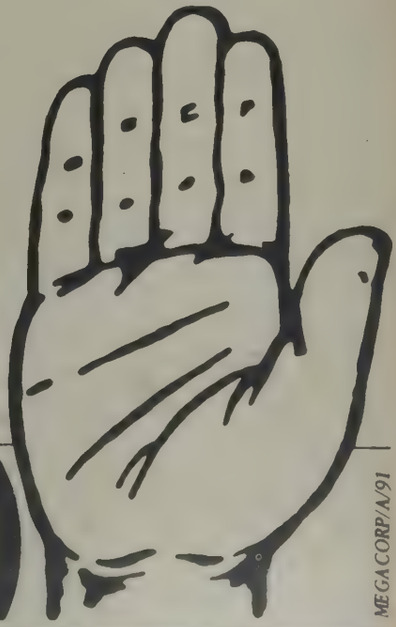
Impervious to international experiments, the manifestoes have taken the most ostrich like position in the area of inflow of foreign capital. The National Front simply dismisses the issue with one glib and ambiguous sentence: "National self-reliance will be strengthened, and foreign collaboration shall be sought only when it helps this basic goal." The BJP fist indulges in some posturing over 'self-reliance' and then acquiesces to allowing foreign investment in the area of hi-tech, import substitution industries and strictly export-oriented industries. Yet, it does not spell out the rules and incentive structures for entry into these areas.

Sadly enough, the Socialist Janata Party (the former JD-S) invokes the supposed menace of a 'foreign hand' before patronisingly inviting foreign investment only "... in areas where we need to upgrade the national production system technologically". Unfortunately, the Congress (I) too holds back on this issue and meekly promises to permit (not invite) foreign investment and technology collaboration to obtain higher technology, increase exports and expand the 'production base'. What it means by the last category is anybody's guess.



False premise

Obviously, the ghost of the familiar refrain, "They sold out the country", is haunting our political parties. There is also a false underlying premise that hundreds of foreign companies are simply weighting to crash through our door. The fact is, they have many more lucrative options today than they had ten years ago. Hungary is just one of those attractive options.



What of the manifestoes of the Communist parties of India in the light of the post-Cold War era? The CPI (M) seems to be still sleep-walking through the cold war decades with only one difference. The international monetary fund has become the biggest villain of the piece now and the US comes only second. Understandably, the CPI (M) wants to guard against any form of de-nationalisation of the PSEs. But, reality compelled it to add that it wants to make the PSEs efficient. Unfortunately, no policy proposal of any sort is offered on how they plan to do this.

What is not surprising is the tame and social democratic position taken by the manifesto of the pro-Moscow CPI. The current confusion on political economy in the Soviet Union distinctly marks the CPI perspective. In a vague and distant manner it concludes: "While firmly adhering to socialism as a goal, the CPI does not press it as the immediate objective in the present stage or our country's development." I guess one will have to wait till the clouds over the Soviet Union lift and only then we will look for useful ideas from the CPI.

What becomes amply clear by juxtaposing the lessons of recent international experiments against the manifestoes of the political parties of India is that our politicians are just not learning much from these experiments. This gives cause for pessimism. If the changed global interconnectness of economies in the nineties leave our politicians untouched, there is cause for alarm. However, there is a rather strange reason for optimism as well. From the lessons of the past let us hope that these manifestoes primarily serve rhetorical purposes. When politicians, in fact, come to power, they will do what the new global reality necessitates. Hopefully, they would be dictated by reason and not rhetoric.

ONLY A STABLE GOVERNMENT CAN ENSURE 100 MILLION NEW JOBS BEFORE THE YEAR 2000.

Is the waiting over?

The fourth round of bidding for oil exploration has had a tortuous history, the delay extending over two years. But anyhow, the waiting appears to be over for foreign drilling companies.

Tenders for the fourth round of bidding for offshore blocks to foreign companies are likely to be floated the moment a new government resumes at South Block in June. Many of the blocks offered, it is believed, will be to restore damaged wells rather than for fresh exploration. Oil exploration being an expensive exercise, and India experiencing severe foreign exchange constraints, the government has little choice but to resort to this.

Stars in the fray

Bachchan: shackled by controversies

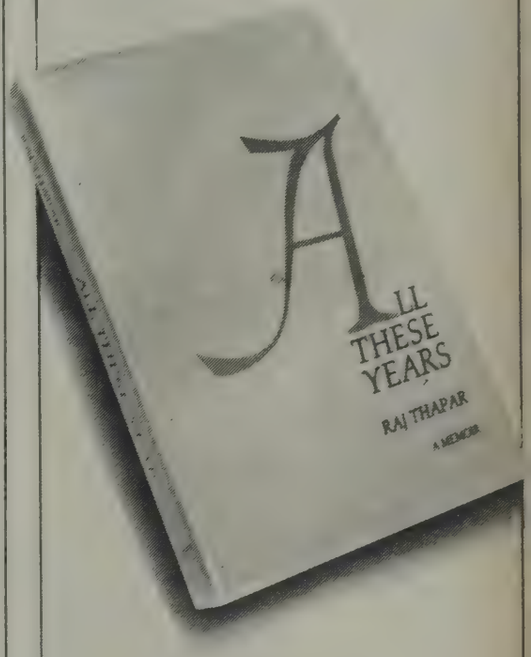
Film and television stars are back again with a vengeance in the forthcoming general elections. Old faces like Sunil Dutt (who is contesting from Bombay) vie with new ones like Rajesh Khanna (who is contesting against L.K. Advani from new Delhi on a Congress (I) ticket) for attention. However, it's Gujarat that has taken the cake with a bagful of film personalities contesting. If from Baroda it is Deepika Chikiliya (Sita of the tele-serial *Ramayan*), it's Arvind Trivedi (Ravana of the same serial) from Sabarkantha and Mahesh Kanodia (a Gujarati film producer) from Patan constituency.

And it seems, many of them are on a winning wicket, more so because of BJP backing than anything else. Though campaigning has begun in earnest, most of the stars are still busy completing their shooting schedule. And most of them know little about politics.

Parliament of the eighties was 'graced' by stalwarts like Amitabh Bachchan and Vijayantimala. But it didn't take much time for them to find out that politics was not a bed of roses. Embroiled in scandal and controversy, Bachchan bowed out, admitting that it was all a mistake. Vyjayantimala, though spared the ignominy of scandals, was disillusioned all the same.

So now, it's Gujarat which will provide new glamour to the portals of the Parliament House, now that Amitabh Bachchan and Vyjayantimala have faded out of the political firmament.

CM grounded



General elections always tend to bring out the worst in people and machines, especially when the people are politicians and the machines, of the flying variety. As the chief minister of Madhya Pradesh, Sunderlal Patwa, found out to his great discomfort. He was to visit Gujarat last fortnight to address some BJP rallies in the state. To facilitate his visit, the Gujarat state BJP office had hired the state government's ageing Dakota to fetch Patwa from Bhopal. But as luck would have it, the aircraft developed serious snags and had to be grounded in Indore, much to the discomfort of both Patwa and the Gujarat BJP bigwigs. Not only was Patwa stranded at Indore (since he couldn't go back to Bhopal for lack of an aircraft), he also could not reach Ahmedabad to address the rallies. Late at night, the BJP party office desperately tried to get L.K. Advani's helicopter from Delhi but it was not available either.

...a brutally frank story of how power corrupts, how ideals are torn down....

ELECTION 1991

RAM, STABILITY, MANDAL ... but what about the economy?

The decisive issues of this election are no longer confined to the religious outrage-communal insecurity-reservations formula. Economic questions have come to the fore, as the main contenders have only now realised, despite their efforts to project 'stability', 'Ram rajya' and 'social justice' as the real concerns. And the voter has perhaps never had a more uninspiring choice of rulers

For L.K. Advani, the contrast must have been painfully apparent. From the frenzied thousands who escorted the *rath* on his *yatra*, the reality of the 1991 general elections appeared in the form of a pitiful 100-odd souls who listened to him at Sarojini Nagar, New Delhi.

In Kishenganj in north Bihar, Rajiv Gandhi faced a bored crowd. In this predominantly Muslim constituency, Congress spokesman M.J. Akbar is defending his seat. He began campaigning by speaking of secularism and then fell back on promises of roads and bridges for the district.

A crowd in Bharatpur, Rajasthan, listened patiently to BJP leader Atal Behari Vajpayee, perhaps more attentively because of the areas he spoke on — India's external-internal debt trap, employment for all and population control. Surprisingly, the Ram Mandir issue remained in the background. Says Jagdish Tytler, the Congress (I) candidate from Delhi Sadar, "I am stressing more on economic issues which are being faced by this country."

In Orissa, chief minister Biju Patnaik launched his campaign in Puri by thundering: "The Centre could neither provide funds for big projects, railway lines and for the development of the Paradip and Gopalpur ports; nor did it allow the state to exploit its own mineral and other resources. I am ready to turn rebel for the cause of my people."

The mind of the voter

These incidents reveal the mind of the 1991 voter. Reports from across the country reveal widespread indifference among the electorate. Party workers blame the weather. But the relatively poster and slogan-free walls, infrequent loudspeakers and smaller campaign convoys tell a different tale. The voter is spurning the vote-seeker. The major parties then, are desparately trying to change their emotive issues in mid-campaign. This often means switching from so-called national issues to local problems halfway through a speech. In Haryana, for example, Bansi Lal, who has just broken away from the Congress to launch his own party, Haryana Vikas Party is promising: "Gaon gaon me sadke, gaon gaon me nalke" (roads in every village, water in every village).

In the capital, the BJP has erected large billboards which display the movement of prices of essential commodities in the last year. The cutouts and posters of the Ram temple have yielded to a last-minute attempt to decry the financial bottomline. Instead of

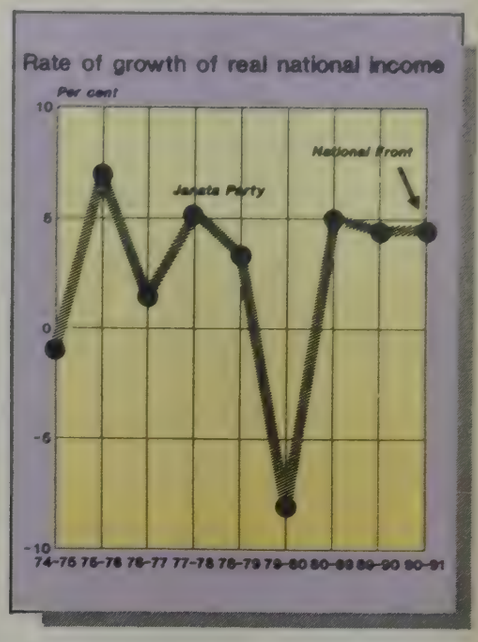
Ram, the BJP has started highlighting the failure of the Nehruvian model of socialism practised in the country since Independence. Says general secretary Govind Acharya: "We are pointing out that this model has not led us anywhere. It has just meant appeasement of minorities, the lack of a clear approach to policy making and the absence of firm implementation of policies. We are also highlighting that there have been distortions in fixing economic objectives. We are trying to translate the Ram issue — which many have perceived as a religious issue — into a national issue."

In Rajasthan, the Congress(I) now rushes across the stability plank with a single sentence; "Our party will provide stability if elected to power". The rest of the campaign focuses on the Centre's inaction on the economic and development fronts. "The nation is in peril. Its unity is in danger" is the Congress(I) campaign theme. That this old line has been resurrected only points to the paucity of ideas in the party. But at local levels, candidates and regional bosses are articulating local economic issues on their own.

Steadfast on Mandal

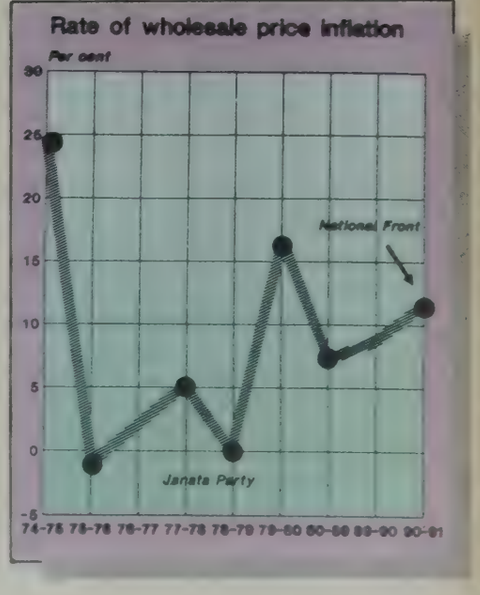
With its chronic disorganisation, the Janata Dal cannot quickly change its stand. Moreover, the intensity with which V.P. Singh promoted Mandal makes it well nigh impossible to deviate. Singh remains steadfast: "I am setting the agenda for all political parties. Even if I do not form the government, every party will be forced to deal with issues I have raised. Look how the Congress was pressured into including Mandal in their manifesto."

Meanwhile, previously sanguine candidates are quickly discovering what really bothers the voters. Uma Bharati, the fiery BJP candidate from Khajuraho, MP, confessed: "I am finding it difficult to convince my electorate that I had to be in Ayodhya. They are asking me where I was when Khajuraho was facing a water shortage."



In Kangeyam, Tamil Nadu, AIADMK supremo Jayalalitha is seeking votes from a cynical constituency. Says a teacher: "There is not a single party or a politician who can understand the magnitude of the diverse problems we face."

Former deputy railway minister and Janata Dal candidate Ajay Singh is also learning the hard way. Far from using Mandal as a passport to his second term, Singh is repeatedly having to answer why the electronics factory he promised for the city during the 1989 elections has not materialised. In Bhopal, sitting BJP MP S.C. Verma is hard pressed to explain to farmers why the loan waiver scheme was implemented so late.



By and large, in previous general elections it has been political parties which have set the agenda for the polls. Consider 1971, when Indira Gandhi romped home with her powerful "Garibi Hatao" slogan. Or 1989, when V.P. Singh, by continuous repetition made Bofors and corruption in high places the central issue of the elections. Through the National Front rule and the short-lived Chandra Shekhar prime ministership, the three main parties sought to thrust their 'national' issues down the electorate's throat.

Return to reality

Now, after the immolations and the assault on the Masjid, it is a return to ground realities. Today, only in pockets of Bihar, Maharashtra and Uttar Pradesh does Mandal remain an issue to the Dalits who have not had access to white collar jobs so far. Hindutva hype remains largely confined to Gujarat and urban centres. But even in Gujarat chief minister Chimanbhai Patel speaks of a 'new Gujarat'; he speaks of the Narmada project, groundnut oil prices, unemployment and more industrialisation. That the major parties have misread the voter's mind is clear from the example of Madhya Pradesh. More than half the state's population comprises scheduled castes, tribes and other backward classes. Yet, the Janata Dal has been unable to make Mandal an issue here. And instead of a Ram-and-roti offensive, the BJP is being forced to discuss its own performance in the state it has ruled for the last 18 months.

Says an election analyst: "It is not really surprising that the parties are unable to captivate the masses with their agenda. Take the Congress(I) and its stability theme. Stability as a slogan has lost its edge because the stability of the Congress is being viewed as stagnancy. Moreover it was useful when there was no other serious contender to power." As for the Janata Dal, "At the surface level their appeal is strong but to emerge victorious, organisational infrastructure and publicity also matter. Here the JD is a total zero. It does not have a party base."

Given this scenario, voter turnout on 20, 23 and 26 May is certain to be low. Faced with an uninspiring choice and little and belated recognition of the true problems, many voters will simply not vote. Others, although apathetic, will still cast their votes, if only to exercise their franchise. But who could they vote for? There appear to be four courses of action for the mechanical voter: a vote for the candidate perceived to be the lesser evil, for a locally popu-

ECONOMIC MANIFESTOES

Election gambit

The economic manifestoes of the four major parties in the fray reveal many contradictions and inconsistencies. Certainly, some of the confusion is a reflection of the conflicting pressures political parties must deal with at election time. But most of it appears to be the result of an attempt to appease wildly different constituencies without even a minimal effort to mesh the proposals together into one sustained, workable policy. Thus to a large extent, each manifesto appears to be more of an election gambit than a serious economic blueprint.

The manifestoes also reveal the tensions of a society that is in transition. Socialist and autarkic ideals from the days of Independence jostle with pragmatic concerns about efficiency and productivity. And old election rhetoric about more jobs and more houses, among other things, returns juxtaposed with talk more attuned to undeniable economic realities. The overall effect is one of an uneasy mingling — of what has been tried and tested but is now outdated, with the new challenges that cannot be dismissed.

Surprise from the BJP. Surprisingly, the BJP's economic plan reveals an acute understanding of some of the new economic issues that confront the nation. Its manifesto says, for example, that the party will put statutory limits on the budget deficit, reduce the revenue deficit to zero and ensure that the state eventually withdraws from all commercial activities. On the other hand, the old knee-jerk rejection of an open-door policy for foreign investment lingers. And some hare-brained proposals — one of them essentially says all companies must have operations that are foreign exchange neutral — have crept in.

The Congress(I) is the only party which seems to have realised the importance of freeing the financial sector from stifling controls. The manifesto says the private sector will be allowed to launch mutual funds and is categorical that both the private and nationalised banks will be allowed to raise offshore funds. It is also the only party which has promised a stable tax regime. However, it says little about what it will do to control the burgeoning budget deficit. And a misplaced avowal of the planning process and the public sector raises disturbing questions.

The National Front plan appears to be largely unaware of either economic realities or the changes that have already occurred in the economy. It is also more openly an electioneering prop than the manifestoes of the Congress(I) and the BJP. It has promised to eradicate unemployment in a decade, for example. And promised to "rationalise" the income tax rates to ensure a more equitable distribution of income. It has also proposed a ceiling on urban property and other "unproductive" assets. No mention is made of steps that will be taken to control government spending. And beyond saying physical controls on industry will be replaced by fiscal incentives and disincentives, there appear to be no real strategies which could unchain the private sector.

The CPI(M) has produced a manifesto that could only have been written by a party that lives in its own world. It calls for the nationalisation of jute and cotton textile mills. And fiercely demands that the nascent economic liberalisation that has already produced some striking results should be junked. The most fatuous of its bizarre points is one that says the right to work ought to be a fundamental right enshrined in the Constitution. In sum, this is a manifesto produced by people who know they will never govern the nation and so can merely voice ideological predilections.

Uncertain outcome. Perhaps in no other election has the outcome been so uncertain than it is in this one. But if a hung Parliament results, political realities will impinge on the economic plans these manifestoes have drawn out and confuse them further. What will be the real economic policy, for example, of a Congress(I) government that crucially depends on the CPI(M) for its survival. What will the BJP actually do if it comes into power? Will it get so enmeshed in Hindu revivalism that it pays scant attention to economic questions? And what if Rajiv Gandhi returns? Will he act as if he has reclaimed a dynastic privilege or will he act with good faith and good reason?

India has never been at a more crucial juncture in her brief history after Independence. Wrenching economic change is essential if she is to grow and prosper. But change raises questions that leaders must be able and willing to tackle. Sadly, no politician today seems to have either quality in abundance.

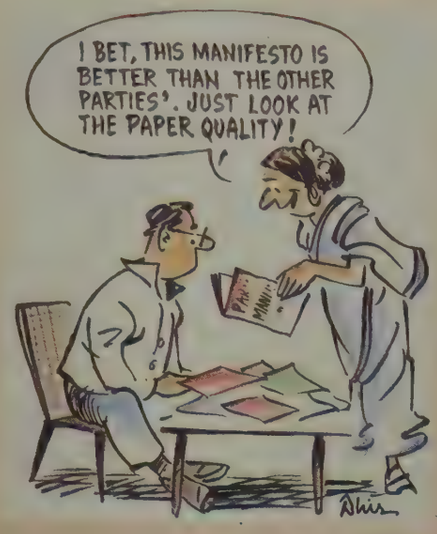
■ NAVAL B. GHIARA

lar candidate; for a party with local organisational presence; or for a candidate perceived to protect economic interests.

Tau still popular

Devi Lal is a good example of this last choice. The national press may condemn him, but all the farmers in Haryana still adore him, Chautala notwithstanding. Says Mukhtiar Singh, a farmer from Hissar district: "Why should I not vote for Devi Lal. In 18 months he increased the prices of wheat by 50 per cent. He removed sales tax on tractors. There is no *kisan* in Haryana who did not get at least Rs.5,000 from the government under one scheme or the other."

Veteran politician, Madhu Limaye, however, has a different view of voter behaviour: "While for assembly polls local grievances may hold water, for the parliamentary elections, the local issues cancel each other out between the different assembly segments and Lok Sabha constituencies. Then caste, religion and commitment to party comes into play. This is where the Congress may score, while votes may be divided over caste and religion between the Janata Dal and BJP. The fact that the Congress has an all-India presence, which the other two lack, will help it become the single largest party in Parliament."



According to a political analyst, it is only the non-committed voter who will rationalise and cast his ballot in keeping with his economic interest in the Lok Sabha poll. But the analyst adds that Indians largely vote along caste or religious lines and when confused vote for a party they have traditionally supported. Thus, if the Yadavs in Bihar decided to vote for Laloo Prasad Yadav's party, it is because they perceive that Laloo will take care of the economic interests of the community. Similarly if the Muslim masses in the country, by and large, decided to vote for Congress(I) or the Janata Dal, it will be because of their perception that their economic and other interests are safe with these parties.

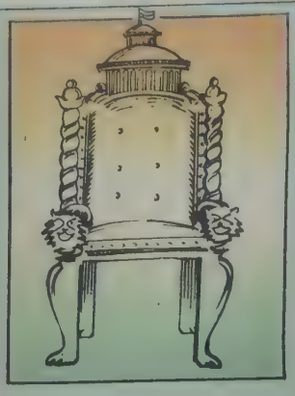
It is only in the last few days before the elections that the floating votes, which form a substantial number, get commit-

THE PARTY LINES

The Bharatiya Janata Party promises

- A White Paper on the state of the economy will be prepared.
- The annual growth rate of the economy will be raised to 7.5 per cent.
- The state will retreat from commercial activities and concentrate on providing law and order, justice and social welfare.
- The Reserve Bank will be given operational autonomy.
- A statutory ceiling will be imposed on budget deficits.
- Deficits on the revenue account will be reduced to zero.
- Non-development expenditure will be drastically cut.
- The highest rate of income tax will be brought down to 40 per cent.
- Annual incomes up to Rs 48,000 will be made income tax free.
- All investments in approved private and public organisations will be exempted from wealth tax.
- The Centre will share corporate income tax revenues with the states.
- The excise duty on mass consumption items will not be hiked for five years.
- Octroi will be abolished.
- Uniform sales taxes will be established throughout India.
- Cattle and crop insurance will be introduced.
- Parity between agricultural and industrial prices will be maintained.
- Foreign investment will be encouraged only in high-tech and import-substitute products.
- Controls on business will be reduced. The Industrial Development and Regulations Act will be replaced by an Industrial Development Act.
- MRTP provisions will apply to all business houses with assets above Rs.1,000 crore or with more than a third of the market share.
- The role of the public sector will be reconsidered. Public participation in the equity of public sector units like hotels, trading organisations and consumer goods manufacturers will be allowed.
- The corporate sector will be held responsible for maintaining a balance between exports and imports. That is, a trade balance at the level of each unit will have to be maintained.

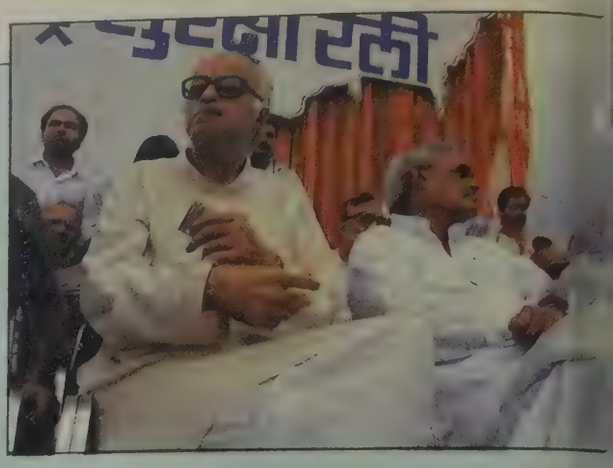
The Congress (I) game plan



- Nationalised banks will be made more efficient.
- All banks, even private ones, will be allowed to raise offshore funds.
- The private sector will be permitted to launch new mutual funds.
- There will be no income tax hikes.
- Direct taxes will be held stable for five years and indirect taxes throughout each fiscal year.
- India's external debt will be managed better. Disbursement delays in externally assisted projects will also be prevented.
- Tax exemptions will direct investments to areas like housing, roads, bridges and non-conventional energy.
- Interest rates for small savings will be hiked.
- Non-development expenditure will be cut by 10 per cent in the first year. The same level of spending will then continue for the next two years.
- Planning will be decentralised and performance budgets will be instituted to report actual plan achievements.
- A national drive will establish accurate and easily verifiable land records.
- Agricultural support prices will be linked to the dearness allowance index.
- Employment at the rate of 3 per cent per year, 1.4 percentage points more than the present rate, will be generated.
- The public sector will gradually withdraw from areas where the private and joint sectors have developed strong capabilities.

The National Front proposals

- The economic structure will be made more equitable.
- Ceilings will be imposed on urban land holdings.
- Direct and indirect taxes will be rationalised to improve the redistribution of income.
- Planning will be used to reduce sectoral and regional imbalances.
- Interest rebates will be offered on farm loans.
- A national policy on agriculture will be announced.
- Land reforms will be made.
- The thrust in industrial development will be on employment generation.
- The public sector will continue to command the heights of the economy but its managements will be professionalised.
- Physical controls over industry will be replaced by a regime of fiscal incentives and disincentives.
- A new Industrial Relations Bill will be introduced.
- An Agricultural Labourers Bill and a Construction Workers Bill will be introduced.
- Unemployment will be eradicated in a decade.
- A new tax on urban property will be levied the proceeds of which will be used to improve slums.
- Special provisions will be given to the small-scale sector.



The CPI (M) credo

- IMF-World Bank dictated economic policies will be repealed.
- India's economic independence and self-reliance will be upheld.
- Direct taxes will be hiked.
- Indirect taxes affecting the common man will not be hiked.
- Land reforms will be implemented.
- Jute and cotton textile industries will be nationalised.
- The growing penetration of multinationals into the economy will be checked.
- MRTP provisions will be tightened.
- The right to work will be embodied in the Constitution as a fundamental right.

Given a chance....

The three possible contenders to the prime ministership of India were caught in the middle of their hectic campaigns — BJP supremo L.K. Advani in a plane, Congress (I) president Rajiv Gandhi at home, and Janata Dal chief V.P. Singh while driving from one rally to another — and they answer queries on the economic agenda they would adopt if they form the government:

On how the budget deficit will be controlled

Advani: It is a problem. The nation is reduced to begging for handouts from the developed countries. The distortions which have entered the economy will have to be removed first. We want to impose a statutory ceiling on budget deficits. We will ensure operational autonomy to the RBI. Non-development expenditure will be cut drastically.

Gandhi: We will restrict deficit financing to manageable limits. Instead of financing development expenditure through borrowings, what we plan to do is to try and base our revenues on making public sector units much more profit-oriented. We do not plan to raise taxes but we will make collection more effective. We will also give tax exemption on profits in areas like roads, schools, supply of drinking water, etc. We will cut non-development expenditure by 10 per cent in the first year and continue to maintain the level every year.

Singh: First curb expenditure. Go in for zero-based budgeting and work out more imaginative ways of raising revenue. I do not believe in high taxation rates. I would rather impose reasonable rates with firm implementation. Why encourage people to create more black money?

On cutting subsidies to curb expenditure

Advani: I would not readily do so. Subsidies ensure the availability of certain essential commodities to the common man at fair prices and we cannot, overnight, change the situation. What we should guarantee is that these subsidies reach the underpriveleged instead of benefiting those who do not need them. In this regard, some changes in the present arrangement can be made. We are in favour of continuing agricultural and fertiliser subsidy.

Gandhi: Subsidies for foodgrain will have to be maintained at affordable levels, for the poor.

Singh: We will give subsidies only to target groups. For instance, subsidies for chemical fertilisers will be cut and further research on bio-fertilisers will be given top priority.

On generation of employment

Advani: We plan to launch an employment guarantee scheme in a phased manner and also introduce the contributory family pension scheme to cover the daily wage earner. Our development policies are all aimed at doubling our growth rate and so getting rid of unemployment.

Gandhi: Through massive investment in agriculture and labour-intensive industries. In fact, through all our *yojanas*, collectively we plan to generate 10 million new jobs per year.

Singh: We will have to work within the resources available. We will not give dole but try to create employment (not necessarily white collar) for all, in a phased manner. We will also make sure that backlog in all jobs in government for scheduled castes, tribes and backward classes is filled as soon as possible.

On tackling inflation

Advani: We will abolish deficits on revenue account and cut capital accounts deficit to half. We also plan to maximise production and lower costs through technological upgradation. Overhauling the public distribution system is also on the agenda. It will make available at nominal prices not only grains, sugar and kerosene but pulses and cooking oil too. We will enforce the Consumer Protection Act and initiate a consumer movement to make sure that the buyer gets what the government promises.

Gandhi: The very fact that we are coming to power will have a good psychological impact on the people, because fear of a stable and secure government in the Centre will check blackmarketing and hoarding at least to an extent. We think we will also be able to push back the prices of diesel, kerosene, salt, electric bulbs, cycles, smokeless *chullahs* and inland letters to July 1990 levels. That should certainly have an overall impact on prices.

Singh: It cannot be done 'instantly'. There are certain long-term measures, which must be taken to inject an anti-inflationary trend in the economy. The first problem any government will have to tackle will be to secure the IMF loan. After the fire-fighting is over, we will have to start tackling the BoP problem seriously. We will have to have an organised strategy for export, to build up our foreign exchange reserves again. Exports where the net foreign exchange revenue is high should be given more incentives initially. Once the balance of payment is favourable, inflation will be automatically curbed. There is no point in going in for short-term gimmickries like the reduction of the oil price, etc. But we will expand and streamline the public distribution system for some immediate relief.

On reforming the public sector

Advani: A novel idea is to set up a national management cadre from which public sector can draw trained professionals. We will also introduce workers' participation from shop-floor to board room in all public sector projects.

Gandhi: We will allow the sector to lead in areas of national importance, especially in the exploration of new frontiers where substantial investment is required, but phase it out of areas

where the private sector is ready to make an entry. We will sell stock off, not only to workers but to small and medium companies so that the management of these units will have to become more accountable.

Singh: We will give them more freedom to operate and allow labour to buy shares in the company concerned. Also labour will be given a chance to participate in management. Their involvement will certainly improve the performance of this sector.

On foreign equity in Indian companies

Advani: Generally yes. But in our overall strategy, we would be reluctant to admit foreign collaboration in low technology areas, as the strategy lay considerable stress on employment. We do not, however, want to be inhibited and want to consider these issues pragmatically. To garner foreign exchange, we do have special schemes for NRIs. One is the setting up of science-based industrial parks for them. We are also rethinking on linking the Indian rupee to a basket of currencies.

Gandhi: We will allow it only in industries which will promote our exports and production base through high technology.

Singh: Yes. in hi-tech and need-based areas. We will allow time-bound investment, which should be repatriated after a certain period. The debt service ratio is becoming unmanageable. It has to be cut but in certain areas we may have no option. For instance, valuable gas is being flared, and we do not have the capacity to capture and utilise it all. So, it is wasted. The government must think and act fast. In such cases, I do not mind the entry of foreign firms. But we will demarcate clearly, the areas for tiny, small, large and multi-national sectors.

On the entry of multi-national corporations in key sectors and consumer goods industry

Advani: Not in consumer goods sector. But in high technology areas there should be no hesitation about their entry.

Singh: We are open to proposals on it.

On private sector reform

Advani: The Indian economy has suffered in the past because of highly centralised planning and too many uncalled-for controls. And certain issues which may have had relevance at some time have become outdated, like public sector commanding the economy, etc, etc. The country must break free from the stranglehold of these ideas. So we are in favour of liberalisation and greater public participation in public sector units, particulary those which have more to do with tourism, hotels, telecommunications.

We are generally disinclined to give monopoly control to the state in any sector of the economy except where the integrity of the country is involved and where decontrol is not practically possible, like defence. But we are keen to see competition in most sectors. I have always wondered why airlines and telephones cannot be opened up?

Gandhi: We will systematically dismantle selected regulatory agencies of which at least five will be taken care of in the first year itself. Also, we are planning on allowing establishment of new mutual funds in the private sector. We will also allow private sector banks to raise offshore funds. In fact, within three years of our rule, we plan to abolish production monopoly in every sector except defence.

Singh: Delicensing. Quality control through increasing competitiveness and making industries more accountable for the loans they take from banks. More firm policies for exit of sick industries. And, of course, the opening up of more areas to private sector. We had already done so for power. For road building, plans had been initiated. We could open other areas too, perhaps oil, but I don't know if any private entrepreneur will be able to take it on.

On implementation of non-discretionary controls

Advani: Yes. Of course.

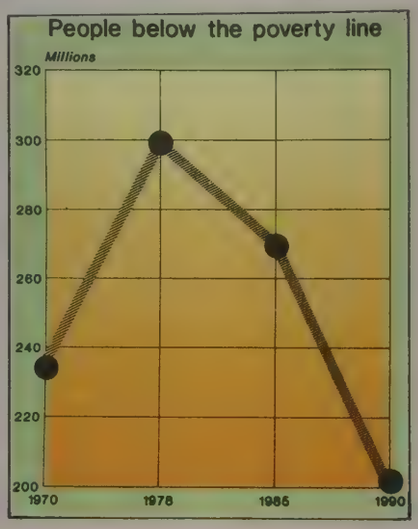
Gandhi: Yes, we plan to deregulate selected agencies every year. Also, we plan to set up free-investment industrial centres in backward districts where investment within a year will be given immunity. We will even decentralise planning gradually.

Singh: I am very much in favour of it and if I get time, I am definitely going to do something about it.

On not implementing the reforms being talked about

Advani: We are the only party which has never got a chance. If given one, we can prove that we take our manifesto seriously.

Gandhi: The process of liberalisation of the Indian economy did begin when I was the prime minister. For decentralisation and employment generation, we had prepared the *Panchayati Raj* Bill and the *Jawahar Rozgar Yojana*. In spite of the unprecedented drought in 1987, we had kept inflation to a single digit level. For economic growth and stability, we are certainly the best bet.



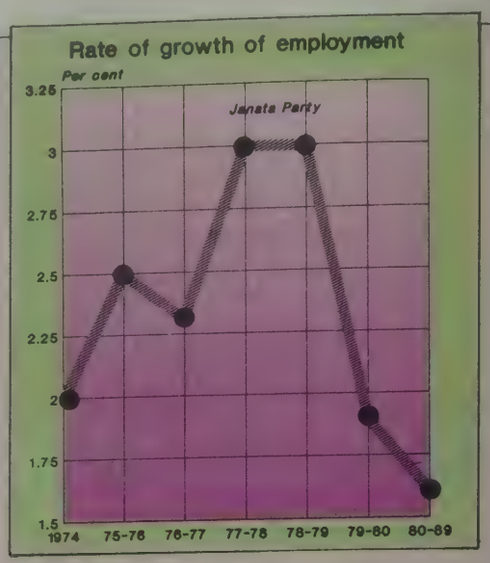
Singh: We had prepared the industrial policy which would have involved the process of delicensing and decentralisation but a lot of party leaders and outsiders raised objections, some frivolous, to the draft. We had to postpone it so that a debate was possible and everyone's opinion was taken into account. That, after all, is the essence of democracy.

Obviously you cannot expect us to do in one year, work that other governments get five years to do. We were still in first gear, we never got time to get into top gear.

Who is responsible for the mess?

To the extent that politicians are willing to take economic issues seriously, they have used them largely to criticise their fellows in other parties. But the quality of their discourse is poor. It is rhetorical, such as "What did the Congress do to control prices during its time in power?" or simplistic and contradictory, such as "We shall raise agricultural support prices while controlling inflation."

Nevertheless, all politicians agree that the economy is in a mess. Even the party in power has no need to be defensive about its record. The mess is most noticeable in the economy's macro-economic management, such as on inflation, employment and vulnerability to even temporary shocks (for example, the Gulf crisis last year cut industrial growth from an 8 per cent annual rate to 1 per cent between the first and second halves of fiscal 1990-91). Of course, micro-economic messes such as the poor quality of goods and services available in the economy also matter.



But who is really responsible for the mess? Is it the Congress(I) or the parties that ruled in 1990? Or going back before 1980, how does the Congress(I) compare with the National Front's earlier incarnation, the Janata Party?

On poverty, the Congress(I) can claim that its liberalised policies since 1980 have played a significant role. The number of people below the poverty line have fallen sharply during the last decade of Congress rule in spite of a steady 2.1 per cent growth rate of population.

The Congress(I) does less well on jobs. Employment growth peaked in the first two years of Janata Party rule. Although it fell off in 1979, the fall was even greater in the decade of Congress(I) rule that followed.

On prices, the Janata Party of 1977-79 comes out as the best performer. In fact, price performance was worst in the immediate pre-1977 period and after the Janata Party left power in 1979, although the National Front performed poorly on inflation in 1990. However, it should be noted that prices are susceptible to oil shocks and the monsoons.

The Janata Party's pro-small farmer test comes out with mixed results. The terms of trade for foodgrains, which measures how the prices of foodgrains moved against other items, improved in the first year-and-a-half of JP rule with a sharp

decline towards the end. The Congress(I) rule of the next decade led to a steadying of this figure. However, there was a big improvement for foodgrain producers in 1990 under the National Front government, when terms of trade jumped sharply to restore the balance that had been upset since 1974.

How does it all stack up against overall economic growth measured by the change in national income? The best performance clearly comes from the Congress(I) of the eighties.

It is obvious that no consistent picture of performance on all categories emerges from the above. In addition, there have been many other factors which a political party can shift the blame to, in particular, failed monsoons and oil shocks. True. A statistical study of macro-economic factors has all the risks that give truth to the statement, "Lies, damned lies and statistics". But the buck must stop somewhere.

■ RAFIQ DOSSANI

ted. Often the fence-sitters decide in favour of the party which they perceive to be 'winning'. Political parties know this, and put all their effort into the few days before polling dates in an effort to appear certain victors.

As we go to press, it is clear that the major political parties have failed in their bids to project Mandir, Mandal and Stability as decisive election issues. In these last crucial days before India's tenth general election, the key questions remain. Will the voter extend his preoccupation with economic issues into the polling booth? Or will there be an eleventh-hour wave in favour of one party? And, finally, will we have another hung Parliament or a party with a majority?

PRIVATISATION

British, French experiences

More than fifty countries around the world have, over the past decade, turned to privatisation as a pragmatic answer to economic constraints created by fiscal and budgetary pressures. These countries, from both the developed and developing world, cut across a widely varied spectrum of political ideologies and economic systems. The one element uniting them is not past common experience nor present consensus on development strategy but rather a shared belief in the need to reinforce productive efficiency through reducing the relative importance of the state in economic activity.

In Europe, the country which has gone farthest with privatisation is the UK. Under Margaret Thatcher's leadership, the UK began a major privatisation effort in 1979, denationalising what successive governments had nationalised since 1945. As of beginning 1988, this effort had raised roughly $15 billion for the government exchequer. Firms which were sold to the public include amongst the most important: British Petroleum, British Aerospace, Cable and Wireless, Britoil, Enterprise Oil, Jaguar cars, British Telecom, British Gas, British Airways and British Airport Authority. The most recent privatisation effort has centred on electricity in which 12 regional electricity companies in England and Wales were put on sale in November 1990.

Varying methods

The method through which privatisation was carried out in the UK depended upon the company concerned — its structure, size and the competitive environment in which it operated. Either company equity was offered by tender (public auction to the highest bidder) or offers were made to the public at a fixed price per share. The latter method was the most commonly adopted. However, in certain cases for small enterprises, a part or a whole of the firm was offered to a single bidder. In two cases (National Freight Co and Redheads Ship Repair Yard), the entire firm was sold to its workforce. In one case (Cross Channel Hovercraft Service), the enterprise was given rather than sold to its employees.

The privatisation effort, undertaken by the British government, was carried out over the entire decade of the eighties and has continued into 1991. Once the privatisation of the electricity companies is completed, there will be very few firms which are still under public control in Britain. They include the railways, coal production, nuclear energy and defence, the latter three considered too sensitive for ownership transfer.

The privatisation effort in France began after the election of 1986 when prime minister Jacques Chirac announced a five year privatisation plan. This programme was to cover 65 enterprises including major banks, insurance companies, financial holding groups and industrial groups. The programme was put into effect rapidly so that by end 1987, 13 enterprises had been sold with proceeds totalling over $11 billion. Examples of companies which were sold include four banks: Paribas, Credit Commercial de France, Societe Generale and Indo-Suez. Sales of major industrial groups include Elf, St. Gobain, Compaigne Generale d'Electricite and Havas. The country's major television station (TF1) was also privatised.

Programme discontinued

The French privatisation effort lasted for a two-year period and stopped with the subsequent change of government in mid 1988 and the return of the Socialists to majority in Parliament. The companies which were privatised have remained in private hands, but the remainder of the programme was not carried further. However, a considerable amount of equity transfer had been accomplished in a short period of time.

Although the length of government commitment to privatisation varies in the two countries, there were similarities between the UK and France in the programmes they carried out. First, the objective of both governments was to reduce the involvement of the state or public sector in economic activity. In this, both programmes succeeded. The fall of state activity in GDP was primarily marked in the UK, where the share of state-owned industry in national output fell from 11 per cent to approximately 5 per cent over the decade. In both countries, many workers lost their jobs — almost one million in the UK and over 900,000 in France. Both countries used a variety of techniques to carry out their privatisation programmes and modelled these techniques according to the enterprise in question. Both countries imposed a ceiling on foreign participation in equity holdings (15 per cent in the UK and 20 per cent in France). Last and very important, both countries attempted to enlist the support of the general public in the process of privatisation through an information campaign and through a widespread sale of shares.

However, there were some major differences between the privatisation programmes in the UK and France. The main difference concerns the sectors and enterprises which were involved. As banks and insurance companies had remained in private hands in the UK, it was not necessary to privatise these sectors. Therefore, the British government concentrated on enterprises in the areas of transport, energy and telecommunications. Many of these had built up huge monopolies on the domestic UK market.

The French privatisation programme concentrated, on the other hand, on the financial sector and on competitive industries which had been nationalised in 1982 and which were carrying out business normally assigned to the private sector. The French programme excluded those firms which enjoyed a natural monopoly position on the domestic market, for example, those in the area of transport (Air France and the railways, or SNCF), energy (EDF/GDF) or telecommunications (France Telecom). The French model was that followed on the whole by Germany and Italy which also preferred not to touch the natural monopolies, but to concentrate on privatisation in the areas of industry and services.

Ground for experimentation

The British privatisation effort encountered a larger number of difficulties than the French one. This was due to the fact that the UK preceded all other countries in its privatisation initiative and therefore served as the ground for experimentation. The nature of the public sector firms involved also made a difference. The size of the enterprises in the UK were extremely large and many had no private sector counterpart. The determination of a market price for the public enterprise equity was difficult due to the size of the monopoly and the lack of information on which to base a realistic estimate. On certain occasions in the UK, tenders failed to reach the reserve price indicated, while

on other occasions, many of the offers for sale of company shares were over-subscribed, leading to the offer price being significantly below the subsequent market price. Because of this pricing problem, an average discount of 26 per cent was recorded on privatisation attempts in the UK between 1980 and 1985, causing the government to lose a considerable amount of potential revenue.

The second major problem encountered by the British government in its privatisation efforts was a tendency of the equity of the new private enterprises to concentrate in the hands of a few. This was due to the reduction in number of shareholders as many preferred to sell their shares quickly to realise an immediate gain, and was obviously linked to that of the under-valuation in price of shares. However, later privatisation such as British Telecom and British Gas were more successful in this respect as the government took measures to encourage shareholders to hold on to their initial purchases. In France, the above problems were largely avoided due to the fact that valuation of enterprise stock was made easier because of the smaller size of the firms involved and the presence of national and international competitors. The result was a smaller discount on initial price of stock and a greater retention in number of shareholders.

Indebtedness reduced

But for these implementation problems, on the whole, the privatisation programmes were considered to be highly successful by the two governments. Firstly, pressure on the public budget came down considerably. Privatisation allowed government indebtedness to be reduced in both cases. In France, the budget deficit fell from 3.3 per cent of GDP in 1985 to 2.3 per cent in 1987. And, the reduction in pressure on government budget was one of the main reasons behind the UK government's decision to lower the general tax rate in 1989.

Secondly, privatised enterprises in both countries have improved their profits and economic performance, as various studies and figures suggest. Economists attribute this mainly to the freedom managers have attained to pursue commercial objectives, unhampered by government interference. It is interesting in this context to note that amongst those state-owned firms which the privatisation programme in France was scheduled to cover (but which the government did not carry through after 1988), were the two electronics and computer giants (Thompson S.A and Cie.des Machines Bull) which have registered substantial losses over the past few years. Recently, the government decided to step in with subsidies of 2 billion and 4 billion French francs respectively, a major drain on the budget at a time of rising unemployment and a source of conflict with EC Competition Directorate in Brussels.

Thirdly, the privatisation effort was successful in both countries in increasing substantially the number of shareholders amongst the general public. By end 1987, there were 9 million shareholders in the UK, meaning that one out of every five persons owned private stock. In France, there were over 8 million shareholders by this time which represented a multiple of four in just one decade, and over one out of eight persons owning private stock. This is comparable to one out of four individual shareholders amongst the general public in the US. This increase in the number of private shareholders in both countries is the main reason that privatisation has been well accepted by the population and well absorbed by the financial market.

Fourthly, privatisation was successful in increasing the importance of London and Paris on the international financial market-place. In France, privatisation represented a 30 per cent increase in the capitalisation of the Paris Stockmarket over only a two year period. However, it should be noted that, in both countries, privatisation was accompanied by financial deregulation and removal of capital controls, which also helped to increase the importance of these to cities as financial centres.

Public support critical

What lessons can India learn from the UK and the French experience? If the government is committed to a privatisation programme, then enlisting the support of the general public in this process is critical. For understanding and acceptance of such a programme, it would be best to start with the privatisation of competitive activities which can function easily in a profit-making environment and only in a second stage move to privatisation of loss-making concerns. This would be necessary to encourage the general public to participate in the privatisation process as few individuals will be interested in taking the risk of buying into a loss-making concern. Privatisation would also be easier to carry out with smaller units so that the danger of underpricing is less.

Privatisation for the right reason — that is, to make the economy more efficient — must be carried out along with deregulation so that there will be greater competition in India's domestic market. Without greater competition, the transfer of equity would be pointless. If large monopolies are to be sold, government should think of divesting in small pieces in order to avoid the transfer of the existing monopoly structure from the public to the private sector which would have no long-term impact on economic performance.

An exit policy must also be envisaged. All units which are at present loss-making in the public sector will not be able to be salvaged and some must therefore be allowed to go under. With regard to those loss-making units which are taken over by a private firm, the latter must be allowed to do the necessary with respect to the often redundant number of employees. This implies that a review of labour legislation be an integral and important part of deregulatory policies. One of the best uses to which government could put the funds from its sale of public sector equity is into a fund destined to provide unemployment benefits and retraining along with placement for displaced workers.

Lastly, in a democracy such as India, it will be important to create constituencies in favour of privatisation. In the UK and France, for example, the creation of private shareholders on a large scale amongst the general public proved to be the main factor in the government's ability to maintain the privatisation process in a long-term framework and to see it successfully through.

HARVARD BUSINESS REVIEW REPORT

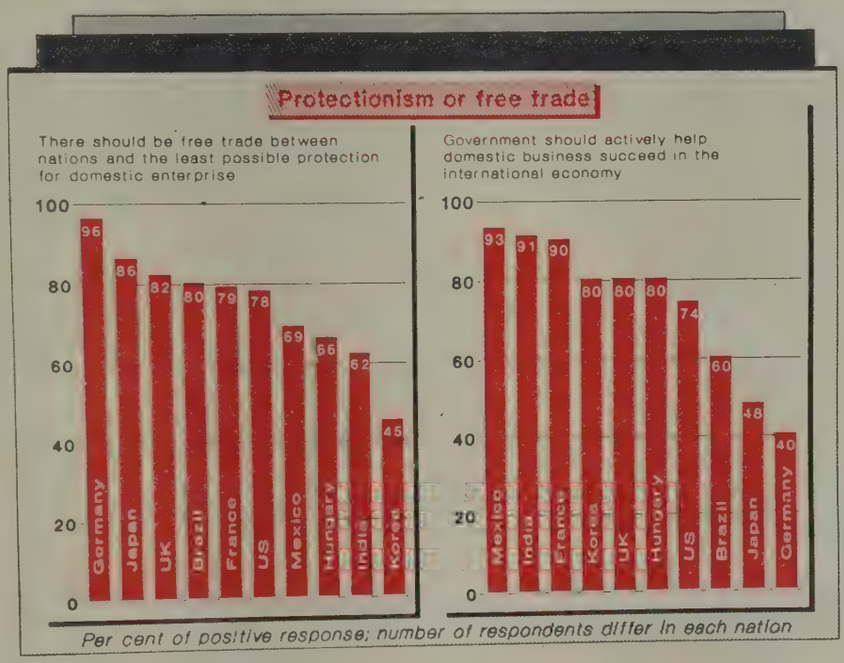
Transcending the boundaries of business

For much of the twentieth century, business managers around the world confronted a series of walls. Walls between nations that establish the boundaries of national markets, national practices, or national social, economic, and political systems. Walls between the company and the society in which it exists, drawing sharp distinctions between corporate interests and social interests. Walls between work and home, separating those activities that involve earning a living from those that constitute just plain living. Walls within the workplace itself, dividing managers from workers, function from function, line from staff. And walls between the company and its stakeholders, including suppliers, customers, and venture partners.

Now, we are told, the walls are crumbling.

Globalising markets, instantaneous communications, travel at the speed of sound, political realignments, changing demographics, technological transformations in both products and production, corporate alliances, flattening organisations — all these and more are changing the structure of the corporation. The once rigid and unreachable boundaries of business are fading in the face of change.

Or so many experts say. But what is the experience of real managers around the world?



What the managers said

To find out, in November 1990 *Harvard Business Review* conducted a world leadership survey exploring the boundaries of business. After constructing and testing the survey questionnaire, HBR itself crossed boundaries, arranging to share the survey with 25 publications (including *Business India*) in 25 countries on six continents, with each publication reproducing the survey in its own language.

By January 1991, 11,859 responses to the 91 survey questions were received for analysis at Harvard. Details of each nation's findings were returned to the appropriate magazine editor for further analysis and comment. If there is a single message from the survey results, it is this: change is indeed everywhere — regardless of country, culture, or corporation. But the idea of a corporate global village where a common culture of management unifies the practice of business around the world is more dream than reality.

But the survey results also uncover the leaders of the dream. For the most part, traditional industrial enterprises — larger, older, publicly-held manufacturing companies with long planning horizons — are leading the drive toward globalisation. These organisations are more "cosmopolitan" in their outlook and are reshaping their boundaries faster. They are the most international in scope, least protectionist, and most closely involved in cross-boundary relationships with suppliers, customers, and venture partners.

They also have undergone the most pervasive change: more downsizings, reorganisations, CEO changes, mergers or divestitures in the last two years. Respondents from this sector report less satisfaction with their own jobs and a decline in loyalty and commitment in their companies. Such companies — and such managers — are in the vanguard of changes that could confront business with new political and social struggles.

INTERNATIONALISTS VS ECONOMIC PATRIOTS

Most respondents naturally want businesses to have the freedom to make decisions in their own interests, without having to take "patriotic" considerations into account. As expected, the most internationalist views on the survey are expressed by German, Swedish, Finnish, Dutch, and Belgian respondents. It is no surprise to find the capital of the European Community (Belgium) and its unofficial leader (Germany) among a group of nations whose size or situation makes trade a necessary component of a healthy economy.

Japanese antiprotectionist responses are most surprising in light of western "conventional wisdom" that says Japanese companies benefit from government protection and assistance. Assuming the honesty and accuracy of the response, three interpretations seem most plausible. First, this group of Japanese managers, drawn primarily from older companies competing domestically, having heard recent exhortations in the Japanese media about the inevitability of internationalism is now playing that message back. Or, second, they could simply reflect a growing confidence within Japan over the quality and performance of their products. Or, third, it is possible that western conventional wisdom is simply wrong.

Underneath the world majority's endorsement of globalism are some potentially difficult contradictions. A third of the survey respondents say that business should be willing to pay a premium to support domestic suppliers, and a quarter want business owners to care more about their country's success than their company's. These managers are indicating their willingness to put patriotism before profits. They represent a sizeable

business group available for political mobilisation in the name of protectionism.

Even in the unlikely event that trade barriers disappear, other contentious issues remain around the rights and responsibilities of global companies. Respondents appear to draw a clear line between economic freedom and political rights. While foreign ownership of local assets is acceptable around the world, foreign voice in local affairs is not.

Will local politicians simultaneously court foreign investors but exploit xenophobia in trying to keep their country free of foreign influence? If a freer flow of capital across country borders is not accompanied by the ability to protect that capital through the political system, will global companies exit or will they enter into the political fray?

BUSINESSES AS CITIZENS: WHICH SOCIAL RESPONSIBILITIES?

Respondents everywhere single out the quality of education as the most significant social issue affecting their organisations and they feel business should take the lead in improving it. A scant 5 per cent feel business should not be involved at all. While 18 per cent say that businesses should limit their contribution to financial support, another 77 per cent approve of a very active role. And a great many respondents feel business can make a very useful contribution to basic literacy skills.

Environmental issues such as waste disposal and pollution are the second highest social priority, though falling well behind education in degree of importance to the respondent's own business. But solving environmental problems is the responsibility of those that create them. Most respondents are willing to shoulder all the burdens; only 3 per cent — one of the lowest responses on any item on the survey — think business should not be involved at all.

Consensus breaks down, however, around somewhat messier human problems that are country-specific: alcoholism and drug addiction, crime-ridden cities, and poverty. Argentinians, for example, worry more about the impact of poverty and unemployment on business, while Americans see unsafe cities and substance abuse as more pressing problems.

PRODUCTIVITY AND PARENTING

Respondents voice strong support for practices that help working parents. While world averages are skewed slightly because Americans take the lead in this area, Japanese, Brazilian, Mexican, and Canadian respondents are also strong supporters. Only South Koreans are dissenters.

Finding world consensus in a direction some consider "women's" issues — from a survey response that is 90 per cent male — is noteworthy. Attitudes toward work and family are fraught with cultural overlays, coloured by deeply-held personal values. Yet respondents agree on three "win-win" practices — good for both families and organisations.

First, child care at the work site is overwhelmingly supported by respondents. Indeed, there is more agreement in this area than in any other on the survey.

A second practice considered good for both families and organisations is for husbands and wives both to hold important paid jobs. There is strong support for dual-career families even among those who believe that it is good for the family to have a family member at home to take care of children. Still, the line between work and family should not be erased too much, respondents believe; a sizable group feel a husband and wife should not work for the same organisation. Clearly, respondents' views reflect a deep ambiguity — and continuing conflicts for women, who are expected to work at demanding paid jobs while "someone" stays home with the children.

Flexible work hours — the ability to begin and end work at any time — is the third practice considered good for both families and organisations. Support for flextime appears connected to a desire for family members to be able to provide care for one another, instead of relying on child care centres. Respondents feel that having a family member at home to take care of the children is good for the family — though fewer support stay-at-home family members than support work-site child care. But flexible work hours are seen as good for the family just as often as a family member at home.

By supporting child care and flextime, managers are endorsing the work side of the work-family equation; the family side remains unaddressed. This area is ripe for new solutions that go beyond parenting leaves and sabbaticals. Will we see flexyear — the opportunity to work in-

Comments from across the globe

Japan

"Japanese workers' loyalty and commitment to their companies has declined dramatically during the past ten years. The reason is that the opportunity for promotion has diminished as the population has aged. Some people say the rising sense of individualism and decrease in loyalty will deprive Japanese companies of competitiveness, but others say this change is necessary for Japan to become a more mature society."

NOBUYOSHI MIKI, editor-in-chief,
Diamond Harvard Business

Germany

"Free trade and the power of international competitiveness have made Germany a leading exporting country, so it is not surprising that the survey found German managers opposed to any kind of protectionist trade barriers or government assistance. There is uncertainty as to how successful economic reunification will be, but I don't see a change in the government's present policy towards business. Germany has learned how harmful any kind of "protectionist" barriers can be, and German business leaders will not allow the construction of any walls around free trade."

HORST GEORG KOBLITZ, editor,
Harvard Manager Magazine

France

"French companies are enjoying a greater and greater amount of autonomy every year since Mitterrand was elected in 1981. This has caused a great expansion of French business around the world. Few French companies however have been willing to co-operate with the state in finding new ways to train workers and care for their families. If French corporations continue to ignore the country's domestic problems, they will be confronting an underskilled labour force too concerned with its inability to house and care for its families to propel further business expansion."

ERIC MEYER, managing editor,
Harvard L'Expansion

tensively for periods of time, then ease up, perhaps around school vacations? Or will solutions lie in technology — making work flexible and portable — or adding labour-saving innovations to increase productivity while freeing time? A new work force, composed of more working parents, requires a new look at the workplace itself.

FISSURES INSIDE THE WORKPLACE

Today's work force is generally viewed everywhere as better than ten years ago in its skills and motivation. This positive aura is even stronger for successful, growing companies. Managers from growing companies think more highly of their own jobs, their employers, and their people than do those from stagnant companies — one of the few differences between the groups on the survey.

Many respondents count "work force skills" among the most important business success factors, but successful companies have a higher percentage of managers who believe their people actually have better skills. Are the people in such companies really better — or does a "halo effect" surround anyone who works in a successful organisation? Research suggests that positive views of people's abilities can cause high performance as well as result from it. A "culture of pride", based on success, increases confidence, motivation, and co-operation. It's a virtuous cycle: performance stimulating pride stimulating performance.

But the widely-noted decline in employee loyalty and commitment is also confirmed by respondents in many countries. And they express more satisfaction with their jobs than with their employers — a pattern indicative of the shift in managerial loyalty from company to profession.

That gaps remain between managers and non-managers is not surprising, but the nature of the gaps is suggestive. Workers are seen as having a widening edge over managers in their ability to work well in teams; managers are seen as increasing their cross-functional knowledge more than non-managers. Managers also tend to reserve strategic information and project initiation for themselves.

ANXIOUS ALLIANCES, CAUTIOUS COALITIONS

While boundaries within the organisation are shifting slowly, the blurring of external boundaries is apparently happening faster. Larger, older manufacturing companies are in the vanguard, but they are proceeding cautiously.

Is ambivalence about breaching company boundaries a function of the difficulties involved in making this change? Most respondents' companies are engaged in at least a few joint ventures or alliances — though more often in countries like Sweden or Belgium than in Argentina or Brazil. The more joint venture experience respondents have, the more they identify managerial issues as worrisome. For instance, Belgians are more concerned about loss of control and information in collaborative ventures. In contrast, Austrians, who report less joint venture activity, consider the biggest risks to involve political and macroeconomic factors such as exchange rates.

It is one thing for less experienced managers to be unaware of the corporate culture clashes and ongoing managerial dilemmas of cross-company coalitions. But if so many experienced managers recognise that ongoing management issues are the biggest risks in alliances and partnerships, why do companies devote con-

Britain

"The incredible pace of organisational change in Britain over the last decade stems directly from Margaret Thatcher's desire to develop the enterprise culture. Wholesale privatisation of state monopolies, the liberalisation of capital markets, buy-outs, buy-ins, and new start-ups have helped create thousands of new businesses that could form the foundation of a multilayered corporate culture in Great Britain.

"The British, however, still have difficulties to overcome. Their insularity, their neglect of education at both the personal and state level, and their paucity of language skills are all major failings. Mistrust of foreigners is still a powerful factor operating against the country's longer term interests."

CHRISTOPHER PARKES, editor,
Business

South Korea

"Korean companies are expected to play a major role in educating their employees and caring for their families. This guarantees a qualified and loyal work force for Korean industries. Koreans will continue to be very optimistic about future industrialisation as long as corporate control of retirement funding, health care, housing, and child and elderly care continues to thrive."

YONG HEE CHEE, chief editor,
Harvard Sogang Business

Singapore

"Because domestic opportunities are limited, homegrown companies are setting their sights on overseas investment in an attempt to become global players.

The government has been a key architect of this plan and has even acted as a partner in a local food and beverage company's acquisition of the Chung King Corporation in the US. Because of the limits on the size of the Singapore labour force, the government also is exhorting manufacturers to automate and focus on less labour-intensive, higher value-added industries."

PATRICIA M. SCHERSCHEL, executive editor,
Singapore Business

TABLE - 2

Key success factors

Success factors depend on the country's culture and circumstances (per cent of respondents that checked each success factor)

Country	Work force skills	Capital	Trade policy	Product quality	Product development	Management	Technology	Customer service
Germany	62	5	4	33	17	44	27	17
France	49	6	26	48	19	17	27	36
Great Britain	1	11	2	42	21	37	29	58
United States	29	12	2	40	22	29	36	52

India	21	13	1	47	17	35	37	43
Brazil	18	12	17	48	10	35	45	22
Japan	11	6	5	36	54	42	38	25

siderably more resources and top management time to negotiating the deal than they do to managing the relationship?

AGENDA FOR THE NEXT CONVERSATION

Comparing and contrasting opinions from managers in many countries provides an opportunity for leaders to hold a mirror to themselves, their companies, and the countries in which they do business. As in a mirror, the images could be distorted by any number of cultural factors — or the self-selection of respondents. Still, taken as a whole, the survey results suggest some topics for the next conversation:

- Look to Germany for role models of companies "fit" for global competition. German cosmopolitanism is associated with less reliance on government and more co-operation with suppliers and customers. Working effectively across boundaries could come more easily for German companies, giving them an edge in the global economy. In contrast, companies in English-speaking countries, including the US, are still comparatively inward-focused.
- Worry about the Japanese emphasis on product innovation — and the Japanese work ethic. In fact, worry about Japanese worries. A tendency to be dissatisfied — for example, with the work force — coupled with a productivity emphasis could spur Japanese companies on to more achievements, especially in labour-saving technology.
- Expect less from one's country and give more. Conflicts and contradictions around political rules for the economic game are still to be sorted out. Companies operating in many countries are not expecting much direct government economic assistance. At the same time, companies that are excellent local citizens contributing to the improvement of society can have a stronger voice in political affairs.
- Get on the child care and education bandwagons. The overwhelming worldwide consensus about the importance of these issues suggests that companies that do not contribute could lag behind their competitors. While cleaning up the environment is also an important arena for action, business leaders already see this as their responsibility. A greater challenge for business is to develop a social agenda on ways to contribute to today's families and tomorrow's work force.
- Close the gap between values and practices. Do too many managers lack faith in the capabilities of non-managers? General agreement about the importance of people to a company's success should be translated into opportunities for those at the bottom to get more information, initiate projects, and mingle with management. Similarly, endorsement of the importance of customer service and product quality should be reflected in new ways of including customer and supplier perspectives in decision-making.

A smaller world creates a bigger agenda for business. There are more cultures to understand. More social responsibilities to master. More time pressures to juggle. And more relationships to rethink.

KERALA'S TOTAL LITERACY

Reading development's future

On 18 April, Kerala reached a significant landmark. It was proclaimed the first totally literate Indian state, a triumph for the country and other developing nations. The literacy programme in Kerala has proved to be an inspiration and a model for the country

"Knowledge emerges only through invention and re-invention, through the restless, impatient, continuing, hopeful inquiry men pursue in the world, with the world, and with each other."

—— Paulo Freire
in *Pedagogy of the Oppressed*

Photos by K.G. Kumar

The alphabet and* (inset)*: a teacher with her innovative teaching aids

Every once in a while Kerala stirs out of its industrial slumber and, like a practised magician, does something spectacular that captures the attention of not just the nation, but the entire world. Usually the result is knowledge in a new and unexpected form, knowledge which can help transform society.

In the arena of politics Kerala's acts have few equals. In 1957 it produced the world's first elected communist government. The world was stunned. And then, over the years, it experimented with coalition governments of various political hues. All along, on the social front, egged on by myriad mass movements, Kerala went on to produce a superior quality of life that soon became the envy of developing countries. Scholars and planners began to avidly propound the 'Kerala model' of development (see *Business India* February 5-18, 1990).

And now, in quick succession, Kerala has pulled off a twin triumph that has the world once again gaping southwards with awe. The focal point this time is literacy, one of the pillars of the Kerala development experience. On 4 February 1990, Ernakulam (area: 2,400 sq kms; population: 3 million) became the first district in the country to be declared totally literate with a literacy rate of 98.34 per cent in the age group 5-60. And a year later, on 18 April 1991, at a massive people's gathering in Kozhikode, Kerala achieved a more creditable first when it was proclaimed the nation's first totally literate state with an official literacy rate of 90.52 per cent and an unofficial, truer level of 93.64 per cent (including about 300,000 who became literate after the census enumeration).

Behind these figures — dazzling as they are — lie some more far-reaching truths. The literacy programme, a broad-based grassroots effort, has swept through the state like a bracing wind, rejuvenating a cynical youth and putting the faith back in people-based development programmes. Most important of all, the literacy programme has given the deprived and oppressed sections of Kerala's society a new voice, a new courage to question the world and its practices.

Listen to these fresh voices of literate Kerala: Lakshmi, a frail 98-year-old former coir worker, never failed to attend the daily literacy class near her hut near Kovalam. She, along with nine others, was taught by a 17-year-old girl, Suma, a pre-degree student. Asked if she felt scared about appearing for the literacy evaluation final examination, Lakshmi chortled: "If you know something, why be afraid? Only the ignorant bow down in fear?" And this from a woman, who, 20 years ago, had her hair ripped off by policemen breaking up a coir workers strike.

Muttani Mallan, a 78-year-old chieftain of the Kannikar tribe in a forest settlement north-east of Trivandrum, attended classes too. "I'm too old for all this," he says, "but I know my children must learn to read and write for they must not suffer like we did."

Representative voices

These are not isolated voices. Their fervour may not be sparklingly evident in today's Kerala, already lulled by the victory in the war against illiteracy. But they are still representative of the awakened feelings of around 1.2 million neoliterates now enjoying their travels in the world of letters.

For Kerala this adventurous journey began two years ago on 26 January 1989 when the Ernakulam District Total Literacy Programme (EDTLP) was formally inaugurated. But that is just a chronological specificity, for Kerala has had a long-standing romance with literacy. From the latter half of the 19th century onwards, the governments of the three parts of Kerala then — the princely states of Travancore and Cochin, and Malabar, directly ruled by the British as part of the Madras Presidency — did much to make their subjects literate.

Such a history gave Kerala a headstart. Nontheless, despite continuing increases in literacy rates since 1951 (*see table*) which pushed Kerala far ahead of the rest of India, around three years ago, it still housed about 3 million illiterates, of whom 3 million were in the age group 5-60. Obviously, past efforts to eradicate illiteracy had made little headway. These included the Adult Education Programme, the Functional Literacy Programme and the work of the Kerala Association for Non-formal Education and Development.

The drawback with these was that they viewed neoliterates as primary school students, not as adults with a different set of problems. Their approach was selective and centre-based — set up a centre to impart education and then hope that the masses will flock to it. The alternative was, of course, to take the programme to the masses in a campaign-style effort. And that is precisely what happened in Kerala.

This technology — the universal campaign methodology — was first tried in Ernakulam. That was its testing ground, but as a methodology it had been advocated over five years ago by the Kerala Sastra Sahitya Parishad (KSSP), the celebrated people's science movement formed in 1962 by a small group of Malayalam science writers. (Today the organisation has over 50,000 members and around 2,000 units throughout Kerala.)

With the hindsight of experience and success, the KSSP has identified six prime elements of this methodology:

- A massive, intensive approach — the whole target area to be tackled simultaneously.
- Building up a 'saturation environment' so that no member of society is free from some impact of the programme.
- Transformation of literacy work from 'job opportunity' to 'patriotic duty'.
- Painstaking planning of time and space for the deployment of human and material resources 'as in a war'.
- Integration of people's zeal with the administrative machinery, backed by a system of professional project implementation.
- Delinking the implementing machinery from governmental bureaucracy to permit greater decentralisation, dynamism, flexibility and accountability.

But theory is one thing, practice quite another, as the KSSP discovered in 1987 when it plunged into a pilot project to wipe out illiteracy in Malappuram, a backward district in the north of Kerala. The effort flopped. For one thing, the project was badly formulated — it grossly underestimated the dimensions of the problem, while simultaneously being overoptimistic. For another, it failed to integrate the government's efforts with those of the people.

Whole-hearted commitment

Ernakulam was where the KSSP sought to avoid those mistakes. Meanwhile, the government of India had formed the National Literacy Mission (NLM) in 1987. The KSSP now had someone to turn to for funding. Another source was the Ernakulam district collector, K.R. Rajan, himself a former vice-president of the KSSP. Rajan whole-heartedly committed his administration to the project.

To oversee the programme and to ensure a broader base, a new body, the Ernakulam District Literacy Society, was registered. It comprised different voluntary and service agencies with Rajan as convenor and chief co-ordinator.

Looking back, Kerala was lucky that Ernakulam became the laboratory for illiteracy eradication. It was not a particularly difficult area to work in, nor was it wholly darkened by illiteracy. The 1981 census, in fact, ranked it the third most literate district in Kerala. But, as the EDTLP's comprehensive survey of March 1989 revealed, there remained pockets of illiteracy — 22 per cent of the illiterates were Muslims; 18 per cent from the Scheduled Castes. In all, 62.55 per cent of illiterates were women.

The survey itself was a gigantic effort with around 50,000 volunteers covering 80 per cent of the 600,000 households in a single day. The exercise turned out to be a contact programme which paved the way for the ensuing mass participation. The EDTLP's approach was non-exclusive. It targeted a wider group of illiterates between the ages six and 60, though the NLM had accepted the 15-35 range as representing the productive age group. Said one organiser: "We accepted whoever wanted to learn."

This supercharged social environment, where the message of commitment and duty mingled with a carnival-like atmosphere of participation and excitement, was the outcome of the campaign style that the EDTLP developed. This approach sought to saturate the environment with a series of messages and propaganda efforts, sustained through the skilful use of traditional, cultural and folk-art media. Apart from conventional aids like cinema slides, hoardings and posters, the environment was bombarded with padayatras, kala jathas, kala melas of neoliterates and children's rallies, to name a few.

A literacy class: women outnumbered men

The training of instructors was structured like a pyramid, with a group of professional resource persons preparing the training module and then passing on the techniques to the 'master trainers' in a training camp. These master trainers were then equipped to train the instructors.

Bountiful zest

These instructors made up a veritable army. Since the size of each class was deliberately kept small, not exceeding ten, around 20,000 instructors had to be trained for the EDTLP. Most of them were drawn from the same localities as the learners. Most were young girls who made up for their inexperience with a bountiful supply of youthful zest. (To be sure, many

Next tribals

About 80,000 tribals were left out of Kerala's literacy programme. They will now be covered in a special project. The KSS realises how difficult the work will be. Not only will the instruction material have to be revised, the instructors selected will have to be far more committed ("semi-Naxalites" was one officer's description of qualifications needed) to live and work amongst the tribals in the forest.

Past efforts could not lure tribals to regular classes mainly because they had to labour hard to earn a day's living and had no time or energy left to attend. According to B.C. Sreedharan, a 26-year-old instructor who himself belongs to the Irula tribe, unless some food incentive is offered, attendance will continue to be thin.

The KSS initially proposed a budget of Rs.937 lakh, of which Rs.600 lakh was to go towards one meal during class. The government of India, however, has sanctioned only Rs.187 lakh and the Kerala government Rs.120 lakh. The KSS is now trying to tap voluntary agencies for the meal part of the budget.

The tribal literacy project hopes to additionally impart knowledge of land management and marketing to forest produce. It aims to equip tribals to fight exploitation — something they have experienced only too well, alienated as they are from much of their own land.

■ KGK

did sign up in the hope that the experience would earn them government jobs in future.)

It did not take long for this zest to spread to the learners. As economic historian Michael Tharakan explains, "To be illiterate in a highly literate society is a fate worse than to be illiterate in a generally illiterate state. And to argue against literacy efforts would be suicidal." Soon enough, Ernakulam was alit with scenes of middle-aged men and women huddled together in the glow of a kerosene lamp, slates in hand and books on the floor, listening intently to their instructors.

Agricultural workers would gather around for their classes in the couple of hours available in the late evening, between the harvesting and threshing of paddy. Women coir workers would bring their books to class, while waiting for the coir to arrive by the morning boats. And fishermen would take their instructors with them on board their craft and learn during the long, previously lonely wait on the high seas.

Classes were no longer some distant, exterior phenomena to which seekers-after-knowledge had to trudge. In the Ernakulam programme, the classes came down to the learners, fitting into their work schedules, elbowing into their daily routines and ultimately becoming an indispensable part of their lives. Economist K.N. Raj says the programme is one which "reached the hearts of the people — that is what development is all about".

By the time the EDTLP came to a close on 4 February last year, 135,254 persons were able, for the first time in their lives, to read and write. These were the ones who had scored over 80 per cent marks in the final evaluation test which assessed their skill in reading, writing and numeracy.

Cost effective feat

And all this had been achieved at tremendous cost effectiveness. The average cost per learner came to just Rs.40, or, if calculated for each successful learner, Rs.65. In purely monetary terms, a total of Rs.80 lakh was spent. But according to one estimate, if the people's voluntary contributions were also to be taken into account, the actual total would have touched Rs.5 crore.

To be sure, not everything was perfect with the Ernakulam experiment. For one thing, as Tharakan discovered in his evaluation, the training of instructors did not quite succeed in adequately equipping them technically. This was because it failed to draw on talent available elsewhere in other voluntary agencies. If the programme succeeded despite this handicap, the credit for that must surely go to the boundless enthusiasm of the army of young instructors.

The project's monitoring system was also faulty, especially at the start. This led to at least one serious case of misreporting by an assistant project officer. The post-literacy phase of the Ernakulam project has also got bogged down in problems. The main reason is the souring of relations between the high-profile Rajan and the KSSP, which had meanwhile bagged UNESCO's literacy award. Some observers view this as a clash of egos over who should take credit for the stupendous achievement. At any rate, post-literacy work in Ernakulam seems crippled right now.

Nevertheless, in the light of the unquestionable gains from Ernakulam and buoyed by the unflagging enthusiasm and vigour of the masses involved, no responsible Keralite could sit back content. The next giant leap just had to be taken — the campaign to make the remaining 13 districts of Kerala, and thus the whole state, totally literate.

That mission got ticked off the day the Ernakulam project was declared successful. In true campaign style, the Prime Minister handed over to Kerala's chief minister the symbolic torch of literacy. 'Akshara Keralam', as the total literacy project was named, had been launched. From then on the elements of the EDTLP were put to good use throughout Kerala, but with significant refinements. Says C.G. Santha Kumar, who was the EDTLP's project officer: "The Ernakulam project was an innovation, this was an application. We learnt from our mistakes in Ernakulam."

New elements introduced

The Ernakulam subprojects (4 to 8 per assistant project officer) were found too unwieldy and ineffective. The Kerala project therefore chose each panchayat as a subproject. Akshara Keralam used the same methodology which had delivered the goods in Ernakulam. But it introduced new elements, viz:

- Patrons committees, where local learneds functioned as guardians, egging on new students.

• Academic councils for back-up support to instructors

• Village parliaments to impart to neoliterates a flavour of parliamentary democracy.

• 'Kudumba Sabha' or family communions, a practice borrowed from the Kerala Christian community, where family members of a class gather round to share their experiences.

• Study tours to public institutions like schools, post offices, police stations and government offices. This was something that most neoliterates themselves demanded. For many it proved to be a demystifying experience, with village women suddenly finding the guts to question high-faulting government officials, even policemen.

Akshara Keralam too was sustained by an environment electrified with zeal. This was evident on 8 April 1990 itself, when the state-wide single-day survey identified the target group of illiterates. In most areas, the big names of the community themselves went around asking the first few questions. Explains Santha Kumar: "To involve an entire society on a larger canvas, you need to rope in the opinion leaders of the locality."

The survey identified 22.5 lakh illiterates in the 5-60 age group. Of these, 16 lakh were enrolled in about 2 lakh classes. About 12 lakh cleared the final evaluation.

Periodic doses of cultural extravaganza, all with the backdrop of the literacy message, maintained the tempo of the programme. Many armchair critics have dismissed these efforts as so much cant and pompous hype, a large-scale tamasha that should have been avoided. One media expert labelled it a case of 'communication overkill'. Yet, the hard truth was that for both instructors and learners, such cultural action was the wellspring of their undying enthusiasm for the project and their passionate commitment to its success. This became true particularly in the context of Kerala's tradition of music-and-dance ensembles, and the jathas popularised by the KSSP since the early 1970s. Says Tharakan: "It's clear that people-based communication methods are far more effective than media-centred interventions."

Akshara Keralam did display some elements of a mad race to beat the 1991 census. The Kerala Saksharatha Samiti (KSS) officials, however, say they were just using the IPCL (intensive pace and content learning) method. Says Warrier: "In the beginning, we didn't even think of the census." Adds P.K. Sivanandan, KSS's secretary: "If we had had that in mind, we could have counted several more."

Need for a broad base

In fact, Ernakulam had taught the need to broaden the support base for any literacy work. Thus, in Muslim-dominated districts, Muslim organisations, including the opposition party, the Muslim League, were in the forefront of literacy work, while Christian bodies took the lead in a Christian-peopled region like Idukki.

Yet, it cannot be denied that the Left Democratic Front (LDF), particularly its leader, the CPI(M), has gained politically from the literacy programmes. This was evidenced in the recent district council elections where the LDF scored a landslide victory. The KSSP too has increased its membership following the literacy campaigns. Yet — and therein lies the genuine success of the programme — few neoliterates identify either themselves or the literacy programme with any individual, party or organisation.

As in Ernakulam, Akshara Keralam proved cost-effective. The actual per capita expenditure worked out to Rs.39.14 per learner, lower than in Ernakulam and far below the NLM's standard of Rs.70. The KSS could even find sponsors for the 7.5 lakh spectacles that were distributed to short-sighted learners.

Where does literate Kerala go from this current peak? Much remains to be done. There are still around 12 lakh illiterates left in the state, especially in the coastal and tribal areas (*see box*) and amongst the Tamil-speaking floating population. The enthusiasm of the instructors seems set to wane, now that the glorious peak has been climbed. And there remains the principal responsibility of ensuring that the neoliterates do not relapse into illiteracy. This is especially likely to happen in the absence of good literature for neoliterates.

The KSS hopes to tackle these problems in the second phase of the project, which will be formally begun in June, after the Lok Sabha elections.

Economist K.N. Raj thinks there will be a 'real resurgence' in Kerala. He says, "Thirty or forty years from now Kerala will be unimaginable, despite its development being slow on the economic side. Kerala has done better than even China, though China's performance is superior on a national scale."

Clearly, the Indian nation at least has much to learn from the Kerala experience — and much to be grateful for. Raj, who has been closely involved in India's planning exercises, says: "It is very important that the Kerala story be given great publicity. It should evoke similar efforts elsewhere."

But anyone who hopes for an easy, made-to-order transfer of Kerala's success will be sorely disappointed. Says Santha Kumar, who toiled for the Ernakulam project: "I don't have the courage to say that Kerala's experience is replicable elsewhere."

Clearly, the rest of India will have to experiment with different approaches and techniques before it can hope to see the dawn of literacy. But Kerala's triumph — and its lesson — lies in how it hacked a way through the forest of illiteracy. The rest of India must follow what Kerala did. And what Kerala did is best summed up in these lines from a Chinese poem:

Go to the people,
live among them,
learn from them,
love them.
Start with what they know,
build on what they have,
but of the best leaders,
when their task is accomplished,
their work done,
the people will remark
'we have done it ourselves'.

■ K.G. KUMAR

Growth of Literacy

Year	India		Kerala	
	All	Females	All	Females
1901	5	1	14	6

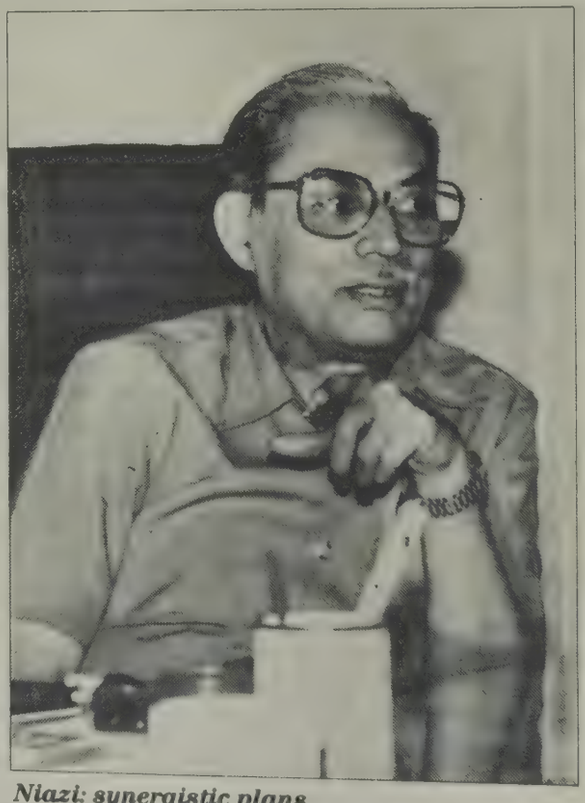
IBP

The winds of change



After decades of playing a minor role, this oil company is now moving into the big league. It has redrawn its relationship with IOC and is setting up a refinery that should comfortably double its present turnover. Apart, of course, from some more diversifications

India's smallest oil company is making some big moves. IBP, formerly Indo-Burma Petroleum Company, is the only oil company in the country that does not possess a refinery of its own. Till now its main-activity has been to serve Indian Oil Corporation (IOC), the country's largest oil company, as a consignee for the eastern region. This activity provided a very small margin and was primarily responsible for the company's relatively small profits on a huge turnover. On sales of Rs.1,353 crore for the year ending March 1990-91, net profit was less than Rs.7 crore.

But all this is now set to change, according to chairman A.A. Niazi. IBP has finally snapped the umbilical cord that had tied it down to IOC for nearly two decades. Following an agreement signed recently, IBP will now buy oil from IOC at ex-refinery prices and distribute it on its own. Thus from now on the company will not have to share its margins with IOC. IBP can also now work out similar arrangements with other oil companies. In fact, under a MOU signed with Madras Refineries on 25 April, IBP will set up its own infrastructure in south India to market products from the former's proposed crude distillation unit in the Tanjore district of Tamil Nadu which will go on stream in July 1993.

IBP's most prestigious new project, however, will be what is popularly billed as the 'Assam Accord' refinery. The fourth one in the state, the Rs.1,400 crore project will have a capacity of 3 million tonnes and will nearly double IBP's current annual turnover. The company has already acquired land for the project at Jorhat and 50 officials have been recruited in the first phase. The ongoing ULFA agitation has cast some doubts on the schedule of completion but Niazi says that the Assam government has assured him that the project will be implemented without a hitch. "With this refinery we will re-emerge as an integrated oil company," says Niazi.

Paradoxically, IBP was originally the first integrated oil company in undivided India. Set up in 1908, through the efforts of that extraordinary combine — the colonial merchant princes, the Steel Brothers of UK and an Indian cotton trader, A.K.S.A. Jamal, who had migrated to Burma in search of fortune — IBP not only had two refineries in the oil rich Burmese region where it was first set up, but tankers and installations as well in Chittagong, Budge-Budge near Calcutta and Sewri in Bombay. But everything in Burma and what is now Bangladesh was lost during World War II, and the company had to virtually start from scratch once again.

Niazi: synergistic plans

The company's first problem in the forties was that of getting adequate oil supplies. What helped them was their excellent relations with the UK-based Burma Oil Co which, on the basis of a gentleman's agreement, continued to supply oil to IBP between 1942 and 1951. "It was a crucial period for us and it was then that we learnt how to survive against any odds," says H. Tyabji, an old-timer who is still an executive director of the company.

The forties also saw the parting of ways between the Jamals and the Steel Brothers. While the latter retained a 61 per cent marjority stake in the company's equity, the rest was sold to the public. In fact, IBP is one of the very few public sector companies whose shares are traded on the stock exchange. Till just before the Gulf War, its Rs.10 share was ruling at around Rs.200 till the start of the Gulf War last year. It has now dropped down to around Rs.100 per share.

In 1951, the company signed a collaboration agreement with Burmah Shell, a major oil supplier at that time. This arrangement continued till 1972 when the government took over the Steel Brother's stake after it nationalised the oil companies. Since then it has acted as IOC's consignee for eastern India. In 1965, IBP first diversified into engineering following a foreign exchange crisis which resulted in a drop in oil supply from Burmah Shell and consequently a fall in its revenue and profits. Creating an infrastructure was no problem as the company had real estate in Bombay where it could set up its factory.

Risk pays off

"We took a calculated risk then," remembers Tyabji, "since we knew of very little outside oil, but it paid off." Though the engineering division was never really a great success, accounting today for a turnover of only Rs.12 crore, technologically, according to Niazi, it has done some excellent pioneering work, especially in hi-vacuum technology and the manufacture of cryogenic containers for which there is a sizeable export demand in the neighbouring countries. The black sheep is the factory in Nasik manufacturing valves and regulators, which has steadily been operating at a loss.

A diversification into chemicals in the mid-seventies — when industrial explosives, says Niazi, were in short supply and there were very few entrants in the field — has been a success. IBP's chemicals business group tied up with IRECO, the American global leader in this field, with fortunate results. Chalking up a turnover of Rs.39 crore, the division is currently poised for further growth and product

diversification. It concentrates mainly on manufacturing bulk explosives and has plants at Korba, Kudremukh, Singrauli, Ramagundam and Dhanbad all large mining areas.

Of the three major companies which dominate the bulk explosives market, controlling about 80 per cent (ICI, Indian Detonators Ltd and IBP) the share of IBP works out to 24 per cent. IBP's strategy is very clear. They want to make profits in bulk explosives as their packaged explosives operation met with mixed reaction. While the small diameter ones are yet to find ready market acceptance, their large diameter ones have done well.

Of IBP's total explosives capacity of around 30,000 metric tonnes at its various plants, nearly all of it is for bulk explosives. For the moment, says a company official, further expansion in capacity is not really a priority. IBP instead would prefer to build volumes in the existing plants to try and reduce overheads. Additional plants might come up once the company goes ahead with new products such as detonating fuses and shaped charges for use in oil wells.

A major advantage for IBP is its public sector status. Its competitors are in the private sector — ICI, Indo Gulf Explosives, IDL, Karnataka Explosives, Maharashtra Explosives, etc. "IBP enjoys an intangible privilege in an user industry where 99 per cent of the purchase is by the government sector," says a major competitor. This year too, twenty six explosive companies had quoted for a Coal India tender, but IBP bagged the contract. Niazi, however, makes it clear that "being a public sector unit does not necessarily qualify IBP for preference by government companies. Our pricing is very competitive and we intend to keep it that way."

The engineering and the chemicals division were last year responsible for nearly twenty per cent of the company's profits. For the future though, the petroleum business will continue as the mainstay of the company's activities. "With the nation facing an energy crisis, fresh business opportunities will have to be looked at," says P.P. Roy, general manager, business development and management services. But these will have to be closely allied with national goals and perspectives in core areas of energy — with compressed natural gas, for instance, which IBP is trying to develop and market.

Right now, however, the upcoming Rs.1,400-crore refinery is IBP's biggest project under the Eighth Plan. On a debt equity ratio of 4:1, IBP's share of the 51 per cent equity in the refinery (since it is a subsidiary of IBP) works out to Rs.128 crore. According to finance director, S. Sampath, this will be financed partly through a rights issue and partly through concessional loans from the oil industry development board. The other new projects include a lube blending project in north India, and a Rs.3-crore bitumen emulsion plant at Bombay.

The cumulative effect of these projects will only be apparent in the mid-nineties and should go a long way in value addition. Currently, the value addition works out to about 2 per cent, the rest going towards overheads, material costs and services. The overall performance has been adequate, with the company maintaining a healthy net worth at Rs.70.36 crore with Rs.63 crore for reserves and surplus. Net profit, at Rs.6.83 crore, is marginally up over last year, but is expected to go up further now that the company — following its agreement with IOC — will be able to realise full margins on its products. Volume-wise growth, claims Sampath, has been at a steady 12 per cent. This year, though, he says, growth is likely to be subdued to the government's restrictions on the oil industry.

Lube oil blending unit, Budge-Budge

Where performance is concerned, Sampath admits that IBP may be the smallest of the oil companies, holding only about 4-5 per cent of the market share compared to IOC at 56 per cent, and 40 per cent commanded by Bharat Petroleum and Hindustan Petroleum. Despite this, Sampath claims that IBP's throughput per pump at its 1,200-odd retail outlets is amongst the highest. Also, unlike other petroleum companies which specialise in bulk customers aviation, defence, etc — the major portion of IBP's sales is in the automotive grade.

An unusual PSU

Either way, says Roy, one can't really judge IBP by the same yardstick as any other public sector company. For one, he points out that IBP, unlike traditional oil companies, is small but a well diversified company, and secondly IBP is one of the very few PSUs which monitors its share prices closely, as about 40 per cent of its shares are held with the public. In fact, over the last 15 years, IBP has gone in for three bonus and one rights issue.

IBP also has the advantage of holding 61 per cent in another blue-chip public sector company, Balmer Lawrie (whose shares it acquired through the Steel Brothers agreement with Alex Lawrie, one of the original partners. "While Balmer Lawrie (turnover Rs.285 crore in 1990-91) is very much a group subsidiary, they remain different companies with separate managements — no controls have ever been imposed," says Balmer Lawrie managing director S.K. Sinha.

But whether this state of affairs will continue is another matter. Company officials are of the view that in future IBP may play a more dominant role in Balmer Lawrie, or alternatively disinvest. The feeling is that Balmer Lawrie being a service company to the petroleum sector, it won't continue to receive the kind of favours in future from oil companies that it has done in the past, as IBP is now treated as a fully integrated oil company and hence a competitor. Niazi however, has a different view. He feels that IBP and Balmer Lawrie have a perfect synergy in their operation and hence can consolidate their positions together. After years of low profile existence, new opportunities are gradually opening up for this Calcutta-based company. It remains to be seen whether this old-timer will be able to regain its past glory.

ASHOK LEYLAND DRIVES HOME A POINT WITH FRP

Leading automotive manufacturers have discovered the versatility and suitability of FRP (Fibreglass Reinforced Plastics) Composites to the tough Indian conditions. They have realised how FRP can help in better styling, reduce fuel consumption and increase the life of the product. In fact today, they use FRP to create parts which would have been difficult with material like steel.

Some unique qualities of FRP

- High strength to weight ratio.
- Corrosion resistance
- Fuel savings
- Ease of repair
- Low capital investment.

Comet NC'

FRP, the revolutionary answer for contemporary automotive designers and manufacturers. And making this happen is Ceat, the manufacturers of "Decca Fibre" glass fibre reinforcements.

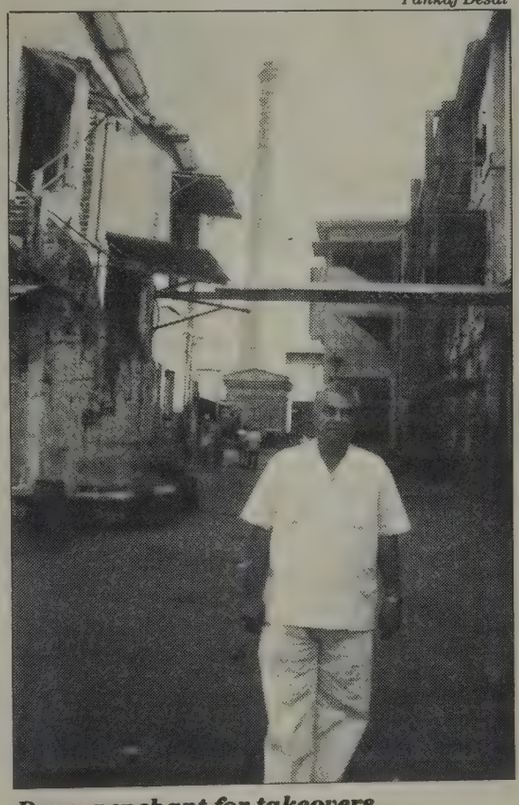
NAVINBHAI DAVE

On the prowl

After turning Swan Mills around, this industrialist has now set his sights on the ailing SLM-Maneklal. His engineering background and the fact that he is flush with funds may swing things in his favour

He has a penchant for white cars, white office interiors, and white clothes, and now, he has picked up another unique trait: buying up sick companies. In 1989, he had bought the controlling interest in the ailing Bombay-based Swan Mills Ltd from J.P. Goenka for about Rs.3 crore and later turned the company around. Now, if things go his way, industrialist Navinbhai Dave hopes to be soon on the driver's seat in engineering company SLM-Maneklal Industries Ltd as well.

Dave has come a long way from the post-partition days which had seen his family uprooted from Karachi, shifting to Bombay and beginning life all over again. His father, a qualified engineer, had started off by working for Richardson & Cruddas in 1948 and then branching out on his own in 1950. Starting off with Sahajanand Engineering Works Pvt Ltd, which manufactures material handling equipment for the coal, sugar and chemical industries, the family later diversified into heat exchangers (Navin Heat Exchangers) and stainless steel and high carbon seamless tubes (Noble Tubes & Engineers Pvt Ltd). It is this engineering background which Dave is trying to cash on in his quest to acquire SLM.



Need for change

A one time reputed manufacturer of textile machinery, oil and petrol engines, gas turbines, boilers and their accessories and high pressure hoses, SLM later fell on hard days (see *Business India*, 28 December 1988). It has been a BIFR case since May 1990. "There is definitely a need for change in the top management at SLM," says a senior officer at ICICI. "The company's performance is way below par, especially since the textile industry in which they operate is doing so well." Nevertheless, along with Dave, a number of suitors have lined up for the company including Mohan Moorthy, a NRI and Batliboi and Co.

An obvious attraction for all of them is the upsurge in the textile industry. Also, even though the company has been in the doghouse in the recent past, its products still carry lot of goodwill. Then there is SLM's real estate — plants at Ahmedabad and Kalol in Gujarat and Andheri in Bombay and company residences and offices in the prime Bombay locations of Cuffe Parade and Warden Road. The residences and offices alone carry a collective price tag of Rs.5 crore — and this is the book value!

According to the ICICI spokesman (the corporation is vetting the applications on behalf of the BIFR), "We are still receiving offers from many companies to take over SLM." Dave has many reasons to feel optimistic about his chances. Even though his group companies had a collective turnover of only Rs.7 crore last year, he seems to be flush with funds. This is evident from the manner in which he pumped in money for taking over and reviving Swan Mills. The takeover artiste, however, shies away from revealing the source of his funds. "Internal accruals, friends, well-wishers," is the enigmatic answer he gives.

Pankaj Desai

Dave: penchant for takeovers

Instead, he harps on his vast experience in the engineering field and the possible synergy of his companies (Sahajanand Engineering, Navin Heat Exchangers and Noble Tubes) with SLM. Boasts a long-time Dave associate, "He shouldn't have any problems in taking over SLM. Dave's personal contacts include politicians and bureaucrats of all parties. And at the BIFR, he is on first name basis with all the key officials."

In the good books

Whether the BIFR would decide an important matter like handing over companies merely on the strength of personal associations is a matter of conjecture. But even without contacts, Dave must be in the good books of the BIFR — because of his reviving Swan Mills. In February 1991, Dave, whose family now owns 59 per cent of the equity in Swan Mills, arrived at an agreement with the Rashtriya Mill Mazdoor Sangh (RMMS) union, to retrench 1,800 of the original 4,000 workers after all their dues pending had been paid up. It cost Dave Rs.9 crore. "The process is still on," he says. "Ideally, I would like the workforce to be streamlined to 1,500 people."

Swan Mills started functioning again on 9 April 1991 after remaining closed for two and half years. The revived company began by spinning 3.5 tonnes of yarn per day and aims to reach 10 tonnes per day by end May. Production has also begun at the tyrecord division.

Dave hopes to repeat the same winning formula once he gets hold of SLM: bring in a new managerial team; infuse funds; rationalise the workforce and streamline operations. His executives project a turnover of Rs. 25 crore within a year of the company's revival and Rs. 50 crore in the second year. So confident is Dave of bagging SLM that he has already started contacting prominent people to put together a new board of directors. P.K. Kaul, former ambassador to the US, has been sounded out for the chairmanship. Minoo Karani, chairman of Hindustan Ciba-Geigy and D.M. Popat, senior partner, Mulla & Mulla, have been approached for directorships.

The ICICI presents its proposals to the BIFR on 10 June. On that day one will know if Dave's efforts at roping in these luminaries were in vain or not. Anyway, Indian industry is slowly becoming aware of this fact — a new takeover king is on the prowl.

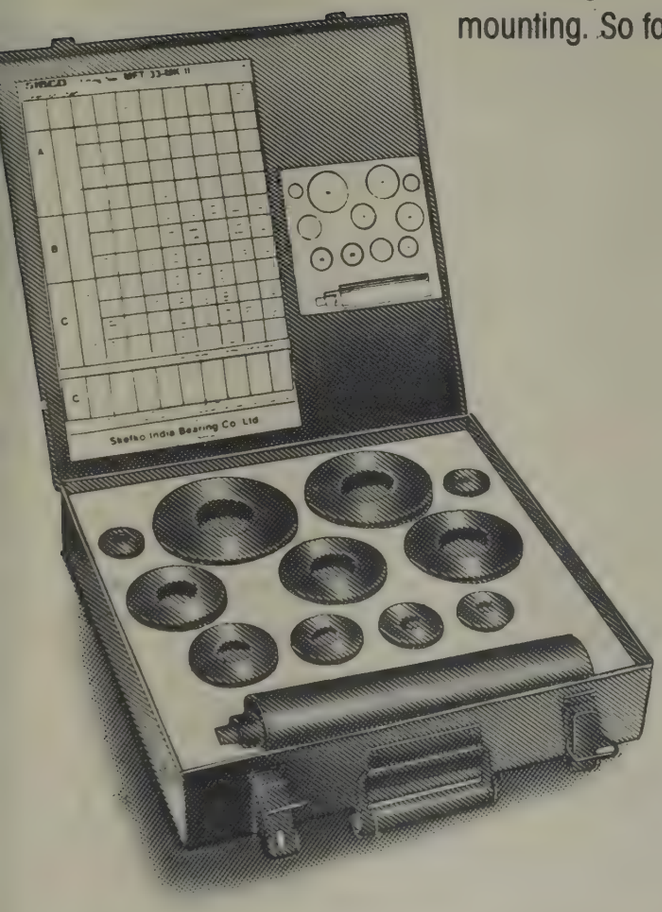
– M.K. Shetty
(Maintenance In- Charge)
New Era Paper Mills Ltd.

"Small bearings are not nuts or bolts! So I recommend only one way to mount them safely – SIBCO® Bearing Fitting Tool."

When it came to mounting small bearings, rough and crude pipes, hammers, rings etc. ruled the shopfloor. As a result, bearing failures were frequent.

One evening while talking to an old friend from SKF, Shetty was offered the solution. At SKF the next day, he was introduced to SIBCO® Bearing Fitting Tool MFT–33 MK II. A compact, portable kit housing 33 machined hardened and black oxidized impact rings and 3 impact sleeves.



And that signalled 'goodbye' to outdated methods of mounting small bearings!.

Skefko India Bearing Co. Ltd.
Mahatma Gandhi Memorial Building, Netaji Subhash Road, Bombay-400 002. Phone-313567.

EARING FITTING TOOL FOR SAFE IOUNTING OF SMALL BEARINGS.

- A compact, portable kit of impact rings and sleeves.
- Makes mounting of small bearings upto 55 mm bore size, so quick, easy and safe.
- Full protection of bearings while mounting.
- Cost saving as bearings last much longer due to correct mounting. So failure rate is low.

Yes! I am interested in **Bearing Fitting Tool .**
So please provide me: (Please tick☑)

1. Price details ☐
2. Technical Specifications ☐
3. Sales Discussion ☐
4. Demonstration ☐

BEARINGPLUS

I also understand that your 'Bearing Plus' programme covers various other advanced and innovative bearing maintenance products.

I therefore request you to recommend and send detailed information on only those products which will help solve my bearing maintenance problems like: (Please tick☑)

1. Under/Over lubrication ☐
2. Damage of shaft while dismounting bearings ☐
3. Uneven heating of bearings ☐
4. Mounting/ Dismounting of large bearings ☐
5. Others (specify if possible) ☐

I look forward to welcome this new era of TROUBLE FREE OPERATION. Let me introduce myself:

UNITEL COMMUNICATIONS

Out of the UB fold

Problems have dogged this company from its inception, and now its private-sector promoter, the UB group, wants to pull out

Vijay Mallya's telecommunication adventure has turned out to be a disastrous one. The liquor tycoon's UB group was among the many large business houses that rushed to grab a piece of the telecommunication action in the mid-eighties. But, unlike the Tatas and the Thapars, who were successful with their ventures, Unitel Communications Ltd, a joint-sector project between Mallya's UB group and the Orissa State Electronics Development Corporation Ltd (ELCO) based in Bhubaneshwar, is mired deep in the red.

With accumulated losses touching Rs.9 crore, UB now wants to pull out of the venture. It has put its 25 per cent stake in Unitel's Rs.6.9-crore capital up for sale. Says Naaz Rovshen, president of the UB group's liquor division, who earlier headed the project as the group's vice-president for electronics and technology, "Everything that could go wrong with the company went wrong."

The problems started right at the time Unitel was being set up. First, by the time UB got its act together, as many as 18 licences had already been issued by the government to private-sector companies for the manufacture of electronic private auto branch exchanges (EPABX) and push-button telephones (PBT). That meant competition even before Unitel was operational.

Big problem

Second, with a choice of Punjab and Orissa as possible locales, UB chose the latter, for obvious reasons. "But Orissa had one big problem," says Rovshen, "Getting trained professionals to move there was not very easy." Nevertheless, the company was set up in that state with a 26 per cent stake from ELCO to manufacture 50,000 EPABXs and 200,000 PBTs.

The third problem was technology. Of the three companies shortlisted by the government to supply technology to Indian EPABX manufacturers — Oki of Japan and Jeumont Schneider and GTE-ATEA of Europe — only the first seems to have been successful in this country. The performances of Tata Telecom and Node, of the Thapar group, are proof of this. But Unitel had opted for GTE-ATEA. And now Rovshen says, "They just didn't have the capability to transfer technology."

Mallya: disastrous adventure

Unitel had problems with GTE-ATEA in many areas, including the choice of important testing machines, software and the supply of matching components. Even the documents accompanying machinery sent to the Indian company were in Flemish and had to be painstakingly translated. The Delhi customs authorities compounded the crisis further by leaving some of the imported equipment out in the open where it was ruined by the rains. This, coupled with problems in getting critical import permissions, delayed the Rs.14.5-crore project by as many as three years.

By the time the company went into production in 1988, competitors like Node and Tata Telecom had firmly entrenched themselves in the market, which already had excess capacity. Cost overruns forced Unitel to price their product higher by Rs.2,000 a line. "Even then we were making losses," Rovshen says. Worse still, capacity utilisation was abysmally low, touching just 30 per cent last year.

Adverse market conditions

Though the company did not have any problems with the technology procured for PBTs from Ericsson of Sweden, market conditions ensured the failure of the product too. Against a demand for 1.2 million PBTs a year, the installed capacity is 3.5 million, spread over more than a dozen manufacturers. And among these, only the ones who got in early, like Bharati Telecom and Rajasthan Telephones are making money. As a late comer, Unitel obviously ran into trouble. Against its licensed capacity of 200,000, its production last year was only 25,000. And general manager G. Raghu Kumar says that it costs Unitel Rs.200 more than the selling price to make a PBT.

According to a competitor, Unitel's costs are higher because of its "use of proprietary components, which increases its cost of production". And indigenisation, which would have helped the company overcome this problem, has been painfully slow.

Despite all this, the company's management personnel, especially those in ELCO, is surprisingly optimistic. Says S.K. Menon, chairman of both ELCO and Unitel, "We have set up a task force which meets regularly and reviews different aspects of the company. A rehabilitation plan will be unfolded soon for which IDBI and other financial institutions have already been approached." Raghu Kumar, too, says that capacity utilisation will be pushed up to 70 per cent.

Industry sources point out that the company has to reach an annual turnover of Rs.25-35 crore before it can break even. This means that Unitel has to sell its products with a margin of 10 to 15 per cent. But that is not feasible under present market conditions. According to Raghu Kumar, this year's turnover should be around Rs.11-12 crore and double that by 1991-92. "The very fact that we executed major installations for NTPC and ITDC in a quick timeframe indicates that a turnaround has started. We expect to break even by next year and hope to post profits three years hence." But it is unlikely that the company will be with the UB group that long.

TRAFFIC-JAM ON THE WAY TO WORK.

THE CAR TURNED INTO AN OVEN.

FIERY ARGUMENT AT THE OFFICE—

HEATED TEMPERS.

AND FINALLY A POWER FAILURE

IN THE AFTERNOON.

SO, HOW COME I'M STILL IN MY

SUIT—AND SMILING?

Freedom from the Indian Summer.

My boss threw me out of his office!

I guess it was difficult not to spill over each others' offices.

Every time I had a few guests, we'd find ourselves in my boss' office (or the area demarcated as his office).

Every time he had a few visitors, he'd assume it to be his privilege to pinch a few chairs from my table.

Everything's settled down thankfully, now that Seccolor partitions are in the picture.

That's right. That's my new office cabin you see up there. With Seccolor partitions and door. Now everyone's happier – with their own neat little office. Seccolor Office Systems helped my boss throw me out of his office – into my own!

In case you're wondering why I am making such a song and dance about Seccolor, let me tell you that they are worth it.

Designed in Italy and made of imported, pre-painted galvanised steel that never rusts, Seccolor Office Systems are the best choice today for most offices. With Seccolor partitions and doors, restructuring your office space – even time and again – is no problem at all.

Get Seccolor Office Systems and you get: no noise, no dust, no ageing. No warping. No maintenance. No installation problems.

Nothing but advantages, advantages.

Including the one everyone is always looking for: economy! So, if you think your office needs a demolition squad, may be what you really need is a great-looking, great-performing office system.

Try Seccolor and see!

Seccolor Partitions and Doors.
The latest in corporate make-overs.

Seccolor Furniture to be introduced shortly.

Write to us or contact any of our authorised fabricators. They'll be only too happy to show you the difference that is Seccolor!

RAYALASEEMA PAPER MILLS

Good target

The company is carrying daunting losses on its books, but it is still a good deal for G.P. Goenka

Goenka: old hand at takeovers and turnarounds

Gouri Prasad Goenka is at it again. The owner of the Calcutta-based Duncan Agro is all set to take over Sree Rayalaseema Paper Mills Ltd (SRPM), a sick joint sector paper company located in the Kurnool district of Andhra Pradesh. After the final BIFR hearing on 18 June, SRPM will become the seventh company in Goenka's Rs.700-crore group.

Starting off with Duncan Agro as his group's flagship company after the family spilt in 1982, he took over Bakelite Hylam, Herdillia Chemicals, Consolidated Petrotech, National Rayon and Star Paper in quick succession in the following years. Then came a lull. As Goenka says, "This takeover comes five years after my last takeover of Star Paper in 1986."

Goenka beat the Thapars in the race for the company. Though both the business houses had almost identical proposals, Goenka's GPG group won in the end because it controls 1.8 per cent more of the total existing capacity in the country's paper industry than the Thapars; the latter control 9 per cent through Ballarpur Industries.

Why the rush?

But with SRPM carrying losses of Rs.118 crore on its books, one wonders why there was a rush to take it over. As one corporate observer asked: "Isn't it too big a loss to be taken over?"

Word is going around that Goenka is taking over the sick paper company only to merge it with his increasingly prosperous Duncan Agro as some sort of tax shelter. Goenka scoffs at the suggestion: "Even if we want the merger, it is not practical. SRPM's huge losses will prove fatal for Duncan."

The obvious answer lies in the fact that, to set up new capacity equalling SRPM's 56,000 tonnes per annum (tpa) today would cost Goenka Rs.500 crore. Against this, he now gets all of this at less than Rs.100 crore — a good deal by any reckoning.

The SRPM case has been with the BIFR for the past two-and-a-half years. As per the BIFR draft rehabilitation scheme, it will cost Rs.30.09 crore to rehabilitate SRPM. Apart from contributing this amount by way of equity and unsecured interest free loans, the GPG group will take up the original private sector promoter's 42.84 per cent stake of SRPM's Rs.10 crore equity at the rate of Rs.4.45 per share of Rs.10 each, totalling Rs.2.5 crore. It will also negotiate with the Andhra Pradesh Industrial Development Corporation (APIDC) for immediate transfer of the latter's stake in SRPM.

Goenka will receive a waiver of penal interest and liquidated damages from the financial institutions and banks. Also, repayment of principal and accrued interest upto 30 June 1991 will be made in easy instalments. Among other concessions, the state government has agreed to ensure supply of 25,000 tpa of bamboo and restrict power cuts to 25 per cent.

SRPM was originally promoted in the joint sector by T.G. Vasantha Gupta as the private promoter and the APIDC the mid-seventies. Vasantha Gupta held 42.84 per cent of the equity and APIDC 29.19 per cent; the rest has been with various banks and the public. SRPM's capacity then, as now, was 56,000 tpa. The plant commenced production in 1979. Though the subsequent years were bad for the paper industry in general, SRPM managed to achieve higher and higher capacity utilisation, sales and profits every year till 1984-85, when production peaked at 55,946 tonne.

Bad decision

Then, the decline began. First there was a feud in Vasantha Gupta's family, and then SRPM took a bad marketing decision. The company contracted to sell its full year's production to two government undertakings — the Director General Supply and Disposal and the Government of India stationery office. "This helped the company in the short term, but in the longer term, the entire dealer network was lost," says a senior manager previously with SRPM. As a result, by 1988-87, SRPM's order book was virtually blank.

Vasantha Gupta's alleged closeness to the Congress also contributed to SRPM's downfall. This had attracted the annoyance of the state's Telegu Desam government and the company was not getting raw material from the state forests. As such, it was entirely dependent on the exorbitant open market for hardwood supplies.

In 1989, the company's loss before depreciation was Rs.32.87 crore, against sales of Rs.35.61 crore, and the accumulated loss of Rs. 118 crore exceeded the entire net worth of the company. Soon after, operations were shut down and SRPM became a BIFR case.

But now, with the state government assuring raw material supplies to Goenka, SRPM will be in a position to produce 8,000 tonnes of paper a year. Goenka, in turn, plans to invest Rs.30 crore more than his promoter's contribution to raise the plant's capacity to 100,000 tpa and set up captive power generation facilities.

Besides the fact that the GPG group is already involved in paper production, the other factor that swung the SRPM balance in its favour is its track record with reviving sick units. The group took Star Paper over in 1986 with losses of about Rs.20 crore on the latter's books; and this year it is going to be out of the BIFR's purview, having posted a sales turnover of Rs.80 crore.

"You can trust us," says Bhaskar Banerjee, director of Duncan Agro, who is confident of turning Rayalaseema around within a short span. And they may well do it. With a booming market and no fresh capacity coming anywhere else in the country, the road to recovery is wide open for SRPM.

CHARGE CHROME

A tale of woe

A drastic fall in international prices has sent manufacturers of this vital ingredient in stainless steel reeling. Over the past two years it's been losses, shutdowns and ambitious export and expansion plans gone kaput, *though the government has done its bit to help. However, bulk consumers are happy*

Stainless steel, that everyday alloy, would not be stainless nor steel-like if it wasn't for chromium. Chromium imparts steel the hardness and the ability to withstand corrosion. But chromium — and its Indian manufacturers — has been going through some tough times of late on account of falling international prices.

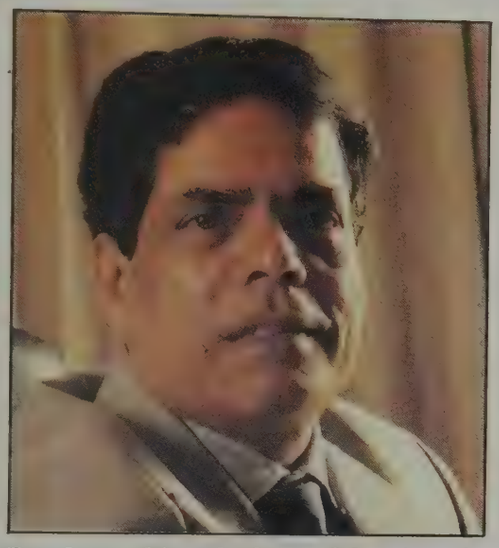
Chromium occurs in nature as ferrous chromite, an iron-chromium combination, and is mined and beneficiated by manufacturers into charge chrome — still an iron-chromium combination but free of impurities — the form in which it is used to make stainless steel. Producing charge chrome is a Rs.500-crore industry in the country which is concentrated largely in and around Orissa, close to the chromite mines. The fall in international prices in the last two years has come like a sledge-hammer blow on the manufacturers, 60 per cent of whose collective production is exported. Prices crashed from a peak of $90 a pound (lb) in 1988 to less than $40 a lb all through late last year and early this year. Though there has been some improvement in the last few weeks it is still not considered good enough for manufacturers to recover their lost profits. Consequently, most Indian charge chrome makers are expected to announce large losses this year.

Ferro Alloys Corporation Ltd (FACOR), one of the larger manufacturers, for example, has reportedly made a loss of Rs.24 crore this year as compared to Rs.14 crore last year.

For FACOR and Indian Metals and Ferro Alloys Ltd (IMFA), the other large charge chrome manufacturer, the crisis seems to be as bad as the one that hit them in the mid-1980s when they lost their monopolistic position in the industry. The government till 1986 had refused to issue any new licence for charge chrome manufacturers. But intense lobbying by the then emerging Haryana business house, Jindals, did the trick when they managed to procure a licence to set up a 10,000 tonne plant at Vizag. Fifteen other licences were issued soon after. Consequently, the price of charge chrome crashed from Rs.21,000 a tonne to Rs.18,000 in less than 2 years, and is now quoting at an even lower Rs.16,000.

The Durgapur Steel Plant, Mukand Ltd, Rathi Alloys and Jindals, who constitute the country's largest stainless steel manufacturers, account for the bulk of the 100,000 tonnes of charge chrome consumed locally every year. And they of course, are rather happy with the falling prices. Says Siddharth Shah, senior manager, materials, for Mukand, "The earlier price was an artificial one on account of the shortage of production capacity. Now it has come to a realistic level." Says Sajjan Jindal, of the Jindal family that owns Jindal Ferro Alloys, whose charge chrome production is mainly meant for captive use, "We are proud to have helped break the monopoly of some of the larger manufacturers and bring down the prices. Competition is at play here." But for charge chrome manufacturers, this combination of falling local as well as international prices has proved to be disastrous.

Mishra: hopeful



IMFA plant, Thembali, Orissa: "exports are no longer viable"

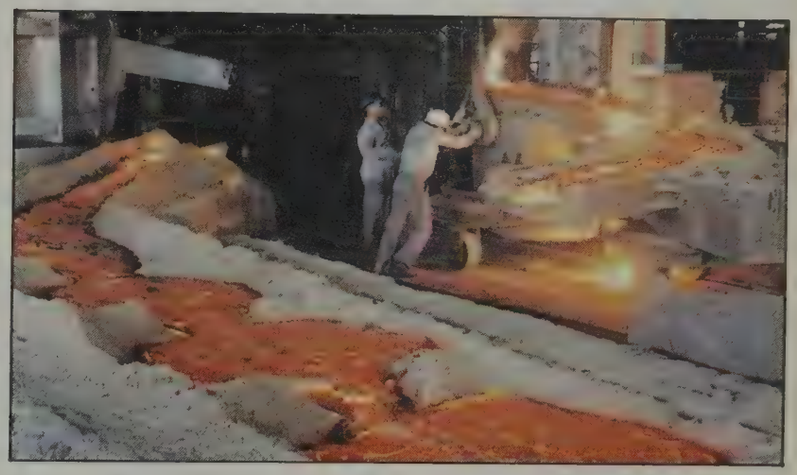
The total charge chrome demand worldwide is roughly estimated to be around 2.7 million tonnes per year which goes into the 10 million tonnes of stainless steel manufactured annually. The total capacity of charge chrome production is now estimated at 3.2 million tonnes. In 1986-87, the stainless steel production growth rate worldwide was roughly between 6 to 7 per cent per annum. It continued at the same level till the middle of 1988. Expecting this growth rate to continue charge chrome industries all over the globe added capacities. But the growth rate of the stainless steel industry came down dramatically in the latter half of 1989 to about 3.5 per cent and directly affected the charge chrome industry.

Rapid expansion

Like their counterparts elsewhere, Indian charge chrome manufacturers had also gone in for a rapid expansion of capacities to cash in on what appeared to be an imminent export windfall. The total licensed capacity of ferro chrome (as charge chrome is also known as) rose from 207,500 tonnes in 1988 to 555,000 tonnes a year later. Of this, as much as 317,500 tonnes was from EOUs alone, though not all these actually materialised in the form of production units.

Almost every large manufacturer of charge chrome went in for an EOU unit much bigger in size than the operation for the domestic market. FACOR, which had a 48,000 tonne plant, set up a 100 per cent EOU with a 50,000 tonne capacity at Randia in Orissa's Balasore district. IMFA which has a 15,000-tonne plant at Therubali in Koraput district set up a 50,000-tonne EOU at Chowdwar in Cuttack district. OMC Alloys Ltd set up a 50,000-tonne unit at Bamnipal in Keonjhar district, also in Orissa.

Panda: making the best of the situation



But things didn't work out as planned on the export front and the result has been that almost all the companies have made major losses. Exports rose but not at the pace at which the manufacturers set up their units. Total exports from India rose from a meagre 39,000 tonnes valued at Rs.24.65 crore in 1987-88 to a record 118,466 tonnes (Rs.137.20 crore) in 1988-89. But in the last fiscal year shipments fell to 90,903 tonnes worth only around Rs.120 crore. As a result, companies who went in for massive expansion found themselves saddled with investments that fetched no returns.

Facing closure

OMC for example set up its 50,000 tonne EOU at a cost of Rs.59.80 crore. It went on stream in May 1987 but is now on the brink of closure. It has incurred a cumulative loss of roughly Rs.25 crore till the end of financial 1989-90, and has served lay-off notices to its 1,200 odd employees. But, due to the state government's intervention, the notices have been revoked. The plant which had produced 90,140 tonnes of charge chrome till 31 July last, had exported 78,505 tonnes, earning foreign exchange to the tune of Rs.75 crore.

But, the recession in the industry has resulted in the accumulation of unsold stock of 11,500 tonnes. Says R.K. Das, managing director of OMC Alloys Ltd, "When the project started, the estimates were that the cost of production would be Rs.3,700 per tonne and the sale price fixed at Rs.4,300 per tonne. But the rise in the cost of inputs — in certain cases by 300 per cent — had shot up the cost of production to Rs.14,500 per tonne as against the sale price of Rs.8,500 per tonne. Add to this the recession in the stainless steel industry and the slump in the international prices of charge chrome. We are doomed."

Sales in the domestic market have also been affected, mainly due to the spiralling input costs for ferro-alloys production and the general liquidity crunch. The cost of power in Orissa has gone up from 24 paise to 110 paise per unit and is constantly rising. A few years ago power used to cost about 50 paise per unit. Today, it costs about 150 paise per unit in Maharashtra and slightly lower in Karnataka (and, of course, Orissa) where the major ferro-alloys industries are located. Raw material costs of coke and chrome have shot up nearly 200 to 250 per cent.

Molten metal at IMFA plant: "what's the use?"

The effects of all these constraints are most glaringly evident on the balance sheet of two of the largest charge chrome manufacturers in the country, FACOR and IMFA. FACOR's officially announced results for the first six months of 1990-91 show that the company lost a staggering Rs.11.75 crore during April to September 1990. In the corresponding period of 1988-89 it had reported a net profit of Rs.12 crore. Even the turnover tumbled from Rs.104.11 crore to Rs.93.25 crore. This is attributed to the crash in the world market prices for charge chrome. Says a senior company official, "Export of charge chrome is no longer a viable proposition."

Furnace shut down

IMFA has posted a loss of Rs.1.5 crore this year and saw its total turnover in 1989-90 come down to Rs.53 crore from Rs.76 crore in 1988-89 (fifteen months). In 1989-90, its exports came down to Rs.15 crore from Rs.27 crore in 1988-89. As a precautionary measure, IMFA had shut down one furnace for nearly a year. Laments one senior executive, "What is the use of continuing production when the loss per tonne of production is around Rs.3,000 to Rs.3,500. We are somewhat saved because of our 108 MW captive power plant which has reduced our input costs. Power is a major input in ferro/charge chrome production."

Now, IMFA is arranging shipments on CIF basis instead of the earlier FOB. Through this device they are earning four cents more on every tonne of charge chrome exported. IMFA is also drastically reducing its inventories and vigorously pursuing with the state government for grant of chromite ore mining leases (*see box*).

Second thoughts

Sensing the general squeeze in the chromium alloys industry, the depressed stainless steel market, general political instability, the liquidity crunch, the two 50,000 tpa projects planned by the Ispat group and Tata Iron and Steel Company (TISCO) have been temporarily stopped, according to industry sources. While, the Ispat group has adopted a wait and watch policy, TISCO has entered into a conversion deal with India Charge Chrome Ltd (ICCL) (of the IMFA group) whereby TISCO will supply chrome ore which will be converted into charge chrome for a conversion fee. (TISCO has more than 60 per cent of the country's chrome ore reserves.) Says B.J. Panda, joint managing director of ICCL, "This arrangement will be profitable for the company. Uninterrupted operations in the charge chrome plant are expected throughout the year in

Sharing the spoils

The battle for chromite ore reserves is hotting up. The Supreme Court, in a recent judgement on a dispute over leasing rights, has confirmed the recommendations of B.K. Rao (then secretary, ministry of mines). Earlier, the court had referred the entire controversy to B.K. Rao for a detailed consideration of the claims of the various parties.

Orissa Mining Corporation (OMC) and Industrial Development Corporation of Orissa Ltd (IDCOL), the public sector units in Orissa, had claimed that they were entitled to the grant of mining rights in the state to the exclusion of all private parties as there was a reservation in their favour. And private enterprises — IMFA, FACOR, Orissa Cement Ltd (OCL) and Orissa Industries Ltd (ORIND) — objected to the intervention of the OMC and IDCOL.

OMC and IDCOL were asking for exclusive mining licences (MLs) in the Sukinda valley of Cuttack district of Orissa which accounts for 97 per cent of the country's chrome ore reserves. They felt that the allotment of the areas to FACOR and IMFA, contiguous to OMC areas, will "lead to fragmentation of the mining lease which will leave reserve on the boundary unexploited". Also, they contended that OMC caters to the needs of 60 chrome-based industries in the country and also exports substantial quantity.

It was further argued that though the OMC holds only 19 per cent of the total chromite ore reserves, it accounts for 50 per cent of the total production whereas the private sector, holding 81 per cent of the total chromite ore reserves, accounts for the other 50 per cent of the production.

Rao rejected these arguments and recommended the grant of chromite ore mining leases to ferro/charge chrome units — one to FACOR, two to IMFA and one to M. Aikath — to the extent of at least 50 per cent of their captive requirements. It was then that the concerned parties, excepting TISCO, went to the Supreme Court against the award.

The battle for chromite ore leases has to be seen against the background that India has only a little over three per cent of the world's ore deposits of chrome. Out of this, 81 per cent is already with the private sector, TISCO holding 69 per cent of the deposits. OMC has 21 per cent, FACOR 4 per cent and others including IMFA hold the rest. Rao pointed out that TISCO held leases for 93 million tonnes of chromite as against only 25 million tonnes by the OMC and FACOR has two leases of 5.1 million tonnes of reserves while IMFA had none till the filing of the writ petition.

He also observed that "the position is distorted to the extent that three-fifths of the total chrome ore reserves is in the captive mines of TISCO," which has no ferro/charge chrome plants. Adds one executive of a private sector charge chrome company, "The Tatas are mere traders in chrome ore, yet they make a neat profit of Rs.400 crore." The Tatas naturally deny these huge profit margins.

A TISCO spokesman alleges that other parties do "slaughter mining", wasting the strategic mineral. He feels TISCO has a technological edge over others. "Other parties have overestimated our position of reserves," he says. "Besides, we have invested crores in prospecting and mining. The agencies have not bothered to properly study the reserves in the leases held by other parties. OMC has three times more of reserves in their captive mines than what they care to admit." Tata's chromite ore leases currently measure 1,261 hectares, but will be reviewed in 1993, since the state government has decided to take into consideration the production capacity of a concern while granting it mining leases.

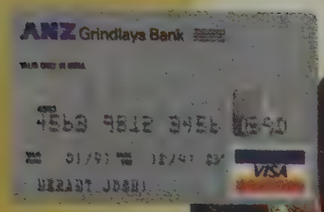
IMFA also has a grouse. Says R.N. Mishra, executive vice-president of IMFA, "We have the largest investment in chrome sector and yet we have not got any MLs." The leasehold of 26.62 hectares which it got at Chungudipal in 1986 had to be returned due to environmental objections. It meets its chrome ore requirement of 300,000 tonnes a year through purchases from TISCO and OMC and also imports, at high prices. "Now we are hopeful that the state government will consider our case sympathetically," adds Mishra.

FACOR already has three MLs with proven reserves of 5.1 million tonnes at Boula, Kathapal and Ostapal and a new ML has been confirmed by the SC. Whereas their total chrome ore requirement is about 250,000 tonnes per year, the production from all their three captive mines ranges between 100,000 and 120,000 tonnes. "We purchase the rest from OMC and TISCO," says its chief geologist here.

IDCOL, the first to set up the 10,000 tonne capacity ferro-chrome plant, has plans to expand the capacity to 25,000 tonnes, without any captive mines of its own. The SC has rejected its claims and all it has got now is a prospecting licence in Tailangi area of 2.37 sq km. Says N.R. Hota, its managing director, "Our total requirement is 25,000-30,000 tonnes of chrome ore a year. OMC is supplying about 50 per cent of the requirement. The rest, we are buying from outside, which affects our production."

Most of the private mining leases of chrome ore are up for review during 1992-94. It remains to be seen how the state and the Centre will pacify the warring parties.

view of regular supply of chrome ore from TISCO and availability of power from our captive power plant which is a major advantage over our competitors." The competitor, in this case, is FACOR.



To bail out the industry from the fall in the export market prices, the government increased the cash assistance to 15 per cent of FOB value and made this facility available to 100 per cent EOUs. Says R.N. Mishra, executive vice-president of IMFA, "The very marginal rise in world prices as also the increased assistance by the government will help put the industry back on the rails and perhaps revive its fortunes." According to R.K. Das, managing director of OMC Alloys, "As of now, it is a struggle for survival. One should not be overtly pessimistic. We should be patient in 1991 and hopeful in 1992. The industry as a whole should be out of the woods by 1994-95." K.G. Nair, general manager, international trade, of IMFA, is more categorical, "My estimate is that we will attain the break-even stage by the end of 1991 and by 1992 we will have a very profitable market."

For the moment though, it seems that it is only the hope of better times which is sustaining the major charge chrome players in India. ■

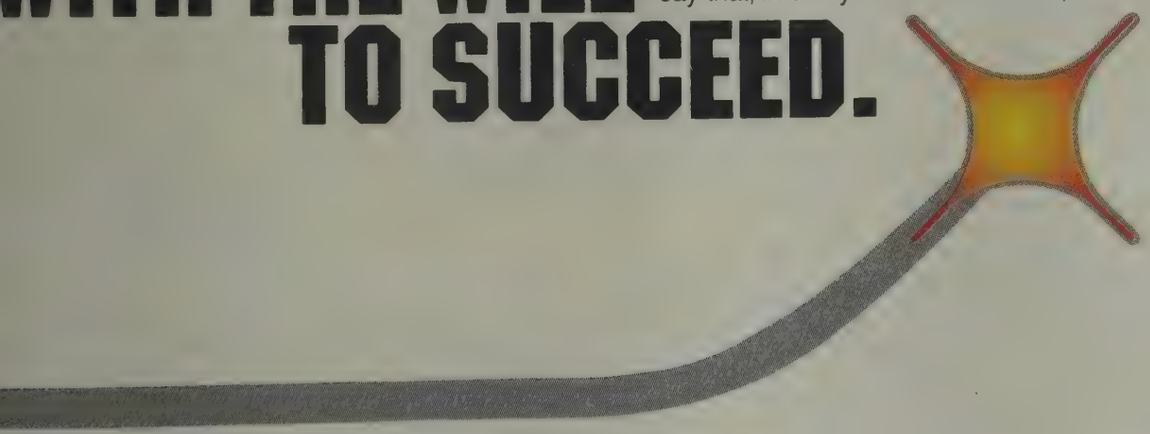
PERFORMANCE IS PEOPLE

It is a singular truth that the quality of a product depends on the quality of the people who manufacture, market and service it. People who are disciplined, single-minded, yet unafraid to innovate where they perceive opportunities for change.

At Escorts, our mission has always been to seek out such people and encourage them to grow, in an environment that cherishes the creative spark and the will to overcome.



Our objectives are clear; clarity of purpose, and motivating the individual to achieve the fullest success while working in a team. Throughout the year these objectives are pursued through programmes for enhanced productivity and quality at all levels. Today Escorts is one of the few companies where all blue-collar employment is pensionable — and where incentive linked payscales have dramatically boosted efficiency. Performance has its rewards.

More than anything else, this is the key to Escorts' phenomenal growth. And there is a lesson to be learnt in the sheer driving commitment of a workforce that doubled turnover from Rs. 500 crores to Rs. 1000 crores in two years, with only a 2% increase in their number.

No matter how advanced manufacturing techniques become, it is the human being who adds value. And in an age where the very latest technological innovation becomes common property in a matter of months, it is people who, by managing that technology in a way that serves the customer better, provide the winning edge.

The people at Escorts have consistently demonstrated the power of performance that exceeds expectations and creates new goals. They embolden us to take on even bigger projects. And to say that, in every sense of the word, the future is here.

BACKING PEOPLE WITH THE WILL TO SUCCEED.

The Aurelec controversy

In late March, 140 members of the marketing staff of Aurelec Data Processing Systems (ADPS), the Pondicherry-based computer manufacturer, quit their jobs to form Nexus Computers Private Ltd (NCPL). "Uncertainty regarding ADPS's future induced us to make this move," explains S. Natarajan, branch manager, ADPS, Madras. The new company will take on marketing and maintenance of computers, beginning with the Aurelec range.

The "uncertainty", springs from the takeover of the Auroville assets by the government. Set up in 1968 on the outskirts of Pondicherry to fulfil Sri Aurobindo Ghosh's vision of universal brotherhood, Auroville has many manufacturing units. These units were launched by the Sri Aurobindo Society started by Aurobindo's French disciple, Mirra Alfassa (the Mother), to implement the Auroville project. "The Aurelec however, does not come within the Society's perview, it is a separate trust," claims Kalya (Michel Lemaire), the Mother's great grandson and chief executive, ADPS.

Assembly line and (inset) *Kalya: "Aurelec not relatable"*

Carving a niche

ADPS was set up as a trust by Kalya, Sunaina Mandeen and Ulrich Blass in 1980. The bulk of the initial investment of Rs.3 lakh was provided by Mandeen. Having no shareholding or capital resources, ADPS had to provide for growth and development from sales. Banks provided working capital support. The company netted a turnover of Rs.10 crore during 1989-90, the net profit being Rs.70 lakh.

Soon ADPS carved a niche for itself in computer networking. It built its reputation on the use of indigenous components, at a time when government restrictions on import of components were stringent. In addition to hardware, ADPS also produces lap-top add-on products, network-related software, etc. A recent survey by computer magazine *Dataquest* accorded ADPS the premier position in terms of customer satisfaction. "Despite its low volumes, ADPS is technically and professionally sound," maintain computer industry sources.

In 1988, by an act of Parliament, the government took over the assets of Auroville and vested them with a body corporate called the Auroville Foundation, to be administered by a custodian appointed by the government. All units which were 'relatable' to the Society, were to be henceforth be vested with the Auroville Foundation, administered by a government custodian.

And Aurelec was also treated as one among them. "Aurelec's contention is that it is not 'relatable' to the Society," says Kalya. "What does 'relatable' mean? ADPS has not taken money from the Society. The trust is self-financed, so how can it be taken over, without paying a compensation, especially when ADPS has a net worth of Rs.2 crore?" he asks.

Case dismissed

Though located outside the city limit of Auroville, over the years ADPS has been making donations to the Society and "the trustees of the Aurelec trust have been interested in the Auroville project and involved in it in various capacities," explains Kalya, who feels that this must have been the reason the 'relatable' clause is applied to ADPS.

In late 1990, ADPS filed a case in the Madras high court, to prove that it is not 'relatable' to the Society, but this was dismissed in January 1991. The main reason cited was that under the Auroville Emergency Act, 1980, ADPS voluntarily came under the supervision of the government custodian for a six-year period from 1982 to 1988. "Since we were a fledgling firm at that time and the transfer did not involve transfer of assets and was of a temporary nature, we did not then object," explains Kalya. But the Auroville Foundation Act involves a transfer of assets as well, so ADPS has gone on appeal.

In addition, in February 1991, the company filed a second case in the Madras high court challenging the Act itself and Kalya is confident that they will emerge victorious. Unfortunately, ADPS will have to go it alone. "The other units which are affected by the Act are smaller manufacturers — of items like incense, tanks, roofing material, etc," he says. Several of these units are already administered by the government custodian while ADPS obtained an injunction in 1988. Further, ADPS is the only hi-tech company with a national image.

The employees are concerned about the role of the custodian in controlling ADPS's finances. "Interference in this sphere cannot be ruled out, particularly with regard to new investments," says Natarajan. Also they feel that the working environment "which provides for independent functioning" may change once the custodian steps in. "The decision to form a new company was taken only when the present management could not provide us a guarantee regarding the future of the company," says Natarajan.

Kalya claims that the management of ADPS will not have a financial stake in NCPL, nor will it be involved in its management, good-will apart. About 40 per cent of ADPS's sales are brought in by its six existing dealers, and "NCPL will emerge as a major dealer for ADPS," he opines. The production and assembly units at Auroville will continue to function under ADPS. Since an injunction has been obtained against implementing the Act, Kalya believes that production will not be curtailed.

"There is no plan to spin this off into a separate company," he affirms. He does not expect the present development to affect production and sales. Sources in the industry concur with this point of view. But optimism apart, the legal battle has to be won before ADPS begins to breathe easy again.

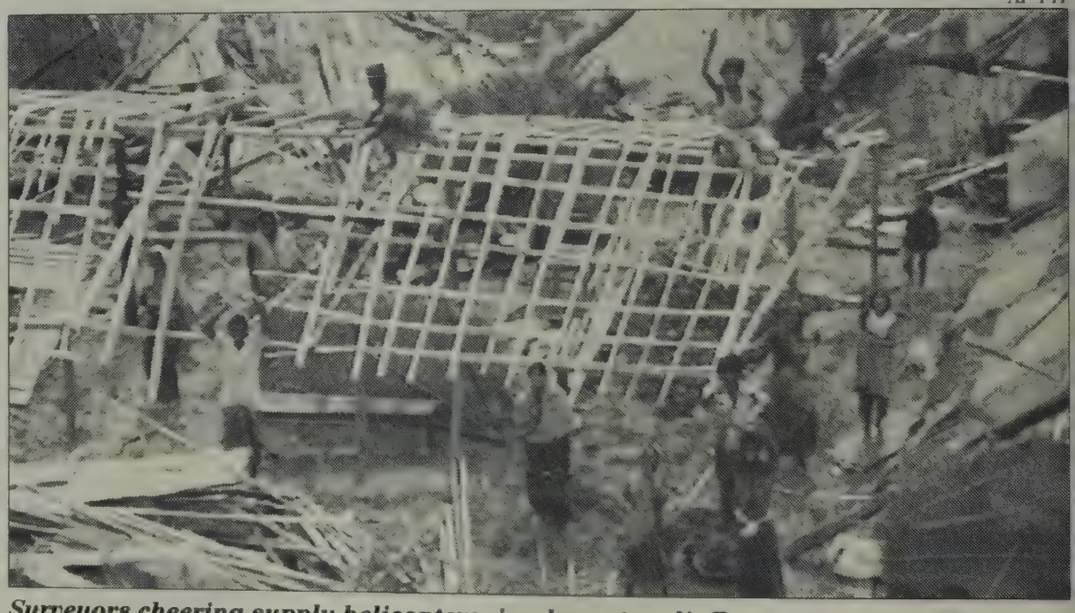
CYCLONE IN BANGLADESH

Prayers for the dead

On 7 May 1991, a week after a giant cyclone had pulverised Bangladesh, when Khalida Zia addressed her countrymen for the first time since she became the prime minister in March, she called on them to pray for the country's dead. By doing so, she was replaying what is essentially an old scene: Bangladeshis have often had to pray for their dead in starkly similar circumstances.

The geographical area that became Bangladesh in 1971 has been a regular victim of nature's wrath. In the past two hundred years, as many as 60 cyclones have struck it with varying degrees of force. But all have killed people. So, though Zia's words were nothing new, her government's undeniable failure in alleviating the suffering caused by the present cyclone prevented them from giving solace. After all, prayers for the dead have now become necessary only because the government could not keep them alive.

Clearly, this was one cyclone that ought not to have caught the government unawares. Meteorologists from India and even Bangladesh itself had warned the government about the cyclone well before it struck; the Bangladesh Space Research and Remote Sensing Organisation had in fact issued a warning five days in advance. Despite this, the government was caught on the wrong foot. And the cyclone — much larger in size than the country it wreaked its havoc on — killed 125,000 people and damaged property worth $1.42 billion, a fifth of Bangladesh's GDP.



Questionable claims

The government did little to evacuate people from even the particularly vulnerable coastal districts and the alluvial islands in the Ganges delta. It claims that over 3 million people were moved out of this zone, but this is highly questionable given Red Cross estimates that one out of every ten residents from this zone perished in the storm. Journalists in Bangladesh have since claimed that only a few thousand families were actually evacuated.

The governments' insufficient evacuation efforts were further hampered because of three reasons. First, extensive damage to airforce planes prevented the government from launching organised evacuations as soon as the cyclone's strength had abated. Second, though warnings of the storm were broadcast several times on radio and television, well before the storm, they did not reach the coastal residents because many of them are too poor to own radios or television sets. And third, many farmers refused to abandon their crops, which were then almost ready for harvest.

Though about 100,000 people escaped certain death by hunkering down in the 300 concrete cyclone shelters the government has erected in the coastal areas as part of its cyclone management plan, many who died were people who could not find such refuge. By the time the cyclone struck, the government had put up only 13 per cent of the total number of cyclone shelters that had been specified as essential if the population was to be insulated, as far as possible, from the recurring cyclones that plague Bangladesh.

AP PTI

Surveyors cheering supply helicopters: inadequate relief?

Certainly, resource constraints have been largely responsible for this tardiness. With a per capita income of $170 per year, Bangladesh is one of the poorest countries in the world. However, the government does not seem to have considered it necessary to have found the money for fully implementing its cyclone management programme. In fact, a senior Bangladesh High Commission official in New Delhi seemed content to say, two weeks after the tragedy had occurred, "Bangladesh is a poor country. And the resources required for such a major project are huge. What can we do if we don't have those resources?"

Disaster management

The tragedy thus clearly showed up the Bangladesh government's claim that disaster management is one of its top priorities. At present the Bangladeshis are too numbed by death to react. They are also too busy trying to fight hunger and diseases like cholera and typhoid that have come in the wake of the storm, to have time to reflect. But when life returns to normal, they will look back in anger. Then Zia will have the tough job of convincing them that though the government messed up this time around, it will be ready to protect them when the next storm comes. (The cyclone in November 1970 that killed between 300,000 and 1 million people was clearly managed badly by the government of what was then West Pakistan. And this was a major reason why the people became violently dissatisfied with it; dissatisfied enough to engage in the civil war that ended with Bangladesh's independence.)

The tornado that slammed into an industrial suburb of Dacca on 7 May — the same day that Zia asked Bangladeshis to pray for their dead — is perhaps a good symbol of how people will soon feel. It flattened houses, uprooted trees, snapped power-lines, and killed 200 people. Unless the present government handles the relief work now in progress better than it did the pre-cyclone evacuation, it could well find itself out of power. And then, another dictatorship would probably emerge even before Bangladesh has quite renewed its nodding acquain-

ance with Parliamentary democracy.

But as relief work entered the second week of operations, it was clear that the government was labouring under severe problems. Charges were made that the relief being given was inadequate and also that there were several remote areas where the government had been unable to reach many marooned people. Zia was also taken to task by the press over the apparent lack of co-ordination between the several relief agencies in the field. She angrily retorted: "Had that not been there, many people who survived the cyclone would be dead by now." It was an honest enough answer. However, it did not show the sensitivity she will soon need to engage in the delicate task of re-winning the trust of her people.

Pledges for assistance

Zia's immediate problems are, however, quite different. She needs at least $56 million at once for the relief operations. To date she has received pledges for assistance from the EEC, Japan, the US and India which total about $16 million. UNICEF's disaster relief fund has also pledged another $1 million. But these amounts are nowhere close to what she requires to put her country up on its feet at least for the immediate present. She will, of course, need even more money to rebuild the fragile economy.

The cyclone and the tidal waves that followed have swept away 90 per cent of the entire summer crop of the country. And most commercial activity has been badly hit because it is centered around the now devastated regions of the coast. Since agriculture accounts for 46 per cent of the GDP and trade accounts for another 28 per cent, the storm has directly affected activities that constitute three-quarters of the total GDP of the country. Another worrying factor is the large proportion of subsistence farming in the total agricultural production; this means the government will have to provide substantial food aid to all the subsistence farmers who have lost their crops this year.

The storm has also been a setback to the fishing industry in the country. It has crippled most of the trawlers and the indigenous boats used to catch the fish which make up the staple diet of most Bangladeshis and the shrimp that were exported to gain the country much needed foreign exchange. (Shrimp, along with jute, tea and newsprint contributed 98 per cent of Bangladesh's exports in the last year). So, its exports will slide this year, putting further strain on the BoP position and increasing the trade imbalance caused by an already high level of imports. (Imports were two-and-a-half times the value of exports in the past year, and will now go up further as a multiple of exports.)

Unfettered private sector

Bangladesh's poverty has long obscured the fact that government intervention in its economy is significantly smaller than that in India or Pakistan. The Bangladesh government controls only six specific sectors in the economy: defence, power, forest plantations, airlines, telecom and the printing of currency notes. And though there are several large public sector banks too, Bangladesh has many private sector banks of a comparable size. Overall, this means that in Bangladesh the private sector plays a much more unfettered role that it does in the rest of the subcontinent. The economy's recovery will therefore depend crucially on the manner in which the government is able to harness the power of the private sector.

Another factor that may well spur the recovery of the economy is the government's open-door policy, for foreign investment. This allows foreign companies to set up wholly-owned industrial units in the country and also to repatriate their entire profits from those units. For example, this policy attracted Korean garment exporters to Bangladesh in the early eighties and was largely responsible for the $100 million worth of garment exports the country posted a couple of years later.

But even after the economy recovers from the deliberating effects of the current cyclone, Bangladesh's future will continue to be precarious unless the government seriously gets down to implementing its comprehensive cyclone management plan. The Bay of Bengal naturally spawns cyclones, directly south of Bangladesh, just off the Andaman Islands. The cyclones then travel northwards. Narrowing coastal boundaries act like a funnel and amplify the storms. By the time they reach Bangladesh, they are ready to kill.

Another major problem that Bangladesh also needs to tackle is that of recurring floods. An alluvial plain created by the two largest rivers of the subcontinent, the Ganges and the Brahmaputra, Bangladesh has to bear the brunt of the huge quantities of water carried by the two rivers. Extensive deforestation in India and Nepal, say some experts, causes Bangladesh's floods. Other experts argue that the lack of a proper flood control strategy is the real issue. Barely a month before the current cyclone hit the country, work had begun on a World Bank sponsored action plan to design a viable flood control strategy for Bangladesh. This will be completed in the next few years. But any steps that Bangladesh takes to control floods will need the cooperation of India, Nepal and China. Sadly, India has not seen it fit to cooperate so far.

Bangladesh will have to win its neighbours over. It has no other option. For otherwise, prayers for the dead will be called for, year after year after year.

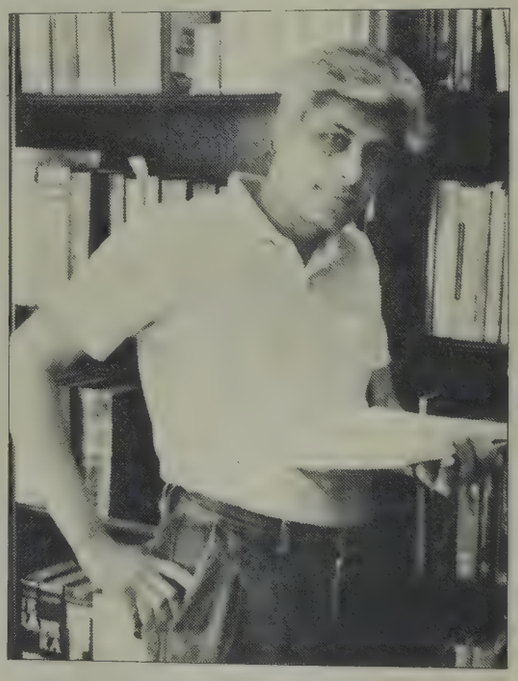
Scene of devastation: 90 per cent crop destroyed

INDO-US TAX TREATY

Version 37 provides a break

On 1 April 1991 — exactly three months after it had come into force in the US — the first ever Indo-US income tax treaty came into effect in India. While an earlier treaty had been signed in 1959, both countries were unhappy with it and it never came into force. The wrangling over a new, more acceptable treaty that followed, lasted for three decades! Finally, on 12 September 1989, a new draft was signed. Following its ratification on 20 December 1990, the treaty came into force as per schedule and is now a part of public international law.



India has entered into almost as many tax treaties — 37, including the present one — as the number of years that it has been a free nation. For bilateral tax treaties reconcile the differences in approach of two different tax structures. They enable the two peoples to avoid 'double taxation'. They encourage trade and investment flows between the two countries. And, they allow the taxmen to exchange information, improve tax recoveries and check tax evasion.

Tax sparing

Paradoxically, the present treaty was delayed because Indian negotiators took matters too seriously. Nishith M. Desai, a Bombay-based international tax counsel, points out that much of the delay was caused by the Indian government's insistence on the inclusion of a 'tax sparing' clause, something the Americans flatly refused to do.

The present treaty does not have a tax sparing clause. Tax sparing is fairly crucial, at least in theory, for a developing country like India. In order to encourage foreign investment in their countries, developing country governments often exempt from income tax the earnings foreign investors derive from their investments there. If a foreign government taxes such incomes as if income tax had actually been paid in the developing country — that is, it gives a tax credit for taxes that have been 'spared' — the tax exemption actually benefits the investor. Otherwise it doesn't. This explains why Indian negotiators fought so hard for a tax sparing clause that they almost scuttled the treaty!

The present treaty seeks to avoid or mitigate 'double taxation'. Double taxation arises because both the US and India tax their residents on worldwide incomes. And definitional differences in the concept of residence in their tax laws cause some individuals to be treated as residents of both countries. The specific reliefs the treaty allows are as follows: The tax paid to the US on any income will be allowed as a deduction against the tax payable to India on the same income, and vice versa. The US will also allow as a credit to an American company which receives dividends from an Indian company, the income tax paid by the Indian company on those dividends. (Provided the American company holds ten per cent of the voting stock of the Indian company.)

Desai: 'tax sparing' problem

A treaty first

The treaty provides for profits derived from international shipping and air transport by an enterprise to be taxed only in the country of which it is a resident. While this mutual, total exemption for air transport is also a part of the other bilateral treaties India has signed so far, this treaty is the first to extend it to shipping activities.

Dividends received by a resident of one country from a company in the other country will continue to be taxed in both countries. However, if the dividend recipient is a company which owns at least 10 per cent of the voting stock of the company paying the dividend, it will have to pay only 15 per cent of the gross amount of the dividend as tax; not the usual 25 per cent. The treaty stipulates that interest income paid to the US government, approved institutions and to Exim banks will be totally tax exempt; that paid to US banks will be taxed at 10 per cent and all others will pay 15 per cent.

The treaty has also slashed tax rates on royalties and fees for 'included services' down to 15-20 per cent. (The treaty defines included services as technical or consultancy services which are ancillary and subsidiary to the sale of equipment or information; not tied inextricably to the sale; and involve the transfer of a technical plan, design on process.)

Desai points out that while this reduction in the tax rate on royalties and included services is significant, it is still high compared to the rate the US has negotiated with other countries. He also clarifies that an accompanying MoU gives examples of included services to help interpret them.

Finally, the treaty allows the US to impose a special tax on the permanent establishments of Indian companies there. It also accepts that US companies in India will be taxed more than Indian companies: but with the difference not to exceed 15 percentage points. So now their tax liability will come down from the usual 65 per cent to 55 per cent.

Thus, overall the treaty has clarified and improved upon the contradictory stances in the Indian and the US tax structures. To date, India has scrupulously followed the principle of international law that says 'a treaty always overrides the provisions of domestic legislation'. Unfortunately, the US hasn't; especially with respect to its other bilateral tax treaties.

The Vienna Convention on the Law of Treaties which came into effect on January 27, 1980, authorises a treaty partner to respond to a major branch in the treaty by terminating it entirely or by terminating or suspending any provision. But none of America's treaty partners have yet responded to a treaty override by terminating or suspending it; that would be a cure worse than the disease. International law, after all, is not enforced by an international police and court system. And so it is susceptible to all the pressures of realpolitik. ■

NAVAL B. GHIARA

The great outdoors

SILVESTER DACUNHA

The recently presented Aaren Awards for outdoor advertising gave the ad profession an opportunity to review the state of this art. Hoardings are one of the least understood (and perhaps most misunderstood) of advertising opportunities. Most multi-media campaigners fail to appreciate the magic of the great outdoors. There's a widely held misconception that hoardings are merely a "reminder" medium — to be availed of only after an advertiser has established a sufficient presence on television and in the press.

Not altogether true. Amul demonstrated what the outdoor medium can achieve to get people to open their wallets. A small insignificant brand in the mid-sixties, Amul butter decided to take the message to the streets, at the same time cutting out advertising in all other media. In a few years, the product was a brand leader.

Medium is message

Out of home advertising packs the quality of "exaggeration". A name seen on a hoarding makes the advertiser come across as a large successful corporation while he may only be a modest, struggling enterprise. The medium is the message.

Movie publicists were the first to exploit the enormous potential of billboards. Hindustan Lever has made a long-term investment in billboards, spread all over the country. And other consumer giants are committed to this medium. But these are exceptions rather than the rule.

Why do most advertisers shy from going *al fresco*? To start with, this is not the easiest medium to buy. An adman cannot blithely pick up a phone and order up a dozen good hoardings. Availability of hoardings is severely restricted and all major cities have laws strictly regulating their proliferation. In Bombay, there's an embargo on new hoardings. In Delhi, a total ban operates in the key city areas. On the capital's outskirts, the few good hoardings that exist are periodically re-auctioned to the highest bidder, making it difficult to plan a consistent long-term campaign.

Then again, the most attractive hoarding sites tend to be located at city centres — Mount Road in Madras, Chowringhee in Calcutta, M.G. Road in Bangalore. These prime thoroughfares can accommodate just so many ad sites leading to frustration among those who cannot buy in.

Not all advertisers, of course have products that lend themselves to expression on hoardings, where a terse simple message must get across. Jensen & Nicholson paints made their mark with the single sentence, "When you see a colour think of us." Charms cigarettes set the market aflame with one line, "The spirit of freedom". Advertisers with complex stories to relate are best advised to give hoardings a miss in favour of a press advert (or even a brochure). Paradoxically, financial advertisers have, of late, adopted hoardings for their long-winded presentations. A motorist or bus commuter speeding past can hardly be expected to study, let alone absorb, these complicated effusions.

Costly affair

Hoardings are fast becoming the preserve of the big spender. Site rentals have gone through the roof. A Bombay sea-front site cost Rs.1,000 a month in 1975. By 1980, the same client had to cough up Rs.10,000 for the location, a tenfold increase. The rental continued to soar unabated: Rs.45,000 by 1985, Rs.60,000 by 1988 and Rs.70,000 in 1991. A lighted structure in downtown Bombay can command up to Rs.12 lakh a year. Advertisers who can afford this must need be crore-plus operators on the national scene. And these phenomena are few and far between.

The big bucks that this business seems to attract have drawn in many real estate speculators — aggravating the lack of professionalism besetting this trade. There are few scientific audience studies on the basis of which rentals can be justified. There is no strong representative association that can represent this occupation, regulate its conduct and plot its orderly growth.

There is also a marked absence of field monitoring. An advertiser who hires a network of hoardings cannot immediately know if a storm has knocked over a structure, or if it has been defaced by political posters or if the quality of the painting does justice to the original artwork.

The problem of on-site paint-brushing poses yet another migraine. Hoarding artists who have to clamber up scaffoldings and paint on a tin surface tend to distort the picture. That is why outdoor ads are seen to comprise only typography and product pictures. This is not wholly satisfactory. Hindustan Lever got round the problem by printing multi-sheet posters which, when pasted on the hoarding, combine to create a photographic rendition. They were able to achieve this by standardising the size and shape of the hoardings they utilise. Not everybody can afford this.

As hoarding prices escalate, advertisers have taken to employing them for local promotions rather than national campaigns. They are also employed only for short-term events. The annual contract is becoming a thing of the past. Unless outdoor contractors combine to introduce professional standards, hoardings will continue to be subjected to the law of the concrete jungle.

GODFREY PHILLIPS

Light up a Jaisalmer

Jaisalmer, nestling in the sand dunes of the Thar desert, was once immortalised by Satyajit Ray in his masterpiece *Sonar Kella*. And now comes K.K. Modi's newest cigarette, Jaisalmer. For inhospitable Jaisalmer, located in the western corner of Rajasthan, it could mean the unique status of having a cigarette named after it, thus joining the likes of Kent, Berkeley and Marlboro — well-known brands abroad and all named after places. The idea is, undoubtedly, to keep the cash registers ringing at Godfrey Phillips, Modi's company. This sort of branding is the first such attempt in India.

The foreign exchange crisis has spurred the government, in the last few years, to exhort big business houses to step up exports. His efforts to grow into the largest cigarette maker in the country could not push Godfrey Phillips past the number one — ITC Limited. These two factors led Modi to decide on cigarette exports. He soon realised that exports would only be possible if a truly Indian cigarette were created; a cigarette which could be sold as a novelty from India in international markets, especially in the fast-growing South-east Asian market.

"It was not an easy job," says Modi. "We had to create a brand name that meant everything about it was Indian. So we decided to take the name of a place and weave a story around it." Thus was born the concept of Jaisalmer cigarettes.

What's in a name?

Says R.A. Poddar, chief executive, Godfrey Phillips: "The name chosen was such that it could be romanticised." Agra was found to be too commonplace. Bikaner was not found exciting enough. "Jaisalmer," says Poddar, "is very inaccesible. Yet it is a place with a history of 900 years, a history of adventure, valour and bravery. We thought that a story could be built around it and sold as a dream."

Two historians were then called in to detail the history of the medieval kingdom and transfer this knowledge to a team creating the product. This team included personnel from Philip Morris, Godfrey Phillips' foreign collaborator, technical personnel from Godfrey Phillips and two specialists from advertisement agency Rediffusion. Team members, especially Philip Morris representatives, were encouraged to travel around India, and especially Jaisalmer, to feel the pulse of the country. Impressions could be incorporated in the packaging and advertisements for the new brand of cigarettes.

Last month and Rs.1.5 crore later, K.K. Modi felt confident enough for a soft launch in Delhi. Will he succeed? Modi says it will be three months before the results of the launch are known. However, he asserts that initial responses have been good, even better than those for Rothmans, launched by the company two years ago. But the result could well be due to new product novelty. A random survey in the capital revealed that many liked the taste of Jaisalmer. However, smokers felt that at Rs.22 for a pack of 20s, it was a trifle too costly. Rothmans sells at Rs.20 for a similar pack. But for a consumer who can afford to pay a rupee for a smoke, another 20 paise would hardly make a hole in his pocket. There is, however, some apprehension amongst smokers that the quality may not be maintained. "It is usual to find the quality very good at the time of the launch, but it deteriorates later," they said.

It would be a long haul for Jaisalmer to capture a part of the domestic market for premium cigarettes. And establishing itself in the international market will be an entirely different proposition

Even if the cigarette does well in Delhi, it would be a long haul from there for Jaisalmer in its effort to capture a part of the domestic market for premium cigarettes — an estimated 60 to 70 million sticks per month. And establishing itself in the international market will be an entirely different proposition. For now, even Godfrey Phillips' sources are unwilling to hazard an international launch date. The national launch has not been scheduled either. And obviously, Modi and his team are unwilling to venture any guesses about turnover.

Competitors do not seem unduly perturbed. Says an official of a rival company: "It is not simple to create an Indian brand name. The not too successful India Kings is a good example. What is the charm about Jaisalmer? And what is the dream and story that is being sold? Jaisalmer is in the middle of a desert and the only image projected by its name is one of hardship."

Time alone will tell whether Jaisalmer will bring back to life the valour of the Rajputs or just remain buried in the sands of time. ■

KINGSHUK NAG

Harmonising vendor relations

It is always relatively easy to control quality within one's own organisation, for obvious reasons. But manufacturing has become very complex, and most large manufacturers have to depend on vendors to provide raw materials or components. If satisfying the customer is the ultimate goal, then vendor development becomes critical. This is because quality is that standard of excellence which is mutually acceptable to the purchaser and the supplier. Hitherto, a buyer's relationship with vendors was mostly adversarial and at best contractual. What is required today is teamwork based on mutual confidence and joint planning.

The Japanese have developed an excellent and innovative approach for dealing with vendors, which is in contrast to the traditional western approach. Vendor surveys as conducted in the West have not proved to be useful in predicting the future quality performance of vendors. The western emphasis has been on organisation and documentation, whereas the Japanese approach has been on the capability of the process, the adequacy of process controls and training plus qualifications of the work force. The Japanese, in certain cases where technology upgradation is inevitable, have even arranged for finance from financial institutions for the vendors.

Areas of concentration

As a consequence, the western approach has tended to concentrate on conformance to procedural specifications rather than on product fitness for use. The emphasis is on the vendor's general plan of approach, not on specific products or processes.

The Japanese team approach dovetails the vendors' processes into those of the buyers. There is joint planning, assessment of quality standards, training of staff, to the extent that the vendor becomes a *de facto* partner in the business. The supplier helps to develop the product in tandem with the designer, offering his expertise and knowledge to solve the most difficult of problems. This helps him to become aware of the controls that will be necessary both within his own process and during assembly of the product. A situation develops where both the purchaser and the supplier are helping each other towards the supply of a product that will meet performance requirements.

If we acknowledge that the quality of products can be better controlled at the point of manufacture, it is essential that the purchasing staff grade and assess all their potential suppliers on a continuous basis. And then, whenever possible, measure their performance in compliance with the requirements of specifications and evaluate their quality control procedures.

Other countries like South Korea have adopted the Japanese approach very successfully. Modi Rubber, a leading tyre company, went through a detailed vendor survey by the South Koreans. The message that Modi Rubber got was that the Koreans were looking for something more than organisation and documentation. They were looking for process capability and the extent of training of the work force, among other things.

Take the case of Otis Elevators (India), which exports elevators to countries like Thailand, Sri Lanka and the Philippines among others. To become a world-class exporter, the company made a serious effort through eight senior executives drawn from various Otis companies internationally. After a thorough analysis they came up with 200 recommendations which had to be implemented by Otis India if they were to become a world-class vendor/exporter. The comparison was made with other companies within the Otis group using similar technologies.

A fine skill

An Indian company that has successfully developed vendor upgradation into a fine art is Maruti Udyog Ltd (MUL). MUL is associated with over 400 vendors who supply a variety of components. Of course, the fact that Maruti had to indigenise under its phased manufacturing programme, must have been the motivating factor. Their internal rating system keeps track of vendor performance with respect to the quality, quantity and delivery schedules. This has enabled them to classify the vendors into different categories ranging from good to poor.

A review of the various categories of vendors indicated tooling quality, proper raw material supply, process control, quality management system and a total productive management system as the focal areas that needed attention. However, in carrying out the specific upgradation exercises, it was found that a case-by-case approach was practical as each vendor had problems that required specific solutions based on the capability of the manufacturing processes.

The problems ranged from inadequate training of personnel and poor technology, to lack of process capability. MUL has gone to the extent of requesting financial institutions to come forward with innovative schemes to help vendors upgrade themselves.

From a supplier's viewpoint, an 'A' category customer receives the vital attention of the upper management. Therefore, a small but thoroughly vetted list of approved suppliers is of greater importance to a purchaser than a much longer list of unknown suppliers. The latter can only hike the cost of inspection. This very important function is usually performed by the purchase manager, who has to constantly identify cheaper and alternative sources of new items. To establish confidence in the supplier, it would sometimes be necessary to work in conjunction with the quality assurance people.

However, this joint planning is not oblivious of the economics of the supplier. And the product supplied is, more often than not, cheaper than what could be purchased from another vendor. This is because the gains from higher quality are usually shared between buyer and vendor. Also, it is entirely feasible for the vendor to be an adversary on prices and a member of the team on quality.

The initial investment incurred by the buyer is usually recovered very soon through higher quality and lower costs. Clearly, the benefits accruing from vendor development are so great that manufacturers can only ignore this issue at their peril.

ERAS

A losing proposition

When the rupee dwindled significantly during the past month, corporations which had borrowed in foreign currencies were naturally perturbed. If the trend continued — and given the country's precarious foreign exchange reserves position it was quite likely — it would mean higher repayment liabilities for them. But how much higher would be known only when the instalments actually fell due, and that added to their worry.

Some borrowers though were wiser. The exchange rate fluctuations did not bother them as much. Their repayment liabilities were more or less determined at the time they took the foreign currency loan from term-lending institutions. The Exchange Risk Administration Scheme (ERAS) protects them from exchange risk exposure.

ERAS was first introduced in 1989 for borrowers who faced the risk arising from volatility in exchange rates. The scheme was introduced as an experiment for two years only, ending in March 1991. This year in mid-April the government agreed to renew the scheme operated by the financial institutions for another three years, albeit at a higher interest band. Additionally, a few more lenders, such as the state financial bodies, were included in the scheme. Does it mean that the experiment has succeeded?

No exchange risk

Perhaps. Under ERAS, borrowers are charged a composite interest rate which includes interest on the loan and a premium to cover the exchange risk. The rate is expressed in terms of a range. It was 15 to 18 per cent when ERAS was introduced but is 20-23 per cent now. Says a source in a financial institution, "We were forced to increase the rate to cover the increasing exchange risk on account of the sliding rupee." Yet, many a borrower prefers to pay almost twice the interest rate charged on term loans under ERAS. (Without ERAS, they would have paid 6 to 8 per cent interest for the foreign currency borrowed.) The total disbursements under ERAS since 1989 are Rs.750 crore. The advantage of ERAS is that the borrower's rupee liabilities are defined when he borrows. In other words, he has to repay at the exchange rate prevailing at the time of disbursement, and thus has to face virtually no exchange risk.

Companies manage their exchange risk in several ways. Besides borrowing in various currencies as against only one, companies take a forward cover through their banks. The forward cover operates like an insurance and the borrowers pay a premium to banks for covering their exposure to exchange risk. The six-month cover is rolled over several times until the loan matures. Smart borrowers watch the premium rates constantly and have the option to renew the cover at a time when the rate is most favourable for them.

Some finance managers like those in public sector undertakings prefer to leave the exposure uncovered and face it when it comes to repayment. Some even wait till the last six months before the repayment falls due to take a cover. "The idea," says Anand Rathi, senior president, Indian Rayon and Industries Limited, "is to take advantage of a possible favourable exchange rate."

The advantage is that the borrower... has to repay at the exchange rate prevailing at the time of disbursement

But all this is really leaving too much to chance. The premium rates keep fluctuating depending on the money markets. According to a company finance manager, "Premium rates at present work out to about 13 to 14 per cent but given the fast depreciating rupee, they may well be 30 per cent in the near future." In which case, he points out, ERAS even at 23 per cent is much cheaper.

Rathi though does not agree. He is confident of managing the exchange risk at a 20 per cent rate on his own by using the various options. "Why should I then buy ERAS at 23 per cent?" he asks.

Yet there is uncertainty. Says J.S. Bakshi, president (commercial), Reliance Petrochemicals Ltd, "Since under ERAS, our liability is determined at the beginning of the loan tenure, we can plan our finances well." Foreign currency loans are generally taken for capital investments and have long tenures of three to eight years, with repayments falling due twice a year. Repayment liabilities fixed at the beginning of the loan tenure will naturally benefit borrowers.

Another advantage of ERAS is its fiscal efficiency. The entire interest amount — which is higher than the interest charged on normal term loans as it includes interest on the loan and the exchange risk premium — is tax deductible. The differential arising out of the exchange rate difference can also be charged to the profit and loss account.

However, not all get the benefit of ERAS. ERAS does not cover more than Rs.20 crore per project, for instance. Export-oriented units (EOUs) too are not allowed the facility of ERAS. Explains an FI source, "As EOUs have foreign exchange receivables, they have a built-in hedging mechanism against exchange loss." But he agrees that this may not neutralise the losses every time. ERAS also does not cover loans given by institutions other than IDBI, ICICI and IFCI. The shipping industry, which is prone to high foreign exchange losses, thus does not get the ERAS benefit. There is a small mercy though. Small and medium sector units will now benefit from ERAS as the renewed scheme includes loans granted by IDBI to state industrial development corporations and state industrial investment corporations.

Minimising losses

But is it cost-effective for the financial institutions? Says an FI source, "We operate ERAS with the object of minimising exchange losses." A committee, consisting of an official each from IDBI, ICICI and IFCI as also RBI and the government of India, monitors the interest rate vis-a-vis the exchange rate movement. Moreover, the spread under ERAS — the difference between interest paid (6-8 per cent) and interest earned (23 per cent) — is kept in reserve as a fund which is deployed as rupee resources to earn the normal 15 per cent. According to the FI source, this fund will help FIs to reduce the exchange risk. "And even if after all this, there is an exchange loss, the government will finance the deficit," he adds.

Owing to the rapid slide in the rupee over the last two years, there was a small deficit at the end of December 1990. And finance managers agree that in the present circumstances ERAS cannot be anything but a losing proposition. Despite this, the government has agreed to extend ERAS for another three years, hoping for the best. ■

ALPANA KILLAWALA

CREDIT CARD TIE-UPS

Towards one India Card?

In the beginning, there was Centralcard. And then the others followed. Today, nearly all the nationalised banks — and a few of the private and co-operative ones too — have credit cards. While some issue their own, others ride piggyback on the existing ones. United Bank of India and Vysya Bank issue Centralcards, while Bank of Maharashtra (BoM) has just begun issuing Bank of India's (BoI) Indiacard. The Reserve Bank of India (RBI) guidelines, however, allow no more independent cards, so every new player will have to tie up with Central Bank of India (CBI), Andhra Bank, BoI, Bank of Baroda (BoB), Vijaya Bank or Canara Bank. The only exceptions are the foreign banks, of which Citibank and ANZ Grindlays are already in the fray.

Is India, then, headed towards a commonality of credit card operations with one universal card being issued by all the banks and honoured by all their member establishments (MEs)? Probably, says Vimla Dalal, chief manager of the ATM and Indiacard department at BoI, who wants to make Indiacard a generic name. Tie-ups between individual banks, she explains, are beneficial to both, enabling them to increase their business and improve service to their own customers.

This is why BoI has entered into arrangements with BoM and Oriental Bank of Commerce for the issue of Indiacards by these banks to their own customers. BoI thus gets its affiliate banks to expand its customer and ME base and earns a commission of about 2 per cent on servicing their cardholders, while the affiliates earn about 1.5 per cent of card spendings and save on setting up a separate infrastructure. The card embossing machine itself costs a small fortune, as does the day-to-day operation of the international on-line link-up with Mastercard in the US.

BoM chairman T.K.K. Bhagavat points out that credit cards are "an important area of service for our customers", as they are the money of the future. "We decided to go in for it as soon as possible because it is an area of growth," he says.

Adds D. Viswanathan, deputy general manager, systems and procedures, at CBI: "Even the other major issuers get the advantage of the ME network built up by the forerunners. CBI alone has 8,000 MEs, while BoI has only 500; but thanks to Mastercard, both have access to a 16,000-strong ME base." One pointer to the coming commonality, he indicates, is the fact that issuing the weekly "hot list" bulletin of lost and stolen Mastercards has been taken over by CBI.

Not only does one bank tie up with another, but banks also sometimes tie up with their MEs. For instance, BoI and CBI have tied up with the Taj and Leela groups of hotels, respectively, to offer cards to the customers of these hotels.

While Viswanathan admits that his bank lost out to BoI in the race for the Taj business, Dalal is quick to point out that CBI's partner Leela has only two hotels against 27 in the Taj chain, and a target of only 1,000 cardholders against the Taj's 15,000. She also stresses the fact that her bank won the business in the face of competition from foreign banks, including Citibank NA, which now runs Diners Club. Both CBI and BoI are talking to other hotel groups for more such tie-ups, but are cagey of divulging names. The benefits are apparent — the banks can increase their credit card business and cover assured high-income customers, while the hotels are saved the hassle of keeping track of their own credit clients.

Dalal also claims that the Indiacard arrangements with affiliates (other banks) as well as affinity partners (favoured MEs like hotels) are different from — and superior to — those of the other major banks. "Canara Bank's is only a franchise operation," she says dismissively. "On the other hand, our affiliates have a complete identity of their own." The Indiacard, she points out, remains the property of the issuing bank, and is announced as such — for example, the BoM card will be inscribed 'Bank of Maharashtra's Indiacard'. Vysya Bank's card gives prominence to the 'Centralcard' logo, then Vysya's own name, thus underscoring the latter's affiliate status.

But Canara Bank too hopes to make its

Cancard a generic product nationally, according to C.G. Adwalpalker, its general manager in charge of the computer and consumer services wing which also looks after the credit card. Cancard is now a Visa international member, it is also looking at Mastercard, and "has an open mind" on affiliate tie-ups, while negotiations are on with a star hotel for an affinity partnership, he says.

K. Ratnakar Hegde, divisional manager in charge of Vijaya Bank's card operations, says his bank is also looking at some 5-star hotels as potential affinity partners, as well as at other banks as possible affiliate issuers.

Moral control

And Diners, claim its Indian competitors, is on the downslide despite having been taken over by Citibank. As Dalal points out, the Taj card is much better value for money, offering similar benefits — like wide acceptability, airline bookings and prestige — at a fraction of the cost. And despite the glamour of being associated with a foreign bank, people have actually stopped renewing Diners memberships, she claims. CBI's Viswanathan points out that RBI's fixation of minimum discount rates of 3 to 5 per cent, to be charged by card issuing banks from MEs means that the foreign banks can no longer undercut their Indian competitors. However, RBI has only a moral control, not a statutory one.

So, with Citibank, ANZ Grindlays and other foreign banks facing such a disadvantage, the way is clear for the Indian banks' credit operations to grow. And thanks to RBI's restriction on them too, the day of an Indian all-India card does not seem too far away.

OIL & NATURAL GAS COMMISSION

The price of excess

Usually a stickler for meeting targets, the Oil & Natural Gas Commission (ONGC) last month fell short of production plans for 1990-91 by a good 4.098 million tonnes (mt) of crude — its first blemish after two and a half decades of successful exploring. It had promised 33 mt in its memorandum of understanding with the government in March 1990 but finally delivered only 30.35 mt. Worse, it has dropped its target for 1991-92 further by 20 per cent (7.042 mt) to 27.1 mt (original target 34.142 mt).

The consequence of a shortfall in domestic production will, undoubtedly, be severe. It will mean importing an additional 7.042 mt of crude to compensate, which will add Rs.6,000 crore in foreign exchange to the oil import bill (for 1990-91 the bill came to Rs.10,000 crore for 21.1 mt of imported crude). An additional cost of this magnitude, when the reserves position is already so poor, may not be too welcome. In fact, the government, has declined to accept next year's target given out by ONGC; the target now awaits whatever decision is taken on it by the cabinet committee on political affairs of the new government to be formed in June.

The decline in production has resulted primarily from damage to the oil wells in Bombay High due to over-production. ONGC chairman, S.L. Khosla says it is imperative to cut production now to restore the health of the damaged wells. "The choice is between incurring costs to save reserves now or to postpone repair work and lose a good 13.2 mt of crude permanently." ONGC's deadline to the government to decide on the project is 1 July 1991, after which the reserves will be irretrievably lost.

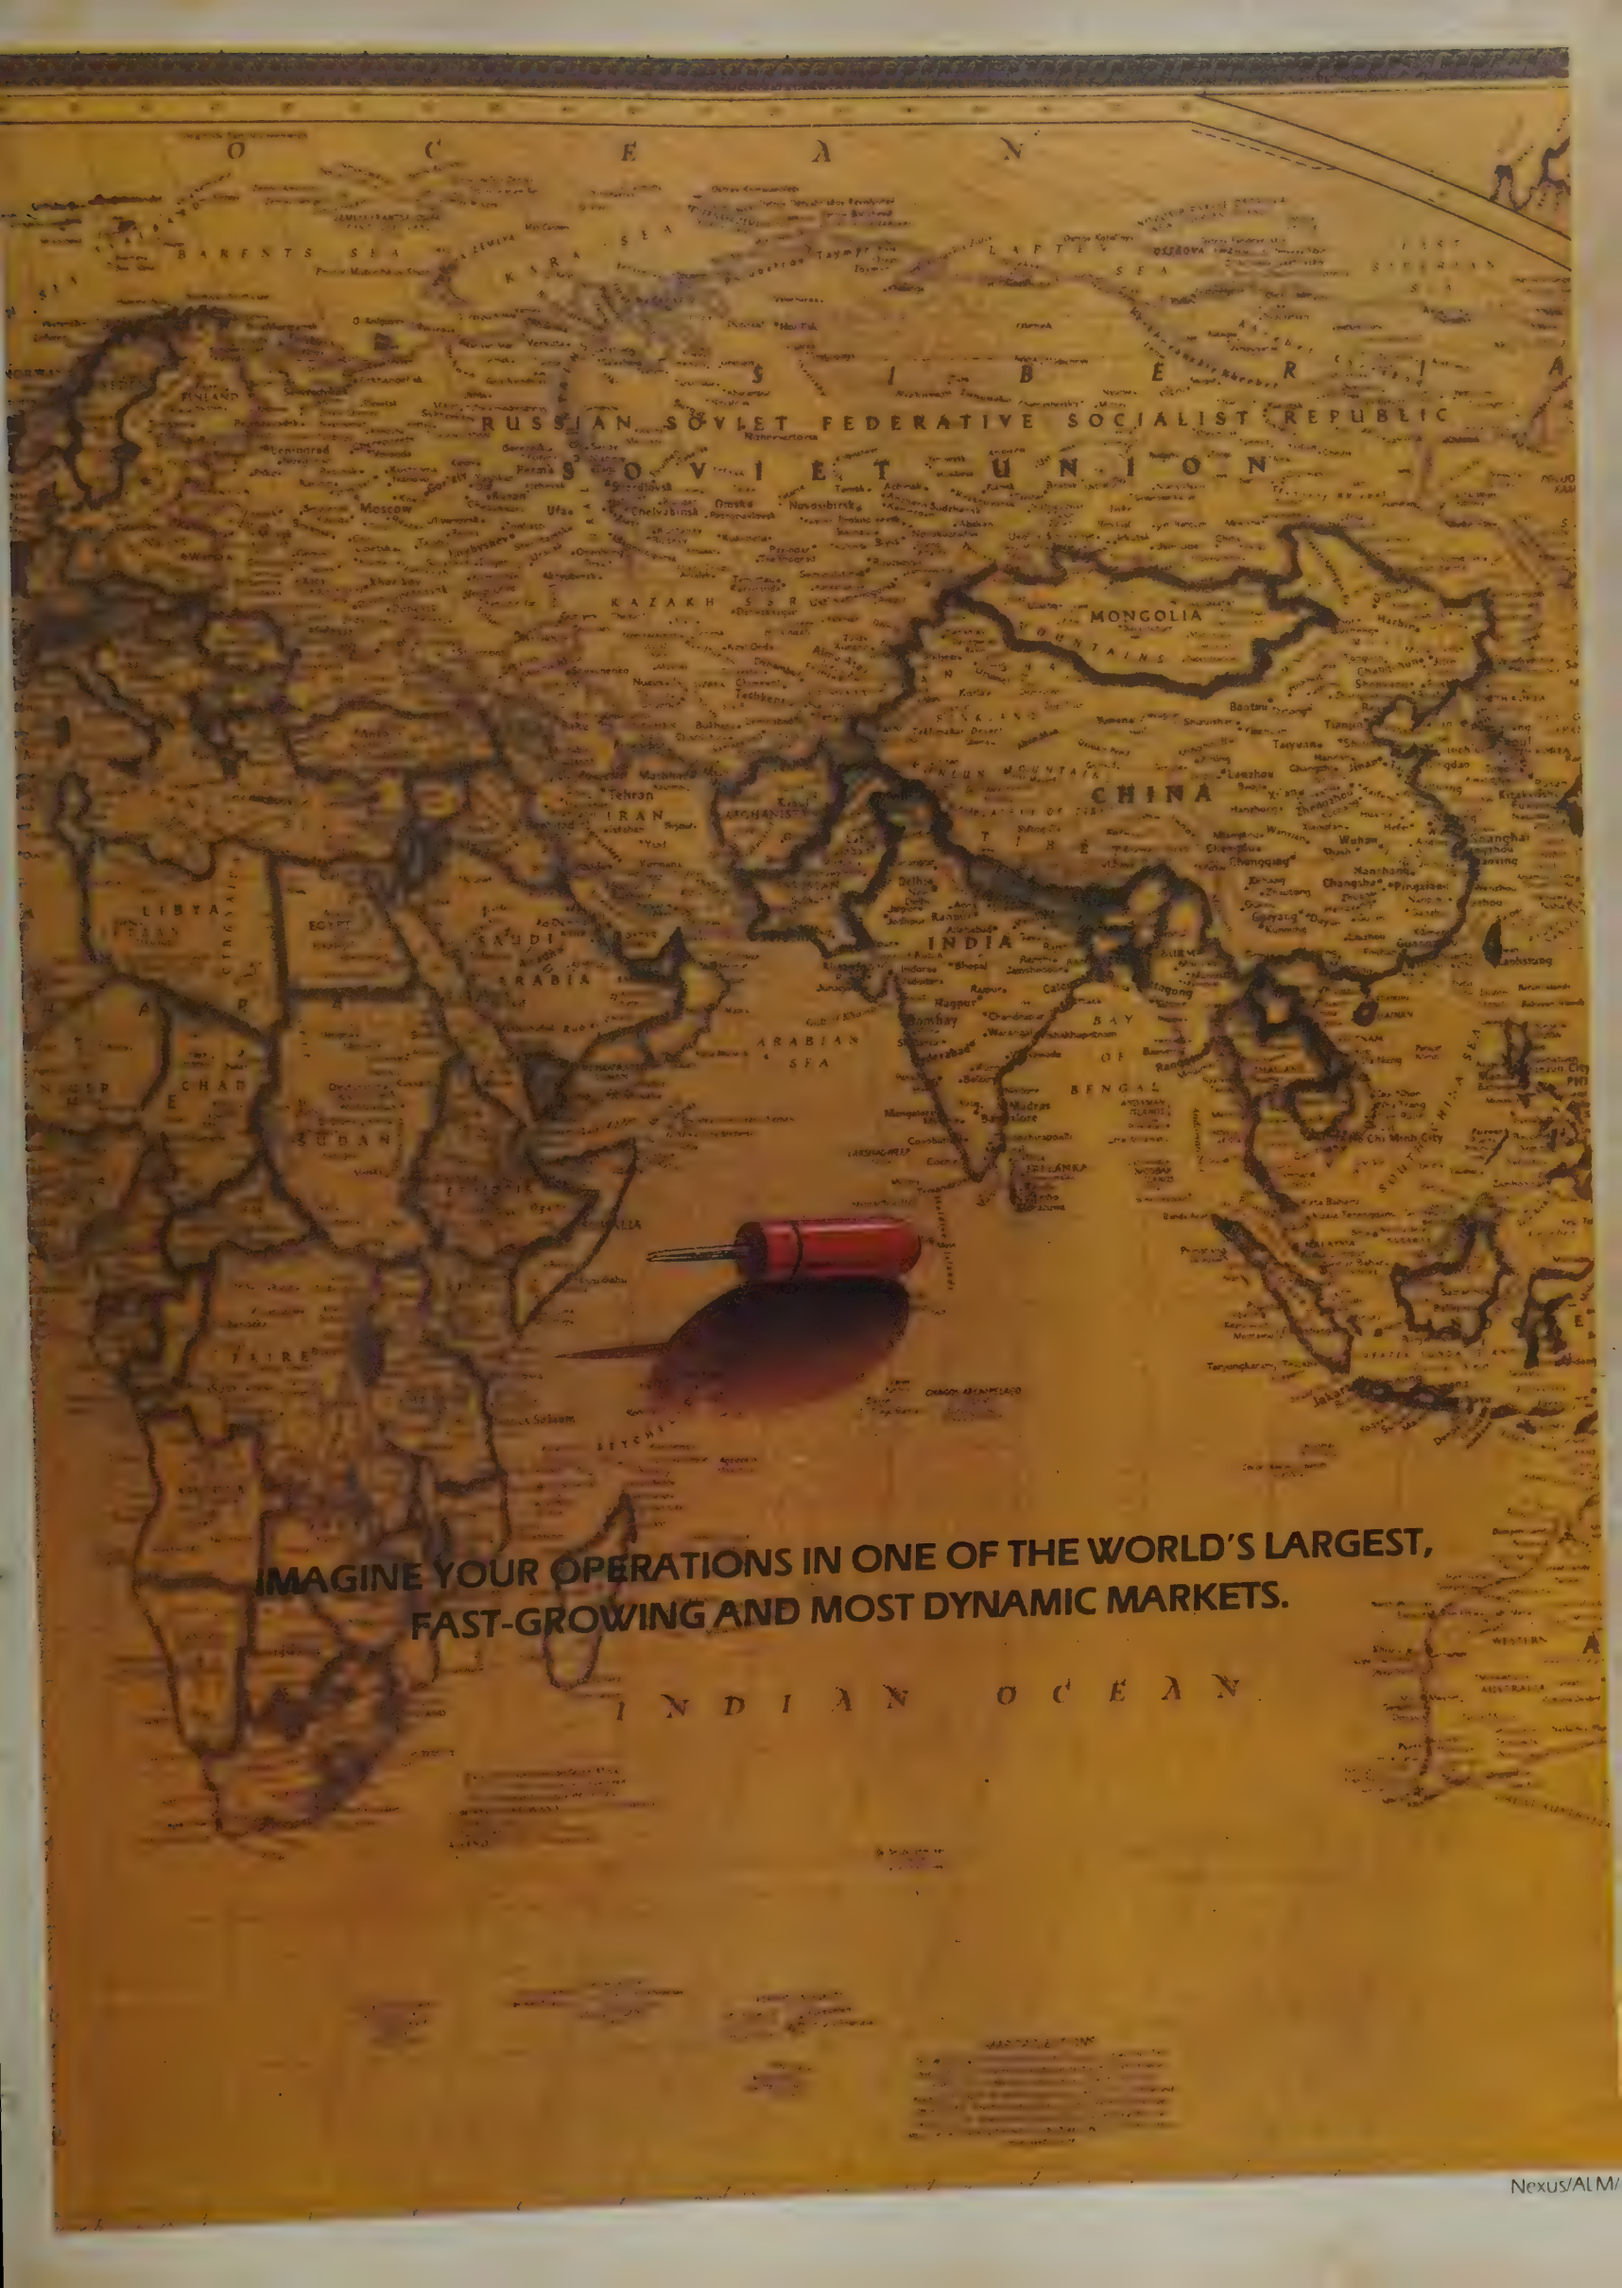
Unhealthy practices

"But, even if ONGC launches repair operations now there is every likelihood of losing 75 per cent of the western offshore reserves," says a geologist attached to a foreign oil company. The opinion in oil circles that ONGC, under S.P. Wahi, placed an unhealthy emphasis on meeting targets which resulted in the commission ignoring accepted reservoir management practices.

Not everyone at ONGC, however, agrees entirely with the reasons Khosla ascribes for the shortfall. "Bombay High may have contributed," says one observer, "but nowhere near the quantum that Khosla attributes to it." Decline in production is more because of flagging employee morale, say others. It seems the transition from Wahi — ONGC's chairman for eight years — to Khosla in July last was not too smooth.

Some sources insist that Khosla's management style has not been well accepted in the company. In oil exploration there are considerable chances of predictions going awry and some risk of not meeting targets. Consequently, company sources say, to insure against future action drillers are deliberately quoting lower targets. Industry observers claim that setting up systems to monitor drilling is legitimate, but Khosla is attempting to undo whatever Wahi did. "And that is undesirable, because Wahi undoubtedly was a great motivator." ONGC never witnessed a strike during Wahi's chairmanship. Says Khosla, "My brief from the ministry of petroleum is to set up systems in the commission, and, on occasion, that may involve being rude."

Whatever the real reasons, the foremost concern both at ONGC and the ministry now is to restore the damage from over producing. The Bombay High review committee, chaired by A.S. Dasgupta — which investigated the production at wells in the western offshore (L III) wells where production continued even after they displayed high gas oil ratios — submitted its report last November to the ministry.



The report states that overproduction from the L III wells resulted in a reduction in reservoir pressure. The inadequacy of the compensating water injection facilities, and the work over the operations, caused a depressurising of reservoirs (reservoir voidage imbalance) that finally resulted in reduced withdrawals from the offshore facilities. The Dasgupta report is not alone in passing such a judgement. There have been two others, — one from the World Bank and another from CFP of France, both of which placed the permanent loss of recoverable crude at a much higher 150 mt.

Khosla: management style under question

Conservation board

Consequently, the committee has recommended that the "functioning of overseeing drilling and exploration be taken away from ONGC and vested in an autonomous conservation board." In all probability, that responsibility will be vested in the department of petroleum, which is an unpleasant development for ONGC — another intrusion by the ministry into the commission's functioning. Nevertheless, as a prelude to divesting responsibilities, Khosla is devising several systems for overseeing drilling at ONGC that will 'instil some transparency into ONGC's functioning.'

Nexus/ALM

ONGC now has designed seven alternative ways to rehabilitate the ageing wells in the Bombay offshore. The most attractive option that it has recommended to the ministry requires the shutting down of the damaged wells in three stages that will help recover the 13.2 mt of crude that is expected to have been lost. The Dasgupta Committee's recommendations are to shut down all wells with an oil gas ratio of more than 700 volume/volume. The ONGC had been using a ratio of 1,000 volume/volume before it shut down production.

But it isn't as if the ONGC completely ignored the symptoms of the high gas oil ratios. These were first witnessed way back in 1984 and ONGC did put together a project plan for water reinjection, in two phases, in the reservoirs. High gas oil ratios had occurred at several wells elsewhere and ONGC had successfully managed these.

But for several reasons that project was delayed by two and a half years. Besides, the quantum of water to be injected was also inadequate. ONGC, however, instead of holding back production, continued to produce. Even while saying this at several places, the Dasgupta Committee is ambiguous. For instance, it says, "Production from a well is linked to the facilities planned to be created and it is expected that where there are slippages in the erection of structures or where the structures are inadequate there ought to be cut-back in production." But then it adds, "In hindsight, it does appear that owing to the complex geological structures of Bombay High, ONGC's scientists miscalculated."

Self-contradictory observations

The report goes on: "Deviations in levels of production were justified according to accepted industry practices to meet commitments but with respect to reservoir health these deviations were not justified." The report does not explain anywhere how production can simultaneously damage reservoir health, if it is an "accepted industry practice".

Elsewhere, in another severe indictment of the policies followed at the commission, the report says, "Preferences, inconveniences and concerns of individual work centres have to be pushed to the background." As a member of an advisory committee to the chairman remarked, "Whenever I asked for information from the commission I would draw a blank. The atmosphere at the commission was a little suspicious."

There have been allegations about the irregular purchase procedures followed by ONGC; these have also drawn adverse remarks from the Comptroller & Auditor General and several from the Committee on Public Undertakings (COPU). "There have been three such COPU reports in the short period of seven months. The chairman of ONGC cannot spend all his time facing inquiries," says Khosla.

As of now, Khosla has given out four reasons to the ministry for last year's shortfall. As much as 2.838 mt of the 3.9 mt decline is stated to have resulted from damage caused to the Bombay High wells as a result of overproduction. The other contributors have been strikes in the Bombay High region that cost ONGC another 0.3 mt, disruptions in Assam caused by the ULFA agitation took away 0.6 mt and another 0.66 mt shortfall owing to delays in the supply of rigs by Hindustan Shipyard, and Siepen of Italy.

Claim contested

Not everybody in ONGC, however, subscribes to the reasons for the shortfall given out by Khosla. "Bombay High is not the primary contributor to the shortfall as the chairman claims," says an ONGC official. "Rather, Assam has been most worrying." The shortfall has been 1.2 mt instead of the 0.6 which the chairman himself admitted to. Oil India, the other exploring company that operates in Assam admitted that ONGC was badly hit this year. The areas in which ONGC drills are particularly susceptible to disruptions.

Assam has always been a problem, with the local population making increased demands for jobs in the drilling companies in return for all the oil that the area produces. All these years the ONGC has been getting away by subscribing to several development plans in the region. This year, the demands were rather steep (Rs.5 crore), which the ministry of petroleum did not accept. Consequently, the disruptions were more acute this year with production being frozen for a period of four months. "And to shut down production from a flowing well considerably affects future pumping from it," says Khosla.

Offshore oil platform, Bombay High: a victim of over-production

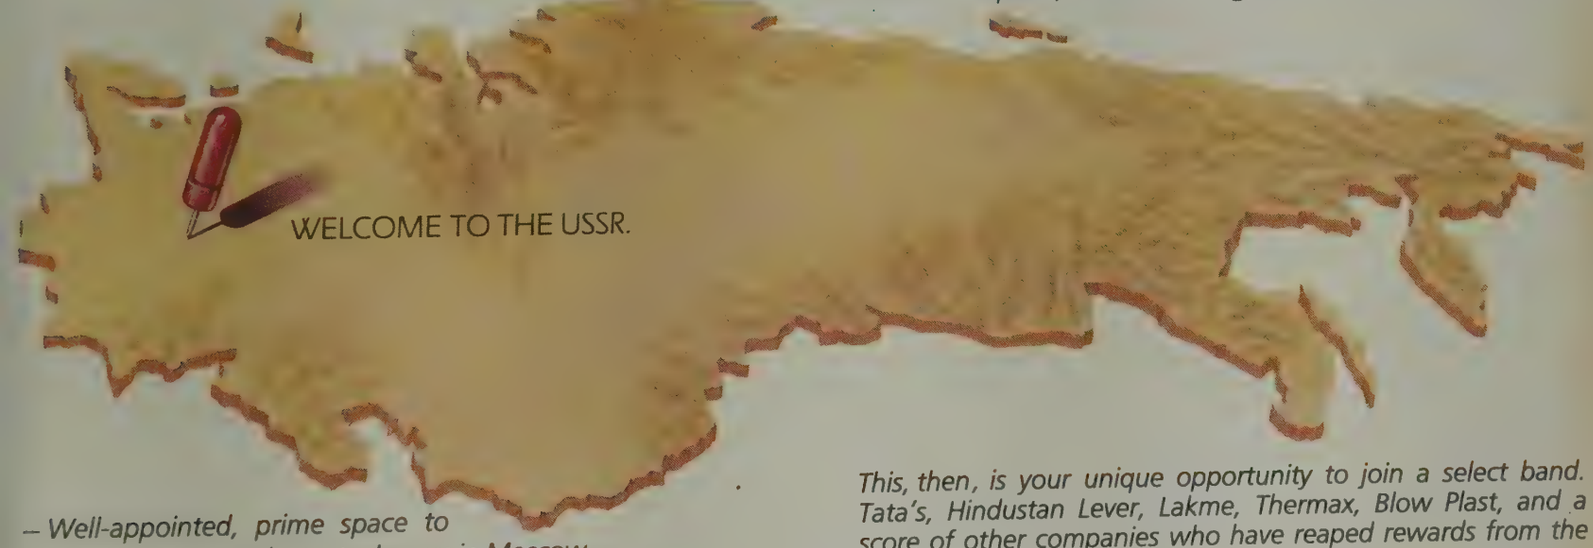
A pointer to this particular adverse effect is the sudden jump in the proportion of sick wells at ONGC. It was 35 per cent in 1980, dropped to 8 per cent in 1988-89 and now stands at 38 per cent. Another problem, at Gujarat, has resulted from the high sulphur content in the crude which the Koyali Refinery of Indian Oil has been unable to accept.

Several of the reasons that contributed to last year's shortfall will continue to hamper production at the ONGC over the Eighth Plan. In all likelihood, India's self-sufficiency will slip below the 60 per cent that we managed to achieve in the eighties — another unhappy addition to India's list of economic problems. ■

ARIF SHARIF

The Union of Soviet Socialist Republics (USSR), or Soviet Union, is one of the world's largest markets, with an area of 22.4 million sq km and over 250 million people. It stretches across two continents and offers an unrivalled consumer market potential, especially given product availability in the past and the policy of open-ness to the rest of the world. In fact, today, the USSR is one of the world's largest importers of cosmetics and cassettes, footwear and fashionwear, luggage and leather goods, toiletries and toasters, and much, much more. And traditionally, the USSR has been a major trading partner with India, with Soviet imports touching an all time high of Rs 5,000 crores in 1990.

Of late, however, it has become a complex market with decentralisation and autonomy for the Soviet Republics – hence, instead of a handful of key persons, there are now over 20,000 buyers. Hence success, for an Indian company, is all the more difficult. Which is where The India Trade Centre, Moscow, comes in.



The India Trade Centre, Moscow

The India Trade Centre, Moscow (ITCM), is a unique concept of a full-fledged operation in the heart of the USSR, offering a wide range of services to select Indian companies. It is your extended arm into the Soviet market, and offers:

– A marketing and selling agency in the USSR

THE INDIA TRADE CENTRE MOSCOW

YOUR AMBASSADOR IN THE USSR

– Well-appointed, prime space to display your products to buyers in Moscow

– The full array of modern, business infrastructural services

– Trained, bilingual professionals, experienced in the complexities of the market, the buying process and your needs.

ITCM is the ideal solution for Indian companies, in different product lines, who are looking at entry level, and increased exports to the USSR. ITCM will be an Agency, on a commission basis with a unique difference – a range of offices, cabins and display/showroom spaces to exhibit the principal's products, on rent, adjustable against the agency commission. And all payments can be in Indian rupees.

ITCM will professionally market product lines (strictly non-competing) in the USSR, including promoting through mass media, direct mail, seminars, exhibitions, symposia and local contact. The principal will also get constant feedback on performance, market trends and changing preferences, relating to the product lines. And that's not all – ITCM will even help identify the right Soviet partners for Joint Venture Projects.

The Ideal Set Up

ITCM is centrally located in Moscow, with over 20,000 sq ft of prime space, in the biggest Soviet exhibition complex, which drew 12 million visitors in 1990.

The facilities and services here include a full-fledged, fully air-conditioned Business Centre with all modern voice and data communication links, courier services, secretarial and office services, audio visual facilities, provision for meals, translation/interpretation, legal/documentation/banking advice, airport/transit/transport/accommodation (at special, attractive rates) facilitation, assistance for local seminars, exhibitions, buyer-seller meets... in short, every conceivable facility for modern-day business operations. All available to ITCM's clients, either free or at very nominal rates.

The hub of all this, of course, is the product display and marketing agency operation. Making ITCM the one-stop shop for buyers from all over the Soviet Union.

Impeccable Credentials

The India Trade Centre, Moscow, has been promoted by a London-based, NRI Group. The Company, Apollo Ltd, Moscow, USSR, is already incorporated and registered, and all facilities set up.

Apollo Ltd, Moscow, USSR, is represented in India by Intercraft Ltd, the flagship company of a large, dynamic group with decades of experience in exports, manufacturing, marketing and franchising.

This, then, is your unique opportunity to join a select band. Tata's, Hindustan Lever, Lakme, Thermax, Blow Plast, and a score of other companies who have reaped rewards from the USSR.

Your route to managing the complex task of selling to a large, but now heavily decentralised market.

The way to expand your operations dramatically.

And be welcomed in the USSR.

To find out more, mail this coupon to:
The Chief Executive – International Projects, Intercraft Ltd, Mehta House, A-16 Naraina Industrial Area, Phase II, New Delhi 110 028, India.
Phone 5704177. Telex 31 77387. Fax 5702138.

Yes, I'd like to extend my company's operations in the USSR.

MUMBAI GRAHAK PANCHAYAT

A force to reckon with

Like many other Bombay housewives, Malati Patankar is bothered about continually rising prices. But unlike many of her neighbours, she has a soft cushion to fall back on: her association with a consumer organisation. This enables her to buy household items at prices 15 per cent cheaper than existing marketing rates. What's more, the goods are delivered at her doorstep — free of cost!

Patankar, along with 11,500 other housewives in Bombay and the neighbouring townships of Thane and Raigad — and their families — are beneficiaries of an unique scheme operated by Janata Madhyavarti Grahak Co-operative Society (JMGCS). An offshoot of the consumer organisation Mumbai Grahak Panchayat (MGP), JMGCS procured for and distributed to its members Rs. 7 crore worth of 67 different kinds of groceries, textile items and household plastic goods last year (the figure is expected to cross the Rs.10-crore mark this year).

"Ours is a self-funding organisation," says Ashok Rawat, who is closely involved in MGP's activities. "We do not depend on any government grants for our activities." He then outlines the reasons for MGP's financial independence: "Low overheads, because no inventory is involved. Also no investment risks, because the members themselves put in the money."

The purchase committee of the JMGCS sends monthly lists to members, checking out their requirements. Volunteers then buy in bulk from wholesale markets around the country — chilli from Guntoor in Andhra Pradesh, wheat from Haryana, turmeric from Sangli in Maharashtra, etc. The savings accrued in buying at wholesale rates are passed on to the consumer. All that the JMGCS keeps for itself is charges incurred on overheads like salaries for the packing staff. Otherwise, the JMGCS funds its operations through membership fees — Rs.60 per annum per family.

A movement is born

This activity is now in its sixteenth year. In 1975, inspired by consumer activist B. Joshi who had started a similar movement in Pune, journalist B.V. Ghatge, singer Sudhir Phadke, Rawat and a few others had started distributing seven household items every month in Bombay. Thus was MGP born. In the very first year, there were 800 members.

While this economical procurement and distribution of household necessities may be its most visible activity, MGP is much more. Low-profile and manned by dedicated, publicity-shy activists, it ranks high among the most respected consumer organisations. As its name suggests, its activities are concentrated in and around Bombay city but MGP has also taken up cudgels on behalf of consumers in other states. It was MGP which recently helped hundreds of people who had booked the Vespa XE scooter manufactured by LML Ltd in getting back their refunds from the Kanpur-based company (see *Business India*, 26 November 1990).

Simultaneously, MGP has been actively campaigning to educate consumers about their rights and responsibilities. It has distributed pamphlets and published booklets to warn consumers about the aggressive marketing techniques adopted by some pharmaceutical companies in pushing their products. It had also launched a campaign highlighting the importance of breast milk and had roped in women's groups, maternity homes and medical practitioners for the purpose.

All these activities were co-ordinated by the consumer education wing of MGP. "This section of our organisation is primarily concerned with creating awareness among consumers so that each person can be transformed into a soldier who can fight his own battle," says MGP activist Shirish Deshpande. Besides printing pamphlets and booklets, this wing produces a monthly TV programme on consumerism. It also runs weekly columns in prominent Marathi papers, highlighting important consumer cases. Other

Famous battles

In the 16 years that it has been around, the Mumbai Grahak Panchayat (MGP) has often been in the forefront of many landmark consumer battles. Among them:

- In 1981, MGP filed a writ petition against the Maharashtra State Road Transport Corporation (MSRTC, commonly known as ST) against a double hike in the prices of ST tickets. The matter is now pending before the Supreme Court.
- MGP made an issue of the Maharashtra government's decision to levy an entertainment tax on the sale of television sets. Worried about bad publicity, the state government backtracked just before the 1985 elections.
- After the oil companies introduced the "cash and carry" scheme in 1986, making it mandatory for LPG cylinder owners to make their own arrangements for carrying the cylinders from the dealers, MGP took up the matter with the food & civil supplies department of the Maharashtra government. It pointed out that the Indian Explosives Act prohibits non-authorised persons from carrying the cylinders. The oil companies had to scrap their scheme.
- The Bombay suburban railway authorities had been continually hiking up ticket rates on the grounds that their division was making losses. MGP succeeded in proving that the Bombay section was making profits and subsidising the loss-making centres of Delhi, Calcutta and Madras. In 1986, the then railway minister Madhavrao Scindia admitted in the railway budget that Bombay suburban railways had made a profit of Rs.50 crore.
- The same year, after Irish butter affected with contamination from the Chernobyl nuclear disaster found its way into Maharashtra dairies, MGP put up posters near milk booths warning consumers about the danger. Simultaneously, families of its members wrote letters of protest to the then prime minister Rajiv Gandhi. The state government then stopped using the butter at its dairies.

important activities: distribution of *Grahak*, an eight-page publication in Marathi and English, organising radio talks and publishing consumerism-related articles in Hindi newspapers.

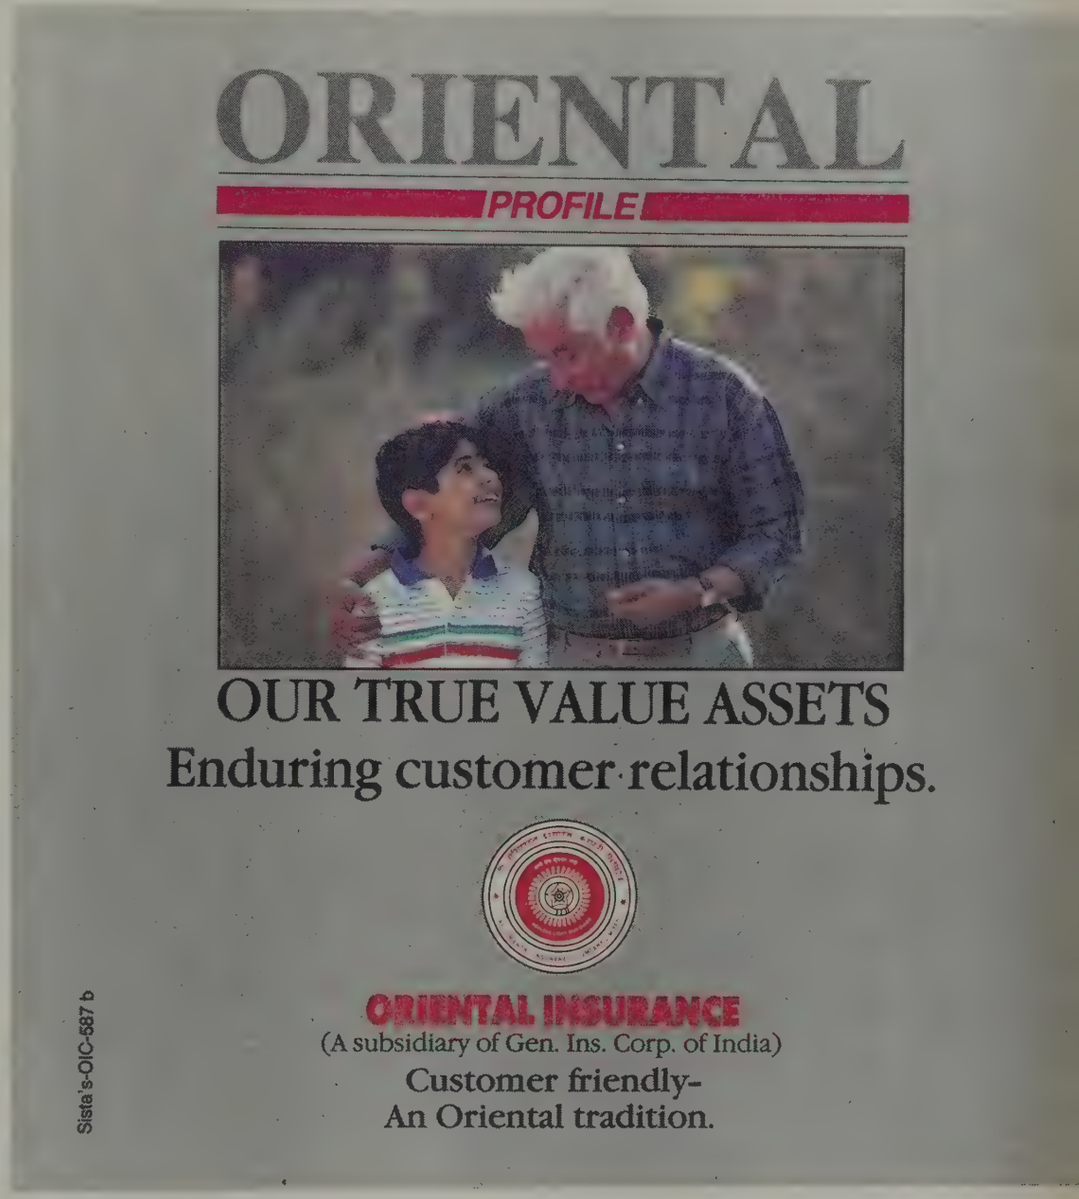
MGP's consumer protection wing organises consumer counselling centres every Friday evening in certain Bombay suburbs. It also conducts training programmes to groom consumer activists. After their training, these volunteers then take up lecture assignments at colleges and trade union offices, and work with organisations like the Leslie Sawhney Training Programme.

Research wing

Another important MGP department is the study and research wing. This wing was started by Jayant Deo, an economist-engineer now settled in Pune.

According to Deo, MGP approached various people in the course of its activities and even developed good contacts in organisations like the railways and the Bombay Suburban Electricity Supply Ltd. "But we never took undue advantage of our contacts. That is the main reason why our organisation has been able to win respect," he adds. "There was a sincerity of purpose. I think that is why we have been able to make such a dent."

Compared to other consumer organisations, MGP is able to make a bigger impact because it is very particular about the kind of people it has on its rolls. This is evident in the meticulousness that goes into the selection of JMGCS members. Not anybody can walk into the consumer organisation and, like Malati Patankar, avail of the benefits. Individual membership is not entertained. Instead, new members are recruited in groups of 11 each. Before each group is formally inducted, noted economist Gangadhar Gadgil, MGP's president, or some other senior MGP executive, screens the prospective members for their commitment towards the consumer cause. At least two members of each family are expected to volunteer for MGP's various consumer-related activities.



Another interesting activity organised by MGP is consumer plazas. Set up once a year for 10 days, they offer a wider choice to MGP members for buying their household requirements. At these sales, manufacturers sell their goods directly at ex-mill rates and retailers are not entertained. At the consumer plaza held at Dadar in October last year, goods worth Rs.25 lakh were sold. Similarly, in the north Bombay suburb of Borivli, MGP volunteers helped sell articles worth Rs.11 lakh. In a similar exercise held in June every year, MGP organises sales of school and monsoon requirements. The response to these sales has been good and MGP plans to increase the activity in the future.

Marching on

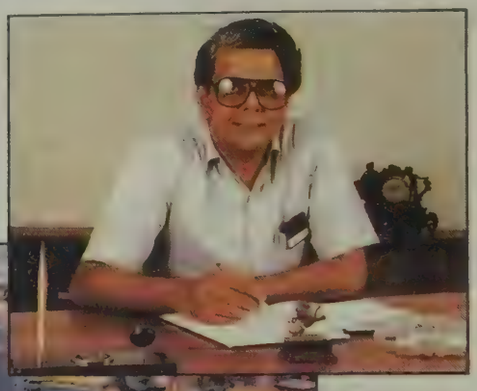
The coming years will also see an increase in the number of consumer counselling centres, more of which are planned in other Bombay suburbs. From June, MGP is also throwing open its doors for new members. In the meanwhile, its activists are busy with their latest consumer case which is related to safety. For the last six months, some of these activists have been sitting with oil companies and members of the Consumer Affair Council of Petroleum producers. MGP is asking the oil companies to table reports of all LPG-related accidents. "The oil companies are reluctant to part with the information but we are persisting with our demands. We have a right to know," says Deshpande.

MGP's activities, its victories and plans show that the consumer movement is alive and kicking in India. It may not have taken on the dimensions of a mass movement as has happened in parts of the West but the patient, dedicated efforts of the people behind organisations like MGP suggest that things are on the right track. It is a difficult, painful, back-breaking job to take on organisations which are insensitive and sometimes even hostile towards consumer rights. But as MGP has repeatedly proved, it is not impossible. ■

RAJU BIST

AUTO ANCILLARIES

Getting into high gear



The Indian auto components industry did not seriously look at the export market till the mid-eighties. However, there has been a change in the industry's focus in the last few years. Most of the manufacturers are looking at exports more actively than ever before. Says T K Balaji, president, Automobile Component Manufacturers' Association (ACMA), "Export consciousness is definitely rising in the industry. Everybody is slowly beginning to realise that exports are no longer optional. New projects coming into the component field are directed at both domestic and export markets in an integrated manner which was absent earlier."

The results are obvious. The value of auto ancillary exports has risen from Rs.74 crore in 1986-87 to an estimated Rs.150 crore in 1990-91, a doubling in five years. There has also been a widening of the range of auto components which are exported. Enthused by this kind of performance, the government has set a target for auto ancillary exports of Rs. 937 crore for the year 2000. The projected market size of auto components worldwide by the year 2000 is $170.6 billion. India's target for that year represents a market share of 0.2 per cent in dollar terms as against 0.1 per cent which is the current figure. There is a general sense of optimism about attaining this target and even exceeding it. However, everyone clearly understands that it is not easy.

From its very beginning in the fifties, the auto component industry never thought in terms of exports. The orientation was towards import substitution. The industry sprang up to cater to the domestic market of Telco, Ashok Leyland, Premier, Ambassador and later to the growing tractor market. Production policies and capacities were not geared towards exports. Those who exported did so mostly to the rupee trade countries, Africa and, to a certain extent, the Middle East. It is only recently that the industry has started to try and sell to the US, Europe, and Japan.

The change in direction came with the entry of Maruti. The Maruti car was the first international model produced in India. So, the ancillary industry started developing components which could be exported. Recent government policies geared towards exports have also energised the industry.

Auto components and (inset) *Balaji: export consciousness rising*

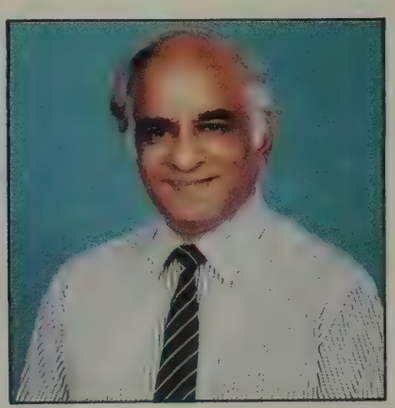
Rocketing exports

A lot of manufacturers are now talking in terms of doubling and trebling their exports in the next five years. The Bangalore-based MICO, which manufactures spark plugs and fuel injection equipment in collaboration with Bosch of Germany, is the largest auto component exporter in the country. Its current level of exports is over Rs.30 crore and is about 10 per cent of its total turnover of Rs.315 crore. According to Mico sources, there are plans to substantially increase this percentage in the near future. Lucas TVS, the Madras-based auto electricals manufacturer, which exports to the value of Rs.3 crore out of its total turnover of Rs.140 crore, is planning to double its export performance in the next three to four years. The company, which is headed by Balaji, is implementing its fuel injection equipment project in which capacities are being built to export 50 per cent of the production in the next ten years.

The Pune-based Bharat Forge identified exports as one of the thrust areas for growth sometime in the early eighties. After making a successful entry into easier markets like the USSR and Poland, it made a conscious effort to enter the more competitive and fastidious markets of the US, Western Europe and Japan. According to Pradeep Nadkarni, vice-president international, Bharat Forge, the company has been able to break through to the original equipment manufacturers (OEM) market of these countries. The company is currently executing a very ambitious forge modernisation programme at a cost of Rs.100 crore. The export figure for the year 1990-91 for its own manufactured goods is Rs.15 crore. It expects to double its export performance in the current year 1991-92. Since 1986, Bharat Gears has been supplying transmission gears and crown and pinion sets to Dana Corporation of the USA. Of the company's total turnover of Rs.60 crore, about Rs.8.5 crore came through exports. The company is now aggressively seeking new markets in the US, Germany and Britain.

Sona Steering Systems Ltd of Delhi, a three-year-old company headed by Surinder Kapur, vice-president, ACMA, is planning to export 25 per cent of its total production in the next three to five years. The Madras-based Sundaram Fasteners has set itself the ambitious target of reaching Rs.100 crore in exports in the

next five years. It also has the distinction of being the first company in the country to get the international quality accreditation ISO 9000.



According to P. Srinivasan, secretary general of ACMA, the industry is now trying to get more mileage out of its collaborators. "By and large, the concept of collaboration has been to use collaboration only for technical knowhow. But now we will persuade our collaborators to buy sub-components from us," he says.

Collaborators' support

Indian manufacturers do not have their own distribution network, as a result they do not have a brand image. Here again the collaborators can help. A company which has successfully pursued this policy is the Madras-based India Pistons (of the Amalgamations group). "Four years ago we were exporting to the tune of Rs.80 lakh to Rs.1 crore and in 1989-90 our exports touched Rs.5 crore. One of the main factors that helped us achieve this is the support in marketing extended by our collaborators, the UK-based T & N," says N. Venkataramani, managing director, India Pistons. The support involved measures like supplies of dies and cases for models that are non-existent in India, marketing of India Pistons' products in the brand name of the collaborators, assistance in obtaining approvals from OEMs for their spares requirements, and offloading some of the low volume markets to the Indian company.

Obviously, companies like Mico have a distinct advantage in having a powerful collaborator like Bosch. In 1962 itself, Mico started exporting certain fuel injection parts to Bosch. Says a senior Mico executive, "Our export promotion drive has received a boost with the company becoming one of the select sources for the Bosch global supply of spark plugs. Mico will supply its bimetal super spark plugs. Most of them are meant for the highly competitive European market."

In spite of all these efforts, there are many in the industry who feel that the possibility of the Indian component industry making a dent in the sophisticated world markets is rather remote. Unless, of course, there is a complete change in the mind-sets of both government and industry. Says L. Lakshman, vice- chairman, Rane group, the Madras-based auto ancillary manufacturers, "I do not really see us becoming major players in this field. There are three options available to our component manufacturers: to export wherever Indian vehicles are marketed abroad, tie up with godfathers like GM or Ford, or sell in the bazaar which is the replacement market."

Venkataramani: good support

Lakshman has a point. All over the world, the component manufacturers who are successful exporters are those based in countries whose vehicle industries have a very strong international presence. According to automobile industry sources, as of now, Telco and Ashok Leyland have nothing much to offer to the European or American markets.

The Indian component industry has so far been more or less catering to the replacement market and has not made any spectacular breakthrough with OEMs. It is easier to supply to the replacement market because R&D requirements are limited, delivery schedules are not so stringent and the need for constant technology upgradation is less urgent.

India Pistons: exports receive a boost

A company like the Madras-based Wheels India of the TVS group (export turnover for 1990-91, Rs.10 crore) has been able to get the much coveted German TEU certificate. But it supplies wire wheels only to the BMW and Mercedes replacement market. The standards set by BMW are much higher than Germany's national standards. All Ford supliers are systematically rated on quality and under-performers are eliminated.

It is not as though vehicle manufacturers are not interested in coming to India to source their components. Says Srinivasan, "GM representatives are in the country and have given positive signals of buying from India. A team from DAF Trucks of Holland has shown interst. Daewood Motor Company of Korea is also considering the sourcing of components from India." While this sounds very promising, one should remember that at any given point in the last 10 years, one well-known vehicle manufacturer or the other has been conducting discussions with the industry. But no concrete proposal has emerged till now. Auto component industry sources point out that unless the government makes up its mind to announce a clear-cut policy encouraging foreign investment, India will not be able to gain ground in this field.

Efforts to achieve export targets have to come from both industry and government. India does not have much of an image in the international auto component sector. Today, vehicle manufacturers increasingly require suppliers to be zero-defect producers, whose products perform harmoniously with the other parts of the car. They also insist on just in time deliveries and cost effectiveness. The vehicle manufacturers are not confident that the Indian industry is capable of performing on these fronts. The component industry has to wake up to these realities.

On its part, the government has to relax FERA restrictions, implement with speed and efficiency the existing export incentives, and set about removing infrastructural bottlenecks. Unless these things are done, the Rs.1,000 crore target, despite all other efforts, will remain just a target.

■ SUSHILA RAVINDRANATH

Some of our most privileged bene

At the National Housing Bank, we have a mission to accomplish.

To help make every Indian's once-in-a-lifetime dream come true.

A dream of a house of one's own.

An inspiring challenge

NHB was thus born of a commitment to the housing needs of an entire nation. Two years ago.

As a wholly-owned subsidiary of the Reserve Bank of India.

An apex institution to promote, strengthen and support the country's housing finance system.

Working towards the goal of "Shelter For All". With the motto "Small Man First".

The task before us is truly stupendous.

What with a colossal shortage of housing. Scarce buildable land. Escalating construction costs. And housing becoming increasingly unaffordable for a large segment of our population.

Making shelter possible on this scale is a daunting challenge.

But for NHB's band of dedicated professionals — drawn from various disciplines — it is the life-force of their mission.

A dedicated commitment

NHB's flagship programme — the unique Home Loan Account Scheme — is a reflection of that commitment.

A scheme that makes owning a house a possibility for every Indian.

But NHB is also promoting the cause of housing in other ways.

By refinancing loans to individuals through banks, housing finance companies and cooperative institutions.

Facilitating project loans for land development to public agencies, professional developers and cooperatives.

Supporting rental housing projects.

Assisting building material industries.

In fact, NHB has already disbursed over Rs. 320 crores. To help provide shelter to over one lakh thirty thousand families.

Our sights are set even higher in the years to come.

On the long journey ahead that we are determined to complete.

Housing for millions. We're making it happen.

Chaitra-D NHB 1990

aries have only a dream in their pockets.

OUR GOAL : SHELTER FOR ALL

Exceptional. Sensational. So National.

Videocon Air Conditioners. Manufactured under D & D supply agreement with Matsushita Electric Company, Japan, the owners of brand name National .

Japanese state-of-the-art

In technology or in artistic pursuits... the Japanese are born inventors, innovators.

Videocon brings you Japanese expertise. Air Conditioners with the world's most advanced technology.

High Performance Rotary Compressor

First Time in India,

The only one of it's kind. Compact...cooling efficiency at par with International Standards. Yet, tough enough to withstand Indian tropical conditions. Designed for longer life and trouble free performance.

Super Quiet Operation,

Made possible by the ultra thin heat exchanger, specially designed sirocco fan, propellor fan, fan motor and rotary compressor mounted on a vibration absorbing rubber base – all housed in heavy insulation.

High Energy Efficiency Design

Savings on electricity bills, due to specially designed louver fins, grooved copper tubing and rotary compressor.

4-Way Air Deflection System

At the touch of a switch, control air direction from side to side – for uniform cooling across the room.

One Touch Air Filter

Slide in slide out filter– easy maintenance. You can do it yourself.

Dust Protected Fan Motor

The only Air Conditioner with double ball bearings and a dust protected fan motor to give a quiet, smooth performance and longer life to the Air Conditioner.

Super Service

Prompt after sales service with factory trained technicians.

1.5 ton Air Conditioners in Wood Grain and Ivory White finish.
1 year warranty.

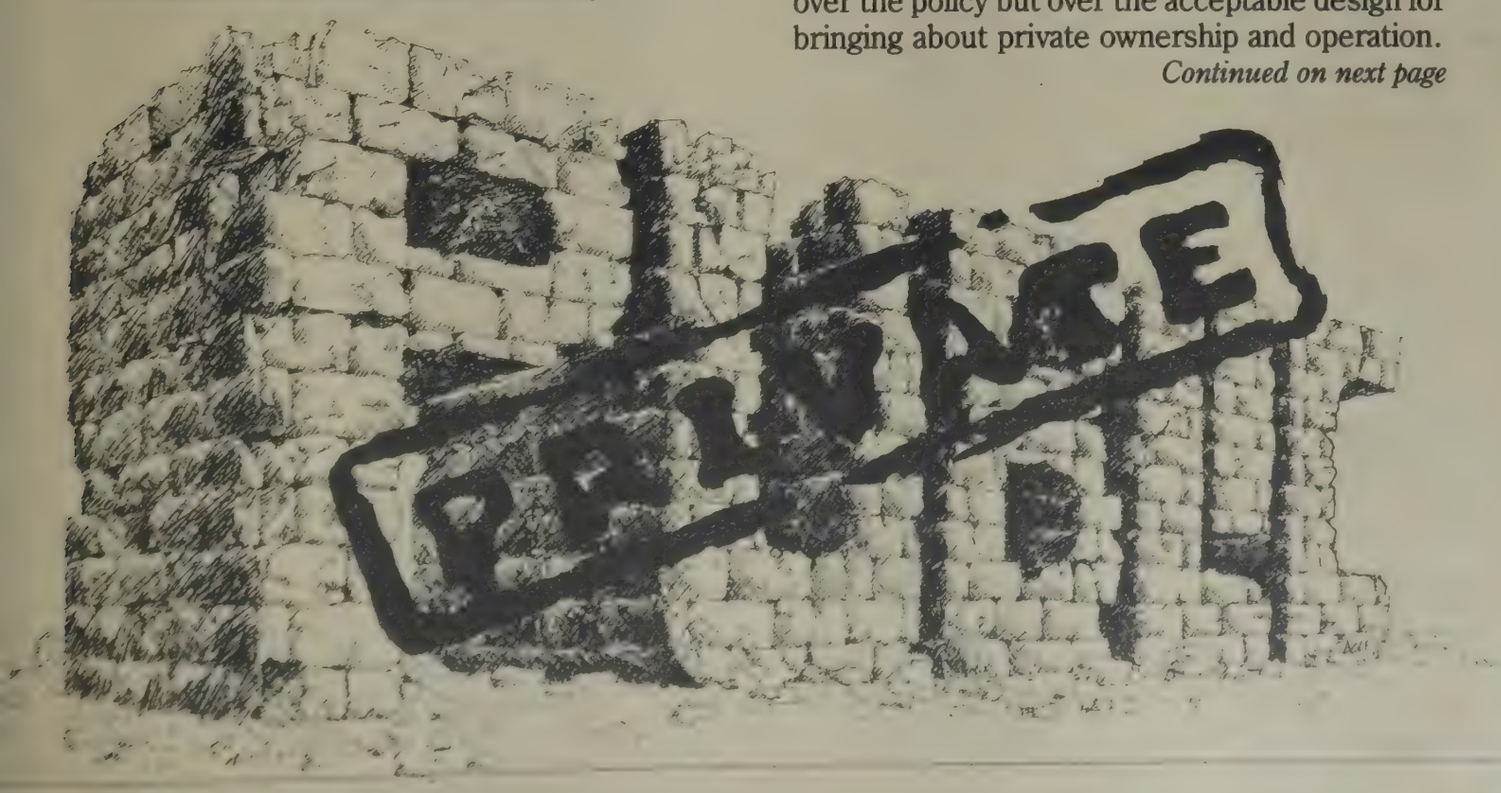
THE WAVE OF PRIVATIZATION

Public headaches—private cures

By JOHN KENNETH GALBRAITH *in Cambridge, USA*



GOING BACK 50 years or so in economic and political time the code word in much intense discussion was nationalization—or socialization. Large, powerful and often monopolistic enterprises were prominent on the industrial scene. Their workers and consumers were, even in the most reputable discourse, presumed to be a little or a lot at their mercy. How plausible that the state should step in, take over and operate in the interest of all its citizens.

Or perhaps the enterprises were insufficiently powerful; the public was penalized by their weakness, threatened by their prospective failure. Again the remedy: nationalization.

Any such discussion today would have a marked flavor of antiquity, the economic and political equivalent, more or less, of the resurrection of the Titanic or the re-creation in New York's Central Park of the caves and paintings of Lascaux. All mention is now of privatization, most dramatically in Central Europe and the Soviet Union but also in the English-speaking countries and as a basic component of effective public policy in Latin America and elsewhere. Economic debate is not over the policy but over the acceptable design for bringing about private ownership and operation.

Continued on next page

John Kenneth Galbraith is the Paul M. Warburg professor of economics emeritus at Harvard University.

Public headaches—

Continued from previous page

It is a discussion, I suggest, that should be approached with a certain measure of mental reservation, extending, on occasion, to extreme skepticism. There is no overriding rule as to privatization by which anyone or any country should be guided. There is no substitute for careful case-by-case thought, painful as that may be.

In Europe and Japan, visiting Americans ride with pleasure on publicly owned or largely publicly owned railroad systems. Government ownership and operation of this by no means unimportant industry has been an economic and social success. In the United States we do not widely use railroads, for here private rail ownership was extensively a failure. The passenger trains and quite a few of the freight trains that do still serve are operated by the government. This is done with modest competence; the alternative would be no passenger service at all and a large part of the industrial eastern US left with no cargo trains.

In most modern industrial countries, electricity is provided by publicly owned companies, as are other utility services. In Switzerland, a land identified in all popular attitudes with committed capitalism and free enterprise and where I have lived part of my life, I bank in an excellent publicly owned bank, ride a publicly owned railroad and rejoice in seeing cities where everyone is entitled by public action to more than acceptable shelter.

Elsewhere, there is indication that if a corporation is large enough, it does not greatly matter who is the ultimate owner of its shares. It can be owned by the government or, with little difference, by scattered and anonymous investors. What matters is that the management of the enterprise have full right of decision and be fully accountable for performance; that it be broadly rewarded for good performance and suffer the consequences of incompetence. This, in turn, is to say that it should be generally subject to the test of the market, have the rewards from doing well and the penalties from lousing things up.

The disaster of public ownership in much of Latin America, as also in the case of older industry in Europe and elsewhere, is that performance is irrelevant or largely so. The firm is kept in operation as a lifeboat and gravy train for those employed there. The service rendered or the product manufactured is poor and sometimes redundant; the cost can be large and on occasion horrific. Privatization here has much to be said for it; it is also, in a good many cases, a useful cover for simply shutting down the business.

I have been talking of large enterprises—the big corporations. As the Russians, the Central Europeans and the Chinese have discovered, the case for the privatization of small enterprises, especially those rendering services or producing diverse consumer goods, is very great, perhaps nearly total. It was here, above all, that socialism did not work.

None of this, however, is to minimize the problems in the transition back to private enterprise. That is proving far more difficult than some of its advocates ever imagined. Intelligent gradualism can have much to commend it.

What emerges as a conclusion? I venture to think the meaning is clear. This is not a matter by which we can be guided by any universal rule, by ideology. We cannot conclude that public ownership is always good or bad. Equally, there is no general case for or against privatization. There is a need for careful consideration in each particular case or in the particular kind or class of economic enterprise. Thought, not general rules, must be brought to bear on the issue of privatization.

As I indicated at the outset, case-by-case consideration is demanding, even painful. Far easier is the oratory laying down broad, if sadly implausible, principles. Some have spoken of a broad, transforming move to private enterprise. I am hopeful and indeed optimistic enough to believe that it instead will be a thoughtful adjustment to particular circumstance.♦

Philippine fire sale cools off

Selling the Marcos legacy

BY JOSE MARTE A. ABUEG
in Manila, Philippines

AFTER FOUR YEARS, progress in the Philippines' ambitious privatization program remains slow, mired in a history of bureaucratic and political bickering.

The government's program encompasses nearly 500 assets, including about US$7 billion in loan accounts previously held by government banks in 365 "nonperforming" projects left over from the time of Ferdinand Marcos.

Over $700 million in assets—ranging from cars and executive jets to financial accounts and building projects—have been sold. But the vast majority of the big-ticket items such as Philippine Airlines, National Steel and the Philippine Associated Smelting and Refining Corp. (PASAR) remain unsold.

In an attempt to speed up the process, the Philippine government's Committee on Privatization (COP) has given many state enterprises holding targeted entities a mid-year deadline to complete sales. Of 301 government corporations, 123 have been targeted for privatization. So far, only 67 have been offered for sale, of which 58 have been fully or partly sold, yielding about $228 million.

Nonetheless, many criticize President Corazon Aquino for the loss of the program's momentum. Aquino herself has publicly expressed impatience with the pace of progress.

The most cutting criticisms, however, come from former program officials who claim the bureaucratic process relies on recommendations from self-serving players, such as government companies that would lose attractive subsidiaries and officials who would lose their posts in the event of privatization.

A more fundamental problem is that the market itself is weak in the Philippines. Even if assets are offered at prices below market rates, they find few takers, which sets up a situation where a few investors could dominate markets.

The most sales under the program have been completed by the Asset Privatization Trust (APT), which is the most independent of all the government entities involved in selling state assets and has the most liberal valuation policy.

Created specifically to sell off Marcos-linked accounts foreclosed by the government's two biggest banks or the sequestered "ill-gotten wealth" of the Marcos regime, the APT does not try to sell assets above prevailing market prices. This policy has spawned criticisms that it sells assets at fire sale prices. It is staffed by full-time professional executive trustees, but the decision-making powers belong to the COP.

Numerous drawbacks notwithstanding, the program has had favorable effects. The APT has remitted $500 million to the national treasury from its sales.

Other benefits are less quantifiable. Ferdinand Marcos had increased government corporations from only 70 at the start of his martial rule in 1972, to 301. Although most of these remain with the government, the burden they put on the national budget has eased significantly.

That privatized companies are more efficient under their new managers than under government bureaucrats is readily acknowledged, but the true test of their performance remains in the future.♦

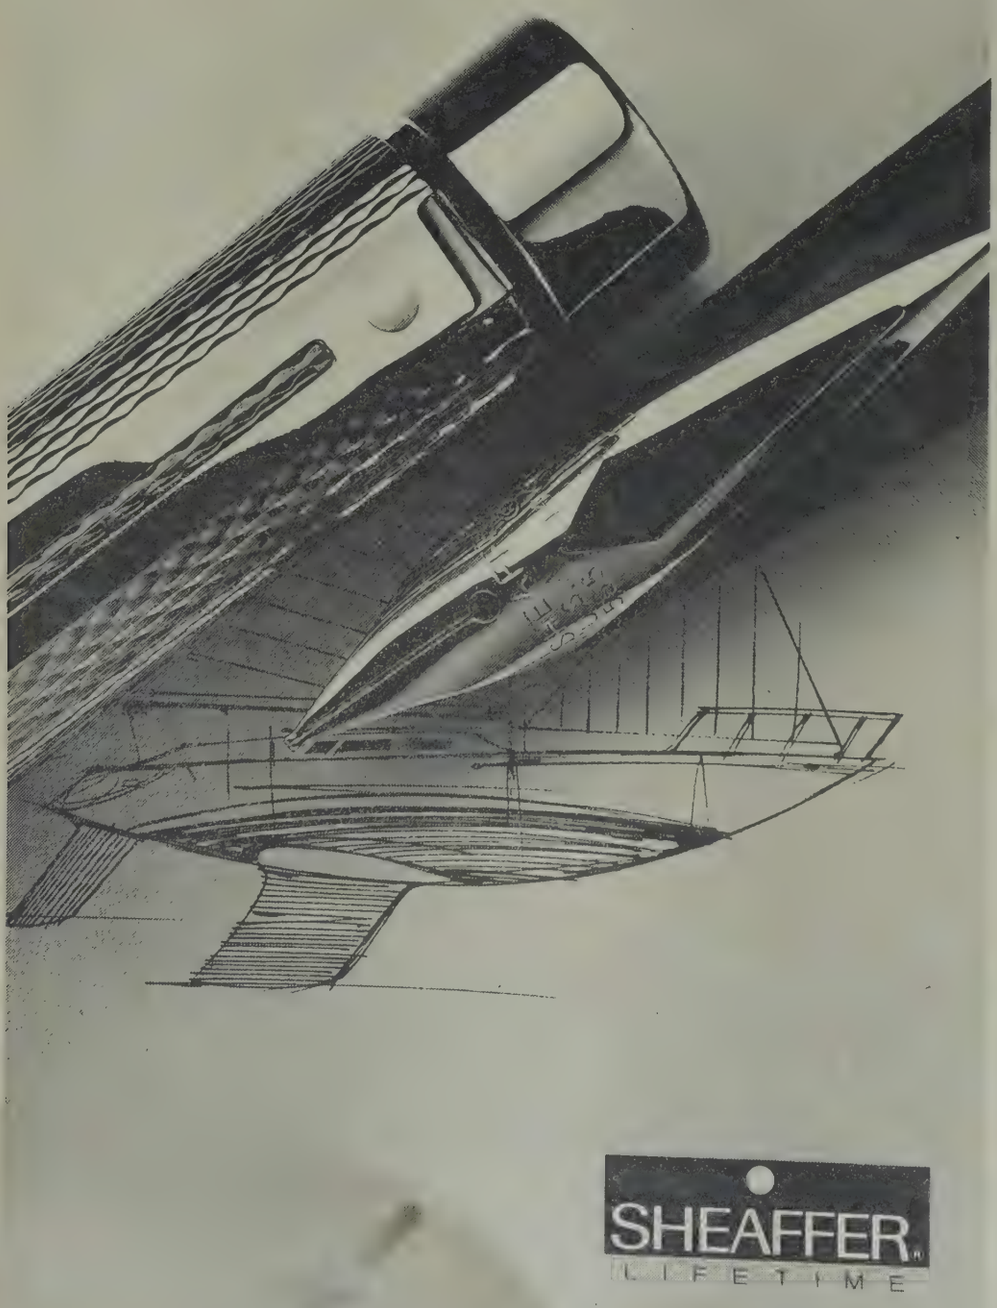
Hungary's shaky progress



Privatization clouded by suspicion of favoritism

By Robert Becski
in Budapest, Hungary

IN HUNGARY, NOBODY is satisfied with privatization's pace. Despite numerous program proposals, drafts, arguments and amendments to laws, there has been little progress.

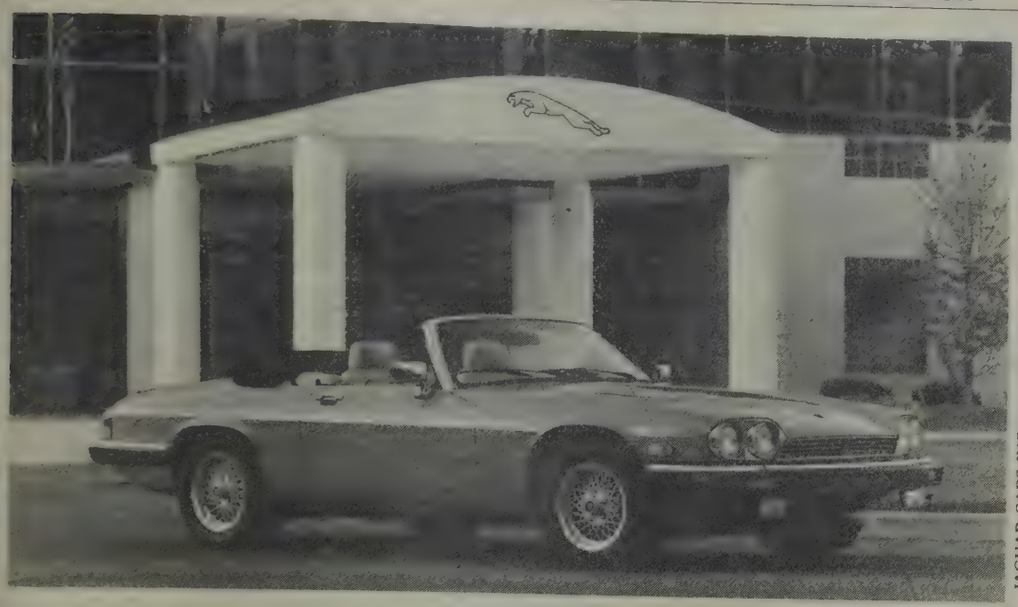
There is also a growing suspicion that some privatization schemes have led to massive giveaways of state assets which may have added only a droplet to an already shrinking pool of government revenue.

Reinstating private ownership is a difficult task in a country where even every grocery store was socialized. Yet, the principle of privatization is firmly entrenched and can be carried out in three approved procedures.

The first is a change in ownership initiated by the state. State-owned enterprises are supposed to be offered for sale several times a year.

In the second procedure for privatization, the enterprises themselves initiate the sale. Dubbed "spontaneous privatization," this process remains a politically sensitive issue and topic of heated debate in and outside the government.

There is also a third procedure for privatization. Domestic and foreign investors—including managers and employees of the enterprises—can request the sale of a specific enterprise or shop.



Paralleling the above mentioned programs, the "preprivatization program" was initiated through a special act of parliament in the retail trade, restaurant industry and consumer services. Its development is a good example of the difficulties which new governments face in previously socialist countries. The idea of an enterprise which is formally under state control but is in fact run independently and leased was an obvious solution for the transition to private ownership. Under this program, retail firms and restaurants may be leased from the government by employees, who then deliver preordained monthly payments, retaining any additional profits.

The idea saw daylight, but some managers, especially those linked to the political elite, often took advantage of generous leasing terms. Unrealistically low prices were set on the equipment which was contributed by the state along with the capital base, again to the managers' advantage.

The role of foreign capital, for the time being, is also problematic. All agree that the Hungarian economy cannot be privatized without a massive injection of foreign capital. The privatization of large industrial enterprises calls for Western investors, but in an uncertain economic environment they are not going out of their way to invest.

The risk of selling state enterprises below true market prices can be reduced, if overseeing institutions are involved in transactions to provide a public check on the process. But this approach also has its drawbacks since, as a general rule, the more administrative procedures there are, the fewer buyers and the more cumbersome privatization becomes.♦

Robert Becski is an economist and works for the Market Research Institute in Budapest.

JAGUAR CARS INC.

At left, Jaguar paid off handsomely.

In UK, privatization leaves government shelves bare

Jury is still out on success or failure of great experiment

By Nigel Adam
in London, UK

THE BRITISH LOVE a bargain. Until the present recession, standing in line for store sales was a national pastime. One ongoing sale proved so popular that near riots sometimes broke out in the City of London. This was the phenomenon known as privatization.

The disposal of a substantial part of the UK government's industrial assets was a cornerstone of the Thatcher administration's policy over the last decade.

The era of privatization in the UK is almost certainly drawing to a close, not long after the architect of this phenomenon herself left the stage.

In total, the UK government will have raised nearly US$78 billion from its asset sales which began publicly when 50 percent of British Aerospace was sold 10 years ago. The state entities which have been passed to private hands include the cream of British industry in key sectors ranging from energy to telecommunications.

The debate over the ultimate consequences of privatization has always been a lively one.

The government recognizes, though, that raising revenue to reduce the level of public debt is a finite exercise. The November sale of the electricity industry has left the government's shelves almost bare. Privatization of the coal and railway industries has been pencilled in for the next Conservative administration, but at present neither industry has the financial stamina to survive in the private sector.

Certainly, privatization has boosted the number of individual shareholders in the UK; from only two million in 1975 it multiplied to about 10 million by the end of last year. Yet the proportion of outstanding shares held by institutional investors—principally, pension funds and insurance companies—has also increased, to no less than 80 percent.

The government has deliberately spread the new shares thinly. Most investors hold only a few hundred, which is proving irksome both for the newly privatized companies, who must maintain a bulky shareholder register, and for individuals, who find that rising dealing costs make such tiny holdings barely worthwhile.

This issue came to the fore last November when shares for the regional electricity companies were massively oversold. Allocations were pared back so severely that most investors received only 100 shares worth $195 at the initial price. Worse, some investors who received no shares at all found that their checks had been cashed and had to wait weeks for a refund.

The electricity sale was the government's largest as well as its last. Scheduled as the grand finale of the privatization program, the event was tainted well before its closing minutes. First, in 1989, the government was forced against its will to drop nuclear power stations from the sale, after it miscalculated their running costs. Then, last summer, it began talks with Hanson, the industrial conglomerate, on a possible private sale of PowerGen, one of two British electricity generators. When talks began to unravel, the government decided to revert to a public sale early in 1991.

Nonetheless, many investors have profited handsomely from privatization. The electricity sale may have resembled a lottery to unlucky investors but those who did get shares are already sitting on a gain of over 50 percent. Further back in privatization's history, those who scrambled to buy shares in Jaguar, when it was sold in 1984, realized a fivefold profit when the company was bought by Ford in 1989.

The big utilities like British Gas and British Telecom have generated respectable profits since becoming privatized but this is largely because they still hold monopolies in their markets. Telecom has improved its services but the industry regulator, appointed by the government to keep an eye on standards, believes that services and prices could be even more favorable to the consumer.

This attitude will be reinforced if a socialist government is returned at the next general election, due by mid 1992 at the latest. The Labour Party has said it will renationalize only certain industries, principally Telecom and the water and electricity companies. But the government would insist that all the utilities pay more attention to prices and less to dividends.

The jury is still out on the success of the UK privatization experiment. Its instigators can take some comfort from the fact that the process is being repeated around the world, often following the British model. If nothing else, privatization has been added to the vocabulary of industry.♦

Tailoring privatization to Japan's fast-track needs

Government meddling derails Japan National Railways

By Tsugunari Edward Kuroki
in Miyazaki, Japan

AT GENERAL McARTHUR'S instruction in 1948, three of Japan's largest public enterprises, Japan National Railways (JNR), Japan Tobacco and Salt Public Corporation and Nippon Telegraph and Telephone Public Corporation (NTT) were made public. "Public" in Japan at that time meant that instead of being wholly managed as well as financed by government ministries, the companies, though still 100 percent financed by the government, would become self-managed entities. Almost four decades later, both Japan Tobacco and Salt and NTT finally were privatized in the modern sense, in 1985. JNR followed suit a few years later.

JNR, however, pioneered a unique course to privatization. Seven different major rail enterprises have been spun off from the parent company and are in various stages of privatization.

Unlike Japan Tobacco and Salt and NTT, JNR was always subject to severe competition with existing private railway companies from the very beginning of its 1948 transformation, especially in major cities. Though JNR often wanted to implement improvements to make it more competitive, the purse strings were still controlled by the government and approval for improvement plans was often bogged down in government bureaucracy.

Though struggling to meet growing public demands and overcome the financial binds of the government, JNR managed to maintain a profit until 1968. In 1969, JNR marked its first yearly loss on the balance sheet and losses soon snowballed. Over the next 20 years, tremendous efforts were made to try to improve JNR's financial situation. Repeated borrowing to make up for the growing deficits totalled over US$150 billion by the end of fiscal 1985.

During the losing years, the railroad implemented a series of drastic measures, including, at one time, laying off half its work force. JNR was also forced to increase fares many times, knowing that while this might immediately aid the financial situation, in the long run it would (and did) cause a severe drop in the number of passengers. JNR tried to expand and diversify key, profitable lines in hopes that an investment would eventually pay off, but all plans were opposed by the government, which didn't want JNR's speculations to threaten the private sector.

To compound JNR's struggle, government planners requested many unprofitable local lines. Meanwhile, the more efficient and privately owned Shinkansen (bullet train) was extended beyond Tokyo and Osaka.

JNR seemed to be locked into a no-win situation. Both the government and the public criticized JNR for its inefficiency. The railroad's hands were tied by government fiscal controls and politicians were constantly lobbying for their constituency's interests, which invariably conflicted with other constituencies' demands.

Now, after five years of privatization and diversification, though there are many more hurdles to overcome, the newly named Japan Railways' (JR) financial situation has improved significantly; the number of passengers has increased; operations and scheduling of each JR line are becoming more suited to local needs; and, perhaps most importantly, each JR company now has complete jurisdiction over its own development. Each of the JR companies still has years to go before paying off all debts and resolving many other problems. But the future of JR companies looks bright, for it is now finally transforming itself into a truly consumer-oriented organization with its own autonomy.♦

The fading of Canada

Will Canada lose its identity in rush to privatize?

ENTRANCED BY A global trend, the Canadian government has been privatizing state-owned corporations and cutting spending on public services. While few argue that this is not good economics, there is rising concern that it is bad nation-building for a young country.

Always sensitive to the influence of American ideas and culture seeping north over the longest undefended border in the world, Canadians have taken pride in a political culture markedly different from that of the United States. And part of that culture has been public enterprise.

While Americans have sought life, liberty and the pursuit of happiness for every individual, Canadians set goals in their constitution of "peace, order and good government" for the national community. In the past, the government was seen as an agency with which to cooperate in building a country in a huge, sparsely populated territory with a forbidding climate.

Now, however, that tradition is disappearing. Railway passenger service, which has for some years been operated by Via Rail, a publicly owned agency, has cut lines and trains, including the famous transcontinental train, The Canadian. A steel link with the past has been lost. Air Canada, which replaced train service, has been privatized and there are now a number of private airlines instead of one national line.

Canadians are watching the familiar symbols and institutions of their nationhood fade. A new society is emerging, one in which market forces are dominant. The American model is taking shape—a model they thought they had rejected at Confederation in 1867.

The WorldPaper

In Latin America, state enterprise gets the axe

Chile's path to privatization offers lessons worth noting

By Felipe Larrain
in Santiago, Chile

PRIVATIZATION IS BOUNDING over ideological barriers in Latin America. Considered a patrimony of the right just a few years ago, today the left is also embracing it. Clearly, the examples of Felipe Gonzalez's Spain and François Mitterrand's France have inspired the more flexible minds in Latin America's left.

In the private sector, privatization has renewed investor confidence in economies that not too long ago seemed destined for strong state control.

In the 1980s, Mexico took the lead in privatization from Chile, which in the 1970s was the first country in Latin America to implement nationwide privatization schemes.

By 1990, the two main Mexican airlines, Aeromexico and Mexicana de Aviación, had been auctioned, as well as the telephone company, Telmex. Eighteen banks, those that were originally nationalized in 1982, are waiting their turn to be auctioned. While the sale of Telmex yielded a reported US$8 billion for the Mexican government, the banks are expected to net an extra $14 billion.

Argentina has also begun its privatization process. In November 1990, foreign investors purchased the national telephone company for about $5 billion. The government then went on to sell the national airline, Aerolineas Argentinas. Brazil, Venezuela and many smaller countries in the region are also in the initial stages of their own privatization processes.

Many long-held tenets of state enterprise have gone up in smoke in this process. Only a few years ago, for example, it would have been unthinkable to privatize state airlines, which have long been symbols of national pride. However, Argentina and Brazil (and Chile earlier) swallowed nationalist sentiment and privatized their airlines.

Privatization has not just been the result of ideology, as many said of the 1970s Chilean process. It stems from outright necessity. In Argentina, privatization is an urgent, practically motivated task. The Argentine public sector simply does not have the resources necessary to maintain normal operations in many state companies.

Chile's road to privatization provides useful lessons for Latin American and other countries where significant private markets already exist.

> *Only a few years ago, it would have been unthinkable to privatize state airlines, which have long been symbols of national pride.*

In Chile, the military government that took power in September 1973 decided to transfer most of the assets that had come under state control in the previous Allende administration to the private sector.

The value of assets the government reaped through sales (mostly between 1974 and 1978) was about $1.2 billion. By 1980, only 43 public enterprises remained and the government's share in GDP had declined from about 40 percent in 1973 to a still considerable 24 percent in 1981; key public firms had remained in state hands—primarily those in the communications, mining and utility sectors. Although this may initially sound like a success story, there are several points worth noting in Chile's first privatization round:

- Timing of the sales was inappropriate; most privatizations were carried out in 1975, as Chile faced its worst depression since the 1930s.
- Newly privatized firms started with a high debt-equity ratio. When interest rates rose and the 1982-83 depression hit the economy, many firms went bankrupt.
- Little care was taken to disseminate property widely. Sales resulted in the concentration of property in the hands of relatively few groups which had access to foreign credit.
- The prices paid for some companies caused considerable controversy. Many analysts have claimed that public assets were sold too cheaply, damaging public finances.

Chile launched a second round of privatization in 1985. As a result of the failure of financial institutions in the 1982-83 depression, many previously privatized entities were again in public hands, including two of the nation's largest banks and the biggest pension funds. A menu of new methods was used to privatize these companies. This time, the procedure and timing for the process was considerably improved.

In other developments, the government also privatized many state firms that remained in its hands after the first round to simply reduce state holdings. Several means were used to privatize these companies: private pension funds were allowed to purchase limited quantities of shares through the stock market (institutional capitalism); workers were given important incentives to become stockholders in newly privatized firms, such as access to their severance funds to pay for the shares (labor capitalism); and individual investors bought shares through the stock market or participated in the bidding processes (traditional capitalism).

Some concerns have arisen in this second privatization round over changes in the program as the process evolved, especially regarding the privatization of natural (though regulated) monopolies and the subsidization of foreign investors. Nonetheless, the program has already scored important successes providing for a large dissemination of property to private firms, worker access to ownership in companies and improved financial positions for newly privatized companies.♦

Felipe Larrain is an associate professor of economics at Pontificia Universidad Catolica de Chile in Santiago.

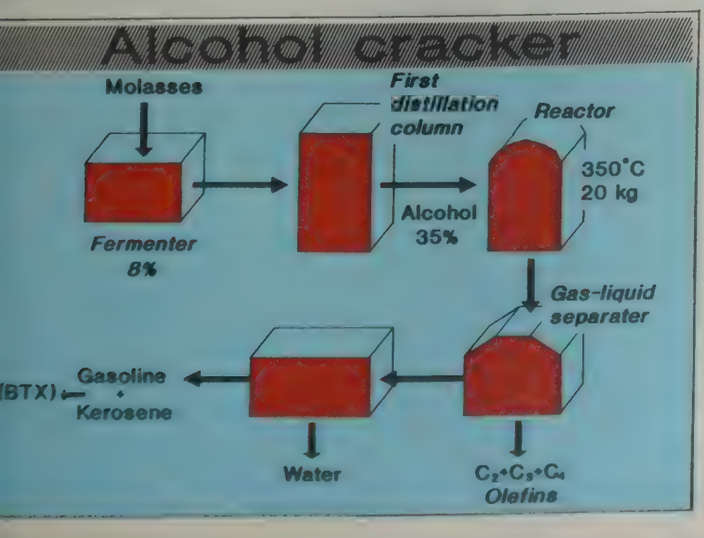
Nexus/JST/22

Molasses to petrochems' aid

High octane from molasses, that's technology for you. Three scientists — Paul Ratnaswamy, S. Sivasankar and S. Saha — at the National Chemical Laboratories (NCL), Pune, have recently evolved a process by which molasses can be converted into this superior grade petrol which is free of pollutants like lead, sulphur and nitrogen. This fuel has been tested and found satisfactory as a source of energy for scooters.

However, Ratnaswamy, deputy director of NCL and project-in-charge, is cautious in his optimism. According to him, the total amount of petrol which could be produced annually from the molasses available in India would be less than 1 million tonnes — a quantity quite insubstantial, given the annual requirement of 50 million tonnes. And the cost of production would make this method uneconomic too.

Still, the technology has its uses. It could be applied to convert agro-based alcohol (obtained from molasses) to olefins, an important feedstock for the petrochemical industry. In fact, this development could have far reaching consequences, for the implementation of this technique would enable the production of all the six basic building blocks of petrochemical products — the olefins (ethylene, propylene, butane) as well as the aromatics (benzene, tolouene, xylene) — from agro-based alcohol, for the first time in the world.



Alternative ways

Says Mashelkar, director, NCL, "We now have alternative ways of producing petrol, kerosene and diesel — by converting natural gas, for example. So it makes more sense to produce petrochemical feedstock from agro-based alcohol and thus reduce our dependence on imported naphtha."

Foreign exchange saving

India produces about 200 million tonnes of sugarcane a year, which yields roughly 6 million tonnes of molasses. So if agro-based alcohol were to be used to produce olefins, India can save as much as Rs.1,400 crore a year in foreign exchange.

What the three scientists have done is to invent and patent a new catalyst called encilite. After fermentation and distillation of cane juice or molasses produces alcohol, in encilite works on it at a temperature of 350 degree centigrade, in a reactor, to produce olefins and water. A gas-liquid separator is used to obtain the required product-mix of hydrocarbons.

Not only does the process involve low pressures and temperatures — making it possible to build a conversion plant indigenously — but its economics is also quite attractive.

It takes 840,000 tonnes of molasses to produce 100,000 tonnes of olefins. The indigenous cost of molasses being Rs.200 per tonne, the total raw material cost would be only Rs.16.8 crore. Even if the molasses were to be imported, the total raw material cost would work out to only Rs.74 crore, at current prices. On the other hand, it takes 167,000 tonnes of naphtha to produce 100,000 tonnes of olefins. At the current price of $300 per tonne, the naphtha cost would be $50 million or Rs.100 crore. So this new technique works out much cheaper.

What's more, even the capital investment required is one-third of what is required along the naphtha route. Also, the naphtha process requires import of plant and technology, while the agro-based process does not.

According to Ratnaswamy, NCL is setting up pilot plants based on this new technology in Sangli (Maharashtra), and at Rampur (UP). But the gestation period for the technology to become commercially available will be at least five years.

Ratnaswamy, Sivasankar and Saha: breakthrough

Plentiful raw material

For the new process, raw material will not be much of a problem for, as the NCL scientists say, it need not be sugarcane alone. Grains like rice, wheat, maize, and starch-rich products like potatoes, beetroot, or even fruits can be used in place of sugarcane. "The present technology developed by NCL," says Mashelkar, "has potential to be sold to countries like Brazil, where large amounts of agro-based alcohol is produced but not fully exploited." The process, if properly exploited, could not only effect considerable saving on foreign exchange but also turn out to be a foreign exchange earner. ■

ROOP KARNANI

INDO-AMERICAN HYBRID SEEDS

For passion and profit

When he began 26 years ago, Manmohan Attavar never imagined that he would one day end up creating a mini Holland in garden city Bangalore. Attavar is the founder director of Indo-American Hybrid Seeds (IAHS), which is one of the largest Indian enterprises producing hybrid flower and vegetable seeds and ornamental plants. Along with its subsidiary Indo American Exports (IAE), IAHS achieved a turnover of Rs.11.15 crore in 1990-91.

The cornerstone of Attavar's success is hybridisation, a technique which took the US by storm in the early part of this century. This technique increases yield and resistance to diseases and achieves uniform growth. However, it involves more manual work since the hybrid seeds are for one-time use and have to be constantly produced. It is this drawback (shortage of labour abroad) that Attavar has capitalised on.

Invaluable US experience

Attavar, who has acquired his passion for plants from his mother, hails from a middle class family in Karnataka's south Kanara district. He completed his Masters in horticulture from Karnataka University, Dharwad, in 1959 and in 1961, headed for the Montana State University, US, where he hoped to do a PhD in plant breeding and genetics. His professor and head of the department of plant sciences, E.R. Hehn, encouraged him to study ornamental horticulture and flower breeding at the George J. Ball Seed Company of West Chicago, a world leader in seed production. During his year-long training there, Attavar picked up invaluable experience in plant breeding, commercial horticulture, greenhouse management, plant propagation and seed production. He was then selected to study at Du Page Horticultural School, run by the Ball Seed Co, from where he graduated.

For the next three years, Attavar worked as a plant breeder at the Pan American Seeds Company at Paonia, Colorado. By 1965, he had already spent over five years in the US and it was time for him to decide whether to return to India and try to complete his doctorate or apply for a residence permit in the US. At this crucial juncture, Hehn advised him, "I don't think India is in dire need of academicians right now. What it needs is self-reliance and entrepreneurs."

Attavar then visited all the major seed companies in the US and realised that hybrid seeds are relatively expensive in labour-short America. He decided to return home, where labour is cheap and plentiful, to produce the seeds and then export them to the US.

But giving concrete shape to his idea was not easy. He could generate only Rs.1 lakh on his own, most of it salary savings from abroad. So he prepared a project report and got a loan of US $17,500 (Rs.87,500) from Pan American Seeds. It was agreed that he would export the flower seeds (mostly petunia) exclusively to the company and thus repay the loan in five years.

Natural choice

Attavar brought back seeds of special varieties of petunias and other flowers, scientific apparatus and chemicals for carrying out investigations in floriculture. Since Attavar's roots were in Karnataka, his choice of Bangalore, with its ideal weather conditions and soil, was natural. Mari Gowda, director of the state horticulture department, allowed him to use the greenhouse facilities at Lalbagh in the city.

In 1966, Attavar shifted to his 6,000 square foot farm at Yediyur village near Bangalore where he set up his own greenhouse. Within 12 months, IAHS' first consignment, valued at Rs.86,000, was despatched. Pan American Seeds was happy with the quality of seeds.

In 1967, Attavar's college mate, N.K. Bhat, tired of his transferrable job with the Spices Export Promotion Council, teamed up with him as a partner with financial assistance provided by a nationalised bank. IAHS acquired more land at Channasandra village, 10 kms from Bangalore, for production of flower seeds. Later on, the company added a R&D lab at Nainital and a bio-technology division at Bangalore for going in for tissue culture plants. It also has an oil seeds division at Ranebennur in the Dharwad district of Karnataka, where research work is being carried out on sunflowers.

Attavar (left) and Bhat: the export team

From 1969 onwards, IAHS set its eyes on the domestic market. It started work on hybrid vegetables (tomato and capsicum) and two years later, they were successfully produced. "Since hybrids were new to India, farmers were initially reluctant to try our seeds which were expensive and needed more fertiliser and plant care," says Attavar. It was only after farmers in Maharashtra used IAHS seeds that others, impressed by the yield, started buying them. "Today, the demand is greater than the supply," adds Attavar.

Interestingly, IAHS has developed wide varieties of seeds to suit different agro-climate regions in the country. In tomatoes alone, it has 11 varieties, three each in watermelon and cabbage, two each in capsicum, cauliflower and ladies fingers. Says K.P.V. Shetty, director of the flower seeds group at IAHS, "Our aim is to have one seed in each category of vegetable available in India."

One obvious drawback is the high costs f IAHS seeds. Shetty dismisses this: Once the message is spread that a rmer gets benefits like higher yield and etter quality, he does not talk about osts." Marketing director H.S. Parikh, dds, "Seed costs form not even 10 per ent of the total cost of cultivation. armers who are aware of the potential of ybrids do not mind paying three to four mes the cost of normal seeds."

Parikh looks after the domestic market nd the export market is managed by ttavar and J. Prakash, director of the io-technology division. Both Attavar nd Prakash have good contacts abroad. ttavar attends to export marketing of ybrid seeds and flowers, while follow-ps are carried out by Bhat.

ncouraging results

the last two years, Prakash has made at ast ten trips abroad, in quest of foreign arkets for tissue culture plants. The re-ults have been encouraging. During pril 1990 and March 1991, IAHS ex-orted tissue culture plants worth Rs.1.3 rore. This year, IAHS hopes to export tis-ue culture plants worth Rs.2 crore, in-uding an order of Rs.65 lakh from a utch company for breeding blue lilies. rakash points out, "Tissue is definitely the growth area in IAHS."

While some Indian companies engaged in tissue culture are concentrating only on multiplication of plants or breeding of seeds, IAHS has other facilities as well. These include preparing disease-free plants, or making completely new plants — like a banana with the taste of mango or caffeine-free coffee. Such endeavours are obviously not possible by conventional methods. It also has the infrastructure for exploiting plants for aromatic and medicinal purposes.

HS tissue culture lab: in the growth area

One of the major activities at the bio-technology division of IAHS is to increase the yield of cardamom plants. On an average, one gets 200 to 300 gram of yield per plant. IAHS research has succeeded in increasing the yield to 1 kg per plant (on an average, 600 gram).

Big markets

The US is IAHS' biggest market for hybrid flower and vegetable seeds and the Middle East an important market for hybrid plants. Europe is the principal market for tissue culture plants. For ornamental and fruit plants, Oman is the largest buyer, followed by Saudi Arabia.

Indo-Amercian Exports, set up in 1984, is engaged in contract production of hybrid seeds. During 1990-91, IAHS had a turnover of Rs.5.70, crore while IAE recorded sales of Rs.5.45 crore. Attavar holds 70 per cent of the equity in IAHS and Bhat holds 30 per cent. In IAE, Attavar has a 40 per cent stake, Bhat 30 per cent, while four other directors together own 30 per cent.

Attavar: aiming to be the best

IAHS may have become a big name today but export activity has not been a smooth game all along. "While labour in India is cheaper, costs of consummables and freight are quite high," points out Prakash. Laments Bhat, "Once Air India flew consignments of tissue culture plants all the way to Amsterdam without delivering them and brought them back. Subsequently, Air India simply wrote a letter of apology." Attavar feels that the government, which gives more importance to agriculture than floriculture, should relax some import curbs.

IAHS' achievements so far have been noteworthy and its future is certainly promising. World-renowned agriculture scientist M.S. Swaminathan says, "It's a remarkable achievement to be leaders in seed production in the world. Indo-American Hybrid Seeds has played a pivotal role in establishing a horticulture industry in India on scientific lines."

Attavar is certainly aiming high. Over the last many years, his company has been increasing its turnover at an average yearly rate of 20 per cent. This year, he expects IAHS' turnover to increase by 35 per cent. "My ambition is to make this company the best in the world," he says.

■ DEVAPRASAD PUROKAYASTHA

SUPERSNOOPERS

Business is booming

The sleuthing business is touching a new high. A job that used to attract sniggers or, at most, tolerant amusement, now lures young men and women (often highly qualified in various fields) as full time sleuths or freelance investigators moonlighting from their regular jobs. Glamour and excitement are considered only a part of the business; there is plenty of money to be made as well. And while the gumshoe business is still comparatively in its infancy in India, people are getting increasingly aware of the facilities offered by detective agencies. In the yellow pages, there is an entire section devoted to them.

"Compared to when we started out 30 years ago, sleuthing is now a very comprehensive business," says Major Bhagwan Singh of Globe Detective Agency, one of the leading detective agencies in India. "Though 90 per cent of our business is taken up by the corporate and industrial sector, we also have numerous cases of thefts, kidnapping, marital suspicion and the like." But, he adds, "We have to be careful while taking on such cases, because we don't want them to end up as a tool of blackmail."

Shadowing a suspect

Then again there are those who want a divorce on the ground of infidelity. The court accepts only photographic evidence, and detectives have to involve themselves in intrigue, and, in detective jargon, 'pull a Bond' on the party concerned. This service involves very careful tailing and the use of expensive photographic equipment. Costs can run into more than a lakh of rupees.

Among the services offered to the corporate sector is pre-employment screening, which includes giving the client a complete lowdown on the professional and personal life of a prospective employee. Another service is surveillance in offices and factories to prevent pilferage, monitor union activities and plug the more serious malpractices — like the deliberate purchase of inferior raw material. Such malpractices often give rise to the manufacture of spurious goods where the help of private investigators, if not the police, becomes necessary.

The methods that such sleuths use are varied and interesting but, according to them, as devoid of glamour as a banana peel. "All these images of a private eye with gorgeous girls hanging on his arms, dead bodies strewing his path, and motor boat chases are created by the movies," says Henry Bawa of Littlemore Services. "In real life trailing a suspect is frustrating, often hot, boring and uneventful, and only sometimes dangerous." When a suspect has to be kept under 24 hour surveillance, his shadow has to be on his feet continuously. Singh cites a case where a woman disappeared into a building. Five days later her shadow was still waiting for her to emerge!

Agencies cannot do without specialists. For instance, there are people good at riding motorcycles for trailing, smooth talkers for gleaning information and specialists in the use of electronic gadgets. Though all agencies get dozens of applications every year, many from dewy eyed graduates looking for a 'kick', the ones that get chosen are those who are resilient, observant and above all patient.

"I give prospective employees an IQ test that I have devised myself', says Bawa. "To my mind a sleuth must be mature, intelligent and imaginative. The glamour flies out of the window in the first week," he adds. "That's when many quit." There is no formal training course and most youngsters are trained on the job.

Bawa himself trained in technical optics related to crime and came into the business because he "knew nothing else". His father was a handwriting and fingerprint expert. Bawa was the youngest and first Indian to be selected president of the World Association of Detectives (WAD).

Bawa's wife Indra, a director of the company, handles the woman operatives. There are several women in the profession but they are assigned the less dangerous jobs. Meeting suspects and witnesses, often in various guises, and gleaning information from them is a highly skilled job. "While the suave young man at the next table at a restaurant is trying to eavesdrop on your conversation, the seedy looking character rolling a *bidi* with your driver might in fact be a senior investigator trying to get information," says Singh.

Often an undercover agent has to infiltrate an office or factory and actually work there as a regular employee for months. "We ask companies to release a dummy advertisement for a job, to which our man applies and gets chosen," Bawa explains. Operatives enter the organisation as electricians, telephone operators, liftmen and typists. Of course they have to be qualified for the task in order not to arouse suspicion.

Cunning contraptions

The gadgets detectives use in India are limited, but some cunning little contraptions are common — miniature tape recorders small enough to nestle in hair buns or collars; cameras tiny enough to be fitted into cuffs, and even one contraption that can be concealed in an olive that is served in martinis at parties.

Business is booming. Globe has offices in the major metros with over 500 full-time operatives. Employees get salaries and perks that compare with those of any multinational. There is nothing 'shady' about the business any more and as Bawa, known affectionately as the 'Indian James Bond' puts it: "It isn't making money that is our *tour de force*. We are committed to doing good to society."

With the profile of the proverbial 'private eye' turning sophisticated, maybe it won't be long before we see a full fledged School of Detectives — something professionals feel there is a crying need for. ■

SANYO

HORIZONTAL REVOLUTION

NOW, THERE'S A CAMCORDER THAT IS EASIER TO HOLD, TO SHOOT WITH AND TO CARRY.

Sanyo Zeema. The recently perfected VM-ES88P 8mm camcorder to complement every phase of your lifestyle. It keeps pace with your energy because it's horizontally designed. Which makes it easy to hold, easy to shoot with, easy to carry. Hang it around your neck and you can move about freely. But you're always ready to grasp your camcorder with both hands and shoot a fleeting scene.

Fuzzy Logic Auto Focus gives you quick, accurate focusing, just like the human eye. Even when your subject is moving. And Fuzzy Logic Auto Expo (Iris) sure does the job automatically. Even in difficult backlight situations. Sanyo's Fuzzy Logic 8mm camcorder. Join the switch to a successful combination of technology and ergonomic design. Join in the horizontal revolution.

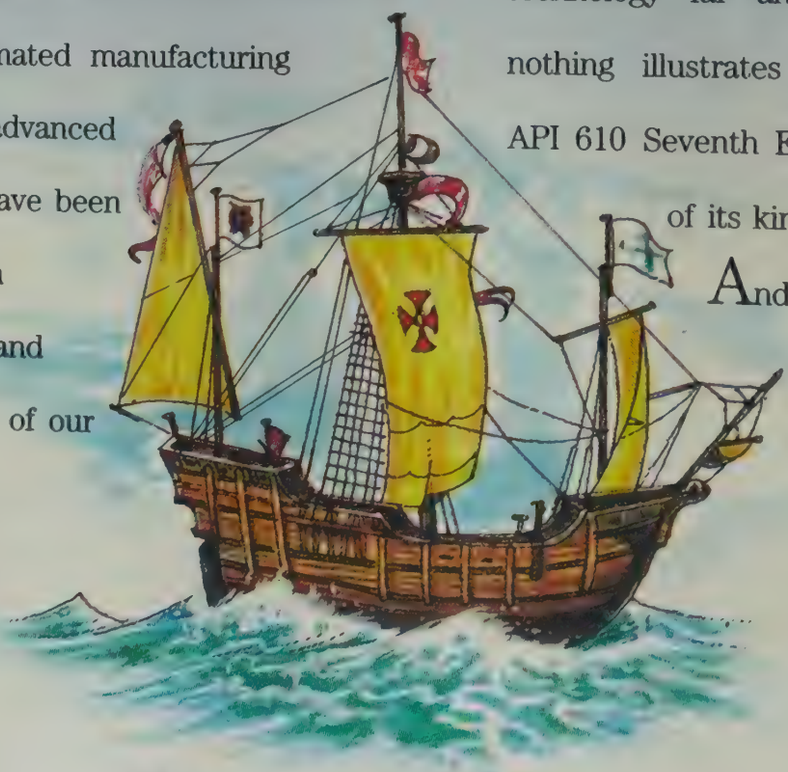
Enterprise DELL



THE WAY OUR ENGINEERS KEEP DISCOVERING NEW VISTAS MR. COLUMBUS, WISH YOU WERE HERE.

Yes, it is with the same indomitable spirit that our engineers have steered the company through the voyage of innovation and technological advancement.

Development and upgradation of products through continuous research is an on-going process with us. Our CAD/CAM systems, automated manufacturing facilities and advanced test facilities have been instrumental in customisation and standardisation of our products – Chemflo process pumps and valves that match international standards.

At Akay we have never believed in turning out pale imitations of obsolete borrowed technology. With our R & D efforts we have forged ahead and created technology far ahead of its time. And nothing illustrates this better than our API 610 Seventh Edition Pump – the first of its kind in the world.

And that Mr. Columbus we would have loved to share with you.

BRITISH AIRWAYS

A flight of fantasy

Marcel Parker, general manager (personnel) at the Oberoi Hotel group was in the midst of conducting interviews when his secretary put an 'urgent' call through. Parker's annoyance at the interruption changed quickly to sheer delight when he learned the identity of the caller and the reason for the urgency. A spokesman from British Airways informed him that he'd just won two free tickets to London.

As a standby winner of the airline's much-publicised lucky draw — "The World's Biggest Offer" (WBO) — Parker and his wife had all of four days to prepare to board BA 036 on 24 April flying non-stop from Delhi to London's Gatwick airport. For the Parkers, who hadn't been abroad for years, and for 268 other free ticket holders this seemed truly a flight into fantasy.

Festive look

On the night of 23 April, the international airports at Bombay, Delhi and Madras, sported an unusually festive look. Banners proclaimed that it was 'Up and Away Day' when British Airways the world over was carrying all its passengers for free. A month earlier (in March) the airline had launched this global marketing campaign with much fanfare and some controversy.

In India, Air India questioned its validity and 'fairness' of the campaign, thereby earning itself the distinction of being the only national carrier worldwide to do so. On the day of reckoning, with competitors watching keenly, BA spared no effort to ensure a smooth take-off for its three free flights out of India.

Champagne and chocolates

At Delhi's Indira Gandhi International Airport, there were 25 sales staff (instead of the normal 10) and special immigration counters to welcome the free fliers. Needless to say, the welcome was more effusive than usual and the mood distinctly celebratory. Flowers and chocolates were distributed to invoke that party spirit for the promised bash on-board. The cabin crew were dressed for the occasion — the stewards in straw hats and aprons, the stewardesses draped in saris.

As the flights took off and the champagne began to flow, there were more freebies on board. Special pens as giveaways and gifts with every duty-free purchase. A video recorded welcome address by BA chairman Lord King greeted a rather mixed lot of passengers. First-time travellers (some in the first and business class cabins) rubbed shoulders with the travel-wise.

On its home turf, the airline had to cope with the arrival of 25,000 passengers over two days from flights originating in various countries, and the departure of 25,000 winners in the UK heading towards 700 different destinations. At Heathrow, Gatwick, Glasgow, Manchester and Birmingham airports, elaborate arrangements had been made to handle this. Jazz bands and costume characters created a carnival like atmosphere.

Arriving passengers were handed out more goodies in the form of free theatre tickets and discount coupons for a chosen lot of tourist attracts. Even travel-weary R.N. Sinha, a Delhi-based garment exporter, admitted to being a bit overwhelmed. Sinha, who logs in an average of eight overseas trips annually had a one-word response for BA's campaign to win customers and influence the travel and tourism business: "Unbelievable".

Indeed, the WBO promotion had precisely these two foremost objectives. The business took a down-turn in the latter half of 1990 and airlines were caught in the double vise of an economic recession and war.

Precipitous drop

Jim Callary, BA's head of sales and marketing, recalls that by end-December so precipitous was the drop in business that they realised that no routine marketing promotion would work. A special in-house team was put together to devise a campaign that would have both high awareness and sustainability. "We had to gain market share not in a diminishing market but a growing one," says Callary.

WBO seemed to measure up on all these counts. It was audacious, innovative and being global, its sheer size made it noticeable in several markets simultaneously. It is just the start of a six-month long promotional effort that is expected to cost 50 million pounds. There are other goodies in the pipeline.

A campaign titled 'Key to Britain' will offer special incentives to all visitors to the UK between May and August. These range from a time-share at a Scottish Castle to an English title for one person. Business travellers will be wooed by a separate reward scheme called 'BA means business'. Additionally, in Britain, the 1.5 million applicants who did not win, will get a £50 voucher as a consolation prize.

Lord King: greeting a mixed lot of passengers

Positive signs

Callary feels the budget is well spent. The first positive signs are visible according to him. "Our telephones are ringing again and we no longer have heavy negatives in advance bookings," he says. The target is to bring traffic back to last year's level by end-September.

When launching WBO in India, Alan Burnett, BA's area general manager on the sub-continent, had expressed a hope that India tourism would "get a slice" of the additional business. Unfortunately only 170 passengers arrived in India from London on B-day.

■ NAAZNEEN KARMALI

CENTURY TEXTILES

Talent for hire

Last fortnight, Century Textiles and Industries Ltd announced its annual results. Riding high on a cement and textiles boom, the company's sales jumped 17 per cent to Rs.841 crore and gross profits by 45 per cent to Rs.169 crore. Happy news indeed for chairman B.K. Birla. But what he is even more enthusiastic about is his negotiations to manage at least four textile mills in Romania.

It all began when the Romanian government was looking for managerial talent to take care of the mills and some friends recommended Birlas to the Romanians. Negotiations commenced immediately though, says B.K. Birla, "So far we have not been able to strike any agreement on the terms and conditions of the deal".

Early indications are that if the deal is finalised, Century will provide managerial and technological inputs, strictly on a management fee contract, to help salvage the mills which are now sick. The company won't be infusing any funds into the project. Though company executives have looked at only one mill so far, they might finally end up reviving three more.

The first mill has a spindle capacity of 50,000 — one third Century Textiles' size (last year's turnover Rs.140 crore). According to Birla, much of the machinery will have to be replaced. While technical help will go from India, the machines themselves will be bought in Europe.

Not easy

Laying out the terms and conditions of this deal has not been easy for Century, essentially because they had not envisaged the ignorance of the Romanian government regarding basic concepts. "We had to literally start from scratch as they had no concept of debt-equity ratios or production-capital ratio," says Birla. Added to this was the lack of adequate foreign exchange; Romanian laws were vague in this matter. "This is the main reason why negotiations are taking so much time," Birla explains.

For Birla, however this is not the first involvement in an overseas textile venture. Starting in 1955, he had set up three textile mills and one jute mill in Ethiopia. "They were highly profitable, but were nationalised following the Communist coup in the country after Emperor Haile Selassie's death in the seventies," Birla says. And in what is a subtle irony, while in Ethiopia the communists took over his mills, in Romania, the communists now want him to take over theirs.

Birla: enthusiastic about going to Romania

■ SHAMPA KAR

OBEROIS

The Hungarian venture

For almost one decade, the East India Hotels Ltd has been gradually increasing its presence in the Middle East and the Asia-Pacific region. And last month it tied up its first European deal, almost two years after the negotiations first began.

The new property that the Oberois are acquiring is the Gresham Palace, built way back in 1827 in Budapest, Hungary, facing the river Danube and situated in what is called the Roosevelt square. The building, though officially not registered as a historic landmark, is still regarded as such by the city council.

Experts' clearance

In fact, for its renovation, the promoters had to take clearance from the executive committee of the Budapest city council. And the city community board consulted a group of 20 experts before accepting the proposal to turn Gresham Palace into a first class hotel.

The Hungarian venture had been in the offing for some time but according to Gautam Khanna, vice-president (development), it was delayed due to the uncertain political situation in the country. The Oberois will be investing 65 million crowns in the new venture through its subsidiary Oberoi Holdings Pvt Ltd. This amount includes various loans that the company will be getting. But, according to Khanna, the financial structure still remains undecided.

Mex Holdings of Holland will join the Oberois, holding approximately 25 percent in the project. Incidentally, for Mex it would be the first foray into hotelieering as it is traditionally in the garments business. The Gresham Palace will be renovated totally, have 150 rooms, and will, in all probability, open to the public sometime in 1994.

Advantageous position

The Oberois are placed in a distinctly advantageous position, as they are an internationally recognised chain of hotels and Budapest is one of the major tourist centres. "We think the opportunity is good, otherwise we would not have gone there," says Khanna, who is in charge of all new Oberoi projects.

The present four-storeyed Gresham Palace, categorised by the Hungarian government as a 'monument of character', was called the Nako House till 1880. Then the Gresham Life Assurance Society of England took over the building to begin its operations in Hungary; hence the name Gresham Palace. But by 1906, the building was demolished and restructured at a cost of three million crowns. Since then further major alterations have taken place because the buildings were damaged severely during World War II.

Gresham Palace will be the sixteenth overseas venture for the Oberois. The 15 other establishments, spread across 11 countries, include Australia, Egypt, Indonesia, Nepal, Saudi Arabia, Sri Lanka and Kuwait. Gresham would give the Oberois the foothold they have been looking for in Europe, at a time when east Europe is opening up for business travellers. The Budapest unit, along with similar set ups in Thailand, Mauritius and Malaysia which are in the pipeline, would mean a very wide international network for East India Hotels.

■ RAHUL SHARMA

Lipton India

dverse performance of the new foods usiness puts a damper on performance; rofit margins under squeeze; payout iked to maintain dividend

hile volumes in tea, the dominant (50 er cent) contributor to Lipton's turnver, declined slightly, this was made up or by higher average realisations per onne. In edible fats and animal feeds, erformance turnout continued to be satfactory. The advent into foods however as just not taken off and is bogging down erformance as a whole. With the fruit rinks segment badly hit, volumes were dversely affected. Also responsible for ecline in profitability is the percentage eduction in the "Other Income" compoent which in the previous year included s.2.74 crore as sale of Lipton's interest in ertain properties (the tax burden for hich was negligible).

Lipton India			(Rs crore)
Year ended	31 Dec 1990	31 Dec 1989	% change
Gross sales*	586.57	482.33	+22
Other income	3.13	5.49	−43
Raw materials cost	434.43	340.21	+28
Employees' cost	20.55	21.50	−4
Interest	12.07	9.04	+34
Gross profit	12.93	17.15	−25
Depreciation	1.70	1.35	+26
Tax	6.22	5.55	+12
Net profit	5.01	10.25	−51

Reserves & surplus†	24.49	22.12	
Dividend (%)	22.00	22.00	
Market price (Rs):			
Current	109.50		
1990: High	115.00		
Low	63.00		

** Inclusive of blending & packing service charges*
† Excluding revaluation reserve

Export earnings stagnated at Rs.12.48 rore (Rs.11.95 crore) and barely acounts for 2 per cent of sales turnover. hile gross profit margin shrunk to 2.2 er cent from 3.6 per cent, the bottomline tood reduced by half. With EPS dropping om Rs.6.51 to Rs.3.18, payout was hiked om 34 per cent to 69 per cent to maintin dividend per share at Rs.2.20.

The scrip, which has seen a low of Rs.50 nd a high of Rs.115 in the last five years, ow quotes at Rs.100 (3 May '91) discounting earnings 31 times. In fact, the rip had almost touched its 1990's high in the last week of April giving a P/E ratio of nearly 36. Market sources however attributed this high P/E to a combination of certain factors. Hindustan Lever has sold the edible oils business to Lipton for a consideration of Rs.14.87 crore. And this is one area which is slated to do well in the coming year. The biscuits business has been shut down and the right strategy decisions could turnaround the foods division. The market also felt that tea prices are likely to be relatively subdued which would be to Lipton's advantage. All this had led to a big operator buying up shares and hence the upward movement in price. Company sources however felt that the market obviously thought that the worst was over for Lipton and was being optimistic about the current year. Notwithstanding all these observations, it is still tea that would make or mar Lipton's future performance and a good monsoon would definitely help in pushing up margins.

Garden Silk Mills

Excellent half-time performance; dividend maintained during 1989-90 despite 68 per cent fall in net profit; new company formed to implement backward integration plans

Garden Silk Mills has set up a new company, Jayshree Filaments Ltd, to put up a Rs.180-crore plant to manufacture 15,000 tonnes per annum of polyester filament yarn. Enjoying collaboration with Lurgi of West Germany, the project will be implemented in two phases. The project will serve the backward integration plans of the company as PFY is one of its major raw materials.

Garden Silk Mills			(Rs crore)
Year ended	30 June 1990	30 June 1989*	% change†
Sales and job charges	186.89	220.66	6

Market price (Rs):			
Current	42.50		
1990: High	68.00		
Low	35.00		

** 15 months † annualised*

Garden Silk Mills has reported encouraging results for the six-month period ended 31 December 1990. Total income rose by 15 per cent to Rs.113.39 crore against Rs.98.94 crore in the corresponding six months last year. Operating profit improved by 39 per cent and gross profit by 57 per cent, despite a 28 per cent increase in interest costs. Net profit recorded a two fold growth from Rs.1.46 crore to Rs.4.23 crore.

The improvement in half yearly performance was brought about by cutting down input costs, particularly of imported raw material. Consumption of indigenous yarn was increased without affecting quality. The company also introduced a number of high value-added varieties to improve profitability.

Earlier, for the year ended June 1990, the company maintained dividend of 24 per cent on annualised basis, against 30 per cent dividend for the 15-month period ended June 1989. The company had suffered a set-back in 1989-90 with a 68 per cent fall in net profit on account of higher interest and depreciation charges, besides a steep increase in input costs. The cost of goods consumed as a percentage of sales and job charges went up by 3.5 per cent from 50.1 per cent to 53.6 per cent. The increase is significant, considering the increasing excise burden and stiff competition.

The shareholders of the company will be offered Jayshree Filaments equity shares (at par, subject to necessary approvals) on rights basis. However, neither this offer nor the excellent half-time results have created a significant upward movement in the scrip, which is currently quoted at Rs.42.50. The steep hike in excise duty on synthetic yarn during December 1990 has affected the investor's sentiment.

Goodyear India

Tighter working capital management leads to better overall performance; turnover up 9 per cent; rise in profit margins; higher EPS but lower dividend payout on ex-bonus equity

While capacity utilisation improved marginally, better monitoring of working cap-

Goodyear India			(Rs crore)
Year ended	31 Dec 1990	31 Dec 1989	% change
Gross sales	236.85	216.87	9
Other income	2.00	8.44	−76

‡ Increase in equity due to a 1:1 bonus
** Exclusive of revaluation reserve*
† After excluding write-back of provision no longer required (Rs.6.04 crore) and prior year's refund of purchase tax (Rs.1.48 crore).

ital enabled Goodyear to post an improved performance overall. While the inventory holding period declined by fourteen days, in terms of debtors also the collection period stood reduced by about four days.

While *prima facie* the net profit for the year ended December 1990 as shown in the company's accounts seems to have declined, this is not really so. The reason is that the net profit as shown for the previous year was inclusive of earlier year's write-backs of provisions. Were one to exclude these provisions, profit at gross and net levels would show a healthy enough growth. In fact, other income as a percentage of operating profit (gross profit plus interest) fell from 50 per cent to about 9 per cent.

On ex-bonus equity of Rs.14.96 crore, Goodyear earned Rs.4.46 per share (Rs. 8.92 on ex-bonus equity) as against Rs. 3.03 in the previous year. Like most FERA companies, Goodyear too strives to maintain a good distribution policy as is evident from the fact that for December 1989, the payout was stretched to 131 per cent to pay a dividend of Rs.4 per share. With a better bottomline, the payout has eased to 56 per cent giving a dividend per share of Rs.2.50 for the year under review.

The auditors have qualified that the company is following deferred tax accounting in respect of certain items only. They have also noted that due to the Supreme Court recalling its 1986 judgement on disputed excise duty on post-manufacturing expenses, adjustment, if required (in respect of Rs.2.38 crore written back during 1988 from the total liability created and provided for such disputed excise duty), cannot be ascertained at this stage since it would depend on the outcome of the Supreme Court's fresh consideration.

Exports brought in barely Rs.4.52 crore and the company will have to put in far greater efforts to penetrate the export market. Goodyear is also planning to produce giant earthmover tyres that are currently imported. Such moves on Goodyear's part are most definitely imperative if it is to maintain margins and a market share in an already overcrowded market.

Moving between a low of Rs.33.75 and a high of Rs.125 in the last five years, the scrip now quotes at Rs.55 discounting earnings twelve times.

TRENDS

Dynasty Industries

Dynasty Leasing & Finance, an offshoot of the NTV group, has changed its name to Dynasty Industries Ltd (DIL) and will broadbase its activities by entering into the manufacture of coated paper. A plant set up in Surat, Gujarat with a capacity of 6,000 tpa, is the first step in this direction. Its coated paper will be used by the printing and packaging industries while chromo and art papers will be required for commercial advertising and greeting cards.

Dynasty Industries			(Rs crore)
Period	Apr '90 Sep '90	Apr '89 Sep '89	Apr '89 Mar '90
Income from leases	0.30	0.26	0.53

Net profit	0.14	0.10	0.17

In the first phase, the company will invest Rs.3.5 crore in the plant, the funds partly mobilised by a rights issue.

Dynasty has involved in the business of leasing, hire purchase, financing consumer durables, bill discounting etc, since 1986. Its current diversification plan stems out from the fact that the NT group has the required expertise of mar ufacturing specialised paper. Trial ru of the DIL's paper units is slated for Jul 1991.

Corn Products

Corn Products Company (India) Lt (CPC) (an Indian subsidiary of CPC In ternational, USA sells its food product under well-known brand names such a 'Glucovita', 'Rex' and 'Brown and Polson

Last year, it launched 'Rex More Please jams — a range of premium jams with real fruit pieces. CPC claims that these jams meet international quality stan dards and its 'Rex' range of flavours has captured 15 per cent market share of the Rs.40 crore Indian jam market.

CPC International, with an annual turnover of around $5.8 billion, is one of the largest food companies in the world, owning popular multinational brands like Mazola, Marmite, Skippy etc. CPC's management has gone on record stating

that the company hopes to double turnover every three years. However this 59-year-old company notched up sales of a mere Rs.18.61 crore for the year ended March 1990.

For the half year ended September 1990, sales recorded were Rs.10.16 crore, a 14.29 per cent growth over the corresponding period of the previous year. However, the gross profit and net profit figures have gone down by 40 per cent and 89 per cent, respectively.

Though the bottomline is not improving, the company is making a rights issue of 14 per cent partly convertible debentures of Rs.250 each, aggregating Rs.1.12 crore. Six months from the date of allotment, Rs.180 of every debenture will be

onverted into 10 equity shares of Rs.10 ach, at a premium of Rs.8 per share. The alance Rs.70 will be redeemed at par in wo instalments during the eighth and inth year from the date of allotment.

The rights issue is being made to fi- ance additional working capital require- ents. CPC International will invest in he current issue and maintain its stake n CPC India's equity at 40 per cent. At resent, CPC India's equity capital stands t Rs.75 lakh and its market price is round Rs.56. The company's share price as hovered around this level for some- ime, notwithstanding its performance ecause it has always been a potential akeover target.

Choksi Tube

hoksi Tube Company Ltd (CTCL), hich set up a continuous tube mill to ake stainless steel welded tubes in 972, is at present one of the largest man- facturers of stainless steel tubes in dia. It also has facilities to manufacture apillary tubes and, in 1989, set up a lant to produce hot extruded seamless ainless steel pipes. Its steel tubes are vailable in a wide range from 0.4 mm to

00 mm diameter.

In a bid to improve quality, increase oductivity and reduce costs, CTCL is panding its cold finishing facilities at plants in Vatna and Rajpur, in Gujarat. cording to the management, tubes anufactured using the cold finishing fa- ities have a higher value addition and e preferred by end-user industries. This w project, also aims at boosting the oducts' export potential. To date, the mpany has exported tubes worth Rs.1 re to the US.

The total cost of cold finishing facilities is estimated at Rs.5 crore. The company is also repaying a foreign exchange currency loan taken from IFCI, to shelter the company from any increase in the DM currency rate vis-a-vis the rupee. Hence a rights issue of 14 per cent partly convertible debentures of Rs.100 each, aggregating Rs.11.19 crore. After the conversion, the equity capital will rise to Rs.6.5 crore.

For the six months ended June 1990, CTCL's sales, at Rs.11.99 crore, shows a 100 per cent increase over the sales of the corresponding period of the previous. (CTCL is changing its accounting year and, as such, will draw up accounts for the 15 months ended March 1991.) Raw materials cost have also doubled for the half year ended June 1990. The raw material to sales ratio hovers around 77 per cent.

During 1990, interest and depreciation had jumped by 289 per cent and 427 per cent respectively, as reflected in the net profit figure which shows a down trend of 24.6 per cent. Net profit as a percentage of sales has also declined from 11.5 per cent to 4.34 per cent for the half year ended June 1990. It was 5 per cent for the year ended December 1990. Though gross profit has gone up in actual figures, as a percentage of sales, it too has declined from 14 per cent to 10.9 per cent. The company's share price which touched a high of Rs.95 in 1990 has declined to Rs.43 (April 1991).

RESULTS ANNOUNCED

Century Textiles & Industries

Impressive performance for the year ended March 1991 on all fronts

Cement, bringing in the lion's share of product sales, has decisively swung fortunes again for this B.K. Birla flagship company. This is not to say, of course, that textiles, rayon yarn, shipping, etc, have lagged far behind. Overall, turnover on an annualised basis is up 17 per cent to Rs.841.59 crore. Gross profit margin, has risen by 4 points to 20 per cent while, at the net level, EPS is Rs.306.27 (Rs.194.77 — annualised). Dividend per share is Rs.50 (Rs.40 — annualised) at a lower payout of 16 per cent (21 per cent). The scrip quotes at Rs.4,985 (3 May 91), higher than its 1990 peak, discounting these earnings 16 times. A bonus from Century is also on the cards.

Birla Jute & Industries

Jute performance very poor; cement again raking in profits and pushing up margins

For the year ended March 1991, gross profit margin was up nearly 7 points to 12.3 per cent on a turnover of Rs.532.29 crore (Rs.467.84 crore). On an equity base of Rs.20.37 crore, EPS went from Rs.2.14 to nearly double the face value at Rs.19.23. Payout eased from 84 to 15.6 per cent on a dividend per share of Rs.3 (Rs.1.80). The scrip at its 1990 high of Rs.230 discounts these earnings 12 times.

Century Enka

Excise duty hikes on PFY/NFY take their toll on gross profit margin; bottomline also hit by steep hikes in provisions for depreciation and tax

For the year ended March 1991, the gross profit margin dipped by 5 points to 17 per cent as sales of Rs.500.72 crore (Rs.491.08 crore — 15 months) yields a gross profit of Rs.85.71 crore (Rs.108.63 crore — 15 months). With provisions for depreciation and tax spiralling by 92 and 91 per cent, respectively, on an annualised basis, the bottomline stood reduced by 56 per cent at Rs.24.24 crore (Rs.68.59 crore). Dividend distribution at 49 per cent (50 per cent — annualised) comprises 25 per cent interim on cum-bonus equity and 24 per cent final on ex-bonus equity of Rs.23.26 crore. Payout was hiked from 15 to 40 per cent. The scrip currently quotes at Rs.2,500.

Mangalam Cement

Turnover up 35 per cent; profitability gets a boost; higher dividend at a lower payout

Expansion of the company's cement manufacturing capacity from 400,000 tonnes to 1 million tpa is underway and is scheduled to be completed by the first quarter

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

(In collaboration with The Institute of Chartered Financial Analysts, Virginia, USA)

ADMISSION NOTICE

THE CFA PROGRAMME

ICFA (USA) & ICFAI Collaboration

- ★ Evaluation and critique of study programme and material as well as examination on an on-going basis.
- ★ Involvement in study material development and related matters.
- ★ ICFA (USA) counter-signing the 'CFA Charter awarded by ICFAI'.
- ★ Representation of the President of ICFA (USA) on the Board of Governors of ICFAI.

The American Institute

The Institute of Chartered Financial Analysts, set up in 1959 at Virginia, USA is the only institution of its kind in the world. It offers a three year training programme leading to the designation Chartered Financial Analyst (CFA) which is a highly valued professional qualification. Since its inception it has awarded the CFA designation to about 13,500 candidates. Interested in advancing the cause of professionalism in the field of financial analysis, it is collaborating with the Institute of Chartered Financial Analysts of India, in offering the CFA Programme in India.

The Indian Institute

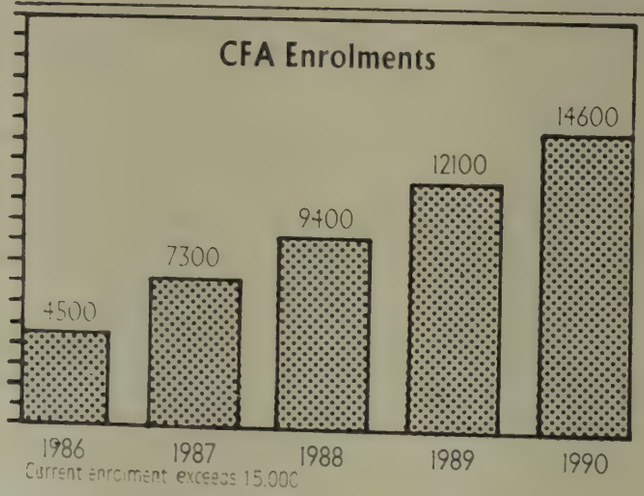
The Institute of Chartered Financial Analysts of India has been established in 1984 as a non-profit educational society. ICFAI is a member of Asian Securities Analysts Council, Japan. The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 59 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff.

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level



Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/ International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: July 14, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

Prospectus

Please write with complete address and a DD for Rs. 60 drawn in favour of 'ICFAI' to : The Admn. Officer (CFA).

The Institute of Chartered Financial Analysts of India,
Road No. 3, Banjara Hills, Hyderabad 500 034,

FAX: 0842-229107.

of 1993. For the year ended March 1991, sales of this B.K. Birla company stood at Rs.54.02 crore (Rs.40.10 crore), yielding a gross profit margin of 19.8 per cent (13.2 per cent). EPS has risen to Rs.5.75 (Rs.2.71), while dividend per share has been hiked to Rs.2.40 (Rs.1.80) at a lower payout of 42 per cent (66 per cent). The scrip quotes at Rs.80, discounting these earnings nearly 14 times.

Jayshree Tea & Industries

Turnover up 8 per cent; cash earnings reduced; bottomline is better; 5 point hike in dividend

For the year ended March 1991, this B.K. Birla group company has earned a lower gross profit margin of 22 per cent (26 per cent) on a turnover of Rs.131.64 crore (Rs.122.43 crore). But with reduced cash earnings at the net level, EPS has risen to Rs.22.28 (Rs.14.31), of which Rs.3.25 (Rs.2.75) will be paid out as dividend per share. The market price at Rs.180, discounts earnings eight times. Incidentally, 92 per cent of Jayshree's equity comprises bonus shares. The last bonus of 1:2 was issued in 1985.

Universal Cables

Turnover up 14 per cent; pressure on profit margins with a fall in EPS

For the year ended March 1991, the turnover of this manufacturer of electrical cables, wires and conductors, stood at Rs.147.04 crore (Rs.129.33 crore), yielding a lower gross profit of Rs.9.51 crore (Rs.10.27 crore). With a 40 per cent decline in net profit, EPS dived to Rs.6.33 (Rs.10.47) while dividend per share was maintained at Rs.2.20. With the market price at Rs.90, the P/E ratio is 14.

Ficom Organics

Lower sales and profitability for year ended March 1991; higher input costs; dividend maintained

Manufacturers of Malathion technical, octoxyl phenol and nonyl phenol, Ficom's performance has been hit by higher cost of imported inputs and higher margin requirements for the same. The turnover dropped 20 per cent to Rs.18.04 crore, yielding a gross profit of Rs.2.87 crore (Rs.3.61 crore). On an equity base of Rs.1.29 crore, the company earned Rs.13.33 per share (Rs.16.67) and will maintain dividend at Rs.4.50 per share. The scrip quotes at Rs.132.50, discounting earnings 10 times.

Pudumjee Pulp & Paper Mills

Slight rise in turnover; pressure on margins at the net level; EPS declines; dividend stepped up by 3 points; book value continues still bloated due to conservative payout history

In the year ended March 1991, this manufacturer of value added speciality paper has seen its turnover rise by 70 per cent to Rs.62.92 crore, yielding a gross profit margin of 18.3 per cent (17.8 per cent). With higher provisions for depreciation and tax, EPS dipped to Rs.15.91 (Rs.20.36) while dividend of Rs.1.80 per share will merit a payout of 11 per cent (7 per cent) — a bit higher, no doubt, but still conservative enough to ensure a bloated book value of Rs.81.92. The last bonus was a 1:5 issue in 1982. But does that explain a discount of eight times with the market price hovering at Rs.127.50?

IN BRIEF

Sree Kailas Sugars and Chemicals of the AP-based S.R. Kailas group, is setting up a 2,500 tcd plant at Khammam. This together with an alcohol and a chemicals unit will form an integrated industrial complex.

DCW has decided to pay an interim dividend of 12 per cent for the year ended March 1991. Meanwhile, its subsidiary, DCW Home Products, has launched a new refined salt under the brand name Captain Cook. The Rs.12.50 crore salt plant, with a capacity of 100,000 tpa, has been set up at Palghar.

Polymechplast Machines, a Baroda-based company, is expanding to manufacture high capacity injection moulding machines. The total capital cost is Rs.9.5 crore.

Do-Max Steel is setting up a 30,000 tpa steel plant at a cost of Rs.5.95 crore.

Ceat Financial Services, belonging to RPG Enterprises, plans to enter merchant banking and portfolio management services.

Indtradeco is setting up a 100 per cent export-oriented unit for making terry towels at Palghar. The unit will make 1.5 million pieces every year.

Indo Rama Synthetics, an O.P. Lohia company, has come out with a Rs.20.91 crore rights issue of partly convertible debentures. The proceeds will part-finance a new Rs.34.13 crore 100 per cent export-oriented unit to make cotton and polyester-cotton yarn.

Sundaram Polymers, promoted by the TVS group, is venturing into engineering plastics. The 3,600 tpa capacity plant will be located near Mysore.

Western Indian Enterprises Ltd, of Pune, has bagged a Rs.75 million contract in Abu Dhabi for engineering, installing and commissioning the telecom systems for four oilwell platforms.

Tata Consultancy Services has got a Rs.1.70 crore order to supply Unigraphics II CAD/CAM software to the Rail Coach Factory at Kapurthala.

E.I.D. Parry is acquiring 41.75 per cent of the shareholding of Falcon Gulf Ceramics, a company promoted by the Channel Islands-based Falcon Gulf Holdings.

Kirloskar Cummins is setting up a Rs.100 crore export-oriented unit in technical-cum-financial collaboration with the Hungary-based Railway Carriage and Machine Works. The unit will make 10,000 commercial vehicles with capacities ranging between 1.5 and 25 tonnes.

Gujarat Communications and Electronics has signed an MoU with the Computer Maintenance Corporation to jointly provide integrated voice and data networks as well as other associated services.

Hindustan Teleprinters, a public sector company, has received the green signal to make fax machines.

Hero Honda has achieved a record production of 120,000 motorcycles in its year ended March 1991. Hero Honda is the first 100 cc motorcycle manufacturer to notch up these production figures. This year the target is 140,000 motorcycles.

Dalmia Cements is setting up a Rs.34 crore sugar factory in UP. Its capacity will be 40,000 tpa.

Mahindra Nissan Allwyn's new light commercial vehicle, the Cabstar 690, priced at Rs.2.5 lakh, has made its debut in the market.

Asian Coffee

Asian Coffee Ltd (ACL) is re-entering the capital market, to finance its plan to more than double its capacity from 1,500 to 3,500 tpa.

The company made its debut before the investing public in July 1989, when its issue was over-subscribed 27 times. It has just completed its maiden year of operation. For the eleven months ended February 1991, ACL has notched a gross sales of Rs.8.72 crore and made a cash profit of Rs.28 lakh. However, at net level, the company has posted a loss of Rs.54 lakh.

Being a 100 per cent export-oriented unit, ACL is exempted from tax. The company has performed well, considering the depressed international coffee market which forced it to sell at an average price of $3 a kg against last year's average of $6. "The price fell because there were no fresh international coffee agreements (ICAs) signed last year," says Challa Rajendra Prasad, managing director, ACL. ICAs are agreements that fix the quota and price for coffee. They are signed by the consuming and producing countries and decided on the basis of the demand and supply position in the international market.

Till February 1991, the company manufactured 1,200 tonnes of coffee, of which 800 tonnes found its way to the European Economic Community (EEC), the US and Canada while the balance went to the USSR. The other exporter of soluble coffee from India is the coffee board. But they only supply to the USSR, under a protocol signed by the Government of India.

Asian Coffee	
Duration	: 27 April to 27 May 1991
Size of issue	: Rs.5.92 crore
Instrument	: Equity shares of Rs.10 each at par in the ratio of 1:1
Purpose	: to increase capacity to 3,500 tpa
Listed at	: Hyderabad, Bombay and Ahmedabad

ACL's raw material is green coffee beans procured from the coffee board which is the sole procuring and selling agency. The company's plant is equipped to use both Arabica and Robusta coffee beans, available in India. The company, at present, buys coffee at export auctions and pays a price higher than that quoted at domestic auctions. So it has to compete with traders who operate on wafer-thin margins as against ACL's value addition as a manufacturer. This makes ACL less competitive, as its procurement price gets affected. Meanwhile, a recent commerce ministry directive to the coffee board, to give firm allotment to ACL, has also been rejected by the board.

After the rights issue, the company's equity base will double from Rs.4.85 crore to Rs.10.87 crore. Nevertheless, Prasad is certain that ACL will cross the Rs.20 crore turnover mark for the year ended March 1991 by which time the expansion will be completed. With the present amendment to cash compensatory support (CCS) to EOUs, ACL would stand to gain. CCS has been hiked by 100 per cent, from 9 per cent on sales to 18 per cent. However, the dividend possibility appears bleak at least till 1992-93, a full year after the expansion.

Currently the company is exporting in bulk. However, its long-term plan is to launch its own brand. "Right now, our capacity is too small, the US alone consumes 100,000 tpa," explains Prasad.

I S E '91
INTERNATIONAL SECURITY EXHIBITION
PRAGATI MAIDAN, NEW DELHI
SEPTEMBER 3-7, 1991

Participation invited from Security Industry for India's Second International Exhibition on Security Technology, Systems, Equipment and Devices.

SCOPE OF DISPLAY:

- Industrial security devices, Fire safety & security.
- Banking security devices.
- Anti-terrorist, Anti-sabotage and Anti-smuggling devices including modern weapons, explosives, protective garments, opto-electric devices, special equipment for commandos/ Special Task Force personnel etc.
- Bomb detection, removal and disposal devices.
- Fibre Optic, Counter-espionage and VIP security devices.
- Domestic security appliances, crowd control/ mob dispersal equipment/outfits.
- Forensic science equipments, arms, ammunitions relevant to the Police/Paramilitary forces.
- Wireless equipments & Paging devices, Speech secrecy devices & equipment.
- Airport and Port security devices/measures.
- Training aids and training equipment for security personnel.
- Radars & other fast detection devices.
- Target and shooting range equipment.
- Self defence/personal protection equipment/devices.
- Uniforms and other outfits for security forces.
- Office security.
- Computer based Information systems and their security.

SPACE RENTALS:

Rs. 1200 per sq. mtr. for national exhibitors. Minimum space booking 9 sq. mtrs. and multiples thereof.
Rentals include constructed stand with three side partition, carpet, facia, three spot lights.

VISITORS PROFILE:

Top Executives of Public and Private Sector companies, Heads of Police and Para Military Forces, Heads of Purchase Departments from Railways, Banks, Government Departments and Civil Defence, Defence Services, Aviation, Technologists and Experts, Trade Buyers, Engineers, Students and Technical Personnel. Over 5,00,000 visitors are expected to visit ISE'91.

SPECIAL FACILITIES:

The foreign participants are also allowed duty free import of exhibits and facilities for disposal of exhibits subject to certain conditions.

THE ESSENCE OF LEADERSHIP

THE DIFFERENCE BETWEEN MANAGING THE COMPETITION, AND LEADING IT...

The Thapar Group

OR HOW CROMPTON GREAVES GREW TO BE INDIA'S LEADING TELECOMMUNICATIONS COMPANY IN JUST 4 YEARS.

Corporate history is replete with examples of those who struggled to keep pace with competition, and others who failed. At Crompton Greaves, however, objectives are set with one underlying goal—leadership. In telecommunications, for example, we grew to be the leader in just 4 years. In electrical engineering, we continue to remain far ahead of the rest. And are fast emerging as a leader in electronics, industrial automation and robotics as well. The determination and ability to achieve targets is what sets us apart. You could attribute this success to our vast experience. Our dedicated team of 2000 engineers and 8000 personnel. A highly participative work environment. State-of-the-art testing laboratories. And more. Last century, we brought electricity to India. Before the turn of this one, we will be a Rs. 2000 crore company. As we continue to bridge the gap between emerging needs and changing technologies.

Crompton Greaves LIMITED

WE WERE THE FIRST.
WE ARE THE FUTURE.

ULKA-13937-C

Elgi helps to put the bite on steel

When it comes to compressed air, the machining industry depends on Elgi.

As do the mining, the petroleum, the automotive, the aeronautical and a host of other industries.

Including some leading names like Tata, Raymonds, Voltas, H.A.L. and L & T.

Elgi's reputation for quality, flexibility and an ability to tailor customised solutions is probably the reason for this popularity.

But you know the best way to find out for yourself.

When you need compressed air, what you need is Elgi.

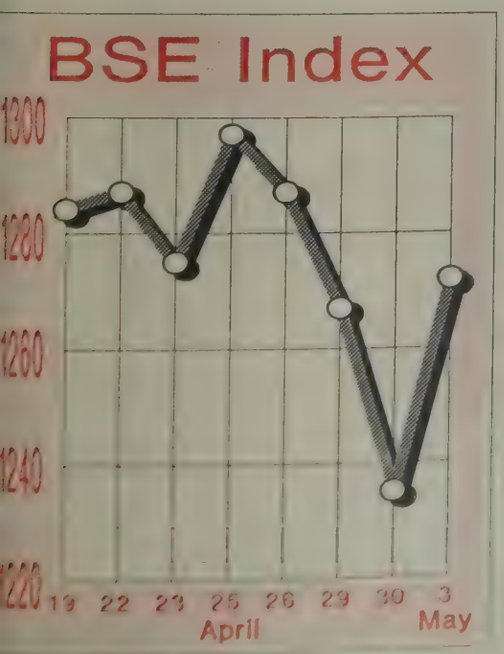
STOCKMARKET REVIEW



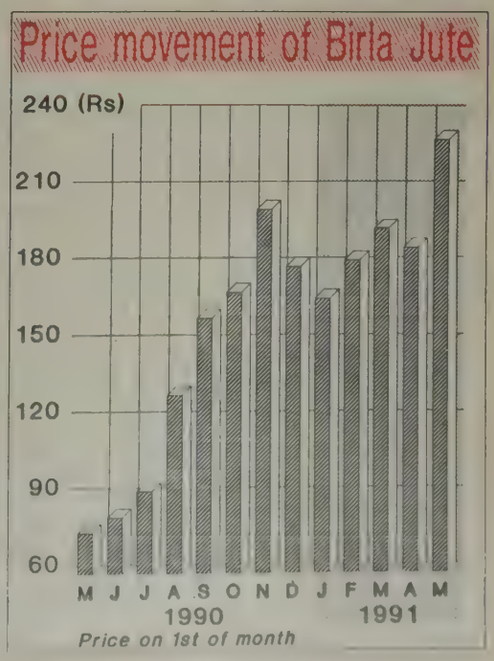
Waiting for the elections

(For the period 22nd April to 4th May 1991)

	4/5	22/4	per cent change over fortnight	year
BSE Sensitive Index	1272.09	1283.94	−1.0	+58.0
BSE National Index	634.01	640.58	−1.1	+46.1
Vol (Rs.cr) fortnt.ended	142.28	138.66	+2.6	+17.6

Stockmarkets steadied over the fortnight on active volume. The BSE Sensitive Index stayed within the 1200 to 1300 range that has marked it for the past month. This reflected the influence of the upcoming elections on investors. A decisive victory for the Congress versus a hung parliament are the two options that marketmen consider most likely and current price levels reflect a genuine uncertainty about this. Hence, the announcement of the election results is likely to be followed by big price changes. It is widely expected that a decisive Congress victory (anything more than 250 Lok Sabha seats) would lead to a quick 200 point jump in the sensitive index, while a hung parliament would lead to a 100 point fall (although institutional support is likely to slow the rate of the fall).

Politics first. Since political news mattered the most over the fortnight, the broad trend of the market was unaffected by other news. This was particularly true of dramatic events in money markets. These included a sharp rise in call money rates which crossed 50 per cent per annum at one stage and a sharp 50 per cent rise in import margins announced by the Reserve Bank (RBI) at the start of the fortnight. Similarly, the steep increase in cash reserve ratios from 15 per cent to 25 per cent, which was announced by the RBI at the end of the fortnight, left the market unaffected in kerb. Other news that surprisingly left the market cold was the relatively high *badla* rate of 2 per cent per month in Bombay on 26 April. However, the market reacted positively on 3 May to a lower than average *badla* rate of 0.75 per cent per month in Calcutta, indicating its bullish undertone.



An event that affected markets adversely, however, was the public announcement by Fairgrowth's Harshad Mehta that he had not been involved in any speculative purchases of ACC over the past two months. This, along with rumours that an important client of Mehta, was selling his speculative holdings in advance of the elections, caused sharp declines in ACC (-6.4 per cent), Tata Tea (-9.1 per cent) and Excel (-5 per cent). However, institutional purchases, especially in Tata Steel (which rose by 2.9 per cent) made up the slack.

The volume of trade in ACC was particularly heavy. In the last four trading days of April, namely 25 to 30 April, 5 lakh shares of ACC changed hands in Bombay, accounting for almost 20 per cent of total trading volume.

Within the broadly steady trend, the most significant price movement was of Reliance Industries which fell sharply by Rs.13 (-9 per cent) to Rs.130 over the fortnight. The reason is that its mega-issue to finance the gas cracker project is now almost certainly off. This is because the Supreme Court, which recently legalised the mega-issue of Larsen & Toubro of 1989, has instructed Larsen & Toubro to use the funds for the purpose stated in the issue application, namely the provision of suppliers' credit to Reliance for its gas-cracker project. With the proposed issue now off, the Reliance scrip has lost its lustre, especially with poor expected performance for 1990-91.

Expected pattern. The flow of corporate results shows the expected pattern of a stagnant second half of the financial year. This is seen in the results of Hindustan Motor which made a loss of Rs.70 lakh (versus a profit of Rs.2 crore last year) and Century Enka whose net profit halved to Rs.24.2 crore. However, expectations of a satisfactory corporate performance in 1991 are widespread, especially for steel, cement and paper. Among the companies that have declared excellent results are cement companies, including two in the B.K. Birla group, namely

Kesoram and Mangalam Cement. So also Birla Jute of the M.P. Birla group. The net profit of the last named jumped from Rs.4.6 crore to Rs.39.2 crore. This increase is, incidentally, in line with *Business India*'s (14 April) forecast of a Rs.40-crore net profit. Birla Jute's share price has also risen sharply over the past year (*see chart*). Current indications are for a generally strong 1991 for cement companies, which should also help Birla Jute.

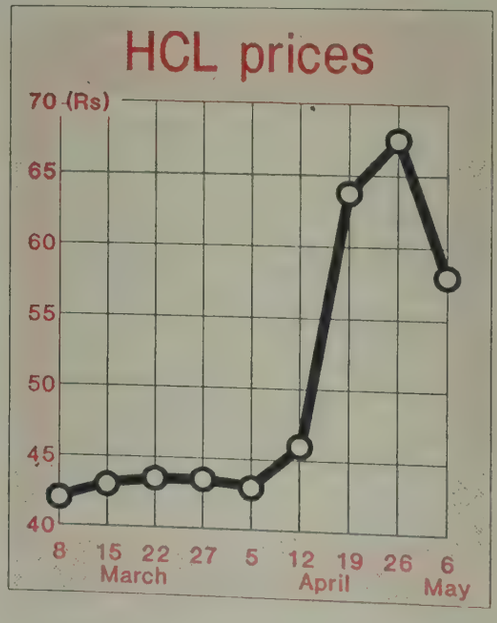
Lipton's annual general meeting on 1 May had been awaited by speculators who were expecting good news regarding the company's performance, especially its edible oil business. However, the company was only cautiously optimistic noting that it would be reviewing its troubled Tree Top business later this year. Speculators who had taken the scrip to Rs.114 on 25 April sold off taking the price to Rs.100 by the end of the fortnight.

The market closed the fortnight with a strong undertone as seen by strong volume. The Rs.700 crore collected through equity-linked savings schemes is also likely to add fuel to prices once election uncertainties are over. The most important determinant after the elections will be, of course, the monsoons. Unlike past years when monsoon uncertainty would affect markets by early May, the market is unwilling to react to this unknown until the more immediate one of elections is over. By mid-June, therefore, the market could be looking at three uncertainties: a stable government and a good monsoon (the best situation, with the index around 1600), an unstable coalition and a good monsoon or a stable government and a bad monsoon (with the index between 1100 and 1300, depending on the situation) and an unstable coalition and a bad monsoon (the worst case, taking the index below 1000).

■ RAFIQ DOSSANI

HCL

Is it a good buy ?



Name	Equity	Reserves	EPS 1989-90	EPS 6MO 9/90	Price 6/5/91
HCL	14.84	29.35	4.1	−3.6	58.00

Since the announcement of the American firm Hewlett Packard's (HP) tie-up with Hindustan Computers Ltd (HCL) on 12 April (see *Business India*, 29 April), the HCL share has been actively traded. According to brokers, most investors have been buying on the lustre of the HP name. Unfortunately, those investors who bought on the announcement at around Rs.65 per share have lost money as the current price is Rs.60 (as on 3 May). Is it a good investment at this price?

HCL will be split into two companies, one for the computer business — HCL-HP — (in which HP will have a 26 per cent stake) and the other (call it HCL-other) to look after the rest of the business (copiers, reprographics, etc). The management has valued the computer division at roughly two-thirds of the total business. Thus, of the current Rs.14.84 crore capital, about two-thirds or Rs.10 crore will be allocated to HCL-HP while Rs.4.8 crore will go to the non-computer firm.

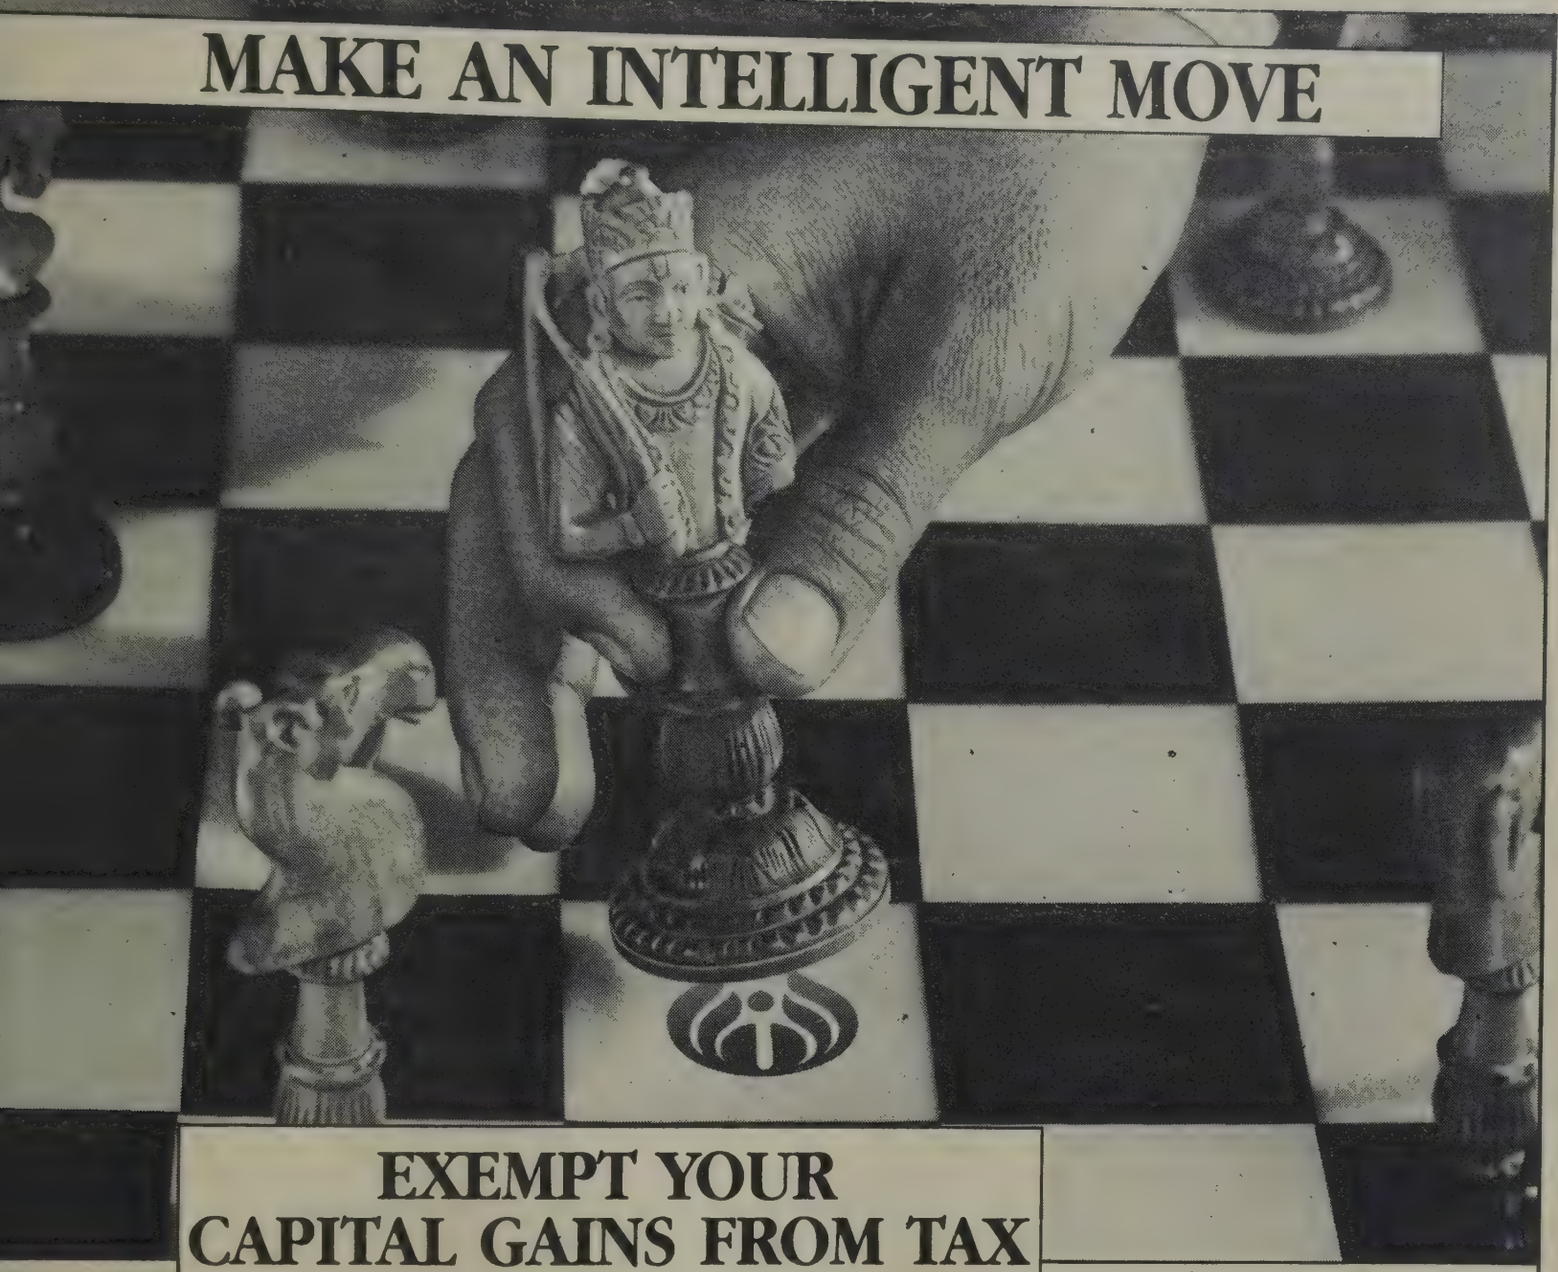
Minus the "HP effect". A realistic valuation of the non-computer line should consider not the current price of the share but what it was before news of the HP involvement was factored into the share price. On a very conservative basis, the 1990-91 low of Rs.24 could be taken as the value of the firm without the "HP effect".

An investor who holds, say, 100 shares

of HCL (currently valued at Rs.60 per share) will receive 32 shares of HCL-other and 68 shares of HCL-HP. She can, based on the above argument, expect that the 32 shares of HCL-other she will receive as a result of the split will be worth at least Rs.24 per share for a market value of Rs.768. These shares will be entitled to 96 rights shares at Rs.10 each but the benefits of these are, conservatively, omitted from the calculations.

The main advantage comes from the access to rights shares in HCL-HP. The investor's holding of 68 shares of HCL-HP will entitle the investor to a rights issue of 2.8 times that holding, or 190 shares at Rs.10 per share. Hence, the ex-rights cost per share of the investor's holding of 258 shares of HCL-HP will be Rs.27.60 (Rs.6,000 for the initial investment plus Rs.1,900 for the rights in HCL-HP (less Rs.768 for the value of HCL-other).

The key question, therefore, is whether the market is likely to value HCL-HP ex-rights at Rs.27.60 per share or more. "It is not likely to be less than Rs.45 with the HP name", says an investor who is a long-time HCL watcher. "In any case," he adds, "at a price of just Rs.3.60 per share more than HCL-other, it is unlikely to prove a bad investment."



At Rs.45 ex-rights, the investor is in for a substantial gain of Rs.17.40 per share or a total profit of Rs.4,490 on an investment of Rs.6,000.

Tarnished image. What are the risks? The main one is HCL's image which has slipped with the decline in its earning power last year. Although turnover jumped 33 per cent to Rs.229.96 crore for the financial year ended June 1990, profit margins were lower and net profit was sharply down to Rs.6.63 crore versus Rs.9.76 crore in 1988-89. For the half year to September 1990, the company made a loss of Rs.5.3 crore on sales of Rs.82.9 crore. Inspite of this, the scrip hovered in the mid-40's through April for a price-earnings multiple of about 10, close to the industry's average. The price jumped sharply, though, after the merger was announced (*see chart*).

Behind the earnings' decline are the archaic laws that the Department of Electronics imposes on an industry (for example, massive export commitments as high as 350 per cent on import values prior to import) whose main feature is rapid product obsolescence. Competition from smuggled goods will also be increasingly difficult to handle as the company moves increasingly towards more expensive lines of products. Add in India's balance of payments problems, and, for many investors, any investment in computer shares has a high inherent degree of risk.

MAKE AN INTELLIGENT MOVE

EXEMPT YOUR CAPITAL GAINS FROM TAX

INVEST IN

IDBI

CAPITAL BONDS

Long term capital gains from the sale of land, buildings, jewellery, shares etc. attract Income Tax. But there is a way out. Invest in IDBI CAPITAL BONDS, keep your capital intact and earn interest too.

- Bonds available at par throughout the year.
- Exemption from tax on Capital Gains under Section 54E of the Income Tax Act, 1961.
- Income tax benefit under Section 80L.
- Exemption upto Rs. 5 lakhs from Wealth Tax under Section 5(1)(xvie) read with Section 5(1A) of the Wealth Tax Act, 1957.
- Interest at 9% p.a. payable half yearly.
- At the investor's option, interest for the full period of 3 years can be paid in advance on discounted basis.
- No deduction of tax at source.
- Outstation cheques accepted and cost of collection borne by IDBI.

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

"My Master, I Am Back! This Time With DHANAVARSHA (3)."

DHANAVARSHA (3)
Option 1 – Immediate Monthly Income.
Interest: 12.5% to 14%.
Get 66 cheques in advance.

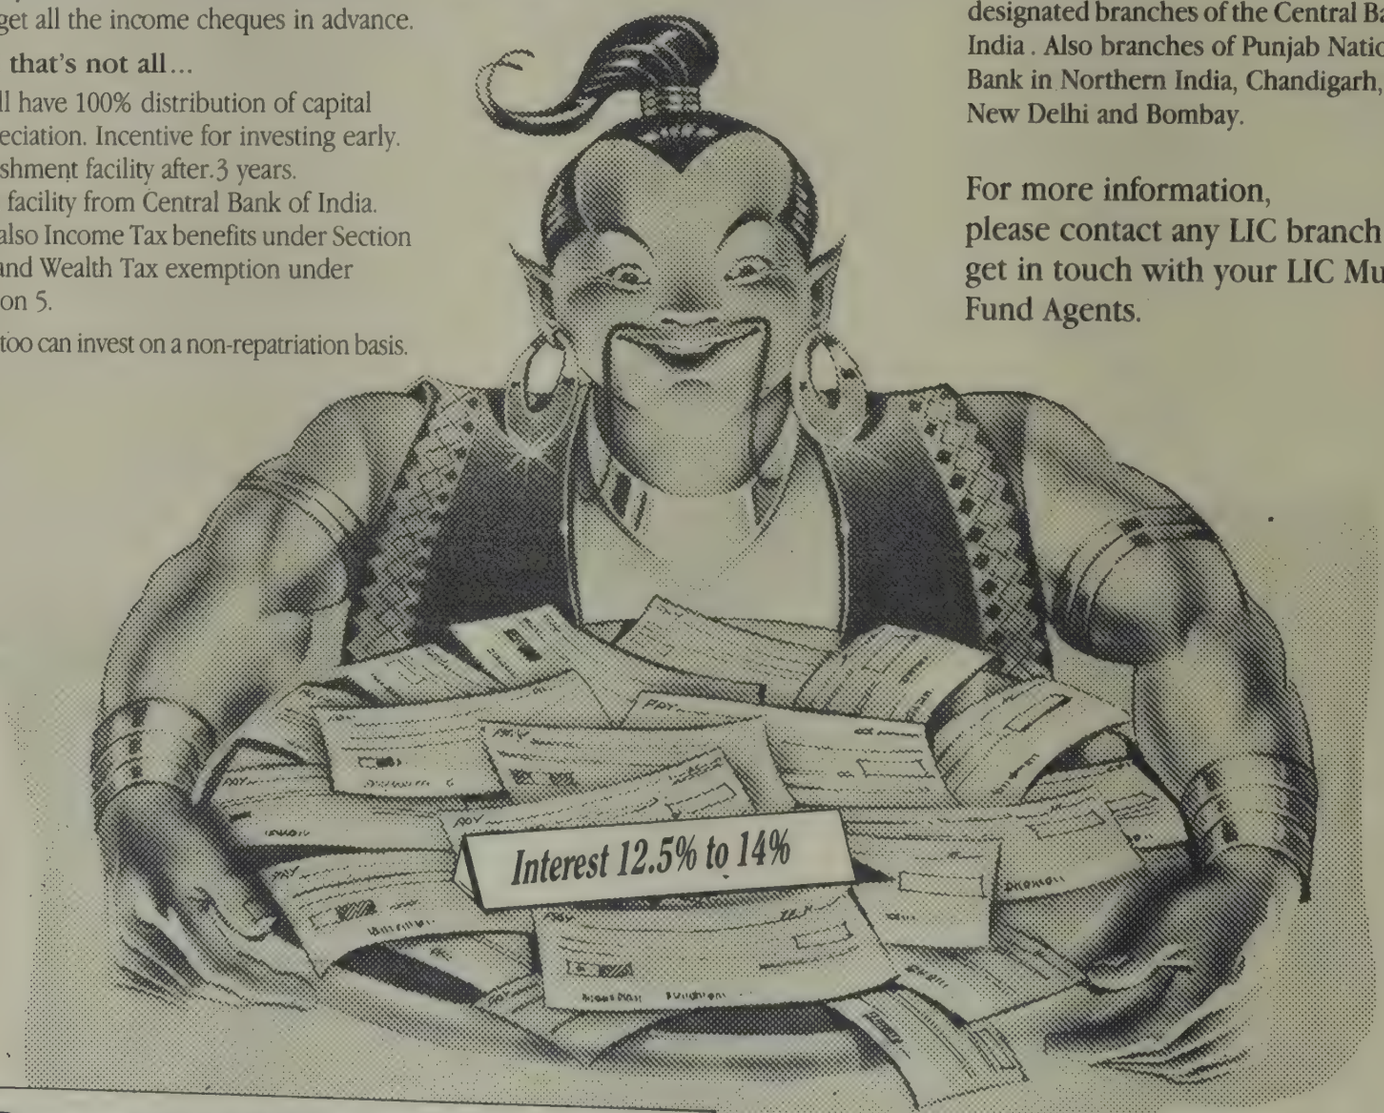
Invest a minimum of Rs. 5000. Get a regular monthly income for 5½ years. The interest rate initially is 12.5% which increases to 14% by the end of the scheme. What's more you get all the income cheques in advance.

And that's not all...

You'll have 100% distribution of capital appreciation. Incentive for investing early. Encashment facility after 3 years. Loan facility from Central Bank of India. And also Income Tax benefits under Section 80L and Wealth Tax exemption under Section 5.

NRIs too can invest on a non-repatriation basis.

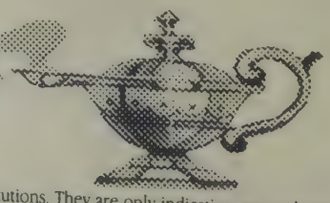
You also have a choice of other options:



Option 2 – Deferred Monthly Income, wherein you defer income for one year and then get higher interest ranging from 16% to 21%. Options 3 and 4 – Accumulated Income/Capital Growth, in which you get a lump sum of 103% returns plus your appreciated principal amount.

Attractive incentive for early investors!

Period	Incentive
May 1-15	1%
May 16-31	½%



All payments have to be made only at designated branches of the Central Bank of India. Also branches of Punjab National Bank in Northern India, Chandigarh, New Delhi and Bombay.

For more information, please contact any LIC branch or get in touch with your LIC Mutual Fund Agents.

DHANAVARSHA (3)
Hurry! Scheme open March 11 to May 31, 1991.

LIC Mutual Fund
We'll help you meet your goals

Mutual Funds and securities investments are subject to market risks and there can be no assurance or guarantee of returns by the Trustees/Sponsoring Institutions. They are only indicative returns based on the investment policy of the fund. Past performance is not necessarily indicative of future results and may not necessarily provide a basis for comparison with other investments. Investors are requested to study the Terms of Issue printed in the brochure carefully before they invest in the Fund, and in case of any doubt regarding the contents of the Advertisements/Terms of Issue, they may contact the LIC Mutual Fund.

Note: CD: convertible debenture; NCD: non-convertible debenture including debentures that were earlier partially convertible for which the conversion is over.
Debenture yield is calculated as a percentage of market price without adjusting interest due component. This can make a significant difference in actual return.
The fact that the debenture market is generally active can be surmised from the dates of last business done.
Hence readers are advised to seek suitable professional advice before deciding.
All care is taken to ensure accurate and up-to-date information.

Does your subscription copy arrive late or sometimes never at all?

Sorry, we don't run the postal services. But we'd like to ensure that there's no hold up at our end.

- Print or type your name and address clearly so that any errors in your address can be corrected.
- Quote your subscription number in your letter. It may well be that your subscription has expired.
- Write to us for a replacement copy no later than six weeks from the date of the issue which has been misplaced.

Winners in plenty

Most of the scrips moved up and so did the number of winners. For Investor Contest (IC 341), we have 78 winners.

Last time, due to a typographical error, some of the prices got interchanged. We regret the error. The prices are as follows: Ballarpur Industries (Rs.305), Brooke Bond (Rs.140), ITC (Rs.165), Lipton Tea (Rs.96), Modi Rubber (Rs.62.50) and Varun Shipping (Rs.26.25).

Scrips	Prices as on Friday 25 March 1991 (Rs.)	Prices as on Monday 22 April 1991 (Rs.)	Ranks
Brooke Bond	142.50	140.00	5
Bajaj Hindustan	900.00	875.00	6
TELCO	175.00	227.50	1
Escorts	138.75	160.50	3
Garware Polyester	54.00	55.00	4
Hindustan Alloys	57.50	69.00	2

Given here is a new list of six scrips, and their closing prices on 3 May 1991. Pick the share that you think will rise the most in percentage terms by 3 June 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 3 June 1991. You don't have to tell us either the prices or even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 30 May, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

IMAGINE PEELING A STRIP OF CELLOTAPE FROM THIS PAGE .... AND FEEL HOW WELL CEAT RADIALS GRIP THE ROAD.

RPG
FORMULA

Ceat Formula - I Radials are a different breed of tyre. Different by design. And by construction.

The special textile belt ensures tread rigidity. As well as sustained tread contact with the road.

Result: a superb grip, along with better traction, surer braking, and steering stability.

The ply-cords, running perpendicular or radial to the circumference of the tyre, enhance flexibility and the capacity to absorb shock.

Result: a smoother ride.

All of which adds up to enhanced tyre life, fuel economy and higher puncture resistance.

And, of course, better car control.

That's the advantage of having advanced tyre technology from Yokohama Rubber Company, Japan.

Ceat Formula - I Radials. A whole new dimension in driving.

FORMULA-I RADIALS

FOR BETTER CAR CONTROL

As bland as a Big Mac

AN AMERICAN LIFE
By Ronald Reagan
Simon & Schuster, 1990. Distributed by IBD, Bombay. pp.750, Rs.250

Nostalgia isn't what it used to be. Do you remember when Ronald Reagan was president of the United States? The second most significant figure of the eighties seems to have passed into oblivion, or at any rate, into the after-dinner speech circuit. Anxious, perhaps, to extend his image into history, Reagan has come out with his autobiography, rather modestly titled *An American Life*. Ordinarily, autobiographies published shortly after retirement attract all manner of restrictions from the new powers that be. However, this book presents no such problems. The good gentlemen of the CIA can sleep unperturbed for, in truth, this book is as bland as Big Mac and as wholesome as apple pie.

Bumbling amiability

After reading this book one's impression of Reagan being the quintessential B film actor remains undisturbed. Politics could be interpreted as being merely an extension of his acting by other means, his bumbling amiability shining up like a garish Pepsi illumination in a world full of Pentagon types who are content to describe the incineration of innocent civilians as "collateral damage".

The book is written in that indelibly folksy style which became the hallmark of the great communicator. However, behind great communicators lie even greater censors. The role of Nancy Reagan in this enterprise cannot be underestimated, if Kitty Kelly's biography is even 20 per cent accurate. She is a truly formidable person, much more so than the great bumbler. Why ever did Reagan devote all of two lines to his previous marriage with Jane Wyman in a book of over 700 pages?

Moreover, there are several defences made of Nancy's legendary extravagance — which reportedly made even Imelda Marcos blush — including that of the purchase of the one million dollar dinner service. Apparently, Nancy has excellent taste and, in any case, the money didn't come out of public funds but from private donations. Private donations? Well, yes, from patriotic businessmen and foreign wellwishers.

Incidentally, no mention is made of Frank Sinatra.

One judges a man by his heroes and, perhaps, his reading matter. Well, if Saddam Hussein's hero is Don Corleone of the *Godfather*, Reagan's idol is Calvin Coolidge. Calvin who? you may ask. Well, go back into the mists of time and, like Reagan who became famous by running up a deficit so big any self-respecting computer would fuse at the very mention of it, there was also a president called Calvin Coolidge who paved the way for the great depression which brought capitalism to its knees. To get the unique flavour of what Coolidge was about, savour Dorothy Parker's wickedly delicious comment when hearing of Coolidge's death, "How can they tell?"

Reagan's single greatest contribution to the eighties was to make greed respectable. Of course, nowhere in his autobiography does he talk about greed as such; rather he uses such anodyne terms as enterprise, hard work, etc

As far as Reagan's reading is concerned, the joke in Washington goes that the ex-president's library burnt down... both his books got burnt... he hadn't finished colouring them. Well, his autobiography doesn't disabuse us of the notion that books are not Reagan's cup of tea. However, he does spring a surprise by quoting an Arab economist of the 14th century, Ibn Khaldoon, who he quotes several times over as being the granddaddy of all supply side economists. The great Ibn thought taxes were decidedly a bad thing.

Reagan's single greatest contribution to the eighties was to make greed respectable. Of course, nowhere in his autobiography does he talk about greed as such; rather he uses such anodyne terms as enterprise, hard work etc. But what is evident is the fact that throughout the eighties the degree of economic inequality widened to an unacceptable extent. Even some of Reagan's advisors were repelled by the consequences of his economic philosophy. David Stockman, the ex-president's budgetary advisor, graphically remarked: "The hogs were really feeding. The greed level, the level of opportunism, just got out of control." And as Amar Bhide, an associate of McKensy's sharply put it: "We never will know how much entrepreneurial activity was unleashed among tax payers in the top tax brackets. But we do have on record what federal deficits, swollen by the tax cuts, did — they sucked away the funds needed for productive investment."

However, as citizens of the world now apparently ruled by a Pax Americana, what kind of leadership can we expect? Not very much at the political level at any rate. Reagan practically confesses to ignorance of the Iran Contra affair but approves of it nonetheless. Otherwise, his perceptions on international relations remain extraordinary for their simplicity — one-dimensional views fortified with much prejudice.

The Reagan touch is decidedly human, he likes to relate on a one to one basis. Unfortunately for him, his autobiography is littered with friends who keep disappearing: like the Shah of Iran ("a fine ruler"), the Marcoses ("our devoted allies"), Baby Doc of Haiti and other fine friends. Reagan's trenchant support of Saddam Hussein gassing the Kurds in 1986 when Congress wanted to reduce military aid to Iraq is not mentioned here and nor is Saddam Hussein.

Here we have an autobiography which is remarkable for not showing the slightest hint of introspection or doubt. Fortunately, history will be a more exacting task master, and history is something no one, not even the president of America, can rewrite or gloss over. ■

United they stumble

GERMAN UNIFICATION: ECONOMIC ISSUES
Edited by Leslie Lipschitz and Donogh McDonald.
IMF, December 1990. pp.175

The murder of Detlev Rohwedder on 1 April came as a rude shock to most Germans. Rohwedder was the head of the Treuhand Ansalt, the agency responsible for privatising 8,000 East German companies with four million workers. The task was a monumental one and though Rohwedder was a workaholic he made very little headway. By the time he died, only 100 large companies had been privatised along with 20,000 of the 40,000 small enterprises. His murder is almost certainly related to the turmoil that privatising and restructuring has caused.

Valuable background

The book under review provides some valuable background for understanding the situation in Germany today. Written by economists in their typically dry and abstruse manner, the book is by no means bed-time reading. It gives no easy answers to questions raised by the recent events in Germany though it does provide the different scenarios, based on selected assumptions, on what the economic development of East Germany is going to involve.

The challenge posed by unification is formidable. The East German command economy was the antithesis of the Erhardian ideas which dominated West German economic thinking. The emphasis has been on limiting government involvement in the economic process to let the market operate efficiently. This is what Rohwedder tempted.

In an article by Larry Lipschitz, the dilemma of the Treuhand is clearly illustrated. The value of the asset it inherited, the property of the East German state, was not at all clear, nor its ability to generate income in an open market. Yet these factors would determine employment, income and the degree of hardship that East Germans would have to endure.

Treuhand's own role was not clearly defined. Was it like an investment fund maximising the value of its assets? Or was it primary role to restrict the extent of social disruption? Finally, the scope of its work was staggering; the privatising and restructuring of an entire industrial sector of an economy.

To compound Treuhand's problems, enthusiasm among W.German industrialists for investing in the east has been conspicuously absent. While they invested DM 335 billion in West Germany last year, the most optimistic projections for this year in East Germany are only DM 25 billion. Ironically, Rohwedder was the same one who taxed industrialists for their failure to invest.

Written by economists in their typically dry and abstruse manner, the book gives no easy answers to questions raised by the recent events in Germany. It however does provide the different scenarios, based on selected assumptions, on what the economic development of East Germany is going to involve

Wave of hostility

A wave of factory closures, which the Treuhand considered necessary, created enormous resentment. The announcement last January of a decision to close the Wartburg car factory in Eisenach in East Germany triggered off the recent wave of hostility against the Treuhand. At a meeting to honour Rohwedder, president Richard von Weizsacker said, "It is a real effort for us to understand one another. But if we do not heal the deep wounds together, unity will be a burden in the east and west forever." While pressure from unions now affiliated to their West German counterparts has extracted some concessions, such as an extension of payments to part time or "short time" workers and redundancy payments the problems are still severe.

One of the most interesting chapters by Thomas Mayer is on lessons from the past. It profiles the three phases of German economic management. The first was dominated by the free market ideas of Ludwig Erhard, which persisted till the mid-sixties. This was the time when the German miracle really took root. The second phase which lasted till the early eighties saw a mild Keynesianism which led to greater state intervention but also a sharp increase in deficits. Finally, the eighties which saw a revival of Erhardian ideas and a sharp increase in prosperity.

Mayer suggests that if lessons of the fifties are taken seriously, rapid economic growth and adjustment can be resorted to without relying on subsidies. An attempt should be made to limit the effects on social transfers on the flexibility of the labour market. Finally, policy-makers should make an attempt to ensure that pursuit of equity through the tax system is balanced against the efficiency losses that might result.

Uncertain outlook

Towards the end, as if in conclusion, Mayer warns, "It is clear, however, that the outlook for the government finances in the pre-unified East Germany is highly uncertain and that one could envisage large fiscal imbalances being sustained for some time. It may also turn out that past experience, on which model calculations of German economic, monetary and social union are based, is a poor guide given the unprecedented character of the unification process. These factors argue for a close monitoring of developments in Germany and their international effects. Should persistent and sizable fiscal imbalances seem likely, policy makers should be ready to take decisive action."

So there exists the need to limit the immediate social consequences of restructuring — for example, unemployment should lead the German government to take a more interventionist role. The other prospect of continued social unrest in the short term is probably too alarming.

VICE-PRESIDENT

LEADING 250 CRORE COMPANY

Our client is a progressive company in the steel processing industry manufacturing and marketing a range of products reputed for its excellent quality. The company has prestigious foreign collaborations, a consistently good track record and ambitious expansion and diversification plans. In a short span, the company has acquired a position of pre-eminence in the industry.

This is a senior opening reporting to the Board and entails overall responsibility for cost-effective functioning of the company's highly sophisticated manufacturing complex. Providing leadership and direction to the functional heads and managing the external and internal environment will be key result areas.

We are looking for an outstanding leader with proven commercial acumen and a solid reputation in man-management. He will be a CA/MBA/engineer or have a good university degree with over 20 years plant-level experience in the engineering/heavy process industry. Accent is on sound general management capabilities rather than a functional specialization. Some experience as a cost centre head in a manufacturing complex employing over 500 personnel is necessary. Age Group 40-50.

The position is based at plant located in a district headquarter town of Eastern Maharashtra which has reasonably good educational, medical and other facilities/infrastructure.

THE MANAGEMENT ATTACHES CONSIDERABLE SIGNIFICANCE TO THIS POSITION HENCE TOP MANAGEMENT TERMS, SUITABLY TAILORED, WILL BE NEGOTIATED.

As the requirement is urgent kindly write immediately, preferably by courier/speedpost, clearly indicating the size of operations managed and name of present employer, citing Ref.No.CMP/A-2076

DATAMATICS STAFFING SERVICES
Post Box No. 106 G.P.O. Bombay-400 001.

Shilputsi

Murugappa Group

GROUP VICE PRESIDENT – PERSONNEL

The Company: The Murugappa Group has a commitment to excellence in diverse business activities including Fertilisers and Farm Inputs, Confectionery and Food Processing, Ceramics and Building Materials, Cycles and Metals, Engineering, Electronics, Abrasives, Financial services, Plantations and Tea Manufacture and Exports. Some of the companies in the group include EID Parry, Tube Investments, Carborundum Universal and CWS (India) Ltd. The group turnover is about Rs. 800 crores.

The Job: The individual companies in the group have their own management set up including Personnel. The overall policy is decided by the Top Management Team reporting to the Chairman. The incumbent will be part of the Top Management Team, with total responsibility for all aspects of human resource management for the Group. He will provide advice, guidance and directions in formulating and implementing Human Resource policies and programmes to achieve the demanding corporate plans in the various group companies.

He will provide advice and guidance to a team of senior professionals heading the Personnel functions of the individual companies. He will also develop a Corporate Management Development Centre to cater to the needs of all managers in the group. This task will involve creative effort in building a new institution.

Qualifications: The Group is looking for a top notch, seasoned professional with a high degree of analytical and conceptual skills having around 20 years of experience in all facets of human resource management with a proven track record of result oriented performance. Exposure in other areas of management will be an added advantage.

The Group provides considerable challenge and opportunities accompanied by a professional work environment.

Compensation offered will be comparable with the best in the country.

The Company with EXCELLENCE as its mission

Sobhagya-91

Indian Express is India's second largest publishing group. Besides publishing 'Indian Express', India's largest selling English daily, the group also publishes 20 other newspapers and magazines in 7 languages. The group's turnover is over Rs.150 crores. It has printing plants in 15 cities and its marketing offices are situated in 28 cities spread throughout the country. With over 10 million readers, the group has one of the largest marketing and distribution networks in the country. Indian Express now requires a Branch Manager for Ahmedabad.

Ahmedabad

Branch Manager

Rs.1,00,000 p.a. + Benefits + Vehicle

The Express group has two dailies published from Ahmedabad. Indian Express and Loksatta-Jansatta a gujarati daily. In addition a gujarati magazine Rangtarang is also published from Ahmedabad. The Ahmedabad branch employs approximately 100 people.

The Branch Manager will be in charge of the Express operations at Ahmedabad as an independent profit centre and will be responsible for all publications published from Ahmedabad.

In publishing, there are four key areas of responsibility. Editorial, Operations Distribution and Space Marketing.

The Branch Manager will be responsible for co-ordination with the resident editors of the group's publication and ensure that the publications are published, day in and day out.

On the operations front, the Branch Manager will, in conjunction with the Works Manager be responsible for procurement of materials, inventory control and preventive maintenance of plant and machinery.

Newspapers are the most widely distributed consumer products in the country. Obviously the logistics of distribution are daunting. A key area of responsibility, is distribution. Not just ensuring efficient distribution of the product, but expanding the distribution network. In this task the Branch Manager is assisted by the Circulation Manager.

The cover price of a newspaper does not even cover the direct variable input cost of the newsprint which goes into it. This is true for all publications. Obviously therefore revenue from advertising is essential to any publication's finances. The Express group sees this as an area where substantial improvements can and have to be made. In this task, the Branch Manager will be assisted by the Advertising Manager.

The job requires a person of many facets. He should be mature and diplomatic enough to handle daily co-ordination with resident editors. On the operations front, he has to be a tough taskmaster to ensure that everything goes

right between 11 p.m. and 3 a.m. (the time when newspapers are printed), 358 days of the year. Newspaper distribution requires logistics comparable only to moving an army, except that you have to do it daily. And space marketing requires not only marketing acumen and strategic planning but also excellent PR, for a lot of advertising is still solicited and obtained because of PR.

The Branch Manager will report to the Regional Manager. The Press Superintendent, Circulation Manager and Advertising Manager will report to the Branch Manager.

The job is challenging and this is not a cliché. But it is satisfying. The satisfaction of being in the middle of where things are happening. The fact of being a part of the core group of people who shape and mould public opinion. The opportunity of looking back in your twilight years as not just having contributed to your company but having the satisfaction of contributing to the nation. These and lots more are the real compensations of the job.

In return the group promises you an excellent working environment with no interference as long as you are producing results. The group has ambitious expansion plans. Both in publishing and the newer technologies that are changing the face of publishing as we know it. Which means that if you do a good job as a Branch Manager, the chances are that you won't have the job for long. You would be promoted to tackle bigger things and greater challenges.

To qualify for consideration, you would have to be a post graduate in management in the age group 30 to 40. A basic degree in engineering would help, though Express are not particular about it. What they insist on is that you have spent the last three to five years successfully as a Branch Manager. In a large (read as Rs.100 crores plus) company. You should be in direct charge of operations of not less than Rs. 5 crores. And while Express would prefer people with exposure to publishing, they are equally keen on looking at people from the consumer goods industry. Also you should not just be a specialist in marketing or production but a well rounded generalist. Express are looking for clear winners. There is no room for people who are blaming their current organisation for their failures. And while your track record may not be blazing, it should be impeccable. Express as an organisation has people who are concerned with results, even if they have to resort to unconventional means of achieving the goal and you should be comfortable with this style.

If you feel that you will fit the bill, write to Vaneet Chhibber, Regional Manager at Janasatta Bhavan, Mirzapur Road, Ahmedabad 380 001. Or better still speak to him on 0272 353312. This is his direct line. Spend an evening with him and get to know more about Express and publishing. And then decide whether you want to do about your career. Are you satisfied with influencing the course of your company or do you want to be part of a group which is shaping a nation?

TATA EXPORTS LIMITED

(Leather Complex)

Requires Manager R & D

The Company which is a Star Trading House has modern manufacturing facilities at its Leather & Leather Products Division at Dewas near Indore (M.P.). The Leather Complex is today a leading exporter of leather and leather products mainly to West European countries, USA, Canada, Australia, Hongkong and Japan.

The R & D set-up which is recognised by DST is engaged in process development, manufacturing development, development of new products and import substitution of leather chemicals. In recognition of its key role the R & D Unit is being strengthened with the addition of outstanding, high calibre and highly motivated professionals.

The successful candidate will head the R & D Department, report to Director (Operations) and will be accountable for the following key result areas:

— Setting up of a full-fledged R & D Laboratory to meet the requirements of Leather Complex taking into account the Company's Long Term Plan to market leather and leather products.
— Scientific support to our technical team for training of officers, supervisors and operators.
— Review the processes and practices in the manufacture of leather and leather products including identifying specific areas like cost reduction and quality improvement.
Documentation of processes, methods and standards.
— Review the testing facilities and help the Company set up a laboratory of international standards.
Quality standards for finished leather, shoe uppers, shoes, garments and chemicals.
Gearing for ISO 9000 quality system.
Review the Effluent Treatment facilities and processes adopted by the Company.
Examine the feasibility of economical recycling of treated water.
Handling and disposal of sludge and other solid waste.
Development of new non-polluting processes in leather manufacture.
— Scaling up and enlarging the manufacture of leather chemicals.
— Computer-aided colour matching system for dyeing leather in small lots.
— Research in the field of collagen.

The candidate should be a Post-graduate, preferably with a Doctorate in Chemical Engineering or Analytical/Organic Chemistry, and have 10 to 15 years R & D/Process/Product Development experience in a Process Industry. Opportunity would be offered to continue academic research.

This position is in the Company's Senior Management cadre and offers ample opportunities for growth and development. Apart from competence and flair for development, managing a highly motivated team is a key pre-requisite.

Interested candidates may kindly apply with full particulars, in strict confidence, within 15 days to:

WIPRO SYSTEMS
THE SOFTWARE PEOPLE

ONE THOUGHT

Our client is an excellent professionally managed 100% Export Company with a Rs. 50 Crore project in hand. The Company will be manufacturing high quality granite and other value added stone products to serve the markets of U.S.A., Japan, Europe and ASEAN countries.

We are looking at the core team to comprise of:

MANAGER – MECHANICAL ENGINEERING

The assignment will involve specifying, and selecting plant and machinery, a majority of which will be imported. The responsibility encompasses process engineering, plant layout, line balancing, utilities services and material handling.

We are looking at a Mechanical Engineer with 10 years experience in heavy mechanical engineering equipment with specialisation in hydraulics and pneumatics. Exposure to working with sophisticated stone cutting and polishing equipment would be preferred.

MANAGER – ELECTRICAL ENGINEERING

Complete responsibility of specifications, selection of plant and machinery, a majority of which will be imported. The incumbent will lay down systems of power supply, distribution and network. Import substitution, management of spares and maintenance would form an integral part of the job.

We are looking at a B.E. Electrical/Electronics with over 10 years of expertise in project planning and execution. Expertise in state-of-the-art process control equipment, PLCs, and CNCs, is a must.

MANAGER – EXPORTS

The assignment is to facilitate the marketing process – provide incisive inputs on export marketing by way of custom laws, rules and procedures. From the documentation stage to actual execution of all marketing orders will form a part of the job content.

We are looking at an accomplished M.B.A. with a civil/mechanical background. An empowered export marketing profile with ten years experience in a 100% export house of repute or light engineering firm, with indepth knowledge of transnational import and export procedures.

COMPANY SECRETARY

The assignment is to head the secretarial function. Management of a public issue, interact with financial institutions, RBI, would be the emphasis areas. The incumbent will be responsible for corporate taxation and optimisation of export benefits.

We are focussing at an accomplished business manager with a minimum of five years of relevant experience. A Company Secretary with a C.A. or I.C.W.A. background who adheres to exacting standards of performance is what we are looking for.

The remuneration packages are designed to attract the finest talent and the perks include housing, car etc.

Please contact us at 011-4625316, 692415 for further details or apply within seven days to:

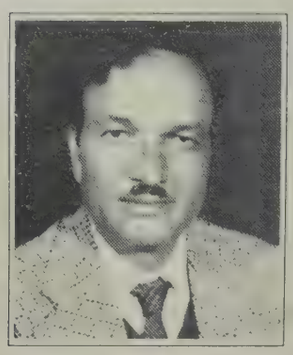
The incumbent should possess effective Human Relations Skills and be able to perceive people's needs and effectively interact with people at all levels of the organisation.



The position carries an attractive salary and perquisite package.

Please apply in strict confidence, superscribing the envelope "HRD MANAGER"within ten days to:

Managing Director
Harrisons Malayalam Ltd.,
24/1524 Bristow Road, Willingdon Islands, Cochin-682 003.

RPG ENTERPRISES

EXECUTIVE LADDER

Krishna Joshi has taken over as director-general of the Council of Scientific and Industrial Research.

F.S. Tarapore has been appointed chairman of Indian Seamless Steels & Alloys Ltd.

Ramniklal Gosalia has been appointed chairman of Dynasty Industries Ltd.

R. Sundaresan has been promoted as director, technical, of Madras Refineries Ltd.

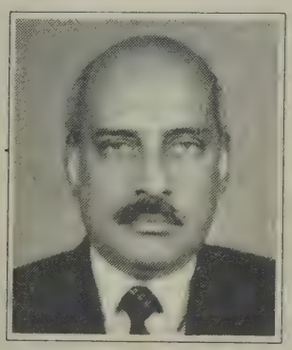
R. Ramakrishna has taken over as chairman-cum-managing director of the National Textile Corporation Ltd.

Shashi Chand Jain has been appointed chairman of DCW Ltd in place of **Sahu Shriyans Prasad Jain**, who has been re-designated chairman emeritus.

M.N. Krishnappa has assumed charge as director, production, of Bharat Earth Movers Ltd.

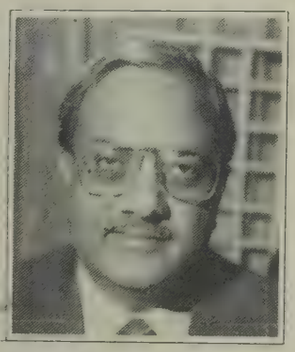
G.P. Singh has taken over as director, projects, of the National Hydroelectric Power Corporation.

P. Sadanandan and **S.P. Mudur** have been appointed associate directors of the National Centre for Software Technology.



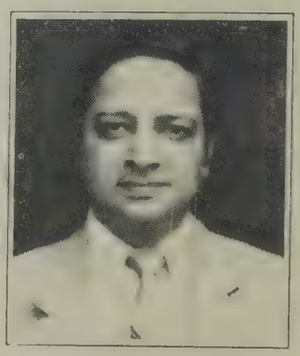
Ashok Kumar Mazumdar has joined Vintron Electronics as a fulltime director.

G.V. Paibir has been promoted as general manager of Mafatlal Consultancy Services (India) Ltd.



G.T. Mamtora has been appointed group manager, corporate finance, of the Patel group. **Ashish C. Roy** has been appointed chief executive of the construction diviison.

Balbir Singh has taken over as senior regional manager of the Food Corporation of India's southern region.



Philippe Maciocia has taken over as regional manager, north India, Nepal and Bangladesh, of Air France.

T.L. Anantharaman has been appointed director, mines, of Neyveli Lignite Corporation Ltd.

A.K. Gulati has taken over as director, technical, of Eastern Coalfields Ltd.

Vivek Pande has taken over as chief executive of the Intercraft group of companies.

Naina Lal has been appointed head of the NRI banking division of ANZ Grindlays Bank.

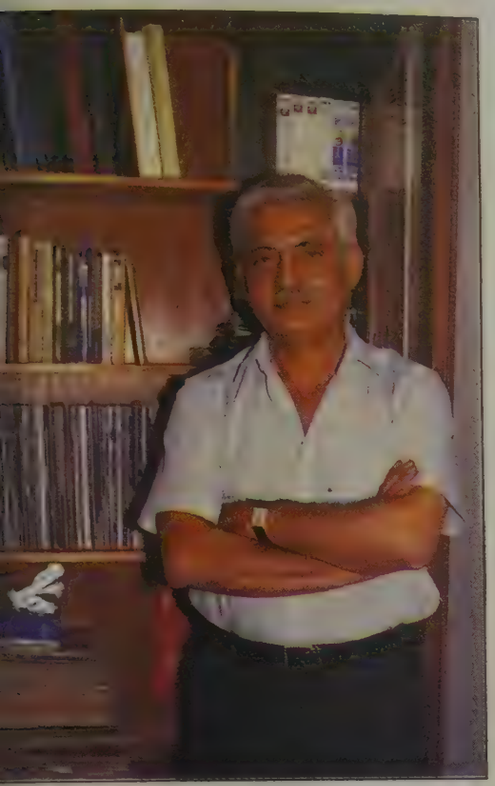
ASSOCIATIONS

Dhruv M. Sawhney has been elected national president of the Confederation of Engineering Industry (CEI). **N. Kumar** and **Vijay R. Kirloskar** have been elected chairman and deputy chairman, respectively, of CEI's southern region, and **P.S. Ramamohan Rao** chairman of the Andhra Pradesh Committee.

S.K. Mukherjee has been elected to board of governors of the Indian Institute of Management, Ahmedabad.

V.B. Patel and **P.I. Bhuva** have been elected senior vice-president and vice-president, respectively, of the Federation of Gujarat Mills & Industries.

M. Fasihuddin has been elected president of the Mining Engineers Association of India.



Paramjeet Singh has been elected chairman of the northern India regional council of the Institute of Company Secretaries of India.

R.K. Narayan has been elected chairman of the Delhi-Haryana chapter of the Indian Institution of Plant Engineers.

P.G. Ramrakhiani has been elected president of the Council of State Industrial Development Investment Corporations of India.

Mahendra J. Dhruva and **Milan D. Mehta** have been elected president and vice-president, respectively, of The Institute of Insurance Surveyors & Adjusters.

Confounding the critics

.R. Taneja, *55, is managing director of he Indian Seamless Metal Tubes Ltd*

e has reason enough to feel proud about is achievements. After all, he master-inded the creation of one of India's fas-est growing engineering companies — he Indian Seamless Metal Tubes Ltd ISMT). From start-up in 1980, it has rown at the rate of 38 per cent com-ounded annually, and reached a turn-ver of about Rs.75 crore in 1990-91, in ust over a decade — a performance atched by only a few others.

Taneja, who completed his B.E. (Mech) t Osmania University in 1958, joined the eamless tube division of the Indian Tube Company (ITC) in 1959 as a graduate rainee. He did not quite enjoy his work at irst in this Tata group company. But, radually, he found the job more interest-ng, and rose to become the divisional nanager of the division in 1978. It was nly a matter of time before he would ave become the managing director of he company.

Turning point. Then came the turning oint in his career. "Just becoming the MD of ITC seemed more like routine stuff, hile I was itching to do something more hallenging. And at that age (42) I had to nitiate something soon, as time was run-ing out for me," says Taneja. At that time uring a visit to Bombay, he met a SICOM manager, who urged him to start a project in Maharashtra and promised help. Fired by the prospect, Taneja took a critical decision and applied for a licence to set up a seamless tube plant near Pune. Simultaneously, he informed the ITC management about his plans. Not only did they encourage Taneja to carry out his plans, but also requested him to stay on in ITC till the expansion project, which he had begun earlier, was completed. Accordingly, he left ITC only a year later, in 1979.

By then, Taneja had got a licence, but had practically no money. The total project cost worked out to Rs.3.5 crore, of which the equity component was Rs.90 lakh. Most of this amount was raised from the public, and The Indian Seamless Metal Tubes Ltd was incorporated as a public limited company. The rest of the project cost was provided by IFCI and a consortium of institutions.

With the mere aid of drawings from Mannesman Demag of Germany (because he could not afford to import any machinery), Taneja and his colleagues completed and commissioned the plant in just 15 months. The sceptics were confounded because this was a task no one had attempted before on the basis of mere drawings.

No looking back. What's more, in the very first year, the company, on a small turnover of Rs.2.8 crore made a marginal net profit of Rs.2 lakh, after providing depreciation. From then onwards, there's been no looking back for Taneja and ISMT.

Later, several professional managers joined ISMT and now they have gone into steel manufacture by setting up yet another company. By 1995, the Indian Seamless group of companies hopes to achieve a turnover of Rs.500 crore. But, ISMT has been and will remain Taneja's cherished project. He has plans to make it one of the seven or eight companies in the world manufacturing ball-bearing seamless tubes of international standard by 1993. It is already the first private Indian company to make these tubes in India, that too without any technical collaboration.

"At the same time, I hope to maintain ISMT's annual growth rate at 30 to 40 per cent," says Taneja.

ROOP KARNANI

■

FRONTRUNNERS

S. Ramkumar, 31, manager, corporate investments at an ITC company, Classic Financial Services, is one of the leaders of the group spearheading its expansion into the leasing of light commercial trucks. After acquiring a masters degree in commerce from Osmania University, he joined a small leasing company in Hyderabad. Later he shifted to the Road Transport Corporation of India, a large Hyderabad-based truck operator.

After servicing blue-chip clientele for three years, he joined Nagarjuna Steels as executive assistant to the managing director, K.V.K. Raju. He was later moved to Nagarjuna Finance as executive assistant to the managing director. "It was in these two jobs that I learnt about corporate finance," he says. And that has proved to be a major asset at his next job, the Calcutta-based Classic Finance.

—S.D.

V. Ravi, 31, joined Mahindra Ugine Steel Company Ltd as a finance officer in 1986. Within five years, he got two promotions and is currently finance executive, corporate finance and treasury group. "When I joined, the company had begun to diversify into areas like real estate and hotels. I got to play an active role in this process."

Ravi completed his chartered accountancy and cost accountancy in 1984, in Madras. He gained work experience at an auditor's firm and then a chemical company, Ballestra India, before joining Mahindra Ugine.

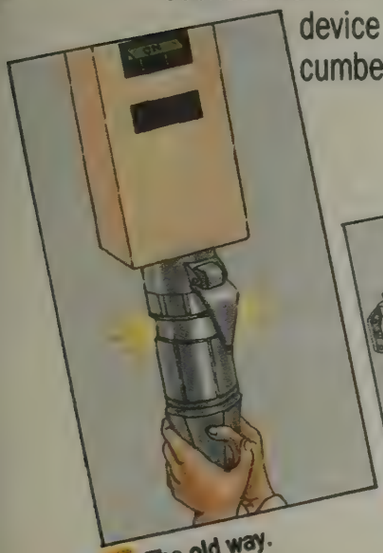
"The work is always changing which makes it interesting and challenging," says Ravi. Regarding the future, he says "Mahindra Ugine is also planning to activate a subsidiary finance company. I hope to play a key role in this company."

—P.C

FUTURE SHOCK

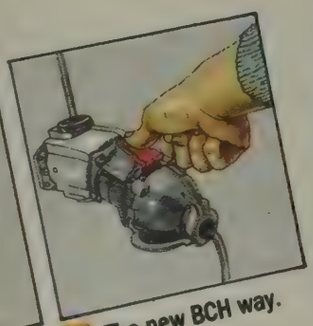
Prevent it

Switch to On-Load DS Decontactors



When it comes to industry, there's nothing like too much protection.

All it takes is a bit of careless handling, and the damage is done.



That's where DS Decontactors★ from Bhartia Cutler - Hammer demonstrate their superiority.

Plug and socket with integral switching device.

The Decontactor is a plug-and-socket with an integral switching device which eliminates cumbersome interlocked switch socket outlets. They allow On-Load disconnection unlike the ordinary plug and socket.

The old way.

The new BCH way.

Safety first

The socket is safely covered with a lid. Further, a safety disc prevents access to socket contacts when no plug is fitted. And a latch-button enables safe On-Load disconnection.

The interior keying system with 24 different positions prevents equipment being used on incorrect supply voltage.

Reliability

The DS Decontactor's features include the silver-tipped, spring-loaded, self-aligning, self-wiping butt contacts which are superior to conventional pin and sleeve type contacts.

In butt type contacts the inserting force is parallel to the direction of contact pressure. Wear is negligible, ensuring predetermined contact pressure and keeping contact resistance and temperature rise within limits.

The voltage drop across the contacts is low – so watt loss is minimized and there's less heating, less deterioration, less oxidation. In one phrase, less problems.

Get in touch

The BCH DS Decontactor is unique and far superior to anything you've used before.

Spare yourself future shock. Write to BCH at the address given here for details.

INTRODUCING CASTROL GTX2

In these times, when every drop of petrol is precious, we would like to introduce you to the new generation engine oil.

***Castrol* GTX 2.** It saves you enough fuel in a year to give you free petrol for a week.

This fuel conservation is made possible by ***Castrol* GTX 2**'s selective Friction Modifier, which dramatically reduces friction; conserving energy and fuel.

Only ***Castrol* GTX 2** is certified as energy conserving by the American Petroleum Institute. It conforms to the highest gasoline engine performance specification in the world - API SG.

API SERVICE SG·CC
SAE 15W40
ENERGY CONSERVING

FREE PETROL FOR A WEEK

Your engine needs ***Castrol* GTX 2.**

If not for its ability to conserve fuel, then surely for its ability to increase your engine's working life. Protecting it better over vast temperature ranges; smooth running at scorching temperatures and quick cold starts.

And if even this is not reason enough, you may still wish to buy it. Because it comes to you from Castrol.

Available at leading auto accessory shops. In case of difficulty contact Delhi: R. Kaul 3318038. Bombay: S. Chatterjee 4923707. Calcutta: S. Bannerjee 201996. Madras: Venkatachalam 513844.

World Champion Lubricants

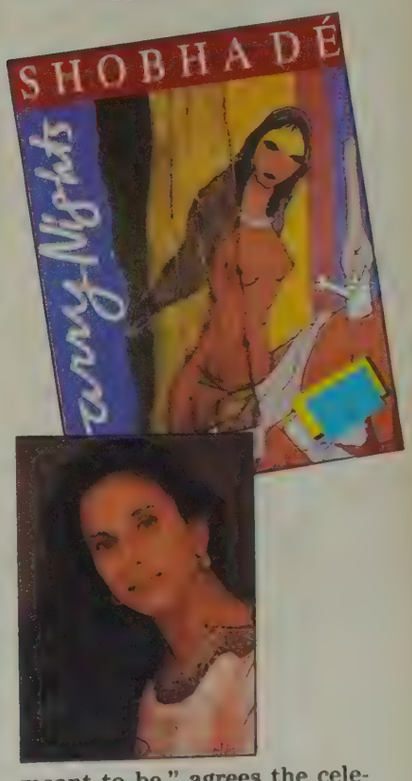
Castrol

Being acknowledged by peers, evidently, has an intoxication all its own. "It's the ultimate honour to be considered deserving by responsible and mature captains of industry," said Ulka Advertising's chairman **Bal Mundkur**. He had just received the Indian Society of Advertisers' gold medal for his long and outstanding contribution to the advertising industry. The function, held at the Raj Bhavan in Bombay, was attended by corporate doyens like Prakash Tandon, who had especially flown from Delhi for the occasion. Mundkur announced that Ulka would be setting up an advertising institute to develop new talent.

There was another high point at the function — an ironic one at that — when the governor launched into an anti-advertising diatribe. With painstaking detail, he emphasised how harmful advertising was, how it increased demands and desires that could not be fulfilled. Even Galbraith's view, that advertising tempts people to squander money on inessentials, was quoted.

Sanjay and **Yashodhara Shroff** have come up with Bangalore's answer to Bombay's "Ensemble" and New Delhi's "Touch of Class." The young couple recently set up 'ffolio', an exclusive outlet for designer jewellery and clothes catering to both men and women. While the jewellery ranges between Rs. 35 and Rs. 2,000, the clothes are tagged between Rs.350 and Rs.20,000. Rohit Khosla, Anu Mafatlal and Rohit Bal are among the top designers whose creations are up for sale at this popular boutique. Says Sanjay, a chemical engineer, "Now people from the south will not have to go to Bombay or New Delhi for their shopping." Adds Yashodhara, who looks after all the merchandising at "ffolio" as well as interaction with the designers, "We have a lot of space still available. So we might diversify into bathroom and office accessories as well as children's wear."

He is the R & D director at Telco. That perhaps explains **K.G.K. Rao**'s obsession: collecting working models of vintage cars, trucks, buses, jeeps and even tanks. Many of the 150 models were presented to him by automobile giants like Toyota, Mitsubishi and Daimler Benz when he visited them. Rao plans to use them to show the growth of the automobile industry over the years — he is planning a book on the subject. Next move: procuring car models of renowned makes like Ford, Porsche and Renault and bus models from Volvo, Leyland and others.



He has a boyish enthusiasm for his hobby but ask him about his planes and **P.S. Bhattacharya** starts drawing complex diagrams to explain their mechanics. The divisional manager of Tractors India Ltd in Bombay, Bhattacharya has been making aeromodels since his school days. To make them look as realistic as possible, he has incorporated retractable undercarrages, lights and flaps to his remote-controlled airplanes. Today Bhattacharya's collection includes the Indian Airlines series of planes and the entire Indian Air Force fleet.

Bhattacharya had also tried his hands at rockets when he was a student of IIT Kharagpur. "I stole zinc and sulphur from the chemistry lab and used live shells sneaked in from my army friends," he reveals. But if his hobby has seen mostly ups it has seen some let-downs too: "Many of my planes got caught in thermals and disappeared and one of my rockets took off with the launch pad," laments Bhattacharya.

The woman sat in front of the computer screen ... and "Starry Nights" was born. **Shobha Dé's** second novel, expected to hit the bookstands early this week, is sure to create ripples, starting from the cover itself — a semi-nude by Hussain. "Suggestive, just as it was meant to be," agrees the celebrated columnist. "But very appropriate to the bold theme." And pray, what is it all about? "A South Indian actress making it big in the Bombay film industry. We have had so many of these thundering thighs mesmerising north Indian men." A surefire formula indeed to keep the cash counter ringing and Dé laughing all the way to the bank — once again!

DUAL HOMES

Living in two worlds

In their effort to improve personal and professional lives, people the world over are choosing to maintain dual homes, commuting between cities as they keep family ties alive. Maintaining two homes can help executives enjoy the best of both worlds but the decision is not always an easy one.

N.K. Prasad, who used to work for Kirloskars in Pune, faced the dilemma when he joined The Standard Chartered Bank in Bombay. Basically a Pune person he decided against giving his family a 'cultural shock'. In any case, his daughter had to stay back in Pune to complete college as admission to Bombay University might have been difficult. His wife too opted to continue her job as a nursery teacher.

Fortunately for them they had their own house in Pune so the four-bedroom, nearly 4,000 sq.feet Roshilla flat on posh Carmichael Road became a transit point with only Prasad occupying it. "It works beautifully," he exclaims, "I have a servant to maintain the Bombay flat and, because I'm travelling most of the time, I really don't miss the home atmosphere. Going home to Pune over the weekends is a must so I actually end up spending more time with the family than I would have done if we all were to shift to Bombay."

The weekend travelling to Pune gives him an additional six hours to catch up on his paper work and reading, "which is fantastic, otherwise one tends to vegetate," says Prasad. "I have no regrets," he adds, "I enjoy business relations and professional satisfaction in Bombay, and personal relations and a better quality of life in Pune." Prasad, who has recently left Standard Chartered to head the venture financing division of ILFS, obviously enjoys his dual city lifestyle.

Sense of peace

Vikram and Meena Kaushik's story is similar, with home in Bangalore and work in Bombay. As managing director of the advertising agency Enterprise, Kaushik can take travelling in his stride and be in Bangalore whenever he wishes. For his wife too, as managing director of Quantum Market Research Pvt Ltd, travelling is not a problem. For 15 days a month, the Kaushiks enjoy a sense of peace in their rented home in Bangalore, recuperating from the trauma of Bombay. The children, who are 13 and ten, school in Bangalore and have learnt to give notice to their parents about their needs, or fend for themselves. A loyal domestic staff of four keeps the Bombay and Bangalore homes running smoothly.

The logic is simple. After 13 years of a hectic life in Bombay, Kaushik, who used to be with Liptons, got transferred to Bangalore. Bangalore, in Meena's words, was "a city where you could be human". Bombay had totally alienated them from nature. When the time came to return to Bombay the Kaushiks did some quick calculations. What, for instance, would it cost them to buy a small house in Bombay? They also realised that it takes 1 hour and 20 minutes to fly between the two cities and nearly 1 hour and 30 minutes to commute from the suburbs in Bombay. "Ultimately," says Meena, "spending 15 days in Bangalore made sense. We see more of the children this way and weekends are really like weekends."

Jobs which entail travelling allow executives to manipulate their monthly timetables. But, what happens to executives in production? Amit Deb, general manager, pharmaceuticals division of Rallis India, was initially overjoyed when asked to head their new project in Ootacamund. Once the exhilaration wore off, the family went into a debate about moving. His wife Anuradha, a students' counsellor, th with St. Mary's School, Bombay, defini did not want to move. Finally Deb w alone for a two year stint during whi time he was allowed to retain his Ward Road flat in Bombay for his famil use.

Dry existence

Deb was given functional accomodati for himself. Family re-unions were limit to twice or thrice a year and life was toug for the wife who had to hold fort singl handedly. Since Lawrence school admi sions also did not come through the was no choice but to carry on with a, "d working existence with enough time miss the family," says Deb. Deb is back i Bombay.

C.L. Seshadri of Glaxo has had a sim lar experience. He was sent to Bangalor on a joint venture project to put u

The Kaushiks: Bombay for work, Bangalore to recover

powder milk food factory. Their children were in their crucial years of appearing for the 10th and 12th standard examinations. Fortunately such cases are looked upon with sympathy by most companies, who realise the difficulties a job transfer can create. Seshadri was allowed to retain his house in Bombay and use facilities provided by the Bangalore-based company.

Job transfers can take their toll, disrupting family ties, children's education and friend circles. Commuting between two homes may not be an ideal solution for some, but many find the decision worthwhile. ■

NEERU NANDA

Private sector not better

Moosa Raza, *an IAS officer of the Gujarat cadre, is now chairman of the Standing Conference of Public Enterprises (SCOPE) and Delhi's showpiece, the Trade Fair Authority of India. He was chairman of the joint sector Gujarat State Fertiliser Corporation (GSFC), which he turned around and helped achieve spectacular results. He speaks to Arif Sharif of* Business India *about the problems the public sector is afflicted with*

t true that you
ted to shut down the
de Fair Authority of
ia (TFAI)?
l, that is not exactly
way I had put it. What
d said was that
alism has gradually
nered away and I
ld expect the same to
pen with the TFAI.
authority was
ially set up to
mote participation of
panies in
rnational trade fairs
I see that role of
I diminishing. None
he trade fairs
rseas have country
ls, there are only
pany stalls. So the
an companies have to
ikewise in future.

isn't that also
ause the areas where
Indian industry has
ditionally enjoyed a comparative
antage is made of small players —
ments, textiles and leather?
but these are also areas where some
he newly industrialised countries of
a have a comparative advantage —
g Kong, Taiwan, South Korea and
gapore — and their participation in
rnational fairs is not sponsored by
government.

government intervention in these
ntries is substantial in sponsoring
nology development? Why do we
er do that in India by allowing
re collaborations?
l, whatever technology development
country has witnessed has come
ough government sources. The
ate sector has never contributed to
in any case even after several
cessions awarded to R&D. Look at
collaboration that Maruti has had
Suzuki. Have they introduced
thing by themselves that can be
sidered an improvement on what
uki brought into this country.
nd this has very little to do with the
sence or the absence of government
he country. It seems like a national
ude, the inability to take risks. I
d to change this attitude while I was
SFC, encouraging my engineers to
head and experiment with new ideas without worrying about the results. And there is nothing wrong with the people that we have in the public sector. They are as good if not better than people anywhere in the world.

What is your perception of the plan to disinvest 20 per cent of the equity of select public undertakings to the financial institutions?
Government has not had an opportunity to implement the scheme and the decision now really rests with the government that replaces the current one. Nevertheless, it is a significant step forward.

But why merely 20 per cent? Are we going to achieve anything significant?
Well, that depends on what you wish to do with the public sector. For the moment, there are really four issues that face the public sector. First, there is the problem of revamp, growth, technology and modernisation. Then there is the problem of assisting ailing industries, the problem of distancing the government from the functioning of the PSEs and finally the problem of exposing them to greater market forces. These issues are separate and the people in the country need to collectively decide on these issues through Parliament.

This really cannot be anybody's personal decision — do we still need the public sector and if not and how will we dismantle it? — If you are talking of distancing the public sector from the government then disinvesting 20 per cent of their equity to the financial institutions is a good beginning. And you can continue doing this until you have reached 49 per cent.

Why not beyond that, because so long as public funds are invested in the company, isn't the government answerable to Parliament for such investments?
Yes, the government will still be answerable, but the moment a company passes into the joint sector, the mechanism of control changes. The government then does not control the company through the ministry but places its representatives on the board of directors. These representatives then enjoy the same rights as any other member. They vote, they attend the annual general meetings and if they have any concerns, they voice them there. It worked wonderfully with GSFC and now it is one of the better companies in the country with its share price quoted at Rs.204.

So if this system is working well, I see no reason why the government should go beyond this. In any case, a disinvestment of more than 50 per cent will need alterations in other laws which is not desirable at the moment. We will gradually make these alterations, consolidate and then proceed further.

What about the sick companies?
That is another of these decisions that needs Parliament's consent: whether to shut them down or to revamp them. All this depends on the costs associated with rehabilitation. What do you do with the labour entrenched from these companies. You need to find some alternative mode of employing them, perhaps train them further for suitable alternative employment.

At age 85, he was what most men half his age could only yearn to be — trim and fit, immaculately dressed, gracious to perfection, and most importantly, working late into the evening every day, six days a week.

Hotchand Gopaldas Advani's death last week was a loss not only to Bombay's judicial and educational community but to *Business India* as well. Though not many people knew, *Business India* magazine was founded with his support in his law offices at Bombay's Dalal Street. And it was only fitting that he worked on his last day out of the magazine's offices.

Business India was but a small note in the giant symphony of his life. He was a distinguished lawyer at the Bar for over five decades, and for as many years a highly regarded institution builder. He was responsible for setting up more educational institutions in the city of Bombay than probably anyone else, past or present. Respected city colleges like National, H.R., K.C., K.C. Law were all his labour of love — for his own Sindhi community, and society in general.

The affection and regard with which the Sindhi community in Bombay looked upon him was sometimes overwhelming. It has its roots in their own troubled history as a displaced community, a history that coincided with one of his own. The son of an eminent lawyer, he was born in Hyderabad, Sind. After obtaining a degree from King's College, London, he was called to the Bar at Middle Temple in 1929. He married Savitri in 1933. Soon, he established a successful practice for himself in his home city. His clients included not only the leading Sindhi merchants of the city but also some of the largest Muslim land-owners and politicians of that time.

Though he was closely associated with the RSS in Sind, his political and personal connections with the Muslim politicians was primarily the reason, in the bloodshed following partition, that he was able to ensure the safe departure of hundreds of Hindus from Pakistan. He himself was so rooted to his native land that he never thought he would leave.

Left with no choice but to stay back in Bombay, he threw himself into rebuilding his professional career from scratch. Though a member of the Hyderabad Municipal Corporation in Sind, he gave up the idea of a political career. He was co-opted on to the first working committee of the Jan Sangh in 1952, but resigned in protest against the party's policies.

Immediately after partition while he was building his practice, he simultaneously started setting up educational institutions. The driving force was the sight of the suffering of thousands of fellow Sindhis who fled Pakistan and were living in refugee camps in places like Kalyan and Ulhasnagar. His strong and compassionate personality enabled him to rise above the class divisions in the community itself and get the rich to contribute generously towards setting up educational institutions for poor Sindhis.

The first college that he set up, along with his colleague, principal K.M. Kundnani, was the National College at Bandra in 1948. Then came K.C. College, K.C. Law College and, in the next 40 years, a string of other colleges in virtually every discipline — all under the aegis of the Hyderabad (Sind) National Collegiate Board.

His concern for poor Sindhis was also expressed through the Jai Hind Co-operative Bank, which helped displaced persons to buy houses. Although the Reserve Bank prohibited loans for property, with his legal acumen he worked around the rules and gave people personal loans which they used to buy property. He also helped pioneer the concept of ownership flats in cooperative societies in Bombay. He remained chairman of the Jai Hind Co-operative Bank till the end.

He was also instrumental in re-starting in India the Sindhi newspaper *The Hindustan*. This for him was community activity which strengthened bonds between Sindhis all over the world. About twenty five years ago, he took over as chairman of the Sindhi Resettlement Corporation, which was responsible for developing the town of Gandhidham in Kutch, and relentlessly pursued his concern for providing homes and jobs for displaced persons in Gandhidham as well.

A historian by training, he had a broad social view and a historical perspective with which he clearly saw the need to develop colleges into broad-based institutions for the whole of society.

His career as a lawyer was equally distinguished. In fact, he considered himself a lawyer first and foremost, and worked assiduously with amazing regularity and a photographic memory. In fact, even on the night of 8 May, he was reading a court brief after dinner — his usual routine before going to bed. He was amongst the most respected counsel in Bombay, and quickly built himself a flourishing practice. He had a magnificent library of law books which was referred to by even the most eminent of other lawyers.

Even at the Bar, he was known for his openness and friendliness with all members. He only had good words to say about fellow lawyers. It was true to say that nobody at the Bar had any ill word to say about him. He saw the courts as a sacred institution and believed that justice would be done.

Hotchand Advani was a man who believed in building institutions and not individuals. His manner was open and he had a humane concern for all. He had generosity of spirit, his doors were open to all and his sincerity and caring for each individual was the reason why people, both high and low, flocked to him. Sindhis not only in Bombay but all over the world lovingly referred to him as "Dada". He was a deeply religious person, but this did not necessarily mean association with religious functions or temples. It was a spiritualism that governed his outlook on life.

He was a man of integrity and values and these were clearly transparent to all. This was reflected in his austere lifestyle, his love for his profession and his commitment to institutions, his people, and society at large.

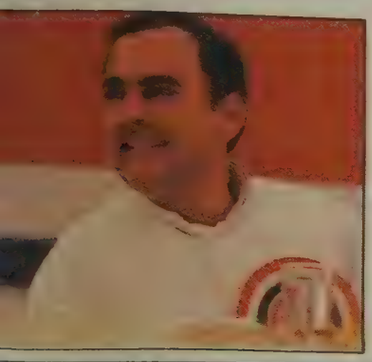
THE TRAGEDY AND AFTER

WE TAKE METAL MORE SERIOUSLY THAN DIAMONDS

Diamond. Symbol of perfection. It owes the perfection of its shape to uncanny precision that goes in the process of its creation. Precision of the highest order is built into every **NORMA** bearing. Precision that is measured in units of 1/1000,000 of a millimeter.

NORMA bearings are manufactured in India with the state-of-the-art technology from **FAG** Germany - World leaders in rolling bearing technology. Optimal designs, evolved & updated through FAG's extensive R & D, superior materials, automated manufacturing and handling systems ensure that NORMA bearings have that cutting edge of precision over others in their performance.



The electronic probe scans extremely small deviations of balls from the ideal geometrical shape.

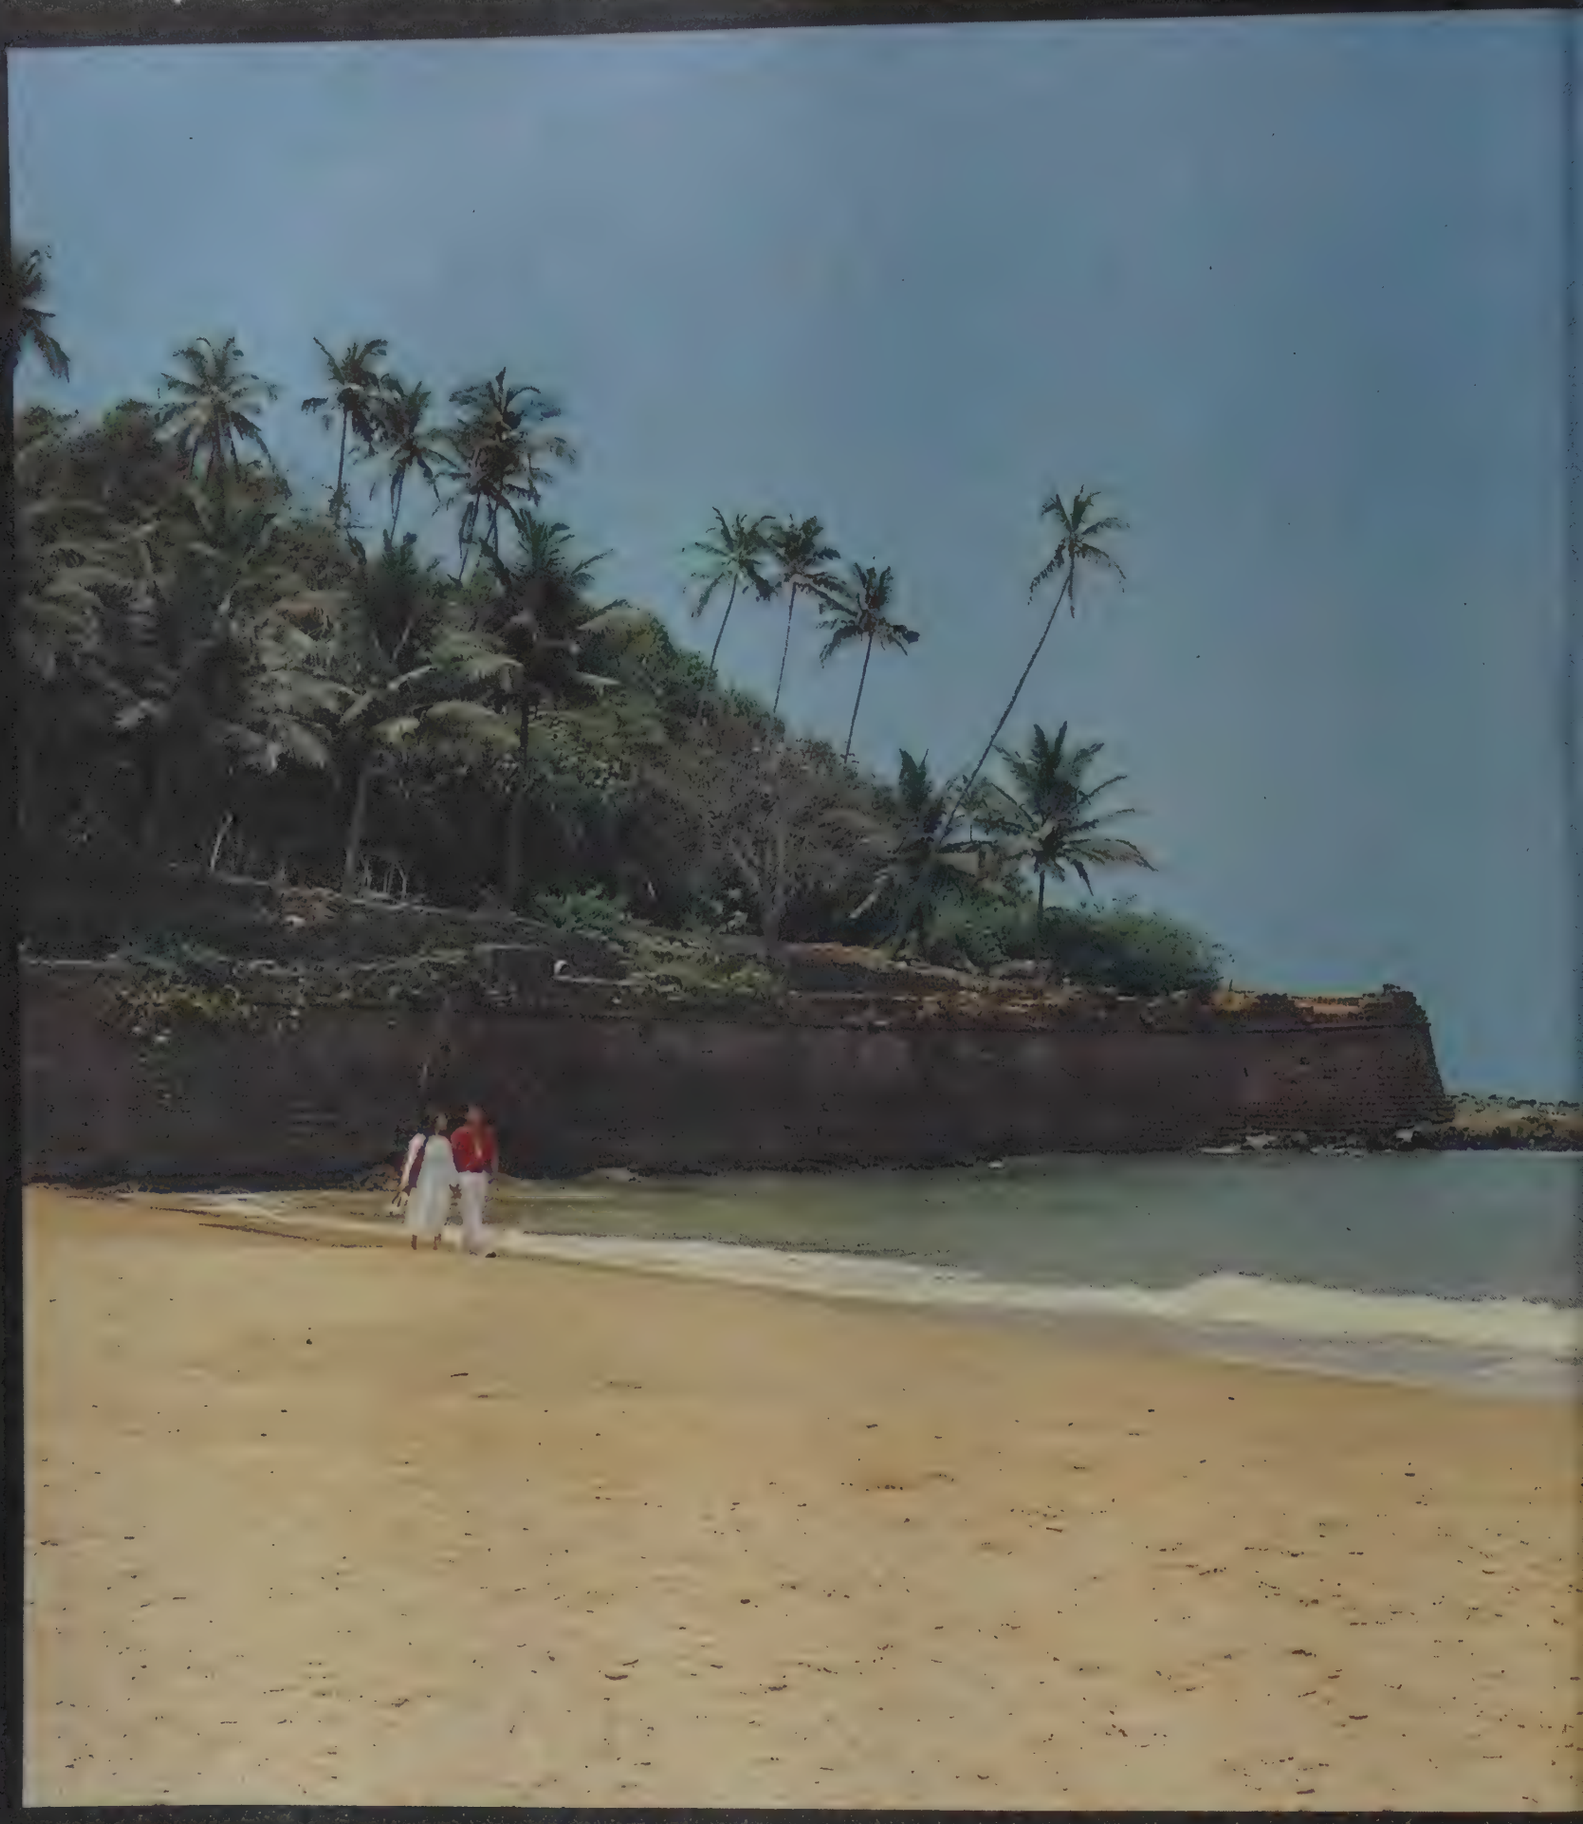
LETTER FROM THE PUBLISHER

Can we call ourselves a peaceful nation? Clearly the answer is no. The hallmark of any civilised society is that it detests and condemns violence. And goes out of its way to ensure that it does not occur whatever be the provocation. The fact that we have lost a national leader, Rajiv Gandhi, in this gruesome manner proves that we have failed this test of a civilised society: the only one that really matters.

When we became free, a pluralistic sub-continent rather than a homogenous nation state, we were filled with the hope that different though we undoubtedly were, we would live together in a spirit of amity and mutual respect. We were not ingenuous; we accepted that there would be differences but we also expected to resolve these within the framework of the democratic process.

Sadly, events in the past two decades have eroded not only the vision of a national consensus but have in fact sacrificed democratic norms to violence waged for narrow, political gains.



What is it that we as social groups are really fighting for? Are any social and political gains worth the violence we have witnessed? In this context Rajiv Gandhi's assassination is all the more shameful.

Rajiv Gandhi had said that he would like to be remembered as the man who led India into the twenty first century. His death has made that impossible. However, what is particularly anguishing is the fact that the hope that brightened our earliest days of freedom has dimmed. It is up to us to reverse this dismal process.

Our heartfelt sympathies to the bereaved.

• Taking investors for a ride

You have rightly pointed out (Letter from the Publisher, 15 April) that shareholders, depositors and financial institutions have legitimate interest in the companies in which they invest. However, the only information they get about their companies is from the annual reports and accounts statements. At the time of making public issues, most companies make tall claims and rope in foreign banks as managers to infuse confidence in the investing public. But many report sick soon after beginning operations, thus defrauding their investors. Merchant bankers and financial institutions who aid such projects certainly deserve to be blamed.

J.B. WILLIAMS

• Give a free hand

Vysya Bank's success story is refreshing especially since the banking sector is prone to sickness. (Corporate Report, 15 April). The dynamism and initative of the chairman of Vysya Bank is in striking contrast to the irresponsible attitude of some of the chief executives of nationalised banks who openly state that there cannot be any sickness amongst nationalised banks since their liabilities are guaranteed by the government.

The least the government and the Reserve Bank of India can do to inculcate some discipline and efficiency amongst the nationalised banks is to loosen its grip, on a selective basis, on some of the private banks like Vysya Bank who are operating under many constraints and disadvantages. Such a move would help the business community who is otherwise forced to deal with inefficient nationalised banks.

• Misinformed report

There appears to be some misinformation about the completion of the ammonia extension project at Hazira of Krishak Bharati Co-operative Limited (KRIBHCO). (Centre, 1 April 1991). For your information, the ammonia extension project has been completed ahead of time and is in production, so also the fertiliser project.

M.W. Kellogg, who were the process licensers for manufacture of ammonia are not the suppliers of process licence for the ammonia extension project. The process has been supplied by the department of atomic energy.

• Towards greater transparency

This has reference to the article highlighting the welcome change of lifting the veil of secrecy from the annual operational results of banks to make them more transparent (Accounting, 18 March).

Surprisingly, till now, banks were cleverly drawing up their balance-sheets to hide their misdeeds as there existed no uniform system of assessment of the quality of credits and there was also an absence of well-framed accounting policies. The new format will definitely remove the defects and make banks' balance sheets more meaningful.

• Reverse the drain

Tertiary education, at least selectively, could be corporatised (Institutions, 18 March). Foreign contracts should be encouraged and promoted. Faculty from reputed foreign institutions and external examiners would be an asset in attracting students from abroad. Good tertiary education abroad nowadays costs about $12,000. If India can offer it at a significantly lower price, even students from North America may be attracted.

Messrs Goenka, Khaitan, Pandhi and Chandra have initiated what may turn out to be one of the critical service sectors in which India may develop substantial comparative advantage.

• A joint effort

This is with reference to your article "Write on" (Computers, 7 January). I mentioned that a team had worked on MyScript but names of only two members appeared in your article. The team of software engineers working on MyWord/MyScript comprises: Vimalendu Verma, Karan Khanna, Ajay Madhok, K. Ramkumar and Manisha Nalgundwar.

Others in the team were K. Seetharam, Vikesh Sethi and Sujit Verma. It was a collective effort and no individual member of the team should get all the credit.

PRANNOY ROY
New Delhi

r last issue we published obituary of Hotchand das Advani. Since then his l and spiritual companion Jashan P. Vaswani, a well-n spiritual leader based in has sent us his personal te.

shall pass through world but once...."

omas Edison, the great in-or, it is said that the last s he spoke were to his wife, : "It is very beautiful over e." Soon, thereafter, he sank the lap of death.

believe this, too, was the ng of Mr. Hotchand aldas Advani, as he set out n the journey of death: "It is beautiful over there."

e had lived a full life. He was when he passed away on 9 '85 years young', as one of friends remarked. He was a el of a man — a loving hus-d, an affectionate father, a hful friend, and a trusting f.

e was friend, philosopher guide to many. They came im with their difficulties: he what he could to help them. believed that a man's true lth is the good he does in the ld. His life was a living com-ntary on the ideal so beau-lly expressed in the words of llet: "I shall pass through world but once. If therefore re be any kindness I can w, or any good thing I can do, me do it now: let me not defer r neglect it."

o know him was to love him. life was a mine of many vir-s. One of them was sim-city. He was simple in his ss, diet and daily living. I was n him at Lonavla, during the six days of his earth-rimage. I often wondered at simplicity of this great man. recall an incident which was characteristic of him. He had begun his law practice, en he learnt that a sewing chine belonging to a widow ner only source of livelihood was about to be auctioned ause she could not repay a t. The widow was a complete nger to him, but in Mr. chand's heart there was a place for everyone. He bought the machine and restored it to the widow. Many are the people who have come to me and said, "Our Dada is gone: to whom shall we go now?"

He was a man of integrity and character. His hands were clean: his life was pure: his heart was rich in dreams and aspirations — all directed to the well-being of people.

He believed in the power of prayer and, not unoften, spoke to us of the miracles prayer could perform. How true it is, as a man of science has said, prayer is the mightiest and the most unused power in the world. He practised silence everyday, and sought to understand the meaning of the mystery of the endless adventure of existence. He kept his daily appointment with God.

He was positive in his approach to life and its problems. He saw no evil. He greeted every experience as *prasadam* from God's hands. In times of change, he lived in the assurance that God's angels went before him and cleared his path and made it smooth. His last lecture — delivered at the Sadhana Camp, Lonavla — revolved round the thought of being grateful to God for everything that happened to us.

In his life there was a beautiful blend of courage and kindness. He had the courage to stand up for truth though the heavens fell. He encouraged his Sindhi brethren who, leaving behind their properties and possessions in the land of their birth, migrated to different parts of India, to stand up and earn by the sweat of their brow, be self-reliant and trust in God, the dispenser of the destinies of individuals and nations. Whenever he took a project in hand, he would see it to its fulfilment. He never gave up. He was a picture of kindness. On his lips there was a word of comfort for everyone who came to him in difficulty and distress. Adam Lindsay Gordon could have been describing Mr. Hotchand Advani in *Ye Wearie Wayfarer:*

Life is mostly froth and bubble,
Two things stand like stone,
Kindness in another's trouble,
Courage in your own!

He had a beautiful sense of humour. He drew upon his store-house of "jokes" — as he called them — choosing the one appropriate to the occasion. His jokes never hurt anyone and gladdened the hearts of his listeners. He also had a sense of humour. But his jokes never hurt anyone; they gladdened the hearts of his listeners.

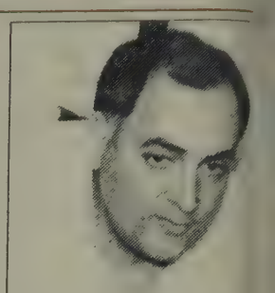
Generations unborn will remember with gratitude his contribution to the cause of education. He was the founder-president of about 24 colleges and educational institutions — including a college of electronic engineering — in Bombay. At none of those institutions would he permit any capitation fee to be charged for admission. I trust the tradition will be kept up by his successors. Though he was well-aware of the defects of current education, he felt that one good thing it did was to help the young people to stand on their own feet and earn their livelihood with dignity and self-respect. I look forward to the day when, at the entrance to the K.C. College at Bombay — and the Chandibai College at Ulhasnagar — we shall have an imposing statue of Mr. Hotchand in the act of awarding diplomas and degrees to young people of different castes and communities.

He was a shining star of the Sindhi community. Though he never regarded himself as a leader, many turned to him for guidance and leading. Sindhi philanthropists, residing in different parts of the world, had complete faith in him. They sent him millions of rupees to further his educational and humanitarian work. He had reverence for the saints and holy ones of Sind — specially for Sadhu Vaswani, who influenced his life from his early days.

He was a great lover of books. He was fond of reading the latest publications. Every time he met me, he would speak of some recent book he had browsed. He was a fast reader. One day he told me that he could read at the rate of a hundred pages an hour. He thought deeply: he spoke softly: he acted devotedly. Though he was always wary, he had deep reverence for the *sat-purukhas*, the holy ones of humanity.

Great was his devotion to the *Bhagavad Gita*. He delved deep into the meanings of several *slokas:* he tried to bear witness to the great teaching in deeds of daily living. He believed in the words of Sadhu Vaswani:

In all religions, the Light is Thine: In all scriptures, the Inspiration is Thine: In all the Saints, the Picture is Thine!



He kept himself busy. Work was the worship which he offered to God, every day. He had value for time: every moment was, to him, precious. A few years ago, he was asked: "Do you ever fall sick?" He answered: "I am too busy to fall sick." He was too busy to stop even for death. As Emily Dickinson has said in a beautiful poem:

Because I could not stop for Death,
He kindly stopped for me,
The Carriage held but just ourselves,
And immortality.

He wished to die in harness, without giving trouble to anyone. God fulfilled his desire. Death came to him with gentle footsteps. On his last day, though he travelled by road from Lonavla to Bombay — a journey of about three hours — he attended his office in the evening. He shared dinner with members of the family. He fixed the dates of his forthcoming visit to London. He retired to his bed at the usual time. A little after midnight he developed breathing trouble with a feeling of suffocation in the chest — and was gone within a couple of hours.

Hotchand Gopaldas Advani is not dead. A mind, so rich and radiant, so versatile and vivacious, so fine and fearless, can never die, but continues its search for Truth on the other side.

J.P. VASWANI

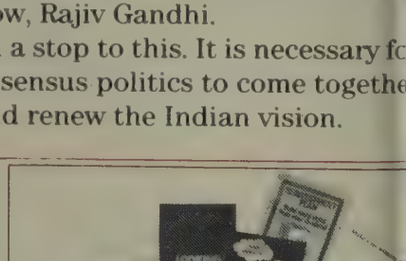
Reflections on a shameful crime

Over the last twenty years, the practice of building a consensus — which had characterised the Congress till then — broke down. The Congress (I) became centred around the cult of a personality, Indira Gandhi. Rajiv Gandhi, after his election in 1984 with an absolute and resounding majority, failed to re-assess the situation and revamp his own party. Other parties also came to cultivate special interests and abandoned any approaches which would weld the divergent and diverse communities of India into a common whole.

The BJP, for instance, chose to concentrate on a vision of a Hindu India — which necessarily meant that large sections of the populace had no place in its vision of the body politic. V.P.Singh seized on another divisive strategy, that of capitalising on caste. The Communists had, from the very beginning, cultivated only a very narrow sectional and regional interest. With this scenario there was no escape from the politics of alienation.

Political violence, in consequence, became rife. The case of V.P.Singh is particularly illustrative. He capitalised on already existing tendencies — violence among the various castes in Bihar was by no means a new phenomenon, with caste armies wreaking terrible retribution on each other. What he succeeded in doing was extending this phenomenon beyond the confines of Bihar, to an extent that led his opponents to feel that the only way to counter his appeal was to resort to self-immolation — even in the capital. The point is that there was no attempt at suppressing these divisive tendencies. If anything, politicians condoned it to cultivate their own special vote banks. There was no one of the stature of Jawaharlal Nehru who was willing to say "Thus far and no further".

The sacrifice of essential human values to political strat gies thus resulted in the condoning of violence. The BJP, wi its promotion of the *rath yatra*, negated the basic reality the essential equivalence of people irrespective of their fait The centrist parties displayed an equal moral bankruptcy



This echoed one of the most shameful episodes in o country's history — the promotion of Bhindranwale by th Congress to further its own interests. He could ride in Delhi, as an indicted criminal, on an open truck surrounde by armed men to be welcomed by the then home minister Za Singh. He was allowed to build an arsenal in the Golden Tem ple. What followed was equally shameful — Operation Blu Star. Indira Gandhi herself was then assassinated.

Over 5,000 people died in the following riots. Not only wa no attempt made to prosecute the ring-leaders but some them were even given seats as MPs.

The encouragement of violence was equally evident in th Sri Lankan episode. First, Eelam was encouraged and the S Lankan terrorists were given both support and trainin When they proved a liability, the Indian Peace Keeping Forc marched into Sri Lanka and attacked them.

Thus have the strategies of politicians encouraged po larisation. Every major political action centred aroun issues that perpetuated violence. The result has been clear i the latest round of elections — a total breakdown in the bod politic, caste battles, the rigging of elections and the murde of 200 people in poll-related violence, including several inde pendent candidates and, now, Rajiv Gandhi.

The time has come to call a stop to this. It is necessary fo all those who believe in consensus politics to come togethe under a common banner and renew the Indian vision.

Fairy-tale success of mutual funds

In contrast with its image in manufacturing goods, the public sector's reputation in financial services is significantly better. Nowhere is the label of success more apparent than in public-sector mutual funds which raised over Rs.7,000 crore from financial markets in 1990.

Why the dichotomy? Don't the usual disincentives of governmental interference, unmotivated workers and technological backwardness apply also to the public financial services sector?

The answer is that they do, but it matters little because of the monopoly of the public sector in such financial services. Consider government interference. In an equity market characterised over the last three years by rising markets, governmental interference on the quantities or kinds of shares pur chased has not affected rates of return significantly. The most telling example of this is Ambani's purchase in 1988 o 3.9 million Larsen & Toubro shares held by UTI, LIC and GI via BOB Fiscal and its subsequent "voluntary" resale to th same institutions without profit. Thanks to rising equit markets the institutions profited on both occasions withou any discretionary action on their part.

The problem will arise when their performance is tested b private-sector competition. The seeds of the problem ar already there. At present, for example, the schemes of public sector mutual funds are extremely boring in their similarity Yet no law prevents them from offering innovative scheme

as a fund devoted to investment in new issues or, say, in teel industry. Similarly open-ended mutual funds (with rchase at net asset value) have still not been offered in of being both legally possible and marketable. Mean-, the overall quality of research done by mutual funds is according to several fund managers themselves.

is not, however, fair to tar all financial institutions with ame brush. UTI has a reputation for high labour produc-, professional research and good client servicing, and ank Mutual for aggressive marketing of funds. But they not been adequately tested by competition.

ven that private-sector entry into mutual funds appears table, the role of SEBI becomes crucial. Although some e more recently formed mutual funds have been decry-SEBI's role on wanting more disclosure of fund portfolios reducing the razzle-dazzle of advertising, the fact is that SEBI's role is the protection of investor interest. This requires adequate disclosure.

Once the private sector enters, even the boring "doubling in five years" may become an ambitious goal. It is right for SEBI to force mutual funds to be cautious about their claims. SEBI should, in fact, also be vigilant about matters it has currently not taken up, such as disclosure on the style of market operations and the research basis of mutual funds. And, since there is no point in reinventing the wheel, it should examine closely the laws that have made Securities & Exchange Commission in the US so effective.

The mutual funds, currently basking in their success, should realise that protecting the investor preserves him as a client. It will have to make sure that investor confidence does not wither when the private sector turns on the competitive heat.

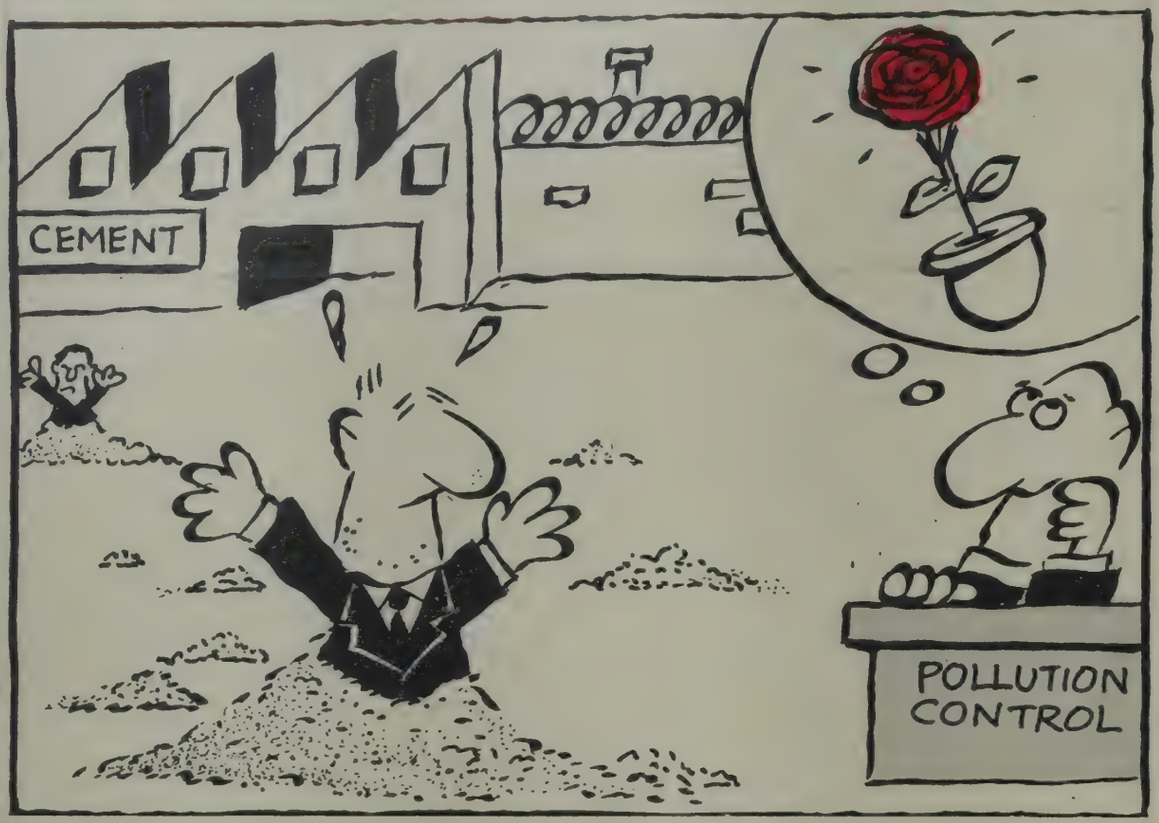
SE under pressure

he Bombay Stock Exchange is constantly under pressure from the government to change its ways. Earlier, it was ain public-sector financial institutions which wished to ome members, on the logic that they could better service nts than private brokers — a notion that their record as lic sector banks did nothing to enhance. BSE is now er pressure to admit 100 new professional members at 20 lakh each (about one-third of the market price). It is under pressure of a more fundamental sort to its exis-ce from the proposed ICICI-sponsored over the counter TC) exchange. This will initially list companies with an ity base upto Rs.10 crore. But once established, it will bably be only a matter of time before it lists larger com-ies and competes directly with BSE.

ll this reflects a fundamental difference in viewpoint bet-n BSE and the government on the role of a stock ex-nge. BSE views itself as a preserve of members holding able transferable membership cards, while the govern-nt views stockmarkets as an engine of economic growth. thinks that the two goals are compatible provided it can ip its members with the right facilities: incorporation, e space, computerisation, more training, etc.

SE points to the New York Stock Exchange as an exam-of an exchange that can service over 100 million shares a (compared to its own 10 million) with about the same ber of members. It feels that its monopoly and limited nbership preserve the professional character and unity embers so vital to a financial exchange, where a consid-le value of transactions is finalised by word of mouth from whose strength flows the strength of the primary kets as well as other financial markets. Brokers, accord-to BSE, should be the high priests of finance.

he government views brokers more traditionally as the mon coconut sellers outside the temple. They ought to provide clients access to transactions and not much more. Market prices ought to be determined by fundamental forces.



Both views are only partially correct. The government is right to view the prime role of the broker as not much more than bringing buyers and sellers together. To that end, BSE is currently short as it does not have the capacity to service clients adequately. However, adding many more members quickly could cost BSE its prized cohesiveness which has prevented any serious defaults so far in spite of sharp market swings over the past year.

While BSE is right in arguing that better facilities will improve its capability to service clients, it is truer to say that even its current capacity is used more to service its own speculations (60 per cent of total volume) than the small client's trades. An improvement in the facilities of members as also an increase in the number of new members need not therefore solve the clients' problem, but could merely increase the volume of speculative business.

There is nothing wrong with speculation by itself. It increases the flow of information into prices and thereby makes markets smoother. The problem is that much speculation is done by insiders via brokers with little accountability for their losses. In such a safe framework, why bother to take on client business, especially small clients?

Thus, the solution does not lie only in increasing competition inside the exchange by inducting new members. This will reduce the value of a card to more affordable levels but will do little to improve client servicing unless the accountability of brokers is increased via a strong Securities and Exchange Board that investigates and imposes stiff penalties for insider trading. The second solution is to increase competition to BSE itself. A properly organised OTC, without limitations regarding equity size, and with private membership which allows dual listing, makes eminent sense.

Pollution-free cement plant

It is hard to imagine a cement plant that is dust free. But that is exactly what Ambuja Cements' plant at Vadnagar claims to be.

It all started when the Ambuja engineers visited a cement plant. They came out coated with dust from head to toe. A few months later, when Ambuja was setting up a plant at Vadnagar, they were approached by a delegation of farmers worried about the effects of pollution from the plant. The engineers took an on-the-spot decision. They gave a written undertaking to the village panchayat that emissions would be controlled and that their crops would remain unaffected.

To achieve international standards, the company sent its team of engineers to Switzerland to study pollution control. The engineers found a plant near the Swiss Alps operating at 50-100 mg/per NM3 — possibly the world's most pollution-free cement plant and returned with the resolve to achieve the same.

Expensive filter bag pollution control machines were set up and individual responsibility assigned to each engineer to ensure filters were regularly cleaned so that the pollution control system worked at maximum possible efficiency.

To monitor its effectiveness, a rose garden was set up in the middle of the plant to see if it would flourish. Pollution levels dropped to 120 mg/per NM3. There was no visible sign of smoke or dust even 200 yards from the plant. The farmers were satisfied. The roses on closer inspection, however, had a film of dust. So in February this year, Ambuja Cements installed an electrostatic precipitator on the clinker cooler. Pollution levels dropped further to 70-80 mg/per NM3. And the rose garden was flourishing.

CERC on the up and up

The Consumer Education a Research Centre (CERC), Ahmedabad has certainly come of age. The organisati now has an annual expenditure of Rs.25 lakh.

Today CERC has a strong legal cell; the largest library on consumer affairs in India a modern computer centre; an internship programme fo consumer activists; a staff o about 30; and a product testing laboratory.

The organisation that spent only Rs.250 annually when it started, is today willing to pay up to Rs.80,00 per annum to its director!

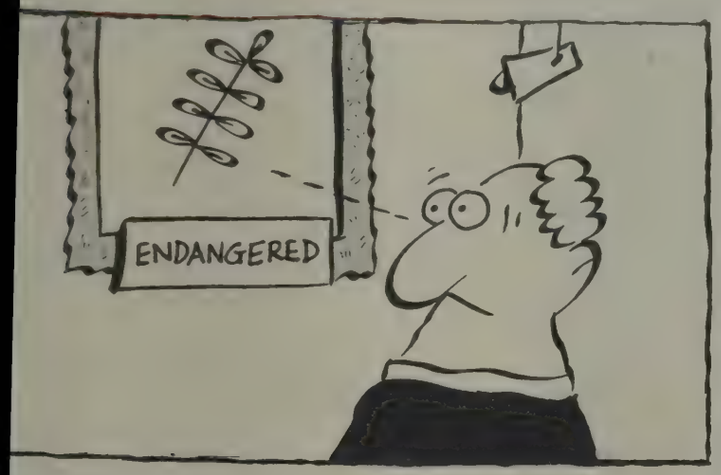
Safety norms

To help existing companies as well as new entrepreneur the Bombay Chamber of Commerce has compiled a manual on "Some important statutory provisions on safety, health and environment, as applicable t manufacturing units". The 2 Central Acts and rules passe so far in these areas, the permissions and licences required under the different statutes, as well as the various norms of occupational safety and environmental protection that factories have to adhere to, have been dealt with in the manual.

Now few companies can sa lack of information was the reason for negligence.

I.K.
Bombay

Whistling skyscraper



Noise pollution has reached new heights in New York city, where a 72-storey building whistles loudly every time the wind blows. City inspectors feel that the noise may be caused by wind blowing over louvres on the building's dome. The architect however says that he needs to study the situation before he can propose a solution.

Meanwhile, hundreds of complaints about the whistling have been received by the city's Department of Environmental Protection and the builder of the multi-storey building has been cited for violating a noise control ordinance.

Children show the way

Pest control could not be more environmentally friendly. In the village of Kannaur in north-western UP, children help farmers control pests affecting the sugar crop. Every morning the village children collect pest-infested leaves of sugarcane, pack them in bundles and take them to the nearby Simbhawali Sugar Mill. The infested leaves thus collected are burnt at the gates of the mill.

This unique integrated pest management experiment was initiated by the sugar mill in 1987. The children of the village were taught to identify the larvae, pupae and the adult moths. "Once identified and started collecting infested leaves," says S.K. Taneja, agronomist at the sugar mill.

Initially the children were given sweets and candies in exchange for infested leaves. Now they are paid two paise per leaf.

What began at Kannaur has now spread to 16 other villages nearby. Last year over 300 school children took part in the campaign and earned nearly Rs.85 each. Farmers on the other hand benefited greatly from this programme. Pests responsible for reducing yields by 20 to 25 per cent were eliminated by children without any extra cost to the farmer.

Little known exports

India's fruit and vegetable exports have been much talked about, but did you know India has been exporting medicinal plants, herbs and flowers as well?

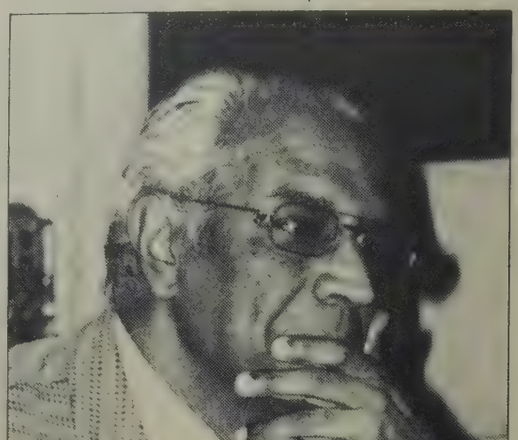
Herbs, which played a vital role in traditional health care systems, are now earning Rs.60 crore in foreign exchange. And their exports are expected to touch a whopping Rs.100 crore mark by the end of the year.

India's share in the two billion dollar international flower market on the other hand is about one million dollars.

However, India's performance is wanting on both counts.

Diversification, Essar style

Essar is planning to get in a big way into portfolio management, venture funds and offshore funds, apart from merchant banking, through its company India Securities. Currently based in Madras, India Securities was earlier known as India Factors and had managed the Essar issue before Essar bought it over in 1989. Now Essar wants to go public with an issue of the size of about Rs.10 crore. It will be a rights issue.



More paperwork for banks

After B. Ratnakar, the go-getting former chairman of Canara Bank set the pace, banks started competing with one another to publish their balance sheets first. This year too the race began with a few medium and small banks meeting publishing deadlines before the bigger banks could get anywhere close. But around 10 May, the finance ministry said, "Enough".

According to the ministry communique, banks must send their finalised accounts to it at least seven days before signing them at board meetings. But why the communique, ask banks, when the government nominee on any bank's board is in the know of everything a bank does and is supposed to have cleared any doubts the ministry may have had? Finance ministry sources say the whole procedure needed an overhaul. Even though the board meeting agenda is sent in advance, in most cases the accounts reach members only a day or two before meetings leaving members hardly any time to scrutinise the accounts thoroughly. And now, with "transparency of bank accounts" having become the buzzword in the ministry, the finance mandarins probably don't want to take any chances.

Beware the white knight

He came in as a white knight. Now, if he has the blessings of Peter Gammon, Abhijit Rajan may end up taking control of Gammon India. Managing director Subba Rao had apparently brought in Rajan to thwart Manu Chhabria's attempts to taking over the construction giant. After the

Rao: on the losing side?

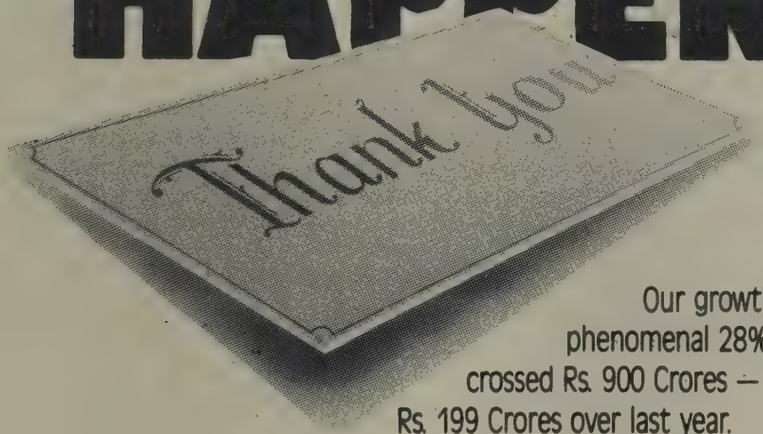
dust had settled, this is how the shareholding pattern looked — Subba Rao 10 per cent; Abhijit Rajan 30 per cent; Manu Chhabria 30 per cent and Peter Gammon 8 per cent. The key to the new configuration is now with Gammon. Whoever acquires his 10 per cent will emerge the victor. Earlier, he had decided to back Rao but is now known to be supporting Rajan.

Scrounging around for scrap

Mini steel and alloy steel manufacturers are in dire straits because of the country's foreign exchange problems. They largely depend on scrap imported from hard currency markets like the US, Germany and Canada. With the forex crisis, they had to look elsewhere. Russia, with whom India has a bilateral trade contract, was where they looked. But Russia refused to honour its trade obligations as it, too, is in need of hard currency and wants no rupee earnings. Now the steel producers are desperate. One delegation is already in Czechoslovakia — another rupee trade country — to explore import possibilities. But the negotiations aren't making much headway. However, Indian importers are ever hopeful. Some of them are busy trying to get their rupee-rouble licences (obtained from the Controller Imports & Exports) converted to ru licences so that they are ready when Czech consignment does manage arrive.

New name, new product

Boehringer Mannheim Ltd (Boehrin Knoll just three months ago) is m probably adding an anti-typhoid vacc to its impressive list of cardio-vascu and antibiotic drugs. The project, es mated to cost Rs.45 crore will come up the company's factory at Kolshet, Tha Boehringer is approaching the Controll of Capital Issues to obtain permission a partly convertible debenture issue to nance the new project. Once the an typhoid vaccine hits the market, it is e pected to give a boost to the compan bottomline (1989-90 sales: Rs.35. crore; gross profit: Rs.1.69 crore). Apa from India, east Asian and south ea Asian countries are expected to be t major markets for the vaccine.



HLL's continuing thrust

No time is being wasted by Hindust Lever Ltd (HLL) on the export front. A reported earlier in *Business India*, HL has retained the American consultan firm McKinsey to develop a new expo strategy for the American and Europea markets. Five core areas have been iden fied: textiles and garments, leath (Pond's has built a strong base Madras), toiletries, foods (especially m rine products) and agri-products. Wi the new strategy, the company expects record an export turnover of Rs.300 Rs.400 crore by 1995. In 1990, the expo turnover was around Rs.195 crore.

Retrenchment time

Retrenchment — a fact unknown to th high growth computer industry in th past — now seems to have become a wa of life. Some of the largest compani have resorted to laying off personne These include Hindustan Compute (600 people), Wipro Infotech (100), Z nith Computers (45) and Hinditro Computers (30). The tight money poli and slower growth are some of the re sons for the current state of affairs.

OUR SPECTACULAR SUCCESS. YOU MADE IT HAPPEN.

PSI BULL

Changing tracks

When Bull SA of France increased its stake in the ailing PSI Data Systems from 26 to 40 per cent last year (see *Business India*, 19 March 1990), it surprised many people. This time around, there are more surprises.

The French multinational has successfully persuaded the Tatas to pick up 10 per cent of the stake in PSI's Rs.27.5 crore equity through the Tata Electric Companies. In addition, NELCO, a Tata company in which Tata Electric has a substantial equity stake, is to introduce the UNIX operating system for workstations in India through a technology transfer arrangement with Groupe Bull.

Lange: "virgin market"

On the manufacturing front, the new Rs.15 crore plant at Peenya, Bangalore has been commissioned. PSI has also acquired the license for a "Software Technology Park" (the second such private company, after Texas Instruments). And most interestingly, there is a proposal to change the name of the Bangalore-based company to Bull India.

Losing streak. When that happens, it will finally severe the company's links with its four original Indian promoters. The new French management, which had started playing an active role some time last year, gave a definite thrust to the company by identifying mainframes as the market to concentrate on. And the move has started paying off. In 1990-91, PSI sold eight mainframes, valued at Rs.11.82 crore. This constituted 50 per cent of the mainframes sold in the country and 80 per cent of those which went to the banking industry, the main buyer.

However, in spite of all these achievements, PSI continues on a losing streak. Against a turnover of Rs.22.77 crore, the company ended the year with a loss of Rs.54 lakh. But that does not faze managing director Mark Jennings who says, "We were expecting a loss of Rs.4 crore." The new management is confident of putting up a better performance in the months to come. "The mainframe market in India is still virgin territory," says Ove Lange, executive vice-president, Bull SA. "An improvement in the Indian telecommunications system, for example, can lead to a big increase in the demand for mainframes. The market here is just waiting to explode."

While mainframes will continue to be the bread and butter in the future as well, PSI also plans to take more interest in software. "We shall strive to maintain a regular and attractive cashflow from software, by catering to Indian customers as well as to markets abroad," says Lange. PSI earned Rs.9 crore from exports in 1990-91, a phenomenal 335 per cent growth over the previous year!

Bull's decision to play a major role in the future of PSI can best be summed up in the words of Lange when he says, "Thanks to its fast pace of modernisation, India will be a major player in the next century." That, and the fact that India can serve as an ideal springboard for Bull's activities in the the fast emerging Far-east Asian markets, could help keep the French multinational's interest alive in its Indian affiliate.

■ RAJU BIST

SCINDIA TAKEOVER

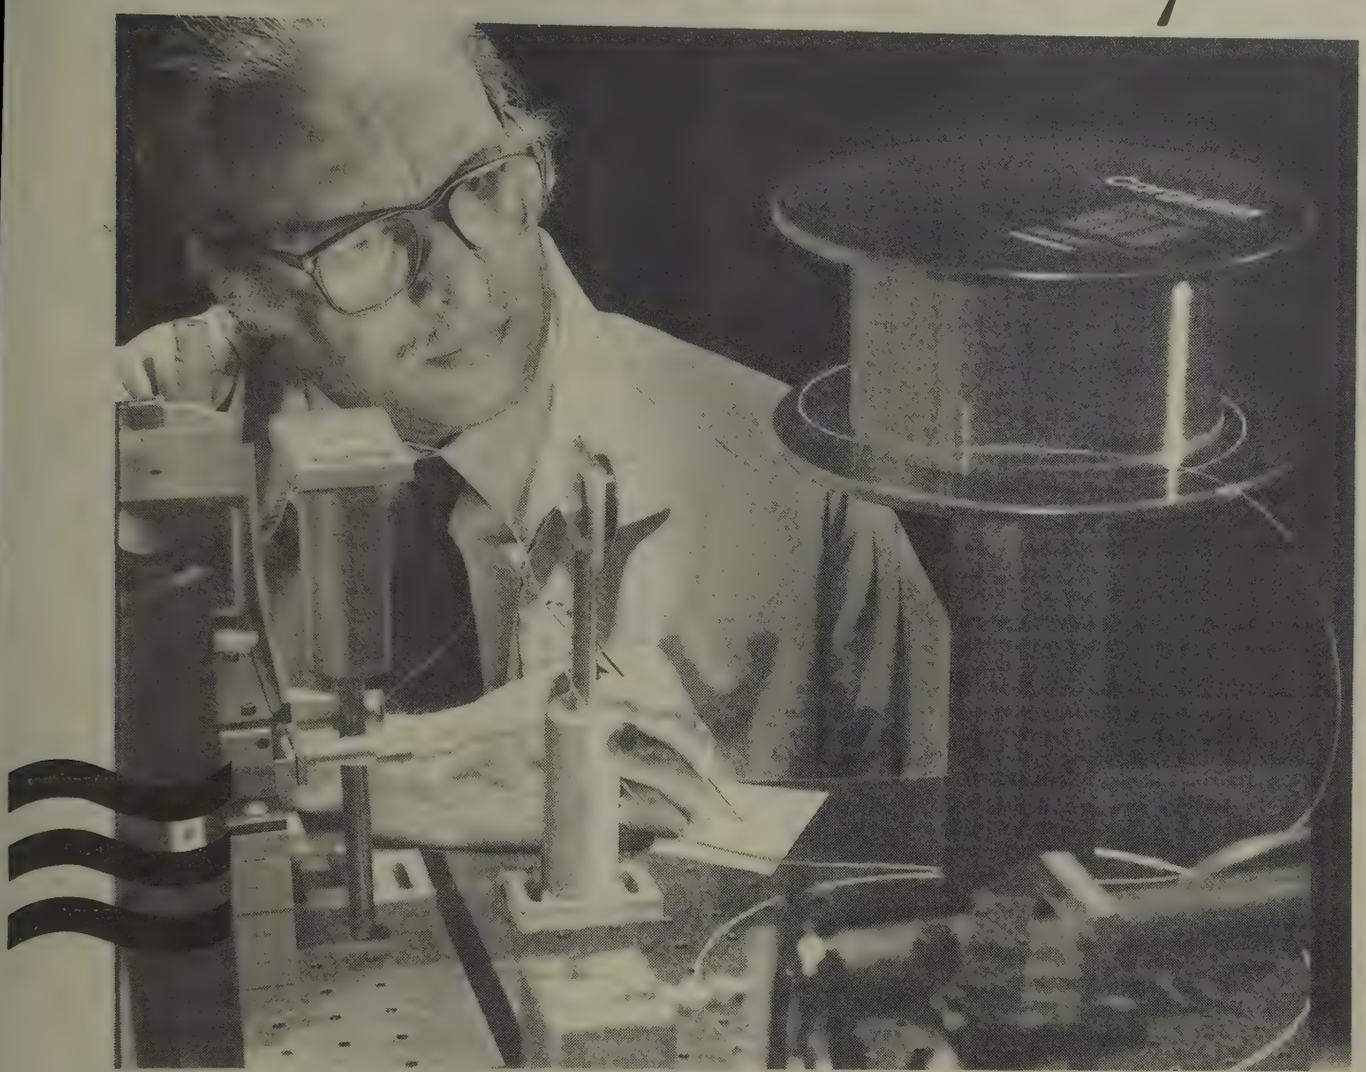
Final countdown

The open offer being made for the takeover of the sick Scindia Steam Navigation Co Ltd is the second one in Indian corporate history. And this move, made by the Shipping Credit and Investment Company of India Ltd (SCICI), has been welcomed by the corporate community. Earlier, open tenders were invited for the takeover of Titagurh Paper Mills, but there were no takers for it, till Lalit Thapar picked it up. The SCICI offer is in direct contrast with the takeover of L&T in 1988 by the Ambanis, which was made possible by a clandestine divestiture by the FIs.

Scindia House: any takers?

Scindia Steam, which was taken over by SCICI in 1987, has now invited open tenders. Early this year, SCICI had invited offers for the takeover of Scin Steam's management. The package cluded Scindia Steam and its two sub iaries — Scindia Workshop Ltd Eastern Bunkerers Ltd. The Reliance dustries Ltd, Peerless group, Essar Sh ping, Great Eastern Shipping, Dalmia Industries, Calcutta-based M anda Industries, two UK-based non r dent Indians and Sumati Morarj chairperson emeritus of Scindia among the few who have responded this invitation.

The bids, opened on 16 May, will evaluated by Credit Rating and Inform tion Services of India Ltd (CRISIL). T credit rating agency's evaluation proc will be completed within six weeks. cording to N.C. Singhal, managing dir tor of SCICI, the selection will be bas on two important factors — financ health and managerial expertise. "T focus will be on the proposed debt structuring, and the company's ability meet the government liabilities," e plains Singhal.



Restructured. Incidently, in 1986, t government and the SCICI had decid that the company should be given pref ential treatment and a status quo in ownership maintained. In August 198 the restructuring of the company bega The board was reconstituted and i cluded government nominees under t supervision of SCICI.

When SCICI took over, the company w in red having accumulated losses of Rs crore and a debt of Rs 136 crore payable the government, while another Rs 21 cro was due to various cred tors. Against this w the company's agei fleet — its 23 shi which would not fet more than Rs. 50 crore

Though the compa is making a profit current operations, la of adequate workin capital is posing pro lems, says Singhal. Th government's motive b hind inviting tende was to give equal oppo turity to all private pr moters vying to tak over Scindia. Accordin to experts, shippin companies hold a bett chance of being selected due to their ex pertise in the field.

Corporate Terrorism is an inside story.

An inside view reveals the most vulnerable areas.

The nerve centres of your organisation are an easy target for saboteurs within your organisation, especially during labour or executive unrest. Your whole organisation from production to data processing systems to marketing could be paralysed with minimum effort.

Littlemore secures your vulnerable areas from attack from within. And offers professional services for the following corporate problems:

- Labour unrest
- Executive discontent
- Ex-Employees/Executives
- Leakage of Technical information
- Threats, Blackmail and Extortion
- Hostile takeovers

We also offer Corporate packages and specialized services for your organisation. Please come and discuss your specific security requirement in utmost confidence with:

ECONOMY

Trade deficit up

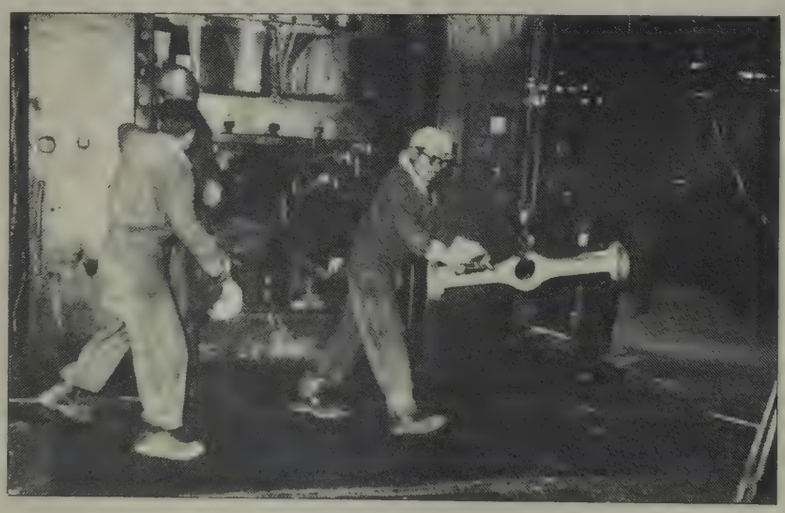
Provisional figures released by the Directorate General of Commercial Intelligence and Statistics show that India's trade deficit has gone up to Rs.10,643.53 crore against the previous year's Rs.7,730.41 crore — an increase of 37.7 per cent. The deficit is attributed mainly to the increase in the petroleum import bill.

AEC pools in

In an effort to earn precious foreign exchange, the Atomic Energy Commission has offered to reprocess spent fuel from other countries as a commercial service. This would require countries to ship the material to India where the plutonium would be separated. Orders are awaited.

RBI's new curbs

The RBI has announced a 25 per cent surcharge on import finance, and restrictions on large



cash withdrawals. The first move will severely curtail imports whereas the latter will restrain credit by narrowing the gap between sanctioned limit and actual utilisation of funds.

Hawala transactions increase

Funds running into hundreds of crores of rupees are flowing into the country as a result of a whopping increase in *hawala* transactions in Bombay over the last four weeks. Gold smuggling has dropped as major operators have shifted to *hawala*. The premium on the dollar has fallen from 23.62 per cent to 18.9 per cent.

Phased decontrol of steel prices

The finance ministry has decided to delay full decontrol of steel prices in view of the worsening balance of payments situation. Though the department of steel has advocated the implementation of both — phased decontrol of steel and reduction of import duties on steel products to moderate levels, The finance ministry is reluctant to reduce import duties given the foreign exchange crunch.

Interest spreads hiked

The Union finance ministry has substantially hiked the interest rate spreads for contracting short-term loans abroad. The spread has almost doubled for six-monthly credit, known as bankers' acceptances (BAs) by 0.60 basic points from the earlier 0.65 points above the London inter-bank offer rate (LIBOR). This move is one of the many attempts by the finance ministry to tackle the escalating foreign exchange crunch.

ADB to launch mutual fund

The Asian Development Bank (ADB) will launch India Equity Fund, a type of international mutual fund, to promote overseas investments in the equities of new companies of India. ADB will participate in the fund to the tune of $10 million.

Interest on SDF loans hiked

The ministry of food and civil supplies has raised the interest on Sugar Development Fund (SDF) loans from 6 to 9 per cent per annum. Other notifications on the anvil include a ceiling of Rs.5 crore on SDF loans, denying loans to the private sector and large sugar units with capacities over 5,000 tonnes crushing per day.

New guidelines for OTCEI

The Union government has released fresh guidelines for the listing of companies on the Over The Counter Exchange of India (OTCEI), which is expected to be operational soon.

Under the new guidelines, the lower limit for listing has been fixed at Rs.30 lakh equity capital and the upper limit at Rs.10 crore. Finance, leasing, investment and hire purchase companies and amusement parks will not be eligible for listing.

CORPORATE

Hindustan Ciba-Gie for weedicides

Hindustan Ciba-Giegy Ltd planning to enter the weedic market with two new produ — metalachlor, used on so bean and maize crops and p tilachlor, a rice weedicide. T company has already receiv provisional registration metalachlor and has sou permission for ea commercialisation.

Associated Beverage Soviet venture

Associated Beverages Pvt Ltd Meghalaya-based company, h signed a MoU for setting up food processing unit in the S viet Union. The project will be joint venture with the Repub of Georgia. The project, e pected to go on stream mid-1991, will have a produ tion capacity of approximate 20 million packets of fruit-jui and jams per year.

The products will be sold f roubles on the Soviet mark and also for hard currency o the Soviet as well as third wor markets.

Escorts to make harvesters

Escorts Ltd has received pe mission under the MRTP Act fo floating a joint-venture com pany, Escorts Class Ltd, to ma ufacture self-propelled combin harvesters. The company ha tied up with Class OHG of Wes Germany for technical and fi nancial collaboration. The co laborators propose to take a 4 per cent stake in the compan They have also undertaken t buy back a specified quantity o the output.

The permission comes afte an eight-year long tussle durin which Escorts' entry was stiffl opposed by Punjab Tractor Ltd, the only manufacture of self-propelled combin harvesters in the organise sector.

T bags Malyasian tract

construction group of en & Toubro Ltd has ed a Rs.16.8 crore contract esign and construction of a bridge in Malaysia. The e will be located across the Limbarg in the state of wah. L&T has already con- cted two bridges in Mal- worth Rs.35.75 crore.

C plans more jects

n Oil Corporation is plan- to set up projects worth 000 crore in the next three . These include additional uct tankage at 53 locations cost of Rs.438 crore and tap-off terminals on the 4 km Kandla-Bhatinda line at Rs.138 crore.

Thirumalai Chem bags order

India's largest manufacturer of phthalic anhydride, Thirumalai Chemicals Pvt Ltd, has bagged an export order of $1 million to supply 1,500 tonnes of the chemical to China.

The company is however facing problems in execution as the buyers are insisting on shipment within three or four weeks of placing orders. The Indian company is unable to commit this because issue of advances under the duty-exemption scheme takes an unduly long time even if the applications are in order.

RPG's joint venture

RPG Enterprises has signed a joint-venture agreement with Benninger Company Ltd, a Swiss multinational, to manufacture weaving, preparatory and finishing machines. The 125-year-old Swiss company, a leading textile equipment manufacturer, will have an equity stake in the company.

The venture will provide service support to over 100 well-known textile clients in India.

IA to increase capacity

Indian Airlines plans to increase its capacity by 30 per cent and carry over 30,000 passengers per day by the end of this year. The airline also plans to have its entire Airbus A-320 fleet back in operation by December 1991.

J.K. Industries' dairy venture

J.K. Industries Ltd of the J.K. Singhania group of companies has received government clearance for a Rs.30-crore project; its first foray into dairy products. The plant, to be set up in Uttar Pradesh, will manufacture 10,000 tonnes per annum (tpa) of yoghurt, 18,000 tpa of flavoured milk, 1,800 tpa of malted and infant milk and 300 tpa of low-fat cheese.

INDUSTRY

Exports up

There has been a seven-fold increase in the exports of castings and forgings, from Rs.14 crore in 1985-86 to Rs.97 crore in 1989-90. This amounts to an annual growth rate of 60 per cent. The world growth rate for the casting and forgings industry was 28 per cent during the five-year period ended 1988.

Prices to be checked

The government is considering the possibility of imposing curbs on sponge iron manufacturers, in a bid to curtail the arbitrary increase in sponge iron prices. The government will also be meeting sponge iron producers to discuss this issue. The price of sponge iron was hiked several times recently, even though cost of production did not increase significantly.

Freshwater fish farming

An intensive freshwater fish breeding programme supported by the department of biotechnology is expected to increase Indian production of fish. Farmers will be offered a technology package for the production of 25 tonnes of fish per year, per hectare of freshwater. This would mean a 50-fold increase over current yield, which is around 500 kgs per year.

Shortage of copper

The virtual halt in the import of copper by Hindustan Copper Ltd and MMTC has affected industries using copper as a raw

Over the past two years, KVB has been associated with the public issues of several leading companies, as Managers, Co-Managers, Underwriters and Bankers. The reasons are obvious: KVB's evident competence, commitment to the job on hand and above all, the personalised service that KVB is known for. And KVB's reputation among investors and merchant banking establishments particularly SBI Capital Markets, Canfina and PNB Financial Services, speaks for itself.

In the years to come, KVB is all set to further consolidate its position as merchant bankers.

Cut in sugar exports?

As a result of low sugar prices in world markets, India may not export 500,000 tonnes of sugar as previously planned. Export commitments have already been made only for 150,000 tonnes.

The world price of sugar is currently around $265 per tonne as against $300 last month. Sugar production for the year 1990-1991 (October-September), meanwhile, is expected to be a record 11.50 million tonnes.

Drug prices may rise

The Joint Council of Pharmaceutical Trade and Industry has warned the ministry of chemicals and petroleum that it might have to unilaterally raise drug prices. This was conveyed in a telegram to the ministry,

stating also that the cost of inputs has gone up. At present, the consumer pays 40 paise of tax for every rupee spent on drugs.

New caustic soda units

Seven caustic soda units which were earlier given licenses, are likely to go on stream since financial institutions are now in favour of the idea. The reason for this is two-fold. One, demand for chlorine, a by-product of caustic soda is expected to rise when the proposed PVC plants of IPCL, Finolex, Reliance and DCM take off. Two, there is a shortage of capacity as eight out of the 40 existing plants are out of operation. There is also a potential for export of caustic soda to South-east Asian countries.

LABOUR

SBI strike deferred

The proposed one-day token strike by the All India State Bank Officers' Federation on 10 May was deferred. The decision was taken following an assurance by the chairman of SBI to implement the agreement. The strike call was given by the federation to implement the agreement on promotion policy and categorisation of difficult centres.

Transport workers agitate

Talks between the agitating Bus Transport Workers Union's representatives in Tamil Nadu and a high level team of state government officials failed to end a two-day strike the union had called. The government refused to yield to the workers' demand for suspension of the police officers responsible for ordering the firing on transport workers at Vellore on 6 May 1991.

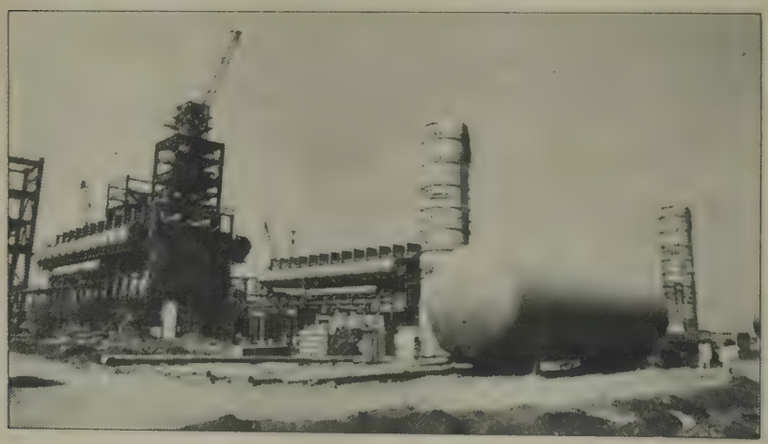
Leaders of the Transport Workers Unions say that the officials, led by Tamil Nadu chief secretary T.V. Antony, made it clear to them that the government was not prepared to take any action as a judicial enquiry had already been ordered into the incidents.

Wage hike for tannery workers

About 50,000 workers employed in the tanneries in Tamil Nadu will receive wage hike of Rs.270 per month. Five major unions, CITU, AITU, INTUC the LPF of DMK and the ATP of

AIADMK have dropped their plans to go on strike from 16 May. The tripartite agreement has brought a hike of Rs.5.27 per day in the basic wage. Dearness allowance is to be paid at the rate of 13.50 paise per day for every five point increase in the cost of living index above 2.75 points.

One-day strike



Workers of Trichem Ltd at Ambarnath near Bombay staged a unique protest by shedding their clothes and walking in a procession in their underwear. They resorted to this form of protest in support of their demand for wage revision and other issues.

Violence at RPL plant

A group of agitating workers indulged in heavy brickbatting at the Reliance Petrochemical Ltd (RPL) plant at Hazira. The trouble started over a tiff between a worker and a security guard. The worker was detained in the security staff quarters and interrogated following his inability to produce his identity card.

Lock-out lifted

The management of the Madras-based sugar company, KCP Ltd, which employs about 530 workers, has finally lifted the six-month-old lock-out in its engineering division in Madras. This follows an order passed by the Tamil Nadu government directing the management to resume operations. The company declared a lock-out on 30 October last year in the wake of a strike declared by the employees. The main issue was over the offer of lower bonus for last year in comparison with the previous year.

Strike threat

Employees of Rallis India are preparing for a court battle to prevent the sale of the engineering division to the Calcutta-based HMP Group. According to a company spokesperson, the sale of the loss-making engineering division is an attempt by the management to pull the company out of the slough of faulty policies of management.

Rasta roko by texti workers

Workers from closed te mills and retrenched wo from other industrial uni Bombay staged a *rasta* and blocked traffic for

the last few years. According to Madan Phadnis, leader of the Rallis Group Employees Union, the employees fear large scale retrenchment and a cut in their salaries. He says that although there may be several reasons for the sale, the employees are being made scapegoats for the

30 minutes between VT Mantralaya on 10 May. agitation was led by the Ba Girni Kamgar Sanghrsha, Woollen Kamgar Sanghat and the Silk Workers' Union demand that the governm should resolve their pend problems.

LANDMARKS

Awarded, to the Indian Petrochemical Corporation Ltd (IPCL), the national safety award by the National Safety Council, US, for 4.43 million manhours of accident-free operation at the company's Baroda plant. This is the eighth time that it has bagged this award. Incidentally, IPCL's upcoming plant at Nagothane, outside Bombay, suffered a major disaster in November last year in which 20 people were killed.

Awarded, the 1990 'B.D. Goenka Awards for Excellence in Journalism' to Nikhil Chakravartty, editor, *Mainstream*, and Harindra Dave, editor, *Janmabhoomi & Pravasi*. The awards, consisting of Rs.1 lakh and the citation, were presented in Bombay by former vice-president M. Hidayatullah.

Launched, Mars, India's first indegenously built multi-purpose research vessel for geophysical, metallurgical and military-related use. The 84-metre-long ship was built by the Garden Reach Shipyard near Calcutta at a cost of Rs.65 crore and will be under the charge of the Naval Physical Oceanographic Laboratory.

Nominated, Manu Shroff, former editor of *The Economic Times* and currently advisor, Unit Trust of India, N.K. Shinkar, ex-chairman, Life Insurance Corporation of India, and Suresh A. Shroff of Amarchand & Mangaldas Shroff & Co. to the board of Bombay Stock Exchange as representatives of the public.

Died, K.M. Kannampilly, 79, former Indian Ambassador to Indonesia and Denmark, on 13 May. A former chairman of the Kerala Kalamandalam, he was a close associate of Netaji Subhash Chandra Bose and a participant in the then Indian National Army. He leaves behind his wife, four sons and a daughter.

IT WAS MY ENTIRE WORLD,

J. RAO

He was the man who revolutionised the consumer banking business in the country. Now Jaithirth "Jerry" Rao is all set to test his skills in foreign waters.

Citibank's vice-president and chief executive officer of its Indian operations is taking up the additional responsibility of supervising the bank's growing consumer banking operations in the Gulf. Citibank, which has been operating in the Gulf since 1964, has seven branches in United Arab Emirates, Bahrain and Oman. Rao, who has worked previously with Citibank, Saudi Arabia, set up the consumer services group of Citibank in India in 1985. This is the first time that a Citibank executive from India is looking after the bank's Gulf operations. For Rao, it's yet another milestone in a successful career

MADHUR MURARKA

Last fortnight, when 20th Century Finance Corporation (TCFC) — the country's foremost leasing company — joined hands with the reputed brokerage firm Batlivala and Karani

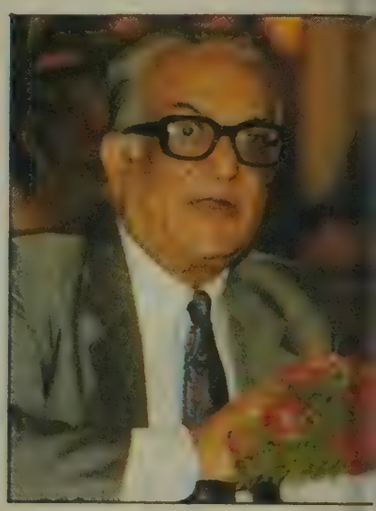
(B & K) to form a new venture, Finesse Capital Services Pvt Ltd, it opened for the corporate sector one more window for meeting its funds management need. The new company will provide non-fund based services ranging from bill discounting to asset, portfolio and treasury management, as well as forex and project advisory services.

The new company will gain its marketing strength from the large corporate client base of TCFC while B & K's expertise in money and capital markets will give it the skill to deal in issue and portfolio management. Beginning with a capital base of Rs. 50 lakh, Finesse also takes over the Delhi-based one-year-old B. K. Financial Services Pvt. Ltd as its subsidiary. Says Madhur Murarka, chief executive of the new company, "Diversification is the word of the past at least for the financial services sector which is looking at consolidating its strengths."

M. N. GOIPORIA

He had a lot to boast about. M. N. Goiporia, the chairman of SBI Capital Markets Limited,

exuberantly announced his company's latest results last fortnight. SBI Caps ended the year by being the lead manager in 128 out of 264 issues and mobilised 77 per cent of the total amount raised through the capital markets. The balance sheet is glowing with a 72 per cent rise in the gross income and a 39 per cent rise in net profit. All of which allowed the company to declare a 20 per cent dividend on an enhanced equity of Rs.50 crore. The fact that SBI Caps had the largest number of complaints against it did not bother Goiporia. Said he, "Having managed the largest number of issues, it is natural that SBI Caps also has the largest number of complaints. Only the person who works comes in for criticism."



R.J. RATHI

Pune-based Sudarshan Chemicals Ltd is diversifying into environmental engineering and pollution control, tying up with Radian Corporation, Texas, US, a world leader in environmental technology. Sudarshan will provide the technical knowhow to Indian companies, while the execution of the projects will be sub-contracted. "This is the fastest growing industry in the US," says R.J. Rathi, chairman of Sudarshan Chemicals. "And in India, large companies have become very pollution-conscious after the Bhopal disaster." If all goes well, in three years' time the new line of business should add Rs. 50 crore to the turnover of the Indian company.

M.B. AJWANI

Public sector giant Bharat Earth Movers Ltd (BEML) is going in for new products: walking draglines (mining equipment for cutting across wa

faces), fire tenders, and a support vehicle for the 'Trishul' missile. "We have also completed all the necessary paperwork for manufacturing the Bofors gun at our Mysore works," says chairman and managing director M.B. Ajwani. BEML has received order for a walking dragline from the Singareni Collieries. And the fire tenders are meant for the Indian Air Force.

During 1990-91, BEML recorded a turnover of Rs.750 crore, an increase of Rs.45 crore over the previous year. Pre-tax profit and net profit stood at Rs.67 crore and Rs.44 crore, respectively.

DWARKESH SHAH

"Non-resident Indians have invested more than Rs. 15,000 crore in India and have helped reduce the country's debt by 25 per cent. But the Indian government does not think this is substantial. NRIs' service to India is not taken into consideration."

fumed Dwarkesh Shah, sec-
tary general of the Union of
ople of Indian Origin in Ger-
any, an offshoot of the Global
rganisation of People of
dian Origin (GOPIO). To
ghlight this and other prob-
ms, the GOPIO is organising a
ıropean Regional Convention
RC) in Stuttgart this month.
NRI businessman with con-
olling interests in three com-
panies in India and three in Germany, Shah identifies himself with the problems faced by fellow NRIs but is not one-sided in his views. "The development of the country is equally important," says Shah who is also a member of the NRI Consultative Committee, attached to the ministry of finance, New Delhi.

H. STUART JOHNSON

Incorporated Engineering Ltd (IEL), an associate company of KTG (India), has been executing turnkey projects for setting up glass plants in India. H. Stuart Johnson, overseas group chairman of KTG, UK, who was recently in India, said, "In all our projects, there has been energy conservation ranging from 30 to 80 per cent, considerable advancement in glass quality, pollution control and production processes." According to the chairman, several Indian plant owners are in contact with

KTG while charting out their future plans. KTG has now ventured into other areas like cement and steel reheating furnaces.

Ramesh Vangal, managing
irector of Pepsi Foods Pvt Ltd,
e Indian subsidiary, revealed
at the company had reached
turnover of Rs. 14.08 crore
is year. Exports seems to be
e catchword at the Punjab-based company — 64 per cent of the turnover came from this area. But what about the future, especialy in view of Coca Cola's proposed entry into the country? Sinclair had the last quote: "We don't like to compete with Coke anywhere but competition is good for the consumers."

VALERIY PYATOV

Soviet plasma physicist-turned trader Valeriy Pyatov, heads the association of Soviet "department stores" which are the primary outlets for consumer goods. He was in Calcutta last fortnight looking for exporters

to do business with. State factories in the USSR now despatch goods to the highest bidder. Pyatov's association, along with others, has begun to band together to form cartels to take care of all their purchases. "The Soviet commercial world is for the first time coming to grips with things like depreciation, factoring, bills discounting and a host of other accounting concepts which oil the wheels of a profit-oriented market economy," said Pyatov.

DAVE SANBORN

The US-based Sea-Land Service Inc is beginning container operations from Paradip port in Orissa. The company will initially run a monthly feeder service between Paradip and Colombo. Says Dave Sanborn, general manager, Middle East/ Subcontinent, "We aim to be number one in containerised shipping soon and will expand both

in terms of markets and ports." Based in Dubai, Sanborn has been with Sea-Land for 18 years. A division of CXS Corporation, US, Sea-Land is already operating from six Indian ports. Paradip has been chosen for its potential for growth as it has a healthy cargo traffic but no container service so far.

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance, Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

Aurelec: Quietly building the best.

OOM EXPORTS

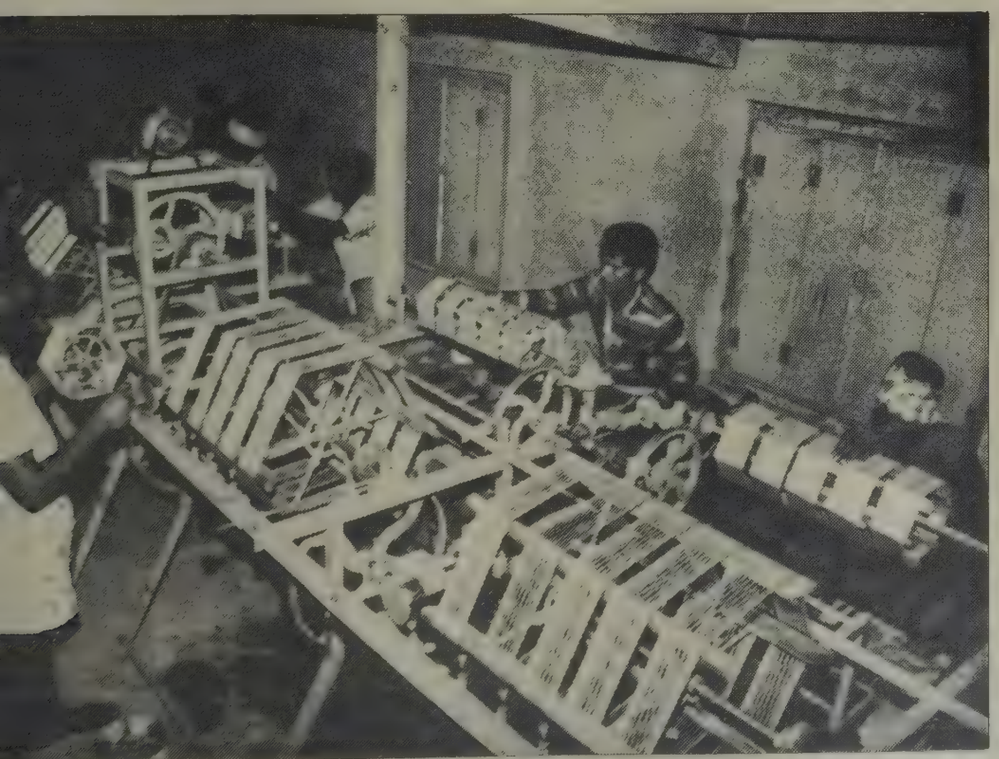
dernisation project on

xports of handlooms continue to r an impressive growth. The value ndloom goods exported during 91 amounted to Rs. 841.15 crore t Rs.807.66 crore in 1989-90, the handloom exports (Rs.407.29 doing particularly well. According vindan Nair, secretary, Handloom t Promotion Council (HEPC), silk oom exports have been disappoint- erhaps due to the Gulf war.

as imposed. Among cotton hand- products, made-up items (floor cov- s, bed linen, etc) accounted for 4.63 crore, an increase of 24 per cent the previous year. There were en- ging signals from cotton handloom s too — a 10 per cent increase in rts over the previous year. After years, the declining trend seems to been halted. The demand for the tra- nal fabrics like lungies and hand- iefs seems to be reviving.

other heartening sign is that the ex- to Western Europe has increased by r cent. But exports to the US, the st market, was not as impressive. n January last year, the US imposed as for handloom made-ups except ries," explains Nair.

e council has taken positive steps to ove and increase the exports of cot- oods further. Its action plan for the period 1991-95 is ready. The government has taken the HEPC recommendations seriously and has decided to implement a scheme to upgrade handloom quality and also develop new products and designs, for export. The modernisation project is to be executed through the combined efforts of weavers' service centres, Institute of Handloom Technology, and state directorates of handloom. HEPC will coordinate.



The project involves a detailed study of the equipment, techniques and processes employed in major handloom production centres. Product-wise studies are also to be conducted to select suitable measures to improve the quality and marketability of these products. The council proposes to help develop certain powerloom items as high value goods by highlighting their individuality and uniqueness.

With cotton handloom exporters dealing in the same things for the past 20 years, weavers had no motivation to try anything new. Now, under HEPC's new scheme, they stand to make extra earnings.

Technical study. The modernisation project has begun with a technical study of the handloom industry of Karur and Madurai in Tamil Nadu. In the initial phase, furnishing material from Karur and turkish towels from Madurai have been taken for upgradation. "It is possible to make some modifications in the looms to ensure productivity and quality improvements. The weaver also will be able to earn 50 per cent more," says Nair.

Training sessions and workshops, conducted in Karur and Madurai, have received encouraging responses from weavers and exporters. "We propose to initially select 100 looms for modernisation and upgradation in these centres," says Nair. Hopefully, the demonstration effect of these improved looms will encourage other weavers in these centres to go in for similar improvements.

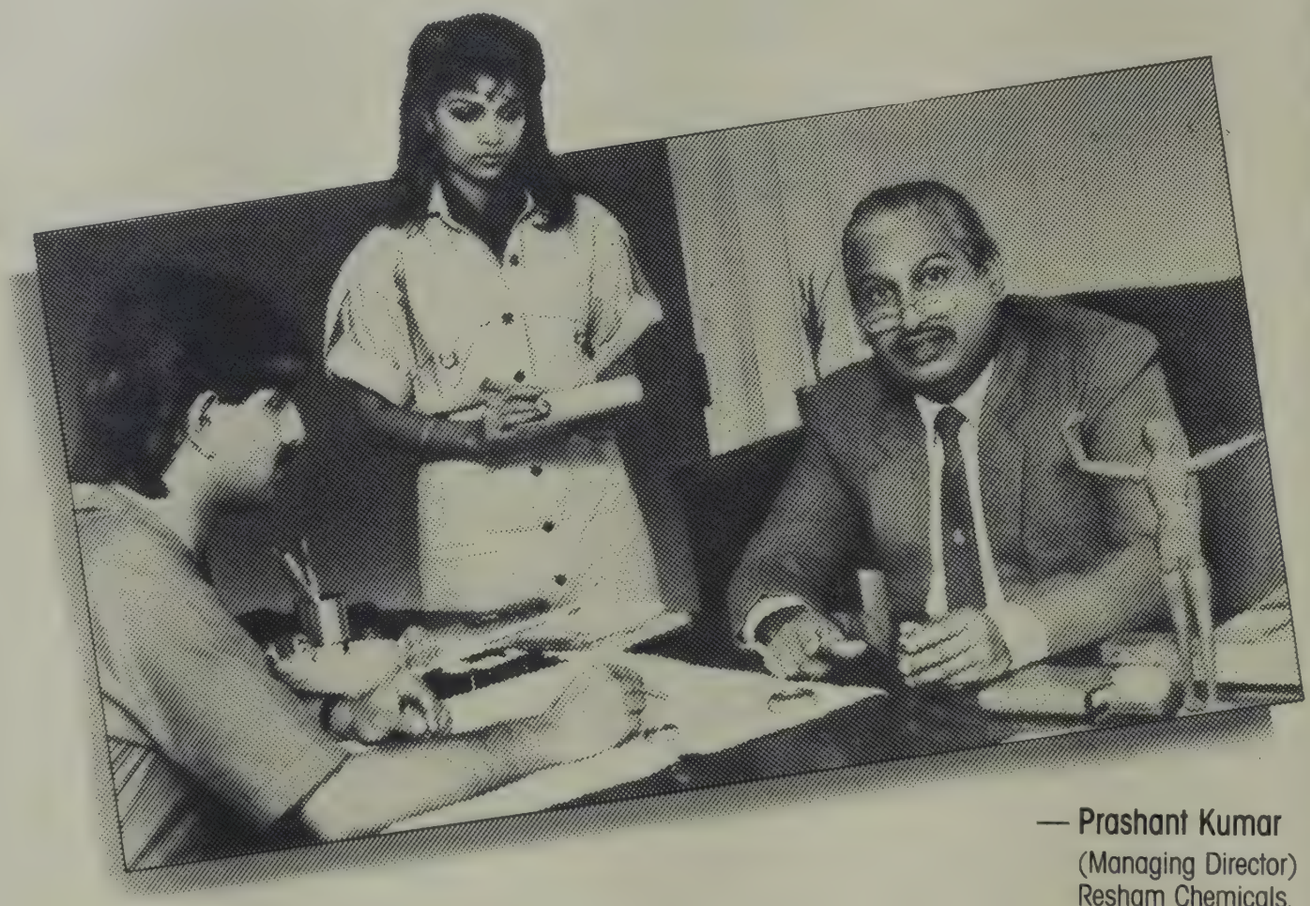
looms: a serious effort

TOILET SOAPS



Always room for more

New toilet soaps are being launched each year. And existing capacities are stepped up. A recent study conducted by the Operation Research Group (ORG) shows that brand population in this industry has gone up significantly between 1985 to 1990. While in the premium soaps segment it went up from 57 to 80, in the popular soaps segment it increased from 33 to 51.

Consider the last few months. New brands of soaps launched were innumerable — Nirma Bath, Grace, Limelight, Shield, Baby Soft, Wipro Shikakai, Ralak, Javan and many more. There were also a series of relaunches — Lux, Cinthol, Lyril, Palmolive and Moti.

Successful brands. "Spin-offs usually work better in the premium soaps market," says Nadir Godrej, managing director, Godrej Soaps. After being relaunched in two new categories, Cinthol's share which had dropped in 1988-89 rose by 17 per cent in 1990. Similarly Lux International and Palmolive's share went up after a relaunch. "The most successful brand in recent times is Palmolive — a perfect case of an old brand new brand situation," says Godrej.

On the other hand, many of the new launches have not done that well. Brands like Grace, Ralak and Javan have failed to entice buyers in spite of being heavily promoted. "But market shares are usually low during the launch period," says Ravi Menon, general manager (marketing), Wipro. "The launch period could take anything from one to one-and-a-half

— Prashant Kumar
(Managing Director)
Resham Chemicals.

"Automatic bearing lubrication device* ??? It's a miracle! Just attach it to bearing housing and forget it."

Mr. Kumar often observed that Resham's maintenance personnel spent considerable time greasing or oiling bearings in the machines, to maintain proper lubrication levels. Despite this vigil, often, bearings ran dry, machines stopped and production was affected.

Luckily one day, an SKF Service Engineer suggested 'Lubesite'. A new product concept. An attachment to bearing housing from which the correct quantity of grease/oil automatically trickles down into bearing as and when relubrication is required.

And that signalled 'goodbye' to outdated methods of bearing lubrication!.

Skefko India Bearing Co. Ltd.
Mahatma Gandhi Memorial Building, Netaji Subhash Road, Bombay-400.002. Phone-313567.

* Manufactured by M/s Shilchar Electronics Pvt. Ltd., Baroda, under the brandname 'LUBESITE'

ASE FEEDERS & OILERS FOR OMATIC BEARING LUBRICATION.

- Convenient automatic lubrication device attached to bearing housing.
- Systematic approach to single point lubrication.
- Prevents under or overlubrication by having a controlled feed.
- Proper lubrication thereby minimizing breakdowns and manhours spent.
- Wide range depending upon application (11 Grease feeders, 10 Oilers, 1 Refill kit).
- Safe-n-easy method.
- Economises grease consumption.

Yes! I am interested in **Automatic Bearing Lubrication Device.**

years." What then, attracts new comers to this field where mortality rate is high and gestation period long? The lure of a large market (350,000 tpa strong), growing at rate of 12.2 per cent every year in the rural areas and of 1.6 per cent in the urban markets.

Rarely are products withdrawn completely from the market. And when they are, it is only temporarily — to be restructured, rechristened and relaunched in another market at another time. At Tata Oil Mills Company (Tomco), soaps that do not go down too well with consumers are revamped to suit consumer preferences and relaunched. Market research plays a vital role here. In the case of OK, Tomco discovered that red was the colour most suitable to the popular soaps segment as people were already familiar with Lifebuoy's red colour. "We decided to move from the familiar to the new. The red coloured OK gave way to the pink as people started identifying pink with an improvement in status," says P.B. Bharda, vice-president (marketing), Tomco.

Heavy advertising expenditure is also involved in launching a new soap — another area where large companies score. A company like Hindustan Lever (HLL), for instance, spends between Rs.12 to Rs.14 crore in advertising, a figure that fazes new companies. "If this is the kind of advertising expenditure that one has to incur, it is doubtful if we will ever be able to compete," bemoans N. Krishnan, marketing manager of Wallace Pharmaceuticals which is contemplating launching Fa soap in the Indian market. The cost of a launch is also no laughing matter. Says Ernest Fernandes, general manager (marketing), Tomco, "A national launch can cost up to Rs.1.5 crore. And even after the launch period it costs about Rs.1.2 crore to sustain sales."

Higher expenditure. Marketing also involves mega bucks especially in the rural areas. This is because population density in rural areas is less than that in urban areas, "You have to cover a larger area to reach a substantial number of people and therefore rural marketing involves a higher expenditure," explains Wipro's Menon. Yet the rural market cannot be ignored. For, about 14 per cent of the total soap production is snapped up in the rural areas. And this figure is increasing every year. Also, contrary to popular belief, the rural market is no longer the cheaper segment. Consumer spending in rural areas is almost on a par with that in urban areas and the gap is narrowing.

"Most of the people living in rural areas have non-taxable income. Naturally, their disposable income is also higher. With advertising and media coverage their aspirations have increased and they want better quality products. Premium soaps is no longer only an urban product. There's an equal demand for it in the rural markets," says Alan Rego, senior communications manager, HLL.

With demand increasing in both rural and urban areas, companies are stepping up capacities to either increase their volumes within existing brands or are launching new soaps. Godrej and Tomco are planning new launches in the next couple of months while Lever is stepping up production of existing brands. Lever has taken over manufacturing units on lease to augment its own production facilities. For instance, after Piyu launched by the Rajkot-based Sunrise Soaps and Chemicals' failed and the unit shut down, Lever took it over and put it back into operation. Others are also leasing out idle capacities to other brand owners.

Simultaneously, in order to meet raw material shortages, companies are integrating backwards. Godrej has set up an alpha olefin sulphonate (AOS) manufacturing unit while Nirma has just received government sanction for the same. Meanwhile, Tomco has tied up with SICOM to manufacture fatty acids, soaps and a whole range of toiletries at Tata Vashisti Detergents Ltd in Chiplun, Maharashtra.

The trend shows no sign of abating. Popular or premium, brands of toilet soaps appear in the market at regular intervals. Some linger on the scene, while others sink without a trace.

■ SHANKARI CHAKRAVARTY

DENIM FABRICS

Boom in the offing

Here's some good news for yuppies: they will get to wear more jeans, now that the financial institutions (FIs) has decided to finance more projects to manufacture denim fabrics. This follows a recent market study done by the FIs, which shows that the demand for denim fabric in the domestic market is increasing by 15 to 20 per cent per annum (pa). According to the study, there is scope for setting up additional capacities totalling 40 million metres pa (this includes capacity for exports).

At present, the market for denim in India is 18 million metres which is e pected to go up to 36 million metres 1995. But with the existing capacity t supply will be only 19 million metres leaving an uncovered gap of 17 milli metres pa. It is to meet this gap that t FIs are considering supporting projec with fresh capacities.

The present domestic demand of million metres is met by Arvind Mills (million metres), Soma Textiles (5 milli metres) and Amtex (1 million metres However, a part of the production is bei exported and the shortfall of 5 milli metres is met by imports.

Even as the FIs are deciding to finan more denim plants, existing manufa turers are also gearing up to enhan their capacities. Arvind Mills acquire Nagri Mills some time back and now i total capacity has increased to 20 milli metres pa. Soma and Amtex are also ra sing their capacities to 7 and 2.5 milli metres pa, respectively.

New projects. Some new projects ar also coming up. Modern Suitings Lt (MSL) has just set up a 100 per cent EO with a capacity of 7.2 million metres p Another unit, with a capacity of 8.8 mi lion metres pa, is being proposed b Ganesh Synthetics Ltd (GSL).

According to the study, there is scop

Mills are increasing capacities

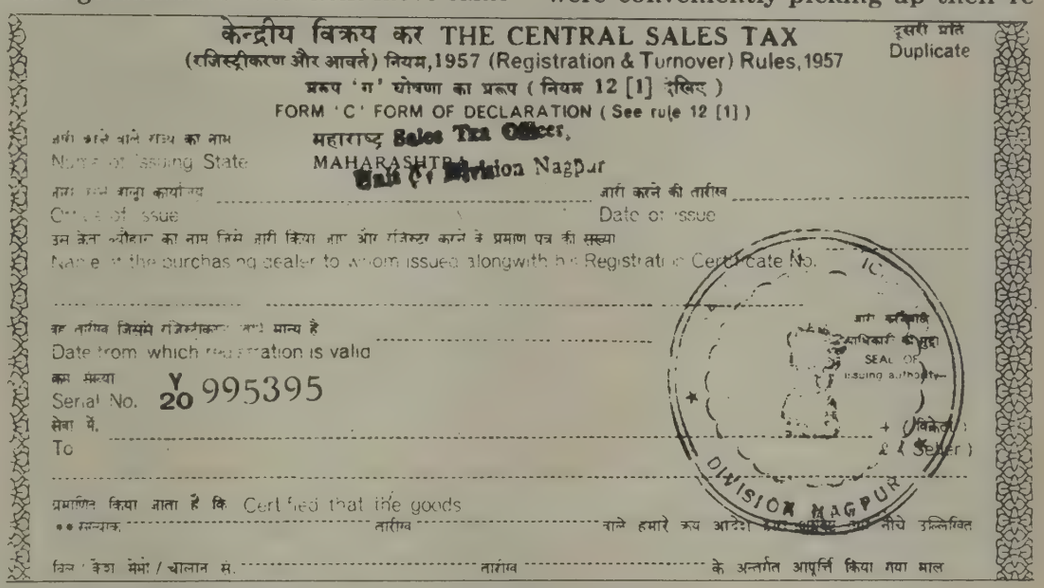
nother 26 million metres capacity to
t up. Perhaps a few more who are in
ne will be lucky to get licences.
anwhile, the institutions have de-
l to follow certain specific criteria
financing the new denim projects.
of the main conditions is that each
unit should be integrated, ie, it
ld comprise spinning, weaving and
essing facilities. Its minimum eco-
ic capacity should also be around 8
on metres pa.
s will also insist that the new
hines to be installed should be capa-
f producing high quality denim. Mar-
g tie-up arrangements up to 50 per
of the annual production would also
sisted upon.
ith a worldwide shortage in denim,
h is not only widely used for jeans but
for school bags and memo pads, the
are thinking in terms of Indian manu-
urers capturing part of the interna-
al market. Worldwide demand for
m grew from 1,900 million metres pa
988 to 2,100 million metres in 1990.
is expected to rise to 2,700 million
res by 1995.
hanks to cheap labour in Asian coun-
s, the industry is gradually getting re-
ted in such areas. The FIs obviously
that India can take advantage of this
nomenon and expect Indian manu-
urers to grab at least 2 per cent of the
ld market (50 million metres).
o, more competition is in the offing for
anglers, Flying Machine, FUs and other
ular brands. And more smiles from
yuppies.

REENA PATNAIK RAO

ASPATI

asy pickings

aspati manufacturers in Mahara-
ra, faced with a growing threat from
nufacturers in Gujarat — who are al-
dly evading sales tax duties — have
ched a situation of near despair. Com-
ies like Wipro, Maharashtra Vegeta-
s, Ahmed Oil Mills and IVP have
erienced a 30 to 35 per cent drop in
duction levels and a 50 per cent drop
ales in the past two years. Low pricing
Gujarat manufacturers, resulting from
r savings in sales tax, has been their
e.
ccording to figures available with the
aspati Manufacturers' Association of
ia, over the past four years, even as the total consumption of vanaspati in Maharashtra has remained steady at a little over 1 lakh tonnes per annum (tpa), the market share of the 11 factories based in Maharashtra has been halved. In 1987, the manufacturers from within the state sold 87,000 tonnes, in 1988 and 1989 around 70,000 tonnes and in 1990, the figure dropped to 68,000 tonnes. The ten manufacturers in Gujarat, on the other hand, who had a turnover of only 12,000 tonnes in 1987, sold 20,000 tonnes in 1990.



Sales tax reduced. The market situation turned in favour of the Gujarat manufacturers in 1988, when the sales tax in Gujarat was reduced from 4 per cent to 1.5 per cent at the behest of the Gujarat vanaspati manufacturers. This gave them a clear tax advantage compared to the manufacturers in Maharashtra who had to continue paying 8 per cent to their state government. Their next move came when they realised that the mode of despatching goods on a consignment basis to consignment agents in Maharashtra would serve them better if it were changed as, under law, the consignment agent is deemed to be the company. Under this system goods were despatched on credit, with no money coming to the manufacturers till the agent actually sold the goods. This meant that even if the consignment agent evaded the Maharashtra sales tax, the government would hold the company in Gujarat responsible if it detected the tax evasion.

The Gujarat manufacturers, therefore, decided to make outright sales to wholesale agents in Maharashtra. This ensures that after paying a nominal Central sales tax and making an outright sale, the liability for payment of local sales tax in Maharashtra rests solely with the agent. The new arrangement was perfect.

The current selling price of vanaspati is Rs.535 per tin (15 kg) plus taxes. With the consumption in Maharashtra now standing at 120,000 tonnes, and with the 8 per cent sales tax and the turnover tax, the total tax collection in the state from vanaspati sales should amount to Rs.37.8 crore. The actual collection, however, have been only Rs.20 crore. Unaccounted vanaspati from Gujarat is quite clearly responsible for the shortfall. In fact, the sales tax evasion gives the Gujarat manufacturers an unfair price advantage of Rs.40 on every tin.

In April the sales tax authorities in Maharashtra raided dealers in Nasik, where out of the 20,000 tins consumed, 17,000 allegedly come from Gujarat. But the raids proved to be futile since dealers were conveniently picking up their requirements from other locations. The other areas considered to be the favourites of the Gujarat manufacturers include Pune, Akola, Amravati, Malegaon, Sangli, Thane, Ulhasnagar and Kalyan. In Gujarat the annual consumption is only 40,000 tonnes whereas the production is 120,000 tonnes.

It is convenient for the Gujarat manufacturers to tap the Maharashtra market for a number of reasons. Maharashtra does not have a single sales tax check post. Blank C forms (used for Central sales tax declarations) to facilitate transactions are illegally available at Rs.500 each, and setting up bogus agencies, which can be disbanded every few months, is easy. In the possession of this correspondent is a xerox copy of a blank

Xerox of a blank C form issued to a furniture maker

C form which bears the stamp of the sales tax officer, unit C division, Nagpur. Investigations showed that the C form (bearing the serial number Y 20 995395) was issued to a furniture manufacturer by the Sales Tax Office in Bandra, Bombay.

Meanwhile, the Maharashtra manufacturers who have an annual production capacity of 276,000 tpa continue to be beleagured by the Gujarat manufacturers. If the situation persists, they may be compelled to seek markets in other states.

DEVENDRA TAK

MTNL DUCTING

Doing away with inconvenience

Bombayites, long used to dug-up roads and pavements, will now have one governmental agency less to blame: the Mahanagar Telephone Nigam Ltd (MTNL). An ambitious Rs.300-crore programme undertaken by the department promises to do away with the much-hated trenches which telephone crews gift to the city year after year. Now, instead of laying telephone cables under the ground and then digging up whenever there is a fault, MTNL has adopted the "ducting" route popular in all advanced countries.

Directly buried cables are vulnerable to damage caused by digging operations of the water, sewage and electricity departments as well as by MTNL itself. The sheaths covering the cables are often punctured as a result of the digging. Under the ducting programme, telephone lines are packed into 10 cm wide PVC or HDPE pipes. These "ducts" are then encased into concrete banks.

Once the lines have been laid in this manner, according to MTNL, there will not be any necessity to dig for at least another 30 years. Repairs, if any, can be carried out by pulling out the cable through special junction boxes provided along the duct route at suitable intervals. The ducts and their concrete covering will protect the cables from water seepage and the strike of a pickaxe. There are other advantages as well. Says Vinod Kumar, deputy general manager, MTNL: "Digging every now and then was not only inconvenient for the citizens, digging costs which were increasing every year were also turning out to be a big financial burden for us."

Manifold benefits. There are several other advantages of the ducting system. Some of them are:

- The life of the cable is increased as a result of reduced handling and better protection.
- Since this system eliminates unnecessary digging of roads, there is saving in material and manpower.
- Since the cables in the ducts do not have to be provided with sheaths, there is an immediate saving of 25 to 30 per cent in their cost.
- The cables can be laid at short notice.
- Expansion programmes can be carried

New ducts: no more digging

more economically.
he ducting programme was launched
986 immediately after the then Bom-
Telephones was converted into a cor-
ation and became MTNL, Bombay. But
gs started humming only in 1988. In
9-90, a total of 150 km of cables were
neshed in ducts, and 116 km in
0-91. Of the 100 km planned for
1-92, 11.08 km have been executed so
In all, the ducting programme has
ered 340 km. The final target: 1000
s. The deadline: 1995.
While mostly it is new lines that have
n taken up under this programme, in a
cases, existing lines have been trans-
red into the new ducts.

The telephone department, which has
en come under attack from the citize-
for a wide variety of reasons, will for
ce be showered with bouquets once the
cting programme is completed. Vinod
mar sums it up best when he says,
hile we cover up our trenches, we will
opening up an era of improved services
all concerned."

RAJU BIST

GB CIVIC WORKS

rivate sector nvolved

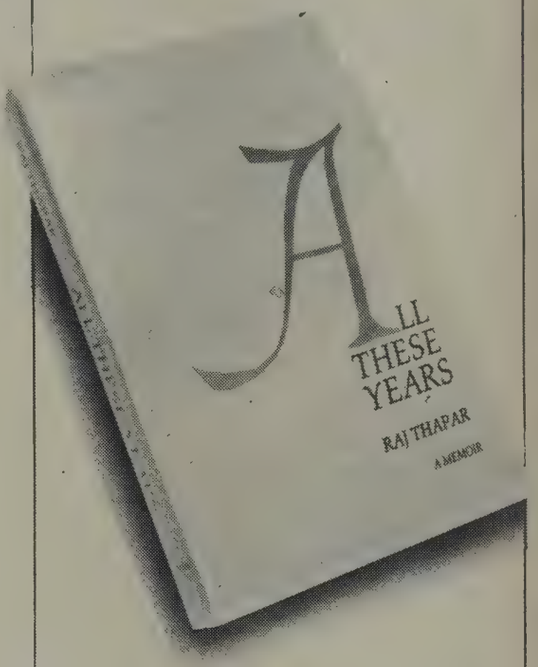
he Municipal Corporation of Greater
ombay's (MCGB) plans to privatise
me of the civic works are finally moving,
ough at a snail's pace. The Bombay-
ased Mittal Builders and ITC Ltd are
mong those who have responded fa-
urably to the corporation's proposal to
t private parties build flyovers at the
ty's main intersections. "This is part of
overall state government plan to in-
lve the private sector in infrastruc-
ral development in the state," says
Padmanabhaiah, the municipal
mmissioner.

In 1984, a high level committee was ap-
inted to look into ways through which
e ever-increasing traffic flow on Bom-
y roads could be regulated and smooth-
ed. And the committee had identified
3 areas where foot-overbridges could be
uilt for pedestrians and seven sites for
yovers. The Bombay urban transport
roject, prepared by the MCGB, submit-
d a report to the World Bank, asking for
loan of Rs.1,296.41 crore. Recently the
orld Bank responded favourably to the
ppeal. But the cash-strapped MCGB feels that if sponsors come forward to construct these projects, it would save the corporation from paying high interest rates. But MCGB was short of funds. And so the city-based Western India Automobile Association (WIAA) came up with a proposal to rope in private companies to construct these flyovers. Says Ram Gandhi, chief of the traffic committee of WIAA, "The industrial houses are ready, provided they receive full co-operation from the MCGB."

Depends on benefits. WIAA sent out feelers and ITC and Mittals were among the first to respond. Says Arun Mubayi, district manager, ITC, "The proposal is under consideration. As soon as it is approved, we will submit tenders." Mittal Builders is also interested in the project, but according to Badal Mittal, "It all depends on what benefits we receive." Similarly, M. Pherwani, chairman, Infrastructure Leasing and Financial Services Ltd (ILFS), points out that his company will be interested, provided it receives some sort of compensation.

There had been such proposals — to involve the private sector in the city's construction activities — in the past too. But no concrete plans were drawn up as to what benefits the companies would receive. How will they be allowed to collect revenue? In the form of toll, advertisement rights or users' charges? But MCGB regulations prohibit the collection of toll within city limits, and advertisement rights alone would not fetch adequate returns. "The advertisement revenue will be negligible compared to the construction cost," says Rajendra Jain, managing director, Aaren Advertising, a big name in outdoor hoarding business.

The corporation is aware of these shortcomings, says Padmanabhaiah. That's why the MCGB has decided that along with advertisement rights, these companies will be either given a suitable land in the vicinity of the project or allowed to develop a market or a bus station and sell them on a commercial basis.



Companies which take up the project will be required to complete them within a specified time frame. Important issues like how to raise finances, whether the benefits laid down by the corporation are feasible, etc are still to be worked out. Nevertheless, Padmanabhaiah is confident that the tenders will be in by October this year. On the speedy implementation of the projects will rest the chances of decongesting the Bombay thoroughfares. ■

JANAK®

PATIENT CARE EQUIPMENT

The right equipment makes the best hospital care better.

Our commitment to product development is continuous and steadfast. It has helped us equip hundreds of hospitals in India and some abroad. Our pioneering efforts have resulted in many new products such as the Hi-low I.C.U. beds, Emergency & Recovery Trolleys and Patient transfer system for the first time in India.

Based on a modern manufacturing plant incorporating state-of-the-art tubular and sheet metal fabrication facilities and backed by an experienced work-force of skilled and semi-skilled technicians led by a professional management team, we have been providing standardised equipment to the hospital industry for the past 40 years. Our total range of equipment is available in Epoxy Powder coated finish or wholly stainless steel as per buyer's choice.

World trade and India

The trade figures for India for 1990-91 show a deficit of Rs.10,643.53 crore, up 37.7 per cent over the previous year (Rs.7,730.41 crore). This is largely the result of the sharp increase in the prices of crude oil and petroleum products and the general slowdown in exports. Exports were valued at Rs.32,527.28 crore, up from Rs.27,681.47 crore in 1989-90, but far short of the targeted Rs.36,000 crore. In dollar terms, the performance is even more dismal.

It is in this context that the report by the GATT Secretariat on 'International Trade in 1990 and 1991 Prospects' gains significance. The devaluation of the dollar against major European currencies boosted the value of world merchandise trade by 13 per cent in 1990 to a record level of US $3.5 billion. But in volume terms world merchandise trade decelerated from seven per cent in 1989 to an estimated 5 per cent. The growth rate in world output also slowed, from 4 to 3 per cent.

Mixed trend

In exports, the growth in value last year was particularly evident in the developed countries, especially Western Europe, largely prompted by the dollar's devaluation. For developing countries, while growth in exports remained unchanged at 13 per cent, imports accelerated from 11.5 per cent to 15 per cent. Among the developing countries, the OPEC member countries registered sharp increases in export earnings largely because of the hike in oil prices. Export growth was higher than the world average for developing countries in Africa and Asia but below the world average in Latin America, largely because of the contraction in Brazil's exports.

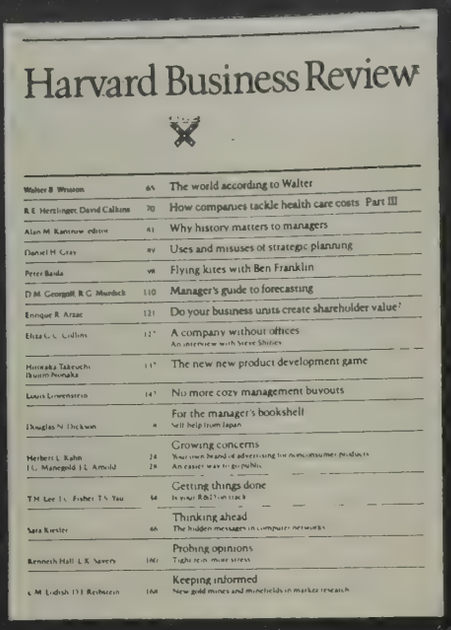
The countries of Central and Eastern Europe, in their effort to restructure their economies towards a market orientation, focused more on trade with convertible currencies rather than with the members of the Council for Mutual Economic Assistance. Therefore, in dollar terms, both imports and exports of these countries fell more in 1990 than in 1989.

The newly industrialised countries of Asia (Hong Kong, Singapore, Thailand and Malaysia) experienced export and import volume growth rates well above the world average. The exceptions were Taiwan and the Republic of Korea, who recorded export volume growth rates below the world average. Both these countries experienced very rapid export growth rates during the early eighties, but imports increased only slowly. Now exports are decelerating, while imports rise significantly (to satisfy consumer demand).

The German unification and the appreciation in value terms of the Deutschemark enabled Germany to elbow out the US as the world's leading merchandise exporter. Among the 25 leading exporters Austria recorded the highest growth rate in 1990 — up 28 per cent over 1989. This was mainly because of exports to Germany.

Given the above trade scenario what should India's response be? India's share in world exports is a dismal 0.5 per cent. The country may be the tenth largest industrial power but India's engineering exports as a percentage of world engineering exports was 0.26 per cent in 1970, which declined to 0.17 per cent in 1980 and is now around 0.07 per cent.

India's exports as a per cent of GDP are currently around seven per cent. This compares poorly with South Korea's 36 per cent, Malaysia's 60 per cent and China's 13 per cent. India could register a trade surplus, even if we set a modest goal of 10 per cent and keep imports pegged at 9 per cent of GDP. But exporting, thanks to the Japanese, has become an art. It begins with a thorough knowledge of customer needs abroad and then producing a product that matches both quality and price expectations.



In this connection, many Indian companies are moving towards getting an ISO9000 accreditation. This is good but not enough to make India a world class exporter, because standards can never be static in a dynamic world.

As regards the direction of trade it would be prudent to look east towards the more dynamic ASEAN countries which are, as the Report suggests, becoming large importers. Exporting is a hard and serious business and unless the government and industry together make a concerted effort India could well miss the bus again.

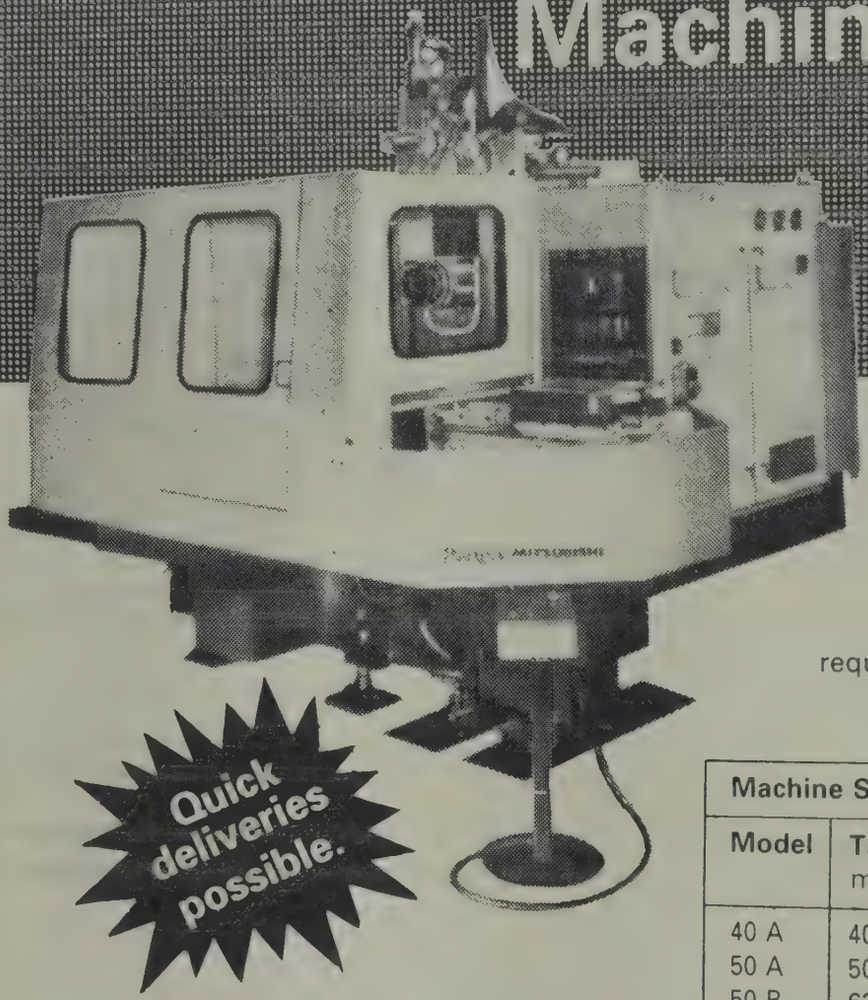
of gold is in rupees per 10 gm and silver in rupees per kg)



The Indian cable industry is one of the oldest industries in India. At first cables were used for house wiring. But over time this industry has grown and covers winding wires, AAAC/ACSR conductors, power cables and PVC, VIR and other cables and flexibles. However, amongst the different types of cables the greatest demand is for power cables. The volume of business of the order of Rs.2,000 crore per annum.

Production of the different types of cables has been growing steadily but slowly. In the power cables category demand is veering towards PVC and XLPE cables from the traditional PILC and rubber cables. Imports are restricted to only very high voltage cables. In the Power Cable category there are 24 companies having a combined capacity of 70,000 km which is nearly 90 per cent higher than current demand. Hence the urgent need to export. Presently the major export has been of PILC cables to the USSR. The Engineering Export Promotion Council has projected an export of Rs.100 crore for all categories of cables for 1990-91, against Rs.88 crore in the previous year. With the rapid growth in telecommunications and the power sector during the Eighth Plan the future for this industry looks good.

JAISONS/PT/11291

Liberalisation and liberalisation

Recently an avid reader of this column congratulated me on having predicted the failure of Perestroika. The felicitations were ill deserved: it required no great insight into the Russian economy to realise that their liberalisation programme was so superficial as to have no chance of success. However, predicting failure of government policies is very much easier than forecasting their success. In the former case you can always rely upon the wooden headedness of governments to make a mess of things. It is, therefore, with some hesitation that I predict the future success of Pakistan's economy after its recent liberalisation. Here at least some caution is justified, because other reports, like that in the *Business and Political Observer* of 20 May, warn that "Economic chaos stares Pak in the face".

Nawaz Sharif understands liberalisation in a way that no politician in India does. At a stroke their government has dismantled exchange control, abolished industrial licensing... released the energy of the people

Now I know less about Pakistan than I do about the USSR; I mainly go by the interview that the prime minister of that country gave to the magazine *India Today*. What emerges out of it is that Nawaz Sharif understands liberalisation in a way that no politician in India does. At a stroke their government has dismantled exchange control, made the Pakistani rupee virtually convertible, abolished industrial licensing, begun the process of denationalising the banks and put up for sale 40 of their public sector units with the intent of selling 115 within the year; they have even opened up infrastructural investments like roads and canals to the private sector. In a single phrase, they have released the energy of the Pakistani people.

The result so far seems to have been successful; their foreign exchange position has improved, the Pakistan rupee has been stable and moved upwards. There has been no flight of capital. On the contrary, money has come into Pakistan and made the Pakistani rupee pretty well convertible. These measures have worked precisely the way a liberalising economist would predict they would, but it is not just the immediate breakthrough that is so impressive. It is the confident and sure touch that the Pakistani prime minister displays which will transform the economy. He does not seem afraid of the consequences of his policy. He freely acknowledges that many of the public sector units are not viable and cannot be sold, but his answer to that is not to make vague promises of improving their performance. On the contrary, he says, "We will be only too happy to scrap them and give away their assets to the private sector." Not even Margaret Thatcher at her boldest had quite that courage and determination to take that type of political risk.

Deeply frustrated

Nawaz Sharif's resolution seems to come from the fact that as a successful businessman he was deeply frustrated by the licence permit raj that had prevailed in the past; yet, there must be something more to it than that. Businessmen normally prosper out of shortages and are only too happy to perpetuate a system that allows them to profit from it. Though Nawaz Sharif speaks the language of Adam Smith, his vision of Pakistan does not seem to be rooted in the economics of competition, but in the world of realpolitik. He recognises that the role of a mendicant supplicant is not one that can command any respect in the world. While India goes cap in hand to the IMF, Sharif prefers to rely upon turning black money, even drug money, to strengthen his industrial base. He recognises the value of independence.

Contrast this with our behaviour for we have only ourselves to blame for our current difficulties. We have been grossly misled by all those self-deluding people who claimed that we would have managed if there had not been a Gulf War; indeed, even in their own eyes they must now look pretty silly as the price of oil is collapsing and our economic crisis continuing. The truth, of course, is quite different, for as the governor of the Reserve Bank has said, the present crisis is the consequence of a failure of economic policy over the last ten or twelve years.

Getting over the hump

Venkitaramanan is hopeful that once we make the structural adjustments we will get over the hump. I do not share his optimism, for the longer the mess persists, the greater the need for massive adjustments. And I do not see these emerging nearly rapdily enough. Am I being unduly pessimistic? After all, every political party is now promising liberalisation. So surely we can achieve as much as Pakistan. Unfortunately there is a difference. Whatever our politicians may say, they really have no notion of how the process of freeing the economy works. At the first hint of a problem, they will run back to interventionism.

There seems to have been almost a conspiracy in the choice of our financial administrators. They are chosen either for their fiscal rectitude — like Morarji Desai — or for their socialist adventurism but never for their skills in liberating the economy

For years now, the most powerful man in this country has been not the prime minister but the finance minister; it is the finance ministry that is at the centre of our web of controls and no one there is a liberaliser. There seems to have been almost a conspiracy in the choice of our financial administrators. They are chosen either for their fiscal rectitude — like Morarji Desai — or for their socialist adventurism but never for their skills in liberating the economy. I therefore predict that nothing will really change. Perhaps to satisfy their class from the IMF and the World Bank we will have one more financially 'responsible' man who will increase taxes; the demand for liberalisation will be satisfied by broad-banding the import of ball-bearings. We will then get our IMF loan and continue to proceed steadily downhill all the way.

First break the rules.

Venture capital is "equity support, to fund new concepts that involve a high risk and, at the same time, have high growth and profit potential."

In the US, venture capital has propelled new ideas to major commercial successes. Some prominent examples: Apple, Lotus, DEC, Federal Express, Domino Pizza.

Venture capital in India

TDICI was the first to bring the concept of venture capital to India. TDICI's venture capital assistance comes in the form of equity and quasi-equity instruments, structured to suit your individual needs.

You retain the first option of buying back TDICI's shares.

A complete business relationship

TDICI takes into account the three most important aspects of a project. Originality. Feasibility. Growth.

To this, TDICI injects venture capital custom-designed for you.

It also places at your disposal other support services which you may require from time to time.

You will find that TDICI is a patient partner. Its involvement long-term and complete, without being demanding or interfering.

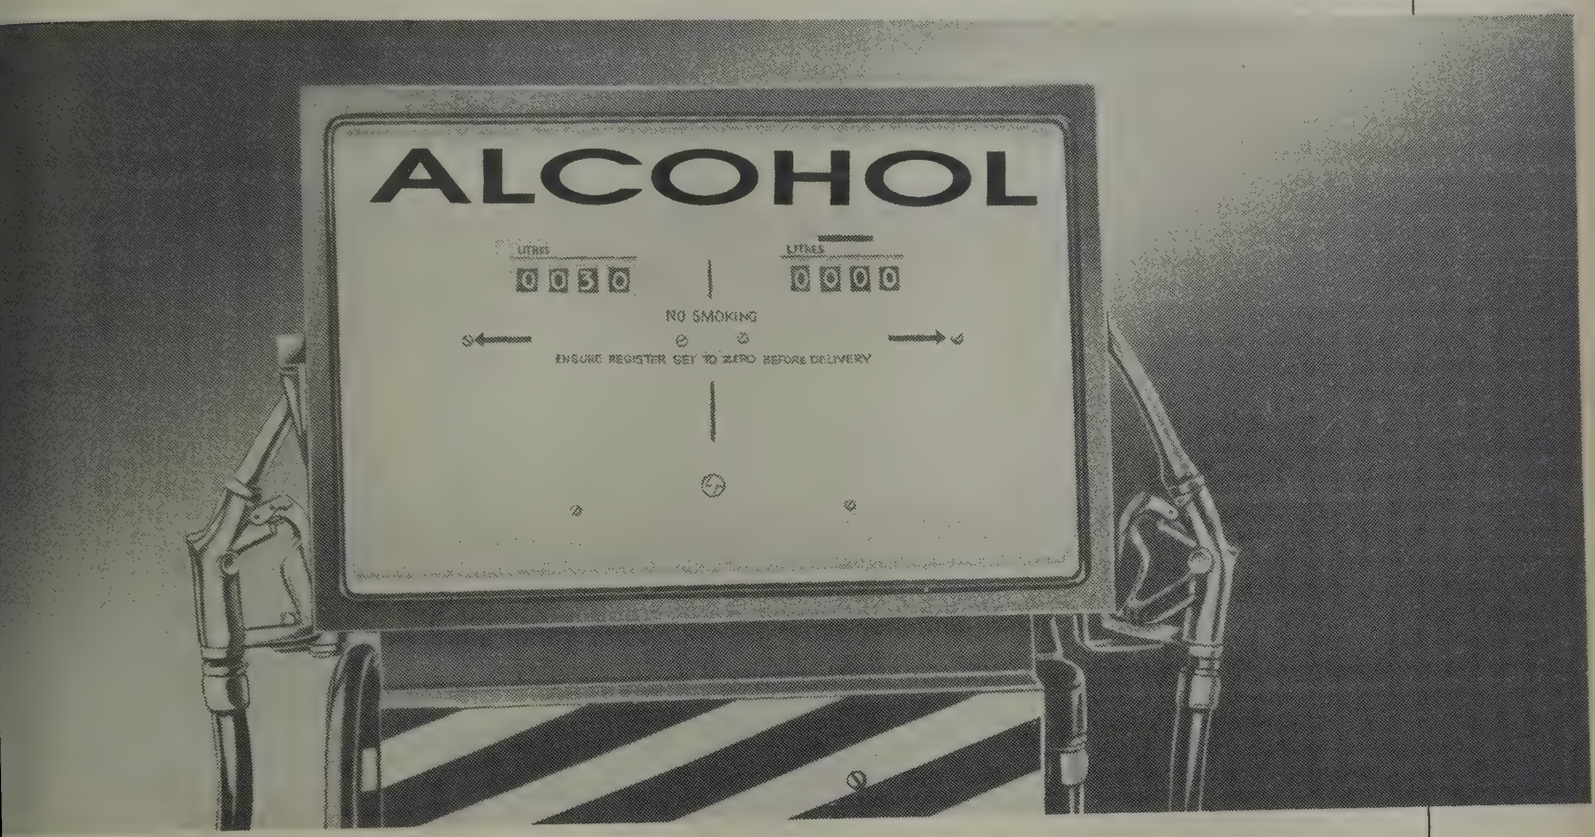
You deal with qualified professionals: people who empathize with you.

The big business idea

Almost all the companies assisted by TDICI have one of two things in common: a spectacular track record or a promising one.

If your project shows originality and growth potential, TDICI puts forward finance in the form of venture capital.

Take for example :



Anamak, the EOU that uses computer aided systems to manufacture garments.

Automac, the people who brought vending machines to India.

Unicorn Biotek, the hybrid seed producers.

Praj Counseltech, the specialists in fermentation

Then talk to TDICI.

and distillation systems.

Computer Garage, India's best known computer maintenance company.

Mastek, the software professionals.

Gum India, a leader in gum confectioneries.

All these people have broken an old rule of small business: don't tread the unknown.

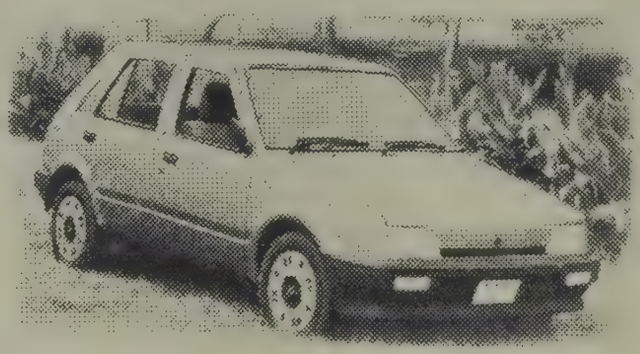
If you too believe that originality is the first step to success, and if you have a business plan, get in touch with TDICI in Bangalore or in Bombay.

You will be glad that you did.

BANGALORE: TDICI, 5th Floor, Leo Complex, 44 & 45 Residency (Cross) Road, Bangalore-560 025. Phone: 543681, 544471/2/3 Fax: (0812) 540741. Telex: 0845-2947 TDIC IN. Grams: TECHDICI.

BOMBAY: TDICI, 163, Backbay Reclamation, Bombay 400 020. Phone: 2022535. Fax: (022) 2046582. Telex: 011-83062/86410 ICIC IN. Grams: CREDCORP.

TDICI



TDICI. Big money for big ideas.

SIPANI DRIVES HOME A POINT WITH FRP

Leading automotive manufacturers have discovered the versatility and suitability of FRP (Fibreglass Reinforced Polyester) Composites to the tough Indian conditions. They have realised how FRP can help in better styling, reduce fuel consumption and increase the life of the product. In fact today, they use FRP to create parts which would have been difficult with material like steel.

Some unique qualities of FRP

- High strength to weight ratio
- Corrosion resistance
- Fuel savings
- Ease of repair
- Low capital investment

SIPANI - D1

FRP, the revolutionary answer for contemporary automotive designers and manufacturers. And making this happen is Ceat, the manufacturers of "Decca Fibre" glass fibre reinforcements.

BI's RESTRICTIVE MEASURES

Mood of uncertainty

Stringent measures adopted by RBI to curb inflation and improve the forex reserves have had an adverse effect on industry, which had no choice but to bear it. It is not yet clear how long these measures will continue

The war in the Gulf coincided with another kind of war for the Reserve Bank of India. The petroleum price hike and its cascading effect on the prices of other essential goods and the resultant drain on the country's foreign exchange reserves forced it to take up arms against both. Corrective measures were taken step by step. And yet, success eluded the RBI on both fronts — forex crisis as well as inflation.

At the same time, the impact of the measures adopted by the RBI became unbearable for the industry. Not so much because they called for 'sacrifice' from the industry as for the confusion they created. One day, the RBI imposed a 50 per cent cash margin on all imports; a few days later it relaxed the stipulations for EOUs, FTZs and general currency areas. In the next few days the RBI issued yet another control banning sale of free foreign exchange for import of capital goods along with 133.33 per cent cash margins on imports under OGL. Says a senior official of commerce ministry, "Cash margins are a price mechanism and ban of forex sale is a physical control to check imports. And both hurt exports badly."

True, the precariousness of the balance of payments condition is well-known. But what the trade and commerce would like to know is how precarious is the situation? What is the level of forex reserves the RBI is aiming at through these measures? How temporary are these measures?

Motive not clear

Clearly, the RBI motives behind these measures are not made clear to the public. The commerce ministry officials feel that if making industry seek a prior approval of RBI is to introduce a system of privatisation, the RBI is not geared to handle it. The only other motive seems to be to cause a delay. The country also has Rs.5,000 crore worth of gold reserves. Why isn't the RBI using it in times of need? Its demand for a 200 per cent cash margin made imports impossible for most industries; also, its pressure on banks to contain credit expansion drained away liquidity from the financial system within no time.

Pharmaceuticals: facing raw material shortage

The freeze on working capital limits at peak utilisation during the past three years appears complex at the operating level. First, there are too many exemptions and then arriving at the actual limit after ascertaining three years' limits is too elaborate. Says a general manager in a medium size nationalised bank, "The RBI does not understand the problems at the implementation stage. I wish an RBI official actually works out limits in a few cases."

Calculating limits for borrowers taking loans from several banks under consortium finance is even more complex. Commenting on the RBI's promise to review the freeze, a senior bank official says, "This would be such a lengthy process that by the time we complete the calculation, it will be September." Dena Bank's general manager Pratap Merchant admits, "Neither we as lead managers of a consortium asked other banks to come together to fix up new limits, nor have we been asked by other lead banks to do so." Probably each bank has restricted limits given by it and left it at that.

Lines dry up

Cutting credit for banks is not necessarily a corollary of the credit squeeze. It is dictated by the non-availability of funds too. The call money rates — the barometer of liquidity in the financial system — touched a peak of 110 per cent and troughs of 30 per cent since April, as against the normal bottom rate of mere 3 per cent. The minimum lending rates went up from 16 to 17 per cent officially and 23 to 30 per cent unofficially and bills are being discounted at 23 to 26 per cent as against 15 to 18 per cent of normal times.

Financial institutions' refinancing lines have almost dried up. Though mutual funds are having a field day in the call money market, they are non-committal towards individual borrowers. Bankers and borrowers are quite understandably unwilling to commit themselves for a longer duration when rates rule high. The maximum a banker would commit is 30 days. Naturally so, because they too find it difficult to locate funds

that are available for a period longer than this. Says a Citibank spokesman, "There is uncertainty about both the cost and the availability of funds."

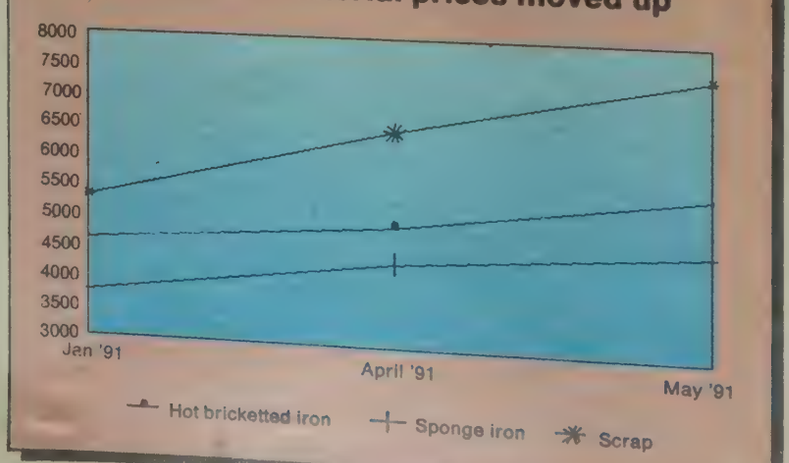
ANZ Grindlays' move to link up the lending rate with the call money rate is, in fact, a good testimony to this uncertainty. Says an official of a British bank, "This is a very crude form of an internationally prevailing mechanism of LIBOR-linked lending rates." In the international market, the LIBOR is the benchmark for interest rates and banks get a fixed spread (profit margins) over that rate in their dealings.

Though most bankers see Grindlays' move as 'logical', they consider it quite impractical from the nationalised banks' point of view. "How can we reach the information daily to all our branches spread across the country?" asks Merchant. The move thus is brushed aside as temporary. But banks do not see the rates returning to previous levels even after the situation eases. "The rates could stabilise at 22 to 23 per cent or even remain floating," says an official of a financial institution.

Borrowing capacity reduced

In the meanwhile, the industry bears the brunt. Though it is too soon to assess the total impact on the industry, S. Viswanathan, group vice-president, finance, Murugappa group says, "Generally, the borrowing capacity of every company is reduced by 20 to 30 per cent. The RBI curbs will have a higher impact on those companies which managed funds well and hence did not utilise their full bank limits." Century Enka and Supreme Industries are cited by bankers has instances in point.

Several industries, particularly those with a high import content, are hit hard by the RBI's fire-fighting measures. And so are the marginal units in the small and medium sectors while the large and cash-rich companies are able to withstand the shocks. Many have, perhaps, inventories built up to see them through the next two months. Says R. Seshasayee, executive director, finance, Ashok Leyland, "We may feel the impact of RBI measures two months hence, because we have the requisite new material in the pipeline."



The effect is strongly felt by the drug industry because nearly 80 per cent of the production cost of most widely-used drugs comes from imported raw materials and intermediates. With the need to maintain cash margins, imports are almost impossible due to which production is hit. Naturally there is a delay in the export orders delivery and orders are being cancelled.

Apolymes plant: domestic processors in trouble

Ampicillin — the most important product of Lyka Labs (turnover Rs. 60 crore) — will be affected because stocks of a vital intermediate, phenol glycine, will be exhausted by end May. "If things get worse," says N. I. Gandhi, managing director, Lyka Labs, "we may have to shut down our plant. And when I said that last month, my bankers got scared."

But for the borrowers the problem is real. Says Gopakumar Nair, CEO, Bombay Drug House (turnover Rs.10 crore), "From next month I may not be able to produce trimethoprim at all. By 15 June, we will be left with no raw material stocks.

We are receiving cancellations of expor orders very frequently — right now I got fax letter from Kenya, cancelling order worth Rs.4 to 5 lakh because there is a de lay in executing the order. If this situa tion prevails, we may soon have to lay of staff." According to CHEMEXCIL, shortfall of Rs.800 crore in the export tar get may well be expected.

No margin money

For the sagging petrochemical industry the fall in international polymer prices t pre-Gulf war level, could have meant a re prieve. Due to recessionary trends in th US and Europe, the petrochemicals de rivative prices fell from the previous $1,200 per tonne to $700 per tonne. Bu the Indian industry had no respite. Th average domestic prices of petrochemica derivatives still continue to rule high a Rs.52 per kg, nearly the same when poly mer prices were quoted a $1,200 per tonne interna tionally. The reason: RBI's dik tat on the 200 per cent margi on opening LCs.

As the domestic landed prices of major polymers such as HDPE, LDPE, and PP re mained at the Gulf war levels the domestic plastic pro cessors, who need to impor nearly 50 per cent of their to tal requirement, obviously suffer. "The processors were suffering with just 50 per cent margin money requirement and a 200 per cent require

ment will kill this industry," laments Vijay Merchant, president of the All India Plastic Manufacturers' Association (AIPMA).

In India, 18,000 plastic processors have a combined annual capacity of processing 1.5 million tonnes of polymers. Of the total demand of 800,000 tonnes of plastic raw material a year, only 350,000 can be purchased internally, the rest being imported. Over the last one year, around 3,000 small processors had to shut down their units and it looks as if more will follow suit.

Petrochemicals: no reprieve

Demand-elastic products

While the small and unorganised sector has been hit the worst, many large processors also are in trouble. Those manufacturing PVC sheets, films, pipes and other low value-added products, where raw material costs constitute almost 70 per cent of the total costs, have been struggling to keep out of the red. Manufacturers of household and consumer plastic goods face an even worse situation, their product being demand elastic. The increasing consumer resistance has led to falling demand for their goods.

Some larger polymer processing companies are still in a seemingly better position as they have adequate internal cash generation to meet at least part of their import requirement, and the raw material component of their costs is relatively lower at around 30 to 40 per cent. Some exporting companies like Milton Plastics, makers of thermoware, have some breathing time since they are exempted from margin money against advance licences for exports. Units manufacturing value-added items like moulded luggage, speciality plastics, and components for the electronics and automobile industry have also managed to hold their own.

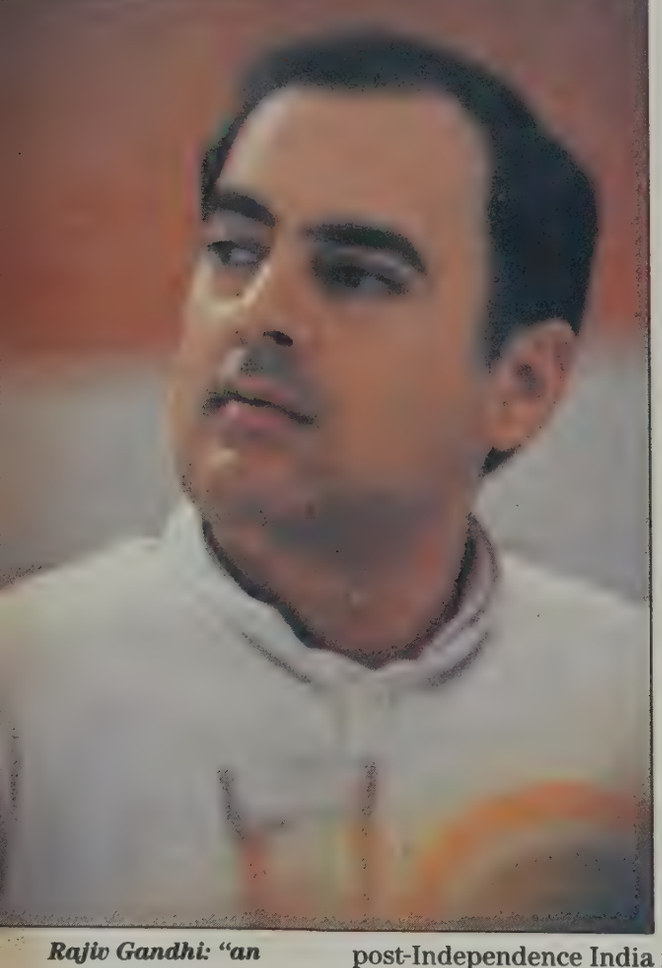
Says Harish Mehta, joint managing director Hinditron and president of NASCOM, "Since the computer industry is highly leveraged, its cost of funds will increase. Moreover, as the cash gets blocked for three months as cash margins, imports in large quantities will be difficult. This will give rise to large-scale smuggling." Fortunately for the computers industry, sales had just peaked in the first quarter. Yet, Mehta feels there will be "large-scale retrenchments in the industry".

The diamond industry, which imports roughs and exports them in cut and polished form; which is 38 per cent value addition to earn net foreign exchange is in jeopardy today and will come to a standstill tomorrow as it faces 'rough' weather. The 50 per cent cash margin itself, had forced the diamond industry to the verge of a closure. Now, with payments delayed by the need for RBI approval on each remittance and absence of credit on exports, "Our image is tarnished in the international market and the repercussions are severe," says Bharat Shah of B. Vijaykumar & Co, the leading diamond trader in the country. Fresh imports have come to a halt and the industry is facing several closures and unemployment.

Price hike imminent

The 100 mini steel and ferro alloy units face difficulties on two counts. First, there is an acute input shortage as imports have stopped for the past few months. And then on account of the increased demand for indigenous raw material, viz, sponge iron, the costs have risen sharply. Says R.N. Singh, executive director, Mahindra Ugine Steel, 'There has been a 20 to 30 per cent rise in prices of melting scrap since last December due to the hike in the import duties. And because of this raw material shortage, the units expect a 30 to 50 per cent fall in their production levels this year." Though it is difficult to predict the exact amount, he adds, this may lead to a steel price hike by 1.25 times.

K. Ramachandran, chairman, Alloy Steel Producers Association, explains the alloy steel producers' plight. The Metal Scrap Trading Corporation (MSTC) is the sole canalising agent for metal scrap in India. The RBI had released forex to MSTC for 1991-92 before the country entered the forex crisis. But the MSTC failed to arrange continuous supply of metal scrap. Rather than staggering the raw material supplies so that, month after month, the alloy steel producers would keep getting their supply of scrap, the MSTC has allowed the situation to drift. Now the units have enough scrap only to last six to 10 weeks.



As the demand for indigenous metal increased, suppliers of indigenous raw materials such as hot bricketted iron and sponge iron have raised the prices of their products too. From Rs.4,000 in July last, the prices of hot bricketted iron has gone up to Rs.5,600 per tonne today — a 40 per cent hike. The prices of sponge iron, on the other hand, rose by 23 per cent since January and scrap prices rose by nearly 35 per cent in five months. No wonder the mini-steel units are opting to run at a lower capacity right away than to run at full capacity now and then shut down completely after the raw material stocks are exhausted. Mukand Ltd has stopped operating two electric arc furnaces out of three. Mahindra Ugine Steel too has shut off one of its two furnaces.

Buyers' market

In any case, the mini-steel sector has excess capacity and the market is indeed a buyers' market. Says Singh, "Since there are bulk buyers and there is oversupply in the market, buyers can really dictate prices to the suppliers." In fact, often, there is undercutting among these units which leads to the units finally becoming unviable. Added to this problem is the rising costs of these units due to the RBI curbs. The combined effect of all these is

India will never know whether Rajiv Gandhi would have become prime minister again. But it does seem plausible that he would have made a better and more mature prime minister. In both the Congress-I's manifesto as well as in private, he acknowledged the need for structural changes in the economy. He finally found the courage to drop "socialism" from the Congress party documents and at the same time talked in terms of a time-bound programme for reducing the state's role in the economy. His electioneering style itself was different: a deliberate attempt at getting closer to the people regardless of security, to combat his own realisation that during the years he was in power he had allowed himself to become extremely isolated. Ironically that proved to be his undoing.

Pankaj Desai

Rajiv Gandhi: "an outsider to the political system"

Any assessment of Rajiv must start with the recognition that he was a politician for only about a decade — of which four years were as a reluctant participant in the grand drama presided over by his mother, five as a prime minister and one as the leader of the opposition. This was an extremely short period by any standard even for the heir of a dynasty which ruled post-Independence India for all but five years.

This proved to be both an asset and a liability. Having arrived on the scene without going through the long process of being trained in the Byzantine ways of Indian politics, he didn't carry the baggage of the garden variety politician. At the same time this lack of experience led to all those disasters that many people would like to remember him by.

Aura of freshness

He was just forty when he took over as prime minister of the country and his youth brought with it an inevitable aura of freshness of vision. He himself reinforced it by his early actions. First, he distanced himself from the coterie of glorified stenographers-turned power brokers that surrounded his mother, and brought in people to advise him, who at least at that time appeared by contrast to be refreshingly different and competent. Secondly, he offered the promise of rejuvenating the Congress by reviving inner party democracy. Thirdly, and most importantly, he attempted to tackle problems head-on, both economic and political, that had stymied his mother for years. "Rajiv Gandhi prefers to think himself as an outsider to the political system, neither beholden to it, nor enamoured of it," one commentator said of him at that time.

But there was unfortunately a wide gap between what he attempted to deliver and what he actually could, something which in hindsight would seem inevitable considering both his inexperience and the rashness with which he tried to achieve his objectives. The accords which he signed, on Punjab, Assam, Mizoram, Gorkhaland and Sri Lanka, appeared to show that there were solutions to these problems which were not blocked by history and all that was needed was good faith and a sense of accommodation. In Punjab, Assam and Mizoram, he set aside narrow political considerations and allowed regional political parties to come to power at the expense of the Congress, something his mother would have never done. He saw his party's loss as the country's gain.

Yet many of these accords were disastrous failures and the reasons were not far to seek. Rajiv had either done poor homework in anticipating the consequences or simply lacked the courage to push through his convictions. He failed to initiate debates which would have helped to build a consensus both within his party and within the country for his various accords.

End of an adventure

In Punjab, for example, he signed the peace accord with Sant Longowal in July 1985, just seven months after taking over as prime minister, and allowed elections soon after in which the Akalis triumphed. But when the time came to transfer Chandigarh to Punjab on 26 January 1986 he backtracked, because the judge appointed for the purpose could not find a suitable compensatory territory for Haryana. Six months later, a second judge presented an equally unworkable solution for the boundary sharing. But by then Gandhi himself had lost the courage to go through with the accord, fearing a backlash in Haryana in terms of electoral loss for the Congress-I. And that was the end of his Punjab adventure. Worse than his own failure, the tragedy here was that he first created hope and expectations in the people of Punjab and then destroyed them, understandably engendering a state of nihilism much worse than the chaos that Punjab faced when he first sat across the table from Longowal.

The failure of the Sri Lanka accord was a repe-

tition of the Punjab experience. The signing of the accord on 27 July, 1987 offered an alternative to the fratricidal conflict which had plagued the country for years, but it did so without the necessarily laborious process of bringing the two sides to some kind of a via media. The speed with which the accord was drafted made it seem as if Rajiv was more interested in the public relations' benefit that would accrue to him rather than the welfare of the parties involved. The LTTE was virtually coerced into signing the agreement with predictable and disastrous results. They reneged and the Indian army sent to maintain peace was forced into waging an unwinnable war at a huge cost both in terms of money and morale.

Rajiv's failure to carry out his promised reforms within the Congress party is in hindsight even more tragic, considering that today after him the party lacks a democratic mechanism to even elect a leader. Speaking at the centenary celebrations of the Congress party in December 1985 in Bombay, Rajiv thundered that he was going to do away with "power brokers" who "thrive on the slogans of caste and religion" and who "dispense patronage to convert a mass movement into a feudal oligarchy". He promised to appoint committees to verify party membership as also hold party elections for the first time since 1969. But only a few months later he decided against the election on the specious premise that bogus membership would allow electoral victories for the very power brokers he had hoped to check.

Nothing did change

For a man who said that he welcomed criticism in the party, he expelled Pranab Mukherjee on charges of dissidence and forced the then Congress working president Kamalapathi Tripathi to step down for the same reason. Eventually nothing changed. Like his mother, he seemed most comfortable in the company of sycophants and made sure that he had no rivals.

Amongst all these failures one area where he did make a significant impact was in revitalising the Indian economy. He has been criticised for not moving fast enough, yet there is no belittling his greatest contribution: creating a new consensus in favour of a new liberal order, a move away from bureaucratic controls. There are many who believe that rather than by a well thought out plan, liberalisation came to him instinctively. Some have termed him as a knee-jerk liberaliser. As *Business India* columnist Sudhir Mulji explained : "It was a deep and intuitive scepticism about centralised planning that enabled him to reject the standard economic nostrum prepared for him. I do not believe that Rajiv Gandhi pushed liberalisation because he understood the role of markets and prices in the economic system; the spirit of Adam Smith did not walk hand in hand with him along the banks of the Jamuna. I believe that he rejected planning because he could not take the complex mumbo-jumbo that a centralising bureaucracy needs for justifying its interventions. This compelled him to look outside the confines of his government and its intellectuals for solutions in the problems of the Indian economy. He was accused of belonging to an alien culture, but it was his very alienation that allowed him to cut loose from the shackles of Indian thinking."

He built on the inheritance of his mother, who had by the latter part of her tenure begun the process of liberalisation, but went far beyond it. Amongst the broad list of achievements were a reduction of income and corporate tax, simplification of tax procedures, delicensing of many industries, raising of the MRTP limits, broadbanding in the licensing of several industries, introducing the concept of minimum economic capacities and doing away with maximum capacity restrictions. Restrictions on foreign collaborations and imports were reduced. Exports were encouraged by a number of measures including the exemption of export profits from income tax. The new electronic policy, the new textile policy, the new drug policy, all helped change the complexion of Indian industry as never before.

Liberalisation was not restricted to trade and

Chadha/Illustrated Weekly of India

With wife Sonia: belonging to an alien culture?

industry but extended to other areas like banking, finance and the capital markets. In a major policy change starting in 1988, the Reserve Bank loosened its grip on the money markets and permitted companies to issue short-term instruments like commercial paper and certificates of deposit. Banks were freely allowed to set up subsidiaries which could provide services like merchant banking, extend housing finance and float mutual funds.

The consequences of all this on the economy was far-reaching. Almost overnight the complacency of established firms who had near monopoly positions, was shattered as competition became a reality. Where there were queues for everything, the economy today is characterised by excess supply in every area from computers to cement, to automobiles and telephone instruments. Industrial growth in Rajiv Gandhi's five years averaged more than eight per cent. The economy grew at an average of five per cent. Exports more than doubled while the investment in the capital market tripled. While the size of the middle class kept growing, the number of people below the poverty line fell from 273 million in 1984-85 to 211 million by March 1990.

Mounting debt

There was another side to his economic policies. The government under him was unable to curb the budgetary deficit as it promised it would. It rose from Rs.3,745 crore in 1984-85 to Rs.7,484 crore in 1988-89. Total external debt nearly doubled to Rs 69,000 crore. And because of the fact that his liberalisation did not reach areas like the public sector, 80 per

Saving the party

Even as news of Rajiv's assassination filtered through to Delhi, R.K. Dhawan, M.L. Fotedar, P. Shivshankar, P.V. Narasimha Rao, Satish Sharma, Sitaram Kesri and Pranab Mukherjee moved swiftly to keep their party together. They all collected at 10, Janpath and even before the bereaved Sonia could leave for Madras to collect her husband's body, they tried to persuade her to take over as the president of the Indian National Congress to continue, "the fight her husband had taken on and to prevent the party he so cared for from breaking up."

Wary of nominating each other to the coveted post of Congress (I) president, the caucus decided to share power by electing a "dummy queen as their controllable instrument of power," as a family friend present there put it.

An insider at 10, Janpath claims the first item on the agenda of the coterie's meeting was to save the party from splitting, with more than 300 Lok Sabha seats at stake. The second was to prevent each other from taking over; and the third was to elect a consensus candidate, namely Sonia, as party president who would serve as a 'vote-catcher' and who was also acceptable to all.

Two of the leaders insisted on swift action to prevent UP's Brahmin leader Narain Dutt Tewari from assuming leadership of the Congress or vice-president Shankar Dayal Sharma succeeding in heading a national government. An idea to appoint an interim or working president till the election was floated. The idea was to have someone who could not stick to the chair in the long run. "Perhaps someone from the south, may be Narasimha Raoji," a senior Congressman tentatively suggested. But, reportedly, Dhawan and Fotedar both shot it down saying, "He is not well. He was too ill to even fight the elections."

A pre-emptive move

Time was moving on and it was learnt that a section of the Congress (I) was not averse to prime minister Chandra Shekhar's leadership. However, in a hasty and pre-emptive bid to stall any such move, the group agreed on Sonia. Satish Sharma, ex-pilot and Rajiv's close friend, V. George, Rajiv's secretary and R.K. Dhawan went to persuade the widow. She is supposed to have accepted the proposal very reluctantly saying she had no interest in the job. But apparently her daughter, Priyanka, tilted the scales in her favour, by saying that her father would have wanted her to help preserve the party.

The next morning all the Congress (I) Working Committee members decided that they would go through the motions of holding a meeting and then "succumb" to the public pressure for her nomination. At 4 pm on Wednesday, Arjun Singh began the meeting with a small crowd outside the Akbar Road office shouting that Sonia be made party president. And so her name was proposed, "to exploit the sympathy for the Gandhi-Nehru family now." To stem all scope for anyone staking a claim in the future, her name was announced as permanent Congress (I) president. To keep dissension at bay, possible contenders like N.D. Tewari were not even invited to the meeting even though he

Pankaj Desai

Pranab Mukherjee with Indira Gandhi: moving to keep the party together

ent of the borrowings continued to be used up for import substitution rather than export-oriented industries. And in what many thought was abject faint-heartedness brought about by the false feeling that it might derail his re-election chances, he resisted all attempts to go to the IMF for a loan despite a worsening foreign exchange crisis.

BOP crisis

The conventional wisdom is that if Rajiv had shown the courage of going to the IMF, then the country would have grown out of its BOP crisis. This is borne out by the fact that while the trade deficit increased from Rs.5,390 crore in 1984-85 to Rs.7,899 crore in 1988-89, it decreased as a percentage of GDP from 2.4 per cent to 2 per cent. And though there has been the criticism that he did not fundamentally alter the structure of the Indian economy, the rapid growth that his policies engendered, rendered many of the restrictive policies which existed on paper ineffective.

While his economic policies offered the country the prospect of a way out of economic stagnation, his tragedy — and necessarily that of the country — was his political immaturity. His achievements were mainly in the first half of his tenure, the latter was characterised by drift and indecision. Confronted by charges of corruption about the selection of the Bofors gun, he was unable to react effectively. He vehemently protested his innocence. It was never conclusively proved that he was anywhere near guilty. But his naivete and brashness, combined with vacillation and prevarication, led to a feeling that he had something to hide and eroded his

phoned saying he would like to attend.

However, Maharashtra chief minister Sharad Pawar, Bihar CC(I) president Jagannath Mishra and K. Karunakaran from Kerala did express some reservations, though only mildly. Pawar reportedly said: "We can retrieve the situation better through collective wisdom." But they did not press the point in the emotionally-surcharged atmosphere and the proposal was silently passed. Middle level leaders like Balram Jakhar and H.K.L. Bhagat had, till minutes before the meeting, tried to get Narasimha Rao elected interim president. But Sitaram Kesri and Ghulam Nabi Azad sided with the pro-Sonia faction.

Grace under pressure

In the meanwhile, Sonia was at Teen Murti Bhavan sitting near the body, receiving visitors and waiting for her son Rahul to come back for the funeral fixed for Friday. Priyanka and other family members sat around giving her moral support. Satish Sharma's European wife Sterre, press advisor Suman Dubey and R.K. Dhawan were with her all through the day. Composed but obviously grieving she gracefully received the president, the vice-president, the prime minister and leaders from all parties.

In the meanwhile, the Congress(I) had hired professional weepers to stand outside the house and cry. The police had a difficult time trying to control the crowd, which kept surging forward and had to be lathi-charged. Even waiting mediamen were assaulted by the police, who had not made any proper arrangements for them either. Rahul arrived on Thursday and the pressure on Sonia was relieved somewhat.

The Congress(I)'s official offer of the party presidentship was made to Sonia on Wednesday evening. She declined saying she did not care to take up the post then. A knowledgeable source said the refusal had been anticipated, but as part of the party's strategy, Sonia would, a day or two later, be "pressurised by party workers" to accept. At the time of going to press an alternate leader had not been named.

While the whole country was shocked by Rajiv Gandhi's brutal assassination, a little of the sympathy abated when the announcement of Sonia's leadership was made. Remarks like "Nehru-Gandhi Ltd," "Italian National Congress", "Firangi Nahi Chalegi" were heard from crowds outside the AICC office. Senior opposition leaders too said that while the act was dastardly, the behaviour of the Congress(I) after the death was deplorable. A spokesman of the Janata Dal said that it was a reflection on the 106-year-old Indian National Congress that, "it cannot find an Indian to lead it." The BJP was even more scathing, "It seems that there is not a man left in the Congress(I)."

Disaster for the BJP

For the Bhartiya Janata Party, the assassination of Rajiv Gandhi could not have come at a worse time. In its last leg of electioneering, the party was surging ahead rapidly in Uttar Pradesh (85 seats) when disaster struck. It had already a wave in its favour in Gujarat and had an even chance in Madhya Pradesh and Rajasthan. It had also made some inroads in Karnataka, a state where its presence hitherto had

Congress(I) leaders with Rajiv: no Indian to lead?

legitimacy.

The last two years of his tenure were spent in a state of siege and he was unable to govern effectively. Not only had he lost all the enthusiasm and initiative of his first three years but he was forced to seek help from the very people he had tried to distance himself from in his early years, his mother's courtiers.

Surprising grace

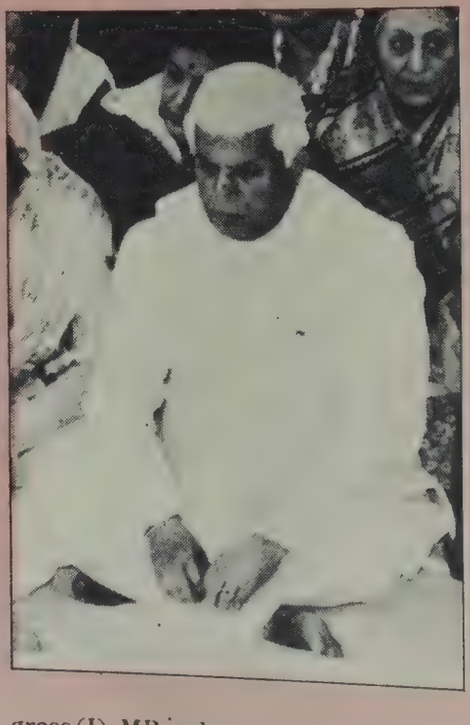
His election debacle of December 1989 was not surprising; but what did surprise many was his grace in defeat. His lack of malice for his bitterest foe was shown by his presence at V.P. Singh's swearing in. As BJP stalwart A.B.Vajpayee said last week, "He was a warm-hearted man for whom political rivalries did not mar personal relationships."

His one year record as the leader of the opposition was a mixed one. In that old and shameful Congress tradition, he arrogantly dislodged Virendra Patil as the chief minister of Karnataka and tried doing so with Sharad Pawar in Maharashtra but failed miserably. He showed political savvy in his role in the downfall of both V.P. Singh and Chandra Shekhar, and in hindsight there are indications that he might have been right in forcing elections at this time. The crowds he had been drawing at his election rallies was demonstrative of the fact that his charisma had not deserted him. He may well have been the country's next prime minister. Whether he would have in his second term measured up to the renewed expectations of the people, will forever remain unanswered.

■ N. RADHAKRISHNAN and EAPEN THOMAS

been negligible. All this had the potential of taking the BJP to a respectable number two at the hustings. The opinion polls also revealed that.

The BJP leaders have now decided to try and garner votes on the stability factor, hitherto the USP of the Congress(I) campaign. Their argument would be, that the stability of the Congress(I) regime had been dependent on Rajiv. But now that he is gone, there is no point in voters voting for the Congress(I). Therefore, they should vote for the only stable party left, the BJP.



Party hawks would like to sell the line that Sonia is not an Indian by birth — she became an Indian citizen as late as 1983. On top of that she is a Catholic. How can you have a Christian PM in a Hindu *rashtra*?

Banking on a break-up

Sources in Chandra Shekhar's Samajwadi Janata Party (SJP) said their party leaders felt that whatever happened, the SJP stood to gain — whether Sonia or someone else was made president, the Congress(I) was bound to break up. "And why did they not accept Chandra Shekhar*ji* as leader?" asks a SJP loyalist. "After all, he was part of their party, and has maintained friendly relations with most leaders there."

Within the Congress(I) too, party workers have been divided into different camps and cliques already. They are sure that once the elections are over a fight for leadership will begin in earnest. Narain Dutt Tewari leads the most vocal camp which is supported by Jagannath Mishra and Sharad Pawar. The southern lobby is in favour of P.V. Narasimha Rao. Sitaram Kesri, the party treasurer, would like neither. Arjun Singh too is lobbying, but Madhav Rao Scindia, Dinesh Singh and Pranab Mukherjee are trying to fix on a different candidate altogether.

Another section is strongly in favour of aligning with Chandra Shekhar. This camp is, however, very subdued, not sure which way the wind will blow. What is interesting is that no one within the Congress(I) is considering an election as one way to settle the matter. Meanwhile, those Congress(I) MPs who were facing tough fights are relieved that they may now scrape through on the sympathy wave.

According to one line of thinking, the result of the election seems to be a foregone conclusion now, with the sympathy over the gory killing likely to help the Congress(I) get a simple majority. But what happens then? A fight for the prime minister's post is very much on the cards. If the Congress(I) cannot marshall its forces by then, the party will begin to crumble. And even if Sonia is made prime minister in the event the Congress wins, she cannot be projected as a long-term leader, feel political analysts. "Simply because she is a foreigner," they explain. "Once the emotional sympathy fizzles out, people will begin to question her credentials. And by keeping her on as their leader the Congress will give plenty of fuel to the opposition."

Few options available

The options for Congressmen are very few now. The fight for the top post is likely to be between Narasimha Rao, Pawar and Tewari. Whoever wins, political experts foretell the splintering of the Congress. If Tewari is made prime minister, the southern and backward caste members will be alienated. If one of the southern contenders comes out on top, the crucial states of Bihar and Uttar Pradesh will be irked.

The break-up of the Congress will further strengthen the forces which are already pulling the country apart. Says Madhu Limaye, veteran politician, "For whatever it is worth, the Congress was the only centrist party with an all-India presence and, therefore, did provide stability to the political structure of our country."

In a bid to preserve the country's precarious stability, the President is again mooting the idea of a national government. His idea may be picked up by the Congress moderates if they cannot come to a consensus on a leader. Political experts feel that at this juncture a national government may not be a bad idea as, they argue, any change in the national political equations may wreck the country's democratic fabric.

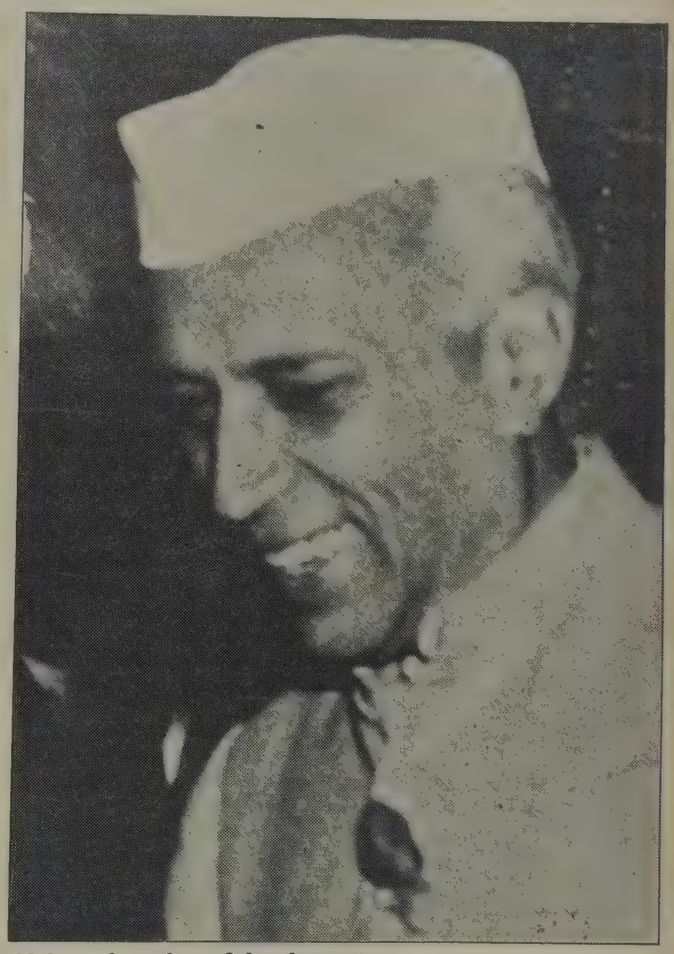
■ RUCHIRA GUPTA

The end of a dynasty

The explosion which robbed Rajiv Gandhi of his life, though lamentably tragic and horrific, is but an example of the role violence has come to play in our public life. The tragedy occurs at a critical stage of our political history with the collapse of two governments within the space of 14 months.

The question uppermost in people's minds is: why have we come to such a pass? Barely a week after the Shiv Sena supremo Bal Thackeray had lauded the actions of Nathuram Godse, assassin of the Mahatma, Rajiv Gandhi is brutally killed. Yet Rajiv Gandhi first came into international prominence bravely standing by the funeral pyre of his mother. In the case of the Mahatma and Mrs. Gandhi there were discernible threats from aggrieved groups, but in the case of Rajiv Gandhi the killing was an example of aimless and wanton violence. It is this kind of violence which is coming to dominate our public life.

Why? What differentiates Indian democracy today from what it was in the past? The principal cause for the increased cycle of violence lies in the breakdown of a basic consensus between political parties in the manner in which political discourse should be conducted. In addition to which is the disappearance of principle in politics leading to a moral vacuum in which winning is the only end, no matter the cost. This breakdown is amplified during electioneering as politicians are no longer bound by the same ground rules as before.



Criminal candidates

The calibre of politicians has also shown a marked decline, with criminals and gangsters populating the lists of candidates put out by all parties. The breakdown of the rule of law has encouraged these antisocial elements to come forward since an election would involve practical amnesty for their crimes and assist them in gaining respectability and opportunities to make large financial gains. This contrasts with the class of politicians who emerged in the period after Independence — the professional (nearly a third of the first constituent assembly consisted of lawyers) and the public servant predominated. Politics involved sacrifice to the cause of public service and politicians were widely respected as being persons of integrity and honour. There are very few politicians today who would fall into that category. The lumpen element now figure prominently.

Among the reasons for the predominance of criminal elements in politics are the financial arrangements necessary to fight elections and the muscle power now seen as essential to assist in the electoral process. Even such national leaders such as Mulayam Singh Yadav and Laloo Prasad Yadav, chief ministers of UP and Bihar respectively, have permitted themselves to be shot by photographers while in the process of booth capturing. Another aspect of this criminalisation of the electoral process is provided by the state of Bihar where the chief minister has sought to arm his supporters with country rifles and bombs in preparation for the elections.

The stakes involved in electioneering are very high indeed. First, the cost of contesting an election is prohibitive, apparently fighting a Lok Sabha seat in UP would cost around Rs.1 lakh a day in terms of jeep hire, petrol, keeping the party workers happy and other sundry items. This money would necessarily have to be paid in cash since cheque amounts would infringe the ceiling on election expenditure. Having made such an expenditure, the candidate would be determined to win no matter what means he would be constrained to use. Having succeeded, his interest would be to recover his initial investment as quickly as possible and prepare for the next round of elections. Such is the economics of our democracy and this economics precludes the honest candidate from contesting, leaving the field open to all manner of unsavoury elements.

In a sense the present election sees a culmination of all these disreputable practices, with a new record set in the number of independent candidates murdered. There has never been a more violent election in our political history. Perhaps we got a flavour of what was to come with the Meham by-election where the independent candidate was murdered and Om Prakash Chauthala, the then chief minister of Haryana disgraced himself. At any other stage in our history such a man as Chautala would at the very least be ousted from public life.

Nehru: founder of the dynasty

The practices adopted by parties to win elections are only symptoms of a wider malaise: the lack of a clear and principled framework of a national vision. The founding fathers of the Constitution were agreed on these principles and this measure of agreement extended to opposition members such as Ram Manohar Lohia and Shyama Prasad Mookerjee who otherwise had strong ideological disagreements with the Nehruvian vision of India. All were agreed on the sanctity of the Constitution and the rule of law.

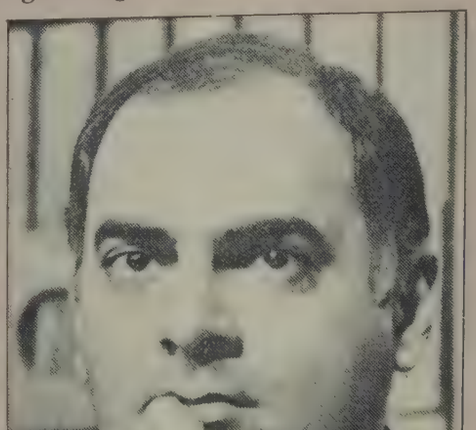
The electorate in this election have never been so polarised along caste and communal lines. The Janata Dal has actively campaigned on caste lines, impressing on the backward castes the necessity for unifying under its banner. The BJP has

similarly sought to mobilise votes by appealing to religious sentiment. Unfortunately, the Vishwa Hindu Parishad has been conducting a blatantly communal campaign in which Sadhvi Rithambara has played a leading part by making inflammatory speeches which have resulted in a number of deaths and communal riots with the police turning a blind eye. The Bajrang Dal, the student wing of the Parishad, has been distributing miniature *trishuls* to its members and supporters for their use. Unfortunately, as these two entities are not political parties they are not subject to the laws on corrupt electoral practices. But the BJP's apparent inability to control them gives rise to concern.

Thus, all parties face a very different India from that which existed at the time of Pandit Nehru. A bitterly polarised electorate along caste and communal lines. Secessionist movements who effectively prevent the peaceful conduct of elections in their areas. Rampant criminalisation of the candidates and exorbitant expenditure by the candidates. And the alacrity to use any means, fair or foul, to win elections, even murder.

Legacy or misuse

This state of affairs is a legacy of many years of neglect and misuse of our political system. The two principal causes of this neglect are the encroachment by the Centre on state powers and the systematic emasculation of the party system by both the Congress and the Janata Dal.



In respect of Centre-state relations, the rot set in at the time of the dismissal of the Kerala government, the first elected Communist government in the world, in the late fifties by the young AICC president, Mrs. Gandhi. Centre-state differences can be classified as political and economic. The two are not unconnected insofar as the stronger economic powers acquired by the Centre have weakened the political standing of the regional leaders, whatever their party. The three generations of Nehrus have seen a gradual decline in the quality and stature of state leaders. The internal party reasons we will recur to later. It suffices to say that particularly under Mrs. Gandhi and Rajiv Gandhi there was a determination to install pliable chief ministers who had no base and were sent in the manner of regional satraps to represent the Centre at the state level.

The example of Andhra Pradesh, formerly a Congress stronghold which saw a succession of chief ministers before the emergence of a regional party, the Telugu Desam, brings home the dissatisfaction caused by the arbitrary and uninformed choice of chief minister. In respect of opposition states, and this applies to the Janata Dal as well, is the repeated top plings of governments which are not the party ruling at the Centre through th invocation of Article 356 of th Constitution.

The economic dimension to Centr

First the tragedy ... then the farce

The tragedy of Rajiv Gandhi's horrific death has been turned into the farce of making his widow, Sonia, the Congress(I) president. And in its 'collective wisdom', the Congress Working Committee sees nothing incongruous in the act, and has the gall to project its decision as a step in the right direction.

Though at the time of writing, it is unclear whether the widow will accept the honour, the act of offering reveals the depth of dishonourable intention which prevails in the highest circles of the largest and oldest political party in the country. Thus, the act of acceptance, even though it will have far-reaching consequences, at the moment, is of less consequence than the act of offering. Because what we are witnessing is just Scene III of a political drama which began soon after the sudden demise of Lal Bahadur Shastri.

Scene I saw the emergence of Indira Gandhi as the 'fairest and the brightest' among the contenders. The sceptre of power was given to her because of three main reasons: one, she had the right pedigree; two, the other contenders (all male), in their mutual antipathy for one another, believed that Indira Gandhi would be a weak woman; and three, she was advised and guided in her bid for power by a galaxy of brilliant minds who were not in politics for the perks of powers.

In Scene II we saw the same relentless logic working in Rajiv Gandhi's favour: he too had the right pedigree and the attraction which a novice in politics has to a pack of politicians who deeply disliked each other. The crucial difference between Scene I and Scene II was that while Rajiv Gandhi had the advantage of being young and clean he suffered from the severe handicap of having no one of any consequence as his advisors and was unamenable to advice.

Thus, it is not surprising that despite the enormous mandate he enjoyed, Rajiv Gandhi was unable to radically transform a moribund politico-economic system. He only reaped the benefits which even the most controlled economy can and does provide — a comfortable foreign reserves position, a socially stable society, etc. What he saw, instead was the promise of a new era turn into the rule of a coterie of 'power-brokers' and end in the ultimate vulgarity of witnessing the prime minister of the world's largest democracy being accused in the forum of public opinion as the prime recipient of an arms deal kick-back.

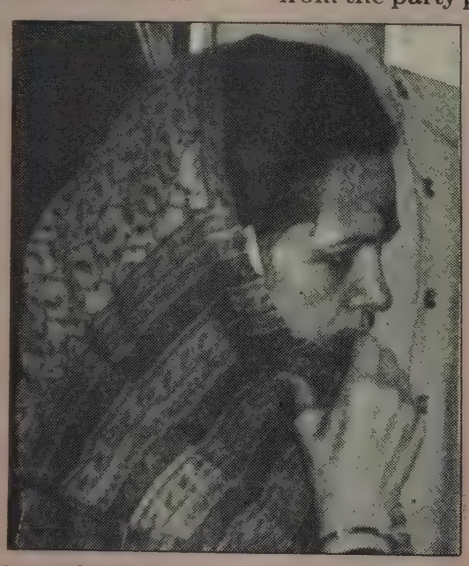
In Scene III, which we are now viewing, the same logic has prevailed, the act of offering the presidency of the Congress to Sonia Gandhi has been dictated by her pedigree and political innocence. The first, the party high command believes, will help to generate a winning wave in the crucial second and third phases of the coming polls. The second factor holds, to a deeply divided, mutually suspicious and power hungry members of the party leadership, the attraction of ensuring that the reins of power does not go into the strong arms of the Pawars or prodigals like the Chandra Shekhars. The level of mutual antipathy is such that even a relatively weak Narasimha Rao or N.D. Tiwari is unacceptable in as much as the rest of the

tate relations has consistently been a aga of encroachment by the Centre on tate powers to raise monies and receive onies. The main demand put forward by aders of opposition states such as Jyoti asu, Karunanidhi and others is that they are excessively dependent on the Centre for funds. And that the Centre has over the years, through an increase in discretionary disbursements, avoiding the discipline imposed by Article 275, sought to favour some states at the expense of others.

These irritants are compounded by the appropriation by the Centre of industry, which was formerly a state subject, through the licence Raj. It was a commonplace during N.D. Tewari's tenure as industry minister that if a licence was to be issued to an industrial group to set up a unit, that a condition was imposed stipulating that the group establish the unit in UP. These conditionalities may not be legal but given the power vested in the Centre, which businessmen is going to take up the issue?

These doubts as to the bona fides of the Centre in Centre-state finance and industrial development have had political repercussions. It must not be forgotten that before Punjab became disaffected on any substantial scale, the demand of the Akalis was for greater industrialisation of the Punjab. And there is much justification in the argument that the militants were drawn from unemployed youth who having found themselves jobless blamed a distant and uncaring government in Delhi for their plight. These youth became easy targets for a messianic figure like Sant Bhindranwale to turn against the government and to enrol in his mission of separatism.

Similarly, Kashmir has suffered excessive interference at the political level from the Centre but without any tangible economic benefits given its isolation from the economic mainstream. This poverty has resulted in a lack of employment opportunities for the youth, driving them to embrace fundamentalism and terrorism.



Assam is another area of disaffection and secession. This is a state which has benefited greatly from Central intervention to the extent that the ULFA considers that Assam is best off independent and has taken to arms to assert this claim.

The reaction to these movements by the Centre in the last few years has been disappointing to say the least. Rajiv Gandhi in the hoary tradition of imperial rule merely opened a dialogue with the militants and signed accords without ever carrying the process to its logical conclusion. The reasons for the failure of the accords were not entirely Rajiv Gandhi's lack of preparation although insufficient ground work meant that many provisions of the accords were unworkable. For example, the Assam accord which involved the Central government putting up a fence along the Bangladesh border could not be implemented since there were no

---

ounch realise that the mantle of power has the potential of transforming even the most indecisive politician into a formidable and dangerous force.

Nevertheless there is a crucial difference between Scenes II and III. When Indira Gandhi was assassinated, Pranab Mukherjee as the senior most member of her cabinet made an attempt to step into her shoes. This was foiled by the Gandhi coterie which resorted to the unconstitutional act of getting a pliable President to swear in Rajiv Gandhi as the prime minister, without first getting him elected as the leader of the Congress legislature party. This time, the process of transition has been smooth without even a whimper of protest from the majority of the so-called party stalwarts present barring a few exceptions. The reason for this mass servility is obvious: They do not want to suffer the ate of Pranab Mukherjee.

The farce going on — that a party which has a history of over a century could find as its president only a housewife whose sole association with the party has been through wedlock — speaks volumes of the political and moral bankruptcy of the Congress. This act signifies that the seed of degeneration planted in the body-politic of the Congress by Indira Gandhi, and later nurtured by herself and her two sons has now grown to monstrous proportions: the parasite power-brokers controlling a party by their proximity to power, manipulating it through fear and favour, and actually running it and the government.

However, the victory of the Bhawans, Fotedars, Azads, Satish Sharmas Solankis *et al* could well become a pyrhhic one. The note of dissidence struck by Pawar, Jagannath Mishra and Karunakaran at the crucial CWC meeting has the potential of becoming a voice of protest and rebellion. Two factors are in favour of this taking place. One, unlike her husband, who stepped into the prime minister's shoes and then took total control of the party, Sonia Gandhi has to move from the party president's chair to the prime minister's office. If the first movement was from a position of great power to one of political influence, the other is in the opposite direction.

Therefore, the circumstances of her entry on to the centre-stage of politics has placed Sonia Gandhi in a relatively weak position: She is heading a party which has to gain power before she herself gets power. Two, the thrust towards federalism which has become so pronounced in the Indian polity has also made its presence felt in the Congress. While the party which Rajiv Gandhi inherited from this mother was a puppet with its different limbs controlled from Delhi, the party which he has left behind is no longer so malleable to the wishes of the high command.

The inheritance of the widow is therefore not an untroubled one. She presides over a party which is no longer a fiefdom but has all the makings of a confederation which consists of many squabbling zamindaris. And when Pawar and Karunakaran struck a note of dissidence over her choice, they were in effect highlighting this transformation. True, they have not said anything further. But between now and the election results, there are enough days and opportunities for the making of a revolt. Thus the farce contains the seed of another tragedy.

■ VIJAYAN KANNAMPILLY

roads to accommodate the building activity.

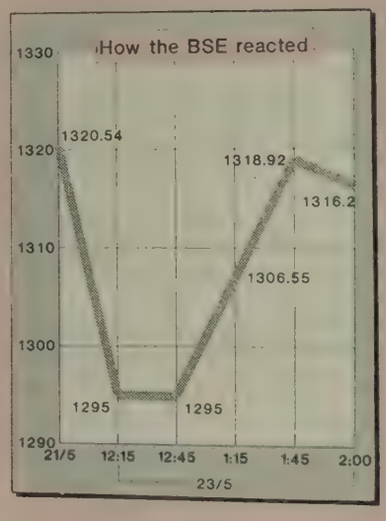
Hastily signed accords

Similarly, the promise to give Chandigarh to Punjab on a particular date without finding an alternative state capital for Haryana is yet another example of half-baked thinking. The latter promise only led to renewed violence. Too often hastily signed accords made excellent press but unfortunately built up expectations which were deflated and consequently damaged the image of the political process.

The beneficiaries of these ill-conceived accords were the militant wings of the secessionist movements. The nexus between the terrorist movements and the moderates has become a hallmark of Indian terrorism. More serious is the extent to which the Centre has played a role in financing and supporting terrorist o ganisations to extract political dividend The most famous example was the cove support extended by the Indian army t the Mukhti Bahini in the creation Bangladesh.

Another more recent case which ha relevance to the gruesome murder of Ra jiv Gandhi is the support originally give by the Indian government to the LTT paradoxical considering that the India

Impact on stockmarkets



The news of Rajiv Gandhi's murder hit the stockmarkets on Tuesday night (21 May) just before 11 pm. Earlier in the day there had been a big boom in market prices all over the country during regular trading hours. This was attributed to expectations of a Congress victory after the first round of polling on 20 May. In Bombay, the most Congress-sensitive share, Reliance Industries, shot up from Rs.139 to Rs.151 while the BSE Sensitive Index rose during the day from Rs.1,284.25 to Rs.1,320.54, its sixth highest jump in the year. Although volume was moderately heavy, around Rs.100 crore, the rise followed heavy squaring up by Calcutta operators along with large purchases of Reliance Industries by a mutual fund.

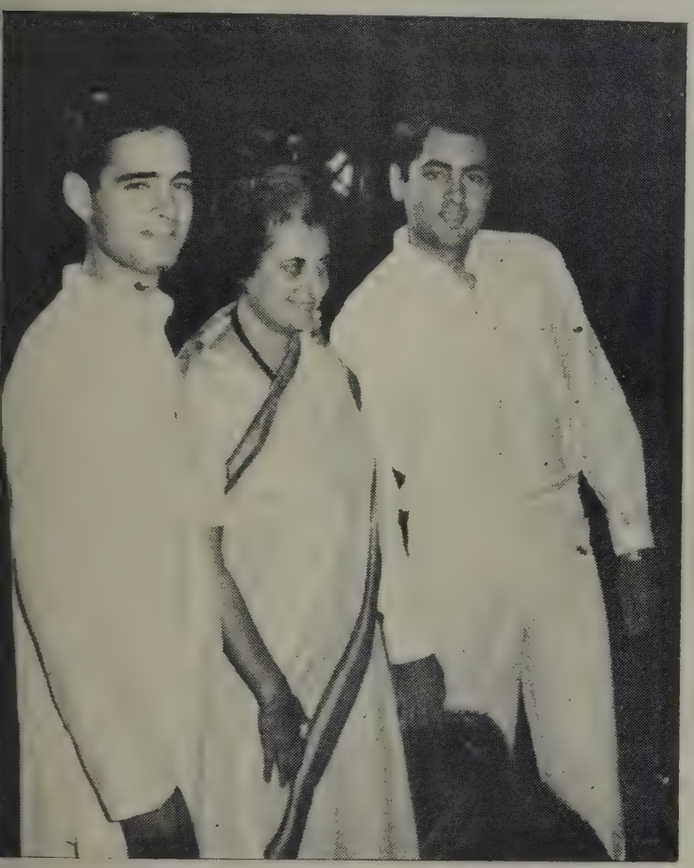
Surprisingly, the expectations of a Congress victory had little to do with any firm news such as exit poll results. Until 8 pm, at least, the market was not privy to any such results. When the news of Rajiv Gandhi's murder hit the market, Reliance Industries, ACC and Tata Steel were the three shares being traded in kerb. While the first slumped from a kerb rate of Rs.153 to Rs.128, ACC fell from Rs.2,550 to Rs.2,300 and Tisco fell from Rs.195 to Rs.175, although trading at that late hour was very light.

Surprising recovery. On the next morning, when most people got to know of the murder — thanks to AIR and Doordarshan's usual arrogance towards the public's need to know — kerb activity picked up. So, surprisingly, did prices. Reliance recovered to Rs.140 while Tata Steel stood at Rs.188. ACC, meanwhile, recovered to Rs.2,400. Clearly, the "undertone", as broker Vallabh Bhansali noted, was obviously strong. There was none of the panic that marked Indira Gandhi's assassination. Another broker put it thus: "When Mrs Gandhi died, there was no one in power and no obvious successor. But Rajiv was not in power when he died and the current government has no interest — unlike last time — in perpetuating violence."

Of such cynicism is the market made. As another broker said, "Although it is all uncertain, the Congress cannot lose seats as a result of this event. Since they were likely to form the government in any case, they are even more likely to do so now. The market, in any case, gains." A more cautious view, however, was expressed by M.R. Mayya, chairman and executive director of the BSE, who noted that while he expected markets to remain stable because of the inevitability of liberalisation, the political uncertainty was not resolved yet.

The mutual funds, which have raised about Rs.2,000 crore already this year and are flush with funds, are also a stabilising force. One of them — rumoured to be Bank of India — was a big purchaser of Reliance Industries (of about 300,000 shares) on 21 May. Hemendra Kothari, president of the BSE, feels that the presence of mutual funds has been a stabilising factor after Rajiv Gandhi's death. "Even if they are not currently buying, the market expects them to be big buyers after the elections. That keeps the market up in anticipation." Kothari also views the upcoming liberalisation as being the main reason for stable markets and noted that, apart from raising daily margins on 23 May on the five major scrips (including Reliance, ACC and Tisco), there was a consensus among the BSE governing board members that the market ought to remain open.

Surprised and pleased. The appointment of Sonia Gandhi as Congress president surprised and pleased traders. It is felt that she would be true to Rajiv Gandhi's liberal policies. Thus, the markets stayed firm even without significant institutional support. The BSE Sensitive Index opened at Rs.1,295 on 23 May and closed at Rs.1,316.20 (*see chart*). Reliance closed at Rs.148, ACC at Rs.2,515 and Tata Steel at Rs.191. Thus, the market was almost back to its level of 21 May.



Mayya feels that while the market has no strong views on the resulting prospects of the Congress, a sympathy wave might help the Congress depending on the situation. However, according to many traders, the Congress leadership has made a clever choice. In fact, in kerb trading late on 23 May the market fell off on rumours that Sonia Gandhi had rejected the Congress nomination.

Overall, the market's stability is a favourable development. As Mayya says, "The market is the focal point of many opinions. Its stability is a good sign of the strength of our democracy. People have ceased to panic as they used to earlier." ■

RAFIQ DOSSANI

army was later required to fight the LTTE on behalf of the Sri Lankan government.

But the most enduring problem is that of communal violence, given the fact that the majority is very much the majority in policing bodies such as the PAC in UP, much criticised for the role they played in the Meerut riots in 1988. By failing to act or in looking the other way, the policing bodies positively abet communal violence. The fall-out of communal violence is to widen the chasm that exists between the majority and minority communities as the latter retreat into their ghettos and develop their own paranoid complexes which preclude proper integration.

Mother and sons: nurturing the seed of degeneration

The majority are fed the notion that the minorities are pampered at their cost. The issue most played up by the BJP for example was Rajiv Gandhi's retreat on the Shah Bano issue. It was this retreat which prompted his policy advisers to suggest that he appease majority sentiment by raking up the forty-year-old controversy over the Babri Masjid at Ayodhya and permitting the laying of the *shilanyas* at the site. In fact, it has become one of the most unattractive features of our polity that politicians for the sake of votes fish in troubled waters and seek to act as agents for communal disharmony. Whether or not such policies have actually generated votes or not is debatable. But in the process, the body politic is damaged by an enduring source of violence.

The other aspect of all political parties, save the left parties and the BJP is the absence of inner party democracy in the form of regular elections. This reluctance to extend democratic norms to their own activities has robbed them of sensitivity to changing electoral requirements and the true concerns of the people. It is perhaps the frustration engendered by this refusal to follow democratic norms that is a likely cause of extra-political activity.

Ultimately, any pragmatic centrist party requires information, views and ideas from the grassroots as to policies and performance. Such a flow of information can only occur in a democratic set-up where leaders are accountable and where they are liable to be dismissed in the event of failure. And this flow of information will make a difference only if the leaders are men of stature. Unfortunately, the Congress (I), by deliberately not holding elections for office since 1975, has created a court culture where sycophancy flourishes and decisions are made on the basis of the leaders' whim and caprice.

The early days of Rajiv's involvement in politics endeared him to the Indian public not just because of his good looks and manners and profession to be anti-political in the narrow manipulative sense. Given the background of acute cynicism the public had developed for self-seeking politicians as a breed, it struck a sympathetic chord. As a corollary of this, he preferred to surround himself with people he could relate to, people of his background.

The high point of his belief in reform occurred on the occasion of the hundredth anniversary of the founding of the Indian National Congress when he openly attacked the power brokers in the process. Yet, towards the end of his period in office, the very same people he held in contempt were his advisors, the R.K. Dhawans of this world. Why did he turn full circle? Perhaps for the very same reason his mother abandoned her kitchen cabinet of Romesh Thapar and P.N. Haksar — when the going gets tough and monies are required to be raised for funding elections the power brokers become necessary and the intellectuals dispensable. Such is the nature of politics, the tragedy being that Rajiv had insufficient imagination to seek to transform the system, and ultimately became its prisoner.

Singular achievement

Perhaps, his most singular achievement lay in the transformation he wrought in the performance of the Indian economy, particularly with the spectacular 1985 budget which set the tone for future liberalisation and was replete with new ideas on economic management. In fact, the liberalisation policy, although it may not have gone far enough, has dramatically altered the ground rules for debate on economic policy, causing Jyoti Basu's Marxist government to adopt free enterprise policies to attract industries to West Bengal.

The consequence of this has been an emerging consensus on future economic policy, all the party manifestos read almost the same on economic policy. But a smooth management of economic policy can only take place in a political context of stability.

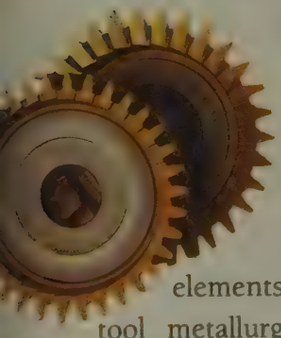
The lesson to be learnt from this is that, in an ultimate sense, systems matter more than individuals. And that government means more than merely managing contradictions, it is a means of mobilising public opinion and a form of political education. What Rajiv Gandhi failed to do was to attract the right sort of person into politics, people of honesty with the right instincts. This was perhaps because of a latent contempt for the political process as he swung from his Doon School technocrat friends to the power-broker mafia of yesteryears. And this also provides an explanation as to why he never followed his intention to hold elections in the Congress party.

One hopes that the Congress leadership of today revives the traditions of inner party democracy in order to make the Congress party the great movement for social and political reform it once was. If the political process is to be made vibrant again the need of the hour is for all political parties to project fresh and meaningful paradigms which necessarily promise more than just the shibboleths of stability and economic growth.

■ JAVED GAYA
and NAVAL B. GHIARA

You Wouldn't Get Your Suit Stitched By An Amateur.

So Would You Get Your Tools Coated By One?



The man on the left is, definitely, not you. For, as a responsible decision-maker, you go only to the best. And when something as crucial as your Company's productivity is concerned, you'll make doubly sure that the best suits your exacting standards.

Multi-Arc India – Giving you the Leading Edge

That's where we come in. As the Indian associates of world leaders Multi-Arc, USA, pioneering tool coating in India was natural to us. But we've gone one step further. To revolutionising tool productivity in India. With a commitment that goes beyond merely adding a film to cutting tools. After all we have the expertise & experience of coating a variety of tools, having coated over 6,00,000 tools till date.

Before the Coating, The Measurement

As consultants in surface enhancement, we had no option but to master tool design. And elements of tool geometry, tool metallurgy and machining environments. Work out how this translates to your benefit. You pay for the finest coating. What you get free is our expertise on productivity boosting concepts in tool design.

Coating, The Master's Way

Our coating centres are built to exacting Multi-Arc, USA standards, and use the latest PVD and CVD coating techniques. To give you the kind of results you would naturally expect from the specialists in the business. Enhanced speed and feed from between 25-30%. Increased tool life by 300-500%. And resistance to corrosion or wear without altering tool dimensions.

After the Coating, The Back-up

Like all pioneers, our commitment doesn't end with the coating. From secure packing of the tool to unfailing delivery on schedule to competent after-coating service, our every operation is marked by the uncompromising touch of excellence. Aided by 16 strategically located branches. A personalised courier service. And a dedicated team of application engineers.

All enabling you to draw out the best from your cutting tools.

The Consultant Sets the Pace

As pioneers, we are ever widening the horizons in surface enhancement technology. With newer applications. Innovative coatings. Recommending breakthroughs in tool metallurgy such as M-35 and ASP-30. Or tool geometry such as single pass or double pass broaches.

The Difference Is Multi-Arc

In short, Multi-Arc is the difference between just doing coating and engineering the coating. The difference between a mere cover-up and an elegantly tailored solution. The difference between an amateur and a specialist.

MULTI ARC *The human face of technology*

INDOFIL CHEMICALS

A metamorphosis

After the retreat of its American collaborator, this hitherto lethargic speciality chemicals manufacturer has taken a turn for the better thanks to the timely implementation of K.K. Modi's management strategies

Much of what is old is being shed, and the excitement of a new beginning is all pervasive. That,then, is the scene at the plush Bombay head office of Indofil Chemicals Co — a division of the Delhi-based fibre manufacturer, Modipon Ltd. Indofil, which makes speciality and agrochemicals, has, for 25 years, subsisted on technology provided by the US giant Rohm and Hass (R&H), its original promoter and Modipon's long-time collaborator. But on 31 March this year, the umbilical chord was cut when the US company formally divested its 38 per cent holding in Modipon.

Indofil itself will, in the next few months, break-off from Modipon to start life afresh as an independent company. In the complicated restructuring of the Modi family assets last January, the fibres division which contributed 80 per cent of Modipon's Rs.236 crore turnover in 1989-90 went to the Kedarnath Modi (the step-brother of the group founder Raibahadur Gujarmal Modi) faction of the family. Indofil which made up rest of Modipon's turnover was given to the group headed by Gujarmal's son Krishnakumar (K.K.) Modi.

K.K. Modi: responsible for the transformation

Not surprising

This was not very surprising because 1985 onwards, K.K. Modi has been primarily responsible for the transformation of the company (though a division of Modipon since 1982, it has always been run as a separate company). He claimed: "For many years, Indofil was static. Then, from 1985, we started marketing aggressively, which has paid good dividends. My objective is that Indofil should continue to offer a full package of products for a wide range of crops dealing with all kinds of problems — pesticides, herbicides, fungicides and insecticides. In the chemicals field too, the scope is enormous."

When K.K. Modi took over the reins, the more than 20-year-old company's turnover was less than Rs.10 crore. Modi's aggressive policies has, in the last five years, ensured an average growth rate of at least 8-10 per cent annually. Turnover is expected to be in the region of Rs.58 crore this year and the net profits Rs.6.5 crore. Says H.J. Chuganee, Indofil's chief executive, "We hope to be a Rs.150-crore company in the next few years. We've already made a beginning and our strategy will definitely pay dividend."

Indofil was born in 1965 when Rohm and Hass first teamed up with the Bombay-based Doshis of Amar Dyechem to set up a company to manufacture industrial and agrochemicals. The US promoter kept 60 per cent of the equity and the Indians 40. In 1971, Doshis sold their stake to the Modis who were already in collaboration with Rohm and Hass, having jointly promoted Modipon with them in 1965.

The Americans continued running Indofil till the early eighties, but did not achieve much. Says Chuganee, "Rohm and Hass's conservative policies, combined with FERA problems, allowed very little growth." Consequently, in 1982, Indofil was merged with Modipon as a wholly-owned division of the fibre company, "primarily to gain non-FERA status," says Chuganee.

While R&H was holding the reins of the company, it followed a distinctly conservative attitude in the areas of expansion and finance. While this policy helped to maintain a long-term financial stability, it also prevented growth. Even when expansion opportunities came its way, the attitude had been very cautious. "Indofil lacked the drive to explore new markets and products and hence even today, the company corners only a small market share despite being around for 26 years," says a senior official of Rallis India Ltd.

Complete change

Ever since Modi took over from R&H, there has been a complete change of scene. He gave the company a totally new, growth-oriented direction. Its senior executives are now busy talking about major expansions, new tie-ups and technical developments. "Our objective is to build up a wide range of products", says R.K Malhotra, general manager, agrochemicals. Indofil's plant at Kolshet Road, Thane, operates three shifts a day, to process nearly 6,000 tonnes of chemicals used to manufacture nearly 80 different products. The product mix includes various industrial and agrochemicals.

When established in 1965, the plant manufactured only Zineb — a fungicide — and a few vegetable oil-based plasticisers used by the PVC industries. Over the years, the list of products has increased to include fungicides formulations like Mancozeb (dithane) and Dinocap (karathane), herbicides like Propanil (Stam F-34) and acaricides like Dicofol (kelthane), in the agrochemicals

division. "Indofil is the only manufacturer of dithane in this country. This broad spectrum fungicide controls nearly 300 diseases for approximately 100 crops," says V.P. Arya of M.J. Pharmaceuticals.

In the case of industrial chemicals, the plant is now processing nearly 1,488 tonnes per annum (tpa) of acrylic emulsions used in the textile and paint industries, 500 tpa of acrylic solutions used in the petroleum industry and 1,600 tpa of synthetic tanning agents and fat liquors used in the leather industry.

The production capacity might not seem great in comparison to that of the giants like BASF, Rallis and Colour Chem, "but as the market is growing, there is room for all of us to grow without stepping on each other's toes," says K.V.R. Subramanian, managing director of Colour Chem.

"This year, our sales were over 3,000 tonnes valued at Rs.15 crore and it is growing by 7-8 per cent per year," claims Sunil Anand, general manager, industrial chemicals division. This is only half the story. Agrochemicals that constitutes nearly 66 per cent of the total turnover of the company had sales valued at Rs.35 crore, in 1989-90.

When Modi decided to give Indofil a new thrust in 1985, initially the going was not easy. "Not all products would sell, despite aggressive marketing," says Anand. Hence, the division heads set about following the 'return on net assets' (RONA) accounting policy. RONA is the ratio of profit after tax before interest to net assets employed. "If the RONA ratio is less than 13 per cent for any product, it is not acceptable to the company," says Malhotra.

Chuganee: paying strategy

Calculated risk

This system has worked very well for Indofil. According to the ratios, product categories were defined and financial and marketing thrust was given to promote the product. Many of the old products were phased out, based on RONA. "It was a calculated risk we had to take, for our products were always known for their quality. We just had to fine tune the product range," says G. Natarajan, chief manager, production.

In the last few years, the company has introduced a large number of new products. Among the more successful ones are: GOAL (a broad spectrum herbicide), BEAM (a speciality fungicide) and Opaque 621 (a speciality compound used in the formulation of water-based paints). Opaque 621 has been developed for the first time in India. "It's a very good product and can be used as a replacement for titanium dioxide, a pigment that is imported," says B. Puri, product manager of Asian Paints.

Agrochemical plant: wide range of products

The company is now negotiating with Reilly Whitman USA for technology transfer to manufacture special grade fat liquors for the leather industry. And amongst its more ambitious plans include setting up of a Rs.300-crore fertiliser company jointly with the Rajasthan government, called Rajputana Fertilisers, for which an application for LoI has already been submitted.

Modi has put together a team of senior level professionals to assist him. And the day-to-day handling of the company has since been left to them. "As we grow, we are slowly decentralising our management functions," claims O.P. Gill, general manager, personnel. Indofil now has a total strength of 370 employees including factory and marketing staff, spread over their seven regional offices. The marketing of agricultural business division alone is handled by 62 professionals. "Today, it's the responsibility of the GMs to make their divisions profit centres. Earlier we performed only perfunctory marketing functions," says Malhotra.

More research

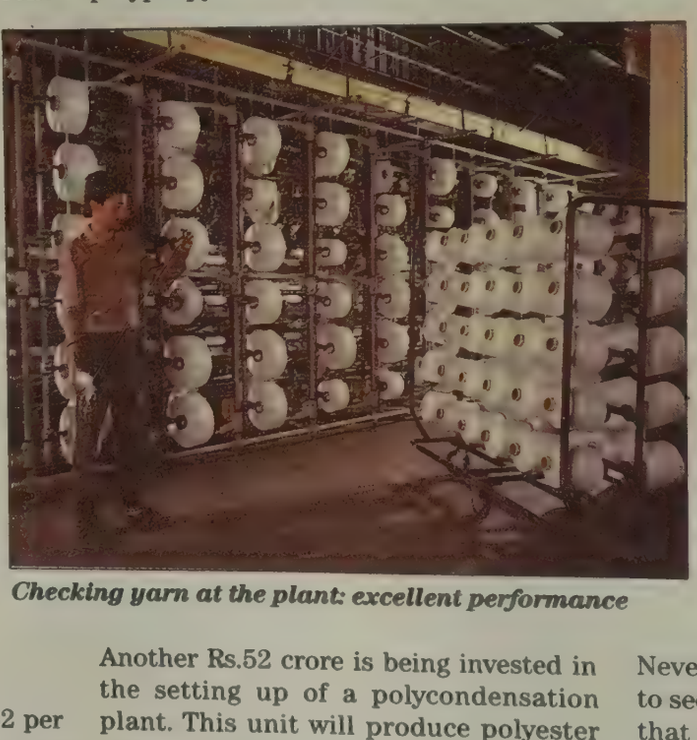
In keeping with the demands made on quality and new products, the in-house R&D centre has been made more effective. From about 0.25 per cent of the turnover till about two years ago, the amount spent on R&D has risen to 1 per cent this year and is growing. "The knowledge that Rohm & Hass is not going to be around anymore to provide us the knowhow has given this department the much-needed impetus," says R. Gopalan, general manager, R&D. It is by the R&D efforts that the company has seen the launch of the new products in the last few years. Currently, the development facilities of the department has been strengthened with more money spent on effluent treatment, pollution control, energy conservations and safety aspects.

For K.K. Modi, whose group consists of giants like Modi Rubber, Bombay Tyres, Godfrey Phillip and Modi Xerox, Indofil is no doubt a tiny player. But from the excitement noticed at Indofil's offices and the factory, one would get a feeling that the executives do not consider their company any less important.

■ SHAMPA KAR

HARYANA PETROCHEMICALS

The limits of success



Despite the good times, the management has seen the warning signs, and plans to diversify

He was an outsider — a commander in the Indian Navy — who ventured into the then virgin field of polyester filament yarn (PFY). When R.S.Aggarwal set up Haryana Petrochemicals Ltd (HPL) in Rewari, Haryana, in 1986, his was the first Indian company to manufacture PFY in the small-scale sector. The company suffered a net loss of Rs.1.7 crore (on sales of Rs.15 crore) in its first year of operations but, according to an industry observer, that was more due to the PFY business going through a slump.

But the company achieved a turnaround in the very next year when on sales of Rs.40 crore, it posted a net profit of Rs.1.08 crore. Five years down the road, HPL's turnover has increased to Rs.100 crore and the company has posted a net profit of Rs.10 crore (year ended March 1991). The net profit margin has grown from 2.76 in 1987-88 to 10 per cent this year. HPL posted excellent results for April 1989-March 1990 (the last year for which detailed results are available). While turnover increased by 67 per cent to Rs.62.59 crore, net profit zoomed by 300 per cent to reach Rs.5.48 crore. Admits R.K.Misra, general manager (marketing), Parasrampuria Sythetics, "Haryana Petrochemicals is a very good company with a dynamic management."

dividend of 20 per cent in 1990, up from 10 per cent the previous year. Over the same period, its earnings per share (EPS) had increased from Rs.1.73 to Rs.6.92.

HPL was started with a 3,000-tpa plant set up at a cost of Rs.12.5 crore. In 1988-89, the capacity was expanded to 7,000 tpa by pumping in Rs.17 crore and the next year, to 9,500 tpa after an investment of Rs.13 crore. The latest expansion, planned for this June and expected to cost Rs.17 crore, will propel the capacity to 12,000 tpa. In addition, this expansion will also see the setting up of a 500-tpa polypropylene filament yarn unit.

Checking yarn at the plant: excellent performance

Shareholders' confidence

Aggarwal and his associates hold 32 per cent of the Rs.12-crore equity (eight per cent is with the financial institutions and the remaining 60 per cent with the public). The confidence of the 24,100 HPL shareholders has been reflected in the price movement of its scrip (Rs.10 paid up) over the years. The share price, which hovered around Rs.12 till April 1988, reached Rs.22 a year later. In April 1990, the HPL scrip traded at around Rs.30, but on 17 May it was being quoted at Rs.56. According to a prominent Bombay stockbroker, the HPL scrip is undervalued at this price. The company had declared a

Another Rs.52 crore is being invested in the setting up of a polycondensation plant. This unit will produce polyester chips for captive consumption. Over the last year, HPL progressively moved away from ordinary to speciality yarns. There is lesser competition in speciality yarns like textured and bright trilobal yarns. Users of such yarns are also in a position to achieve a higher value addition.

Customer concern

According to Navin Gupta, general manager (finance), one of the main reasons for the success of the company is the fact that it has always paid extra attention to its customers. Says he, "We are a customer-oriented company. We don't stop making a particular kind of yarn used regularly by a customer just to make a couple of extra bucks in other more profitable yarns."

Gupta adds that HPL's periodic capacity expansions did not affect sales because, simultaneously, the customers too were expanding their texturising capacities. But the going may not be all that smooth in the future. One grey area which could affect HPL's profit margins in the long run are its high raw materials' costs (about 40 per cent of total sales). Another big problem is that the recent boom in the spinning industry has attracted more players into the PFY arena. Besides, Century Enka, Reliance Industries and Parasrampuria are in the process of expanding capacities. These additional capacities, totalling 95,000 tpa, will increase the country's installed PFY capacity to 260,000 tpa. But according to a study conducted by a committee set up by leading financial institutions, the domestic market will have a demand for a volume of this order only by 1994. This has given rise to fears of both a fall in average capacity utilisation and a glut in the industry.

Misra is of the view that the synthetics yarn industry will have to export from next year to maintain its growth rate. Aggarwal agrees that the increased capacity in the PFY sector may lead to a glut by the end of the year. But is quick to add, "This situation (the glut) may prevail for about six months and then the industry will get rationalised." As far as HPL is concerned, Aggarwal is confident of seeing the glut through with the help of his regular customers. Nevertheless, Aggarwal is savvy enough to see the writing on the wall. Fully aware that the PFY industry is no longer on the upswing, Aggarwal has made up his mind to stop expanding HPL's spinning capacity beyond 15,000 TPA.

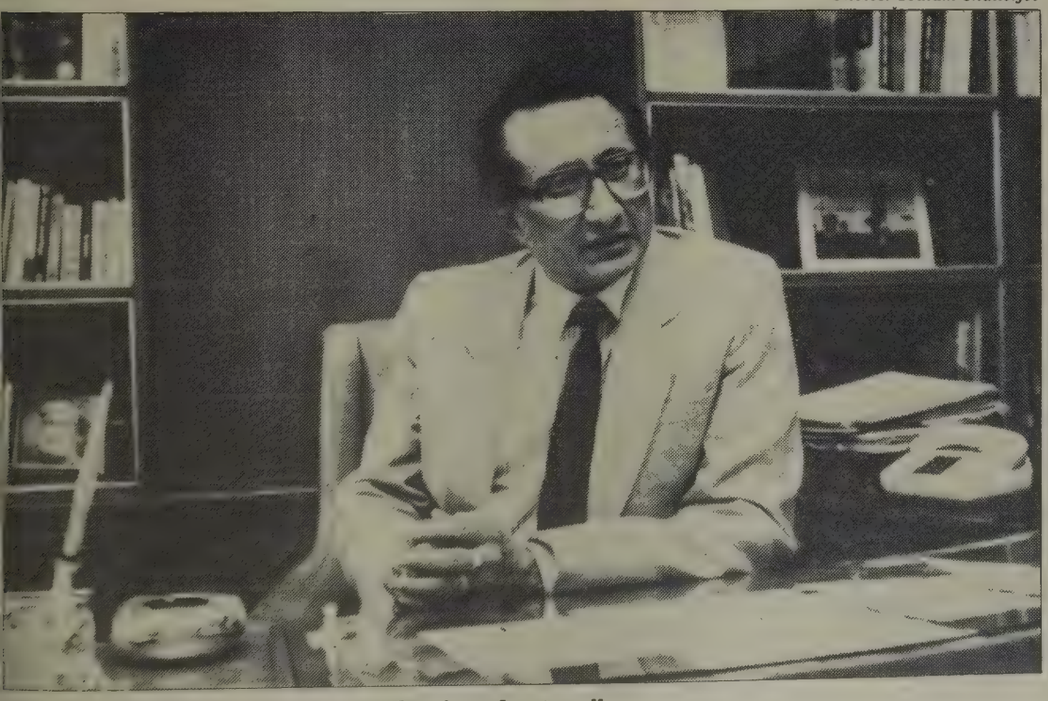
Instead, he plans to diversify into speciality chemicals for the paint industry. But not in Haryana. Aggarwal is disillusioned with his home state because of its political instability. Instead, the trend-setting entrepreneur has started talking with the State Industrial Corporation of Maharashtra (SICOM) for setting up a project in the joint sector. Will Haryana's loss be Maharashtra's gain? ■

FEROZ AHMED

ANDREW YULE

Nothing succeeds like excellence

A revitalised management has helped turn around this century-old public sector unit into a huge success, making it a prime candidate for privatisation. The group now has a Rs.100-crore modernisation and expansion plan in the works and several hi-tech ideas to diversify into



If profitability were to be the main criterion in the selection of a public sector unit for privatisation, the government-owned Andrew Yule & Co Ltd, the Calcutta-based engineering enterprise (1990 turnover Rs.161 crore, operating profit Rs.27 crore) would automatically qualify. Jayanta Ray, the company's new chairman and managing director, agrees: "Whether Andrew Yule will be privatised or not is for the government of India to decide. But yes, our company would certainly be an excellent choice."

Andrew Yule typifies the turnaround experience of several sick public sector companies. These turnarounds have been accomplished without significant lay-offs and divestitures, because the primary reason for the companies' sickness had been management failure. So, once a strong chief executive was put in charge, there were dramatic resurgences. For example, once a new CEO took over at the sluggish Damodar Valley Corporation in the late seventies, it reached one of the highest plant load factors in India. Richardson and Cruddas Ltd, a persistent loss-maker, broke even two years after a new chief executive took over.

Similar experience

The experience of companies like SPIC, Jaipur Metals, Travancore-Cochin Chemicals and Indo-Nippon Precision Bearings has been similar. At BHEL and SAIL, managerial and organisational changes were primarily responsible for smart increases in turnover and profitability.

Photos: Goutam Chatterjee

Ray: "ours is a thoroughly professional set-up"

K.S.B. Sanyal, who was chairman of Andrew Yule from 1983 to 1990, played a major role in the change in the company's fortunes. He dispensed with the old managerial control system that had encouraged managers to concentrate power and decision-making and carve out personal fiefs. He delegated authority and held managers accountable for their operations. "My humble contribution was to introduce the profit-centre concept," he says. That contribution has seen the company's operating profits (before interest, depreciation and tax) soar from Rs.15.51 crore in 1983-84 to Rs.27.01 crore in 1989-90. And the company is now poised for modernisation and growth.

One good reason for privatising Andrew Yule would be that it would mobilise funds for the company's Rs.100 crore modernisation and expansion plan. Though already cleared by the government, the company's investment proposals fall under the allocations of the Eighth Five Year Plan which is now in limbo. Even after the elections, if the government that then comes to power decides not to expand its equity base further, the public holding in the company will have to be increased. Says Ray, "The government holds 73 per cent of the equity in the name of the president, public financial institutions hold 15 per cent and only 12 per cent is held by the public. So greater public participation is probably as desirable as it is necessary."

Expectedly, none of the top managers really want to give out details of this Rs.100 crore modernisation and expansion plan at this time. All that Ray is willing to say is "all our ventures are in the hi-tech area." But corporate analysts feel that one of the proposed greenfield projects will be for the manufacture of hydraulic and pneumatic seals in technical collaboration with Hanger International GmbH of West Germany.

Thinking ahead

Hi-tech ventures, however, make good sense in view of changing market conditions and Andrew Yule's mode of functioning in recent years. "Andrew Yule always think ahead of time. So we continuously make additions and alterations to our product range," says J.K. Chatterjee, director (planning). "We decided to withdraw from jute — one of our oldest business interests — much before the industry slumped. Similarly, we withdrew from coal and insurance just before they were nationalised."

The new lines that Andrew Yule has developed anticipated changing market situations. They include conveyer belting, steel cord conveyor belting, capacitators and vacuum circuit breakers. The most recent products, however, are computers (manufactured at its plant at Kalyani, West Bengal), microwave radios and other telecommunication equipment. A special type of synthetic lubricant, made

XLRI Management Development Programmes
JAMSHEDPUR

9 BASIC LEADERSHIP SKILLS

Dates : August 19-23, 1991, November 11-15, 1991 & March 16-20, 1992
Venue : XLRI, Jamshedpur
Programme Director : E H McGrath, SJ
Key Areas : Personal Expressiveness; Goal setting skills; Problem-solving and decision-making skills; Leadership and conflict management skills.

Fees : Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-Residential
Team (per person, three or more attendees)	Rs. 4,200	Residential
	Rs. 3,600	Non-Residential

10 SKILLS FOR MANAGERS : PUBLIC RELATIONS

Dates : August 19-24, 1991
Venue : Hotel Maurya Sheraton, New Delhi
Programme Director : A C Jesurajan, SJ
Key Areas : Principles of Public Relations; Area of public interest and public policies; Components of corporate image; Public Relations agencies and their contribution; New trends in Public Relations; Association of Public Relations Personnel.

Fees : Individual	Rs. 4,800	Non-Residential
Team (per person, three or more attendees)	Rs. 4,300	Non-Residential

11 PRODUCT MANAGEMENT

Dates : August 26-30, 1991 **Venue :** XLRI, Jamshedpur
Programme Director : Dr. Mohan Agrawal
Key Areas : Management of Existing Products; New Product Development; Branding the Products; Providing support to Product Marketing.

Fees : Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-Residential
Team (per person, three or more attendees)	Rs. 4,200	Residential
	Rs. 3,600	Non-Residential

12 TRAINING FOR ROLE EFFECTIVENESS IN WOMEN MANAGERS

Dates : September 2-6, 1991 **Venue :** XLRI, Jamshedpur
Programme Director : Dr. Geeta Saxena
Key Areas : Organizational roles; Role conflict & stagnation; Role integration; Management of stress; Interpersonal skills; Assertiveness training; Self awareness.

Fees : Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-Residential
Team (per person, three or more attendees)	Rs. 4,200	Residential
	Rs. 3,600	Non-Residential

13 WORKSHOP ON "MANAGING CREATIVITY IN ORGANISATIONS"

Dates : September 9-13, 1991 **Venue :** XLRI, Jamshedpur
Programme Director : Dr. Madhukar Shukla
Key Areas : Understanding Creative Process; Managerial Thinking; Creativity Techniques and Applications; Managing Creative People; Creative Styles; Designing Organisations for Promoting Creativity.

Fees : Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-Residential
Team (per person, three or more attendees)	Rs. 4,200	Residential
	Rs. 3,600	Non-Residential

14 PERSONNEL MANAGEMENT

Dates : September 16-21, 1991 **Venue :** XLRI, Jamshedpur
Programme Director : Prof. Renu Mattoo
Key Areas : The expanding role of human resources management; Recruiting and selecting the right employee for the right job; Human resources development and training; Maintaining positive labour relations.

Fees: Individual	Rs. 5,000	Residential
	Rs. 4,200	Non-Residential
Team (per person, three or more attendees)	Rs. 4,500	Residential
	Rs. 3,700	Non-Residential

15 BASIC MARKETING SKILLS

Dates : September 23-27, 1991 **Venue :** XLRI, Jamshedpur
Programme Director : Dr. Mukesh Chaturvedi
Key Areas : Understanding Buyers' Decision Processes; Segmenting Markets and Positioning Products; Managing Products; Establishing and Managing Prices; Managing Distribution Channels; Designing and Managing Promotion Programmes.

Fees: Individual	Rs. 4,600	Residential
	Rs. 4,000	Non-Residential
Team (per person, three or more attendees)	Rs. 4,200	Residential
	Rs. 3,600	Non-Residential

16 SKILLS FOR MANAGERS : COMMUNICATION

Dates : September 30-October 5, 1991 (October 2, Holiday)
Venue : Hotel Searock Sheraton, Bombay
Programme Director : A C Jesurajan, SJ
Key Areas : Effective public speaking; Face to face communication; Effective listening; Persuasion skills; Interviewing skills; Meeting/group problem-solving skills; Persuasive writing skills; Selling/presentation skills Effective media appearances.

Fees : Individual		
Team (per person, three or more attendees)	Rs. 4,300	Non-Residential
	Rs. 3,900	Non-Residential

by Tide Water, one of the companies in the Andrew Yule group, is also amongst these.

Steel cord conveyor belting had been imported for the past 20 years when the Andrew Yule management first thought of manufacturing it domestically in 1986. "The idea," says Chatterjee, "was to capture the emerging market for steel cord belting in the country. And as belting was one of the company's main lines of business, the extension to steel cord belting was not difficult."

The initial project cost was fixed at Rs.19 crore. But the 36 months that elapsed between the conception and the inauguration of the plant at Kalyani, in February 1989, pushed the cost up to Rs.41 crore. Remarkably, the entire Rs.41 crore was generated internally. "No budgetary support from the Centre was sought even though there was a cost overrun," says Sujit Chakravorty, the company's finance director.

Competing with Dunlop

Many experts wonder what returns Yule expects from this investment. Especially because it must now compete with a multinational like Dunlop India in a slow-growth market. Dunlop opened its steel cord belt plant just three to four months before Andrew Yule and makes an identical product. The handful of customers for steel cord belting in the country — Neyveli Lignite (the main buyer), the Vizag Port Trust and Coates India Ltd — try to distribute their orders equally between the two producers. And both companies have the same technical collaborator — BTR Belting, UK — as well as the same supplier of rubber — Becard of Belgium.

Sujit Chakravarty, the finance director, however, makes the company's point of view clear: "Our total capacity for Yule cord — the trade name for our steel cord belts — is 2,000 tonnes per annum. And that perfectly matches our projections. We plan to make the full use of our capacity only in the fourth year of running." (The belting division posted a Rs.60 crore turnover in 1989-90; meeting the sales target exactly.)

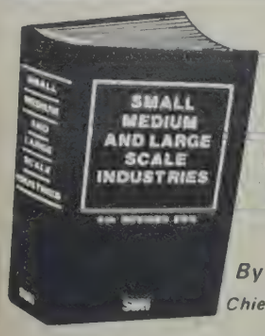
The other important engineering unit is the Togami unit at Thakurpukur, Calcutta. This forms a part of the company's electrical division. This unit, set up in 1983, in technical collaboration with Togami Electric Manufacturing Co Ltd of Japan, makes high tensile products, capacitators and other electrical goods. Initially, it had some problems mainly because of the appreciation of the yen. But extensive indigenisation of the production process has now largely insulated the unit from this. In 1988-89, its turnover was over Rs.7 crore, a 67 per cent increase over turnover in 1987-88. The 1989-90 figures are not available yet, but Chakravarty points out that there are no fresh problems there.

Andrew Yule has technical collaboration with Togami for another important product of the electricals division — the vacuum circuit breakers which it manufactures at its Mayarbhanj plant. Vacuum circuit breakers are mainly used in power stations. So, the performance of this plant depends largely on the buying decisions of state electricity boards and other power generating houses in the public and private sectors.

Management system reorganised

The transformer and switchgear unit in Madras, and the Brentford unit at Kalyani are the two other units in the electrical division. Both were sick when Andrew Yule took them over. Recalls Sanyal, "The challenge was to make them assimilate our work culture." So he reorganised the management systems in both companies and invested over Rs.3 crore in their turnaround.

Now, five to six years later, both units have improved their performance. In 1988-89, the transformer and switchgear unit posted a 57 per cent increase in turnover over that in 1987-88. The Brentford unit did even better. Turnover grew by 124 per cent in the same period. This was possible because of several factors. First, the company changed the product mix of the transformer unit. Second, it took various other measures, along with changes in the product mix, to make Brentford a viable operation.



Steel cord belt unit, Kalyani: "capturing an emerging market"

In its present form, Andrew Yule is more of an engineering company than anything else. But changing circumstances have made tea, one of its oldest lines of business, increasingly important. Some corporate analysts, in fact, prefer to call Andrew Yule an engineering and tea company.

Andrew Yule's tea division is made up of 12 tea gardens which produce 10 million kgs every year. Tea sales, during 1989-90, amounted to Rs.40 crore. "These sales are a result of the boom in prices of tea," says a manager at the tea division. This is borne out by the facts. With much the same production of tea, the tea division's average turnover had earlier varied between Rs.24 to 26 crore. But better price real-

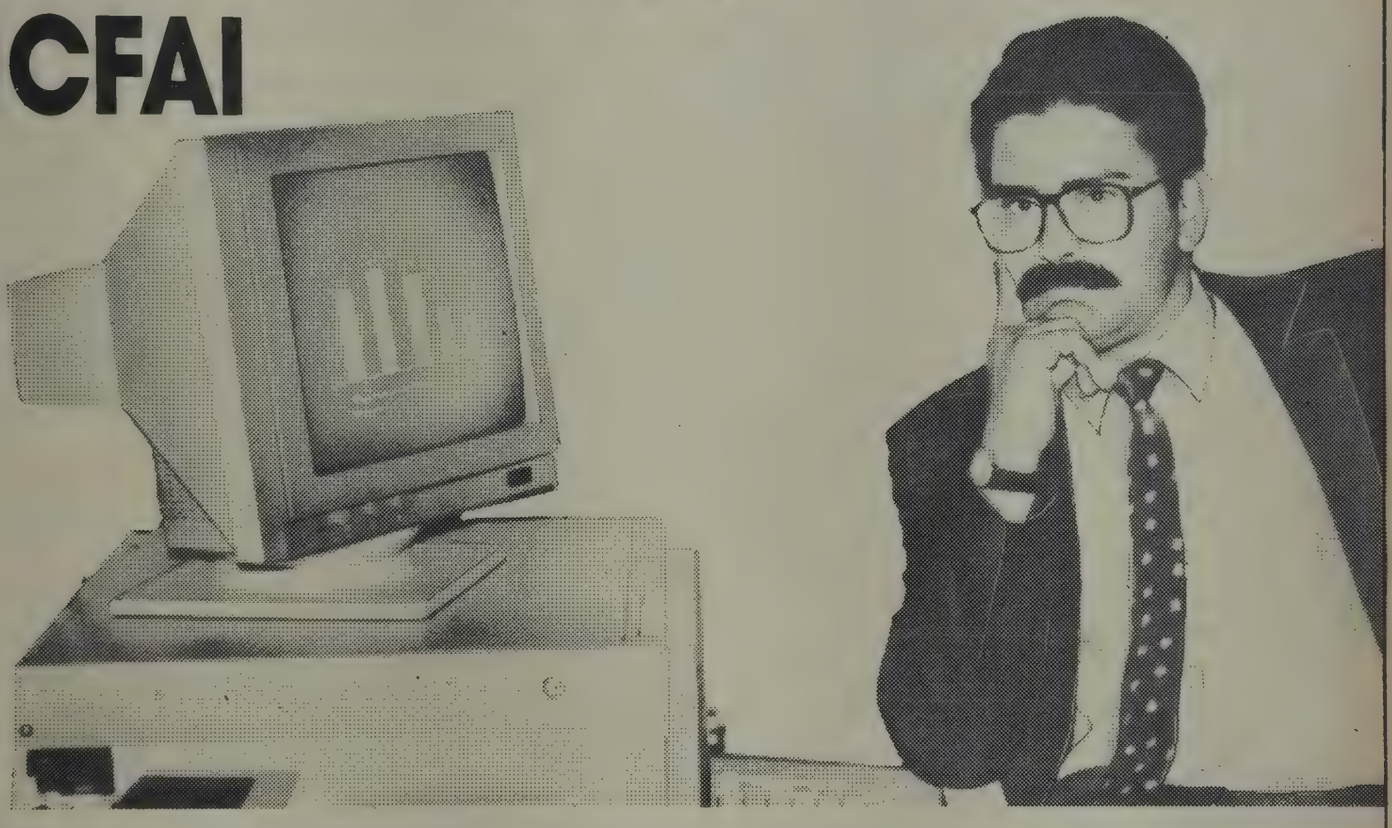
isation has changed that now.

Under government regulations, 95 per cent of the Yule tea is sold at tea auctions held in India; the balance, sold in packet form, is regularly bought by hotels of the Indian Tourism Development Corporation, Indian Airlines and Air India.

The Hoolangori tea company, the oldest in the group, participated in the first ever tea auction held in 1881 in Calcutta. Other tea companies in the group too are more or less of the same age. According to Chakravarty, most of Andrew Yule's tea gardens are over a century old. And that is why, over the last decade, while the group's turnover went up steadily, the growth in tea production was minimal: from 9 million tonnes in 1979-80 to 10 million tonnes in 1989-90. "Our gardens are so old we can only grow tea from seeds. Clonal plantation — the widely practised technique for higher yield — is not possible for us," says Chakravarty.

Sanyal: major role in the turnaround

Story of success



For the past decade, the story of Andrew Yule has basically been the story of success. Compared to a meagre turnover of Rs.20.80 crore in 1979 — the year in which Andrew Yule became a government of India enterprise — sales in 1989-90 were about 8 times higher, at Rs.161.35 crore. And for the year 1990-91, turnover is estimated to have crossed Rs.185 crore. This means sales have grown at an average rate of 75 per cent per year. Profitability too has kept pace. From a profit before tax of Rs.2.04 crore in 1979, the company expects to net a profit before tax in 1990-91 of over Rs.12 crore.

Costs too have been controlled significantly in the past decade. Though raw material costs as a percentage of turnover have shot up from 29 per cent in 1981 to 40 per cent in 1990, employee costs have declined from 26 per cent to 16 per cent in the same period, as have other expenses (which include power and fuel) from 26 per cent to 21 per cent.

For the whole of the Andrew Yule group too — taking Tide Water Oil Co and Dishergarh Power Co into account — the growth during this period has been remarkable. While the group's turnover has increased at an annual average rate of 60 per cent, profit before tax has grown by 45 per cent. In 1989-90 turnover was Rs.246 crore, a 29 per cent increase over the Rs.190 crore turnover in 1988-89. The increase in operating profit has also been impressive — from Rs.19 crore in 1988-89 to Rs.36 crore in 1989-90 — though the increase in the profit after interest and depreciation (but before tax) has been less so at Rs.17 crore in 1989-90 compared to the Rs.11 crore posted last year. The results are expected to improve in 1990-91.

Andrew Yule's success has attracted divergent comments. Criticism, at varied levels, has been, in fact, quite regular. In 1986, to cite one instance, an opposition member in the Lok Sabha made specific allegations that the company had inflated its balance sheet by Rs.3 crore that year. In the same year, one of its statutory auditors, governed by the Comptroller & Auditor General, made some objections about its accounting policies. Around the same time, enforcement officials raided Yule House to look into allegations regarding the company's alleged FERA violations. (All that the raiding party found were half-a-dozen unreconciled GR-1 forms pertaining to a shipment of tea in 1981, which had been damaged and for which insurance claims had been lodged. And the director of commercial audit, after investigation, found the auditor s objections to be baseless.)

Meet the successful Manager, trained in Finance by ICFAI

FINANCE FOR NON-FINANCIAL EXECUTIVES

Nature	Self-study at home and week-end workshops.
Duration	6-8 months
Core Modules	• Financial Statement Analysis • Management Accounting & Control • Working Capital Management • Project Finance & Appraisal
Elective Modules Any Two	• Marketing Finance • Production Finance • Project Management • Financial Services • Personal Finance & Investments • Management Control & Reporting System • Financial Management in Public Enterprises
Examinations	At 25 centres, once in 6 months

Over 1,400 non-financial executives sponsored by reputed companies such as Voltas, ITC, Berger Paints, India Cements, Abbott Laboratories, Hindustan Ciba-Geigy, Mather & Platt, Asian Hotels, Madura Coats, HCL, CMC etc., are going through the DBF (Diploma in Basic Finance) Programme, specially designed by ICFAI for the benefit of non-financial managers. Basic knowledge in finance and skills in using financial tools can put you on a faster path to the top.

The executives learn about the magic world of finance through structured self-study at home and by attending week-end workshops. You will enjoy the entire process. A new learning experience. A fantastic voyage of discovery!

If you are interested, please write today for a copy of the prospectus enclosing a demand draft for Rs. 60 drawn in favour of "DBF A/c ICFAI" payable at Hyderabad.

Finance for Non-Financial Executives

Imageads/91

At a time when the tea industry is really booming, critics of Andrew Yule are even more ready to discount its success. "Andrew Yule is primarily an engineering company but it is doing badly in the engineering business. The company is in the black only because its tea business is booming," says one. Another critic argues that the company's consolidated turnover in fact does not give a true picture of its performance: "Once the tea boom goes bust, the company will be in the red." Many of the critics, in fact, feel that Andrew Yule's income from tea is even higher than what it chooses to declare.

Most of the company's diversifications will be in hi-tech areas

Responding to the criticism, senior executives in Andrew Yule admit that the boom in tea has had a large impact, as turnover from tea has gone up by Rs.15 crore on much the same tea production. Also profit from the tea division in 1989-90, at about Rs.15 crore, contributed half of the group's total net profit of Rs.30 crore in that year.

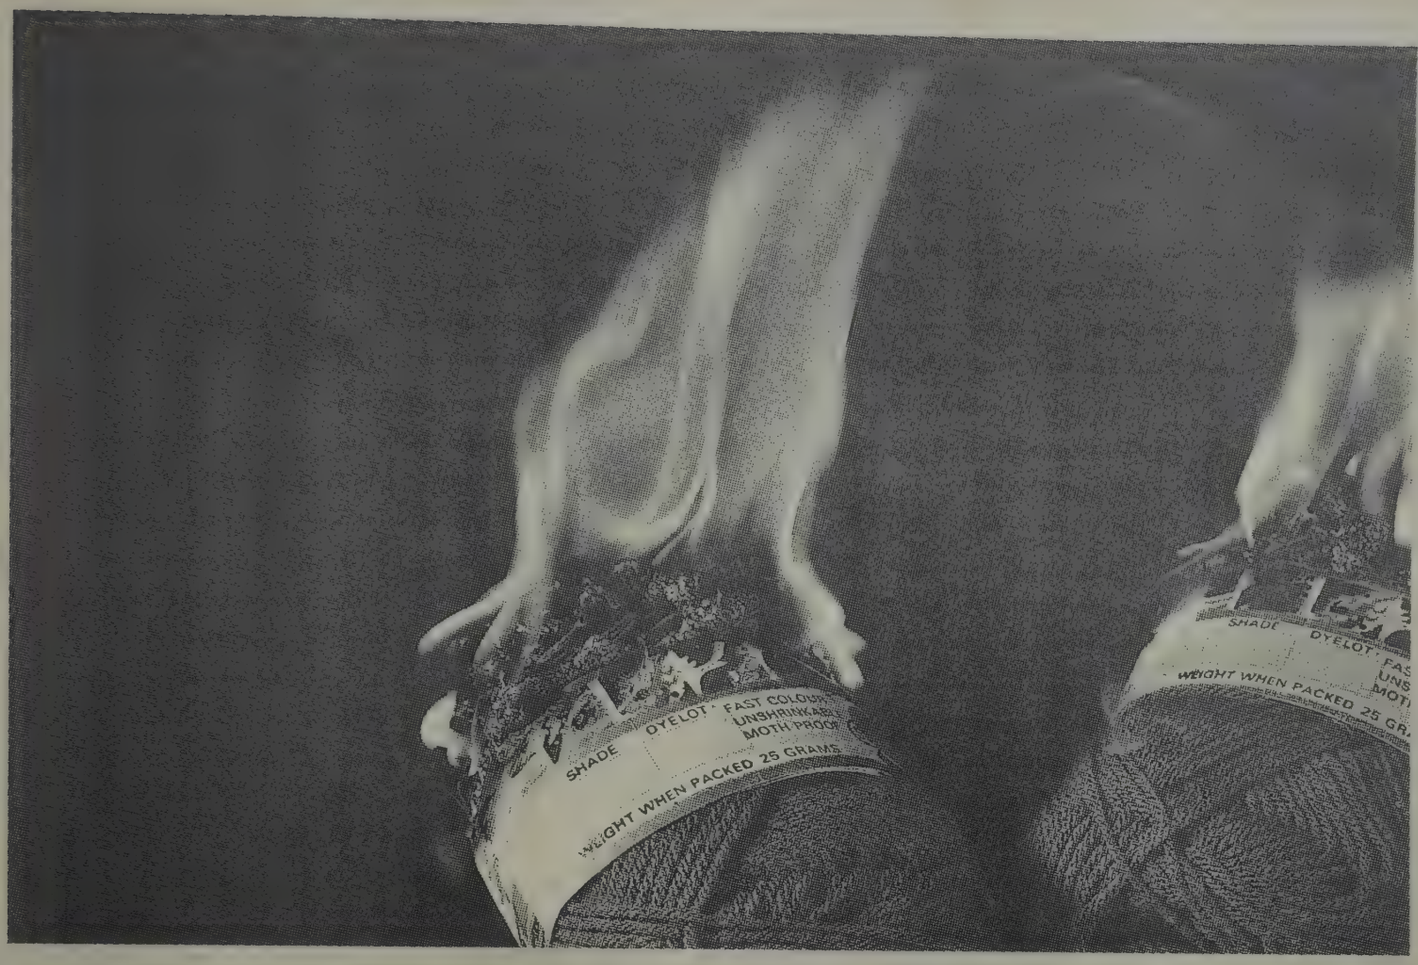
So, what does the management have to say about the engineering division? "Yes, we admit that some of our engineering units are in trouble," says Chakravarty. The engineering division is in poor shape because of many reasons. First, the market for its products is oversaturated. Second, the company faces "unfair" competition from many small units in the unorganised sector. And third, or so the management claims, most of the drawings and designs that the engineering division uses have been stolen. As a result, its products have absolutely no edge over those of its small scale competitors.

The tea machinery division is also in trouble. Clearly, the decision to get into that area was itself a faulty one. The market for tea machinery is seasonal. Demand picks up only in four months of the year — December to March. But a company like Andrew Yule does not operate with casual workers. So the company must pay full wages to workers even when there is no income from the unit for eight months in the year!

Poor performance

Another problem area for the company's engineering activities is its air pollution control division in Kalyani set up in 1980 with technical collaboration from Peabody Sturtevent of UK. According to company sources, the turnover from this division was only about Rs.10 crore in 1989-90 — much below expectations. Its main problem, says Chakravarty, is the unstable pollution control policy of the Central government. "But now, with the government's renewed thrust on pollution control, we can expect a faster growth for this plant," says Chakravarty.

In recent times, there has been some speculation in the Andrew Yule share. Around April 1989, rumours that Ramaprasad Goenka was buying into it, pushed the share price to Rs.39 from the usual Rs.22-23. Again, in early May this year, the share price went up to Rs.75 from the prevailing Rs.50 to.55, based on the speculation that Andrew Yule would pay good dividends in line with those declared by most tea companies that are now flush with cash. (At present the Rs.10 Andrew Yule share is quoting at Rs.44-46 in the Calcutta Stock Exchange.) For a government-owned company with only 12 per cent floating stock, this is one indicator of having arrived.



Will Andrew Yule be privatised then? This will remain an open question for at least the next few months. But as chairman Ray points out, the management couldn't care less. "Ours is a thoroughly professional set-up. Experts manage their own areas of operation. So, any change in the shareholding pattern will not affect performance."

The company's performance bears out Ray's claim. The pre-tax return on gross fixed assets has risen to around 11.5 per cent (post-tax return 4 per cent) and the gross margin is at an all-time high of around 11 per cent. Given the fact that the gross block has doubled in the past two years (from Rs.44.34 crore in 1987-88 to Rs.83.96 crore in 1988-89), and that the asset turnover ratio is only around two, the company will do much better as capacities added on in the past two to three years increasingly become fully functional.

The 100-year-old house of Andrew Yule, a relict of the Indo-British industrial adventure, has done well after nationalisation. It is poised to do even better in future. Whether it stays in the public sector or enters the private sector, its performance so far has made sure that it will always belong to the excellent sector.

■

KAVERI MITTRA

When you forecast a blazing year ahead for your product, you surely didn't expect this.

To be optimistic is indeed a positive attitude. Especially about the future. Record sales. Higher profitability. Better working conditions...

But while you look at all the things that should go right, it makes good business sense to consider what could go wrong. A riot that affects your office. A fire in the warehouse. A damaged consignment. An accident in the plant.

At United India, we've spent years understanding risk. And how it can be reduced, controlled and covered. Because, we believe that the greatest business risk you could ever take is to ignore the ones you already face.

Come, call on us at any of our 1120 offices. Together, let's make risk management work for you.

Risk management which denotes innovative covers, personalised service, and speedy settlement of claims.

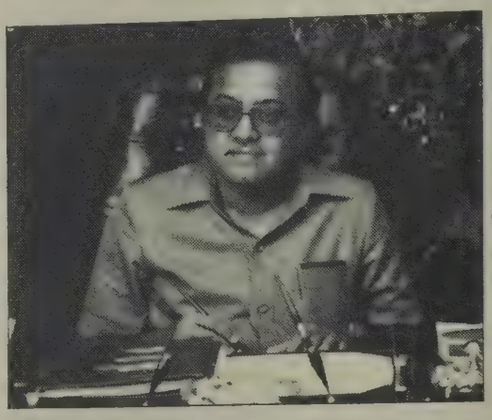
TAC

Merger of convenience

SPIC's takeover of this fertiliser company is expected to help both companies



A.C. Muthiah's problem days seem to be over, at least for now. Last fortnight, through SPIC, his Madras-based Rs.800 crore fertiliser giant, he gained management control of Tuticorin Alkali Chemicals & Fertilisers (TAC). For all practical purposes, TAC will be a wholly-owned subsidiary of SPIC. This is a long overdue takeover having been stymied for years for various reasons, mainly political. TAC, which manufactures ammonium chloride fertilisers and soda ash, was set up in 1971 and never made a profit except for a brief spell between 1986-89. With SPIC in control, TAC's fortunes are expected to take a turn for the better.

The authorised share capital of TAC is Rs.19 crore of which SPIC held 5 per cent, the Tamilnadu Industrial Development Corporation (TIDCO) 46 per cent and the general public the rest. SPIC has now acquired TIDCO's 46 per cent at a price of Rs.20 per share. An amount of Rs.1 crore has already been paid towards the total cost of Rs.12 crore. The balance is payable in annual instalments in five years with the outstanding amount carrying 14 per cent interest.

After the agreement, the board of directors of TAC has now been reconstituted. A nominee of TIDCO will continue to be chairman till the full payment is made. A.C. Muthiah (vice-chairman and president of SPIC) will be vice-chairman. The managing director of the company, an IAS officer appointed by the state government, has relinquished his post and M. Jayashankar, senior executive director, technical, has taken over as chief executive.

TAC was a part of the industrial development plans of Tuticorin, a coastal city in Tamil Nadu. The plants of SPIC, TAC and the heavy water project of the Department of Atomic Energy were all conceived to be interdependent on each other. TAC was supposed to have been a part of SPIC, which had a lot of teething troubles in its earlier days in the seventies and could not go ahead with the Rs.54-crore project. The state government stepped in and TIDCO promoted the project, with SPIC remaining a junior partner.

There was an understanding between the state government and SPIC that when SPIC saw better times, it would be allowed to increase its shareholding to 25 per cent. In 1985 when SPIC did stage a spectacular turnaround, and TIDCO was willing to transfer the shares at a negotiated price, the then chief minister M.G. Ramachandran would not take a decision. After his death in December 1987, when Tamil Nadu came under President's rule, it was expected that the deal would go through. It didn't.

Muthiah: problem days over

The much-discussed falling out between Muthiah and the state government effectively prevented any step towards a share transfer in favour of SPIC. In fact, Muthiah, who had been the chairman of TAC since its inception, stepped down in 1990.

TAC's problems have centred around ammonium chloride — the union government would not include it in the retention price scheme. It was finally brought under the subsidy scheme in April 1985, and as a result, the company received Rs.24 crore as subsidy up to the end of 1987. TAC was able to wipe out most of the backlog on its interest payment and make a net profit of Rs.4 crore, on a turnover of Rs.39 crore. The net profit was used to reduce the debit balance of Rs.6.7 crore. It was hoped that the losses would be wiped out by 1988.

However, events turned out differently. Till 1988-89 the company could show only a marginal profit. "The year 1989-90 was one of our worst years," says Jayashankar. "The plant had to be shut down for four months because of non-availability of imported ammonia. 1990-91 was also bad, with a shortage of ammonia."

To make matters worse, the government also changed its retention price policy for ammonium chloride, which reduced the retention price drastically. The new retention price, which was announced in March 1990, was made retroactive from 1988. The company, therefore, has to make a refund of Rs.3.83 crore for the year 1990-91. For the twelve months ended March 1990, the turnover was Rs.38.60 crore, and the residual loss Rs.1.46 crore. The accumulated losses are around Rs.3 crore. The accounts for 1990-91 have not been finalised, but they are not expected to be much better.

Once TAC's operations are integrated with SPIC, many improvements are possible. The two plants are adjacent to each other in Tuticorin and have many common facilities. Carbon dioxide, a raw material required by TAC, is supplied by SPIC.

SPIC produces ammonia in-house for its urea and DAP (di-ammonium phosphate) fertilisers. At a pinch SPIC can rationalise its operations to supply TAC with ammonia whenever there is a shortage.

SPIC will soon be implementing its modernisation programme. Among the other things planned are, building up adequate storage facilities for handling imported ammonia and upgrading the production of ammonia with foreign technology. This will come in handy for TAC as well. SPIC is also aiming at putting up a new 600-tonne ammonia plant which can also be utilised by TAC and the heavy water plant.

As both SPIC and TAC sources point out, there are other areas of commonality as well. SPIC has diversified into the manufacture of caustic soda. Soda ash produced by TAC, liquid alkyl benzine LAB produced by another SPIC promoted company Tamilnadu Petro Products, and caustic soda are all required by detergent manufacturers. Both caustic soda and soda ash are salt based. "We can go into salt manufacture and maybe marine chemicals," says Jayashankar.

Now that SPIC will be taking an active interest, TAC will have a much stronger lobby at the Centre to make representations regarding changes in the retention price. If there is no more political interference, the SPIC takeover of TAC may be the best thing that has happened to the company in recent times. ■

The Space Age Radial that uses technology from B.F. Goodrich – the company that manufactures tyres for the Space Shuttle Columbia. ☐ So get ready to discover an out-of-the-world driving experience. With Maruti 1000. On MRF ZIGMA, of course.

MRF ZIGMA

THE SPACE AGE RADIAL

Our commitment to million

At the National Housing Bank, our commitment knows no boundaries.

Because we understand the diversity called India.

Where different people have different needs. Different limitations. And different capabilities.

And where our objective is to help each one of them to get a house of their own.

An inspiring challenge

NHB was thus born of a commitment to the housing needs of an entire nation. Two years ago.

As a wholly-owned subsidiary of the Reserve Bank of India.

An apex institution to promote, strengthen and support the country's housing finance system.

Working towards the goal of "Shelter For All". With the motto "Small Man First".

The task before us is truly stupendous.

What with a colossal shortage of housing. Scarce buildable land. Escalating construction costs. And housing becoming increasingly unaffordable for a large segment of our population.

Making shelter possible on this scale is a daunting challenge.

But for NHB's band of dedicated professionals — drawn from various disciplines — it is the life-force of their mission.

A dedicated commitment

NHB's flagship programme — the unique Home Loan Account Scheme — is a reflection of that commitment.

A scheme that makes owning a house a possibility for every Indian.

But NHB is also promoting the cause of housing in other ways.

By refinancing loans to individuals through banks, housing finance companies and cooperative institutions.

Facilitating project loans for land development to public agencies, professional developers and cooperatives.

Supporting rental housing projects.

Assisting building material industries.

In fact, NHB has already disbursed over Rs. 440 crores. To help provide shelter to over one lakh eighty thousand families.

Our sights are set even higher in the years to come.

On the long journey ahead that we are determined to complete.

Housing for millions. We're making it happen.

Chaitra-D-NHB 2090

INDO-FLOGATES

A successful venture

This obscure enterprise of the Bajorias — making slide gates for steel plants — is paying dividends. And now, it is setting up a new unit to make heat efficient refractories

For generations, the Bajorias of Calcutta have been making money in jute and tea. Ten years ago, they bought into Marshalls of Madras who manufacture cranes and road-building equipment, and followed it up with a controlling stake in the automotive battery manufacturer, Willard India. And six years ago, rather quietly, they also got into a business that is obscure and unknown even now as it was then — manufacturing sliding gates that control the flow of molten metal in steel plant ladles. And Indo-Flogates, the Calcutta-based company the Bajorias set up with a Rs.20 lakh share capital in collaboration with Flogates Ltd of Sheffield, UK has proved to be a winner. On a turnover of Rs.21 crore last year, it earned a gross profit of Rs.2.6 crore.

Bajorias control 65 per cent of Indo-Flogates' equity, while the Hinckley family-owned Flogates Ltd, the remaining 35 per cent. Neither of the families has any plan to take the company public. Says managing director Shishir Kumar Bajoria, "It has been a policy of the Hinckleys not to depend on even bank financing. We are also committed to keeping this company closely held and it will not even depend on bank financing."

Indo-Flogates manufactures the Flocon slide gate system, a state-of-the-art tap for molten steel developed by USX (formerly US Steel) and patented worldwide by their subsidiary United Engineers and Consultants. The new slide gates which are more efficient and safer for the teeming of molten steel has begun to dominate the market worldwide and Indo-Flogates is the Indian licensee.

The Indo-Flogates product has been installed in 163 of the approximately 216 ladles in the steel industry (excluding Tata Steel). But the sale of the actual slide gates accounts for barely Rs.2.5 crore annually for Indo-Flogates while the rest of the turnover is made up from the sale of consumable refractories that are used on the gates. The hydraulically-operated slide mechanism is a one time buy, but the Alumina graphite refractories have to be replaced after two or three uses. The company manufactures the components at its plant in Kalinga near Rourkela in Orissa while the alumina is imported.

Refractory material being pressed into shape;* (inset) *Shishir Bajoria

The company was originally set up in 1978 as an agent of Flogates UK, to sell slide gate mechanisms and consumables, and began manufacturing its own products in 1984. It today offers slide mechanisms for ladles ranging from 25-300 tonnes and has managed to garner about 80 per cent of the integrated steel plant market. It is now moving into in the mini-steel plant sector.

The main competitor of the company is in a rival slide gate system developed by Inter-Stop of Switzerland which is represented in India by the Bombay-based company Konin Koncast India. The Tatas produce their own slide gates and refractories through their subsidiary Tata Refractories, but cannot market them outside because of a patent problem. Says S.K. Mishra, general manager — marketing, of Tata Refractories, "Indo-Flogates has been a successful venture because a large number of its senior executives were formally with Tata Refractories."

Indo-Flogates is also in the process of setting up a new company called IFGL Refractories which will become operational by late 1992. With an investment of around Rs.15 crore, this company will tie up with Harima Ceramics, a subsidiary of Nippon Steel in Japan, and manufacture new generational heat-efficient refractories. An ICICI loan for the project has already been obtained. Indo-Flogates has also been negotiating the sales of its system to the Soviet Union. Two steel plants with a capacity almost double that of Indian production have been earmarked for the conversion to the Indo-Flogates system.

The Bajorias came into the steel business after evaluating projects in plastics, educational toys and food processing. "Steel is a commodity that has a stable demand. We serve the steel industry and our future seems fairly secure," says Bajoria. "Our management style has also undergone a change. We do not need a daily *parta* since the market is not volatile. Here we believe in encouraging professionalism and a long-term commitment towards our customers," he says.

The chief executive of Flogates Ltd UK, A. Thrower says that his company has a policy of developing local entrepreneurs. "We begin business through them in a small way and reinvest the profits in setting up manufacturing facilities. As a group, we do not believe in using other's money to do business but our group nevertheless has a turnover of 20 million pounds (Rs.72 crore) and about 60 per cent of the British steel market." He claims that his dealings in India had been fruitful with the investments paying off in terms of a high market share. "We gradually end up being a technology rather than manufacturing company with the actual manufacturing being done by companies like Indo-Flogates," he says.

Transfer Line — monocoque body shell welding.

Latest Mercedes Benz technology

That's what makes Tempo Traveller a world-class vehicle.

Ogilvy&Mather 7747

Whatever it is you're looking for in a vehicle, you'll find that the Tempo Traveller is unmatched. Whether it's in terms of performance, passenger comfort, safety, ruggedness, ease of driving or economy.

Because, after all, the Traveller has been designed by Mercedes Benz. And manufactured in a plant that's as advanced as any Mercedes Benz plant in the world, using the very latest automobile manufacturing technologies.

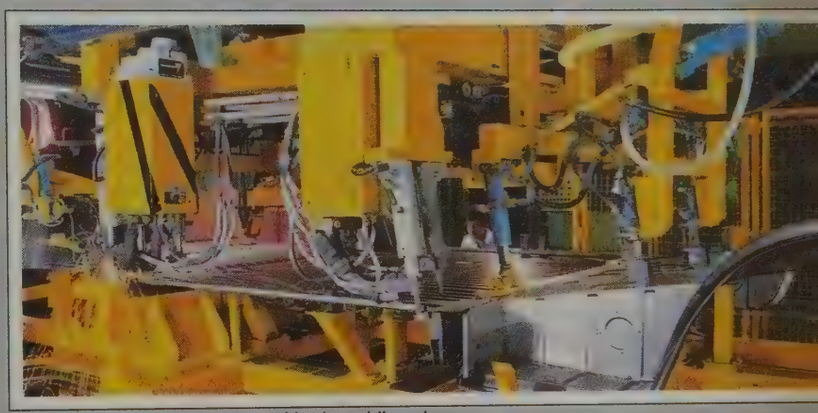
The fact is Tempo's state-of-the-art new plant at Pithampur has been set up at an investment of nearly Rs. 50 crores.

Extensive use of robotics and computer integrated manufacturing systems give the Traveller unparalleled welding precision and welding strength.

An electrophoretic dip process, immersion of full body, gives its monocoque body life-long protection against corrosion.

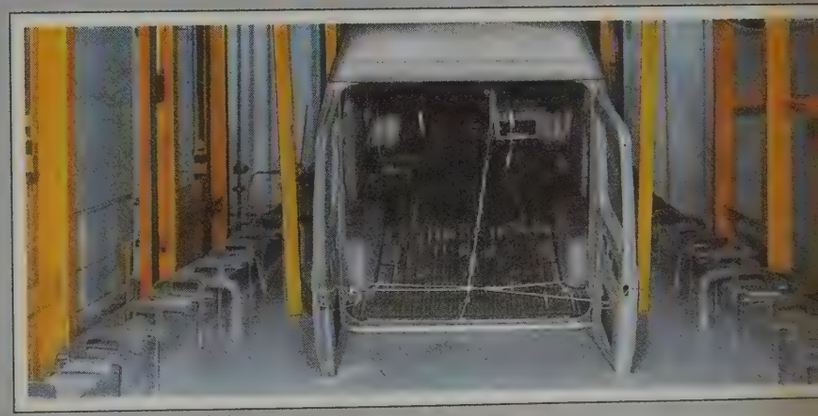
The Traveller plant's assembly environment is highly sophisticated. And its overhead conveyor system, synchronised with a revolving assembly carousel ensures a superb finish (as well as high productivity).

What's more, the Traveller is powered by a new 72 BHP Mercedes OM 616 engine which is extremely silent, extremely fuel-efficient, as well as extremely reliable. And its indirect injection system ensures low pollution.



The Traveller's gearbox too, is a result of high technology: a 5 speed full synchromesh gearbox which uses honed gears and a precise hypoid axle... to give you superb performance and longer component life.

Finally, driving the Traveller is as light and as much of a pleasure as driving a modern top-class car. (With a turning circle that is smaller than most Indian cars.)



Tempo Traveller. Whichever way you look at it, it's world class.

Modern conveyorised assembly lines.

Robotics & Computer Integrated body welding shop.

Electrophoretic dip painting process.

Tempo Traveller

Gives you the Mercedes Benz advantage.

STAR STATUS HOUSES

Brightest of the best

When four companies were recently honoured with "star status" by the commerce ministry, they became the envy of their peers in the exports business. The lucky four: Tata Exports, Allanasons, Britannia and Ganapati Exports. A new concept formulated in the 1990-93 export-import (exim) policy, the main objective of awarding star status is to enable the best exporters further augment their international business and strengthen their global marketing capability.

In order to obtain star status, the export firm should have an average annual net foreign exchange earning (NFE) of not less than Rs.75 crore in the preceding three years. The exports should be spread over a minimum of two export product groups and the NFE from a single product group should not exceed 75 per cent of the NFE prescribed for recognition.

Deserving status

"We worked hard and deserved the star status," says a Tata official. With total exports of Rs.276.05 crore in 1990-91, they are the leading exporters in India. Engineering products and projects formed over 60 per cent of their exports to 70 countries including some in the developed world. Tata Exports are the most prominent exporters of leather and leather products which forms around 25 per cent of their portfolio. The remaining constituted agro-based products, chemicals, pharmaceuticals, textiles and garments.

At the other end of the spectrum is Ganapati Exports, a little-known Calcutta-based company with a Rs.150-crore turnover and a NFE of Rs.80 crore in 1990-91. Its diversified product range includes marine products, diamonds, textiles, leather, engineering goods, minerals, steel and silk.

Ganapati Exports recently bagged a Rs.150-crore order for iron and steel bars for construction in the middle-east, competing with Tata Steel and global companies. Says Ashok Chowdhary, vice-president, exports, "Our prices prove to be the most competitive since we are a trading house with no manufacturing activities and hence no large overheads."

The third company, Allanasons, is not only the oldest, but also the most low profile. This fifth-generation company exports to 69 countries. "We are mainly thought of as a meat-exporting company but that is a misconception," says chairman Razak Allana. "None of our products contribute to more than 10 per cent of our total exports. In fact, for 1990-91, meat exports was only Rs.35 crore while coffee and tea exports brought in Rs.45 and Rs.40 crore respectively." Allanasons also exports processed foods, spices, cashew kernels, deoiled cakes, marine products, chemicals, leather products, textiles and engineering products. Last year the company had exported goods worth Rs.132 crore.

Unlike the other three winners, Britannia Industries Ltd is not exclusively into exports and has a strong presence in the domestic market as well. At Rs.74.5 crore, exports formed 23.67 per cent of their total turnover in 1989-90. But according to Sunil Alagh, managing director, "Exports are not merely an add-on to our activities, but an important area in itself." Britannia exports to around 15 countries. The largest chunk being taken up by soya-meal which forms 40 per cent of the total exports. Other exported products include cashew, biscuits, shrimps and agro products.

Allana: star status an encouraging trend

Additional benefits

Besides adding to the firm's prestige, a star status entitles it to several additional benefits. The firm can avail of special additional licenses for imports worth 15 per cent of the NFE. These licenses are freely transferable but the importer must be an actual user. They are valid for import of permissible non-OGL capital goods subject to the condition that the cost of any single item does not exceed Rs.50 lakh.

According to Ramu Deora, president, Federation of Indian Export Organisations (FIEO), such incentives are relevant and they do help performance. But exporters also feel that more incentives are necessary, especially non-quantitative ones like faster clearances. "One of our clearances has been held up for a year-and-a-half now, and delays like this put us at a disadvantage," complains a leading exporter.

The foreign exchange crunch in the country and the RBI restrictions have further aggravated difficulties. Says Deora, "Exporters have to import materials worth crores of rupees. Under the new restrictions, they will have to approach the RBI for approval before opening any letter of credit. This is not only cumbersome, but it also puts us at a big disadvantage with our competitors like Korea, China, Taiwan and Pakistan." Deora feels that all import requirements of the exporters should be fully exempted, if the government really intends to encourage exports.

Nevertheless, the honoured four are optimistic about long-term opportunities. As one prominent exporter puts it, "The country's share in world trade is only half a per cent — which should only grow." Schemes like star status are a way of making this happen, they feel.

But the schemes are not enough by themselves. Unless they are supported by an efficient and encouraging governmental machinery, there is no way in which India can become a rising star on the export front.

Skybag's been saying about you?)

Man on the move, you hate being made to wait for your own luggage. You love the breezy portability of Skybags' entire range.

You exude a friendly elegance. But the quiet toughness does surface when provoked. You're glad Skybags' tear-resistant fabric has been specially designed for that underlying toughness.

You believe in subtle yet strong bonds that stand the test of time. You secretly admire the unyielding stitching that fortifies every item of the entire range of Skybags.

You might set your work pace by the latest Swiss quartz. But your heart is tuned to the chimes of old times.

V.I.P. Skybags

Makes perfect business-travel sense.

We'll deliver. Wherever on earth. SKYPAK The worldwide couriers.

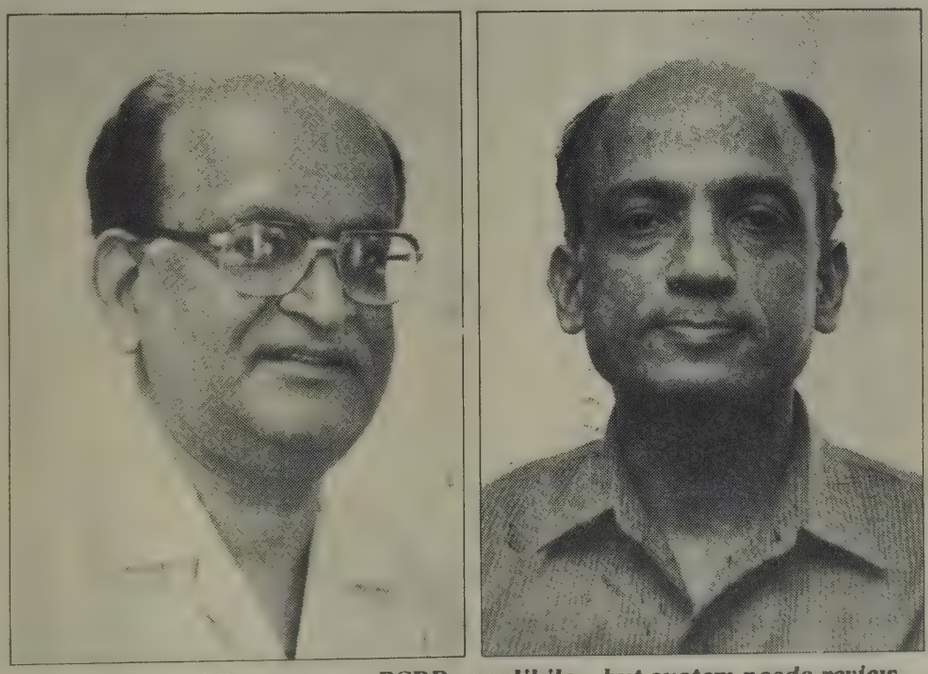
BSRB

Time for review

Large-scale recruitments in nationalised banks are certainly a phenomenon of the past, as having achieved the expansion objectives, the industry is now in for a consolidation phase. The RBI guidelines on recruitment have further slackened recruitments. From nearly 40,000 employees per year in the peak years of the expansion phase new recruitments have reduced to less than 1,000 employees per year at present. In such a situation, what is the future of the banking service recruitment boards — the centralised system especially created in 1978 to handle nationalised banks' recruitments?



Banking service recruitment boards (BSRBs) were created to relieve individual banks of the gigantic task of recruiting personnel during the high growth years following nationalisation. Starting with 7, the number of boards today has increased to 15. These boards handle clerical and officers' recruitments for all nationalised banks. Big-brother SBI has its own central recruitment board for officers' recruitment. The BSRBs also handle recruitment for regional rural banks. The costs of the boards, which are by no means small, are borne by banks in proportion to their deposit base.

Access to jobs

According to most bankers, the major advantage of BSRBs is that it provides the common individual access to employment opportunities in the banking system. S.S. Dabholkar, secretary, All India Bank Officers' Confederation, explains, "Before the boards were formed, recruitment in banks was a closed-door affair." People who 'knew' somebody in some bank were informally recruited in that bank. Although after nationalisation some banks introduced objective tests etc, there was no uniformity in standards. Also complaints of corruption and favouritism were rampant. Not that the boards have been successful in eliminating such complaints totally but most bankers do feel that corruption has been reduced significantly.

Says P.S. Deshpande, chairman, BSRB western region, "The process is so objective there is no scope for favouritism. Entry is purely on merit."Such tough competition has given banks more qualified employees. True, the process takes rather long — as much as 18 months — to complete. But given the advantages of centralised recruitment, banks prefer to reconcile to the delays. Deshpande says that they are trying to cut down on delays. But this seems unlikely with the increasing number of applications

According to Deshpande, "Although recruitment has declined in the recent past, the number of applications we receive has been spiralling over the years."

Ruknuddin and Doreswamy: BSRBs credibile... but system needs review

So long as unemployment increases, the inflow of applications is not likely to reduce. And along with the number. of applications, the costs of recruitment too have obviously increased. A large-size bank for instance, spends anywhere around Rs.35 lakh as its total contribution to the boards' machinery whereas a smaller bank's share is around Rs.10 lakh. Besides, one bank in each region also has to provide the infrastructure and the core staff for BSRBs.

And yet, banks are quite willing to bear these high costs. In fact, most bankers seem happy with the system. Says, K. Ruknuddin, deputy managing director, SBI, "Banks certainly don't grudge their contribution as the credibility of the system is in no doubt."

Increasing costs

Yet, what could be justified a few years ago due to the massive size of recruitment, no longer appears to be so. The same machinery to fill in fewer vacancies and the same process coupled with increasing costs, have moved up the per employee recruitment costs. With an increase of 60 to 70 per cent in the last three to four years these costs have gone up to Rs 4,000 to 5,000 per employee. Bankers seem to have given little thought to this and other issues. Undoubtedly, what was proper for the high-growth years, needs modifications.

Ruknuddin feels that the boards' expenditures need to be audited more closely. Says he, "Not that there aren't any audits now, but with management audits perhaps we could get better value for money." Bankers also suggest that rather than sharing the costs on the basis of deposits, sharing them according to number of recruitments per bank would be more rational. S. Doreswamy, executive director, Dena Bank suggests merging of some of the boards to cut down costs. However no banker suggests abolition of the boards.

The point, bankers stress, is as much of finding a better alternative as it is of the need for an open debate on the subject. Any system, however good, needs to be reviewed from time to time. The chairmen of all the boards do meet every quarter to decide on policy issues, and around once a year the finance ministry, BSRB chairmen and the personnel heads of banks also have a meeting. But says a senior banker, "The ideas thrown up at these joint meetings don't materialise into anything concrete." Perhaps it would be in the interest of the banks themselves to closely look at these suggestions and derive benefits.

The Board Of Directors Plans Another Mega-Crore Takeover

ur young executive talents are the stuff that future corporate leadership is made of. The young captains in today's executive force will tomorrow be the captains of industry. Making headlines. Scoring sensational victories.

Now they are busy learning many skills on the job. The simple solutions to complex problems. Those deft management strategems. The drive and stamina to scale the heights.

Ambassador is involved in the grooming of tomorrow's corporate achievers.

Sure, we make a wide range of executivewear, including accessories, for today's on-the-move executive.

But the commitment goes even deeper. We will be sponsoring events in management forums. Seminars. Quizzes. Debates. Management games. We will institute awards that recognise and reward our executive stars.

Just as we are increasingly encouraging potential in our management institutes.

All this so that the confidence of our young talents can take wing.

And discover new horizons of enterprise.

CREDIT-RISK EVALUATION

Rating for financial health

Given the increasing risk of default on corporate debt, deciding where to invest and how much to invest in different kinds of debt is no easy task for lenders. The host of company-specific and industry framework details that need to be delved into make the task infinitely challenging, as Credit Rating Information Services of India Ltd (Crisil) has found out.

An entrant in this complex but important field is Strategic Consultants. It has, in collaboration with New York University's Professor Edward Altman of the "Z score" and "Zeta model" fame, developed Strat-Risk Version 3.0, an empirically derived mathematical model that rates each company in the organised manufacturing sector for financial health.

Priced steeply at Rs.50,000 (as against *Capital Markets'* Z-score rater at Rs.15,000), this risk evaluation model uses Multi Variate Discriminant Analysis (MVDA), a statistical method that works as follows. Assuming that the population can be divided into two distinct sub-populations using a cut-off point, such as healthy and unhealthy companies, MVDA starts with a sample of known cases and attempts to isolate the factors responsible for the difference in the two groups. The chosen factors are assigned a weightage that reflect their importance to the differentiation.

In Strat-Risk's sampling technique, the sample of sick companies was matched as closely as possible with an equal number of healthy companies on the basis of scale of operations, nature of business and age. While the sample covers 22 industry groups, the model is developed over a complete business cycle and is tested for neutrality to cyclical influences.

The model emerges with eight factors (*see table 1*). Although the actual composition of the ratios cannot be disclosed, the method predicts future earnings and is therefore necessarily independent of parameters such as EPS and related parameters such as dividends, book value and P/E ratios. Given the company-specific data for the latest accounting period, the weighted average of the eight factors then produces a number or score, the higher the better with the cut-off point at zero. The trend of scores over the years reflects an improvement/decline in corporate financial health. In this manner, Strat-Risk's developer, Deepak Raja, claims that the model identifies the likelihood of default on debt well in advance of the traditional balance sheet test.

Competitor *Capital Markets'* Z-score rater is not based on any quantitative technique to determine the factors. Instead, users are asked to specify a maximum of 10 factors that they view as important for their problem at hand, which could include the study of solvency, and also give the weights or importance of each. The rater then prepares the relative Z-scores using *Capital Markets'*, database of 1,200 companies. Raja argues that his method eschews the subjective element of choosing factors.

How good is Strat-Risk? *Table 2* gives a set of Strat-Risk scores for a few BIFR companies under BIFR files of 1987 and 1988 which the model predicts is sick/near sick several years in advance.

Looking at the above data provided by Strat-Risk, the model works consistently for the first four companies, while for the rest there is an absence of consistently negative scores.

Business India also asked Deepak Raja for scores on a company whose fundamentals looked good a year or two ago but which Strat-Risk had identified as unhealthy. Raja cited the example of HCL for which his model has consistently thrown up negative scores of –0.6, –0.7 and –0.6 for the years 1987, 1988, and 1989. This is while Crisil downgraded its rating from A+ in November 1988 to BBB– in January 1991. On the other hand, how does one explain Gujarat Ambuja Cement which was assigned a Stratscrore of 0.29 in 1989 (a borderline case) while the Crisil rating of FAA in April 1989 was upgraded to FAAA in April 1991.

Strat-Risk took three years to develop and Raja has firm inquiries from at least four buyers. *Capital Markets'* Z-score has two installations — both outside India. Crisil, of course, is the most widely used. Which one should be used? The buyer is left to take the risk.

■ ALKA MUKUNDAN

Table 1

Factors that determine the rating of:

Strat-risk	Crisil
1. Leverage management	1. Business analysis-industry risk, market position of the company within the industry, operating efficiency, legal position.
2. Scale of operations.	2. Financial analysis: accounting quality, earnings' protection, adequacy of cash flows, financial flexibility.
3. Technological obsolescence.	3. Management evaluation.
4. Productivity of marketing/ administrative/ energy inputs.	
5. Manufacturing base.	
6. Net worth cushion.	
7. Manpower productivity.	
8. Operating (pre-interest and tax) profitability.	

Note: While Crisil rates a particular debt instrument without comment on its impact on existing debt, Strat-Risk measures potential insolvency for the company as a whole. Crisil works on borrowers' demand while Strat-Risk, which is based on published data, can be done unilaterally and is possibly more suitable for secondary market lenders.

The neglected sector

P.N. JOSHI

The commercial banking system in India consists of 28 public sector banks, 25 Indian private sector banks and 22 foreign banks. In view of the highly biased policy during the last two decades, the share of the private sector banks in the total business mix has gradually dwindled. Today, while public sector banks account for 91 per cent of the banking business, the remaining 9 per cent is almost equally shared by the private sector and foreign banks.

Branches of foreign banks are mostly located at metropolitan and port towns and invariably cater to the sophisticated business requirements of the elite segment in the corporate sector. The private sector banks, on the other hand, function in far off rural and semi-urban localities, catering to the banking requirements of the masses in their jurisdiction. Having developed the technique to cater successfully to rural requirements, these banks have carved out a niche for themselves in the area of finance, despite the onslaught of the giant government banks.

Objective fulfilled

During 1989-90, the 25 private sector banks increased their equity by 50 per cent from Rs.20 to Rs.30 crore. At 19 per cent, their rate of growth of deposits was marginally higher than that of other banks. Published profits rose from Rs.18.85 to Rs.22.38 crore, registering an increase of 19 per cent. They have thus achieved the social objectives they set for themselves.

It is interesting to note that this objective of "mass banking" had to be *thrust* on the nationalised banks. The private sector banks have been fulfilling this objective right from their inception, since they are "at home" with the sons of the soil. Much of the service rendered by them, however, goes unnoticed.

Ever since the nationalisation of the 14 major scheduled commercial banks on 19 July 1969, the entire thrust of the banking policy has been to project the functioning of public sector banks. The policy documents, speeches by the concerned authorities, articles, write-ups, etc, in fact the whole trend of thinking consciously or unconsciously, is concentrated on highlighting the role of public sector banks in economic development. Promotional literature projecting the yeoman services rendered by public sector banks in their effort to bring about social transformation through economic development has been released in prodigal amounts. In the process, great damage was unwittingly done to the nascent private sector banks.

Under these circumstances, it is surprising that these banks continue to survive and even thrive despite utter neglect. They draw their strengths from the strong foundations on which they stand and also from the loyalty of their staff and their devoted service to the clientele. It is an acknowledged fact that among the different groups of banks, customer service is the best in the Indian private sector banks. While the foreign banker shuns the small investor and the government banker despises him, he is welcomed and cared for at the private sector bank. It is also true that the small and medium scale businessmen and the large majority of the middle and low income group depositors feel "at home" with these banks. Not surprisingly then, the private sector banks easily achieve the targets — of lending under priority sectors, weaker sections, direct finance, agriculture, etc — that they set for themselves.

Service unnoticed

Even so, their achievement has rarely been noticed, much less appreciated. There is a discernible indifference to their very existence. For instance, at a recent meeting of chairmen of financial institutions and banks convened by the RBI, the chairman of the meeting welcomed the heads of financial institutions, the State Bank of India and the nationalised banks but completely left out the chairmen of private sector banks! For the credit policy meetings convened by the RBI and held twice a year in April and October, private sector banks are not invited to participate, although they are required to adhere to the policy prescriptions in toto.

It is the indifference to the Indian private sector banks that led to policy discrimination in the Agricultural and Rural Debt Relief Scheme of 1990. The scheme was made applicable to public sector banks and co-operative banks but not to the private sector banks. Here again, the omission may not have been deliberate, at least not initially as it has become customary to ignore them.

But what is intriguing and even irritating is the fact that despite repeated requests by the private sector banks to make the scheme available to their borrowers, this request has gone unheeded. Under this scheme, it is the farmer who borrows cash who is benefitted. It is also the farmer who does not get the benefit under the debt relief scheme merely because he borrowed from a bank not owned by the government. What is annoying is the fact that the plea of private sector banks is held valid and appreciated in several quarters, yet, no action is taken.

This indifference has also been responsible for non-acceptance of guarantees issued by the

The author is chairman of United Western Bank Limited

(Source: Indian Banks' Association)

Indian private sector banks not only by government departments and public sector undertakings but, what is worse, even by certain private corporate entities. The acceptance of guarantees should basically be dependent upon the financial viability of the guarantor and not on the ownership of the guarantor. At a time when several socialist countries are becoming more liberal by introducing privatisation, it is ironical that in our country even private sector corporations should look down upon the guarantees issued by the private sector banks.

Operational irritants

Recently, a private corporate body insisted that its client obtain a guarantee from a nationalised bank. Such operational irritants dog the private sector banks every day. And yet, they doggedly continue to perform their role of serving the community, particularly the middle and lower class and the small businessman.

Again, the policy indifference prevents non-resident Indians from keeping their FCNR deposits with private sector banks. If only a climate could be created where all commercial banks are equal, controlled and regulated as they are under the RBI Act, 1934 and the Banking Regulation Act, 1949, the lot of the private sector banks could have been better. But, in their anxiety to justify nationalisation of banks the authorities have overlooked the private sector banks. This has naturally led to discrimination against them.

A typical instance is RBI's branch licensing policy. In the latter half of the eighties, the policy thrust was directed first at opening branches of regional rural banks (RRBs), followed by lead banks, ie, the major commercial bank in the district and then others. The rationale behind giving first priority to RRBs was that they understood rural needs perfectly. The Indian private sector banks too work in the same direction as RRBs. Yet, in the branch licensing policy they do not figure even in the second position in the list of preferred institutions.

The virtues of privatisation are being recognised even in communist countries, but in a mixed economy like ours it is strange that private sector banks get step-motherly treatment. Objectively stated, a bank and its efficiency should be judged on the basis of its quality of assets, financial strength, quality of service and profitability. Instead, ownership is the criterion for discrimination in treatment. Hopefully, better counsel will prevail and, before long, private sector banks will get their due.

The IIM Ahmedabad imbroglio

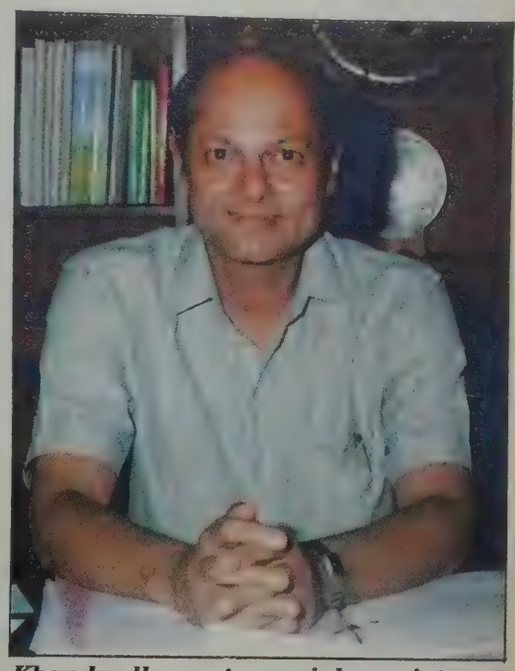
The two-year-long appointment controversy surrounding the prestigious Indian Institute of Management, Ahmedabad, seemed to have been resolved on 4 May 1991, when Pradip N. Khandwalla took charge as the institute's sixth director. His supporters claim that Khandwalla, the Larsen & Toubro chair professor of organisational behaviour at the institute, was recommended for the job in July 1989 by a search committee set up to find a new director when the incumbent N.R. Sheth retired early in the same month. And that Sheth was granted two extensions only because the government sat on the committee's recommendation.

V. Krishnamurthy, the then chairman of the institute's board of governors, P.V.R.N. Iyer, executive director, Rohit Group of Enterprises and Ashok Chandra, the then educational adviser (technical), ministry of human resources comprised the three-member committee which ultimately selected Khandwalla from about 50 applicants. The HRD minister in the Congress (I) regime, claim Khandwalla's supporters, then approved the proposal and forwarded it to the appointments committee of the cabinet for the final nod. But the Congress defeat at the hustings, they say, put the appointment on hold.

Royalty earnings

A.P. Venkateswaran, the last chairman of the institute's board of governors, however has a different story to tell. He says, "Unfortunately, due to certain allegations of financial impropriety against him which came up at that time, neither the Congress (I) government nor the Janata Dal government accorded their approval to his appointment."

Khandwalla's supporters say this is untrue. They claim that "some groups at the institute with vested interests" tried to stymie Khandwalla's appointment on grounds of financial impropriety "only in March 1990" by informing the board of governors that Khandwalla had not given to the institute the mandatory one-third share of his royalty earnings from a book he wrote for the World Bank in 1985. Khandwalla in turn claims that royalty earnings are not subject to the institution's code which, he says, applies only to consultancy and research earnings.



Anil Bhatt, a professor — at the institute, says, "Royalty earnings have never been shared." However, another faculty member says: "It's a question of interpretation." But Bhatt stresses the fact that the issue had been resolved earlier by Krishnamurthy who had stated that the episode should not be held against Khandwalla's appointment.

The controversy only got a new lease of life, say Khandwalla's supporters, because after Venkateswaran became chairman in October 1990, he re-opened the issue "using this allegation as a pretext". Venkateswaran disagrees. He says, "I was requested by the government to make an on-the-spot assessment and submit my considered views. After making an assessment, I suggested that it would be desirable to constitute a fresh search committee without prejudice to any of the candidates who had been considered earlier. I thought this would dispel the cloud over the selection, to the satisfaction of all concerned. I felt that the credentials of a director should not only be beyond question but must appear to be so."

Khandwalla's supporters have no reply to Venkateswaran's claim that his proposal was held up because first, the V.P. Singh government fell and second, Chandra Shekhar's government did not respond till well after its own resignation in March this year.

The timing was particularly inappropriate, Venkateswaran points out, because it was in direct contravention of the President's directive that all senior level appointments, other than those in the career services, would be held in abeyance till the new government assumed charge after the elections. Khandwalla obviously disagrees: "That was an extreme posture, for it placed a question mark on many other recent senior appointments."

Incensed by Venkateswaran's refusal to issue an appointment letter to Khandwalla, the Chandra Shekhar government relieved him of the chairman's post and appointed S.K. Khanna, vice-chairman of the University Grants Commission, as his successor. Khanna's immediate task, after he assumed charge on 4 May, was Khandwalla's confirmation as director. The timing showed up the government's hand again. Venkateswaran had called a special meeting of the board of governors on 6 May to discuss this thorny issue. But the government was not willing to let the governors reach an independent conclusion.

Khandwalla: controversial appointment

Khandwalla's supporters say his appointment has been welcomed because though his predecessor Sheth was a fine academician, he was a poor administrator. (Sheth, himself, does not accept this: "I ran the institute well.") They also point out that Khandwalla is eminently qualified for the job. A graduate of Bombay University and a chartered accountant, he has an MBA from Wharton School and a PhD from Carnegie-Mellon University, both in the US.

Political culture

On being asked what he felt on becoming director Khandwalla, who joined the institute in 1975, says, "I am infinitely relieved but sad that the process had to be so surgical. After all, the removal of a chairman of the institute's board of governors is a most unfortunate event." Paradoxically, Venkateswaran vehemently agrees: "The political culture of out-of-turn gas and telephone connections has now been extended to cover academic appointments. If this is to be the norm of conduct, the future would indeed appear to be bleak." Sadly, the origin of the imbroglio — Khandwalla's alleged financial impropriety — was ultimately overshadowed by the government's complete disregard for norms and procedures. So clearly, what arouses concern is not the fact of Khandwalla's appointment but the manner in which it was pushed through.

VOLTAS LIMITED
Appliances Business Group 19, J.N. Heredia Marg, Ballard Estate, Bombay 400 038. Phone: 2618131

Until now you could not get an air conditioner as advanced as this

For some, 'good' is not good enough. At Voltas, we felt it was high time someone designed an air conditioner for them. Using the latest innovations in technology to battle compromise. We've done a thorough job of it. Starting with a powerhouse compressor designed to convert every unit of electricity into maximum cooling. Aided by 'triple-ripple' cooling fins to maximise heat exchange. And the new extra-drive fan featuring 3-speed control. Every detail finely tuned, right down to the unique 'slip-out' fabric filter. The result is stunning. Cooling that is quick, constant, noiseless... and evenly distributed. The New Crystal Air Conditioner from Voltas. Now you don't have to make the best of what you have. Simply have the best.

EDITOR'S CHOICE

What's brewing at *The Times*?

Newspapers and the morning cuppa have always been associated with each other. But what is the *Times of India* group doing marketing tea?

The well-established daily has, since 4 May, devoted huge amounts of advertising space to promoting its new limited edition tea, Editor's Choice. The seven-ad campaign is expected to use about Rs.22 lakh worth of advertising space in the lean season. The ads feature Vimla Patil, who has been associated for decades with the group as editor of *Femina*, Rauf Ahmed, editor, *Filmfare*, Anil Dharker, executive editor of *The Independent* and Pritish Nandy, editor of *The Illustrated Weekly of India*. All of them, if the ads are to be believed, enjoy a special Darjeeling tea that costs Rs 625 for 200 gm. The copy, written by Sundar Rao, assistant manager, modernisation, was cleared by the editors concerned.

"The brand name has emerged as the most coveted corporate asset of all," said Arun Arora, modernisation director, in a circular dated 30 April addressed to the editors, directors, general managers and branch heads of the organisation. It also said that a great deal of consumer loyalty and goodwill surrounds a successful brand name, which is almost seen as the direct source of much of a company's profit. Developing this brand name and image was one of the tasks the modernisation department took on, after making some headway with its original job of upgrading hardware technology.

For the connoisseur

"Earlier, we had production-based marketing. Whatever was produced had to be marketed," elaborates Arora, ensconced in the newly renovated Times building in Bombay, which now looks glitzy enough to be a multinational's headquarters. "The new trend is to feel the pulse of the market, produce what the market needs. The market looks to us for leadership." Is it the newspaper or the tea market he is talking about?

"Our objective is not to sell tea," he explains. "We don't consider the tea business as an option to newspapers. Our concern is with the goodwill — something similar to what we call brand equity. *The New York Times*, I'm told, came out with an umbrella. It's just that in India we were the first to do this." Adds Rajesh Iyer, project manager, Editor's Choice: "When we brought the Yves St Laurent show to India, people wondered if we were going into the fashion business!"

The 150-year-old newspaper group has, in the last few years, done a great deal to rejuvenate its image, involving itself in such diverse programmes as the Amnesty Show at Delhi featuring rock singer Bruce Springsteen, a *Sampurna Ratri* in Ahmedabad which drew a 2,000 strong audience of music lovers who left after breakfast, and an art exhibition at the Victoria Terminus station in Bombay. "The group has done a lot for connoisseurs," says Iyer, "and we thought tea was an exclusive, high-involvement product. Even its preparation is elaborate if done right, unlike instant coffee."

Deepak Tolani

A 'coveted corporate asset'

"If you're going to boil it with *masala* and milk, you might as well use ordinary CTC tea," adds Arora, explaining that the fragrant leaf tea needed to be made in a warm kettle, and brewed in boiling water with two spoonfuls for three people, with very little milk.

It is this fragrance which is supposed to be the special feature of the tea. As many as 23 Darjeeling teas were sampled, both in-house and outside. Two Calcutta-based tea tasters were also involved. The blind sampling was done over four months, and almost everybody voted for this particular variety. "We even bought a sample which cost Rs.5,000 per kg but that didn't figure anywhere in the reckoning," says Arora. Editor's Choice, after packaging, works out to Rs.3,125 per kg. Arora refuses to mention the exact price of the original tea, saying that the margin is very low. The tea, he adds, is more expensive than the packaging, which has been designed by the Times group.

Hand-made caddies

The tea is packaged in porcelain and brass, hand-made caddies, distributed in two 100-gm foil packs per container to preserve the freshness. A total of 1,800 such caddies have been released in the market, available only at the Oberoi's outlets in Bombay, Delhi and Calcutta. *The Times* wanted the "finest" outlets, and it so happened that while the Taj people promised to get back, the Oberoi's response was quicker.

"We agreed to sell it only if it was truly exclusive," says Vineet Kapoor, food and beverage manager at The Oberoi in Bombay. The Oberoi arranged its own tasting sessions. "I've tasted a lot of fresh tea," says Harsh Varma, rooms division manager, Oberoi Towers, "but this bouquet was completely different." It is, he acknowledges, too expensive to drink every day.

At least one editor of an afternoon newspaper in Bombay has pointed out in his paper that, at Rs.625 for 200 gm, no editor will be able to afford it. "*The Times* editors can certainly afford it," declares Arora. Can anyone else? As it turns out, according to Arora, 200-odd packs have been sold. Kapoor is hoping stocks won't sell out in a hurry, because he gets free mileage every time the ad appears.

How does the old guard of *The Times* react to marketing ploys which have nothing to do with traditional journalistic values? "We couldn't talk to everybody," says Arora. "The campaign would become too big and boring, and anyway, it is difficult to get editors together for the ads. So we decided to involve only editors and executive editors in Bombay, and not the resident editors."

But if Pritish Nandy, known for his attention-drawing ability, approved of the scheme, did the more conservative Ram Tarneja? Arora avoids a direct answer to the question — and admits a few minutes later that he evaded it!

■ MENKA SHIVDASANI

"What's the best way to get to London?"

"Via KLM. Straight to Heathrow."

If you're flying out of Delhi into London, only KLM takes you straight to Terminal 4 at Heathrow.

And even if you are going further West, must you land at Gatwick? Miles away from most connecting flights?

Not if you fly KLM. Fly the world's first airline. And you not only get service that's reliable, caring, punctual and friendly. But you also get to Schiphol, the world's best airport, which offers you unmatched connections to over 150 destinations in 77 countries worldwide. And from June 19, KLM will give you even more – more seats, more comfort and more convenience, with its new turnaround flights.

Fly the Difference KLM

It's the least you could expect from your favourite airline.

Taking on the pirates

Growing along with the information technology industry in India is the menace of software piracy. American companies estimate the loss in revenue due to piracy at $10 to $12 billion annually. By contrast, the total extent of piracy in India is still small; estimated losses to American companies in India is put at $38 million annually. Software manufacturers, both international and local, have now mobilised to protect their products. Six of the world's largest software manufacturers have got together and set up The Business Software Associates (BSA), in a bid to tackle the problem worldwide. The recent raid on SKW Enterprises, a Delhi-based bookseller and software vendor, on 19 March was BSA's first operation in India. Software is governed by copyright acts all over the world. In India an amendment to the copyright act, in 1984, extended protection to computer software as well. India is also a signatory to the Berne convention which provides copyright protection to other member countries. All international manufacturers believe the law in India has enough provisions to combat piracy, but the problem is implementing it.

Mehta, Patel and Pawar: coming out openly against piracy

Gathering momentum

In India, the movement against software piracy is gradually gathering momentum. Two premier associations of the information technology industry, MAIT And NASSCOM, have jointly set up the Indian Federation Against Software Theft (INFAST). Modelled on the British Federation against Software Theft (FAST), INFAST will work with FAST and with Business Software Associates towards implementing software copyright.

Manufacturers will assign rights to INFAST who in turn will implement them. At present anybody violating the copyright act can be criminally prosecuted — the minimum penalty is six months in jail. INFAST plans to, first, only bring civil proceedings against violators. It is only if that fails that they will resort to criminal proceedings.

Software piracy has been a problem since the advent of the PC (personal computer) back in 1975. It is so prevalent that it is hardly considered a crime by most users. The ease with which much of the copying is done makes it even more innocent. Hardware manufacturers are major culprits; when a PC is bought, along with it comes a set of pirated software loaded onto the hard disk. Unlicensed copies are available from a number of other sources as well. In Bombay's Lamington road, software retailers provide catalogues of software available. Shirish Patel, prime mover and chairman of INFAST, says, "Sidekick, which costs Rs.4200 for a legal copy, can be bought for Rs.200 to 300 along with manuals."

End users are another source of copies. Most large corporations buy a few copies of legal software and then duplicate them on other machines.. A different route is through colleagues and friends who bring in the software from abroad. "Eighty per cent of all personal computers use at least one piece of software which is pirated," says Harish Mehta, president of NASSCOM. Of an estimated 2,75,000 PCs installed in the country today, Ganesh Krishnamurthy, country manager for Lotus Development Corporation in India, estimates that "a total of 2,00,000 use Lotus 1-2-3 and only 13,000 use legal copies." AutoDesk has 3,000 licensed sites in the country, which is estimated to be only 10 per cent of the installed base.

Prices are cited as a major reason for software piracy in the country. The prices of hardware and software are totally out of sync. Till Autodesk launched a special discount scheme, AutoCad cost Rs.75,000, excluding marketing and other costs. For a company or an entrepreneur which used a PC/AT that costs Rs.45,000, the price was prohibitive. "If the consumer thinks that the cost is unfair, he pirates," says L.C Singh, marketing manager at Tata Consultancy Services.

A problem of availability

Availability of software is another problem. Until, three years ago, none of the better known software products were available off the shelf. One had to place an order and wait for anywhere between two to three months to receive the product. K.L Vindal, deputy general manager for the information systems division of Hindustan Petroleum, cites a different reason, "It wasn't until a year and half ago that we started buying legal software. Prior to this even if we paid for a legal set we got pirated copies."

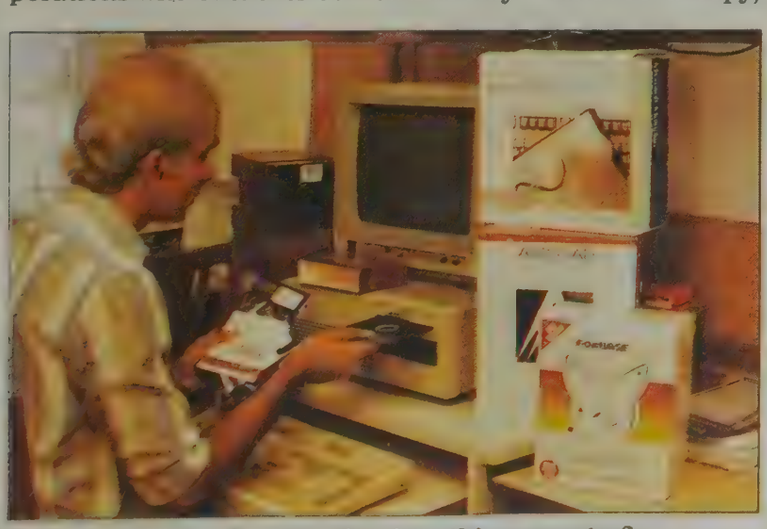
Today, such excuses won't wash. International software giants have drawn up detailed plans to counter this problem. Collaborations with domestic software companies have been set up. Some of these are: Microsoft Corporation & Autodesk with Tata Unisys, Lotus Development Corporation with Tata Consultancy Services, Novell Inc with Hinditron. Through these tie-ups, software should be available off the shelf.

The rampant piracy has stunted the domestic software industry too. Software

manufacturers are unable to recover their initial investment, as users opt for cheaper pirated versions. Patel, of Shiresh Patel & Associates (SPA), a consulting and engineering company which develops engineering design and drafting packages, narrates an illustrative experience, "We sold a PERT package for Rs.9,500 to the Nhava Sheva Port Trust. A few days later the EDP chief asked us why he should buy our software when the Harvard Project Manager was available free. We tried to convince him that the product was pirated and ours had superior features, but in vain. He returned our package." SPA's software project is presently on hold.

Identifying software piracy as one malaise affecting the information technology industry has stirred it into action. "While studying the reasons as to why the software industry has failed to grow at the desired pace, we came to the conclusion that a strong domestic base was a prerequisite, but piracy had affected this," says R.S. Pawar, president of MAIT. As worldwide, the trend is towards a packaged product based game, the only way is to come out openly against software piracy, he says.

Educating users



The next phase in INFAST's strategy is to educate users on the advantage of buying legal software, especially the technical support and documentation that comes with it. Says Patel, "These manuals are so comprehensive. Step by step, every nut and bolt is described." The manuals and services like 'hotline' and 'upgrades' all help in optimising usage of the product.

Weaning away users through price discounts is also part of the strategy. Lotus was approached by a number of large corporations who own over 50 PCs and only two or three legal copies. Buying copies of the latest Lotus 1-2-3 Version 3.0 at Rs.12,500 a piece would be prohibitive." So we offered them the earlier Version 2.01, at a substantial discount, for Rs.5700 a copy," Krishnamurthy says. Over 1000 copies were sold under this scheme. Similarly AutoCad is available at Rs.50,000 a copy in India only. Will the moves to end software piracy prove effective? Though a postive answer cannot be immediately given, the indications are that sales of legal software packages are improving, albeit slowly. Sonata, the distributors for FoxPro and Foxbase, sold 600 packages in only six months and expect to double sales this year. Other distributors have also indicated growth rates ranging from 30 per cent to 100 per cent.

A crackdown on piracy will not improve sales of international products dramatically. Most of the small to medium companies are likely to move to indigenous software manufacturers because their products score on price and provide features suitable to them. This shift in demand will give a much needed fillip to the demand for domestic software products.

Piracy is too entrenched to be removed quickly. But the message is clear. Neither the domestic computer industry nor the international software manufacturers are planning to stand idle while the problem grows. Indian copyright laws possess enough provisions to prosecute offenders. The point is now to enforce them. ■

Introducing

Mymoney

The deposit you can draw on without paying to use your own money.

ANZ Grindlays Bank has introduced Mymoney in answer to a frequently asked question "Why should I pay interest to use my own money?" And that is exactly how each of us feel when we draw against our fixed deposits. Whether it is to buy something special, go on a vacation, meet a medical emergency or even to take care of unbudgeted expenditures.

Mymoney is the way to deposit your earnings from share dividends, bonuses and other annual payments. Perhaps even gift money!

This is how Mymoney works. The amount you save is held in deposit units of Rs. 1000/- each. You can draw one or more deposit units of Rs. 1000/- each. The rest of your Mymoney deposit continues to earn the same rate of interest. (Deposit units withdrawn will be treated as partial withdrawals and interest thereon will be subject to directives issued by RBI from time to time.)

Mymoney is your money, designed to give you high returns in interest plus the freedom to draw from your deposit.

Make Mymoney a part of your saving plan. Walk into any ANZ Grindlays Bank branch convenient to you and meet our Customer Services Officer or telephone us at the numbers given below or find out all about Mymoney by mailing this coupon to reach Marketing Department, ANZ Grindlays Bank plc, 132 Mint Road, Bombay 400 001.

ANZ Grindlays Bank

"You are right : Why should I pay for what's mine?"

I'd like to know how Mymoney can earn higher interest on my deposit. Please send me more information.

ISO 9000

Where quality is all

Only two Indian companies have so far achieved the distinction of getting an international quality assurance certification under the ISO 9000 series. But there are many others in the running and some are close to the goal

In 1988, when the Madras-based fasteners manufacturer Sundram Fasteners Ltd (SFL) was working on its plans for the future, its chairman and managing director Suresh Krishna set an objective — that his company become one of the top ten fastener manufacturers in the world. That it should have a global presence.

When SFL studied the inputs required to achieve this, it realised that it was very important for the company to get an international quality assurance certification under the ISO 9000 series. Early this year it became the first Indian company to achieve this distinction. Another Madras company, W.S. Industries (India) Ltd, which makes electrical and telecom equipment, decided that getting this certification was an intrinsic part of its export plans. After working towards it for three years, W.S. Industries also got its certification a few months ago.

These two companies stand out because they are the only two to have got the ISO 9000 certification so far. There are many other Indian companies which are striving to achieve it, and some are very close to getting it. Kirloskar Cummins of Pune, the Eicher group in Delhi, Usha Martin Black in Calcutta, some divisions of Crompton Greaves, Voltas of Bombay, Widia and Kirloskar Electric in Bangalore, the Murugappa group, and the auto component manufacturing companies of the TVS group in Madras, are some of the well-known names which are working hard for this certification.

Widia milling cutters: the company has adopted various quality systems

International standards

The ISO 9000 series are international standards relating to quality assurance and systems. They are not at this point concerned with product standards. Standards have long been an important part of many industries. Earlier product standards were in fashion. But customers' needs started changing so often that products began getting obsolete fast. Instead of product inspection, customers started looking for companies which had the quality systems capable of producing quality products.

With increased focus on quality issues worldwide, various standards developing organisations in different countries prepared standards and guidelines in the quality field. Although there were similarities among the many standards, there were also conflicts in definitions and interpretations. With recent worldwide economic trends, it became necessary to have standardisation at the international level. This is the origin of the ISO 9000 series.

The International Organisation of Standardisation (ISO) based in Geneva, Switzerland, which is made up of national standards bodies of 91 countries (including India), initiated work on this series. In 1987 it issued six standards, one on terminology and five standards known as the ISO 9000 series. (*see box*). They tell suppliers and manufacturers what is required of a quality-oriented system. Today more than 40 countries have adopted these standards. Already more and more countries in Europe are insisting on certification under this series from its suppliers and potential suppliers.

The ISO 9000 series assumes particular significance because the European Community (EC) has also developed the EN 29000 series of standards which are technically identical to the ISO 9000 series. Starting 1992, when integrated Europe becomes a reality, EC companies will require their suppliers to be audited and registered under the EN 29000 series of standards. EC is not a market anyone can afford to ignore. Its 350 million citizens will represent the largest single trade market in the world — far ahead of the US which has a population of 250 million and Japan which has 120 million.

Falling in line

Interestingly, the US and Japan with their highly developed standards initially tended not to take these European standards seriously. But realising that they could be shut out from the huge European Common Market, they are now working towards adapting their systems to fall in line with the ISO 9000 series.

"To get ISO certification has not become mandatory so far," says Janak Mehta, adviser, Total Quality Management (TQM) division of the Confederation of Engineering Industries (CEI). But whether it is mandatory or otherwise, ISO 9000 registration is considered the minimum acceptable level for a supplier. A supplier without this stamp of approval can face higher insurance rates or be denied insurance in some markets.

As Mehta puts it, the registration is not really a government regulation but a very important customer regulation. Says Suresh Krishna, "Today you need some kind of credibility passport to get an entry. The customer will have to feel assured that we are not fly by night operators, but have a tradition of quality and are capable of being globally competitive. It certainly improves the international tone of the company."

It is not easy to get the ISO 9000 certification. The companies which want this "passport" will have to prepare a quality manual which defines the contractual, functional and technical requirements

for all quality activites that will ensure that a product, process, service or system is fit for its intended purpose. "A lot of work and preparation needs to be done before Indian industry is ready for this. It is an abstract system compared to product systems. A certain amount of subjectivity is involved. We have to plan for this very carefully," says H. Lal, director general, Bureau of Indian Standards (BIS).

Widia mining tools: adopting various quality systems

Rigorous norms

The companies which have already adopted various quality systems in their operations find the going comparatively simpler. Bangalore-based Widia, which is committed to TQM, started training its workers three years ago. Today it is seriously working towards the ISO 9000 certification which it hopes to get some time next year. Pune-based Kirloskar Cummins, which is very close to getting the certification, is a systems-based company. It has received certification from Lloyds, the American Bureau of Shipping and the Indian Register of Shipping. Therefore the company has been already following rigorous standards of quality control, documentation process control and so on. However, even for companies like these, it takes anywhere between 18 months to two years to get the certificate. Usha Martin Black, which has been exporting steel wire and wire ropes to 40 countries from the sixties, expects accreditation some time in 1993.

It is not only difficult to say how long it will take for a company to get certification, but also how much it will cost. It depends on how developed the company's present system is and the implementation strategy it adopts. For SFL it cost about Rs.3 lakh. WS Industries also spent a similar sum.

It is an exercise worth going through even if export is not the major strategy of the company. ISO 9000 certification also benefits the customer in the domestic market. Says Mehta, "We tell the companies who come to us for training not to adopt ISO 9000 just to get a certificate. They should believe that it will improve their business performance and the certificate is incidental." Most of the people working for the certification agree. According to B.N. Bhaumik, export manager of the Calcutta-based Flakt India companies, with ISO 9000 certification, the group will certainly have an edge over other companies in the domestic market. "There is a cost benefit for the company. It will show in the bottomline," says V. Srinivasan, vice-chairman, W.S. Industries.

Baliga Lighting Equipment Private Ltd, a small Madras company, makes explosion proof electrical products, which require very high safety standards as its customers are mainly hazardous industries. The company is not exporting its products at the moment. However Suresh Baliga, the company's young director, feels that the products by their very nature should adhere to high quality standards.

W.S. Industries: accreditation an essential part of its export plans

Streamlining activities

Even companies which have well established systems have found that ISO 9000 makes them look at things differently. Says K.V. Krishnamurthy, deputy general manager R & D, SFL, "The whole exercise made us streamline certain activities. It helped us to get rid of obsolete documentation." Widia found that the ISO 9000 documentation required the company to have a foolproof system of instrument calibration. "Under normal circumstances you don't bother to check this. But the ISO 9000 forces you to do it," explains R. Srinivasan, managing director Widia. Usha Martin Black is setting up a standards room for calibrating their measuring and testing devices.

Today many companies would like to jump on to the ISO 9000 bandwagon. But there is a stumbling block. There are no accredited agencies in India which can give the companies ISO 9000 registration. ISO 9000 registration means the certification of the quality systems of the company by a third party through their mechanism of registration. The accredited independent third party audits on site the company's operations against the requirements of the appropriate standard. Upon successful completion of this audit, the company will receive a registration certificate that identifies the quality systems as being in compliance with the ISO series. It is not a permanent certificate. The quality audit will be done every three or six months and it will be reviewed once in three years.

Stringent requirements

SFL got its accreditation from Bureau Veritas Quality International (BVQI) based in the UK. WS Industries got its certification done by Standards Australia. Not anybody and everybody can become an accredited certifying agency. The process began in the UK where the Department of Trade and In-

dustry appointed the National Accreditation Council for Certified Bodies (NACCB) to accredit certain agencies to register suppliers under the appropriate standard. These registering agencies have to meet stringent requirements regarding how they perform the registration, acquire assessors, ensure the quality of their service, and maintain their records. The most important certification body is, of course, the British Standards Institute (BSI).

Sundram Fasteners: first on the ISO bandwagon

The UK is way ahead of other countries in this regard. It now has more than 10,000 firms registered under ISO 9000, 17 accredited third party certification agencies (plus seven under review), and more than 1,100 lead assessors. Germany and France are moving ahead with registration systems and auditor training. So also are smaller nations like Belgium, Denmark, and Finland.

India has one standards developing body which is the BIS. The problem is that it is really a government organisation (under the ministry of civil supplies) which has specialised in product standards alone. It has not worked on quality standards. Internationally, the agency which formulates product standards does not work on quality standards.

BIS certainly has a vast infrastructure at its disposal. According to Lal, BIS is aware of the magnitude of the work involved to equip Indian industry to move towards ISO registration. A major task ahead of it is to set up an ISO 9000 registration body. "We have already trained 60 of our officers (who were chosen after written exams) by a well-known firm of UK consultants. We are also trying to tie up with one of the European national accreditation boards to set up a certifying body. To do that our own systems have to go through a quality audit. We are going to work with expert European consultants to achieve this," says Lal. BIS also has to get its regulations modified by an act of parliament.

Credibility problem

BIS has a credibility problem in the industry. Comments one of the quality control managers in a company working for ISO 9000 certification, "BIS is like a hockey team saying how well they are playing, but not scoring a single goal." The BIS product standards are not internationally acceptable. "Every one of the BIS product standards are a one to one copy of American and UK standards. So why are they not recognised internationally?" asks an industrialist.

BIS has essentially been meeting local competitive needs. As its officials point out, it is the best in developing countries. But the world is changing at an incredible speed. ISO 9000 is fast becoming a *mantra* for Indian companies wishing to keep pace.

The CEI, which is helping its member companies in getting the registration done by outside bodies since 1989, is currently working with about 30 companies. Nearly 100 companies are in the queue. CEI's TQM division is expanding its staff. V. Krishnamurthy, former chairman of SAIL, is now chairman of CEI's national committee on quality. He is fully aware of the urgency of the situation, "Very soon the ISO standards will become the very prequalification for bidding in the EC markets," he says. BIS is starting a precertification assessment scheme in the next two to three months. But all this is far from adequate to fulfil the need.

The ISO series are fast becoming bench marks outside Europe as well. For companies in the electrical industry to get a certificate from BASIFA of the UK or for companies wishing to get American Petroleum Industry certification, an ISO 9000 registration has become the first prerequisite. In Hong Kong all the contractors have to get ISO 9000 registration. In Britain, the new members of any trade association have to have ISO 9000 certification. It is quite possible that World Bank tenders will start insisting on this registration.

It must also be remembered that the ISO 9000 series is just the beginning. It is the minimum required quality standard. It is really a subcomponent of total quality management. The standards do not relate just to the manufacturing industry. They will cover service areas like hospitals, hotels and so on. The EC standards related procedures are still in the process development, and changes have to be anticipated. The European Committee for Standardisation is working towards much tougher standards. Can India rise to the challenge of a standards dominated world market?

■ SUSHILA RAVINDRANATH

The five standards

There are five standards in the ISO 9000 series. The ISO 9000 standard provides some basic definitions and concepts and explains how to select and use the other standards in the series.

The ISO 9001, 9002, and 9003 standards are for use in internal quality assurance purposes for contractual situations. ISO 9001 is to be used to ensure conformance to specified requirements during design and development, production, installation, and servicing. ISO 9002 is used when only production and installation conformance is to be ensured. ISO 9003 is the least detailed standard and requires only that conformance in final test and inspection be ensured.

ISO 9004 contains guidance on the technical, administrative and human factors affecting the quality of products and services. This standard is for internal use only and is not to be used in contractual situations. The standard lists the essential elements that make up a quality system in some detail, starting with the responsibilities of management. Whole sections are devoted to each aspect of the quality system: marketing, design, procurement, production, measurement, post production, materials control, documentation, safety, and use of statistical methods. This standard could be used to evaluate a company's progress toward a fully-implemented quality system.

HINDUSTAN FERODO

No more jingle-bells

Hindustan Ferodo's Ghatkopar plant in Bombay is calm once again. The management and the 1,500 workers have reached an agreement last fortnight which resolved a lockout that had begun in October last year. Raghu Mody, chairman of the company says, "I have removed the gloves from the union's hands and put it on the hands of the management." The managment has wrested substantial concessions from the union.

Ferodo's performance over the last couple of years has been lacklustre. Hindustan Ferodo has four plants, all based in Maharashtra. Three of them — at Ghatkopar, Paithan and Bhandara — manufacture the company's main products — most of them asbestos-based, like clutch and brake linings. A fourth plant in Jalna, manufactures clutch assemblies. T and N plc (formerly Turner and Newall), holds 39 per cent of the equity and Raghu Mody of the Rasoi group holds 27 per cent. Mody handled the negotiation. "I stuck to my guns," he says.

High labour costs

Ferodo's main stumbling block has been high labour costs. Its wage costs as a percentage of sales was almost 32 per cent while that of its competitors like Rane Brake Linings and Sundaram Abex was only 10-11 per cent. The problem was most acute at the Ghatkopar plant, set up in 1956, where a strong union had managed to secure generous wages and other benefits. It had also become woefully overmanned.

According to Amar Singh, the managing director, the DA formula that the company used tended to overcompensate the workers for inflation. However, the management and the workers' union differed on what needed to be done. The workers have been represented by the CITU Engineering Workers Union since 1985. Vivek Monteiro, the secretary of the union, recalls that he was unable to assure the workers that the union would be able to help them to keep their jobs.

After a meeting with Mody last year, it became evident that the management wanted a reduction of 504 workers. According to Mody, the number of workers has already been reduced by about 139 through a procees of natural attrition since he took over as chairman in January, 1988. In a counterproposal unprecedented in Bombay labour union history, the union offered a 10 per cent increase in productivity with no immediate financial quid pro quo.

The last settlement between the workers and the management expired in 1987. Singh says that the charter the union presented would have cost the company Rs.2 crore per annum in wages. Monteiro suggests that it was not really a serious demand but a bargaining ploy.

Wrangle over bonus

Things chugged along till October last year when a dispute arose over the payment of workers who were not covered under the bonus act. The company agreed reluctantly to pay the bonus if the workers agreed to fulfil the union's offer of increasing production by 10 per cent.

According to the union, all workers agreed to the productivity increases. However, some departments later felt they could not boost production any higher. The management then withdrew the offer of bonus. An act of violence by some workers, which followed, led the management to declare a lockout.

The management's contention, following the lockout, was that unless there was a sharp reduction in employees' cost, the survival of the unit was at stake. It recognised that a reduction in wages was difficult and so decided to reduce the workforce instead. In negotiations following the lockout, the absolute minimum condition acceptable to the management was the lay-off of 200 workers.

The union agreed that at any one time 200 workers will sit out for six weeks at a time. And during that period, they will be paid 50 per cent of their salary. The main reason for this was the union's consistent reluctance to accept a forced reduction in the workforce. Mody, however, believes that the workers would be willing to go if they get a separation compensation of approximately Rs.1 lakh. The company would need about Rs.2 crore which it expects to raise in a couple of months.

Along with the 10 per cent increase in productivity, the union has decided to redeploy some of the workers, which in effect means a 17 per cent increase in production. It has agreed to let the management decide where it wants to deploy equipment and how to operate the night shift. The subsidy on the canteen has been cut down from Rs. 50 to Rs.15 lakh. Revisions of DA have been frozen for one year. The change in formula for calculating DA is to be decided through arbitration as the union is understandably unwilling to accept a permanent freeze.

The agreement has been welcomed by the management. "The union had been very wise," says Singh. Mody is more blunt: "The management has stopped playing Father Christmas." The union is obviously more cautious but hopes that the management will take the opportunity to turn the company around.

High-grade power from low-grade fuel

Wartsila Diesel – the pioneers in burning low grade fuel for continuous base load operation – are the world's leading manufacturers of medium speed diesel engines. Their commitment to R&D and continuous search for future fuels ensure their predominant position in delivering reliable, fuel-efficient, high-performance, diesel-powered generator systems.

In collaboration with the world renowned leaders, Wartsila Diesel India Ltd. manufactures medium speed engines from 4 to 6 MW in Khopoli, Maharashtra.

Turnkey system design capabilities offer cost effective integrated captive power plant packages to suit Indian operating conditions on domestic fuels such as LSHS, HPS and Furnace Oil.

The news is good

In an otherwise depressing year for the Indian economy, agriculture promises to be the exception. Following a third successive good monsoon, harvest estimates for fiscal 1990-91 stand at 177.2 million tonnes (mt), marginally beyond the target of 176.5 mt. Having added 6.5 mt to last year's production of 170.63 mt, this gave agriculture a healthy growth rate of 3.44 per cent. Says agriculture secretary R.C. Kapila, "This gives us confidence to aim for an overall 3.3 per cent growth rate during the eighth plan."

The weather has been unpredictably good — three consecutive good monsoons have never occurred during this century. Forecasts for next year by the meteorological section in the department of science and technology, however, predict a marginally depressed monsoon (a ten per cent variation from either side of the country's trend average of 88 cms of rainfall is considered normal).

"Quite obviously water management holds the key to future improvement in production," says K. Rajan, joint secretary in the ministry of agriculture. Most major reservoirs monitored by the central water commission hold 40 per cent more water than the average over the last seven years . Consequently, a 15 per cent higher water availability is anticipated just before kharif sowing in mid-May.

Watershed development scheme

The watershed development programme for rainfed areas (70 per cent of India's arable land is still rainfed) which the agriculture ministry is pushing aggressively in conjunction with the state governments, should also help production considerably. The state and central outlay for this programme in 1991-92 is expected to be Rs.2,253.33 crore. The advantage of this form of irrigation is that it is a low technology project and needs little investment. All it needs is vegetative bunding, gully plugs and contour planting to retain soil moisture.

The rice harvest, too, has been exceptional this year, touching 75 mt for the first time (it was 74 mt in 1989-90). But this figure could have been better had the winter rains in Tamil Nadu not been delayed or if the south-westerly monsoon had broken on time. "We might have lost a million tonnes there," says an agriculture ministry bureaucrat. "Even when you talk about a good monsoon there can be substantial variations across regions that can affect harvests."

This variation was most noticeable in Gujarat where poor summer rains destroyed its groundnut crop. But that was made up by excellent rabi (winter crop) harvests following good winter rains in the rest of the oilseed producing areas, Rajasthan and Haryana. Madhya Pradesh substantially stepped up its production of soyabean to 2.44 mt from 1.71 mt in the previous year. Total oilseed production then finished at 19.2 mt, rescued primarily by the winter crop of rapeseed and mustard (5.6 mt versus the previous year's 4.12 mt).

Wheat, too, registered substantial gains. Estimates, even though uncertain as since rabi marketing is still underway, are pegged at 54.6 mt, from 49.65 mt in the previous year. The worrying aspect this year, however, has been the low market arrivals in Punjab. Even when this year's production is higher by an estimated 4.95 mt, Food Corporation of India's purchase has been lower by 1.2 mt than what it accomplished at a similar time last year.

Likely production of principal commodities *(million tonnes)*

Rice	75.01
Wheat	54.57
Coarse Cereals	33.42
Total pulses	14.23
Total foodgrains	177.23
Total oil seeds	19.22
Sugarcane	233.45
Cotton (million bales)	10.23
Jute and Mesta (million bales)	8.98

Observers feel that farmers are withholding stocks in anticipation of the new government announcing more lucrative support prices. "Not submitting to distress sales is also a symptom of the substantial purchasing power available with farmers," says an FCI official.

Production of pulses, the other deficient crop apart from oilseeds, also increased by 15.7 per cent to 14.2 mt from last year's 12.61 mt. Pulses, presently, are an unattractive crop owing primarily to their vulnerability to diseases. Substantial research for the introduction of disease-resistant and higher yielding varieties needs to be done. The higher risks associated with these crops are turning farmers away from pulses to wheat, which is both more stable and where high yielding varieties are available.

Sugarcane production is nearly 233.45 mt, another record. Anticipated sugar production is expected to cross eleven mt. For cotton the ministry's estimates production of 10.6 million bales. The figure was brought down from the earlier 11.4 million bales owing to the reduced cropped area in Gujarat and Punjab, and the crop being affected by a blight.

For next year, the consensus at the annual conference of state agriculture secretaries was that the transfer of improved technologies to farmers was the most important objective. Greater attention would be devoted to crop demonstration programmes and contingency plans in case of weather aberrations would be another priority .

■

ARIF SHARIF

Three consecutive good monsoons have helped harvests

Putting our R&D right

A recent study by ASSOCHAM gives some interesting data. The US's per capita expenditure on R&D in 1985 was 210 times that of India, of Japan 140 times, and of South Korea 19 times. Available data also shows that total factor productivity in Indian industry has been poor in the period 1965 and 1975 and very low, at 0.8 per cent per annum, from 1975 to 1981. In the latter period, Japan had a total factor productivity of +3.1 per cent per annum, and South Korea of +5.7 per cent per annum.

This shows that India has lagged behind other countries in effective and proper use of inputs. Our industries have not been competitive — to a considerable extent, this is because of the overprotection, uneconomic size, and most importantly, the low level of our technologies. However, the expenditure on R&D in India cannot be said to be small. In 1989-90 expenditure on R&D was Rs.4,003 crore compared to Rs.2,068 crore in 1985-86, Rs.760 crore in 1980-81 and Rs.140 crore in 1970-71. Expenditure has increased by a third in the last five years, almost doubled over the decade, and gone up by 28 times in the last two decades.

Yet, the survey conducted by ASSOCHAM shows that Indian companies perceive serious gaps in technology, as compared with units abroad, whether in developing or developed countries. These gaps range from around five years to twenty years and cover almost every aspect of production. These gaps are in addition to the high unit cost of production because of high indirect taxes, their cascading effect, and the high cost of many key input materials.

No proper focus

The problem does not appear to be because of the inadequate expenditure but more due to the broad spectrum of areas on which research is conducted in India. We have not picked a limited number of areas for special study and focused most of our expenditure on those limited areas. Further, over 89 per cent of our R&D expenditure is spent by CSIR (Council for Scientific & Industrial Research) labs which are funded and controlled by government. As against this, in Japan as in other industrialised countries, most of the research and development is by the private sector.

Even in countries like France, Germany, UK and USA, where the government is an important source of funding for research, the actual spending is almost entirely in the private sector. This unfortunately is not the case in India, where CSIR expenditures are incurred by laboratories controlled by the CSIR. We have in India a bureaucracy for every aspect of our functioning — in culture, in education, as well as in research.

The relationship between research done in government laboratories in India and its ultimate use is not sufficiently close. The prospective user is not much involved in the initiation of the research and the various stages of its progress. This ultimately results in a low level of acceptability of the research results by the prospective users.

The prospective user tends (whether in the public or the private sector) to go for imported technologies. Here again, our control systems are so rigid that the payments made for technology imports are considerably restricted. The result is that the technology seller more often than not tends to limit the technology that he transfers to us.

Technology transfer is not merely the supply of machinery or drawings. It is ultimately dependent on the human interactions between Indian technicians and their counterparts from the technology sellers. It requires a great deal of openness by the technology seller. The technology seller is unlikely to be open unless he is sufficiently remunerated for his effort. It is in this context that there is a case for permitting equity investment by technology sellers in order to give them a stake in the local companies and provide the local company with full access to the latest technology.

Marketing approach

As far as government laboratories are concerned, a possibility is to privatise them by asking them to find an increasing proportion of their budget — perhaps upto 50 per cent — from payments made by users and prospective users. This will compel a much greater degree of interaction and exchange between the final user and the scientist. This is in fact a marketing approach to research — with the research laboratory marketing its expertise and getting paid a price which is related to the value that the final user perceives he derives from the research. At present, such income is a fraction of the expenditures of these laboratories.

Of course this will not be an adequate solution. If research is going to be actually used, the user must be involved at all stages of the research process, and the researcher must have a close knowledge of the user's operating conditions and business objectives. This will come about if the research laboratory works like an advertising agency and has account executives who are frequently in touch with the user. The account executive 'translates' the differing languages of the two parties — scientist and user — to each other, and ensures at each stage of the research that it is in keeping with the requirements of the user. This does mean that research is more oriented to finished products and processes, and less to basic research. Some prioritising of expenditure on both is called for, in keeping with the thrust areas identified for the future in the country.

In the context of the growing debate in India about subsidies, questions of efficiency have come to the forefront. The principle of efficiency demands that whatever we do produces the most optimal results from our expenditures. From this point of view a good part of the expenditure on subsidies is felt to be unproductive, and many times not serving the purpose for which the money is being spent. It is only a question of time before our expenditures on research and development — at present primarily through government laboratories — come to be questioned on the same grounds. The change in attitudes proposed here should go a long way to improve the efficiency of our research and enhance the competitiveness of Indian companies in world markets.

INDIAN EXPRESS

Succession battle ends

A five-year long wrangle for control of one of the largest media empires in the country ended last fortnight, when Ramnath Goenka, the chairman of the *Indian Express* group of newspapers announced that he had adopted his own grandson Vivek Khaitan, now 33, as his son.

The decision to hand over control to Khaitan might have been influenced by his failing health, though in the past he has always managed to bounce back. And while retaining a fairly tight control over his newspapers, he had given his daughter-in-law, Saroj Goenka, quite a powerful position in the company about seven or eight years ago.

Subsequently, he inducted Vivek Khaitan and Manoj Sonthalia, the sons of his two daughters, into the group. At that stage, the roles that he envisaged for his two grandsons were not too clear. Unfortunately, with the advancing age of Ramnath Goenka, a internal power struggle developed, in which Saroj Goenka found powerful allies in Sonthalia and editorial adviser S. Gurumurthy. Then, about five years ago, it appears that Ramnath Goenka's thinking began to crystallise around Vivek Khaitan.

Vivek Khaitan: taking over the empire

In charge

Khaitan, who has now changed his name to Vivek Goenka, is at last firmly in charge of the Express chain, having direct control of Indian Express Newspapers (Bombay) Ltd which publishes its two largest editions, from Bombay and Delhi as well as four others based in Pune, Ahmedabad, Baroda and Chandigarh. Of these, only the Bombay edition makes a profit.

However, the status of the relatively smaller southern operations, which for tax reasons come under a separate company, Indian Express (Madurai) Ltd, is still not quite clear. It is currently run by Sonthalia, who lost out to Khaitan in the race for total control. Indian Express watchers have long speculated whether the southern editions would break away completely from the rest of the Indian Express chain. Khaitan, however, rules out that possibility.

Ramnath Goenka made the announcement from his bed in Bombay's Breach Candy Hospital on 16 May 1991, his eighty-seventh birthday, in the teeth of fierce opposition from Saroj Goenka, Sonthalia, Gurumurthy and, according to some, ex-editor Arun Shourie. Though the legal formalities of his adoption of Khaitan as his son had been completed in January 1990, it was kept a closely guarded secret while the old man tried in vain to persuade his relatives to support his decision.

"I, too, initially disagreed with the idea of being adopted," Khaitan told *Business India* a day after it was made public. But he gave his consent when Goenka pointed out that it was also for sentimental reasons (since there was no one to carry on the family name). Goenka's only son, Bhagwan Das Goenka, (Saroj's husband) died childless about ten years ago.

But there is no denying that the announcement was intended as a clear signal to Khaitan's detractors that they were not going to have things their way. In fact, insiders say that the octagenarian Goenka felt the Saroj Goenka-Sonthalia-Gurmurthy axis had become "too powerful" and the adoption route was intended to cut them to size. Neither Sonthalia nor Gurumurthy could be contacted for their comments. The timing of the announcement too must have been planned well in advance since Goenka's current round of hospitalisation, which began on 5 March this year, got very little publicity. Even his own newspapers which used to give an update every few days did not mention anything for weeks together.

Interestingly ever since Khaitan's adoption was finalised 15 months ago, Gurumurthy, who authored the widely-read series of articles on the Reliance group of companies in 1986-87, has slowly and steadily opted out of the Express inner circle. Also Saroj Goenka, who had been actively involved in the running of the paper's southern editions after her husband died, seems to have been sidelined of late.

Freedom of action

All this while, Khaitan was being groomed to take over the Express empire. Vivek has had a 51 per cent shareholding in the Bombay company since 1986; had been in charge of the Bombay, Ahmedabad and Pune editions for the last few years and took control of the Delhi edition over a month ago. Now with a majority share holding in the Bombay company (believed to be close to 70 per cent) and three additional directors, Nusli Wadia of Bombay Dyeing, veteran journalist S. Mulgaokar and Venu Srinivasan of the Madras-based TVS group on the board to support him, Vivek Goenka has all the freedom to implement fresh plans to take on perrenial competitor, the resurgent *The Times of India*.

The work environment within the organisation has become more conducive, new technology has been inducted and the library is being enlarged. The group managed to launch a Marathi evening paper in Bombay within 12 days. A Sunday paper is on the drawing boards. Many journalists who left the paper because of interpersonal problems with specific individuals may be invited to rejoin. "If finances permit, we will expand from 14 editions at present to 20 within four years," says Vivek Goenka.

Also expected to make a difference is the coming of the new editor, Prabhu Chawla, at present senior editor of *India Today*, who is due to join the *Indian Express* chain in the first week of June.

■

SUMIT GHOSHAL

RBI's move for stability

The Reserve Bank's decision to enter the forward market in foreign exchange has received a reception ranging from the cautious to the enthusiastic. It has been a long standing demand of the banking community.

Shantanu Rastogi, head of the foreign exchange department at Citibank, for instance states that an article which appeared in Citibank's annual letter made certain suggestions about how such a scheme could function. He points out that the forward exchange market has been in existence since the late seventies. It however became really active after 1984. What precipitated the change was the steady depreciation of the rupee. Prior to this period, the dollar was quoted at a discount against the rupee. In other words, the expectation was that the rupee's value would go up against the dollar.

However, after this period when it became clear that the rupee was headed south against the dollar, it became necessary to cover the rupee depreciation risk. This applied to importers as well as borrowers in foreign currencies. The forward market was essentially short-term, it offered cover for up to six months. However, the development of instruments like the long-term forward cover (rollover cover) afforded protection for customer's who had long-term foreign currency liabilities.

As the demand for forward cover increased, the dollar began to be quoted at a premium against the rupee. This was a result of the way the market functioned. The premium was determined by the demand and supply for foreign currency within the country.

Obvious mismatch

Under foreign exchange regulations, banks are prevented from having access to international money markets. The foreign exchange for the forward markets has to be supplied by exporters. As the demands of importers were obviously larger, there was a clear mismatch which resulted in increased volatility.

Banks could buy spot or forward on the interbank market. They could also buy spot from the Reserve Bank to cover their customers transactions. They then swapped this among themselves to provide forward cover.

The dollar-rupee premiums worked out on the average to fairly reasonable levels between 1984 and 1987, as the dollar-rupee exchange rate remained fairly steady. After this period, the situation has been very different. The rupee-dollar premiums have been very volatile, and sometimes forward cover was just not available at a reasonable rate. That is, the premium was more than the rate of depreciation.

RBI HQ: another source of cover in the forex forward market

Rastogi states that organisations like the Foreign Exchange Dealers Association of India and banks like Citibank argued that the Reserve Bank was actually paying out foreign currency by not providing forward sale of the same. They pointed out that to provide forward cover to customers, banks would have to buy spot sterling or dollars months before they needed it. They could then swap it amongst themselves to provide forward cover. In fact, the Reserve Bank could have retained the foreign currency if it was in the forward market.

RBI's initial reluctance

Some bankers feel that the Reserve Bank showed some reluctance to enter the forward market because it would be construed as an act which would help importers rather than exporters. The bank's terms are not at all flexible. It will provide forward cover only for three months or six months and not for any period in between.

Offering exact maturities is not very helpful for any import transaction where the maturity cannot be very precise. An importer expecting a shipment may not know which day a ship may come in. An option of one to 30 days and other variations which the interbank market offers, provide enormous flexibility. In spite of other bankers reservation, Rastogi, however, welcomes the RBI's entry unreservedly. He suggests that it is not really necessary that the Reserve Bank be in the market all the time, but its presence will help provide liquidity to the market.

Other bankers are more cautious in their reaction to RBI's entry. One concern is, how long does the bank plan to stay on. Is the move only a temporary one to mop up foreign currency or an attempt to stabilise the market? They are of the view that the RBI's entry would placate any fears of default, given the precariousness of the balance of payments situation. It would also provide another source of cover, besides that of the large nationalised banks which already have large commitments.

Besides these, bankers point out that the RBI is charging a premium which is slightly higher than that operating on the interbank market.

Banks, both Indian and foreign, would be tempted to bring in foreign exchange to play the Indian money market, as it offers rates as high as 40 per cent. So there would be a temporary accretion of foreign exchange.

But whether the Reserve Bank's entry really stabilises the forward market remains to be seen.

■ EAPEN THOMAS

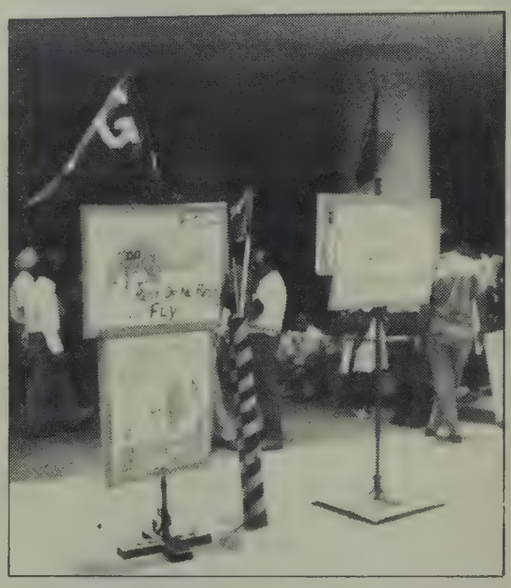
AIR INDIA

Flight time or fight time?

On 28 October 1990, Delhi-bound passengers of Air India (AI) had a harrowing experience. After spending most of the night in the aircraft, they were ferried to a hotel and told to come back the next evening. AI's loss over the cancellation: Rs.8 lakh in foreign exchange. The reason: had Manohar Sharma, co-pilot of the aircraft, exceeded his "flight duty time limitation (FDTL) by 25 to 30 minutes, he would have been fatigued and therefore a safety hazard".

There have been conflicting opinions from different sources as to why the particular incident got blown up into a maelstorm. Whatever, the enquiry into this incident and the show-case notice issued to Sharma led to the latest confrontation between AI's pilots and management.

In any case, as the statutory authority for civil aviation in the country, DGCA is empowered to take decision in all such matters as delays, revenue loss and other failings in civil aviation. In accordance with the rules, AI's director of operations, Captain Mathur sent a full report to DGCA on 8 November. A personal hearing was held on 20 February 1991.



Sudden strike

On 5 May 1991, after a mere eight-hour notice sent in at 4 pm to the secretary, civil aviation, and the director personnel, AI, the pilots owing allegiance to the Indian Pilots Guild (IPG) went on strike. The acting chairman and managing director, S.R. Gupte was not informed directly.

The AI strike, at a peak period in May with heavy outbound holiday traffic as well as Gulf-bound passengers, has caused the airline a revenue loss of about Rs.10 crore. The airline's image, assiduously built up by the recently refurbished Rs.38-crore exercise, could well suffer a backslide.

The airline, of course, inured to regular threats, had been adequately prepared to meet the contingency. Within four days of the strike call, it was able to resume 80 per cent of the flights, operating with its executive pilots.

The matter was placed before the regional commissioner who admitted 'failure of talks' between the confronting parties and the matter was then referred to the chief labour commissioner. On 16 May, the strike was declared illegal since

Striking pilots: unreasonable tantrums?

the statutory notice period was not given. In the meanwhile, AI had 'suspended' those pilots who had not reported for duty.

In the past, there have been innumerable instances of 'walkouts' by AI pilots over FDTL. B.P. Singh, general secretary of the IPG, says, "Almost every pilot had gone through at least one or two such incidents. FDTL is sacrosanct and in no way should a pilot compromise on this. The only consideration is the safety of the aircraft."

But AI chief of public relations, Jitendra Bhargava thinks differently. "It is a case of shifting stances for the IPG in the particular confrontation. First they take the industrial action and then decide to blow up the issue and finally start building up the defence."

The manufacturers of the aircraft as well as the airworthiness authority, and the Federal Aviation Authority of the US have taken all factors like crew fatigue, rest period, etc, into consideration and has laid down a maximum of 12 hours of flight time for a crew of two pilots and one flight engineer during any consecutive 12 hours. In Belgium, it is 16 times for a similar crew and in Switzerland, 14 hours. Air India is more on the conservative side in fixing FDTL.

The IPG has made FDTL the fulcrum of its case, to protect Sharma from the wrath of the DGCA, AI and perhaps even the public. If the mutually agreed rules are stringently applied, Sharma would appear not to have committed an irresponsible act, but had actually acted in the interests of passenger safety. If there had been an accident while landing, then the pilot would be the first to be blamed. Landing and take-off are the most stressed periods for a pilot and the most crucial for any aircraft.

Now, would most of the 244 passengers condemn Sharma for what he did on the night of 28 October? Despite agreeing wholeheartedly on air safety, most of the air travellers did not agree on this. They felt that whenever AI pilots wanted something, they raised the safety flag and played on passengers' susceptibilities.

Both Gupte and Bhargava assert, "We have bilateral agreements on FDTL and it is fixed according to law and the aviation requirement. The other component is responsibility."

According to AI, FDTL is the main bee in the IPG bonnet. But there have been skirmishes over petty issues too. In August 1990, when AI was preparing for the massive airlift of Indians from Amman, the pilots went on a flash strike saying that British Airways had already evacuated their crew. In reality, BA had evacuated only three months later. A letter by the guild to the press stated that their agitation was restricted only to commercial flights, not the airlift. But the whole operation was paralysed. Even though Dubai, Muscat and Doha were outside the war zone, the pilots, unlike those of the other airlines, refused to operate there. To reassure the Indians in these stations, executive pilots had to operate flights.

Fortunately for all concerned, the latest strike was called off on 20 May, after a round of talks with the civil aviation secretary, A.V. Ganesan. Negotiations by the four-member delegation, including Kenneth Khan, president of the IPG and the general secretary Singh, seem to have gone off amicably. Asked whether the strike was called off unconditionally or whether their terms had been accepted, Singh says, "All I can say is that the secretary has been very cordial and understood our insistence on FDTL's sacrosanct nature. We have been amply reassured."

But the public's image of airline pilots as petulant prima donnas throwing unreasonable tantrums, seems to have been confirmed, gaining credence through every such confrontation. It would require a lot of effort to reaffirm the faith the airline user once had in the Maharaja. ■

Ludhiana: longing for self-rule

The people of Ludhiana had a taste of local self-government recently when they voted the Bharatiya Janata Party to power in the first-ever corporation elections in the industrial town. This has kindled a new hope among the businessmen in the town who have been harried by kidnappings and extortions for several months now. More significantly, the elections have set the tone for the forthcoming assembly elections.

"We are sick of dealing with narrow-minded and indecisive bureaucrats," says Jawahar Oswal, chairman, Oswal Woollen Mills Ltd. "It's time we had our own elected representatives running our lives." Oswal thinks that the fear of guns dominating voting in the state is also overplayed.

P.D. Sharma, president, Ludhiana Chamber of Industrial & Commercial Undertakings, also believes that there is no alternative to local rule in the state. "The administrative emphasis of Central rule has left industry and commerce in Ludhiana and in the whole of Punjab neglected," he says. According to Sharma, the worst thing that terrorism has done to business in the town is that it has hampered the circulation of money within Ludhiana. In addition, it has also stopped the inflow of black money from nearby cities leading to a working capital crisis for most of the medium and small units in the town.

Real estate boom

Dinesh Oswal, managing director, Nahar Spinning Mills Ltd, says that during the last six months a great deal of money generated in Ludhiana has got blocked in real estate in Haryana. The demand for land, he says, in Panipat district in neighbouring Haryana has boosted the per square yard land price to Rs.50,000. Panipat is being looked at by the Ludhiana hosiery barons as a site for refuge as this town already has some infrastructure for the industry. Besides Panipat, Ludhiana hosiery makers are also diverting fresh investments to nearby districts in the neighbouring states of Himachal Pradesh and Uttar Pradesh.

O.P. Munjal, managing director, Hero Cycles Pvt Ltd, believes that Ludhiana is still the best place in the country for businessmen. He thinks the kind of infrastructure available for hosiery and cycles in the town has not been and cannot be duplicated anywhere else in the country.

Unlike Jawahar Oswal, Munjal thinks that the assembly elections may not do any good to the state. "Nobody can dispute that the elections will be won by the militants at gunpoint. The theory of giving them the rope of responsibility to hang themselves with is bunkum. Today, the state forces point their guns at the troublemakers, tomorrow they only will be directing state guns."

Munjal's apprehensions notwithstanding, the local municipal elections have given the people of Ludhiana hope that soon they will have their own government in the state, which they hope will be more sensitive to their problems and aspirations than the Centre has been.

■ FEROZ AHMED

PONDICHERY

Industrial ambitions

The Pondicherry government is making an effort to industrialise the union territory with labour-intensive, pollution-free industries like electronics, machine tools and engineering, and agro-based ones.

Toward this end, the Pondicherry Industrial Promotion Development & Investment Corporation Ltd (PIPDIC) — which was set up in 1974 — is trying to woo entrepreneurs with a package of incentives. The promises include quick disposal of investment proposals through an 'escort service'. Says Siddeshwar Sahu, managing director, PIPDIC, "Our plus points are power and labour, and land is easily available."

These factors have drawn big names like the Thapars, Hindustan Lever, Ponds and Larsen & Toubro. PIPDIC has catalysed diverse units in the last four years, including a ready-to-eat 'wheat eats' unit, a cordless telephone manufacturing facility and a vanaspati unit. A frozen shrimp plant and a fault trip unit are on the anvil.

The Pondicherry government's efforts have however not been entirely successful. Sahu candidly admits that 30 per cent of the units started in the state are non-functioning or sick. The factors identified for such failures range from choice of wrong projects to lack of management. Moreover, in 1988, the union government withdrew the central investment subsidy, and this has led to a decline in applications to set up units.

Even as the government tries to grapple with this problem, a massive effort is on to increase the tourist traffic to the union territory. In this endeavour, the special focus is on French tourists as they have a special affinity to Pondicherry.

The tourist potential has also attracted private-sector entrepreneurs. Mahindra & Mahindra has tied up with Day's Inn to set up a 80-room hotel in Pondicherry with satellite booking facilities. Incidentally Hotel Ashok, a joint-sector venture of PIPDIC and ITDC set up five years ago, is doing good business, with 85 per cent occupancy.

■ PADMA RAMNATH

Fishing failures

With a coastline of 483 kilometres spread over four of its districts, Orissa has the potential to be a major harvester and exporter of seafood. Going by the quantity exported it would seem that some of this potential *is* being realised — seafood exports jumped from Rs.36.44 crore in 1988-89 to Rs.50 crore in 1990-91. However, although the value of the exports have gone up sharply, the volumes have not. In the last two years it increased by just 1,000 metric tonnes.Says T.P. Patnaik of Falcon Marine Exports (P) Ltd, the state's largest shrimp exporter, "Our exports look good because the rupee is weak. Tonnage-wise we are not improving."

Looked at from another angle too, the performance is far from encouraging. The state's share of seafood exports is barely 6 per cent of the national total and that too mostly shrimps.

Explaining the causes of Orissa's lacklustre export performance, Patnaik says, "There is a total lack of infrastructural facilities and the government does not seem to be interested. We don't have a good fishing harbour. For the last two years, not a

single vessel has come to Paradip port. We take our cargo to the Calcutta and Vizag ports for shipment, and spend nearly 25 US cents per kg of the export value on transportation cost."

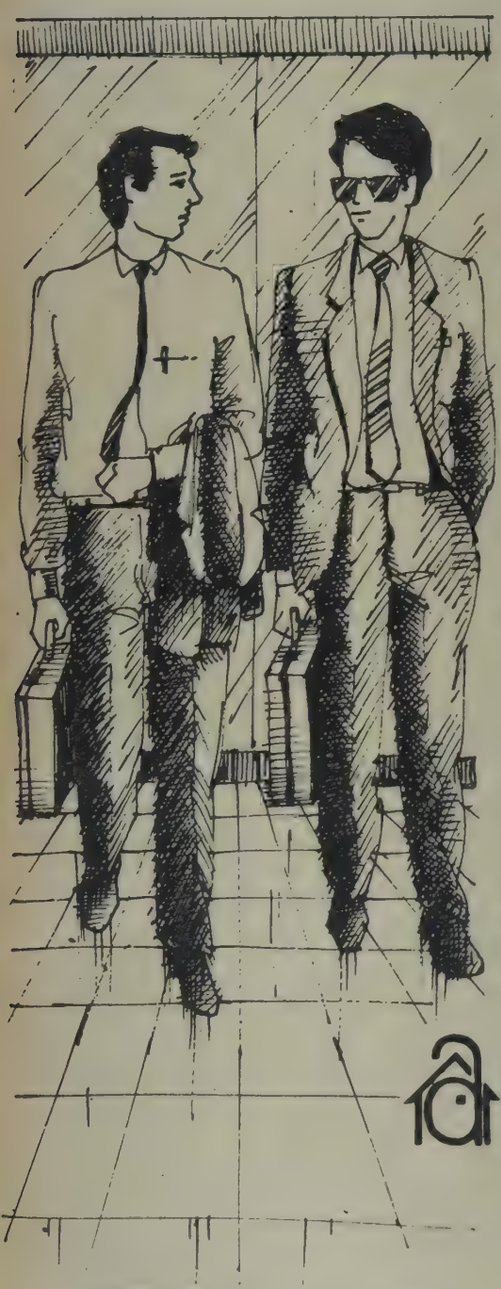
Given this scenario, some exporters seem to have wound up business or practically stopped making an effort. Though on paper there are about 30 shrimp exporters in the state, only seven are active.

Says Ramnath Pani, a fisheries expert, "Orissa has nearly 300,000 hectares of brackish water free of pollution or contamination. Of this, 25,000 hectares have been identified as suitable for prawn culture. One hectare of land can easily yield 2,000 kg per year in two crops. Considering the minimum cost of exportable variety of prawn as Rs.100 per kg, Rs.500 crore worth of prawn export is possible every year." At present, however, only 6,000 hectares of brackish water is actually devoted to prawn culture and, that too, in the traditional style, where the yield per hectare is hardly 200 kg.

Cumbersome procedures

Another obstacle is the non-availability of suitable leasehold land. Also, the procedure for allotting brackish water is cumbersome and time consuming. Ironically, Orissa was the first among the maritime states to conceive of brackish water fish culture and in 1981 had framed procedures for the allotment of brackish water areas on a 15-year lease.

Orissa's potential in deep-sea fishing too has remained underutilised, despite an early start. In 1975, a private company, New India Fisheries, bought the first two deep-sea trawlers to catch shrimps. This inspired several other private operators to take the plunge and the state's financial institution, the Industrial Promotion and Investment Corporation of Orissa Ltd (IPICOL), advanced loans liberally for the acquisition of trawlers. However, over time all the entrepreneurs lost interest and backed out, put off by the absence of infrastructural facilities and lack of cooperation from the authorities.



Most of the 600-odd small and medium fishing trawlers operating today are in a decaying condition. Due to the high cost involved in operating the trawlers and the meagre catch (as they use the traditional method) many operators are unable to pay back their dues to the financial institutions and some have even forfeited their trawlers to the FIs.

NAGESH RAO

Company executives, businessmen and frequent visitors to Delhi.

You can now enjoy the privilege of owning an executive residence in the Capital city.

Ashiana's

STUDIO IX

Executive Club

A new concept in living for those visiting Delhi frequently on business. A home away from home, not a hotel but you still enjoy all the luxuries and comforts without paying through your nose.

Each room is tastefuly decorated and furnished with piped music, channel video, air-conditioning, telephone, refrigerator beside facilities like STD/ISD, fax. telex, and secretarial services.

The club is conviniently located in a posh colony of south Delhi. A five minute drive from Nehru Place.

The club membership is available in multiples of a week (can be used staggered/flexible) each for Rs. 25,000/- which you pay only once in a life-time. And that's not all, you also get a money back guarantee.

The project is beeing developed and promoted by Ashiana group of builders and real estate promoters. The group has the experience of executing more than 14,00,000 sq. ft. of commercial, industrial and residential projects. Plans are afoot to build more such clubs in other industrial cities and metro centres in India.

Now, you can own a prestigious executive address in Delhi. For further details contact:

NEPAL

New equations

With a shift in the system of governance from the palace to parliament, the new democratic regime in Nepal intends to give a freer hand to the private sector. According to the prime minister designate Girija Koirala, leader of the newly elected majority party, the Nepali Congress, "Nepal must build its infrastructure industries now and there is no way it can do so without private investment both from within the country and India."

Earlier, all trade and industry in the small Himalayan kingdom was controlled by King Birendra. All businesses and industries in Nepal were in partnership with some member of the royal family or those connected with them. Now, with a more open democratic set-up, the Nepali Congress wants to streamline the process for licences, permissions and loans so that all can compete and priority sectors have an advantage.

Indian investment even in key sectors such as energy and defence production would not be reversed.

Better chances

Since the policies are unlikely to be reversed, many Indian industrialists would like to explore areas of production which are closed to them in their own country. For instance, the Thapars are interested in setting up a paper factory with a plantation in Nepaganj in the hill kingdom. Says M.K. Raina, senior vice-president of Ballarpur Industries, "Since the equations between the two governments are at their friendliest level, now we have no hesitation in investing in that country. Also, it is a feasible option since plantations are banned in India and Nepal has very favourable terms for India."

One of the terms which Indian businessmen find attractive is the clause in

Big names in Indian industry are ready to enter the new venue

Indian business seems keen to exploit the little-tapped investment potential in the country. Already big houses like the Thapars, Raunaq Singh, Manmohan Singh, the Birlas, the Dalmias, Vijay Mallya and the Srirams are exploring possibilities of new projects in the tiny landlocked country. Eight MoUs were signed this year when the switchover to the more liberal regime was apparent to Indian entrepreneurs. Koirala was at pains to stress that interim prime minister Kishen Prasad Bhattarai's promise of allowing the joint communique which gives preference in treatment of basic customs duty to goods produced in Nepal with 65 per cent Indian or Nepalese raw materials. But the chambers of commerce from both the countries have suggested further liberalisation. They feel that the preference should not be given on a case to case basis with review every two years. Rather, broad guidelines should be set up for all industries.

Also, the treatment on customs duty should be cleared within a maximum of 45 days and the period of review specified then. This seems to be only fair, according to those dealing with the Nepal desk in the commerce ministry. They say that it would save time and help industrialists work out detailed costs. At present, Indian officials are waiting to discuss all the implications of this with their counterparts in Nepal once the new government is in place.

Sources in the foreign ministry say that they, along with their counterparts, are exploring new areas for investment, and that some work has already been done on this.

Export zones

The apex body for private industry trade in India, FICCI, is especially interested in the export processing zones which the government of India wants to promote in Nepal. A task force set up by them, in which N. Khandgi is closely involved, has chalked out several areas for setting up industry in these zones there. Detergents, soap cakes, aluminium tubes, fish farming, processing of mustard seed, pharmaceuticals, cement, paper, sugar, steel bars, cigarettes, electrical accessories, computer software and motorcycles are the items on the list.

Nepalese businessmen are waiting eagerly for their economy to open up. Says Banwarilal Mittal of the Nepal Chamber of Commerce, "Obviously, it means more opportunities for us too. A liberal government gives much more opportunity for individual initiative. Everyone will be treated on a par now." This seems to be true, at least according to party sources, who say that they will even allow all five-star hotels which fall under a certain category to have casinos. "Why should only the Oberois be allowed to run a casino?" asks a senior member of the Nepali Congress.

The policies of the new regime will definitely be more democratic, thus allowing more access to industrial development in the country. Tourism, of course will remain a major industry but now Koirala says they have to develop infrastructure industry on a parallel level. When asked about the lack of funds to develop this, the newly elected prime minister replied: "It is political will and not fianance which determines the path of development of a nation. And I will try to set up a system which is more democratic and liberal. And of cource with adequete encouragement to Indian investors too."

■ RUCHIRA GUPTA

WORLD NO-TOBACCO DAY

Spreading the word

In March this year, an eight-page newsletter titled "Tobacco Action Pack" was published by the AGHAST (Action Groups to Halt Advertising and Sponsorship by Tobacco) which is part of the Malaysia-based International Organisation of Consumers' Unions (IOCU). The countdown for World No-tobacco Day, to be observed on 31 May, had begun.

The tobacco action pack (TAP) spoke of a 200 per cent increase in tobacco taxation imposed a few weeks previously by Hong Kong's financial secretary. It also reported a law suit in the Australian Federal Court which the Australian Federation of Consumer Organisations had filed against the Tobacco Institute of Australia, following an advertisement by the Institute claiming that cigarette smoke did not cause disease in non-smokers.

On the No-tobacco Day itself, meetings, seminars and film shows are to be held across the globe; quit-smoking camps will be organised in that week and celebrities in many nations roped in so that the message is driven home in every way.

This is part of a concerted, global effort at public education which is now beginning to convince people that smoking not only harms those who do, but also those who do not. In fact many doctors say that "sidestream smoke", which the cigarette smoker does not inhale, is at least as dangerous as "mainstream" smoke which is inhaled. This is precisely what the Australian Tobacco Institute sought to deny.

Leading the war against the tobacco industry, which grosses more than $50 billion annually in the US alone, are the World Health Organisation (WHO), the IOCU, the International Union against Cancer and the United Nations International Children's Fund (UNICEF). Seven world conferences on "Smoking or health" have been held between 1967 and 1990; the eighth is scheduled to take place in Buenos Aires, Argentina, in April 1992.

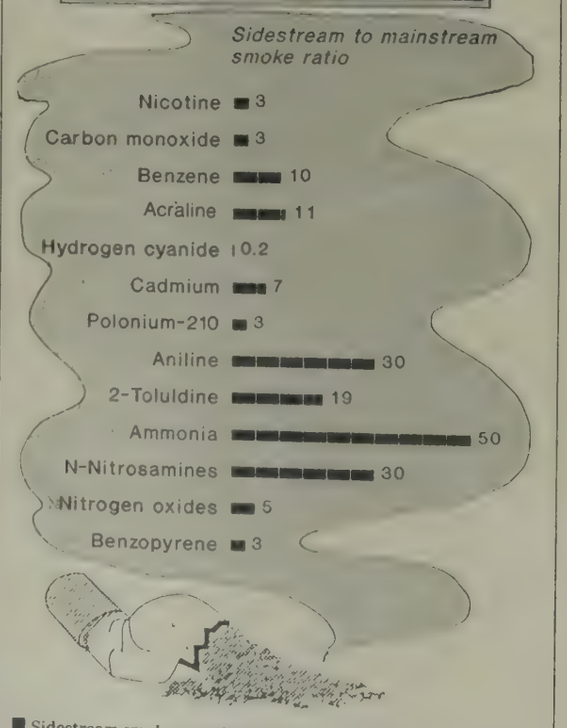
These world conferences bring together health professionals from many areas of expertise — the seventh conference in Perth, Australia, in 1989 was attended by almost 1,000 people from all over the world.

Results showing

Now, after three decades of campaigning, the results are beginning to show. Slowly, the world over, people are moving away from Sir Walter Raleigh's gift. For over a decade, the Hong Kong Mass Transit Railway has been a non-smoking area. The same is true of the London Underground since 1987. It also decided to forego the 300,000 pounds that it would have received annually from the tobacco industry for advertising on its premises. Japan has made 114 of the 127 stations in its underground network smoke-free. The only stations in Japan's underground railway where smoking is still permitted are located at ground level. In New York in the US and the whole of Norway, smoking inside a taxi is prohibited by law and in Australia nearly half of all taxi cabs display no-smoking signs. Airline flights in 30 countries, including India, have been made smoke-free over the years and more than 70 countries including India have buses and trains that do not allow passengers to smoke. And this is not all.

Three European countries have decided to leave tobacco out of the so-called "shopping basket", the list of products used to determine changes in the cost of living. The first to do so was Portugal — from 25 July 1990, followed by Luxembourg from January 1991 and France from next year. This is quite likely to clear the way for much heavier taxation on cigarettes without raising the highly sensitive cost-of-living index in these countries. Beasacon in the east of France and Empoli of Italy are the first cities to respond to a recent EC call to establish a network of non-smoking towns. Their respective mayors have signed a convention for the protection of their citizens' health. In May 1990, Brazil's health ministry passed an order introducing:

- prohibition of smoking in public and private health care establishments,
- ban on sale of cigarettes to minors,
- curbs on advertising of cigarettes on radio and television.



A few months after that, the New Zealand Parliament promulgated its Smoke-Free Environments Act, 1990 on very similar lines.

Although these achievements are impressive, the anti-tobacco activists are not about to rest upon their laurels. The road ahead is long and hard. US Surgeon General Antonia Novello hopes her country will become completely smoker-free by the year 2000. Today 50 million Americans continue to smoke. In several countries, the number of smoking adults has gone up. Tobacco companies have tried with partial success to introduce new brands targeted at women.

Still the mood of the activists is not one of despair but of hope. At the 1989 conference in Australia, WHO Director-General Hiroshi Nakajima said, "Our major task now is to eliminate tobacco as a major threat to future generations." And Novello says, "It is encouraging to note that so many countries have taken a positive stand on tobacco." ■

SUMIT GHOSHAL

What's in the smoke

■ Sidestream smoke contains higher concentrations of many toxic chemicals than mainstream smoke does. Some, including known cancer-causing substances such as the N-Nitrosamines, are especially concentrated in sidestream smoke.

The named substances above represent only a few of the hundreds of chemicals in sidestream smoke. The figures represent the relative concentrations of each sample substance in sidestream smoke compared to mainstream.

Thus, for example, sidestream smoke contains three times as much of the narcotic nicotine as mainstream smoke, three times as much poisonous carbon monoxide, and 10 times as much benzene.

TIPS & TOES

Taking on the challenge

With limited resources and against considerable odds, the company is striving to carve a niche of its own in the beauty aids market

When B.D. Topiwala joined Parle Pvt Ltd in Bombay as a helper, after his standard X examination, little did he know then that one day he would own two companies and possess 10,000 sq ft of prime property in Bombay and Vapi, Gujarat. Now, at 59, B.D. Topiwala is chairman and managing director of Paramount Kum-Kum Pvt Ltd and Tips & Toes Cosmetics Ltd — both based in Bombay. Last year, the combined turnover of the two companies touched Rs. 12 crore.

Today, Paramount, the largest company in the organised sector, manufactures *bindis* under the brand name Shingar, Shilpa and Sun-spot. And Tips & Toes, the second leading company with a 30 per cent share in the market, manufactures nail polish, lipsticks, blush on and a whole range of other beauty products.

Tough days

Topiwala is ambitious. And it is perhaps this zeal that transformed a small-time helper into a successful industrialist. But reaching there has not been easy. There were many hardships to be overcome, the worst of them being shortage of money. He even had to walk from his chawl in Goregaon to the Parle factory in Vile Parle in Bombay — a distance of about 10 km — as he could not afford to pay the train fare.

But Topiwala was an enthusiastic young man. In the 25 years that he spent with Parle, he learnt a lot about sales, accounting, marketing, advertising, and store-keeping. And by the time he was 29, this accumulated knowledge gave him enough confidence to start something on his own. With Parle management's permission, he started Paramount and launched Shingar *kum kum bindi* while still employed at Parle. He finally resigned in 1968 as a franchise manager, by which time he was a successful businessman in his own right. He owned a car and also lived in a modest flat.

"I always wanted to do something on my own, instead of spending the rest of my life working for someone else," says Topiwala. Making *bindis* appealed to him as most of the Hindu married women wear *bindi*. Though the market was waiting to be tapped, no quality brand existed in the organised sector then. So Topiwala rented a 200 sq ft room in Goregaon, employed two workers and started making Shingar *bindis* packed in 5 gm collapsible tubes. These tubes were priced at 60 paise each but the retailer sold them for Rs.1.50. What surprised Topiwala was that in spite of competition from other brands, there was consumer acceptance. In the first year, sales touched Rs.10,000 which increased to Rs.50,000 in the second year and Rs.4 lakh by the fourth year.

The venture proved profitable and in 1964, Topiwala came up with a brand extension to Shingar — liquid *kum kum* in a pot shaped plastic jar, popularly known as *matka*. The product was an instant hit but had to be withdrawn in 1969 as the product had an adverse skin reaction. Moreover, in the same year, a Delhi-based company launched mat-finish *bindi*, which became very popular. Realising the product's potential in Bombay, Paramount launched the *bindi* in Bombay in a cylinder. Well-designed and neatly packed, the *bindis* were well accepted and the demand was still unfulfilled.

What further boosted the sales was an advertisement campaign in the Hindi weekly *Dharmayug*. This helped push sales to Rs.35 lakh. Although Topiwala faced competition from a Madras-based company, its impact on his product was negligible. Says he, "None of these companies had a brand name. But my products were well marketed, advertised and launched under a brand name."

But it was not a smooth ride all the way. The extremely simple concept of stick-on *bindis* were becoming popular in the mid-seventies. And it was a major challenge to Topiwala. Easy to apply, they received wide consumer acceptance and caused a setback to the powder and liquid forms of *bindi*.

Grabs a market share

But Topiwala bounced back with Tips & Toes nail polish. Since the cosmetic market at that time was not crowded with products, he decided that though his earlier attempt at launching nail polish under the Shingar brand name was a big flop, he still stood a good chance to succeed.

Also there was the excitement of challenging rivals like Lakme, which had the lion's

share of the nail polish segment. But Topiwala grabbed a share of the market maintaining the same price as Lakme (Rs.10 per bottle) and aggressively advertising his product. Lakme, of course, shrugs off the challenge. According to Anil Chopra, vice-president (cosmetics), Lakme, "The impact on our sales was negligible and we continued to grow at a steady rate."

In order to recapture the market of stick-on *bindis* which it had failed to the first time around, Paramount launched stick-on *bindis* under the brand name Shilpa in 1982. The product was well accepted, but due to its high price (Re.1 per packet), only affluent customers could afford it. And in order to tap a wider market, Topiwala introduced a similar bindi under the name Sun-spot, for the semi-urban and rural market. Paramount's sales has been soaring high and it has now become the undisputed market leader. This year, its sales is estimated to be Rs.9 crore.

The biggest advantage Topiwala has is that no excise duty is levied on these products. Even in 1986, when the government hiked the excise duty from 10 per cent to 100 per cent, taking the price of each bottle from Rs.12 to Rs.20, the impact on Tips & Toes was negligible. The reason: he sub-contracts the work to several small-scale units. "By doing this, not only could he price his product on a par with Lakme, but he also had the advantage of saving on overhead costs," says a stockist. This further helped him when he decided to shift his factories to Vapi where overhead costs were considerably less. (Apart from the Shingar and Tips & Toes factories, Topiwala also owns a plastic container unit and a printing press.)

In order to recapture the market lost due to the excise hike, Lakme had changed its marketing strategy and launched the "Designer collection," to which Tips & Toes responded with "Exclusive collection". Launched in a wide variety of colours with fancy packaging accompanied by a massive advertising campign, it made Lakme sit up and notice. "For the first time, our sales were down by 5-6 per cent," says Chopra. Along with the new nail polish range came lipstick under the brand name Exclusive. (This was the second attempt at launching lipsticks — the earlier attempt under the brand name of Kiss & Tell had failed.)

The Tips & Toes range: making rivals sit up and notice

Constant effort

Today even though Tips & Toes is supposed to have a 30 per cent share in the nail polish and lipstick market, Topiwala and his eldest son Hemant — who joined the family business in 1982 — are continuously striving to improve both product quality and profit margin. Hemant who looks after sales, production, purchase and advertising, keeps himself abreast of the latest developments in the industry. Realising that advertising would help to keep the products in the news, Hemant has been extensively advertising his product, making it a familiar name in the market. At present, the company spends about Rs.1.5 crore on advertising every year. In the last three years, the company has expanded its product range by introducing blush on, powder compact, *kajal*, liquid foundation and eye shadow.

By September this year, the company plans to introduce shampoo, beauty cream and eye liner, thus completing the whole range of beauty products. With this, Tips & Toes' confrontation with Lakme will be total. But Chopra does not feel threatened. "Tips & Toes is still far behind. Their past record in launching new products has been very poor. One will have to wait and see how they fare this time."

But Hemant Topiwala is quite confident of the products making an impact on the customers. And, once the new range of products is launched, he expects the company's turnover for the next financial year to touch Rs.15 crore. Exports is another area in which the company can excel, he feels. Paramount Exports and Trade Link, an export-oriented unit set up two years ago, exported goods worth Rs.50 lakh last year to south American countries, the Middle East and South-East Asia.

Tips & Toes may, perhaps, be playing second fiddle to Lakme now. But while Lakme has all the backing that a monolith like the Tata group can provide, Topiwala and his companies have struggled on their own — and have done a good job of it. Topiwala has no qualms about being known as Number two. "If one compares the number of products of the two companies, we are nowhere near Lakme. But being in the number two position is not bad, because we have just one more step to climb. And in Shingar we are definitely leading, and that gives us a good boost." ■

Bottling unit at Vapi: low overheads

VCDL PROJECT

Strikes gold

A distillery starts out trying to find a solution to its industrial waste problems and ends up making money on selling fish that thrive on the waste. For years, Vorion Chemicals and Distilleries Ltd (VCDL), located about 55 km away from Madras city at Vedanarayanapuram, discharged 500,000 litres of effluent water into the nearby Vaigai river every day, in the course of producing 33,000 litres of alcohol. The effluent had a biological oxygen demand (BOD) of 45,000 to 50,000 particles per million (ppm) — indicating a very high level of pollution. In 1982-83, following a public outcry against the pollution, the Tamil Nadu Pollution Control Board (TNPCB) issued a notice to the Udayar group unit, saying that if the effluent problem was not sorted out, it would have to shut down.

And so began the search for a solution. This took M. Nandagopal, managing director of VCDL, to the US where a firm, Solar Aqua Farms, offered to provide the technology he was looking for. However, government restrictions on the amount of royalty to be paid put an end to the venture. But around the same time, the company came across a method, in the US, whereby certain varieties of fish, viz, tilapia and catfish, are bred on treated sewage. This proved to be a useful starting point.

VCDL then enlisted the assistance of G. Rangaswami, former vice-chancellor of the agricultural university at Coimbatore, as a technical advisor. According to Rangaswami, there are two ways of getting rid of distillery waste. He says, "The first involves incineration, which is costly. The other alternative is to instal digestors, in which micro-organisms act on the effluents to produce biogas."

VCDL pitched for the second alternative, but the snag here was that after a certain optimum level, the micro-organisms cannot act on the effluent material. The company R&D team decided to treat the bacterial biomass and render it edible by fish, as is the practice in the US. "Nowhere else in the world is this process used to treat molasses-based distillery effluents," claims Rangaswami.

The process is quite simple. The effluent water, which has a temperature above 60 degrees celsius at the outlet point, is cooled and passed into a rectangular digestor. At 35 degrees celsius, the effluent is acted upon by anaerobic bacteria. This process converts the organic matter into biogas and reduces the BOD to about 3,000 to 4,000.

Claims not corroborated

The treated effluent is then led into open bio-conversion ponds and aerated continuously. Bacteria and algae are added to this, to bring down the BOD to less than 1000 in four or five days. The fish are fed with the resultant nutrient-rich biomass. In the process, the dark brown colour and the odour is removed. "The BOD is reduced to almost zero," claims R. Rajendran, general manager of VCDL's aqua culture division. Sources in TNPCB say that over the past three months, "the BOD level has been around 30, which conforms to our specifications". They do not, however, corroborate VCDL's claims of zero pollution.

Finding the right fish for the job took time. "We needed a hardy fish, a fish able to withstand fluctuations in the oxygen and temperature levels and able to thrive in a dense population. The density is necessary to ensure a high population," explains Rangaswami. The choice finally narrowed down to a hybrid, called Golden Fish, which is a cross between the golden coloured and dark brown coloured strains of tilapia. "Since the effluent, in this case, consists of organic matter and not chemicals there is no fear of the fish containing toxic substances," he says.

Intensive culture

By 1987, VCDL had fish ready for the market and the idea was a sell out. In fact, six months later, VCDL found that it had no more fish to sell. It, therefore, had to resort to "intensive culture", in which the "fingerlings" (as the growing fish are called) are fed a protein-rich feed, in addition to the biomass in the tanks. The fish reach an optimum size of 500 gm in about 5 months, against 10 months under the effluent treatment project.

From intensive culture, VCDL has progressed to using a "super-intensive" culture entailing an investment of Rs.75 lakh on a 4-acre fish farm. "This is meant for commercial purposes and has nothing to do with the effluent treatment project."

For semi-intensive cultivation, the investment is Rs.25 lakh on a 10-acre farm. "It is an ideal project for the small farmer," says Rangaswami. Properly managed, the return on investment is Rs.1 lakh per acre per annum in the case of semi-intensive cultivation and Rs.2 lakh per acre per annum in intensive culture. "The effluent treatment project has plunged VCDL into fish farming in a big way," says Nandagopal. He predicts that "the Golden Fish project will net a turnover of Rs.1 crore." Better still, VCDL is now ready to offer its technology for effluent treatment, which can also be used by breweries.

Even though it takes 50 acres of land to handle an effluent discharge of 500,000 litres a day, enquiries are still coming in for the super-intensive culture. The West Bengal fisheries department has also evinced interest, besides "some north Indian parties", says Nandagopal.

The message in VCDL's experience, then, seems to be: caring about the environment pays handsomely. ■

The Premier Philosophy:
Continuous refinement. Constant commitment.

The Premier Automobiles Ltd.

AT THE BIRTH OF INDIA'S MODERN TELECOMMUNICATIONS WE MAKE SURE OF THE RIGHT STANDARDS.

Nature always seeks perfection. And like nature, we at Telecommunication Engineering Centre (TEC) guard against mismatch. In the telecommunication sector. Ensuring compatibility of equipment and technologies. And the smooth functioning of the whole system.

In a fast growing sector like the country's telecommunications, which is absorbing technologies from the world over, a central control is critical.

To ensure that all the equipment is of a certain standard.

That the technologies imported integrate with the country's existing telecom system.

And that's exactly what TEC does.

For the consumer it means total satisfaction.

Every equipment which is put into the telecommunication system has to meet the standards laid down by TEC.

A standardisation procedure carried out by:

- Uniform evaluation tests for all equipment.
- Type approval for Telephone Instruments, Radio Communication Systems, etc.
- Interface approval for Modems, PABXs, Cordless Telephone, FAX, etc.

- Technology approvals.
- Connectivity approval for one time procured equipment.

All making sure you are assured of a high standard, ith no compromise. And the entire telecom system in e country runs smoothly.

or manufacturers, a helping hand.

TEC standards and evaluation procedures help tele- m equipment manufacturers in choosing the right chnology. Fine tune their equipment standards. And t through red tape by a centralised approving thority. As well as access to a vast information bank f the latest technology available in the world.

So whichever way you look at it, TEC is your helping and in the telecom sector. Safeguarding the country's lecom system. Ensuring the highest standards for dian telecommunications.

MRF

Comparatively good performance; profit margins look up; exports down 4 per cent; subsidiary (Funskool) to launch new products

For the year ended September 1990, MRF, the flagship company of this south-based low profile group posted better working results than other players in the industry.

For the current accounting year ended 30 September 1990 (for six months), gross turnover went up by 19 per cent, but gross profit jumped by 62 per cent followed by a 54 per cent rise in net profits.

On a tiny equity base of Rs.3.86 crore, earning per share on an annualised basis works out to Rs.49.42, compared to Rs.31.99 earned in the previous year. Dur-

*6 months **annualised

ing this period, the capacity utilisation for the auto tyres and tubes divisions was placed higher at 75 per cent and 86 per cent respectively. Also, the average realisation for tyres was higher by 5 per cent.

The company's aggressive marketing thrust and presence in almost all segments of the tyre market — two wheeler tyres, LCV and truck tyres, jeep and car tyres as well as tractor tyres — helped it face fierce competition prevailing within the market. This is reflected in higher gross profit margin of 7.6 per cent against 5.60 per cent recorded last year.

However, MRF's average collection period has shown a sharp increase. From just 28 days in the previous year, it went up to 71 days. This means the company has had to extend its credit period to increase sales. The average inventory period has also increased from 49 days in 1989 to 94 days in the current year. Exports on an annualised basis was lower by 4 per cent.

Meanwhile, the company's Medak tyre project is almost complete and trial runs are expected to begin soon. The company's other diversification project into speciality surface coatings will also begin soon.

The company's subsidiary, namely Funskool India Ltd, recorded a turnover of over Rs.3.55 crore with accumulated losses of Rs.1.07 crore. However, the market response to the Funskool range of toys is reported to be quite good and many new products are expected to be launched in 1990-91.

For the current year, the company expects margins to be under pressure due to fierce competition. However, during the first three months of 1990-91, it has recorded a turnover of Rs.177.3 crore (Rs.153.40 crore) — a growth of 16 per cent. In view of the company's track record, it is likely that the performance for the full year may show a steady improvement. The company's long-term prospects also seem bright.

Meanwhile, the share price which had touched a high of Rs.470 in anticipation of a bonus has now come down to Rs.350.

Bata India

Dividend pruned; higher overheads and interest charges keep margins under pressure; disturbances in different parts of the country results in lower sales volume; prospects not so encouraging

Bata has pruned dividend by 5 points to 10 per cent for the year ended 31 December 1990. The company has suffered a setback for the year under review on account of increased costs of production and lower sales volume. The bottomline has, however, recorded a growth of 120 per cent as capital gains on transfer of properties has been credited to profit and loss account.

Violence in various parts of the country, declining purchasing power of the middle class and competition from small and unorganised sector have adversely affected the sales volume and the com-

Bata India			(Rs crore)

pany could not fully pass on the escalation in input costs. The sales volume of rubber/canvas footwear declined by 16 per cent from 33.3 million pieces to 28 million while that of leather footwear was almost stagnant at 18.3 million (18.2 million pieces). Nevertheless, the average unit sales realisation improved by 17 per cent and 9 per cent respectively. However, this was insufficient to cover cost escalation as indicated by declining profitability margins.

During the year, the company sold some of its properties to its subsidiary, Bata Properties Ltd, and booked a capital gain of Rs.4.97 crore. If one excludes this item from the profits, gross profit will be lower by 22 per cent while net profit by 18 per cent, despite a 50 per cent reduction in tax liability. The profitability would have been still lower had the company provided for the full amount payable to employees under a voluntary separation scheme. Only one-third was provided during 1990.

The company seems to be unable to keep overheads and interest costs under tight control. Manufacturing, selling and administrative expenses eat away 37 per cent of total sales. During the year, these expenses went up by 8.2 per cent. Rent, rates and taxes increased by 61 per cent to Rs.11.9 crore (Rs.7.38 crore).

The large labour force not only creates industrial unrest but also increases the cost of production. Employee costs during the year amounted to Rs.68.57 crore (Rs.67.91 crore). Industrial relations at

THAT'S NOT ALL WE'LL BE

Sea-Land Service Inc., now becomes the first and only shipping line to offer regular, multi-container services at Paradip port.

Of course we'll be carrying Paradip's vast sea food exports to the world in our special refrigerated ('reefers') containers.

But that's not all. Our containers are equally equipped to carry every kind of dry cargo – fabric, fruit garments, spices, aluminium – cargo, which is you'll agre a different kettle of fish altogether.

At Sea-Land, we believe there's a container for anything that needs high-quality containerization.

CARRYING FROM PARADIP.

a belief that comes from operating 70 container ships
1,47,000 containers between 80 ports and 70
ntries and territories across the globe.

We're also implementing the concept of multi-modal
nsportation, that involves integrating freight transport
all related services like roads, railways, and container
ots to ensure the safe door-to-door delivery of cargo.

Come, discover Sea-Land, at Paradip. You'll discover how your precious cargo will travel absolutely intact with us.

And that's a strictly non-perishable commitment.

Sea-Land

Ogilvy & Mather 8465

the Batanagar factory improved during the latter part of the year but the long term viability of the unit is still doubtful.

A noteworthy fact is that on the export front the company recorded a growth of 54 per cent at Rs.18.34 crore (Rs.11.94 crore). During the year, the company spent Rs.5.59 crore to modernise its retail shops and factories. Currently at Rs.80, the scrip may slide down further as the prospects are not so encouraging.

Pond's (India)

Dividend higher by 50 per cent; mushroom and electronics project to push up exports substantially; advertisement expenses higher by 67 per cent; capital expenditure plans provide tax shield

Pond's has maintained growth in sales and profitability for the year ended 31 December 1990. It has maintained dividend of 37.5 per cent on the enlarged equity base.

Exports account for over one-third of total net sales of the company. During the year under review, it recorded a growth of 11 per cent to Rs.29.99 crore (1989: Rs.26.91 crore). Items exported included clinical thermometers, shoe uppers, sea foods, cosmetics and toiletries etc. It has also started exporting leather garments from its Madras garment export unit. Its 100 per cent export oriented mushroom project went into production in October 1990 and is expected to achieve full capacity utilisation during the current year. Another export oriented unit (EOU) at Kodaikanal to manufacture electronic products will start operations in the third quarter of the current year.

Gross block during the year under review increased by 44 per cent (by Rs.8.70 crore) to complete the export-oriented diversification plans. The additions to fixed assets were entirely financed from internal accruals and reduction in net current assets. The capital expenditure plans has provided a tax shield to the company. The company's tax liability is only 12 per cent of its pre-tax profits.

During the year under review, total income recorded a growth of 18 per cent at Rs.126.11 crore (Rs.106.95 crore). The company's products are subject to very high excise rates. Excise duty (Rs.41.06 crore) as a percentage of net sales (excluding exports) works out to 132 per cent. Operating profit was higher by 24 per cent at Rs.11.47 crore (Rs.9.27 crore) mainly due to better sales realisation.

Even on the enlarged equity base (after 1:2 bonus during 1990), EPS is attractive at Rs.7.6 (pre-bonus EPS Rs.11.4) against EPS of Rs.9.1 during 1989. The blue chip's p/e ratio works out to 28 times at the current market price of Rs.215.

* on enhanced equity capital

Coromandel Fertilisers

Improved working results; better offtake from fertiliser division; increased profit margins; cement division sold; dividend declared

Coromandel Fertilisers, a south-based company has announced sharp improvement in its performance for the year ended September 1990.

During this period, gross turnover showed a modest growth of 8 per cent, but gross profits registered a hefty 289 per cent jump, followed by a net profit of Rs.10.50 crore (-Rs.6.96 crore). This has resulted in an EPS of Rs.4.31 and a dividend payout of 46 per cent, based on the 20 per cent declared by the company.

The company's sharp spurt in profitability was due to better offtake from the fertiliser division whose production touched 361,000 tonnes, one of the highest levels achieved since commencing production. But a major reason for the splurge in profits was the firming up of cement prices in the open market from April 1990 onwards. This consequently resulted in the average realisation for cement going up by 16 per cent despite a 11 per cent drop in volumes sold, which stood at 673,644 tonnes (758,790 tonnes). The capacity utilisation for the cement division was placed slightly lower at 69 per cent (75 per cent).

Coromandel Fertilisers *(Rs crore)*

Year ended	Sept '90	Sept '89	% Change
Gross sales	208.97	192.83	8
Government subsidies	71.93	54.49	32

Employee costs	11.81	11.71	—
Interest	20.27	20.31	—
Gross profit	23.08	5.93	289
Depreciation	12.58	12.89	
Net profit/(loss)	10.50	(6.96)	
Equity capital	24.32	24.32	
Reserves & surplus	20.45	14.81	
Dividend (%)	20.00	—	
Earning per share (Rs)	4.31	—	
Market price (Rs):			
Current	62.50		
1990: High	80.00		
Low	22.00		

On the other hand, effective cost control measures adopted by the company resulted in interest overheads being maintained around Rs.20 crore. Raw materials' costs rose by 21 per cent but so did gross profit margins which registered a 7.97 point increase from 3.07 per cent in 1988-89 to 11.04 per cent in 1990, against an industry average of around 10 per cent.

Buoyancy in both the cement and fertiliser markets have also helped the company bring down its average debtors collection period from 58 days in the previous year to 42 days. However, the average inventory period has gone up slightly to 83 days, from 74 days in 1988-89. Meanwhile, the company decided to dispose of its cement division with effect from 29 November 1990. This division has been sold to India Cements Ltd at a consideration of Rs.105.30 crore, out of which Rs.5.27 crore was received in June 1990. The balance amount, after setting off-term loan liabilities due to the institutions and banks, was received on 29

November 1990. Hence the full effect of the sale of this division will be reflected in the accounts for 1990-91.

Coromandel's diversification into cement three years ago is posing a problem, as the market for cement continues to be subdued. As a result, the cement division eats into the fertiliser division's profitability. Hence in future, the company has decided to stick to its main line of business — fertilisers.

And in order to reduce its dependence on grid supply for power, the company has installed a 4MW diesel generating set which, together with the existing 5MW turbo generator set, will provide about 9MW of power to the plant.

The management is confident of improving its performance for 1990-91, but much will depend upon the monsoon. Although there is a more than normal increase in 'other income' due to the sale of the cement division, the gross turnover is likely to be slightly lower as a result of the sale.

TRENDS

Bajaj Plastics

Bajaj Plastics, manufacturers of high density polyethylene (HDPE) woven sacks and laminated fabrics has posted a 32 per cent higher sales for the year ended March 1991. With its materials' cost as a ratio to sales constant at around 60 per cent, the gross profit has witnessed a four fold increase to Rs.4.16 crore. After providing for depreciation and taxation, the net profit works out to Rs.1.19 crore yielding an EPS of Rs.12.

Surprisingly, the company's sales are equally distributed over the year but over 80 per cent of the full year's profit is earned in the second half.

Nagarjuna Signode

Nagarjuna Signode, a Hyderabad-based company engaged in the manufacture of steel strapping systems, has posted a 23 per cent increase in sales for the first half ended September 1990.

The company is currently tapping the capital market with a rights equity issue in the ratio of 1:2 at par aggregating Rs.1.89 crore to finance its vertical integration programme. This programme, to be implemented at a cost outlay of Rs.11 crore, incorporates the setting up of cold rolling mills besides diversification into the manufacturing of linear low density polyethelene (LLDPE) used in stretch film wrapping systems.

Incidentally, the company started in 1984 with a turnover of Rs.4 crore on which it made a loss of Rs.2 crore. Till 1987, it continued making losses and had virtually become a BIFR case. Since then, the company undertook a survival strategy by cutting costs, convincing users and expanding the product range. Nevertheless, for the 11 months ended February 1991, gross income was placed at Rs.27 crore and profit after tax at Rs.2.44 crore. EPS on this works out to Rs.6.78.

Parasrampuria Synthetics

Parasrampuria Synthetics, manufacturers of polyester, nylon and filament yarns, has announced improved results for the second half of the year 1990-91. Compared to the corresponding period last year, turnover has improved by 34 per cent in line with a 35 per cent increase in operating profit. In spite of the increase of prices of di-methyl terephthalate (DMT) and mono-ethylene glycol (MEG) during the Gulf War, the raw material cost as a percentage of sales has shown a sharp drop of eight percentage points. Also Parasrampuria has shown a 50 per cent higher net profit with no tax provisions made in the current period despite a higher interest burden. This has caused net margins to inch forward slightly from 10.31 per cent to 11.59 per cent.

At the end of 1990-91, the company had a spinning capacity of 7,500 tpa and a twisting capacity of 800 tpa. Expansion plans are currently underway to increase the spinning capacity to 11,250 tpa by August 1991. Installation of a polycondensation plant for the manufacture of 75,000 tpa yarn grade polyester chips should be finished by October 1991. The spinning capacity has already increased to 10,000 tpa resulting in a 34 per cent increase in net sales. The expansion has been funded through a rights convertible debenture issue. Each debenture of Rs.200 consists of two parts. Part A of Rs.90 will be converted into five equity shares at a premium of Rs.8 in October 1991. Upon conversion, the equity base will increase from Rs.7.7 crore to Rs.13 crore.

Parasrampuria Synthetics has earned Rs.8.29 (Rs.5.51) per share in the six months ended March 1991. An interim dividend of 12 per cent (10 per cent) has already been declared. The scrip reached

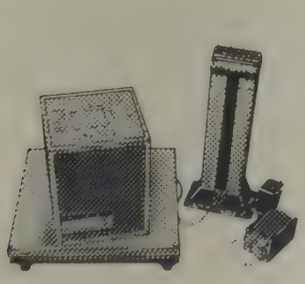
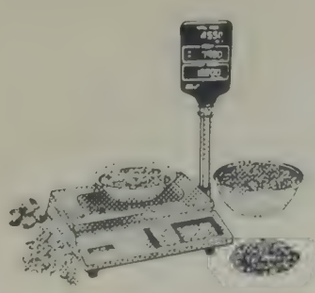
the Impossible



ATCO's accurate electronic weighing can differentiate a baby wearing a pair of socks from a baby wearing just one!



That's the difference that makes ATCO unique. Because ATCO knows that inaccuracies in weighing can cost you money. And repeated weighing errors can cause continuous losses without you realizing it.

That's why ATCO Electronic Weighing Machines have been built to give accuracy levels unheard of earlier. So when anything is weighed on ATCO it has to be true. Precisely why reputed companies like Glaxo, Bajaj, Colgate, Cadbury, Reliance, Tribhuvandas Bhimji Zaveri, Glenmark Pharma, Ankur Udyog, Gharda Chemicals and others trust ATCO.

So if you need accurate weighing, irrespective of your field of operation or size, choose ATCO. ATCO has the widest range of electronic weighing machines to weigh anything from a micron to 60 tons.

It is the high precision accuracy at exceptional value that has made ATCO the No. 1 Electronic Weighing Machine Company.

If it is weighed on ATCO, it has to be true.

ARTIG-553-91

a high of Rs.127.50 and a low of Rs.23 in the year 1990-91. It is currently trading at Rs.72 discounting earnings nine times compared to the industry average of 11.20 times.

RESULTS ANNOUNCED

Sipta Coated and Comet Steels

Turnover up but margins crash as profits come under severe pressure for the year ended 31 March 1991; dividend skipped by these two sister concerns of the Lloyds Steel group controlled by the Guptas

Sipta Coated manufactures galvanised plain/corrugated (GP/GC) sheets and has recently integrated backwards to produce cold rolled (CR) sheets. Turnover up 4 per cent at Rs.135.51 crore yields a gross profit margin of 1.9 per cent (3.9 per cent). With a heavy equity base of Rs.17.97 crore, EPS is barely visible at 17 paise (Rs.1.36). The scrip quotes at its nineties' low of Rs.14.

Fall in gross profit margin from 7.9 per cent to 3.1 per cent is more pronounced for Comet Steels whose turnover is up 38 per cent to Rs.101.55 crore. Also into CR sheets, at net level, EPS is 88 paise (Rs.4.08) while the scrip quotes at Rs.15, against its nineties low, giving a price earnings ratio of 17.

Bajaj Auto and Maharashtra Scooters

Turnover up for both the giant and the little one in the Rahul Bajaj fold while bottomline registers a decline for the year ended 31 March 1991

For Bajaj Auto, gross profit margin was 13.3 per cent (14.8 per cent) on an turnover of Rs.1,219.90 crore (up 15 per cent). On an equity base of Rs.18.81 crore, the company earned Rs.29.95 per share (Rs.31.38) and will pay out Rs.10 (Rs.11) per share as dividend. The scrip quotes at Rs.605 discounting these earnings 20 times.

Gross profit margin stagnated at 13.7 per cent on a turnover of Rs.136.30 crore (up 10 per cent) for Maharashtra Scooters. But with tax provision almost doubling and equity having doubled due to a 1:1 bonus, EPS slid from Rs.43.22 to Rs.18.23 (Rs.36.40 on cum bonus equity). Dividend per share has come down from Rs.4 to Rs.2.50 (Rs.5 on cum bonus equity). The market price at Rs.215 discounts these earnings nearly 12 times.

Grasim Industries

Good results for the year ended 31 March 1991 enable a comfortable servicing of expanded equity for this highly diversified flagship of the Aditya Birla group

Makers of viscose staple fibre, cement, rayon grade caustic soda, man-made fabrics etc, Grasim's gross profit margin is up 14.9 per cent (12.5 per cent) on a turnover of Rs.1,229 crore (up 19 per cent). On the expanded equity of Rs.60.50 crore, EPS works out to Rs.15.87 (Rs.12.39) while dividend has been stepped up to Rs.3.50 per share (Rs.3 per share). The scrip quotes at Rs.244 discounting these earnings 15.4 times.

Kirloskar Cummins

For this Fera manufacturer of engines, profit margins get a good boost while bottomline is up 61 per cent for the year ended 31 March 1991

Gross profit margin is up four points to 15.3 per cent on a sales of Rs.269.54 crore (up 19 per cent). Inspite of tax provision having more than doubled, the bottomline is heavier at Rs.18.79 crore (Rs.11.65 crore) yielding an EPS of Rs.7.12 (Rs.4.41). The scrip quotes at Rs.132.50 discounting these earnings 18 times.

HDFC

Impressive results; total income up 35 per cent, loan disbursals up 37 per cent; equity capital more than doubled; dividend up two points

Housing Development Finance Corporation (HDFC) has announced impressive working results for the year ended March 1991. While total income increased by 35 per cent to Rs.263.41 crore, the loan disbursements kept pace with it, up 37 per cent to Rs.668.49 crore. Also the loan approvals during the year were higher by Rs.210.75 crore to Rs.813.78 crore.

Meanwhile the equity capital has more than doubled to Rs.44.72 crore (Rs.19.99 crore) due to the rights cum public issue made during the year. The directors have recommended a two point hike in dividend to 22 per cent which will be paid on a pro rata basis absorbing Rs.5.74 crore.

IN BRIEF

Weldflux Engineering is setting up a 100 per cent export oriented unit to manufacture submerged arc welding fluxes, used for high pressure welding. The total capital outlay for this project is Rs.7.5 crore.

Benzo Petrochemicals is setting up a Rs.7 crore project to manufacture benzaldehyde and benzyl alcohol.

Times Guaranty Financials has recently launched two new schemes for portfolio management. The company's total assets as on 31 March 1991 were Rs.14.79 crore. It made a gross profit of Rs.77 lakh.

Vikram Projects has bagged two sugar plant projects in Maharashtra and Gujarat worth Rs.15.93 crore. For the year ended March 1991, the company's turnover rose by 115 per cent to Rs.21.31 crore. The order book position for the current year is placed at over Rs.50 crore.

Larsen & Toubro has got a Rs.16.8 crore contract to design and construct a half kilometer long bridge across the river Limbang in Sarawak, Malaysia.

Davy Powergas India is promoting a new company, Xytel India, in financial and technical collaboration with the US-based Xytel Corporation. Xytel India will design and manufacture advanced pilot plants and systems.

Toshniwal Agrochem is setting up a 450 tpa capacity dyestuffs plant at Tarapur, Maharashtra. The plant is expected to go on stream by the end of this year.

Lan Eseda Software Systems has signed a joint venture agreement with International Storage Systems of the US to manufacture high capacity hard disk drives.

Maharaja International plans to manufacture refrigerators and dish washing machines with technology from Siltal of Italy. The company has received CCI's consent to raise Rs. 4.75 crore from the public.

Hindustan Development Corporation has finalised the financing plan for its composite steel plant to manufacture 250,000 tpa of special steels at Malanpur, MP.

Jain Irrigation Systems has stepped up dividend by three points to 18 per cent for the year ended 1990-91.

HIGHLIGHTS EFFICIENCY.IN MODER

Philips Lighting

PHILIPS

NDUSTRY.

Philips Lighting In Action

The TISCO plant at Jamshedpur, with Philips Lighting.

High above the buzz, the hum and the grinding gears of modern industry... shine the lights. Turning wheels of fortune. Moving production lines. Pushing profits to an all-time high. Philips Lighting.

Philips Industrial Lighting: The new productivity factor.

Whatever the area or application, Philips Lighting creates the ideal working environment. Increasing safety. Assuring comfort. Maximising production. And, most importantly... saving on energy costs.

Yes. Because only Philips have the widest range of energy-effective light sources, as well as luminaires that are specially designed to optimise efficiency.

For example, at the TISCO factory in Jamshedpur, PHILIPS INDIA developed special high-bay luminaires for SON lamps. This has resulted in a five-fold increase in illuminance. As well as energy savings up to 51%.

Some other success stories: the TVS-Suzuki Factory at Bangalore; the Escorts-Yamaha Factory at Surajpur; the KCP Factory at Madras, and the Hindustan Motors Plant, near Calcutta.

Each one exemplifies Philips Lighting expertise. And is also, a triumph of technology for Philips LiDEC. The Lighting Design and Engineering Centre that scales new heights every day... in industrial lighting.

Leaders in Industrial Lighting. Worldwide.

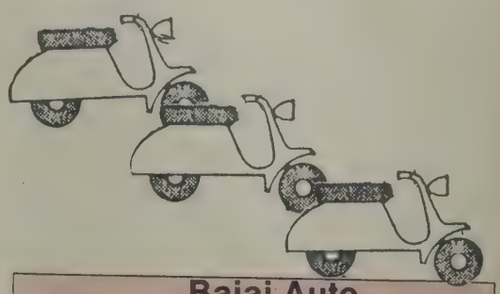
STOCKMARKET REVIEW

Markets on hold

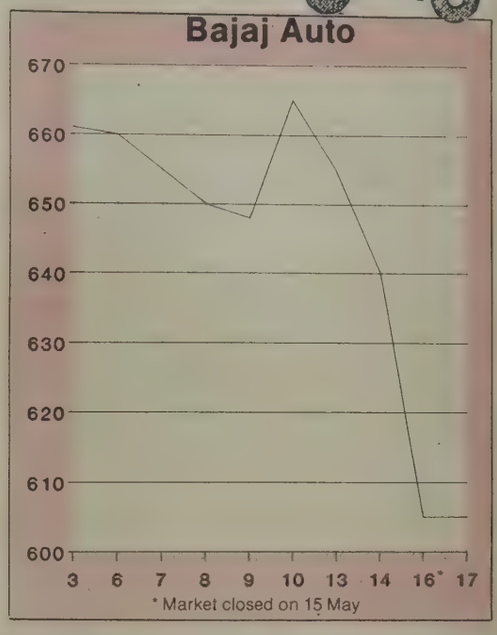
(For the period 6 May to 18 May 1991)

	18.5	4.5	percentage change over fortnight	year
BSE Sensitive Index	1,297.69	1,272.09	+2.0	+69.2
BSE National Index	642.66	634.01	+1.4	+53.7
Vol (Rs.cr) fortnt. ended	107.79	142.28	-24.2	-8.7

Stockmarket prices continued to trade in the narrow 1,200 to 1,300 range that the BSE Sensitive Index entered on 5 April. The market was buoyed by speculators hopeful of a Congress majority — this caused Reliance to close at Rs.142.50, up from Rs.130. And, as rumours of steel decontrol spread, Tisco's share rose to Rs.193, up from Rs.180. This outweighed the absence of financial institutions from the markets as they deployed their spare funds in the more profitable call-money market (where rates touched 60 per cent on 14 May). It also outweighed the negative flow of corporate results, especially for larger companies such as Bajaj Auto, Hindalco and Indian Aluminium. Interestingly, even ITC's share fell when it declared earnings of Rs.77.5 crore, a 38 per cent increase. The market had been expecting earnings of Rs.85 crore.



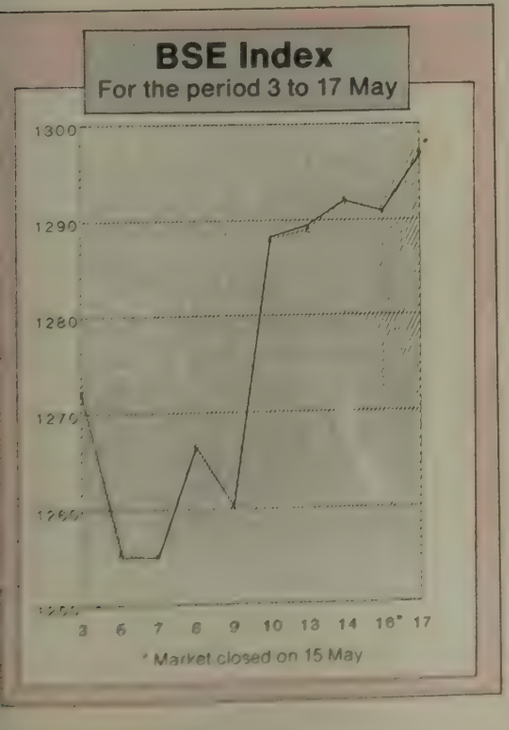
International forces



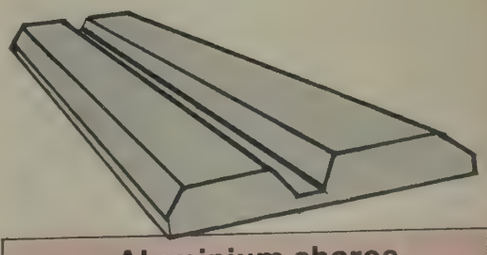
The poor results of Hindalco and Indian Aluminium reflected the fall in the international prices of aluminium which stood at $1,300 per tonne compared with $1,400 per tonne at this time last year. Indian Aluminium which is more dependent on state power supplies than Hindalco suffered more as it was forced to produce less value-added products such as alumina (the price of which, internationally, fell more than finished aluminium last year) as a result. Both shares have fallen significantly since their highs in October last year (*see chart*) when worries about aluminium production in the Gulf caused international prices to cross $2,200 per tonne.

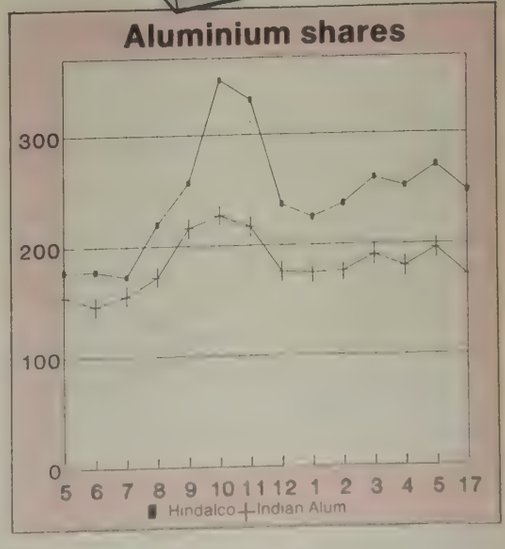
Bajaj Auto's price behaviour was particularly interesting (*see chart*), with many speculators crying foul. The scrip opened the fortnight at Rs.661.25. On 10 May, the company announced that it would consider a shareholders' bonus at a meeting in mid-June with its results due on 14 May. This sent the price soaring to Rs.677.50 from the opening price of Rs.655. The scrip closed the day at Rs.665.

According to traders, volume was unusually heavy compared with normal volume of 25,000 shares a day. The company's results were, however, disappointing with net earnings down to Rs.56.3 crore from Rs.65.1 crore last year and Rs.40.7 crore for the first half of the year (the second half is normally 30 per cent better than the first half but the economic depression after October put paid to that). Given that dividend — an indicator of past and future performance — was cut from 110 per cent to 100 per cent, speculators wondered about the basis for the upcoming bonus. In their view, a bonus was justifiable only if the company's performance in 1991-92 showed signs of improvement over the prior six months. If so, why was dividend cut, given the company's adequate earnings?



Grasim's results were excellent and in line with the market's expectations. Given that earnings exceeded Rs.16 per share and given that cement would continue to underwrite next year's profits and comfortably finance its ambitious plans, the market was pleased with the results. The scrip closed the fortnight at Rs.244, up from Rs.230 (+6 per cent).





Going by hearsay

ICICI and HDFC continued to surge on rumours of a shift from the cash to the specified (forward) list on the BSE. ICICI

closed the fortnight at Rs.350, up from Rs.267.50 (31 per cent) while HDFC closed at Rs.460, up from Rs.397.50 (+15.7 per cent). Birla Jute and MRF were gainers for the same reason, the former rising to Rs.260 from Rs.225 (+15.6 per cent) and the latter rising to Rs.540 from Rs.450 (+20 per cent).

The least likely to be shifted to the specified list is MRF given its low capital base. Nevertheless, it is on the speculators' list as it had earlier been in the specified list. The rise in prices on expectations of a shift is a common phenomenon, having happened earlier in the cases of Castrol and Colgate. Given that such an announcement ought to be done in utmost secrecy so that not even its whiff pervades the charged air in which speculators operate, the BSE authorities ought, in fact, to ensure that none of these scrips is currently moved to the specified list.

Uncertainty about the election results hung heavy in the air as the fortnight closed, putting the markets on hold and keeping volumes down. The Reliance share is likely to be the most actively traded in any event, with sharp swings depending on the outcome. With the monsoons less than a month away, June — normally a stable month for stockmarkets — could prove unusually volatile.

RAFIQ DOSSANI

MADRAS STOCK EXCHANGE

Admission wrangle

The Madras Stock Exchange (MSE) was all set to hold a written examination in mid-May to admit 23 new members, when six prospective members stepped in with a lawsuit. Last month, they moved the Madras High Court protesting against the basis of selection because according to a stockbroker, "All the tickets are reserved for allotment only to authorised assistants, who have served members or member firms for a period of two years prior to December 1991."

The MSE's rules allow for the admission of two categories of members. The first consists of authorised assistants who have served for at least two years with a member broker or firm. The second category consists of those applicants backed by a two-year employment guarantee from a member. "The six petitioners are sore that the MSE is not taking the second category of applicants into consideration," explains S.P. Sivaprakasam, president, MSE.

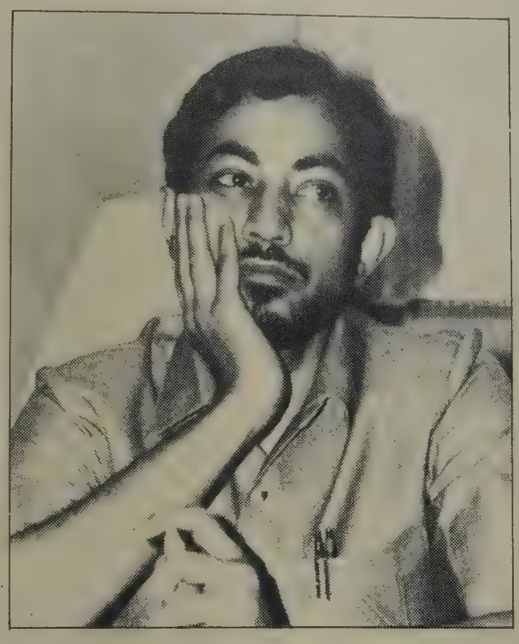
Narrow definition. The problem originated in 1987 when the government permitted the MSE to issue 50 new "professional memberships". "But this did not elicit the right response," maintain MSE officials — the MSE received 90 applications, based on which 64 candidates were interviewed, resulting in the selection of 27 new members. Stockbrokers attribute the response to a narrow definition of the term "professional". "Why confine it to chartered accountants, cost accountants, company secretaries and MBAs ? And why only authorised assistants (those with floor trading and administrative experience of running a card)? A sub-broker with experience, or a merchant banker should also qualify under this category," maintains a stockbroker.

But the MSE authorities thought otherwise. Therefore, in 1989, the MSE obtained government permission to allot the remaining 23 seats to authorised assistants. "The decision to restrict membership to authorised assistants was taken by the Council of the MSE, and it has the discretion to do so," says a council member.

Many brokers are also upset that while the price of a professional ticket is Rs.1 lakh, its market price for general buyers from seller brokers is Rs.16 lakh. In December 1989, the MSE itself auctioned tickets of defaulting members at Rs.5.75 lakh each.

Brokers in MSE: upset over ticket prices

Many brokers feel that if prices had been nearer market levels, this would have both reduced the number of applicants and swelled the MSE's coffers. As it is, the MSE has received 101 applications in the second round. In an interim order, the Madras High Court has directed the MSE to block six seats for the petitioners pending a review of the case.



Currently, it appears that the scramble for the remaining 17 seats will take place shortly. "Several authorised assistants have requested us to hold coaching classes, which will take time. By next month, we plan to go ahead with the examinations," says Sivaprakasam. But it will be a longer wait for the six petitioners who are preparing their case for presentation — when the Madras High Court reopens after its summer vacation.

■

DHARANI K. PANI

"I like good values"

Vallabh Bhansali, *reputed to be a master stock-picker, talks to* Business India's *Lancelot Joseph and Alka Mukandan about his methods and the shares he likes*

The obvious question, now that India has lost Rajiv Gandhi: which way will the market go?
The market sees a choice between the BJP and Congress and is comfortable with both.

Which industry do you like?
Cement is very strong. Product prices are high, and despite the certainty of higher taxes, the industry will be allowed to benefit to avoid future shortages; IDBI has calculated a breakeven price (of per 50 kg bag) for a new 1 million tonne plant. Today, the average producer price is Rs.96. In a year, I expect cement policy to allow larger plants, up to 5 million tonnes. Also, since Korea, Japan and other large producers are losing interest because of pollution problems, I see an export potential. Overall, given a GNP growth of 4.5 per cent, I see a steady demand growth; except for a possible crunch in between when supply meets demand a year down the road, cement will do extremely well.

Which cement shares do you like?
Madras Cements, once nearly a BIFR case, looks the best even up to Rs.5,500. Birla Jute — in spite of its recent spurt to Rs.275 from Rs.200 in a month — and India Cements are also good.

What about the speculative favourite, ACC?
ACC lacks immediate capital expenditure plans; they will therfore pay a lot of tax. If ACC announces viable expansion plans soon, one should look at it. Even then, it would rank fourth in my choice as its expansion plans would take time to fructify.

Any other cement shares?
Jaiprakash Industries. It has the finest plant, as good as anybody else's. It has run its first plant extremely well. The second plant has gone on stream. The location, MP, is fabulous: the two plants together should yield 3 million tonnes in 1992-93. The equity capital needed for a plant of this size today would be Rs.250 crore whereas its capital base (even after conversion) will not exceed Rs.90 crore. The share is priced at Rs.35.

Plus, it is strong in construction and gets contracts in the Middle East – provided it accepts being a sub-contractor. It has large equipment in Iraq. We are doing a lot of research on this company and have found that in such companies, the availability of equipment at short notice is a big advantage.

What about cheaper cement shares, like Priyadarshini Cement?
I generally like good values and good managements with a track record of looking after shareholders. Also, I prefer larger shares with good liquidity. Suppose something goes wrong, the government becomes unpragmatic and levies excise and price controls, bigger companies can do something about it.

Then why don't you like Gujarat Ambuja Cement?
Ambuja is the best managed and leads in innovative marketing; but investing in it is a different ball game. It has relatively high capital and no new capacity for two years at least. It is already working over capacity, 1 million tonnes this year from a 600,000-tonne plant. So, I do not expect it to increase production much further. Hence, if profits are high, taxes will rise.

Of course, its profits will be really fantastic: from last year's average price in Gujarat of Rs.75 to Rs.80, the current price is almost Rs.100. People have no idea of the likely profits of cement companies. They think that because prices have gone up, so the levels are too high. I believe that one must take a value-based approach and cement has a lot of potential.

What is your investment philosophy?
I do not go by the textbook concept of diversifying risk; if something is good, I'll put my money as long as I can get out if necessary. I don't mind putting 60 per cent of my money in one industry.

When I recommended Birla Jute at Rs.60, people said this is a sleepy share, no-one can make money from it. But we went purely by fundamentals and not by old stories or jinxes. Nowadays, with the advent of mutual funds, it is clear that if we recognise value, even exit will be no problem. That's the reason why even a share like Jaiprakash makes sense to buy. I think you make money in the market by identifying change.

Any other industry that you think is worth investing in?
Shipping is very interesting; demand growth is outpacing supply. Of the companies, Essar, Essar Gujarat and Great Eastern are the best. Chowgule has an excellent fleet and has rupee denominated loans because their orders were placed with Hindustan Shipyard; S.I.Shipping should have a bumper first half of 1991-92 and will do better under Essar influence.

Tractors, fertilisers and steel are also interesting. Punjab Tractors looks good and Escorts Tractors, which will be listed soon, also looks good.

Fertiliser shares are cheap. GSFC is a great company making money on caprolactam and other products. Indogulf, on a Rs.165-crore capital, is likely to generate Rs.100 crore for 1991. I also like Coromandel, Spic and Nagarjuna Fertilisers.

In steel, I like Jindal Strips up to Rs.300 and Jindal Iron.

Are there any shares you like despite an uncertain industry trend?
Some well-managed companies will do well despite industry trends, for example consumer product companies like Videocon and Kelvinator. I like LMW up to Rs.5,000.

Note: EPS: This represents the earnings after tax for the full year divided by the number of shares outstanding. EPS half year: after tax earnings per share for six months taking into account announced half yearly profits. PE: ratio of market price to after tax per share. Yield: dividend as a percentage of market price.

Newport University
CALIFORNIA U.S.A.

Here's your opportunity to earn a California State Approved American Degree without leaving home!

ADMISSION NOTICE FOR CORRESPONDENCE/INDEPENDENT STUDY

BBA BACHELOR OF BUSINESS ADMINISTRATION
- For those with atleast 3 years work/ academic experience after 10+2/ Intermediate/PUC or equivalent. Can study for MBA after completion of BBA.

MBA MASTER OF BUSINESS ADMINISTRATION
- For graduates seeking to earn a prestigious American Masters degree with part-time effort. Ideal for working executives

M.S. (ENG)
COMPUTER SCIENCE/APPLICATIONS
- For computer professionals with adequate work experience. Must be graduates (any discipline).

TASMAC (recognised study centre of Newport University, California, USA) announce the commencement of the above courses by correspondence/independent study (for MBA & M.S. Eng-Computers). Study material, guidance support and conducting of the programs will be done by TASMAC. Final grade reports and degree certificates will be issued directly by Newport University, California, USA. These degrees are ideal for graduates & working executives to improve their career prospects, self-employed, entrepreneurs and for company sponsorships.

NEWPORT UNIVERSITY, CALIFORNIA, USA.

Founded in 1976, Newport University has been granted full Institutional Approval under Education Code Section 94310(b) by the California State Dept. of Education. Newport University is also a member in good standing of the California Association of State Approved Colleges & Universities and is today located internationally at U.K. Switzerland, Germany, The Netherlands, South Africa, Nigeria, Israel, Spain, Japan, Hongkong, Indonesia & India.

UNIVERSITY LEGAL STATUS

Newport University has been established legally under California State Govt Education Laws While the University is not accredited and not recognised in India, it's degrees are useful to secure employment in Private Industries Degree Certificates and final reports will be issued directly by the Newport University, California, USA

Prospectus & Application forms are also available on payment of Rs. 50/- from the following

maegabyte

Centres who are Tasmac's authorised enrolment centres:

Please write for detailed prospectus with payment of Rs. 50/- by DD/IPO/MO/Bombay cheque to TASMAC, Newport University's recognised study centre at the following address:

SIPCOT converts budding entrepreneurs into full-fledged industrialists!

ou are a dynamic entrepreneur
ou plan to start a medium or
en large industry. Then
mil Nadu is your ideal location -
r SIPCOT will help you realise
our vision!

PCOT is the Nodal Agency
r Tamilnadu's industrial
evelopment. Backed by two
ecades of rich experience.
PCOT assists in:

- **Identifying the right project**
- **Locational guidance**
- **Technical guidance and preparation of Feasibility Reports**
- **Obtaining clearances from various authorities**
- **Securing the boons of an ideal financial assistance package.**

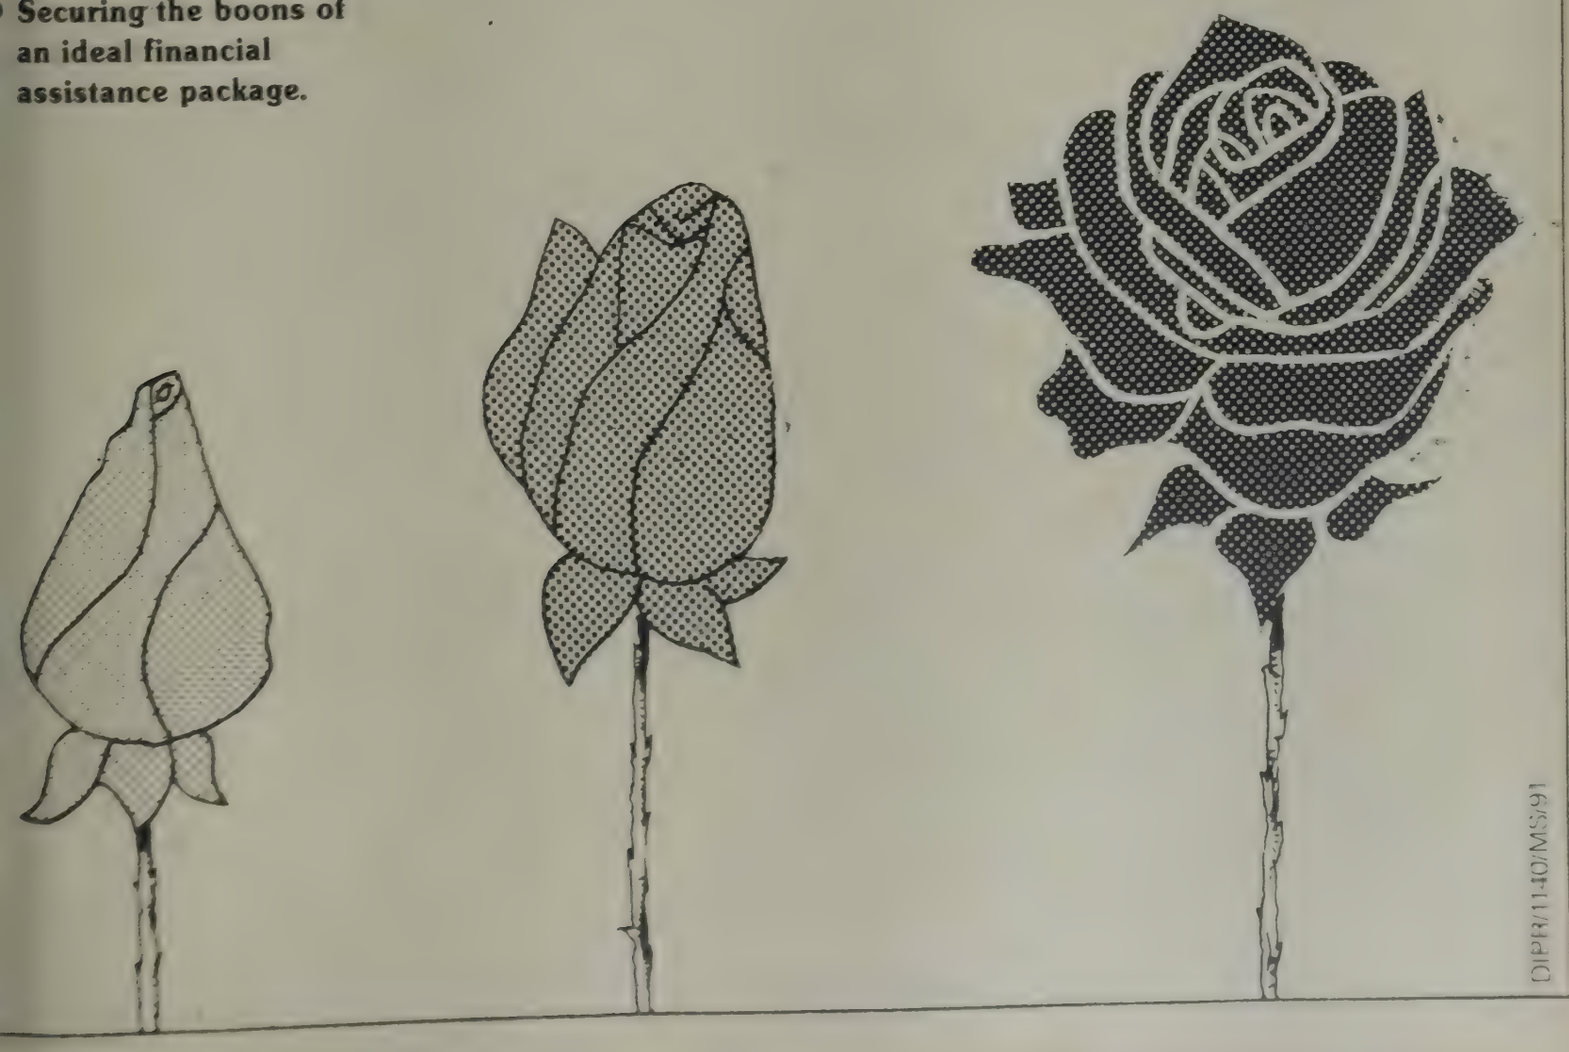
With SIPCOT, you can gain:

Term loans up to Rs.150 lakhs for every project costing up to Rs.500 lakhs.

IDBI Seed Capital Assistance up to Rs.15 lakhs for technocrats and professionals setting up their first industry.

State Capital Subsidy of 15% on fixed investment: the subsidy not exceeding Rs.15 lakhs. This is available for new projects and also expansion/diversification of existing units.

Interest Free Sales Tax Waiver/Deferral for 5 years/ 9 years benefit from the Government of Tamil Nadu.



Besides, you can benefit from SIPCOT's Industrial Growth Centres located strategically in the State, having developed sites with all infrastructural facilities

If you are an NRI, SIPCOT has a Special Cell to give you even more!

Interested? Then write at once to

The General Manager (Plg & Dev.)
SIPCOT (M-2-1)

Winning comes easy

Unlike in the past few contests, this time (IC342) there are winners galore — 177 in all.

Scrips	Prices as on Friday 5 April 1991 (Rs.)	Prices as on Monday 6 May 1991 (Rs.)	Ranks
ABB	147.50	140.00	5
ACC	2,295.00	2,290.00	3
Century Enka	2,600.00	2,500.00	4
Crompton Greaves	875.00	1,350.00	1
Essar Gujarat	56.25	62.50	2
Larsen & Toubro	116.25	94.50	6

Given below is a new list of six scrips, and their closing prices on 17 May 1991. Pick the share that you think will rise the most in percentage terms by 17 June 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 17 June 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 13 June, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Name of scrip	Prices as on Friday 17 May, 1991 (Rs.)	Rank as on Monday 17 June, 1991 (please fill in number)
Grasim	244.00	
Indian Aluminium	172.50	
Kinetic Engineering	178.75	
National Peroxide	1,225.00	
TISCO	193.00	
Titan Watches	84.00

How to excel

WHY LEADERS CAN'T LEAD — THE UNCONSCIOUS CONSPIRACY CONTINUES
By Warren Bennis
Jossey-Bass Publishers, 1990.
Distributed by IBD, Bombay, pp 169, Rs.250

The book under review is on leadership, a fascinating subject which has attracted several researchers and authors all over the world. The types of books produced by them are different. Some provide theoretical models, whereas others of the genre could be categorised as biographical in nature.

This work is entirely different. *Why Leaders Can't Lead* is an analysis of the problems facing anyone who tries to take charge of an organisation — of whatever kind — and effect change. It offers specific suggestions on how to counter the inetria of the *status quo* that threatens any innovative plan in its implementation. It also provides some clues on how to keep routine activities from sapping the leader's ability to make a real impact.

Leadership guru

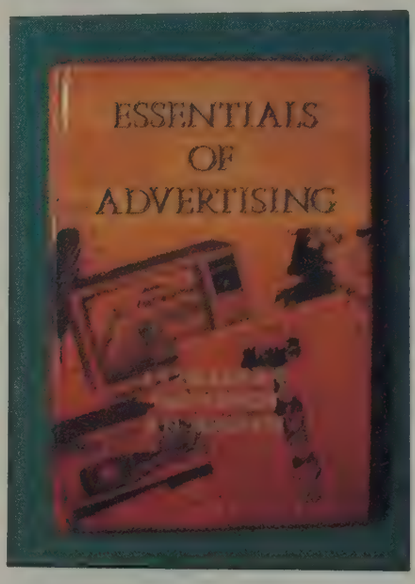
The author gives suggestions to leaders and would be leaders on how to excel. And he is quite obviously qualified to do so. With fifteen books on the subject, Bennis is currently regarded as one of America's foremost gurus on leadership. But, it is not a quickie, how-to-do book. It is based on extensive research spanning over five years. Bennis spent considerable time with 60 leading figures from the US corporate world and 30 from the public sector, and tried to identify a common trait among them. It required considerable probing, and the book is the result of that extensive probing.

The author found that there was more diversity than commonality among them. But, he did come to some conclusions. The most important one was the distinction between leaders and managers. Leaders are people who do the right thing; managers are people who do things right. But an amazing finding was that many people in top positions were doing the wrong things well. He also came to the conclusion that American organisations are underled and overmanaged. This is not true of only American organisations. It is true of Indian organisations too. We do find many pygmies occupying the position of chief executive in the Indian corporate world.

The book is divided into four parts. The first part paints a gloomy scenario of present day America. Things are not different in India. One thing comes out loud and clear. That chaos has overtaken order. And we need leaders who can transform society.

The second part deals with what ails American society. It is a society without vision. As a nation cannot survive without virtue, it cannot progress without some common vision. The lesson for the prospective leader, whether he is leading a nation or a corporation, is to develop a vision.

The third part dwells on some other maladies of American society. They are diversified and deep. Why so? As the quality of leaders declines, the quantity of problems escalates. Some of the maladies identified are obsessions with the bottom-line and greed predominating the lives of human beings.



The fourth and last part of the book is devoted to some suggestions on what leaders and would be leaders should do. The most readable one is on "quitting on principles". It is easier said than done. With the mad rush for grabbing the chair by hook or by crook, who will listen to the sane advice of the author?

The book has been able to succinctly present the author's findings on leadership. And the beauty of the book lies in the fact that it does not try to build theoretical models or indulge in jargon. The discerning reader, however, will find how similar are the problems of Indians to those of Americans.

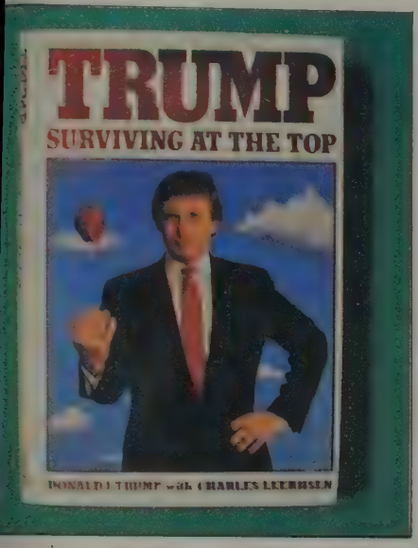
A lazy attempt

ESSENTIALS OF ADVERTISING
By J.S. Chandan, Jagjit Singh, & P.N. Malhan
Oxford & IBH, 1990 pp 255; Rs.150

Indian advertising suffers from a lack of solid book-form literature on it. The few text books on advertising for B.Com students are pathetic in content and production quality. Subroto Sen Gupta's books — *Cases in Indian Communication Management* and his second book (1990), on brand positioning — are exceptions however.

Essentials of advertising by Chandan, Singh and Malhan makes up for the bad production values of past Indian books by easy-on-the-eyes print and layout. In content, however, you wish that co-author, Jagjit Singh of the Institute of Marketing Management, New Delhi, had used his vast access to the growing body of Indian magazine features on brand, corporate and social marketing advertising to make this book relevant.



Too sketchy

Instead, what we get is an edited version of American text books on advertising that is sketchy. For example, political advertising is dealt with in just two paragraphs. Nik Sen Gupta of the New Delhi South Block has generously described this book in his foreword to it, as "useful reading for professionals and non practising ad people."

It's really, however, a lazy attempt by an academically well-qualified trio: and what's more almost all the examples are American; a few Indian names are perfunctorily thrown in for relevance.

■ BRINSTON MIRANDA

Plenty of chutzpah

TRUMP: SURVIVING AT THE TOP
By Donald J.Trump with Chalses Leerhsen
Random House, 1990. Distributed by IBD, pp 235, Rs.410

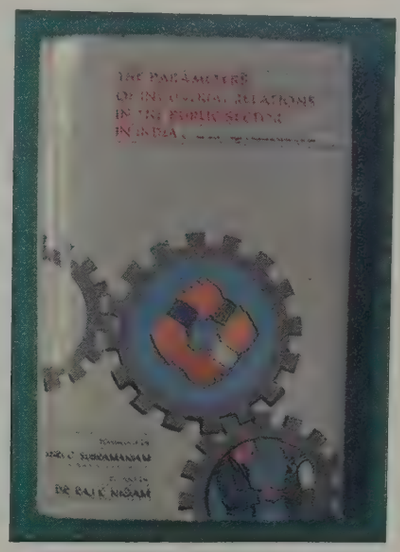
This book is Donald Trump's second literary effort to create God in Trump's own image. It is, nevertheless, a fascinating book. Revolted as readers will undoubtedly be by Trump's constant self-marketing and by the ruthlessness inherent in some of his values, the stories of his deals make for absorbing reading. They reveal Trump to be an excellent negotiator and a perceptive judge of character. Thus, despite its pretentious title and some tedious chapters on "Survival", "Life at the top" and "Toughness" — these have obviously been put in to justify the title —the book makes for interesting reading and it is quite understandable why it was for many months on the New York Times best-seller list.

Image is all important for Trump. And, the image that he most successfully portrays in the book is that of a skilled negotiator. A classic example is his deal in 1988 with Merv Griffin, the American TV game-show compere, for the Resorts International Hotel chain and its then upcoming showpiece, the Taj Mahal casino. Trump, after first bidding for the entire chain because he wanted the Taj, was able to out-manoeuvre rival Griffin by getting him to buy the rest of the chain — sick by then — while keeping the Taj for himself. While Griffin trumpeted then that he had out-trumped Trump", it was Trump's deal all along. The financial journal, *Barron's*, later showed that Griffin had overpaid by at least $200 million, even given the most optimistic estimates of Resorts' future performance. Not surprisingly, the company went bankrupt in December 1989.

Skilled deal-maker

Most readers familiar with the Western media's views on Trump, and given his embarrassing financial decline recently, probably feel cynical about any of Trump's talents. It is, in fact, difficult to separate the image that the media has made of a greedy and arrogant man (partly true) from his skills as a deal maker and judge of people.

Given the nature of his talents, it is probably not surprising that Trump's failures have been in fields unrelated to property. The most publicised one, and the one in which the American press — including the likes of *Time* and *Newsweek* — went into a state of hysteria, was the break-up of his marriage. Once again, in retrospect, it was the media that came out the worst from the break-up.



Trump's purchase of Adnan Khashoggi's yacht, *Nabila*, was another failure, although Trump denies it. The yacht, now called the *Trump Princess*, is currently up for sale. The story of the yacht shows up the peculiarities of Trump's character more than his deal-making skills. Anyone who can put sculpture and literature in their place by calling an opulent and gaudy yacht a "piece of art" purchased for "art's sake" has to have plenty of guts, not to speak of a total lack of aesthetics. Similarly, Trump's pride in the Taj casino — a shiny structure that looks like the Kremlin — has probably replaced forever in the minds of Western readers — who mostly know only what they have recently read — the idea of romance with that of glitz. It is, however, a view that Trump has always held.

There is a section in the book on Trump's views on America's role in the world. They are similar to Lee Iacocca's chauvinism and make for painful reading. For example, it is surprising that an excellent deal-maker at the grassroots level should propose a 20 per cent tax on American imports from Japan. Perhaps it is not so surprising. A good businessman rarely makes a good economist and *vice versa*.

The recession currently on in America has slowed Trump. But he battles on, pitching his name for all it is worth. A fighter like that has to have plenty of chutzpah. But that's Donald Trump.

■ RAFIQ DOSSANI

Much left unsaid

THE PARAMETERS OF INDUSTRIAL RELATIONS IN THE PUBLIC SECTOR IN INDIA
Edited by Raj K. Nigam
Documentation Centre for Corporate & Business Policy Research, New Delhi, 1990, Rs.150

The book is a collection of articles by persons who have had to deal with industrial relations in public sector companies at some time or the other.

The book has two parts. In the first part, Bagaram Tulpule's article is the only one which at least makes an effort to outline the problems in dealing with industrial relations — problems relating to discipline and rules, supervisor-worker frictions, etc.

Laudatory tone

The second part of the book purports to deal with the ideal industrial relations obtaining in Madras Refineries Ltd. The articles are laudatory, where everyone praises everyone else, and contribute little to the understanding of the processes at work which could have brought about this ideal state of affairs.

The significance of the book, thus, lies in what it does not say. If public sector enterprises feel they can have better industrial relations only if they are truly autonomous and if governmental interference is considered an obstacle to good industrial relations, it is high time the subject was discussed openly and frankly.

■ RADHA D'SOUZA

The reviewer is a labour lawyer and writes on industrial relations

Corporate Management

USHA RECTIFIER, a multilocation, multiproduct company, with interests in Electricals & Electronics and Iron & Steel, requires for their Corporate Office in Delhi.

SENIOR VICE PRESIDENT
(CORPORATE AFFAIRS)

The incumbent will directly report to the Managing Director and will be responsible for interacting at top levels with the Government and various policy making bodies and related agencies. He would be required to provide support and guidance to the existing divisions of the company in matters relating to policies and procedures as well as assisting in getting necessary clearances for new projects and in the expansion and diversification plans of the company. The ideal candidate would be between 40 to 45 years of age and should have worked in a large company at the Corporate level for at least five years. He should be fully conversant with Government policies and procedures with respect to Industry and Finance.

VICE PRESIDENT
(LEGAL)

The incumbent would be responsible for advising management on all legal matters relating to the company including drafting of collaboration agreements, trademark matters, licensing, company law, supervision of legal proceedings, direct & indirect tax matters, etc. Skills in legal drafting and interpretation of Corporate and economic legislations would be called for. The ideal candidate would be a law graduate with an ACS qualification and senior level experience. Excellent standing in the profession coupled with a proven track record of achievements in this field are essential. Practising lawyers with suitable experience will also be considered. Preferred age between 40 to 45 years.

VICE PRESIDENT
(INTERNATIONAL TRADE)

The incumbent will be responsible for achieving the targeted export turnover by increasing exports from Group companies and introducing non-company product exports. The ideal candidate would be between 35 to 45 years of age and should possess thorough knowledge of international markets, have the ability to identify potential markets, develop reliable vendors, capacity to form and manage a dynamic export team and sound commercial acumen to achieve targeted volumes and profit targets. He should have around 10 years relevant experience out of which about 5 years should have been as head of merchant export operations in a large export/trading house.

The compensation package offered is atrractive and would not be a limiting factor for the right candidate. Please apply or call in strict confidence :

DR. R.L. CHOUDHURY (Director & Group Vice President)

Empire Finance

Empire

VICE-PRESIDENT
Capital Market Services

We are looking for a senior individual with a strong background in merchant banking and capital market services. Our growth plan this year includes a significant entry into the capital market activities to make it grow to a formidable presence over the next couple of years. The person we have in mind has to be a self-starter and competent enough to build a team of professionals in a relatively short period. The position will report to the Managing Director and be given all necessary supports to help grow merchant banking strength of the organisation. Obviously, the position will be offered a highly attractive remuneration package. We are not setting any particular yardstick so far as the candidate's education and age are concerned. We would however prefer the person to be in the age group of 35-40 and with a degree of either post-graduation or CA/MBA.

Please write to:

Standard Medical & Pharmaceuticals Limited

Standard Medical & Pharmaceuticals Limited is the Company that promoted the highly successful chain of MEDINOVA DIAGNOSTIC SERVICES at Hyderabad, Bangalore, Calcutta and Pune. Equipped with highly sophisticated instruments, MEDINOVA has redefined the medicare standards in the country.

After the establishment of these four MEDINOVA Centres in quick succession, Standard Medical & Pharmaceuticals is all set to further diversify into the fast growth areas of Bulk-drugs, Diagnostic Kits & X-ray Films and Franchise of Diagnostic Services. The thrust into these areas will see the emergence of Standard Medical as a corporate force with multifarious activities.

Over the years Standard Medical has built and nurtured a spirit of challenge and growth. The perseverance to reach the set goals. For our growth plans we need proven professionals who share the same spirit.

BULK-DRUGS

Standard Medical's diversification into the growing market of bulk drugs is a planned programme with a projected turn over of Rs.10/12 crores in the first year of operations itself. This division will play a key role in our growth plans.

For this division we require:

GENERAL MANAGER
(Marketing)

LOCATION: HYDERABAD

The ideal candidate should have at least 8-10 years experience in the line with excellent track record. He should have a thorough understanding of both domestic and export markets.

The selected candidate would be given independent charge of the marketing functions. He should be able to conceptualise and implement the marketing plans. This is a challenging position in the context of the Company's growth plans.

Age: 35-40 Years.

The above position is in key management cadre, calling for great degree of initiative and drive. The compensation package will be comparable to the best in the industry. Selected candidate can look forward to a professional and rewarding work environment.

Please apply in strict confidence with a detailed resume to:
The Executive Director, Standard Medical & Pharmaceuticals Ltd.,
6-3-652 'Kautilya', Somajiguda, Hyderabad 500 482.

DIAGNOSTIC KITS & X-RAY FILMS

Standard Medical's Diagnostic Kits & X-Ray Division will soon start marketing a wide range of diagnostic kits, including DNA Probes - both indigenous and imported. This will be a full-fledged division of the Company, contributing substantially to the turn over. The projected sales in the first year would be around Rs.3 crores.

For this Division we require:

GENERAL MANAGER
(Marketing)

LOCATION: HYDERABAD/BOMBAY

The incumbent should possess at least 5 years' experience in similar field of activity.

The selected candidate would be given independent charge of the division. He should have the vision to conceptualise and implement marketing strategies. This is a key position in the context of the Company's growth plans.

Age: 35-40 Years.

The above position is in key management cadre, calling for great degree of initiative and drive. The compensation package will be comparable to the best in the industry. Selected candidate can look forward to a professional and rewarding work environment.

Please apply in strict confidence with a detailed resume to:
The Executive Director, Standard Medical & Pharmaceuticals Ltd.,
6-3-652 'Kautilya', Somajiguda, Hyderabad 500 482.

A group of companies with proven strengths and established reputation in a range of products, including electronics, plastics and machine tools, is seeking seasoned professionals to help achieve its ambitious growth plans. The companies' products are of superior quality, based on innovative designs and West German collaboration. These positions will be of interest to executives with proven track records, excellent inter-personal skills, high initiative, and willingness to work in informally structured environments.

GENERAL MANAGER – MARKETING

COIMBATORE **(MS/4403)** **Around 2.5 Lakhs/annum**

Reporting to the Executive Director, this position will have overall responsibility for all the sales and marketing functions of the group. The specific responsibilities will include planning, setting goals, developing entire branch offices and dealer networks, formulating advertising and sales promotion campaigns, managing and motivating the sales team, and achieving the sales objectives. The Company already services around 1200 dealers.

The successful candidate will have a professional qualification from a reputed institution, preferably with post-graduate degree in Management and 15 years experience. He would have had successful field sales experience involving distribution networks and retail sales outlets, and experience in managing product development and launching of new products in a highly competitive environment. He would have managed a sophisticated and responsive sales force.

GENERAL MANAGER – FINANCE

COIMBATORE **(MS/4404)** **Around 2.5 Lakhs/annum**

Reporting to the Executive Director, this position will be responsible for all the Financial, Accounting and related areas of the group. The specific responsibilities will include general accounting, cost accounting, taxation, treasury functions, effective interaction with financial institutions, mobilising and managing cash resources, capital budgeting, introduction of cost and profit centre concepts, and a high level of internal control. The incumbent will be assisted by a team of professionals in the various functional areas.

The successful candidate will be a Chartered Accountant with 15 years experience, including at least five years as a Senior Financial Executive. Experience in manufacturing environments is essential and exposure to multi-plant operations will be an advantage. Additional qualifications in Company Secretary or Costing is desirable, but not essential.

Age 40 to 45 years for both positions. The compensation package is unlikely to be a constraint for the right candidates and includes company car, housing, and other perquisites commensurate with senior management positions.

Please apply in strict confidence within 10 days to:

A F Ferguson Associates
Post Box No: 1261
Madras 600 034

giving full details of age, qualifications, experience and salaries drawn. Applications and envelopes should be marked with the appropriate MS Reference numbers.

Prof. G. Balakrishnan
Management – Consultant
GSL (India) Ltd.
145 Maker Chambers III
13th Floor, Nariman Point
Bombay 21. Ph.: 230661/230735.

You've been in Sales or Marketing long enough to know exactly how you want to operate.

Unfortunately, the company you're in doesn't operate that way.

Other companies you've looked at don't seem very flexible, either.

There doesn't seem to be much you can do, short of starting your own company. Right?

Wrong.

Take a look at Kanmoor Foods.

We're the newest company in the Rs. 175-crore Bombay Oil group.

We are putting our sales and marketing infrastructure together, from scratch.

That means that anybody joining us right now gets an opportunity to help shape a company's structure, systems and culture. (How open are we? Our first two employees wanted flexitime, and got it.)

THE NEXT BEST THING TO STARTING YOUR OWN COMPANY.

You'll get the opportunity to practice what you've been preaching on some interesting products.

Basmati rice is one. We are already test-marketing our brand in Bombay.

Then there are bottled sauces; mayonnaise and canned produce, from SIL. (We are in the process of acquiring the company that manufactures them.)

You'll be backed by an organization that is willing to go all out to become a signficant force in foods. As you've probably figured, it takes a lot of financial muscle to enter the packaged rice business in a big way – and we have it. It also takes a willingness to push for excellence to bring in food experts from the UK – which we've done for SIL.

What we'll be looking for in you is clear thinking, a track record of performance and (very important) an interest in food and cuisine.

And, of course, entrepreneurial drive.

KANMOOR FOODS LIMITED

MARKETING MANAGER

Bombay **Rs. 1.5 lakhs p.a. + house + car**

Must be from IIM/XLRI/FMS, 1982 batch or earlier. Should have a minimum of 4 years' product management experience in a large consumer products company.

Will be responsible for new product development, costing and pricing, budgeting and profitability, and advertising. Will handle the entire product management team, and will report to the General Manager – Marketing & Sales.

REGIONAL SALES MANAGER

Bombay **Over Rs. 1.25 lakhs p.a. + car**

Must be from IIM/XLRI/FMS with at least 5 years' field sales experience in consumer non-durables.

Will be responsible for setting up a selling and distribution network from scratch, and for managing a full regional sales team. Will report to the General Manager – Marketing & Sales.

EXECUTIVE DIRECTOR – MIS
(BANGALORE OR BOMBAY)

The House of Patels is a leading business Group, with a turnover in the region of Rs. 150 crores. It plans to double the turnover in the next 3 years. The Group has interests in diverse activities such as Transport, Construction, Finance, Courier Services, Management Education, Consultancy and International Trade. It is supported nationally by a vast network of 400 branches and internationally through its associate offices in Dubai, Hong Kong, Singapore and Australia.

We are looking for a dynamic person to head the Corporate MIS division, reporting to the Chairman of the Group. The Group currently has computer installations all over India on MS-DOS/UNIX hardware and has ambitious plans to further decentralise and move towards a RDBMS/4GL oriented system base within the next two years.

The key responsibilities of the candidate would include strategic long-term planning, sound systems and operations management and guiding a team of MIS professionals in the design, development and implementation of systems, geared towards achievement of the corporate MIS goals.

Candidates should have post graduate qualifications in Computer Science with about 15 years relevant experience, including 5 years as a Senior Corporate EDP/MIS Manager. Exposure to and experience in RDBMS/4GL systems essential. A high degree of management skills and an ability to interact at the highest management levels are necessary, along with a proven ability to introduce new concepts and systems.

The ideal candidate would be in the age group of 40-45 years. The compensation package, which includes perks like chauffer driven car etc, is comparable to the best in the industry. Applications will be treated in absolute strict confidence.

Please apply within 7 days to:

The Chairman,
House of Patels,
"NATASHA", 52, Hill Road, Bandra (West),
Bombay 400 050. Tel: 6401142.

dedicated professional

Nadkar, *44, is managing director of L, Ahmedabad*

•

s among the most respected financial ns in the city of Ahmedabad, and this it comes from having nurtured the e government-owned Gujarat Lease ncing Ltd (GLFL) over the last seven s into the most successful leasing pany in the state. Last year alone, L created assets under lease and hire chase financing worth Rs.51 crore, up 5 per cent from 1989-90. Income rose 3 per cent to Rs.20 crore while profits ped by 79 per cent to Rs.6.04 crore. L's Rs.4.02-crore public issue was subscribed by 27 times in October year.

adkar is now all set to expand and olidate the company's activities and power. GLFL recently added a sumer-service division and wants to ure into businesses such as loan syn- tion, project counselling, portfolio agement, merchant banking, invest- t counselling, etc. He also intends to ve 'career planning charts' for his onnel.

passionate approach. A graduate in engineering from Pune, Nadkar later cialised in marketing and finance at Indian Institute of Management medabad). "At the institute," he says, learnt to work under pressure. We e also taught to develop a dispassio- e approach to problem analysis and tion. This stood me in good stead all through my career and helped me develop the finer aspects of project appraisal."

After a short stint at Fedders Lloyd, Nadkar joined the Gujarat State Financial Corporation (GSFC) as executive assistant to its managing director. He opted for the public sector, because, according to him, it offered a multitude of learning opportunities through the various developmental projects it executed. Working in the sector gave him a chance to innovate and put his training into practice.

Seven years at GSFC shaped Nadkar's career. Here he successfully appraised large projects, both technical and financial. "Express Hotel at Baroda was the outcome of one such appraisal," he states. Also, at GSFC, Nadkar acquired his skills of handling personnel, which later became a hallmark of his management style. "When, in 1972, GSFC decided to computerise its accounts and information systems, the management faced hostile resistance from the operating staff. It took all my ability and patience to convince the staff and finally get the schemes implemented."

Excellent rapport. In 1979, Nadkar joined the Gujarat State Textile Corporation (GSTC) as financial controller. He mastered various facets of working capital management and developed excellent rapport with banks and financial institutions. "These contacts later helped me to establish GLFL," he says.

Nadkar's commitment to GLFL is absolute. Says P.R. Vyas, executive director, Gujarat State Police Housing Corporation and a member of GLFL's board of directors, "The success of GLFL is largely a result of Nadkar's professionalism and dedication. Besides the company's financial achievements, its open management culture cultivated by Nadkar has helped it retain young talented and professional managers within its fold."

Nadkar is now in a dilemma. Though attached to GLFL, his own creation, he cannot entirely discount the lucrative offers from the private sector. The pressures of age, family and need for financial security will influence his decision, when it is taken.

Nadkar devotes his leisure hours to reading and appreciation of classical Indian music.

■ NEERA SETHI

FRONTRUNNERS

As publicity manager of Batliboi & Co Ltd **Bernadette Fernandez** (31) handles publicity for all the ten divisions of the company. "The work is very challenging — almost mind-boggling," she says.

A graduate from Sophia college, Fernandez also holds a diploma in library science. In 1979, she joined Atlas Copco as assistant to the communications manager. She shifted to the public relations department of Hoechst and later became executive, promotion and marketing.

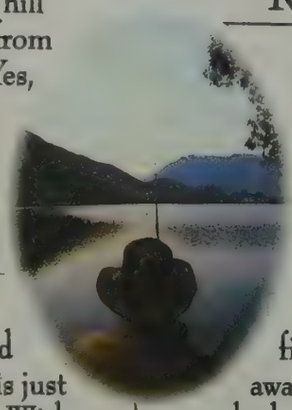
In November 1990, after a one-year stint with the World Trade Centre, she joined Batliboi as publicity manager. Says she, "One of my main tasks has been to change Batliboi's image from a low-profile, engineering goods company to a multi-product company, which is into consumer goods as well."

— P.C.

At 32, **Anil Nair** is the all-India sales manager at the popular cash register manufacturer, Bradma of India Ltd. Says Nair, "I enjoy the opportunity to implement plans, not just make them."

A science graduate from Bangalore University, Nair has a diploma in management studies from Bombay's Bajaj Institute of Management. He started out in 1980 as a sales executive with Bradma in Bangalore, and in 1986, moved to Megabyte Computers as general manager, marketing. He then returned to Bradma, feeling that its introduction of new products now represented a good potential for growth.

Handling only the cash register division at first, he is now in charge of the computer division as well. He aims to make an impact on the industry by consolidating the company's range of products. This, he feels, will make the impact within the organisation automatic.



— S.A.

THIS YEAR BREAK AWAY FROM THE HERD
AND DISCOVER NEWER PASTURES.

The hills of U.P. offer so much more. Snow capped peaks, unspoilt nature, spacious skies and legends galore. And a choice of beautiful hill stations easily accessible from Nainital and Mussoorie. Yes, don't miss out on the magic of U.P. this year.

DHANAULTI

(2400 mts.)

This resort, surrounded by dense Deodar forests, is just 28 kms. from Mussoorie. With a spectacular view of the snow covered Himalayas, it is the perfect choice for a relaxed holiday.

CHAKRATA

(2135 mts.)

Nestling on a ridge among thick Conifer and Oak woods, Chakrata offers breathtaking views, quiet walks and lazy picnics. With the legendary Lakhamandal just 57 kms. away, this resort is perfect for a tranquil outing while staying at Dehradun, Dak Patthar or Mussoorie.

ALMORA

(1646 mts.)

This capital city of Raja Kalyan Chand is a quaint combination of natural beauty and history. Magnificent temples, exquisite scenic splendour, lush forests, tranquil spots and the gushing river Kosi . . . Almora is a truly memorable experience.

RANIKHET

(1829 mts.)

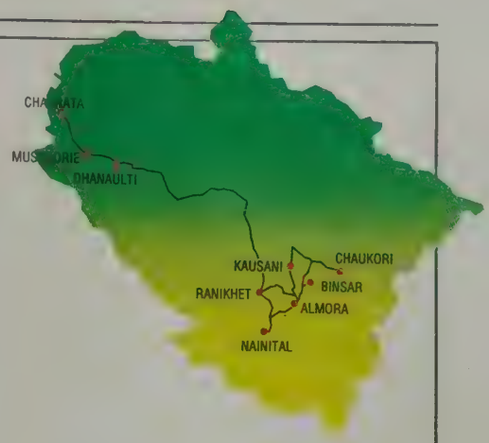
Its beauty enticed even queens in times gone by. Dense Pine forests, sheer snow view, Chaubatia—a fruit paradise, scenic golf course and a rich fishing spot just 22 kms. away—Ranikhet gives you the best of both worlds.

BINSAR

(2412 mts.)

This summer retreat of the Chand rulers is the perfect resort for a quiet holiday. Lush Oak forests and an uncluttered panoramic view of the greater Himalayan range contribute to the beauty of the place.

KAUSANI



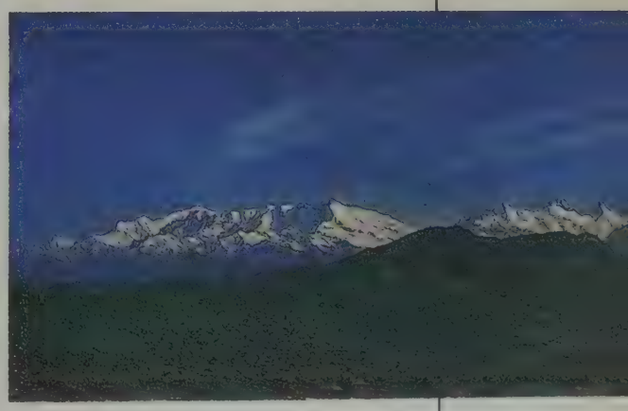
(1890 mts.)

Hidden by stately forests, Kausani abounds in tranquility, religion and history. A grand view of a 350 km. stretch of the Himalayas and an ethereal sunrise will entice you to this resort time and again.

CHAUKORI

(2010 mts.)

Fine weather, beautiful slopes, gushing streams, rolling mists. And the peaks of the Nanda Devi —almost within touching distance. Yes, it's a truly beautiful hill station.



THE EASY CIRCUIT

Each of these destinations offers a complete, relaxed holiday on its own. Include more than one resort if you like, and make your vacation truly memorable.

U.P. offers many other easy-to-reach hill destinations, all with comfortable and economical boarding and lodging arrangements.

For detailed information and a folder on the mentioned destinations, get in touch with any of our offices. For confirmed reservations contact our Advance Reservation Centres (ARCs) at the telephone numbers listed below.

VISIT INDIA

VASTU SASTRA

Our very own success formula

In this age of reason it is considered embarrassing to be superstitious. But when it comes to money matters, few can resist a success-mantra, however far-fetched it may seem. In sophisticated Hong Kong, the Chinese pay attention to *fung shui* for business success, believing that good or bad luck depends on how furniture is placed, or in which direction a building faces. The Indian belief in *vastu sastra* is similar. Says Chandra Mouli Reddy, a prominent *vastu* pandit in Andhra Pradesh: "It is the science dealing with the earth and its effects on man in relation to his house or place of work. There is a power at work. How it works, we do not know until its effects are visible."

Businessmen in Andhra Pradesh have followed *vastu sastra* for ages. Now even industrialists in west and north India are following suit, for *vastu sastra* is said to guarantee success. But, does it?

Says Jatin Kumar, owner of Sujjana Appliances, makers of Padmini Fans, in Hyderabad: "Till 1987 I sold only 1,000 fans a year. The same year I demolished the shed in the north-east corner of my factory and my fortunes changed dramatically." Within three years his annual sales rose to 35,000 fans. "All my new units will be constructed according to *vastu*," he declares.

Even a hi-tech company like Bull Powers System Pvt Ltd, which sells computers in technical collaboration with Futeba of Japan, consulted a *vastu* pandit. Says managing director S.R. Ramprasad: "The success that followed induced me to change my opinion of *vastu*." His total turnover for the year 1990-91 is Rs.10 crore.

Quick positive effects

Says Jagdish Prasad Kanuri, managing director of *Andhra Jyoti*, the Telugu daily with three editions and a circulation of one lakh: "In 1981 I made some changes in tune with *vastu* in my Vijaywada office and immediately the positive effects were visible. When we began our Hyderabad edition we chose the site as per *vastu* and even constructed it accordingly. Within one month we broke even and after six months our third edition from Vishakapatnam started."

According to P.D. Aggarwal, owner of Nort-West Switch Gear Ltd, Faridabad, "In Delhi many have begun consulting *vastu* lately, some surreptitiously, oth openly." Some *vastu shastris* claim t even the Singhanias and Modis h adopted *vastu* principles, though the dustrialists were not available for co ment. Liquor baron Vijay Mallya toc said to be a great believer.

One fall-out of the growing popula of *vastu sastra* has been a rise in dema for *vastu* pandits. Even the number pandits are said to have increased. Co plains Aggarwal: "I us to pay Rs.500 Rs.1,000 for *vastu* c sultancy five years ba but now with more notch industriali seeking such advice minimum money *vastu* pandit takes Rs.50,000."

B.N. Reddy: Taking the sting out of fate

Some well-kno pandits are B.N. Red Chukkanna Su ramaniam, Venkates war Rao. They are hig qualified, professio people. Mouli is the chairman of Andh Pradesh Dairy Development Corporati of India and a lawyer, while Reddy i United States returned architect an Congress (I) MP who has combined roles of architect and *vastu* consultant

For Reddy, the *sastra* is the science putting together things in such a mann as to get the maximum benefits. Mo over, he says, "It has nothing to do wi religion or faith." Aggarwal thinks, "t fact that *vastu* is based purely on ge graphical directions and the magne field gives the concept a touch of realit According to Mouli, *vastu* is a reliab guide to 'corporate amniocentesis'. suggests that at the blueprint stage its the birth of 'sick babies' can be prevente Mouli refers to the Andhra Pradesh Infr structural Corporation which chose ignore *vastu* rules. This resulted in loss he says.

Temple architecture

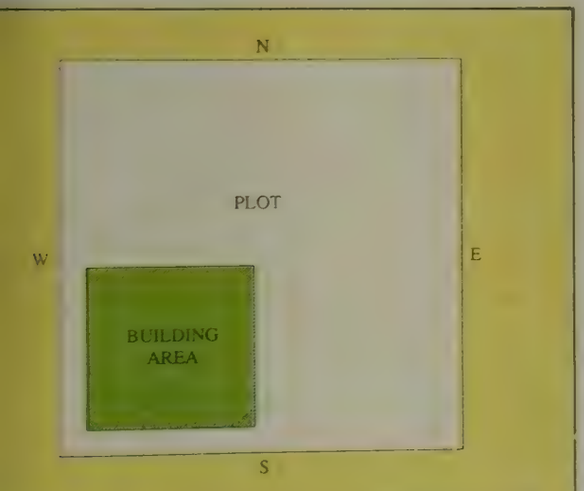
Vastu was most prevalent in temple a chitecture, says Reddy. The temple Tirupati, for example, adheres to *vas* principles. The main entrance is on t east, the water tank in the north-ea And this is the richest temple in the wo with an annual income of Rs.40 cro points out Reddy.

According to the pandits there a some basic principles to be followed.

North-West Switchgear: built according to the Vastu-principles

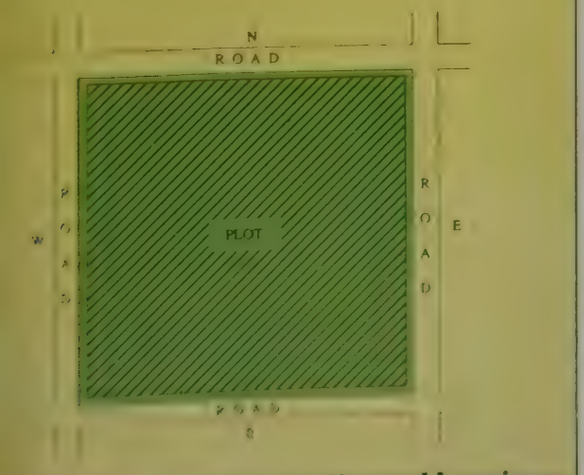
erate employment and create wealth, angular or square plots must be pro-d, with four roads to every industrial t. The topography is also important. land should be sloping towards the th and the east. If the south is higher north is lower then cash flow is tinuous.

ccording to *vastu*, water too plays a cial role in creating wealth. A unit uld be built only on the west and thern banks of rivers, ponds or lakes. ell or an underground water tank in north-east corner of the industrial t results in harmonious labour tions.



n factories, furnaces and boilers need e placed in the south-east corner. refore, if water is in the north-east fire in the south-east and the north-t, the place of *vayu*, or air, is kept n and the south-west is covered, then, the cardinal elements of *vastu* are king in harmony with each other. Ac-ding to Mouli, Ductron Castings was making a profit of Rs.10 crore. But in the late eighties they expanded in the north-east direction and went bankrupt.

According to *vastu* principles, the unit has to be constructed in the south-west corner covering 25 per cent of the total area and grow higher without encroaching the north east. Says Mouli: "If it's vice versa, contrary results are obtained." He thinks the industrial tragedy of Kerala is a living example. In Kerala it is customary to build in the north-east corner of a plot. Result: despite enormous natural resources, education and intelligent labour and a vast market they are not successful in industrial ventures.



S.P. Jaiswal, owner of Minar fans in Hyderabad, is so enamoured by *vastu sakti* (energy) that he always carries a compass and advises others to do the same. Says he, "Even the construction and changes made by your neighbours will affect you if a minimum distance as per *vastu* is not maintained." Ramesh Gelli, chairman of Vysya Bank, is a firm believer. He even arranges his bank's sitting positions in *vastu* style.

Some basic principles

- If the plot is not square or rectangular, the south-west angle should be at least 90 degree and the north-east angle less than 90 degree.
- The levels in the north and east should be less than those in the south and west. The surrounding levels should be such that the natural rain water flows towards the north or east.
- An underground water tank or a well should also be situated in the north eastern part of the plot. The deeper and wider it is, the bigger are the dividends for small investments.
- All buildings should be located in the south-western quadrant.
- The entrance should preferably be from the north or east with more doors and windows opening in these directions.
- Select your site in that area where roads are parallel and perpendicular to the north.

pace in the north ensures continuous cash low while space in the east ensures uality product

oads on all sides ensure all round happiness

Not hardwork alone

S.K. Thakur of AVU Engineering spent Rs. 15 lakh to add a new structure on the western side on the advice of the *vastu* pandit and has never regretted it. He set up his unit in 1985 from scratch. This was followed by tension and struggle till he adopted *vastu*. By 1989 his turnover was Rs.4 crore. Says Thakur: "I always believed hard work to be the only key to success. But on observing the effects of *vastu* I had to change my views." But, says Jayant Tagore, managing director of Synthokem, "I cannot give total credit to *vastu* even though I've constructed my factory according to *vastu*." Sadanand Shetty, ex-chairman of Vijaya Bank, has built his house according to *vastu*. It was designed by architect Rumi Shroff.

But what about instances where even without *vastu* a person has done well? Says B.N. Reddy, "Every person is born with his own fate. *Vastu sakti* reduces the poisonous effect of his fate." Mouli even goes to the extent of taking a random sample of industries around Hyderabad to prove his point. The results show that less than 20 per cent of the industrial units belonging to the small-scale sector are generating profits and rest have become sick. The healthy units follow *vastu* by coincidence and the sick units grossly violate *sastric* principles, though unintentionally.

"Much of this kind of knowledge," says Mouli, "is lost due to lack of preservation facilities. It was transmitted down the ages through disciples until the written script came into existence." Mudragada Ramarao drew attention to it with his book in Telugu *Ramaraya Panchagam*. So far, no other book is available, though Mouli and Reddy are both launching books in English.

Mouli suggests that the Bureau for Industrial and Financial Reconstruction (BIFR) should adopt *vastu sastra*. "So much national waste can thus be saved," he says. While it may be difficult to believe that national waste can be prevented merely by adopting the principles of *vastu sastra*, the fact is that many industrialists trace their success at least partially to this ancient concept.

■ REENA PATNAIK RAO with DEVAPRASAD PUROKAYASTHA in Bangalore and MOHAMMED OMAR FAROOQ in Hyderabad

RATNAGIRI

Where Alphonso is king

With the rain clouds beginning to gather, skilled workers in Ratnagiri are plucking the last mangoes of the season. R.K. Gore, otherwise known as Dada, surveys the sky, hoping the monsoon will not come early and destroy the crop in his 15-acre plantation in nearby Bashni. Midway, his gaze rests upon Shankar, a labourer with 10 years experience in mango-picking. Shankar, perched atop a 35-ft high tree, balances a long bamboo stick in his hand with a net attached to it. Using the V-shaped iron blades inside the net, he slices off the luscious fruit, taking care to see it is not damaged in the process. The mangoes, still green, will take eight days to ripen after plucking.

Shankar's pickings will form part of the 15,000 tonnes of Alphonso mangoes which make their way between April and June from Ratnagiri to Bombay, 370 km away, before being sent elsewhere. Thirty-six varieties of Alphonso are grown in India, but it is Ratnagiri's iron-rich soil and sea air which combine to form the best. "If you take an Alphonso seed from Ratnagiri and grow it in Valsad you won't get the same quality," says Umesh Lanjekar, a fourth-generation mango farmer.

Big business

Mangoes have been found in the Indo-Burma-Thailand region for thousands of years. The Portuguese are credited with grafting the best varieties in Goa, and, according to A.V. Ranadive's *Mango: The King of Fruits*, it was a Portuguese gardener, Alphonso Albuquerque, who brought them to Shirgaon, near Ratnagiri some 300 years ago. Mangoes became a real cash crop just five years back, says Gore. Gore, whose father was a mango trader, points out that earlier, a crate of four dozen would fetch the grower Rs.50. Today, while the average rate is Rs.200, a crate could fetch even up to Rs.700.

With 27,000 hectares under mango cultivation in Ratnagiri, and 15,000 of these in the productive stage, mangoes are becoming big business. Last year, the turnover was Rs.4.5 crore; this year, it is close to Rs.6.5 crore, says Mahavir Jangate, deputy director of horticulture, Ratnagiri. And this is likely to grow, what with the government actively promoting mango farming by providing a 100 per cent subsidy to those who have the land.

The project, under the Employment Guarantee Scheme, is meant to benefit small farmers. Last year, 4,000 hectares went under mango cultivation; this year, it is 8,000. It will be seven years before the new plants bear fruit. Meanwhile, there is some scepticism among the bigger farmers. Lanjekar, one of the very few agricultural graduates in Ratnagiri, points out that the beneficiaries are required to take the 'mother plant' from government nurseries. Their quality may not be the best, he feels, and the results will only be known several years later when nothing can be done about it.

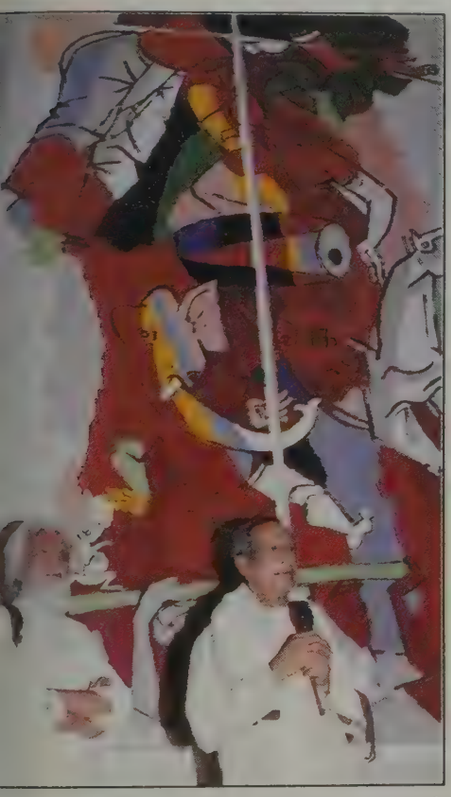
Deepak Tolani

Chandrakant Patwardhan sorts out mangoes for canning

The quality and quantity of the mar goes depends to a large extent on climat The trees can withstand dry condition and heavy rainfall, but the cold can er danger the fruit. This year's crop was af fected by the severe cold in Ratnagir Flowering was delayed, and the season with a 25 to 30 per cent fall in production began in mid-April instead of at the en of March. The flowering occurs in thre stages, and this year, say the farmers, onl the flowers at the last stage bore fruit.

Talking to trees

Some orchards, have, however, flour ished. Gore and Lanjekar are happy witl their produce. Gore's 600 trees have given him 40 tonnes so far. Lanjekar's 2,00 trees are heavy with the fruit, and som mangoes even weigh up to half a kg, h declares with pride. Both prefer natura fertilisers to chemical ones, and Lanjeka attributes part of his success to the fac that he talks to his trees!



While mangoes from government plan tations are auctioned at the flowerin stage, private growers strike deals with middle-men. The best mangoes, naturally are exported. The top quality ones go t France, Japan, England, Singapore an Malaysia, and the "second quality" to th Gulf. The US rejects Indian mangoes, say ing the fertilisers are unacceptable.

Small or spotted mangoes that wil fetch a low price even in the local marke are often canned. While Gore produces 500 to 600 cans (of 850 gm each) a day a home, larger ones like Ganesh Industries a Parle franchise, produce 1,000 tonnes i a season that lasts a maximum of 90 days "Each tin requires 2 kg of mangoes," say Chandrakant Patwardhan, who grow and cans mangoes, "and it is more lucra tive to sell the fruit itself while the price are high." Patwardhan converts some o his produce into syrup and pickle too particularly the mangoes that will fetch low rates because of their size or superfi cial defects.

Whatever form the fruit may take, som things about Alphonso mangoes neve change — the taste and the traditiona methods of farming. Lanjekar, for all hi education, prefers to use the bamboo pol for plucking instead of a harvester. "Th harvester's thin aluminium blades ar not as good as the iron ones in the nets he says. "Besides, a machine cannot de cide whether the fruit, which looks ready is actually ripe for picking. For that, noth ing can replace the human eye." ■

MENKA SHIVDASAN

rust **Maqbool Fida Hussain** to make it to the heades every time. Last fortnight was at the Bajaj Auto corpoe office in Pune, giving the shing touches to an original nting for the company. It was er unveiled by the legendary

ndustani classical vocalist, ndit Bhimsen Joshi. Depictthe famous Haldighati batthe canvas features Rana tap's horse Chetak — also the name of one of the most popular Bajaj scooter models. While roping in the maestro was definitely an achievement for Rahul Bajaj, it is also an assignment which the painter will remember for long. For, at an impressive 30 feet by 10, it is Hussain's largest canvas so far.

When not collecting awards — she has already bagged the Vijay Ratna, the FIE Foundation award and one from the Rotary Club — **Lila Poonawalla** collects matchboxes. Yes, that's right! Matchboxes of different shapes, sizes and colours from countries like the Soviet Union, Germany and the United States. Says the Pune-based managing director of Alfa Laval, "I have about 500 to 600 matchboxes from all over the world. You see, I am abroad nine months in a year." But why does she collect matchboxes? "Because the ones they have abroad are so colourful and interesting," says Poonawalla.

It was a red letter day for **J.S. Sabharwal**, managing director of Brooke Bond India when he accepted the Corporate Citizen Award on behalf of his company recently. Sponsored by HMT, Bangalore, the award has been initiated by the Rotary Club of Bangalore. It is given for product quality and consumer service. The award also takes into account criteria like organisational culture and social responsibility. For quite some time now, Brooke Bond has been supporting a social welfare project, the "Anga Karanya Kendra", a limb centre trust on the outskirts of Bangalore.

The General Electric Plastics World Student Design Competition is among the more prestigious international design competitions in this category. And representing India at the world finals to be held in the US in September will be **Sanjay Koli**, a final year student at the Industrial Design Centre at IIT, Bombay. Koli's entry was selected from the 23 which were put up at the India-level competition organised by IPCL at Baroda recently. His "Braille Copier" incorporates various engineering thermoplastics and advanced electronic gadgetry. It displays a page at a time — a big improvement over the single-line printers.

She shies away from publicity but cannot help cutting a

familiar figure in the desert terrain of Kutch. **Chandaben Shroff**, the wife of Excel Industries managing director K.C. Shroff, is known for her efforts involving uplift of women in this drought-prone region of Gujarat. "I have just helped organise local talent in embroidery," she says. "The items were made available to city women who long to adorn their homes with such work." Obviously, it has not been easy organising nearly 1,200 women spread over 50 villages who produced Rs.25 lakh worth of goods last year. Her other interests include painting, designing and sculpture.

Dynamic growth in rubber

In the industrial world of elastomers, **B.C. Sekhar** *has a reputation to reckon with. A Malaysian citizen of Indian origin, Sekhar has been chairman of the Rubber Research Institute of Malaysia as well as the Palm Oil Research Institute of Malaysia. Currently secretary-general of the International Rubber Study Group, London, he talks to K.G. Kumar of* Business India *about the prospects of rubber production in India*

In today's world rubber industry, prices are depressed and demand is falling. Why is this so?
First of all, I wouldn't use the word 'depressed' for prices in relation to forces of supply and demand. In the last two years, natural rubber consumption has exceeded production, yet the market price doesn't reflect this.

It is true that total demand has been adversely affected by the transient recession in the US and the turmoil in East Europe. The world economy is in the doldrums. In spite of this, the proportionate use of natural rubber has increased. We believe that supply will not catch up with demand in 1991. In the last two years, stocks have been coming down. Normally, when stocks fall the price goes up but in the rubber market that does not happen. Fundamentally, I think the natural rubber industry is stronger today than ever before.

The industry worldwide seems too closely pegged to the tyre industry. Isn't such overdependence dangerous? Is anything being done to find new industrial uses?
About 70 per cent of natural rubber goes into the transportation sector but I do not think you can call that overdependence. After all, you have to cater to that market. In radial tyres, the proportion of natural rubber used has increased. But non-tyre areas are also being developed. For instance, earthquake-vibration dampening blocks of rubber for buildings have been successfully tried out in California and new engineering uses for rubber are being found.

Last year, Malaysia saw a record low in natural rubber output mainly because of a drop in cultivated area as estate owners switched to oil palm and other crops. Is this a growing trend brought on by low prices?
Oil palm has the highest yield per unit area and so the profits available were extraordinarily attractive. Unfortunately, this rush to oil palm only reflects the shortsightedness of the plantation sector in Malaysia. In 1985-86, the price of palm oil fell below cost but by then the massive shift had already occurred. There now seems to be a new awakening that Malaysia should review its policy to have a more realistic proportion.

What about the International Natural Rubber Agreement by which producing and consuming countries agree on a percentage increase in the reference price through operation of the buffer stock system?
This was signed in 1980 and it has been fairly successful. One of the first acts under this agreement was the buying of 370,000 tonnes of rubber, all of which was sold subsequently. So when the trade understood that the buffer stock manager will not hesitate to buy or sell, the market managed to keep the price hovering at levels that keeps the manager inactive. It has worked for b consumers and producers.

Production of natural rubber in In has been growing at about 7 per ce annually for the past two decades. that a healthy enough rate?
You need to do more than that becau you are still importing rubber. But th are not many areas left in Kerala and India will have to go to non-tradition areas to increase its rubber productic Thailand has grown by 9 to 11 per cer in the past few years and Indonesia b to 4 per cent. We have projected that, 1995, India should be producing 360,(tonnes of rubber, not considering the non-traditional areas. But I think Indi has already crossed that figure. By 200 AD, India should reach 476,000 tonne or, optimistically, 574,000 tonnes.

Indian producers and consumers ar forever quarrelling about the benchmark price of natural rubber fixed by the government. Do you thi Indian rubber planters are a pampered lot whose low productivit and average performance are protected by a powerful lobby which wins them high prices?
There is no doubt that any form of pric support policy will tend to sustain som sectors of inefficiency in any agricultur system. On the other hand, the natural rubber industry is dominated by small holders with very little market clout in commodity market. A stable remunerative return for small holders i therefore a necessary and desirable objective.

India is well poised to expand the rubber manufacturing sector substantially and indeed become a significant exporter of rubber goods. To realise this, the manufacturing sector requires adequate supplies of raw materials at globally competitive prices.

India's proportionate use of natural rubber is about 78 per cent while the world figure is 33 per cent. There is therefore a potential for synthetic rubber to expand in India.

In determining the support price, all these considerations must be taken into account.

The indications are that the national rubber production sector is growing dynamically and is techno-economically capable of meeting these objectives at realistic price-support levels.

WE TAKE BILLIONS OF REVOLUTIONS WHILE THE EARTH TAKES JUST ONE

While the earth completes one rotation on its axis, FAG bearings facilitate billions of precise revolutions all over the world in diverse applications. For more than 100 years, FAG have maintained World leadership in bearing technology through a tradition of precision.

We, at FAG India, are proud to be a part of this tradition. **NORMA** bearings manufactured by us have the precision of World standard built into it. Optimal designs, superior materials and automated manufacturing and handling systems ensure that every rotation that NORMA bearings support is smooth and precise. Precision has been the hallmark of all our endeavours.

LETTER FROM THE PUBLISHER

The Unit Trust of India is an institution that works.

There are two "what if" questions that one should ask about UTI.

The first, is what if there was no UTI? One just has to look at the size of the funds raised, and the number of investors served, the numbers of schemes originated and the role in capital markets to appreciate the role played by UTI in the development of the Indian capital market. This simple test underscores the importance of UTI.

The second, is what if UTI was based and run out of Delhi? One can only imagine the levels of inefficiency, corruption and political manipulation on a day to day basis that would have followed. This question only highlights the fact that though in the government sector, UTI has been run both competently and honestly during a period of slide in political and government morality. Of course, this is not to say that the government has not from time to time interfered in the day to day management. But both in relative and absolute terms the performance of UTI has been very impressive.

But it is important to focus on the administrative and regulatory framework within which it operates. On the one hand, in spite of its record, the sad fact is that UTI, like any other government organisation, has to keep going back to the government for routine permissions and clearances. For example, after the success of its funds in the UK and US, UTI had numerous offers from the lending merchant bankers of the world to float a series of funds, in Japan, Europe and elsewhere. In the last few years proposals to raise hundreds of million of dollars got held up for lack of government approval. Isn't it ironic that the same central government is now desperately scrounging for funds overseas.

On the other hand, in the absence of any securities legislation (which would apply to the government and private sector alike) there is no regulatory supervision of unit trusts and mutual funds. And there is traditionally little sharing of information that in the US and UK, is, by law, made available to the investing public. Delhi has not felt the importance of setting up the basic regulatory system, probably on the simplistic assumption that government sector bodies need not be regulated because after all they are run by government.

It is precisely this regulatory framework that is absolutely necessary for the long-term growth of capital markets. And it is this absence that has historically allowed Delhi to ask how can private sector mutual funds or unit trusts be "permitted".

Some years from now, (after these simple but basic systems are in place) we will look back and wonder what the argument was all about.

Ashok H. Advani

Transfer Line — monocoque body shell welding.

Latest Mercedes Benz technology

That's what makes Tempo Traveller a world-class vehicle.

19 JUN 1991
C.F.T.R.I., MYSORE

Whatever it is you're looking for in a vehicle, you'll find that the Tempo Traveller is unmatched. Whether it's in terms of performance, passenger comfort, safety, ruggedness, ease of driving or economy.

Because, after all, the Traveller has been designed by Mercedes Benz. And manufactured in a plant that's as advanced as any Mercedes Benz plant in the world, using the very latest automobile manufacturing technologies.

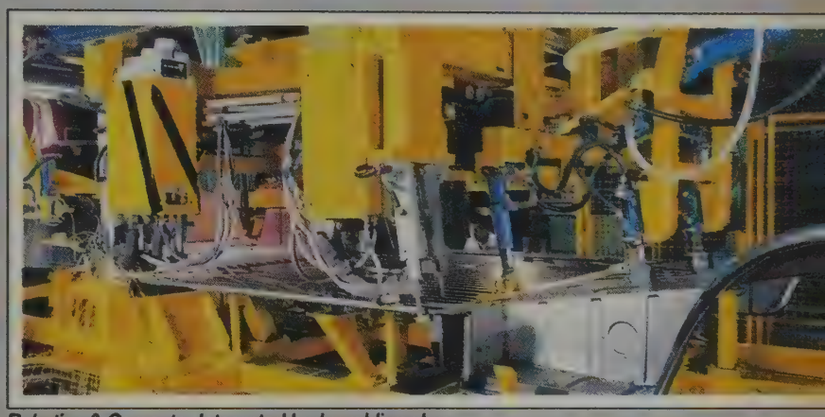
The fact is Tempo's state-of-the-art new plant at Pithampur has been set up at an investment of nearly Rs. 50 crores.

Extensive use of robotics and computer integrated manufacturing systems give the Traveller unparalleled welding precision and welding strength.

An electrophoretic dip process, immersion of full body, gives its monocoque body life-long protection against corrosion.

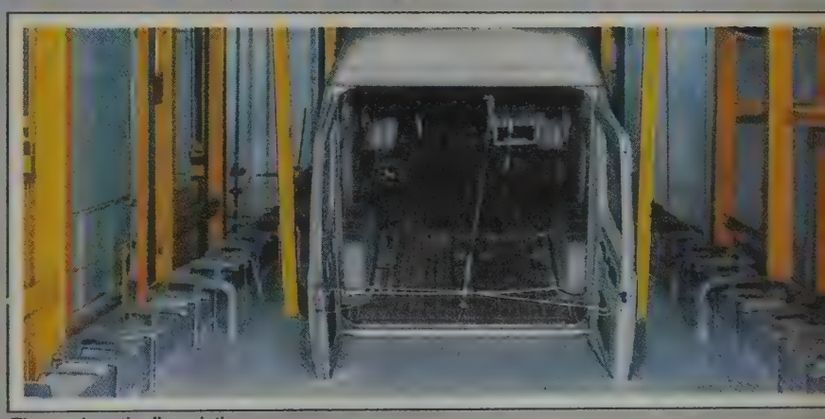
The Traveller plant's assembly environment is highly sophisticated. And its overhead conveyor system, synchronised with a revolving assembly carousel ensures a superb finish (as well as high productivity).

What's more, the Traveller is powered by a new 72 BHP Mercedes OM 616 engine which is extremely silent, extremely fuel-efficient, as well as extremely reliable. And its indirect injection system ensures low pollution.



The Traveller's gearbox too, is a result of high technology: a 5 speed full synchromesh gearbox which uses honed gears and a precise hypoid axle... to give you superb performance and longer component life.

Finally, driving the Traveller is as light and as much of a pleasure as driving a modern top-class car. (With a turning circle that is smaller than most Indian cars.)



Tempo Traveller. Whichever way you look at it, it's world class.

Modern conveyorised assembly lines.

Robotics & Computer Integrated body welding shop.

Electrophoretic dip painting process.

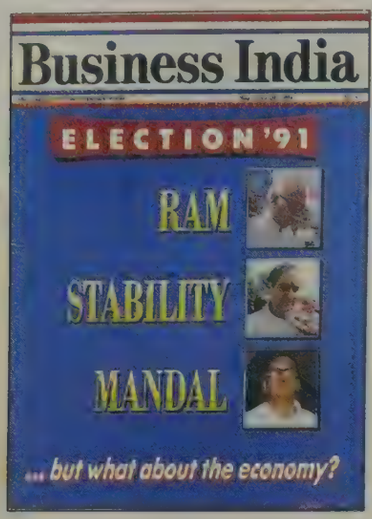
Tempo Traveller

Gives you the Mercedes Benz advantage.

BAJAJ Tempo LTD.
Akurdi, Pune-411 035.

You don't have to set a world flying record microlight to be a Raymond's man.

Vijaypat Singhania, aviator, photographer, publisher, industrialist, can't help being a Raymond's man. He's the Chairman of the Company.



His suit: "Microlite", an exclusive blend of Extra Fine Merino Wool.

You don't have to break a world record to be a Raymond's man. For that matter, you don't even have to be a Raymond's man.

...but it helps.

Raymond's

Never say no to life.

• Give 'em a chance

You are slightly underplaying the role of BJP and its capabilities. (Cover Feature, 13 May) No party in India is as disciplined as BJP; so why not give it a fair chance? If it fails to deliver the goods, it would automatically be thrown out.

U.S. IYER
Bangalore

• Unconcerned

Your cover feature on the election 1991 (13 May) made interesting reading. The leaders are only interested in coming to power. Nobody appears to be concerned about issues like population, economic mismanagement, inefficient administration, overburdened judiciary, industrial unrest, etc. Just because of the inability of our leaders to administer the affairs of the nation properly, every citizen is suffering.

SURENDRA KANSTIYA
Bombay

• Political manifestoes

While the comparative statements of the four manifestoes and the answers to your queries by the three leaders were useful, the two boxed commentaries, viz. 'Economic Manifestations' and 'Who is responsible for the mess?' have failed to bring out the real weaknesses of all the manifestoes (Cover Feature, 13 May). All of them say what they propose to do but not how. Nor do they give time-tables except the Congress (I), which has come out with declarations on employment generation and cuts in non development expenditure. However, a study of their past promises and implementations will show that they have no credibility in that respect.

Also, each party should give unqualified declarations that their pledges are not conditional upon such factors as external threats, the 'foreign hand', oil crisis, the mess left by the previous government and so on.

A.M. DAR
Bombay

• A man for all seasons

Your cover feature on L.M. Thapar highlighted many of his specialities (29 April). And your 'Letter from the Publisher' rightly highlighted the importance of business houses being close to the government of the country.

Businessmen should avoid excessive "protection", for they will face cut-throat competition once they move into global markets. And they have no other way but to go into world markets, if they really want to sustain.

Thapar has to be complimented for never looking at the share-holding pattern as the basis for control. He stood for rapid professionalisation in management.

G. BALAKRISHNAN
New Bombay

• Make amends

Two main reasons for the "Old Faithfuls" (Feature, 29 April) sticking on to their jobs, as you have rightly mentioned, are that they are fully conversant with the culture of the organisation and that they know everyone from top to bottom.

But, the situation is different now. The top management is changing in many companies due to either takeovers or the financial institutions bringing about the changes. Consequently, directors, managing directors and sometimes, chairmen come from some other organisations, with an entirely different culture and outlook. In such cases, the old faithfuls find their very existence very difficult and frustrating.

It is high time the so-called modern management realise this aspect and at least make an attempt to reciprocate the sentiments of the Old Faithfuls instead of allowing them to retire with a feeling of bitterness and frustration.

P. RAMAKRISHNAN

• Taken for granted

Having been associated with an Indian subsidiary of a multinational company for more than 40 years, where I rose to the position of a senior executive from the rank of a staff member, I was thrilled to read your 'Feature' on old faithfuls. (29 April)

Yes growing with the company gives you great satisfaction and a feeling of achievement but, alas, more often than not, you are taken for granted.

K.A. ANANTH
Bombay

• Location wrong

In your article on Keventor Agro (Corporate Report, 29 April) you had wrongly mentioned Hindustan Packaging Company Ltd. (HPCL) as a Hyderabad-based organisation. You may note that HPCL is a subsidiary company of NDDB, based in Anand (Gujarat).

VIVEK DIXIT
Anand

• Oversight, perhaps

In your article on consultants (Marketing, 15 April), there is one mis-statement, perhaps due to an oversight regarding me, at one place. The printed statement says that I was "with advertising agency Lintas India as a marketing director". What I had stated during the interview was that I was with "Lintas India on client-contact work, and later I joined a client-company as marketing director — a company which at that time was an associate compar Union Carbide Corporatio the US."

KRISHAN GOSWAMY
Washington DC (USA)

• In no way connected

It has been mentioned that ish Nagpal is the owner of E bay's Hotel President (Pec 29 April). I would like to cla that I am in no way connecte Hotel President in Bomba elsewhare or to the family t owns Hotel President.

ASHISH BALRAM NAGPAL
Bombay

• Professionals in ministries

You said that the fate of country's economy is decided a handful of people academicians, economists, officers (Letter From the P lisher, 1 April). Often, howe valuable suggestions to impr administration come fr professionals.

I have a suggestion. alre tried and implemented in de oped countries — admitt professionals from the priv sector in ministries. Simila the government could ha quality circles, that make it p sible for workers to particip in management, in governm departments.

G.M. PATIL
Pune

• Visit India

It is unfortunate that the Vi India Year 1991 is not going well as planned (Busine Notes, 4 February). We shou make an effort to highlight t virtues of places other th Kashmir to the US and Euro The country offers other exc lent areas for tourism like M habalipuram and the world unique backwate "Pichavaram".

India's vast resources w certainly make tourism a su rise industry. Like Malaysia a Thailand, we too will succeed.

Domestic: 1-3 ☐ 4-6 ☐ 7-8 ☐

9-10 ☐ more than 10 ☐

Overseas: 1-2 ☐ 2-4 ☐

more than 4 ☐

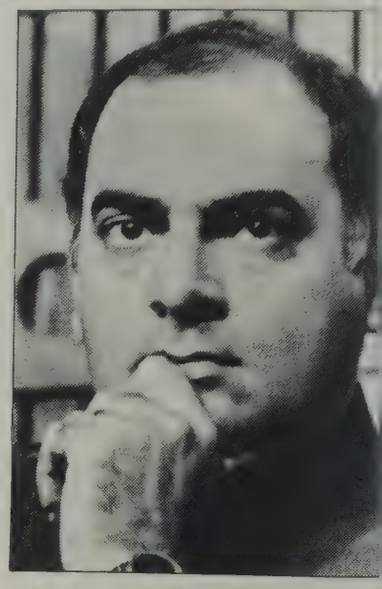
RSVP

Want to host the party of a lifetime free of cost? For 50 of your best friends in Bombay? On an illuminated yacht anchored off the Gateway of India? Moghlai dinner on the yacht. India's latest and finest Royal Velvet beverage, free! Plus live music! (Non-Bombay winners: you can stage your own party ceiling: Rs. 20,000 anywhere else).

All you have to do is complete the simple questionnaire above and mail it to us by July 30. It takes only 2 minutes. We've timed it! Surely a small price to pay for the chance to host the party of a lifetime.

A computerised lucky draw on 2nd September at 5 p.m. at Datamatics Ltd., 106, Embassy Centre, Nariman Point will decide the winner.

But even if you don't win, you still win. Because a large number of marketers of consumer durables, fashion garments and other exciting products and services are keen to flood you with great discounts, free gifts and cascades of incentives through the mail!



So fill in the 2-minute form alongside today. Better still, now!

Only forms complete in all respects are eligible. Photo copies of the form also qualify.

LAST DATE: 30TH JULY 1991

Forms to:
The Chief Executive,
Datamatics Direct,
Eucharistic Congress Building No. III,
5, Convent Street, Bombay-400 039.

Poll prospects

The difference in popular feeling following the assassinations of Mrs. Gandhi in 1984 and of Rajiv Gandhi last month lies in the difference between the sympathy that was felt for Rajiv when his mother died and the empathy that people feel for the Congress without Rajiv Gandhi. In the latter case, there is no unanimity of view although it is partly because the Congress has a different image in different regions of the country.

There are at least four distinct attitudes towards the Congress party after Rajiv Gandhi. Some people see a power vacuum and the emergence of a dominant group of power-brokers; others see an opportunity for the rejuvenation of an over-centralised but right-thinking party; still others, who have been loyal to strong local Congress leaders like Sharad Pawar, hope that the party will at least remain united; yet others hope that the Congress will abide by Rajiv Gandhi's ideas.

The last two form the famous TINA group, that There Is No Alternative. Many of the last group are in the south, which is largely yet to vote. These people are closest to feeling sympathetic for the party and are, therefore, unlikely to desert the party at this stage.

However, the greatest favourable impact could be felt in the state of Maharashtra where the third group is sizeable. When electioneering first began it appeared that the BJP-Shiv Sena alliance would prevent the Congress (I) from even matching its 1989 tally of 28 seats. However, Bal Thackery's espousal of Nathuram Godse — a few days before Rajiv's assassination — and the tragedy that followed are expected to strengthen the ranks of this segment of the TINA group.

Overall, the effects of Rajiv Gandhi's death from a strengthening of the forces of the TINA group will be ma ginally beneficial for the Congress party. This is because th level of commitment to the Congress party was already hig among this group.

It is for the hearts of the first two groups — residin largely in the north and who largely voted against the Co gress in the 1989 election — that the Congress and oth political parties must now battle.

Here the impact will not be dramatic in vote swings bu could be dramatic in seat count, especially in marginal sea and with half of UP yet to vote.

Therein lie the confusing implications for the rest of th polls. Small swings in the north coupled with a consolidatio in the south and Maharashtra could yet see the Congres through. The Congress has started targeting those who war a more democratic Congress after the failure of a sympath wave to emerge in the north. If successful, Sriperumpudu may yet mark a turning point for the party.

Miles to go before we sleep

HUMAN DEVELOPMENT REPORT 1991

The release of the Human Development Report by the United Nations Development Programme 1991 illustrates that just as economic growth is necessary for human development, human development is critical for economic growth.

Human development is a complex enough thing to define. A humane society certainly allows the widespread enjoyment of human, economic and political freedoms; also its government ensures the welfare of the poor, the young and the unborn.

The Indian experience in the eighties demonstrated that economic growth positively benefits such measures of human development as the reduction of poverty. However, several other measures of human development, such as health, nutrition, education and basic freedoms are often the victims of poor choices by democratically elected politicians. This explains why India, in spite of a democratic system, ranks 123 among the 160 developing countries ranked, coming be low countries which Indians are used to considering as worse off, including dictatorships such as Cuba (ranked 62), North Korea (ranked 74) and Vietnam (ranked 99).

Yet the report makes a strong plug for democracy based on its data, even though only 37 of the developing countries ranked above India are democracies. This is necessarily because democracy has emerged to be a necessary but insufficient condition for development. Nevertheless, the report points out that in free societies like Costa Rica and Mauritius, the poor have advanced rapidly largely because of democracy.

In fact, India ranks poorly even in the report's Human Freedom Index, scoring 14 points out of a possible 40, behind even countries such as Israel with its disgraceful record

towards its Arab residents. India scores poorly because of the continuance of child and bonded labour, the involvement of the police in communal riots and the abuse of the social rights of women.

The report makes several suggestions to improve human development. These include the compensation of powerful groups as a sweetener for allowing reallocation of resources to the poor — such as providing subsidised fertilisers to all farmers. It also suggests debt reduction as an important target because this reallocates resources away from social spending.

Ultimately, the report concludes that a lack of political commitment, rather than a lack of financial resources, is usually the real cause of human neglect. While this is certainly true for countries like India, is this true for countries like the Soviet Union where considerable — though entirely misguided — political commitment was the key to its problems?

Clearly, the report seems to be implying an unstated political message: what is necessary is a commitment to *laissez-faire* economics along with an enlightened willingness to intervene when necessary. Depending on the situation, this could be a prescription for success, as in Japan, or one for disaster, as in several developing countries through the seventies.

The other problem with the report is its often simplistic suggestions. For example, it recommends that countries concentrate on basic drugs to improve health at low cost. Such a strategy has led to severe problems in Bangladesh thanks to the phenomenally high cost of "non-essential" drugs on the one hand and the unavailability of price-controlled "essential" drugs on the other. Similarly, the recommendation that primary schooling be free in order to promote education has failed in rural India because it is implemented in government schools by untrained and unmotivated teachers.

Of course, the report is not designed to provide solutions. By highlighting India's dismal position, it is a useful if dismal reminder of how far we have yet to go.

Stable markets

The remarkable stability of stockmarkets through the country's political crises over the past three months contrasts sharply with its susceptibility in the past. While Mrs. Gandhi's murder was followed by a market fall of 2 per cent, Rajiv Gandhi's killing caused the market to sag by less than 0.5 per cent.

Even adverse economic events, such as the lowering of credit rating on sovereign long-term debt, have had little impact of late on stockmarkets. While this steadiness is widely attributed to the buying power of public sector mutual fund money, money ought to chase performance. But the forecasts for corporate performance suggest a flat 1991 with a credit shortage squeezing aggregate demand and foreign exchange shortages crunching capital imports. Even restructuring under IMF pressure is sure to cause short term pain before it starts to benefit the economy.

Are the mutual funds, several of them cautious to a fault, putting money down a sink-hole? The answer becomes clearer when the long-term future of the economy is combined with the peculiar nature of Indian stockmarkets.

The long-term future beyond the current year is generally considered to be bright. With per capita output of almost any item considerably below even poor country norms, the current growth rate of 2 per cent in excess of population growth most inevitably fuel an increasing consumption and investment demand.

Still, stockmarkets in any country — India being no exception — respond to current and expected near-term performance rather than to predictions valid five years hence. This is where the peculiar nature of Indian stockmarkets comes into play. About 70 per cent of market capitalisation is accounted for by the 30 largest scrips, such as Tata Steel, Reliance and Hindustan Lever. The "floating stock", ie, the number of shares available at or near the current market price, is estimated at about 5 per cent of the total. This is because financial institutions and promoters hold 70 per cent and about 25 per cent is with investors tied in by their own long-term investment horizons and the problem of taxable gains. At current market capitalisation, that leaves about Rs.4,000 crore of shares available in large capital scrips. Since mutual funds are not interested in smaller shares or in the primary market — either due to liquidity or allotment problems, the Rs.2,000 crore raised by funds last year for equity investments and an equivalent amount expected this year have led to a scramble for these top quality shares.

Mutual funds view their purchases as good long-term investments, never mind the short-term. There is a danger of even long-term over-pricing coming from such thinking, along with a neglect of capital market development that can come only from the promotion of new issues. The ministry of finance, which has hitherto permitted mutual funds to raise unspecified amounts, ought to re-think the issue.

Corporate giving gains ground

In 1977 there were only three charitable trusts in Japan, today there are more than 300. An increasing number of Japanese corporations are discovering the value of philanthropy amid even greater public awareness of social responsibility. The process has accelerated since the Federation of Economic Organisations, or Keidenren, organised the One Percent Club a year ago. What started as an association of executives willing to set aside 1 per cent of their pre-tax incomes for charitable purposes, has been embraced by an unexpectedly large number of corporations.

"About 100 companies have signed up," says Natsuaki Fusaok, managing director of Keidanren. "That's amazing for a country without any particular tradition of philanthropy." Worldwide too, corporate giving has been gaining ground. Yet, there could be another reason — tax breaks of 10 per cent in the US and 2 per cent in Japan.

Closer home, we have tax deductions at source and, under Section 43 of the Bombay Municipal Corporation's (BMC) Act, exemption from payment of general taxes such as water and other municipal taxes if you are a trustee.

Free trips?

Conte Nast Traveller, a well known travel magazine rated American Express Cards number one for speed and efficiency in refund services, in a survey that included other companies such as Thomas Cook and Citicorp. The rating was decided after the company bought and lost the cheques of all three organisations and then filed for refund in six cities of the world.

This year American Express will be completing 100 years of service and to celebrate this event the company is offering a grand destination extravaganza — a contest in which you can win up to eight trips abroad. The contest extends over a year starting this May. From the entries received during every three-month period, eight winners will be selected. For the whole year as many as 32 winners will be selected.

All you have to do every time you travel abroad, (now here's the fine print) fly any of the five airlines — KLM, Singapore Airlines, British Airways, Lufthansa — participating in the contest and buy only American Express Travellers cheques.

Banning the *toons*

Comic books, a part of almost everyone's childhood, are now considered a bad influence. The Publishing Ethics Council, recently set forth voluntary regulations on their sale to minors. The Council recommended that publishers place a special mark on the front cover and spine of any comic book that could be considered as unsuitable for young peop It also asked retailers to b the sale of these books to minors. Meanwhile accord to a survey done by the Research Institute of Publications, 474.2 million comic books were sold in 1989, and sales exceeded billion yen.

Safer by air

There are 0.6 deaths per billion miles of air travel and 24 deaths per billion miles of travel by road, which means that you are 40 times more likely to die in a car crash than in a plane crash. But a recent study by researchers at the General Motors Research Laboratories points out that, while every airline passenger has about the same statistical likelihood of dying in an air crash, the safety of drivers is heavily influenced by age, alcohol use, safety belt use, the car's size and weight, and the roadway system.

For example, an 18-year old driver has a death risk that is more than five times the average risk. A 40-year old driver, in contrast, is only about half as likely to die in a car crash.

According to the study, i you take all these factors i account, you get the follow results:

- An 18-year old, who does not wear a seat belt, drives car that is 700 pounds ligh than the average, and is intoxicated is substantially more likely to be killed on t way to an airport than on t flight (even if the drive to t airport is only one mile).
- On the other hand, a driv who is 40 wears a seat belt, drives a car that is 700 pounds heavier than the average, and is not drinkin is "slightly less likely to be killed in 600 miles of rural interstate driving than in regularly scheduled airline trips of the same length." T researchers add that "for 3 mile trips, the driving risk i about half that for flying."

Accounting for the environment

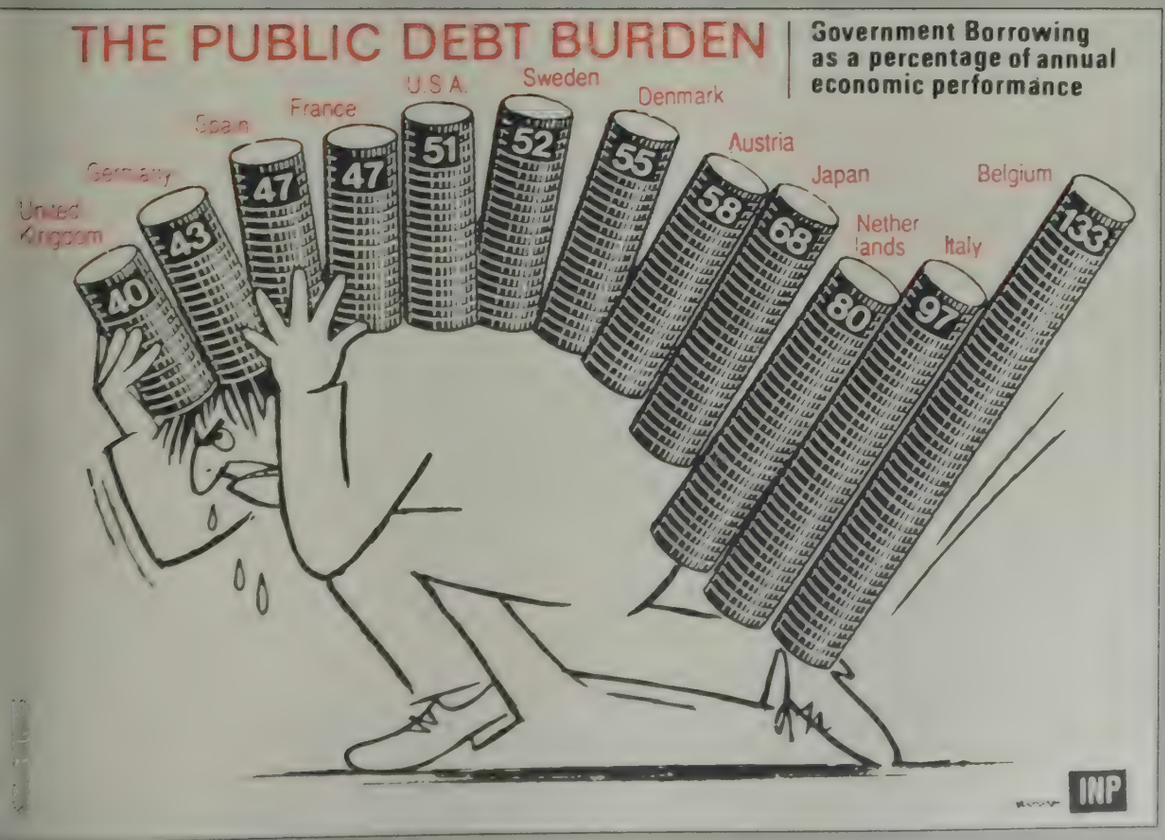
Current national accounting systems do not capture the value of natural resources adequately. Therefore, development strategies that rely on standard income accounting techniques may not result in sustainable development, say Ernst Lutz and Mohan Munasinghe of the World Bank's enviromental policy and research division.

Some of the effects of land degradation, pollution, and waste disposal cannot be captured by market based information and standard accounting techniques. Thus, the challenge is to capture these effects statistically and to link them to economic activities.

Net domestic product and net income should therefore be environmentally adjusted to account for the depreciation of both man-made and natural capital and estimate damages to the environment as a result of economic activities.

For this, the World Bank has encouraged the inclusion of environmental issues in the current revision of the framework used by the United Nations and proposed as an interim measure that a set of environmental "satellite" accounts be created to accompany the UN framework. The bank in collaboration with the United Nations Statistical Office (UNSO), is carrying out a research in two developing countries — Mexico and Papua — New Guinea.

The UNSO Framework being used in these studies is a system for environmentally adjusted economic accounts, from which the environmentally adjusted net domestic product and environmentally adjusted net income are derived. It tries to integrate environmental data with existing national accounts information, while maintaining the concepts and principles of the UN System of National Accounts as far as possible.



Economist's new type face

From this week onwards *The Economist* will appear in its own type face called Ecotype. It could never have been designed but for a revolution that has shaken up one of the world's oldest industries.

Ten years ago Eiichi Kono, a Japanese designer based in London spent 18 months redrawing the face of the type used in the *Underground* a Japanese publication. Every letter had to be drawn, photographed, reduced, revised and photographed again. Kono reckons that today the same job would take only three months.

Six years ago, *The Economist* thought of introducing a typeface called Excelsior Insertio into the paper. It would have cost $110,000 to produce the appropriate bit-maps for the typesetter used formerly. Because of PostScript, nine fonts of an entirely new typeface, Ecotype, were produced at roughly half the cost.

Cleaning up the streets

S.K. Ahire Marg in Worli which houses a host of companies also houses unauthorised hutments, insanitary and unhygenic footpaths and traffic congestion.

To clear up the congestion Glaxo initiated a Quality Streets Circle. As many as thirty companies participated including Ingersoll Rand, Kwality Frozen Foods, Ceat Tyres, Shipping Corporation and State Bank of India.

After several meetings with the BMC head office officials, G-south ward officials and Traffic Police representatives, the Circle was finally recognised and registered as an association to "Save Worli" in November 1990.

MEET THE BARMAN OF TELCO, MICO, ESCORTS, SHRIRAM, SKF, TVS, LMW AND OTHER LEADING COMPANIES.

GRAND FOUNDRY

We, at Grand Foundry have a reputation as bright as our Bright Steel Bars. A reputation for quality which goes back three decades. Our world-class cold-finished steel bars find favour not only with Indian Engineering Industry but also with leading companies in Europe, USA, Japan, Australia. Today, together with our affiliate, Dhiraj Iron & Steel, we manufacture and market, practically all grades of steel. Our large, modern plant incorporates some of the latest technology, and employs the most exacting technical standards. We also have a Quality Assurance Cell. It is our pride. What's optional for others, is a must for us. Bright Steel Bars, as a matter of routine, have to pass a series of stringent tests: inclusion rating, hardness, micro/macro structure tests and crack detection. Only then are they certified fit enough to see the insides of a customer's shop-floor. Our product range includes everything from low carbon steel, free-cutting steel, alloy steel, case hardening steel, cold heading steel, ball bearing steel, valve steel, stainless steel to even tool-die steels.

The future is 'Steel Bright'

PH Advertising 1874(3)A R

Taj in Kerala

Kerala might be one of the country's smallest states, but the Taj group has decided that it is going to put up as many as nine hotels and resorts there in the next few years, apart from the one it already runs at Cochin. A new company called Taj Kerala Tourist Corporation has already been formed for the purpose.

Taj Hotels: widening its horizons

Taj, through Indian Hotels Co, will have a 40 per cent stake in the Rs.4-crore equity and the Kerala Tourism Development Corporation 20 per cent. The rest will be sold to the public early next year. Land for the first four projects at Kumarkonam, Varkala, Ernakulam and Tiruvananthapuram have already been transferred to the new company. Structures which can be turned into hotels and resorts already exist on these properties and nearly Rs.18 crore is to be spent on their renovation in the coming months. The first of the hotels will become operational in July 1992.

Cartel in action

Every Friday, the cement cartel in Tamil Nadu meets under the leadership of the managing director of a leading cement producer in the south. Marketing managers from cement companies in the state discuss prices and sales on a weekly basis. A knowledgeable source credits this person as "the one man who is solely responsible for the increase in cement prices".

Eighteen months ago, cement prices languished at Rs.65 a bag, with very few buyers. But today it is priced at Rs.106 per bag, because manufacturers have held up production to hike prices. Earlier Tamil Nadu was flooded with cement from Andhra Pradesh, but the Tamil Nadu cartel has warned them of retaliation in similar terms. "Prices will boom till 1995," says a source.

Northward ho!

Goodlass Nerolac (GN) is yet another company that is looking northwards. It is putting up a new plant at Kanpur with a capacity of 800,000 litres a year. (Its existing plant at Parel in Bombay has a capacity of 700,000 litres a year.) This follows Asian Paints setting up a new plant just outside Delhi at Noida. The plant at Kanpur is supposed to meet the growing demand in UP and other northern states. And one reason for selecting Kanpur is to avoid the 4 per cent tax which the UP government imposes on paints manufactured outside the state.

The battle hots up

The battle for Cement Corporation of Gujarat Ltd, is hotting up. The company, promoted by N.M. Mehta and the Gujarat Industrial Finance Corporation, had turned sick because of cost overruns. It is before BIFR and bidders are lining up, among whom are L&T, Gujarat Ambuja and Mehta himself.

NRIs who also run Saurashtra Cements and Chemicals Ltd, the Mehtas have just taken over Assam Frontier Ltd, in an offshore deal.

Sweet overture

Lotus Chocolate Co Ltd, Rs.8-crore speciality chocolate manufacturing company, is establishing its unit at Daulatabad, near Hyderabad. The company will be professionally managed by N. Vijayaraghavan — a post graduate from IIT, Madras and T. Sarda, a renowned film artist. The board of directors include Anne Cridland — reputed food technologist and chocolateur, George Varghese — an agronomy specialist from Malaysia and C.P. Krishnan Nair of the Leela group of Hotels.

Lotus is likely to start production by the end of this year. Moreover, it is to be an export-oriented company with 50 per cent of its revenue coming from export of cocoa derivatives and bulk chocolate converters. For this they have a tie-up with Cocoa Specialities, Malaysia. Besides, the company is also involved in growing cocoa in Andhra Pradesh with technical collaboration from Plantek Sdn Bhd of Malaysia, an international tropical agroconsultancy group.

Recording firsts

Canara Bank, which has risen to the *numero uno* position among the nationalised banks, has quite a few other 'firsts' in its bag. It is planning to set up a travel services subsidiary and an asset management company to manage the affairs of its mutual fund. Besides, it also has on cards, an artisans' complex in Bangalore district to provide integrated services to rural artisans under one roof, an exclusive training institute at Pondicherry for developing rural leadership and another one at Kolar to promote rural industries and self-employment among rural youth. Moreover, to record all these events, Canara has employed M.V. Kamath — the former editor of *The Illustrated Weekly of India.*

A departure from the past

The Western region will, this time, contend for the position of the vice-president of FICCI who traditionally becomes its next president. The two likely candidates are A.S. Kasliwal of S. Kumar and Kanti Kumar Podar, former president of the Indian Cotton Mills Federation Ltd. And the likely winner is Kasliwal, whose daughter is married to a Birla.

V.L. Dutt, president of KCP Ltd will be the FICCI president and Kasliwal (if he turns out to be the winner), the vice-president. Considering that earlier the FICCI has had some really high profile office bearers, will this be a departure from the past?

New field unknown

Kinetic Engineering is planning to get into the manfuacture of consumer durables as well. Firodia, however, is tight-lipped about the products and the foreign collaborator. It is also unclear whether the new line of activity is to be through a new company or will get underway in the same premises.

SIEMENS

Limping back to normalcy

Nearly a year after labour problems began at Siemens, (see *Business India*, 1 October 1990) a solution seems in sight. Intra-union rivalry had culminated in the partial lockout of the company's units at Kalwa on 5 January this year. Now with the high court calling for fresh elections the attendant lockout is expected to be lifted.

The trouble began last year when the elections were announced for 22 April. But one faction led by president S.A. Sawant, boycotted them. The reason: they considered them unconstitutional as neither Sawant nor the general body was consulted on the date by U.S. Mahale, the general secretary, and leader of the other faction. Thereafter, Sawant set a new date — 28 May.

To curb indiscipline. Both elections were held. But then, each faction challenged the validity of the election conducted by the other, in the high court. Since 1,634 out of the 2,381 workers present had voted for Mahale in the April elections, and the management was interacting with him, the Sawant faction began agitating in June. So, says S.S. Muzumdar, vice-president personnel, "To curb indiscipline and ensure productivity, we declared a partial lockout." 534 workers were affected.

According to Muzumdar, "There is no management involvement in union matters." But the two factions feel otherwise. Sawant feels Mahale is being supported by the management, as he would be more flexible while negotiating the wage settlement due in September. Ironically, Mahale feels the management instigated Sawant to boycott the elections so that in the ensuing confusion, they can scuttle one major issue the Mahale group has been fighting for — that even managers must be pushed to increase productivity.

Arguments apart, production did suffer. Between October and December last year the production losses totalled 40-50 per cent. But since the lockout, after temporary staff joined, production improved.

Following the appeal from the registrar of unions, the election date has been extended by four weeks from the stipulated 15 May. Fresh elections might now restore normalcy at Siemens.

■ INDIRA KHANNA

APPLE INDUSTRIES

The *Apple* is gone

The two-year long court battle for the use of the name 'Apple' and the logo between the Bombay-based Apple Industries and the US-based $4-billion computer giant Apple Computer Inc has gone in favour of the latter (See *Business India*, 14 May 1990). In a judgement passed on 10 May this year, the Delhi high court judge, Justice Mahendra Narain upheld the plea of the US-based company and restrained Apple Leasing & Industries from using the name as well as the logo of a half-bitten apple in the course of trade.

This judgement is being seen as a historic one, only if it has direct implications on cases of 'passing off' and where goodwill of a company not operating in a country are concerned. According to the judgement, goodwill for any company can exist across geographical boundaries whether or not it carries on business within those boundaries.

Still *sub judice*. However Apple Industries has appealed to a full bench of the Delhi high court and Atul Nishar, the managing director of the company, is ready to take the battle up to the Supreme Court if necessary. "I don't expect the court judgement to have any impact on the performance of the group companies," he says.

The contention of the US company has been that Apple Leasing & Industries has tried to pass itself as a subsidiary of the US company. The US company issued a notice to Apple Industries asking it to desist from using 'Apple' as part of its corporate name, back in 1986. However, after that, things got complicated because the Indian company kept changing its name — first from Apple Leasing & Computers to Apple Leasing & Industries in 1986 and then to Apple Industries in 1989.

The US company's plea was for ... junction on the use of the name as a ... goodwill had been generated for it ... Indian market. Its business had incr... from Rs.15 lakh in 1986 to Rs.11.2 cr... 1989. Moreover it had been advert... regularly.

The defence. Apple Industries cla... Apple Computer Inc did not have a ... tectable goodwill' since it was not op... ing directly in India. It did no a... trading in the country and further, its ... year delay between sending a 'cease ... desist' legal notice and filing a suit ... fatal. However Justice Narain was o... opinion that enough goodwill existe... the US company since its machines ... been sold here. Also, the fact that the ... pany has not been incorporated in Ind... its trademark and logo not registered ... though applied for) were not enough ... sons to allow Apple Industries to use ... name 'Apple'.

CONOMY

ise in IDBI anctions

nctions and disbursements of e Industrial Development nk of India (IDBI) have re-rded an increase of 20 and 27 r cent respectively, for the ar ended March 1991. In ms of money, IDBI has sanc-ned Rs.6,907 crore and dis-rsed Rs.4,462 crore which is pected to catalyse investment over Rs.16,000 crore in the untry with employment po-tial for over 400,000 people.

oreign companies to ake VCRs

reign companies and joint ntures will henceforth be al-wed to manufacture VCRs, Ps, compact disc players and mpact discs provided they utralise the outflow of foreign change. This decision was ken for the first time by the ecial investment approval ard to liberalise foreign in-stment in the electronics sec-r. The board, however, jected the DoE proposal to in-ease the capacity of indige-us assembling units pending on CKD imports as is would lead to an outflow of reign exchange. Currently, oE is working on providing ncessions to foreign com-nies to make investments at-ctive in India.

apan to extend aid

pan has agreed to lend Rs.300 ore to India, following a re-est made for special assis-nce to cope with the termath of the Gulf crisis. The an will be extended by the verseas Economic Co-eration Fund of Japan and a repayment period of 25 ars with an interest rate of 2.6 r cent per annum.

aising coking coal utput

e committee of secretaries s recommended stoppage of king coal imports for the current financial year in view of the foreign exchange crunch. Instead it has advised the department of coal to meet the entire demand of the steel industry for coking coal from domestic sources. In fact, the coal department is already working on plans for raising the production of coking coal from the current 9.6 million tonnes to 15 million tonnes by 1991-92.

Funds likely from Aid India group

India is likely to get some assistance from the donor countries of the Aid India consortium by the third week of June, as apparently both the IMF and the World Bank have urged the release of these loans in advance of the scheduled date. Though the loan is not expected to be of much help in tiding over the present foreign exchange crisis, it is felt that it will at least ensure that the government does not default on the repayment till the stand-by arrangement of $2.5 billion from the IMF and $500 million loan from the World Bank is sanctioned by the end of September.

SBI ships out gold

The State Bank of India has shipped out 10 tonnes of confiscated gold to raise foreign exchange for the country's immediate requirements. If sold immediately, the gold will fetch between around $114.13 million (Rs.230 crore). The finance ministry had earlier denied any government plans to sell or swap gold to raise foreign exchange. Sources say that the SBI is planning to ship out another six tonnes by the end of next week.

India's low ranking

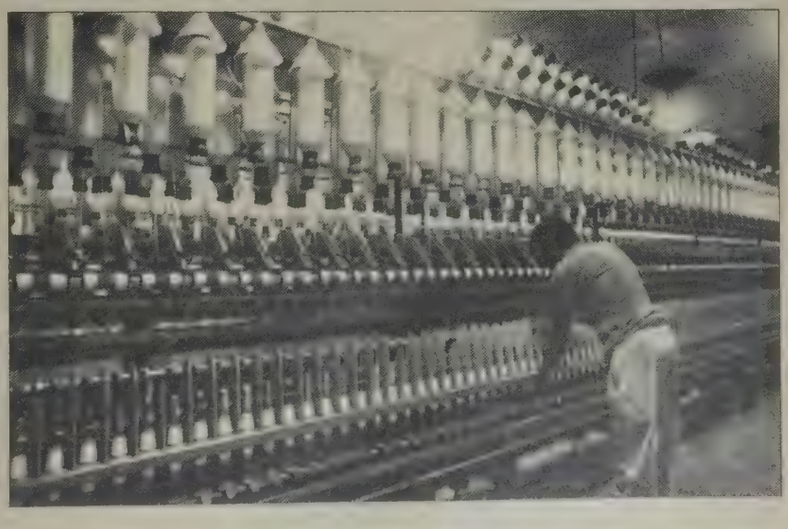
The United Nations Development Programme's Human Development Report for 1991 says that India ranks 123rd among 160 countries in terms of its human development index (HDI). At a ranking of 120, Pakistan is better placed than India. The report, the second of its kind, uses the HDI as a single measure combining indicators like life expectancy, adult literacy and basic purchasing power of various countries. The report asserts that the lack of political will and commitment, not of financial resources, is often the real cause of human neglect.

CORPORATE

Suzuki's new model

Maruti Udyog Ltd will be the sole supplier of the new car model being developed by Suzuki for export to the EEC countries. The car will be fitted with Indian components up to 80 to 90 per cent.

The project was expected to be cleared by the Public Investment Board by end April. Having already been delayed by the current political uncertainty, a decision might come only after the new government takes over.



Export of the 800cc car model to the EEC countries will come to a halt by end 1992 because these countries are insisting on new emission standards which cannot be incorporated in this model.

HDFC's mutual funds

HDFC plans to set up two real estate mutual funds, proposals for which have been placed before the ministry of finance. The two funds, one offshore and the other domestic are expected to be set up in collaboration with a large public sector bank. A target of $100 million is planned for the offshore and Rs.100 crore for the domestic fund.

Arvind Mills to diversify

Arvind Mills Ltd has signed an MoU with the Gujarat Industrial Investment Corporation

(GIIC) for a Rs.520 crore newsprint/printing/writing paper project. The company is expected to invest around Rs.60 crore in the equity of the new project which is to be set up in south Gujarat.

UB proposal rejected

The government has rejected a proposal by the UB group to set up a beer plant in Andhra Pradesh. It was proposed to manufacture 250,000 litres a year at an estimated cost of Rs. 10.06 crore.

Although the Bangalore-based group had applied for permission early last year, the proposal was rejected because it did not incorporate any export obligation, as per government regulations.

SICOM's new project

State Industrial and Investment Corporation of Maharashtra has signed an MoU with Amclyde Engineered Products Inc, an American engineering company for the manufacture of sugarcane processing equipment that uses a unique technology, the separator method.

The project estimated to cost Rs.5 crore has a debt-equity ratio of 1:1. Amclyde will hold a 40 per cent equity stake while the remaining 60 per cent will be held by three financiers — SICOM, ILFS (Infrastructure Leasing and Financial Services Ltd) Venture Corporation (which has been instrumental in bringing the technology) and Risk and Capital Technology Corporation (RCTC, a venture capital company of IFC, Washington). The project is in various stages of clearances.

Reliance to start merchant banking

Reliance Capital and Finance Trust Ltd, has been authorised by the Securities and Exchange Board of India (SEBI) to conduct merchant banking activities as a category I merchant banker.

IPCL to set up subsidiary

IPCL is setting up a subsidiary, IPCL Videsh Ltd. The new company will concentrate on implementing the $4.4 million training contract with Iran. IPCL has an understanding to supply training, support and research collaboration to the National Petrochemical Co of Iran. The subsidiary also plans to export products worth $400 million to the US over a seven years period.

NTPC bags Dubai contract

NTPC has signed a $17.7 million contract with the Dubai Electric Company to lay down high voltage power transmission lines in Dubai. NTPC bagged this contract amid stiff international competition. Accordingly, NTPC will supply and erect 400 kv cables over a 47 km stretch.

NTPC has also signed an MoU with Electricite De France Internationale (EDF), Paris for technical collaboration ventures both within and outside India.

L&T to make steam generators

Larsen & Toubro has bagged a Rs.41-crore order to manufacture steam generators for NTPC. This value excludes the free issue of materials of about the same value. The generators will be used in the country's first set of 500 MW nuclear power plants.

The four generators weighing 180 tonnes each will be manufactured at L&T's Hazira Works in Gujarat where special facilities have been established for nuclear equipment fabrication.

INDUSTRY

Jute output down

During April 1991, goods duced by the jute amounted to 97,900 to This was 9,200 tonnes than the figure for April even though the numb working days were fewe that month.

Included in the jute cat were hessian and sacking, duction of which was low 2,000 and 3,000 tonnes re tively. The output in March at 103,000 tonnes was higher than that in April Stock of jute goods in 1991 was 60,700 tonnes, tonnes more than that in M 1991.

Chemical exports f

Export of chemical and a products for 1990-91 has fa short of the target of Rs.2 crore set for the year, by Rs. crore. This decline covers the mineral and non-min sectors, but it is more so in minerals (including gran sector. The minerals sector ported only Rs.1,788.3 c worth of items as against target of Rs.2,000 crore. Exp of non-mineral items stood Rs.641.6 crore as against target of Rs.700 crore.

Export orders soar

Indian exporters have secu 95 contracts, worth over Rs. crore during 1990-91 growth of 109 per cent over previous year.

The contracts covered countries and included sup contracts worth Rs.89 crore consultancy contracts wo Rs.27 crore. Turnkey expo grew by 144 per cent over previous year and were valu at Rs.610 crore. Construct projects at Rs.170 crore grew 94 per cent over 1989-90.

Possible shortage of caprolactam

A shortfall of 35,000 tonnes caprolactam is anticipated

To the average person, she is losing her sight.

Photograph: Courtesy - Dinodia Picture Agency

To a Lion, she could still see the world again.

So many young people like her are victims glaucoma.

Blindness that can be prevented if treated y.

And every year millions of others, both ng and old, fall prey to eye disorders, luding cataract, that often result in dness.

In their fight against blindness the Lions e been conducting country-wide eye-care ps.

Providing free check-ups and medical relief he underprivileged. And averaging 2 lakh ract surgeries per year, in the past.

Lions has now launched a nation-wide gramme. 'Sight-First—Lions Conquering dness', in July 1990.

Setting a phenomenal target of 20 lakh geries per year, within the next 5 years.

A task that requires selfless devotion and above that the perseverance and commitment to reach the goal.

But not all understand this.

That's why it has always taken a special kind of person to be a Lion.

Special men and women who share a common concern. A concern for the society in which they have succeeded.

Who realize that beyond the achievements of everyday life is that most elusive object: inner satisfaction.

And who have come together to touch the lives of others less fortunate than themselves.

Needless to say, people like these aren't many.

After all, if everyone in the world had the vision of a Lion, there wouldn't be an average person.

Millions of people make up this world.
But just a few shape it.

IT TAKES SOMEONE REALLY BIG TO MAKE A CAPACITOR THIS SMALL.*

The Company that has achieved the largest manufacturing capacity in India.... The Company that offers the widest range in India...now widens its range and sets new standards in miniaturisation.

A new sub-miniature aluminium electrolytic capacitor of only 4 mm dia and 7 mm length, specially designed for use in electronic equipment where space is at a premium.

Manufacturers of hearing aids, micro motors, hand held remote controllers, VCRs/VCPs, personal portable stereo cassette systems, flash guns, automotive electronic equipment will now be able to meet their needs for these capacitors, in India.

Punsumi, as before, is bringing you another high quality, high precision product, developed through its own in-house R&D and Engineering, using the latest technology and the most sophisticated machinery — offering yet another import substitute.

*** Actual size 4 mm dia x 7 mm length** . * FOR THE FIRST TIME IN INDIA.

Punsumi

THE LEADING EDGE IN CAPACITOR TECHNOLOGY.

everest/d91/PIL/51

91-92. Caprolactam is used in e manufacture of NMP, nylon ament yarn (NFY) and nylon re cord (NTC). Production of ese items is expected to be out 93,000 tonnes for 91-92 — 20,000 tonnes more an the previous year. This will present a 10 per cent growth er the best production figures ring the last three years. The tal requirement for caprolac- m in 1991-92 is estimated at er 100,000 tonnes.

omputer industry rowth falls

ne growth rate of the com- uter industry fell to 22 per cent 1990-91 as against 44 per nt in the previous year, ac- rding to a preliminary study one by the Manufacturers' As- ciation for Information Tech- ology (MAIT). This is

tributed to the political and onomic uncertainty.

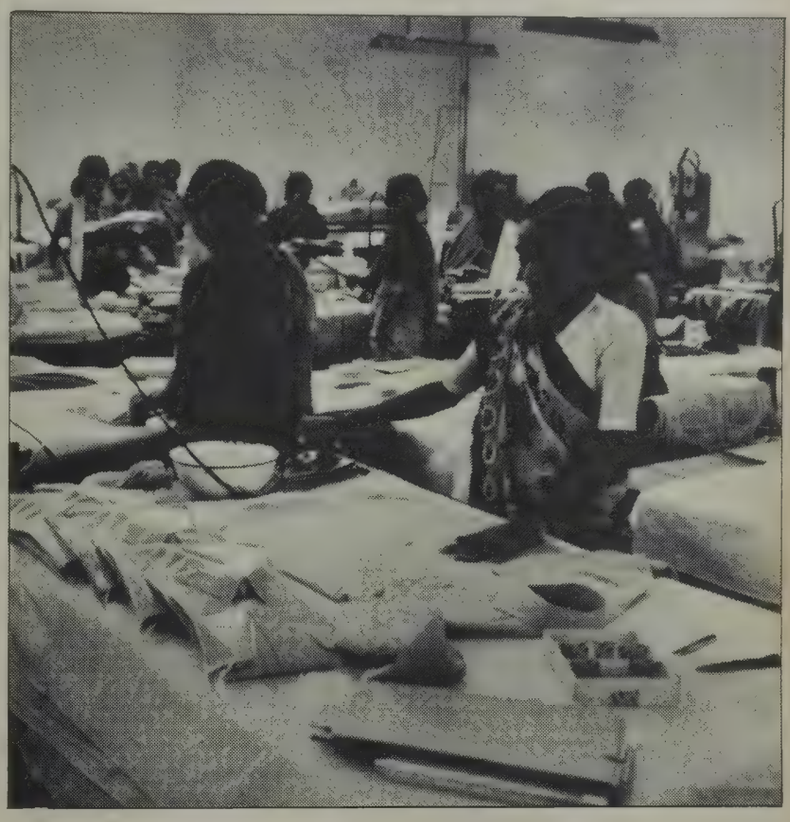
Industry revenues were .2,000 crore, 74 per cent of it ing contributed by hardware. ne micro segment grossed ound Rs.540 crore. The work- ation market grew 126 per nt. The computer industry rmed 12 per cent of the entire ectronics industry in 1990-91.

il meals export own

e export of oil meals has llen to Rs.623 crore for the riod April 1990 to February 91, from Rs.693 crore for the rresponding period in the evious year. In volume terms, ports have fallen from 2.63 to 16 million tonnes.

The decline is mainly due to slackening of import by South East Asia and the Far East, as a result of good crops there. Another reason is the 25 per cent fall in the export of rapeseed extractions — from 650,000 tonnes worth Rs.81 crore for the 11-month period ended February 1990 to 480,000 tonnes worth Rs.66 crore during the same period in the current year.

Gur export quota raised



A new quota of 5,000 tonnes of *gur* has been released for export during the current season (October-September) by the government, bringing the total export quota to 10,000 tonnes for the season.

The country is expected to produce 235 million tonnes of sugarcane during the current season, as against 222.63 million tonnes last season. Even after a 50 per cent offtake by the sugar industry, there are still sizeable supplies of cane for the *gur* and *khandsari* industries.

Garment export rises

During the first four months of 1991, garment export went up by 16.85 per cent over the same period last year. The exports were worth Rs.1,872 crore against a target of Rs.5,800 crore for the full calendar year. The quantity of exports, at 2,571 pieces has also risen by 9.64 per cent over last year.

Shipments to the US have, however, shown a decline in value of 3.17 per cent, at Rs.404 crore, and in terms of quantity of 0.96 per cent at 4.14 million pieces. Exports to the EEC saw a 27.51 per cent increase at Rs.913 crore, and a 7.33 per cent increase in quantity (121.6 million pieces).

Dyes export to fall short

A shortfall of about Rs.250 crore is expected in the export of dyes and dye intermediates on a target of Rs.800 crore for 1990-91. This is for the second year in succession that the target has not been met.

The shortfall is attributed mainly to the 20-25 per cent increase in prices of petrochemicals-based raw materials after the Gulf War, and to high energy costs, sales tax and octroi duty, as also the 200 per cent margins recently imposed on letters of credit.

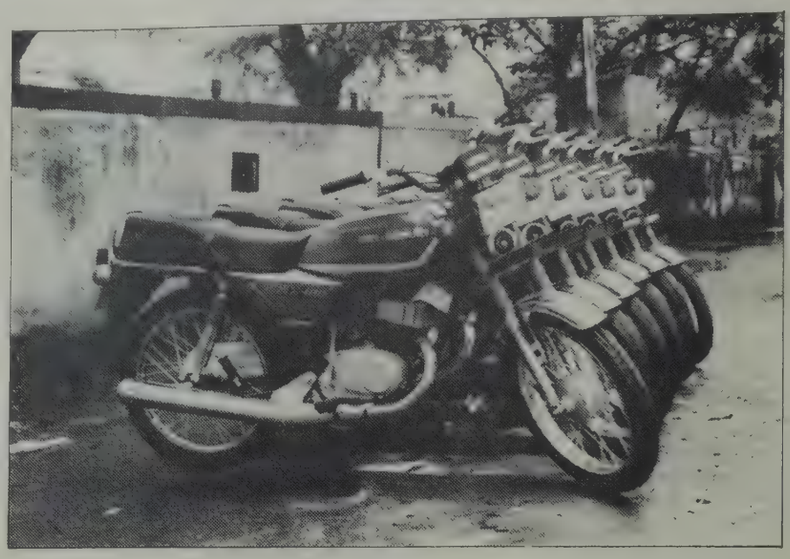
LABOUR

Insurance for staff on poll duty



For the first time, the Election Commission has taken an insurance cover of Rs.47.35 lakh for 4 million government employees on poll duty, anticipating an outbreak of violence during elections.

Gujarat strike

About 1.5 million class II and III non-secretariat employees of the Gujarat government threatened to go on mass casual leave on 21 May and thereafter go on strike in support of their pending demands.

TVS labour row sorted

In an important verdict, the Labour Commission has upheld that the INTUC-led TVS Employees Union at the Hosur factory of TVS Suzuki is a recognised union. With this ends the dispute between the management and the DMK-led union which has been contending for recognition.

The INTUC union has been recognised for over a decade now and the management has been negotiating with it on all matters. But a section of the workers thought otherwise and have been troubling the management and the union. In this battle of recognition, INTUC was decisively against the DMK union. The INTUC union enjoys the support of 1,147 while the DMK failed to prove its claim.

Lock-out at GKW

Guest Keen Williams Ltd (GK declared a lock-out at the C cutta wing of its Sankey Pre ing Division (SPD) on 26 M This will affect about 1,200 e ployees. The division manuf tures fans, motors a generators, stamping and me laminators. Though quality l remained among the best, products have been facing shrinking market and the co pany was forced to operate less than 50 per cent capac The management had earlier fered a voluntary separati scheme (VRS) which promis to pay 65 per cent of the la drawn salary and allowance the next five years to all (condition they agree that th provident fund and gratuity paid in two or three inst ments). The management wa to cut down the work force by per cent, about 130 worke have accepted the scheme.

LANDMARKS

Awarded, to Wing Commander Avinash Chander Sood, managing director of Hindustan Aeronautics Ltd's MiG complex at Ojhar in Nashik, the "Friendship of the People Award" by Soviet president Mikhail Gorbachev in Moscow for his outstanding services in the development of scientific and technical relations between the USSR and India. This was the first time that the award was conferred on a technocrat in the aerospace industry.

Awarded, PR man of the decade award to M.P Narayanan, chairman of Coal India Ltd, by deputy chairman of the planning commission, Mohan Dharia and justice Yogeshwar Dayal. Narayanan, who is also credited for having spurred the growth of the sluggish Neyveli Lignite Corporation as CMD, has recently turned Coal India around.

Ordered, India Abroad News Service (IANS), to pay up to Rs.80,000 and legal costs to non-resident Indian Ajitabh Bachchan, for reproducing an article linking him with the Bofors scandal. The news service had reproduced an article from *Dagens Nyheter*, the Swedish newspaper, in January and February last year, alleging that Bachchan had a Swiss bank account containing money from kick-backs in the Bofors deal. Earlier, Bachchan had denied the allegation and sued the newspaper for defamation in the English High Court.

Named, V.N. Mallikarujuna Rao, one of the key contributors in the development of chloroflourocarbon (CFC) alternatives and processes as DuPont Fellow. He is the fourth DuPont Chemicals employee to receive the appointment, the highest level of professional recognition in the company. His leadership in developing CFC alternatives has resulted in a more rapid commercialisation of these products and established the basis for further catalytic process research.

Died, former union minister and sitting Rajya Sabha MP, Dinesh Goswami, in a highway car accident at Pharamtul, near Guwahati on 2 June. Born on 27 May 1935 in Assam, he made a successful career as a lawyer before he became involved in politics. A well-known orator, Goswami was elected to the Lok Sabha for the first time in 1971 as a Congress candidate. He was also a prolific writer.

Died, Shashank Lalchand, son of Lalchand Hirachand of the Walchand group of industries, due to sudden illness. Shashank, whose involvement in the family business was limited to being board member of two group companies, was on a concert tour in South Africa with singer Lata Mangeshkar where he fell ill. Unlike his brothers, Vinod Doshi, chairman of PAL, and Chakor Doshi, chairman of Walchandnagar Industries, Shashank's interests lay in music, and sound engineering.

Died, Firdauz H.J. Taleyarkhan, Bombay High Court and Supreme Court advocate and son of former Sikkim governor, Homi Taleyarkhan, while on an mountaineering expedition in the Garhwal Himalayas. Firdauz, who was secretary of the Bombay Bar Association for three years, appeared in a number of important cases before the High Court, the most recent one being the development control rules for Greater Bombay.

THE JEWEL IN THE EAST.

A three hundred year old city. And a hundred year old hotel. Imbued with the charm of the passing years. And furnished with modern conveniences.

A hotel that has played host to kings and queens. To royalty, crowned and uncrowned. From the world over. Who have stepped into its portals and fallen under its spell. To return again and again.

To the jewel in the East. The Oberoi Grand.

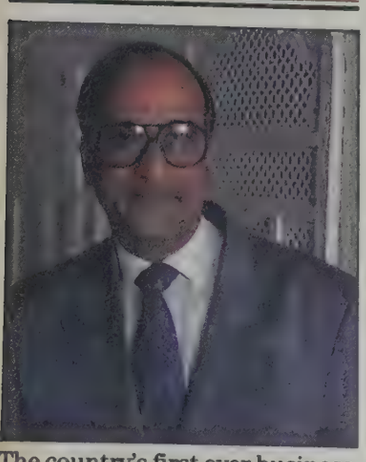
V. KANNAN



Thermax Babcock & Wilcox Ltd (TBW), set up just two years ago, has made its debut in the export market. It has bagged a

Rs.7-crore order from a Saudi Arabian company for setting up a 100 tonnes-per-hour boiler at Al-Jubail. The fledgling company has also bagged another order (worth Rs. 6.5 crore) from Phoenix Pulp & Paper, a Thapar group company in Thailand.

Heading TBW is Venkataraman Kannan, with an experience of 24 years in the field of boilers, of which 11 were at Babcock & Wilcox, US. "Manpower is our greatest strength," says Kannan. "TBW's excellent team is all set to crack the best export markets in the world."

K.R.V.SUBRAHMANIAN

The country's first ever business delegation is just back after obtaining first hand information about business possibilities with firms located in the eastern part of Germany. "There was a lot of confusion over here about what was going on in that part of the world. But the results of our fact-finding mission make us optimistic," says K.R.V.Subrahmanian, leader of the nine-member delegation and president of the Indo-German Chamber of Commerce (IGCC), organisers of the trip.

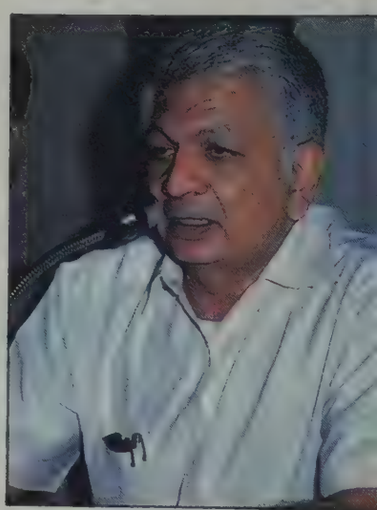
According to the delegation's findings, there is ample scope for Indian businessmen to involve themselves in the finance, housing and hotel industries. The possibility of Indian companies taking over some of the 6,000-odd sick companies with the aid of NRI funds was also discussed.

P.D. GUNE

Pune-based Kirloskar Pneumatic Ltd (KPL) recently launched a high-tonnage packaged air-conditioner, known as the Kirloskar Carrier 50BL Packaged Air-conditioning Unit. KPL has joined hands with Carrier Corporation of the US to produce air-conditioning units in the 20 to 30 tonnes range. Currently, such units are available only up to 15 tonnes. Says P.D. Gune, managing director, KPL, "The 50BL range is the first such unit resulting from the Kirloskar-Carrier collaboration, and more such products are in the pipeline." The new product, which combines Carrier's advanced technology with KPL's versatile experience and expertise in manufacturing, was launched recently in Bombay.

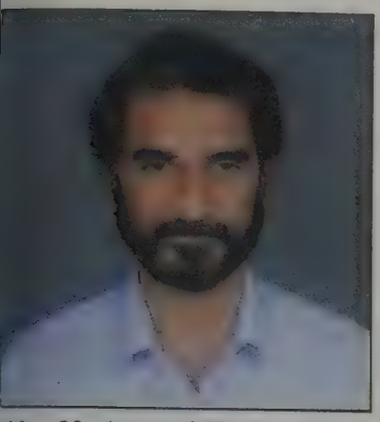
NAVANITLAL SHAH

The Bombay-based Ashapura group, which is involved in the mining of bentonite and china clay, has signed a memorandum of understanding recently with the Gujarat Industrial and Investment Corporation (GIIC) for setting up a Rs.20-crore gypsum board project in Bharuch, Gujarat. Says Navanitlal Shah, chairman of the group, "This is only the beginning. We soon hope to have more such factories." The new plant will have a capacity to manufacture 3 million sq metres of gypsum board a year and expects to initially export 10 to 15 per cent of its production.



SUBODH SHAH

"Suddenly everybody is talking about preserving the green cover and saving the fast depleting forests in our country," says Pune-based industrialist Subodh Shah. For this reason, he is "confident that PVC is the material of the future." Shah is therefore promoting a new compan Rahul & Subodh Windoors Lt with an investment of Rs crore, for the manufacture PVC profiles for door and wi dow frames.



The company will initial manufacture 12,000 frames e ery year. The technical know how will be provided by Actua of Austria. The frames are ex pected to be 20 per cent cheape than wooden and aluminiu frames. Shah, who claims t have received a favourable re sponse from builders lik K.Rahejas in Bombay and Par mar Builders in Pune, projects turnover of Rs.4 crore for hi company in 1994.

B.K. BAKSHI

Despite a reduction in sales of aviation turbine fuel to the extent of 4.7 per cent, Indian Oil Corporation (IOC), has retained its market share of 67 per cent and extended its supply of Indane cooking gas to 36 million more households. The corporation, which meets 85 per cent of the demand of lubricants used by India's core industry, also developed 10 new lubricants. But these achievements notwithstanding, B.K. Bakshi, director (marketing) feels that more needs to be done. He points out that if all the existing kerosene stoves were replaced by energy-efficient Nutan stoves, 410,000 tonnes of kerosene valued at Rs. 156 crore could be saved on a recurring basis.

ALTAF PASCHA

Alsa Marine and Harvests Limited (AMHL), one of the leading exporters of value-added marine products in the country, became the first company last month to export cooked shrimps from the east coast. "We plan to convert our entire export production into value-added products in the next two years," says Altaf Pascha, chairman, AMHL. In 1990-91, AMHL achieved an export turnover of Rs.21.78 crore, of which value-added shrimps accounted for Rs.4.56 crore. The company's 80-acre aquaculture farm near Nellore in Andhra Pradesh is one of the largest operational farms in the country. It saves foreign exchange to the tune of Rs.1 crore annually.

CHRISTOPHER D'ROZARIO

Ten years after he came like a whiff of fresh breeze over the hitherto staid Indian advertising scene, Christopher D'Rozario, Trikaya Grey's creative director, is all set to leave. A foreign assignment with CRN Grey places him as head of the creative department of the Singapore-based agency. "I'll still maintain my ties with Trikaya Grey," says D'Rozario.

Considered a whiz-kid in copywriting circles D'Rozario was winner of the prestigious CAG Copywriter of the Year award in 1986 and 1988. Following his two-year stint abroad, D'Rozario hopes that the experience in handling multinational brands in a "small but competitive market" will enable him to "effectively handle the deluge of foreign brands into the Indian market, with the global market now becoming a reality."

RICHARD FREY & GOPAL SRINIVASAN

The president of Whirlpool Overseas Corporation was unfazed by the sweltering heat of Madras city recently. But then, Frey's last assignment was in Brazil where too temperatures soar high. Frey is quite impressed with his company's joint venture with the Madras-based TVS Whirlpool Limited. "This is a perfect combination," he declares. So much so that TVS Whirlpool's Pondicherry plant will be manufacturing washing machines for export to Asian and south-east Asian markets in the next 12 months. Asia being the fastest growing market for appliances, Frey anticipates a lot of potential.

TVS Whirlpool sold 10,000 washing machines between September 1990 and May 1991. "We are pleased with the consumer reaction to the product so far," says Gopal Srinivasan, managing director, TVS Whirlpool. The company manufactures automatic washing machines which, according to Srinivasan, is the fastest growing segment in this highly competitive field. "We plan to consolidate our position in this segment before we go into other white goods manufacture," says Srinivasan.

JURGEN WIEMANN

He is an old-time India watcher, having made three previous study tours to the country in 1974, 1982 and 1987. Jurgen Wiemann speaks from experience when he says, "Your country has such a huge potential. It is puzzling why she has still not been able to take off." Wiemann, a director at the Berlin-based German Development Institute, is on a three-week speaking tour of the four metros.

According to the German economist, India will necessarily have to open up to global competition but this process should be undertaken at a gradual pace. In the initial stages, feels Wiemann, the basics should be taken care of: "Your planners are ignoring large areas of taxable income like agriculture. Again, it's high time you moved from indirect taxes to direct taxes." India will have to get its act together soon if she wants to make any impact in the post-1992 European market, asserts Wiemann, especially since the liberalised former east European countries will have preferential access to the new common market.

LUIS MORON

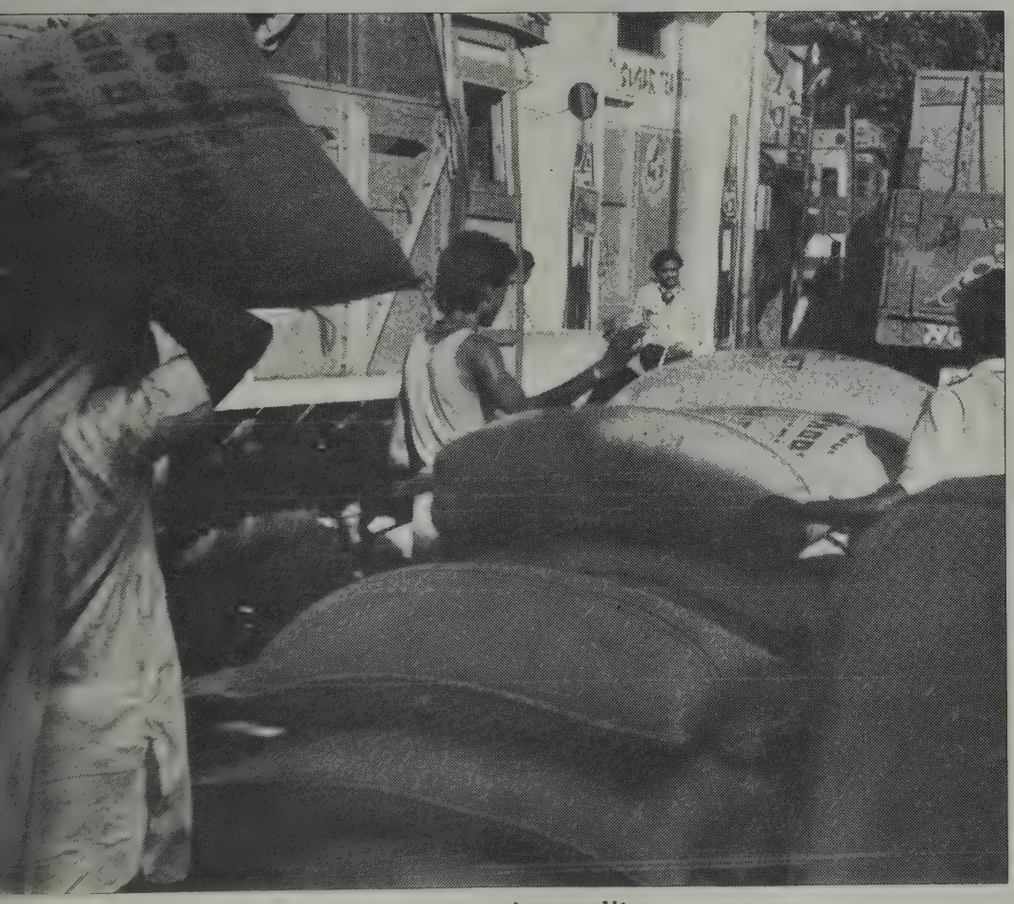
Europe in 1992 will be a single, huge, totally integrated market with enormous potential. And India's trade with the European Community (EC), by far its largest trading partner, is steadily rising. A technical workshop on domestic electrical appliances was recently organised under the Indo-EC industrial co-operation programme in Bombay recently. Luis Moron, head of Mechanical, Electrical, Meteorology and Medical Devices, EEC Brussels, who delivered the keynote address at the function, was here to apprise Indian manufacturers of the various standards involved in exporting to the EC. "You should be looking at it (the EC) as a 400-million-people market with a very high per capita income," he said, while emphasising the need to adhere to stringent EC standards.

The most sophisticated cargo carrier runs the world's most sophisticated cargo complex

The Lufthansa cargo complex in Frankfurt. It is the largest and most sophisticated in the world. Computerised systems, facilities for high speed trans-shipment and over 1600 trained specialists ensure the quick and smooth processing of 1900 metric tonnes or over 6000 shipments a day. Investments like these make Lufthansa the world's leading cargo carrier.

Lufthansa Cargo

AR



roblems of plenty

anticipated good sugarcane harvest 990-91 is giving the sugar manufac- rs a nightmare. Sugar production for year (November-October) is ex- ted to reach 11.85 million tonnes) as a result of the record cane har- of 233.45 mt. And the situation of nty has brought with it a host of blems.

rices are threatening to drop affecting ility of sugar manufacture. Bank dit is insufficient and an inconsiderate ernment is unprepared to intervene. e mismatch between costs and prices deteriorate," says an official of a ar company.

his year's production of 11.85 mt will available to the industry has not progressed at the pace production has. This follows the Reserve Bank of India's recent anti-inflationary strategy and the general resource constraint of the banking system.

Credit scarcity has severely strained the cash position of sugar manufacturers. Cane procured from farmers has not been paid for and some mills are finding it difficult to even pay wages. Last year, the Indian sugar industry held inventories (finished stocks of sugar) of 5.3 mt valued at Rs.3,800 crore. This year's healthy harvest is likely to push up inventories up to 7 mt with a value equal to Rs.5,000 crore. Restricting available credit to last year's stock has left a credit gap of Rs.1,300 crore. "Where will the industry find this quantum of funds?" asks S.L. Jain, secretary general, Indian Sugar Manufacturers' Association (ISMA).

gar being transported: production outstrips credit

850,000 tonnes higher than what was ieved last year, this leaves a surplus of ,000 tonnes after providing for the do- stic demand. If exported, this excess ar could earn the country Rs.500 crore oreign exchange.

remunerative market. That, by far, ms to be the only heartening news. , the domestic market is gradually eatening to become unremunerative. e of the main reasons: bank credit - Much of the credit requirements of the companies result from the peculiar nature of the industry. Cane processing that begins in November (the beginning of the sugar year) must be accomplished over six months. But the finished product is released into the market over 14 months. Sugar producers, therefore, need to hold the stock for three to four months. And so, the availability of credit becomes crucial because it would cover the carrying costs of stocks.

The manufacturers have now submitted a memorandum to the food and civil supplies minister Rao Birendra Singh, for an Rs.850-crore extension of the credit limit. The RBI's decision is expected soon. The sugar industry is hopeful that at least half the amount asked for will be cleared.

Liberal releases. Insufficient credit is not the only problem. Sales realisation of sugar companies has also been threatened by liberal releases of free sale quota. This quota for June is 625,000 tonnes, 65,000 tonnes more than what was released last month and 50,000 tonnes more than the quantity released during the corresponding period last year. Studies have indicated that prices decline by a similar percentage as the increase in quantities. The higher releases are expected to dampen prices substantially and this will further reduce the returns of the sugar companies.

Monthly releases of free sale sugar quotas is decided by the food and civil supplies ministry. "Their decision has no relationship to prices. The entire mechanism of release is arbitrary," says the sugar company official quoted earlier. Sugar manufacturers have been insisting on a market-related release mechanism that will ensure stability of income to the manufacturers. This involves selection of an average all India daily price that would serve as the target for market intervention operations. In case there is a fluctuation of more than 5 per cent, adjustments (by the same percentage as the price variations) should be resorted to.

Sugar manufacturers now rely heavily on free sale sugar prices to subsidise their lower realisation from levy sugar (which involves surrendering 45 per cent of their produce to the government to feed the public distribution system or PDS). For the 1990-91 season, the projected average cost of sugar production is Rs.727 per quintal in UP, Bihar and Haryana. But the average levy price in these states works out to Rs.540 per quintal, thus leaving a deficit of Rs.187 per quintal.

The entire deficit will then have to be covered by the free sale quota that will need a market price of Rs.880 per quintal (exclusive of excise, central cess, transport cost and wholesalers' and retailers' margin) for the sugar companies to break even. This computes to a retail price of over Rs.10 a kg (retail prices now rule at Rs.9.50 a kg).

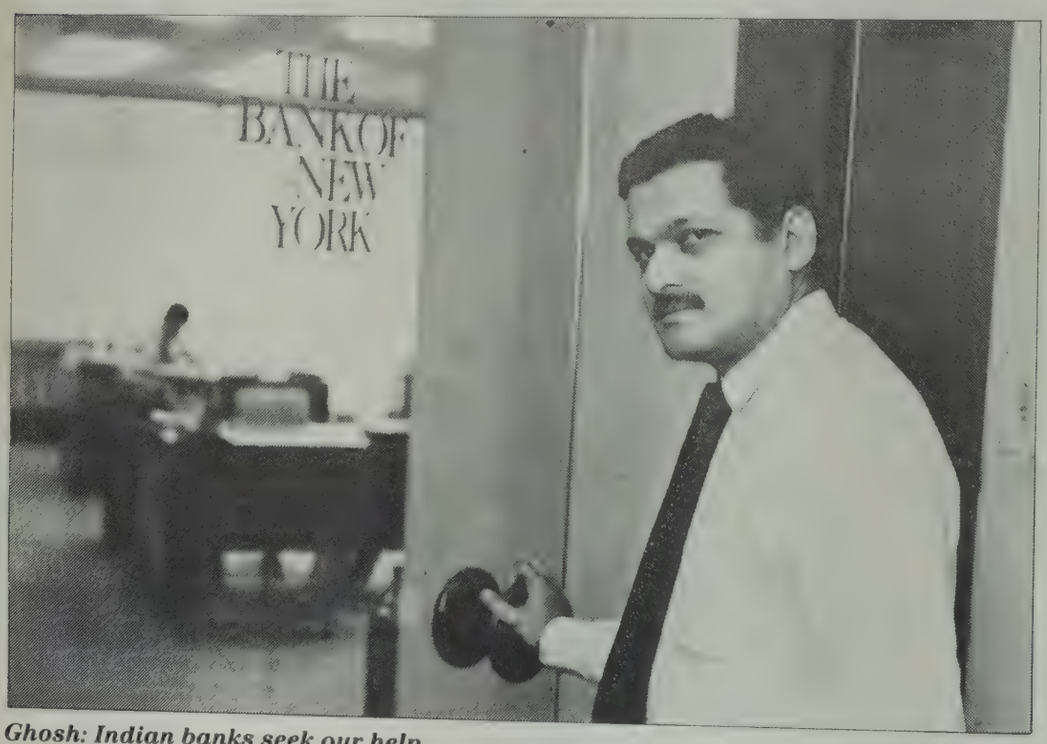
REP OFFICES

Awaiting the pie in the sky

With inflation spiralling and foreign exchange reserves hitting new lows, the representative offices of most foreign banks in India are now faced with redefining the roles they have to play.

Unlike branch offices, these representative or rep offices are not licensed to carry on domestic business over here. They do not earn any local revenue, can handle only offshore business and are active in three major areas — correspondent banking, trade related activities and the capital market.



Surprisingly, the present foreign exchange crisis and the strict Reserve Bank of India (RBI) impositions have not affected the working of rep offices. "In fact, Indian banks which do not have as much foreign exchange funds as before are increasingly asking us to make payments on their behalf. This is helping us bring in additional revenue," says Bhaskar Ghosh, the Bank of New York's (BONY) representative in Bombay. One reason this is possible is because imports of essential items like fertilisers and petroleum products are still going on.

Liaison work. Consultancy activity — another major service provided by rep offices — has also not been affected to a great extent. Many rep offices act as a liaison between Indian companies and prospective foreign investors. This is not a pure banking activity but a means for the rep office to promote the trade of its home country. The representative of an Italian bank says, "Clients are still asking for project and feasibility studies and we are optimistic about the future."

However, all activity on the capital market front — the more glamorous side of the business for rep offices — has come to a virtual standstill. If the State Bank of India were to float a commercial paper tomorrow, it would attract no takers, maintain the heads of many rep offices here. "Today India has reached a stage where no one wants to take a seven year risk," says one of them. The reason: long-term transactions are the first area that prospective partners pull out of when a country seems to be heading for a default. Of course, no one wants to openly admit such forebodings, but bank representatives admit that they are looking forward to the elections, a new government and the much needed IMF loan to become a reality.

Rep offices also hope for more flexible laws to facilitate foreign investment. This, they hope, will make their role more significant. Their yearning is best summed up by a representative who says, "India has all the ingredients of making a very good pie. How well it tastes lies in the hands of the cooks."

W AD MEDIUM

isplay tactics

dvertising agencies have their way, is, autorickshaws and goods carriages mpos, LCVs, etc) will soon sport ourful advertisements. The Road nsport Authority (RTA) in Mahahtra has informally announced that this group of vehicles will now be allowed to display advertisements on the back of their front seats and on the sides. About 35,000 taxis, 15,000 autorickshaws and 5,000 goods carriages in Maharashtra will suddenly become a new medium for advertising. The vehicles will be allowed to paint, print or use stickers.

Popular method Says Vijay Sinh Patnakar, deputy municipal commissioner, Municipal Corporation of Greater Bombay (MCGB), which will levy a "wheel tax" of Rs.900 a year on each vehicle displaying the advertisements, "This form of advertising has the potential to become popular. With people always in a tearing hurry, they hardly have the time to read the messages painted on hoardings. Now advertisers can get a better opportunity to get their message across." According to Bombay traffic police chief P.S. Pasricha, "If the BEST buses are allowed to advertise, why should other public transport vehicles be exempted?"

The Bombay Electric Supply & Transport Undertaking (BEST) which enjoys the monopoly of being the only public transport undertaking to advertise since 1910, is said to be apprehensive about losing some of its advertising revenue (about Rs.90 lakh every year) to these new arrivals. But according to Noshir Desai, president, Karishma advertising agency, there is no reason for the BEST to feel threatened by this new form of advertising. "Both would cater to different groups. Secondly, the profile of the prod-

jointly announce a one-day

Seminar on "Exchange Risk Management"

Objectives : The objective of the seminar is to focus on the following aspects of managing exchange risk and capture the emerging trends, which will enable the participants in reshaping their corporate policies.

- **Economic realities behind foreign exchange transactions. * Forex practices abroad and in India. *Managing short term and long term risk. *FEX contracts and related aspects. *International accounting standards on exchange rate fluctuations.**

Participants : Financial and Commercial executives at policy making levels are eligible to participate.

Faculty : The faculty for the seminar will be drawn from *CITIBANK* as well as the ICWAI. Video tapes, materials and case studies will be provided.

Date & Venue : The seminar is scheduled at three places on different dates as below :

20th June 1991

Hotel Gateway, Hyderabad.

22nd June 1991

Hotel Chola Sheraton, Madras.

29th June 1991

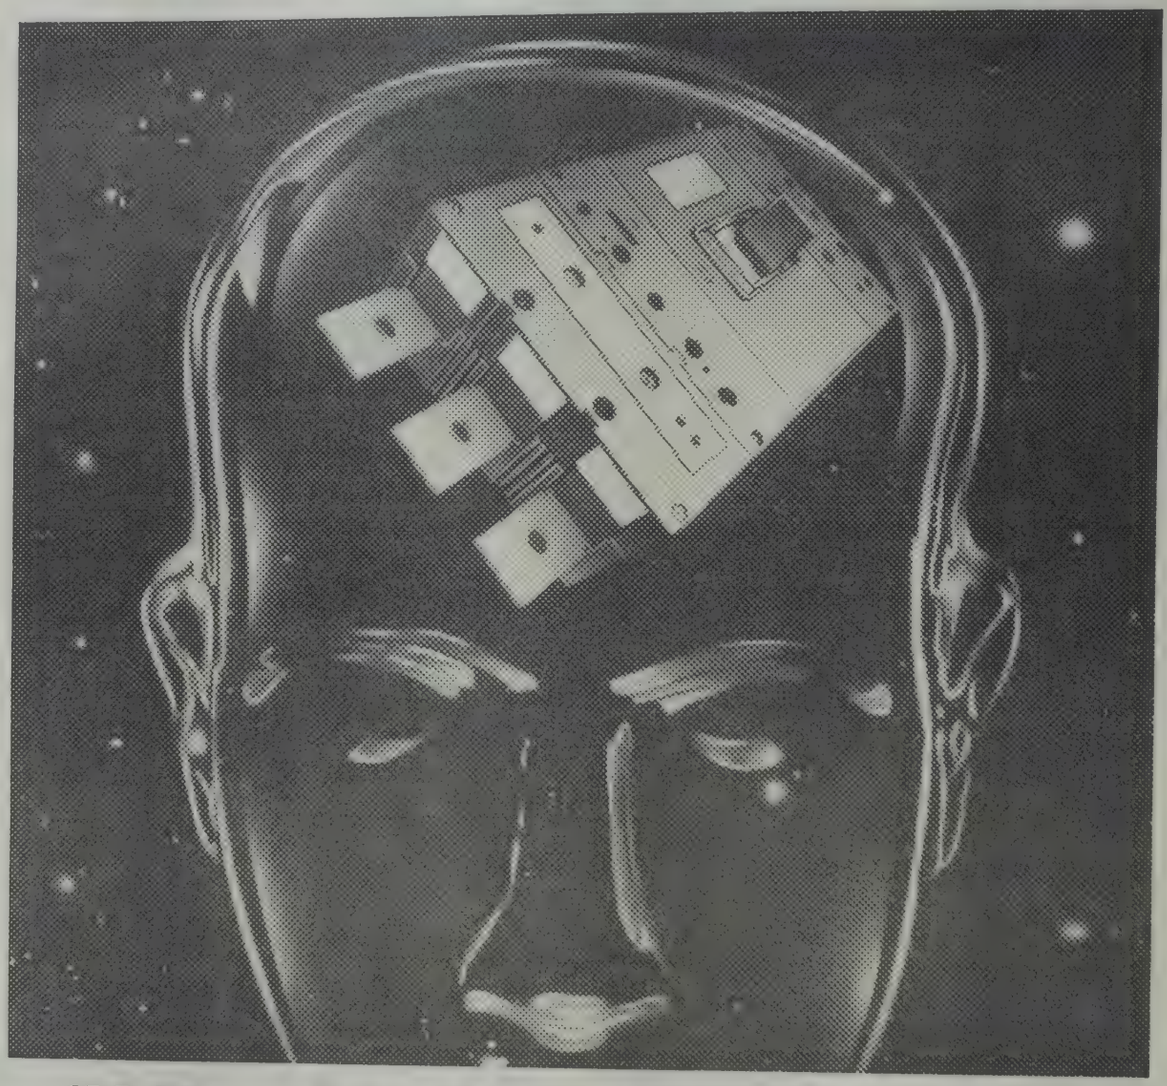
Hotel Windsor Manor, Bangalore.

Delegate Fee :

Rupees Five hundred per participant.

Registration : An application for enrolment **indicating the place of participation** along with a cheque/D.D. drawn payable at Madras in favour of "SIRC OF ICWAI" may be forwarded to the following address :

Executive Officer,
SIRC of ICWAI,
65, Montieth Lane,
Egmore, Madras - 8.



Last Date for Registration : 15th June, 1991

Telex : 041 – 8697 COST IN

CANCO

It first thinks ... then trips.

'U-Break' with discrimination.

Crompton Greaves makes another breakthrough with the U-Break – an MCCB that actually thinks before it trips. And unlike an ordinary MCCB, the U-Break first discriminates and allows only the MCCB in the faulty feeders to instantly trip. Meanwhile the other circuits continue to operate, thereby saving precious down time. This is achieved by the unique feature of short-time delay of 40ms – 250ms on the U-Break.

Moreover, U-Break MCCB allows you wide flexibility with different release modules which are replaceable. The release modules have continuously adjustable 60-100% rated current and 500-1000% short time delay current. Right from 150 amps to 600 amps for 35 KA and 50 KA fault levels. Making it one of the country's most advanced circuit breakers.

Above all, the U-Break is backed by an elaborate manufacturing and marketing infrastructure and the Crompton Greaves stamp of quality.

ommuter transport vehicles: new avenue for ad displays

cts advertised will have to complement ie people travelling in the taxis or the itos."

However, opinion is divided among the dvertising agencies. Rajendra Jain, man-ging director, Aaren Advertising, a big ame in the outdoor hoarding business, as his doubts about the impact this form advertising will create. There is nother objection. While advertisements n BEST buses are neatly displayed, there ill be a riot of colours all over the taxis, itorickshaws and goods carriages. lashed all over, there is bound to be a uster. The whole impact will be very dis-rbing, hampering the purpose of adver-sing," says an advertising executive.

mall groups benefitted. On the other and, a senior advertising executive ob-rves, "This form of advertising will at-act a large number of small shop wners who can't advertise due to the gh cost involved."

Although no formal announcement has een made, the transport authorities ave laid down some broad guidelines. ut the finer details about the service harges to be collected, the duration of dvertisement permitted and the imposi-on of fine for breaking the regulations ve to be worked out. "We have to im-se some sort of fine, otherwise any auto ckshaw driver will freely advertise and ake a neat packet, without our knowl-dge," says a senior RTA official.

MAHIRA SHEIKH

ROAD CONCRETISATION

A face lift in the offing

By the end of this month, the first of the four phases of concretisation of roads in Bombay will be completed — a year behind schedule. Yet, officials at the Municipal Corporation of Greater Bombay (MCGB), which is handling the project, are not perturbed. Says K. Padmanabhaiah, municipal commissioner, MCGB, "This delay was natural since this is our maiden transition to cement roads. In fact, considering the severe constraints like traffic impediments, the delay is minimal." The commissioner also points out that non-cooperation from the traffic police only aggravated the matter "They refused to divert the traffic which put an additional burden on us."

But P.S. Pasricha, Bombay's traffic chief, refutes the allegation and points out that since half the width of the road is being concretised, it becomes very difficult to control two-way traffic on the remaining half of the road. And often, the work is done in patches which creates more problems.

Incurring losses. Apart from the traffic department, another agency which has not taken kindly to the slow pace of the concretisation programme is the Bombay Electric Supply & Transport Undertaking (BEST). According to BEST officials, on an average, the corporation is losing about Rs.66 lakh monthly, i.e., Rs.2.5 lakh every day, on account of the cementing work being done.

The number of trips made by each bus has been considerably reduced. Even the number of new routes introduced in the last couple of months has come down considerably. In congested areas like Sion, King's Circle, Mohamed Ali Road and Andheri, the corporation has incurred heavy losses because the road

ler concretisation is too narrow and ersion of traffic impossible.

The switchover from bituminous (tar) concrete roads had been long recommended by the Delhi-based Central Road search Institute, largely because the hnique results in maintenance-free ds. However, the idea was shelved due shortage of cement and the stringent ernment control on the cement indus- Today, however, things have changed matically. The cement decontrol induced way back in 1982 resulted in an precedented spurt in installed capa- and production of cement units.

Concretisation of Bombay roads began October 1989, the project involving a al cost of Rs.43.59 crore. Last year, 18 he 27 roads taken up for concretisa-, were completed at a cost of Rs.15 re. Of the 36 earmarked this year, 10 e been completed so far at a cost of 35 crore. Comparing the costs inved in concretisation and tarring of ds does not make much sense. Even ugh initial costs involved in cementing ds is on the higher side, in the long run cretisation works out much cheaper e such roads are easier to maintain.

The main advantage of going in for this ject is that citizens can be assured of d, sturdy roads. "Passenger traffic has e up by nearly 80 per cent in the last years. It is therefore advantageous to e good roads," says Pasricha. Accordto the traffic department, petrol th Rs.15 crore and diesel worth about 135 crore is wasted annually on acnt of bad roads.

gmatic approach. Concretisation, refore, is one of the pragmatic apaches to the city's traffic problems. only hitch is that it is taking more e than necessary. There is, however, way in which the work can be quickly npleted: have workers function round clock, especially in areas where the v of traffic is heavy. "We did try the a for some time," says Padnabhaiah. "But the machinery and the ipment used (compressors, mixers, rators, etc) made a lot of noise and we many residents complaining."

he MCGB hopes to complete the reining three phases by February 1992. sadly this year too, the hope of Bomites for a pot-hole-free monsoon will ain an unfulfilled dream. But they can solace from the fact a few years down road, their city can boast of strong the most modern roads.

MAHIRA SHEIKH

GARMENT EXPORTS

Against all odds

For long the largest foreign exchange earner for the country, garment exports continue to show a steady growth. Over the last three years, they have grown annually at 33.5 per cent. Last year, the country exported garments worth Rs.3,900 crore. This year, the figure is expected to touch Rs.5,400 crore. In the last four months exports has gone up by 16.85 per cent compared to the corresponding period last year. In real terms, however, this growth was marginal since the Indian rupee depreciated by 20.7 per cent over the last four months.

India's share of the international garment trade hovers around only 2 per cent. The industry's growth potential, however, is enormous. Says N.K. Goyal, chairman and managing director of Sarju International, a leading garment exporting house based in Bombay, "India could easily export garments worth Rs.10,000 crore annually if government policies were liberalised."

Many obstacles. According to garment exporters, there are many roadblocks in the way of the exports target reaching Rs.10,000 crore. The Clothing Manufacturers Association of India (CMAI), during the recently concluded twentieth National Garment Fair, recommended that the import duty on garment machinery be reduced to 5 per cent from the existing 35 per cent. It asked for the setting up of special warehouses to store trimmings (buttons, zippers, labels, etc) brought from abroad, and to make them available locally. It also suggested that free trade zones (FTZs) and export oriented units (EOUs) be entitled to cash compensatory support, duty drawback and replenishment (REP) licences.

Garment trade: immense export potential

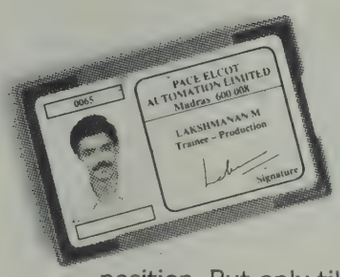
Bureaucratic hassles also contribute to the delay. "An exporter spends most of his time running around and filling up forms," says Kishor Shah, chairman and managing director of Crystalline Corporation, a garment export unit. According to another exporter, one has to fill up as many as 50 forms in India as against a single form in countries like Thailand and Malaysia. According to Shah, thanks to the restrictive policies of the Indian government, many garment exporters are being forced to export grey fabrics to free ports like Dubai where they are converted into garments and exported. "We are ending up promoting our neighbours," says Goyal.

Also, for setting up a garment manufacturing unit, permission is to be taken from at least a dozen government agencies. "You have to take permission even from the pollution control board, though the garment industry does not offer any pollution hazards," says Goyal. But the government officials express helplessness. "We can only make suggestions to the ministry," was the explanation of Arun Kumar the ex-textile commissioner, when asked to comment on bureaucratic delays.

Also they have a different explanation for India's low market share in the world. "Buyers are often duped by fly-by-night exporters, who send substandard goods abroad and spoil the name of the country," says an official in the office of the textile commissioner.

The government, on its part, has reduced import duty from 120 to 45 per cent. Zippers and linings can now be imported against REP licences and import of upto 2,000 labels is duty free.

Better communications . The number of reliable garment export houses is increasing. They are being helped by improved communications which translates into more organised schedules. "Today you can inform a buyer of any delay and renegotiate terms and conditions more easily," says Anil Paul, regional director of Banaras Trading House, which represents many buyers in the US, Britain and Germany.



The recessionary trend in the western world has done little to dampen the spirit of garment exporters. This is because recession normally affects sales of high-value consumer items first and Indian garments do not fall into this category.

Now, the right way to keep all the wrong people out

Presenting the new Resource Management System from PACE for better Access Control

A minor security lapse. And there's a near major disaster. Classified information is leaked. An irretrievable position. But only till yesterday. Now, the Pace Resource Management System has changed it all.

The PACE RMS provides absolutely foolproof access control, monitoring and recording all movements. Keeping all the wrong people where they belong. Out.

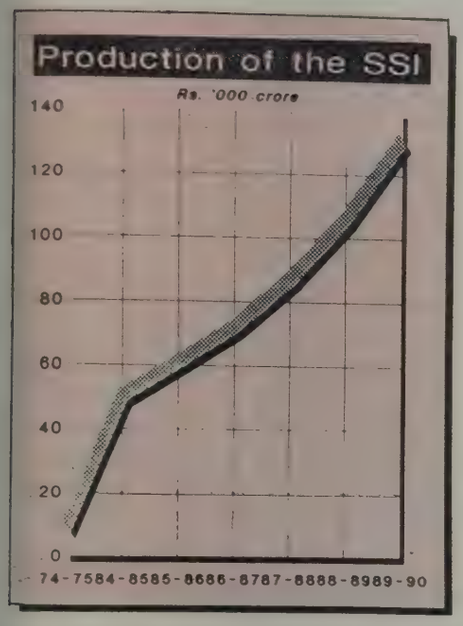
PACE – also for Attendance Monitoring

How many workers have clocked in? How many are absent? The PACE System gives your shop floor Supervisor all this data instantly. So, there's no delay in job allocation or disruption of production schedules.

PACE. A revolutionary system, that can efficiently transform your office process systems and increase productivity.

PACE RMS. Brought to you by Pace Elcot Automation Limited. A company committed to streamlined automation, in line with international technologies.

The Pace Resource Management System can also be extended for different applications like Inventory Management, Canteen Management, Hotel Management, Hospital Administration and Banking Operations.



PACE – *not just a system, but an entire workforce.*

Small, but significant

In a developing country like India, the optimum use of resources is absolutely critical. On one hand capital is scarce and, on the other, there is an abundant supply of relatively cheap labour. Both are necessary for industry but the mix of these factors depends upon availability and the technology used. Industrial development, to be effective, will largely depend upon how well these factors of production are brought into play. It is in this context that the role of the small-scale industry will have to be viewed.

Despite many constraints the small-scale sector has grown tremendously from its humble beginnings. In 1975-76 there were only 550,000 units, with an investment of Rs.3,204 crore and a combined output of Rs.11,000 crore. Ten years later, the number of units were up to 1.36 million while output increased six-fold to Rs.61,229 crore. Currently, it is estimated that on an investment of Rs.18,196 crore by 1.83 million units, total output is in excess of Rs.1,31,000 crore. The products manufactured by the small-scale sector are diverse both in technology and range. They cover a wide range of about 5,000 items (even though only 836 items are reserved for this sector) including ancillaries, engineering items, leather goods and handicrafts among many others.

However, despite the small scale of operations, the small-scale sector has done remarkably well on the export front. In 1985-86, it exported goods worth Rs.2,769 crore, which went up to Rs.5,681 crore in 1988-89, accounting for approximately 28 per cent of the country's total exports.

Widespread sickness

But, despite this sector's contribution to the economy, both in terms of value of production and exports, it is beset by many problems. This has led to industrial sickness in many units. In 1987, an estimated 204,000 units were reported to be sick, constituting 17 per cent of the total. These units incurred cash losses that has led to the erosion of 50 per cent or more of the aggregate net worth, and blocked up Rs.1,542 crore of bank credit, which is about 16 per cent of the total advances to this sector.

This sickness is largely the result of internal problems like management deficiencies, lack of financial control, diversion of resources, and technological obsolescence. Sometimes exogenous factors such as inadequate power supply, raw material shortage, and unavailability of timely funds has also caused sickness.

The government, in order to address the financial needs of this sector, had set up the Small Industries Development Bank of India in April 1990, which has now been in operation for just over a year. During this year, the bank did remarkable work in refinance.

Rapid employment growth

The most significant role the small-scale sector has played is in employment generation. Employment in this sector has increased from 3.97 million in 1973-74 to 9.6 million in 1985-86 and an estimated 11.9 million in 1989-90. This is indeed laudable if one considers that employment in the large organised industrial sector has been growing at a snail's pace in comparison.

This, however, is true not only of India but of western industrialised countries as well. In America, for instance, small companies of fewer than 100 employees, were responsible for as many as eight out of ten new jobs created. Also, small to medium size companies in the US are responsible for 46 per cent of the value-added in that country's manufactured products.

In Japan, 75 per cent of manufacturing employment is in small and midsize companies, in contrast to 35 per cent in the US. The growth of small business in Japan is mainly due to favourable government policies. The Japanese government provides about 20 times more financial aid to small business than the US government.

Clearly, the small-scale sector in India has still not developed its full potential. Greater infrastructural support and assistance in technological upgradation and marketing could prove to be very useful.

Moulis

Over the years, the popularity of scooters has grown and the market is growing at around 15 per cent per annum. While the popularity of motorcycles is increasing that of mopeds is on the wane. Total production of mopeds has decreased by nearly 14 per cent over the last 3 years to 440,400.

Bajaj Auto dominates the market with a 61 per cent share and together with Maharashtra Scooters controls about 72 per cent. Nevertheless, LML and Kinetic Honda are slowly making inroads in this very lucrative and growing market.

nsumer price index: The consumer price index for industrial rkers dropped marginally in March 1991. The index for urban n-manual workers remained steady, however.

	Mar '91	Feb '91	Mar '90	% change over month	% change over year
ustrial workers 82 = 100)	201	202	177	–0.50	13.6
an non–manual kers (1984–85 = 100)	169	169	149	–	13.4

holesale price index: There has been a slowdown in the rate of crease of the wholesale price index — all commodities index fell 0.67 per cent during the month under review. In primary articles, e index for cereals was down by 3.6 per cent and that of fibres was by 6 per cent during the month to 4 May 1991. In manufactured oducts the index of cement, lime and plaster is up 4 per cent.

(1981–82 = 100)

	4 May '91	6 Apr '91	5 May '90	% change over month	% change over year
commodities	192.8	191.5	173.7	0.67	10.9
nary articles	198.4	197.5	172.5	0.45	15.0
nufactured products	190.3	189.3	175.9	0.53	8.2

oney and banking (scheduled commercial banks): There has en a slowdown in the growth of broad money (M3) during the nth to 3 May 1991. The tight money policy followed by the RBI s affected bank credit which declined by 0.50 per cent. On the er hand, food credit was up 12.2 per cent.

(Rs crore)

	3 May '91	5 Apr '91	4 May '90	% change over month	% change over year
ad money (M3)	2,74,444	2,73,415	2,37,746	0.37	15.43
regate deposits	1,97,099	1,98,069	1,70,149	0.48	15.83
k credit	1,17,783	1,18,376	1,03,625	0.50	14.23
d credit	4,987	4,441	2,551	12.2	74.08
dit/deposit ratio	59.76	59.77	60.90		

Industrial production and infrastructure: Industrial production has declined by 1.3 per cent in February 1991. There has been sharp declines in steel, coal and cement production during April. Though on a year–on–year basis all the three sectors reported substantial gains. Power generation also dropped by 10 per cent in April as against a marginal decline over the same period.

	Month	Previous month	Year ago	% change over month	% change over year
Industrial production index 1980–81 = 100	222.7(2)	225.3	207.6	–1.3	7.2
Railway freight (million tonnes)	28.76(12)	26.75	27.25	7.5	5.5
Crude oil production ('000 tonnes)	2668(4)	2910	2934	–8.3	–9.1
Power generation (million units/day)	705.16(4)	783.54	711.70	–10.0	–0.9

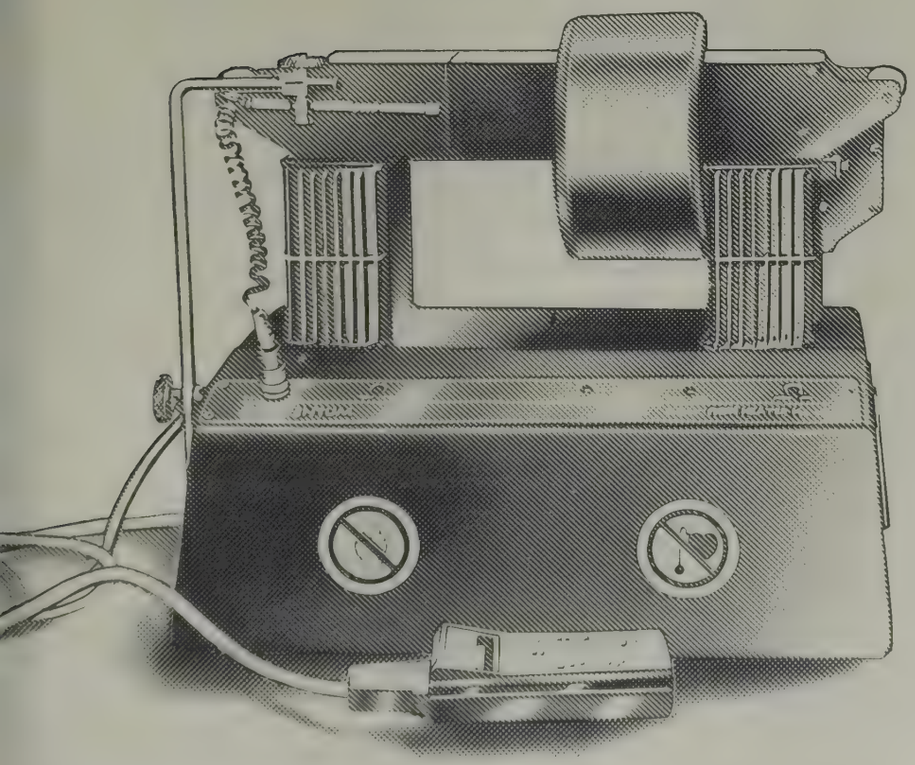
(Purchase Manager)
Canso Machine Tools Ltd.

"Believe it or not. With the Induction Heater*, even I can heat and mount bearings easily."

Canso was using outdated methods and equipment to heat and mount bearings: Messy oil baths and uneven – heating hot plates. Resulting in frequent bearing failures, machine breakdowns, and stoppages in production. Dasgupta was at his wits end!

Then someone informed him about the Induction Heater from SKF for heating bearings. Soon it was on the shopfloor.



And that signalled 'goodbye' to outdated methods of bearing mounting.

Skefko India Bearing Co. Ltd.
Mahatma Gandhi Memorial Building, Netaji Subhash Road, Bombay-400 002. Phone-313567.

* Manufactured by M/s Inventum Engg. Co. Pvt. Ltd., Bombay, under the brandname 'INVENTUM'.

DUCTION HEATER
R QUICK BEARING MOUNTING.

- Clean method. Compact and convenient to use wherever bearings are to be mounted.
- Uniform and controlled heating of bearings.
- Suitable for all Rolling Bearing types (also for sealed and greased bearings).
- A quick and energy saving method.
- Totally safe. Eliminates fire hazards.

Yes! I am interested in **Induction Heater.**
So please provide me: (Please tick ☑)

1. Price details ☐
2. Technical Specifications ☐
3. Sales Discussion ☐
4. Demonstration ☐

BEARINGPLUS

I also understand that your 'Bearing Plus' programme covers various other advanced and innovative bearing maintenance products.

I therefore request you to recommend and send detailed information on only those products which will help solve my bearing maintenance problems like: (Please tick ☑)

1. Under/Over lubrication ☐
2. Damage of shaft while dismounting bearings ☐
3. Uneven heating of bearings ☐
4. Mounting/ Dismounting of large bearings ☐
5. Others (specify if possible) ☐

I look forward to welcome this new era of TROUBLE FREE OPERATION. Let me introduce myself:

HOW WEIGHT CONSCIOUS INDUSTRIALISTS MAINTAIN THEIR FIGURES.

L&T, TVS, NTPC, Coal India, Railways, TISCO, IOCL, ONGC, SAIL, M.N. Dastur, MECON, EIL, Port Trusts, GSFC, FACOR, Grasim... these are just a few of the companies that use and recommend electronic weighing systems from Indchem.

- IN-MOTION WAGON WEIGHING SYSTEM
- PITLESS ELECTRONIC TRUCK WEIGHING SYSTEMS
- MECHANICAL TO ELECTRONIC CONVERSION KITS
- BATCH WEIGHING SYSTEMS
- BELT WEIGHERS
- WEIGH FEEDERS
- ULTRASONIC LEVEL INDICATORS
- DATA ACQUISITION
- LOADING CONTROL SYSTEMS

Why do so many heavy weights insist on weighing solutions from us?

Simple. It's because of our unique technology and unmatched accuracy!

Indchem has a wide range of electronic weighing systems available in India, each with the most appropriate technology for that application.

- INDUSTRIAL AUTOMATION PROJECTS

Also, Indchem has a collaboration with Howe Richardson, U.S.A., the multinational giant with 150 years of experience in weighing, and today one of the largest weighing companies in the world.

So, when it comes to precision weighing, nobody can give you the kind of accuracy, repeatability and reliability that Indchem does.

In today's business world, even the smallest inaccuracies in weighing could lead to losses in lakhs of rupees.

Naturally, our clients just can't afford to take chances with anybody else.

Can you?

Bookies poised for a killing

he day after Rajiv Gandhi's assassination, the bookies decided to close shop nd return the crores of rupees they had ollected for the prediction of the election esults rather than risk their cash on the otally speculative. They then waited and atched to see which way the wind blew: ould there be a sympathy wave for the ongress after Rajiv's death and, who the ew Congress president would be.

It was only after the name of the provional Congress president, P.V. Narasimha ao, was announced that the betting reopened. Punters in Indore, Calcutta and ombay are generally giving the shortest dds (ie, the greatest likelihood) on the nances of a Congress (I) government oming to power. But they give the party nly around 200 seats in the Lok Sabha against the arlier figure of 240.

The BJP is still expected do well in UP and follows cond with about 100 seats. arlier, the bookies were ving the BJP at least 150 ats. That party's stock has opped after Narasimha ao's nomination, as it is ow not expected to get any ats in the south where earr it could have cornered out ten. In Madhya Pradh, the Congress (I) is likely win the rest of the seats. marginal seats will also to the Congress (I), acrding to those giving the ds.

ng odds

the National Front's ances, the odds offered very long. Besides Bihar, ere the Janata Dal is ely to get about 30 seats, w areas where the okies are expecting the party to do well Maharashtra and Karnataka. The legu Desam has regained its foothold in dhra Pradesh with NTR's fast. Yet, odds long as 6 to 1 are being offered on the mation of a National Front government, ich means that the bookies feel there is le likelihood of the National Front com- to power.

On prime ministerial candidates, the tting is somewhat more subdued. The reason, according to a Delhi bookie, is that "the Congress (I) is unable to project a candidate for this post. There are five main contenders there — Narasimha Rao, Arjun Singh, N.D. Tiwari, Sharad Pawar and Madhav Rao Scindia. Then if no party gets an outright majority, leaders of other parties too could agree to head coalition governments. There is Chandra Shekhar, Jyoti Basu, R.K. Hegde. Hardly anyone wants to bet on V.P. Singh, though Advani is a hot favourite, followed by Vajpayee". If you want to wager Advani becoming prime minister, you will make Rs.5,000 on an investment of Rs.1,000, should he make it to the top. You will make a bigger killing on Vajpayee should he get the coveted post. If you put down Rs.1,000 you will get Rs.10,000.

Rao: contender for the PM's post?

The biggest turnaround is of course on Chandra Shekhar. Before Rajiv Gandhi's death the odds being offered were 1:1000 on his retaining the prime ministerial job. If you betted Rs.100 on his chances, and had he made the grade, you would have won Rs.1 lakh. Now the odds have petered out and, according to the book makers, his chances are bright. They are offering 1:2 odds on him.

However, the odds are changing rapidly, as the situation continues to be fluid, and it is difficult to judge the mood of the electorate. The long interval between Rajiv's assassination and the Lok Sabha election for the remaining 300 seats could result in a swing either way for the Congress. But reports coming in at the time of writing do not indicate a sympathy wave for that party.

A hung parliament seems to be on the cards. The Congress (I) seems to have lost the initiative it gained just after Rajiv's death because of the delay over the election of a leader and the party's failure to project a candidate for prime minister.

Within days of Rajiv's death, the BJP hijacked the Congress (I) slogan of stability, primarily because of the confused behaviour of the 103-year old party in the aftermath of the tragedy. But the Congress now seems to have put its act together and could swing a number of marginal seats in its favour in several states. All the same the Congress at best will still be the largest single party in the Lok Sabha.

The National Front, which was hoping to improve its position in the south, is no longer as sure as before. They have had to write off Tamil Nadu, but they are still banking on NTR holding Andhra Pradesh for them. They are also making a concerted bid for Orissa where no sympathy wave is in evidence as yet.

Political analysts feel that a coalition government with the Congress as a major partner is likely. In the wake of Rajiv's assassination the Left Front might support them to combat the BJP. This line of thinking has been given weight to by E.M.S. Namboodaripad's letter to the Congress party saying the Left Front might support the party to preserve the secular democratic ideal. Jyoti Basu has disassociated himself from this move, but both parties are making efforts towards this end.

The permutations and combinations have changed after Gandhi's assassination, though no party is likely to get a simple majority. The Congress is likely to improve the number of seats it had hoped to get earlier, perhaps even repeat its last performance in the south. The BJP hopes to marginalise the Congress (I) totally in the north by capturing the floating vote attracted to the idea of stability, besides the strong Hindu vote. The National Front is trying to preserve its vote banks of the minorities and the backward castes and emerge as the largest block in Parliament.

■ RUCHIRA GUPTA

Now a repayments crisis?

The next month is crucial for bankers as well as the officials of the finance ministry. If things don't go the way they should, there can be major trouble on the NRI deposit front, leading to another money crisis. This is because, next month, almost Rs.800 crore of the Rs.20,000 crore in NRI deposits with various Indian banks will mature. If there is shortage of money and the NRI's don't get their returns, it could well be possible that some will begin to withdraw the money they have deposited in various schemes with Indian banks. No doubt the *Babus* at North Block are spending sleepless nights trying to figure out whether it will be possible to pay up.

The FCNR scheme, started in the mid-eighties to attract foreign exchange from NRIs, has been one of the major sources of funds for the government, specially at times of crisis like the one currently on. The interest rates in this scheme differ from currency to currency, being highest for the German mark. But with the present foreign exchange crisis, the Indian government may find itself incapable of paying back NRIs who have invested in the scheme. Apparently, the recent rush to sell 20 tonnes of gold in the international market is an exercise undertaken to finance these payments due next month.

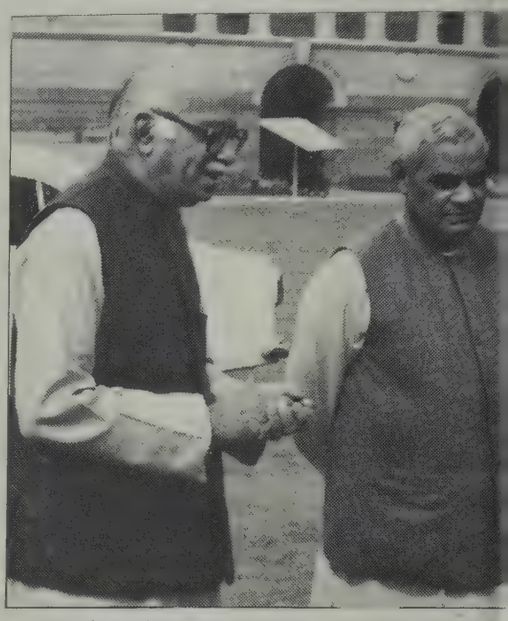
Finding common ground

The persistent bickering between the departments of coal, steel, power and the Railway Board over production in the infrastructural sector has not been receiving much press attention lately. Earlier, it was common to read about the department of coal complaining about how the railways were refusing to pick up the stock. Railways, on the other hand, complained that whenever wagons were made available, there was no coal stock to be taken. Stuck in between were the steel plants, which were unhappy with both the coal sector and the railways because of the coal shortage that ensued.

Now it seems that the officials of the core sectors have decided to settle their differences rather than cry to the press. A committee, under the secretary (coordination) in the cabinet secretariat, R.K. Tikoo, has been formed to find solutions to these perenniel problems. The committee has representatives of all the three core sectors. There are weekly meetings and, once a month, the cabinet secretary himself chairs the meeting. Apparently the committee is working well, and the bickerings have now come to a minimum.

Sheshan riddle

Whose man is T.N. Sheshan? Till the elections began, the former cabinet secretary and now chief election commissioner (CEC) was accused of being a Congress(I) adherent. The circumstances leading to his appointment as CEC, the fact that he held high offices during Rajiv Gandhi's tenure, were all bandied as evidence of his being a Congress(I) man. His utterances about the law and order situation in Bihar and the countermanding of elections (as distinct from repolling, since countermanding means that fresh nomination papers have to be filed) in constituencies where Janata Dal candidates were perceived to be ahead, were also marshalled as additional evidence of Seshan's inclinations.



But now Congress(I) members are openly critical of Sheshan. Reason: he has postponed polls by three weeks. Congress(I) members perceive that this is too long a postponement and prevent them from cashing in a sympathy wave in their favour following Rajiv's assassination.

So whose man is Sheshan, anyway?

Making of a manifesto

The Bharatiya Janata Party's economic manifesto has been hailed as a pragmatic one by business circles. But how did it actually evolve?

Apparently, work on the manifesto started off in June last year, with the constitution of a small group under the titular chairmanship of party vice- president, K.R. Malkani, but with Govind Acharya (the RSS's official representative in BJP) as prime motive force. The group also included an economist, Jagdish Shettigar, director with the FICCI, who was drafted in because of his RSS background.

Advani and Vajpayee: a pragmatic manifesto

By October, when the Ram Rath started surging forward, the group had prepared position papers on industrial policy and prices, but with the collapse of the V.P. Singh government, Shettigar was given the task of quickly preparing a draft manifesto.

This draft, though ready by January, was finalised only after announcement of elections by party president Murli Manohar Joshi, in consultation with Shettigar and some others, like S. Gurumurthy of *Indian Express* fame.

Interestingly the party's erstwhile economic advisor, Jay Dubashi, was completely sidelined. The manifesto apparently includes some points suggested by some bankers, journalists and other intellectuals.

Historical first

This must have been for the first time in the history of India. Officers and *babus* of the Rajya Sabha and Lok Sabha secretariats were equally surprised when last fortnight, they found BJP supremo, L.K. Advani, campaigning within the four walls of the secretariat. Advani, who knows many of these officials personally, having been a Lok Sabha and Rajya Sabha MP in the past, actually went from room to room requesting the *babus* to vote on the symbol of the *kamal*.

Rajiv Gandhi

I did not know Rajiv Gandhi. It is necessary to make this pretentious little statement because, after I was appointed chairman of the State Trading Corporation (STC), quite a few people ssumed that we had been life-long riends from our "Cambridge" days. I was n fact at the other university about ten ears earlier. Apart from exchanging reetings many years ago at the Fujiya, a hinese restaurant in Malcha Marg, I alked to him only once, and that was hen he asked me if I would take over TC. I agreed, and after that we never poke or met each other again.

In a sense this little story of our acuaintance tells a great deal more about ne man and his government than the unmportance of it might suggest. It is not ustomary for prime ministers to interiew potential candidates for public secor jobs; they have after all many more mportant things to do, in running the overnment. It was typical of Rajiv Gandhi's hands-on approach to governing hat he took such a direct interest in hese matters. If however I or indeed anyne else had visions of a grand design of hich I was a carefully chosen cog, then I as to be sadly mistaken. Rajiv Gandhi as like the musical director who having elected his bassoonist, his flautist and ll the other musicians he needed, just ould not quite get round to conducting he orchestra.

ureness of touch

hy this should have been so, I was never ble to understand; he certainly knew hat needed to be done; I had listened to im on several occasions, talking to pubc sector chiefs, or to state chief ministers r semi-public gatherings to which I was itually invited, and on each occasion I ad been deeply impressed by the sureess of his touch on liberalisation and the conomy. It was not just that he was well utored; whenever he departed from the repared text, his words carried even reater conviction, and were in a deeper ense profoundly more accurate. He eemed to have a much finer intuition bout the job in hand than those around him. Perhaps it was his alienation from India that made him so much more receptive to new ideas; his Italian wife, his English education and all that foreignness, was what kept him away from the stodgy parochialism of Indian nationalism.

Having said that, there is another crucial element of Indian politics that Rajiv freely admitted he had somehow lost, and that was communication with the people. He had become inaccessible and I imagine that was as much due to shyness as a dislike for back slapping politics. Being an outsider had given him his strength, but it also meant that he became enmeshed within a system which he could not operate, a system which stifled those common sense ideas which happened to be just what the country most needed.

So what in sum will have been the Gandhi achievement; I believe it will be recognised as critical to the transition from socialism to capitalism. In his few short years, he shifted the centre of the Indian political economy. He moved us away from the outmoded *shlokas* of socialism to talking and thinking of a market economy. The fact that today there is a genuine debate about the merits of free enterprise is entirely due to Rajiv Gandhi; no other politician or leader could have led us away from the legacy of his grandfather. Yet there perhaps was the ultimate tragedy. He could not completely abandon the language and ideas of his illustrious ancestor; he could never attack socialism frontally. There was therefore always a need to take one step back after two steps forward. In the end, this policy was only partly successful. He was not able to change the character of the economy, however much he improved its working.

There was therefore always a need to take one step back after two steps forward. In the end, this policy was only partly successful. He was not able to change the character of the economy, however much he improved its working

Yet the loss of Rajiv Gandhi will be felt far more than we presently realise; when all is said and done, whether he was in office or out, he was the leader of the Indian people. There is no substitute for him; if India passes through a crisis, it is his absence that will be most apparent to the leaders of the world. In the life of a nation every now and again one person seems to embody the hopes and aspirations of an entire people. Such an individual is not necessarily the most able or important person around, but his departure brings about a despondency the like of which is difficult to shake off. Churchill recorded one such event in his long and eventful life, and that was the resignation of Anthony Eden in 1938 from Chamberlain's government. In memory of Rajiv I can do no better than repeat those words of Churchill:

Rajiv Gandhi was like the musical director who having selected his bassoonist, his flautist and all the other musicians he needed, just could not quite get round to conducting the orchestra

"Late on the night of February 20 a telephone message reached me as I sat in my old room at Chartwell that Eden had resigned. I must confess that my heart sank and the dark waters of despair overwhelmed me. During the war soon to come and in its darkest times I never had any trouble sleeping. In the crisis of 1940 when so much responsibility lay upon me, I could always flop into bed and go to sleep after the day's work was done. But now, on the night of February 20, 1938, and on this occasion only, sleep deserted me. From midnight to dawn I lay in bed consumed by emotions of sorrow and fear. There seemed one strong young figure standing up against long, dismal, drawling tides of drift and surrender of wrong measurements and feeble impulses. My conduct of affairs would have been different from his in various ways; but he seemed to me at this moment to embody the life hope of the British nation, the grand old British race that had done so much for men and yet had some more to give. Now he was gone. I watched the daylight slowly creep in through the window, and saw before me in mental gaze the vision of Death."

UNIT TRUST OF INDIA

No longer the Big Bull

UTI has come a long way since its modest beginnings in 1964. The explosive growth of the eighties has been followed by changes, both internal and external, which will determine its path in the competitive nineties

UTI watchers are in for a surprise when the fund announces its results for the year ending 30 June 1991. Although the growth of investible funds has fallen as expected, thanks to a plunge in unit sales under Unit Scheme 1964, it will still be a healthy 20 per cent (*see table*). Equally important, UTI's client base will post a record 55 per cent growth, crossing the 10-million benchmark.

These numbers reflect a metamorphosis of UTI that is partly due to the more competitive environment it now operates in. To an extent, the growth in investible funds reflects changes begun under previous chairmen, particularly the aggressive and dynamic M.J. Pherwani. During Pherwani's years, 1983 to 1990, a large equity portfolio was built up. This had added over Rs.1,700 crore in market value last year. But it also significantly represents the contribution of S.A. Dave, its chairman for the past year, whose methodical approach to total systems management is taking UTI along a new path.

There was a time in 1988 and 1989 when the big "line" speculators — those who conduct business over telephone and telex lines, trading the same share at different prices in different exchanges — would start their day's telex messages with the query "*Pherwaniji aaj kya karnewale hein*?" UTI was then the Big Bull of stock exchanges, the bane of shortsellers and the delight of small speculators who profitted greatly from its sharp incursions into stock exchanges.

Largest operator

Today, things are different. Although it remains the largest operator in stockmarkets, with

Dave: a total systems management man

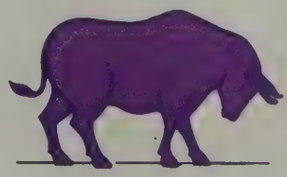
verage daily trades of Rs.10 crore a day (by the nd of May 1991, it had recorded trades — ostly purchases — of Rs.580 crore), far in xcess of the next largest, Canbank Mutual's s.60 lakh a day, the telexes no longer start with oncerns about UTI's likely actions for the day. If t all a mutual fund is referred to, it is likely to be anbank Mutual, whose aggressive and dynamic tyle and willingness to hold shares for shorter eriods — nine months on average compared ith six years for UTI.

Where is UTI going and why has its direction hanged? As one UTI watcher puts it, "If Big Bull vas appropriate for the late eighties, the Danc- ng Giant — still big but nimbly staying out of the vay — might be appropriate for the UTI of the ineties."

To understand the change, one must indeed nderstand how financial intermediation has hanged over the last three decades. The sleepy ixties were followed by the heady thrust to- vards social banking in the seventies. Through oth these decades, the Unit Trust, which was es- ablished in 1964, remained a minor institution, nobilising a mere Rs.14 crore in 1971 and still nly Rs.31 crore in 1981, while total savings rose n this period from Rs.6,000 crore (15 per cent of DP) to Rs.25,000 crore (22 per cent of GDP).

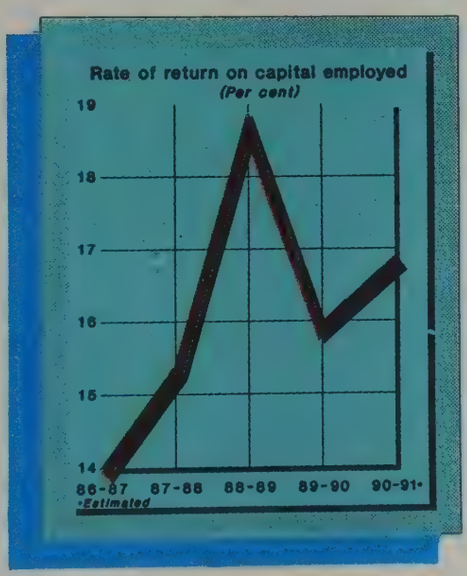
In fact, in the seventies, UTI was looked on as n organisation without a future. G.S. Patel, who vas chairman of UTI between 1976 and 1983 ays, "When I joined UTI in 1976, it was perceived s a sinking ship. Thanks to dividend restrictions — our main source of income — people lost con- idence in us and almost Rs.20 crore was re- urchased that year."

However, thanks to economic liberalisation, rban incomes shot up after 1980 making the ighties the turn of the urban middle class saver — with UTI well positioned to benefit. With its nique tax advantages and service record, sales xploded to Rs.5,580 crore in 1989-90, marking a our-fold jump since 1985-86. Even the mono- oly LIC garnered a lesser Rs.4,300 crore.

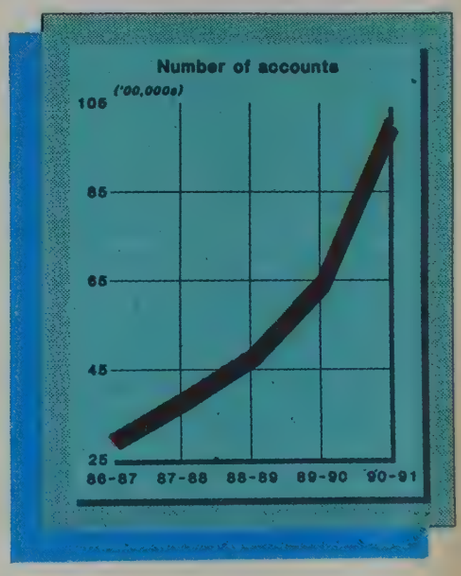


Engine of growth

TI invested a significant proportion of these unds in the equally fast-growing capital market vhich had, by then, become the engine of eco- nomic growth. From mobilising Rs.218 crore in 979-80 or 0.9 per cent of total savings, the capi- al markets in 1989-90 mobilised Rs.6,550 crore r 7.3 per cent of total savings. UTI's equity in- estments rose ten-fold between 1985 and 1990; he estimated market value of Rs.5,100 crore of hese holdings meant that it "owned" nearly 7 er cent of the market.



This huge involvement, notes Pherwani cre- ted its interest in a stable market. "It was in our nterest that the market should move with long erm trends."



This view coincided with the government's view of capital markets. Through the second half of the eighties, the government repeatedly influenced the financial institutions to intervene and stabilise stockmarkets in times of market crises, with UTI being asked to play the prime role.

How well was this role played? Although markets would invariably steady for the day after a publicised institutional entry, volatility tended to return quickly. For example, after a much-publicised institutional entry in December 1987 to prop a sagging market, markets turned weak once UTI withdrew and volumes fell off. By 25 February 1988, the market was 2 per cent below its 10 December low. Another example, this time of a stabilising sale: when UTI sold 1 per cent of ACC's shares on 5 July 1990 at Rs.650 each for a total sale value of Rs.3.5 crore, its obvious though unstated intention was to cool ACC's steamy stock price. The market, however, did not even blink. By 6 July, the share closed at Rs.667 and by the end of July it was at a new high of Rs.1,080.

G.S. Patel, chairman of UTI between 1976 and 1983, does not believe in either the concept or feasibility of market stabilisation. He says, "Many a times, it is tantamount to bailing out the speculators. You might argue that in the interests of investors, markets should be stable, but has it really happened? Secondly, it distorts markets.

Recently, markets have risen not for fundamental reasons but because mutual funds have come in with money that they have recently mobilised."

Waning influence

BSE executive director M.R. Mayya is a firm believer in the importance of a deliberate and positive institutional role in market stabilisation. But he concedes that the ability of a single institution such as UTI to influence market prices and their stability has waned over the past year and a half. He traces this to the growth of other competing mutual funds arguing that it is a healthy development overall.

There are other reasons for UTI's declining influence. As Mayya notes, the liberalisation of the money market has made for a closer integration between money and stockmarkets. Stockmarket movements depend, in the shortrun, to a great extent on money market rates and less on any mutual fund's actions.

For example, M.M. Kapur, UTI's general manager for market operations investment, notes that with call money rates averaging 35 per cent per annum over the past 4 months, UTI's portfolio contains more cash these days as various UTI funds have liquidated shares which might rise less than call rates.

Another factor is that the importance of thinking long term has become more accepted by the trading community at large. Old time speculators, who made money following "the flavour of the day" approach to trading, ie, in and out in a different share each day, have been replaced by educated younger brokers who study stock prices in relation to corporate performance. Kapur notes that "Prices today reflect fundamental, rather than speculative factors." This makes the need for stabilising actions less necessary.

Actions downplayed

The last reason is deliberate and significant: Dave, who became chairman on 30 March last year, has chosen to downplay UTI's Big Bull image. This has been done in a variety of ways. For example, by spreading operations across more brokers — no broker is allowed more than 5 per cent of its business and actuals have been below 3 per cent — UTI has sought to ensure that its actions are camouflaged. Similarly, the purchase or sale of a share (necessarily a large block by market standards) is done in lots over several days. This is unlike the past when huge blocks would be purchased at a time — typically in Reliance or Tata Steel — in order to provide a psychological boost to markets. A wide spectrum of brokers believes that Dave prefers to acquire shares on the quiet, waiting for other factors, such as earnings, to affect prices. Dave argues that this, in fact, gives UTI a price advantage as both buyer and seller.

Kapur sees advantages in UTI's changed role. He notes that 2 to 3 years ago, it was easy for UTI to buy shares in a big way but difficult to sell. Today, with other mutual funds present, large sales are possible without disturbing the price. "Demand is enormous with trading limited to 70 to 80 scrips which all the mutual funds want to buy in large amounts." This has allowed UTI to realise a larger proportion of its gains this year, leading to a rise in realised return (*see chart*).

	1986-87	1987-88	1988-89	1989-90	1990-9
Unit holding accounts (lakhs)	29.8	38.6	48.6	65.1	10
Investible funds (Rs. crore)	4,564	6,739	11,835	17,651	21,
Realised rate of return on capital employed (%)	14.0	15.4	18.9	16.0	1
No of schemes	20	25	29	31	

**Provisional figures*

For instance, in the third and fourth week of May this year, UTI sold over 400,000 shares of Hindustan Lever to create liquidity for its year-end payout. The sale caused prices to fall marginally from Rs.165 to Rs.160, thanks to purchases by another mutual fund. Even two years back, Lever's price would probably have plummeted to below Rs.130.

How good are UTI's investment decisions? Between March 1990 and March 1991, while the book value of UTI's equity portfolio rose by 16 per cent to Rs.3,900 crore, the market value rose by 33 per cent to Rs.6,850 crore. This incremental increase of 17 per cent is significantly less than the BSE Sensitive Index's rise of per cent over the same period. Of cour the figures are not strictly comparal across the years because of a constant a dition to the deposit base. Neverthele Dave notes that the market value of UT equity portfolio, which is more diversifi than the index, will generally rise l than the latter, when the market rises. case of a decline in the market, it will a fall less than the index.

Investment decisions are based on r ommendations by UTI's Investment Ad sory Services team which also follo market news and brokers' reports.

Quick forecasts

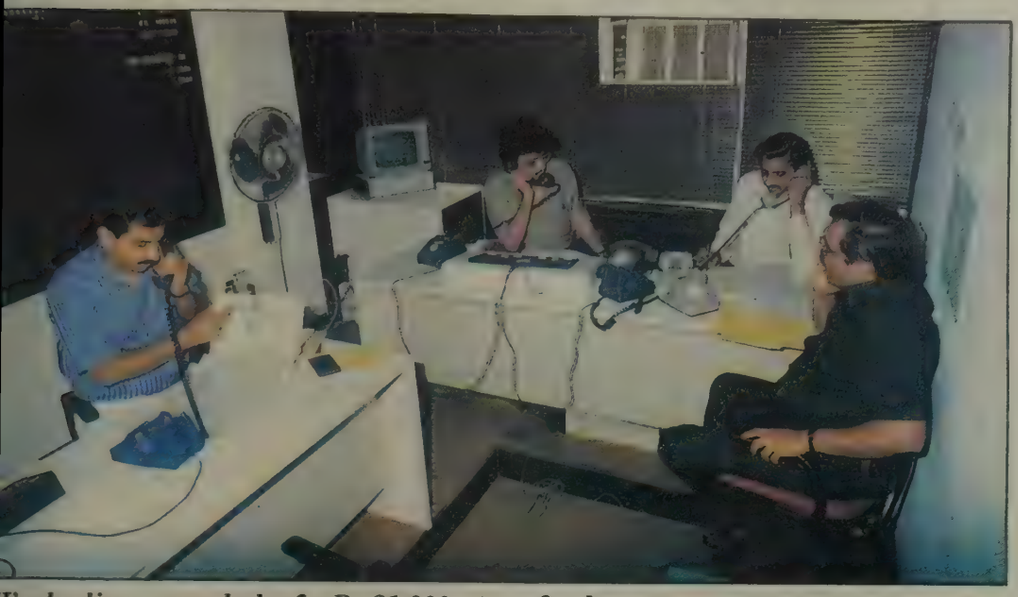
Says Kapur, "Basically we are fundame talists. We look at the fundament strength of the company: on how mu

Where even Rs.100 crore is small

S.A. Dave, *54, took over as chairman of UTI in March 1990. He had behind him the experience of having served as chairman of SEBI for two years and executive director of ICICI. Rafiq Dossani of* Business India *speaks to him on how UTI operates*

This year, UTI's net sales of US 64 units to the corporate sector was negative — repurchases exceeded fresh sales. Your comments please.

There are probably a couple of reasons. The first is the very large flow into capital mega issues. The oil companies, which were earlier big investors in units, had trouble last year. One-third of our corporate sales goes to the public sector, a third to banks and a third to the private sector. Banks, which mainly wish to provide ready liquidity, have been the main market-makers in these units. Another reason is that Section 80M was amended last year to exempt dividends tax only to the extent paid out. Several companies, were already paying dividends over and above their earnings from units and hence had nothing to gain.



What is the basis for your market operations?

We have our own research analysts who study balance sheets on a continuous basis. Some of my staff could give you 200 companies balance sheets orally! We also have the support of UTI Investment Advisory Services which was set up under SEC regulations for the India Growth Fund. Additionally, we have the support of the Institute of Capital Markets. Also, we value what brokers have to say.

We choose our brokers, based on three criteria. First, capital adequacy measured by the size of their previous trades. Second, their research capabilities as reflected by the quality of company analyses that they may do for us. Third, their integrity — whether they have ever been in default with the stock exchange, have they kept our transactions confidential, etc.

How would you grade them?

This year, we graded our brokers on a nine-point formula — three for each criterion. Out of the 300 on our list we shortlisted 13 brokers in Bombay and

I's dealing room: hub of a Rs.21,000- crore fund

ss block has increased over the past, at is the expansion/diversification n, earnings per share, and, most im- tant, management quality and track ord towards shareholders. For exam-, UTI started buying Indian Rayon the ment it was known that the Birlas had en over." Research turnaround is quick, with buy-watch-sell recommendations and earnings forecasts available within 48 hours.

The different funds within UTI work with targeted rates of return that have recently been raised from 25 per cent to 35 per cent thanks to the rise in call money rates. Although di erent funds have different strategies, there is a common emphasis on secondary market purchases (which account for 90 per cent of total equity purchases). This has a price disadvantage as primary allotments are almost always cheaper. But, as Kapur notes, given UTI's large volume of funds and the low volume of primary allotments, it is inevitable.

All this is not to say that the quality of UTI's research bears hallmarks of excellence. It is typified more by a sincerity of approach than savvy with regard to market timing or a deep understanding of markets. But because markets have risen, its buy and hold strategy has paid richer dividends than is possible for the smartest trader playing on borrowed funds and liquidating periodically for personal cash flow reasons.

Good research

Nevertheless, of all the mutual funds, UTI gets the highest marks for researching stocks. Also, unlike some others, it carefully maintains a Chinese wall between its lending and equity investment divisions so that information is not misused.

ve given them hot lines. Even then, ensure that no single broker gets ore than 5 per cent of UTI's business.

ow independently do your fund- anagers operate?

ey operate more autonomously now ter I assigned them separate areas. e are moving towards a system here they consult investment and fi- nce departments and interact with ch other but I would like their deci- ns to prevail.

o you allow inter-fund transac- ns?

e allow new schemes to purchase ares at market value from an exist- g fund for a year but do not allow old hemes to do so.

ow do you monitor the integrity of ur managers?

of today, there are hardly any com- aints on the integrity of market erations.

r what period on an average do u hold an investment?

ound six years.

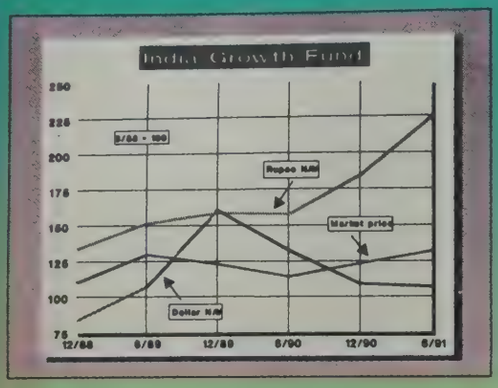
w diversified is your portfolio?

Our growth schemes are basically equity-oriented with 90 per cent investments in equity, while our monthly income schemes have only 10 per cent equity investment. US 64 units which provide more or less fixed income have an equity content of 28 per cent.

Again within a particular industry we would not invest more than 15 per cent even if the sector is booming, such as cement right now. Invariably, however, because of liquidity considerations, scrips in the BSE 30 Sensitive Index list figure strongly.

What is your strategy for deposit mobilisation?

I prefer to do it via spreading the unit cult among people and I'd like to market funds which are easily intelligible to them. As our results show, we get substantial sums in smaller amounts this way. In the metropolis, of course, competition for money is very aggressive. We have reached the stage where if we raise Rs.100 crore, my managers think the issue is a flop. Adding only 200,000 to 300,000 investors a year is not enough. For example, in UGS 2000, we reached a count of 1 million investors, and 95 per cent of the applications were single applications.



Scheme	Return to investor (%)	Minimum lock-in period (years)

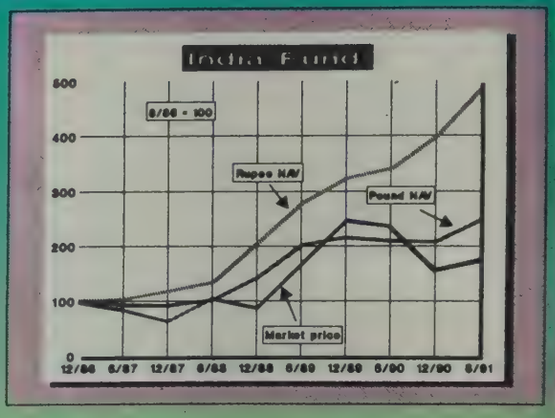
How good are UTI's market operations? And how does it compare with the public sector's traditional reputation for often shady dealings with disreputable brokers — inside deals with benefits for all at the expense of the investor? Mayya is of the view that until Securities and Exchange Board of India (SEBI) is constituted, the issue of whether mutual funds are ethical must remain an open question. However, he gives UTI high marks for integrity. "UTI has always had an excellent reputation in market operations. It has never given any cause for apprehension."

Kapur concedes that in the absence of

The international funds



UTI's India Fund (IF) listed in London and India Growth Fund (IGF) listed on the New York stock exchange have raised 130 million pounds since July 1986. Since its listing in September

1988, IGF has appreciated by 127 per cent in rupees and is currently worth Rs.150 crore; in the same period, IF has risen by 184 per cent and has a market value of Rs.825 crore. However, the depreciation of the rupee has hurt its otherwise spectacular performance.

Dividend policy is conservative and both funds tend to invest in large capital scrips. Trading volume averages a moderate 50,000 shares for both funds, although the IGF tends to move with American stockmarkets while the IF is more affected by India-specific events. Institutions hold about 70 per cent of each fund. Recently, M.I.M. Ltd, a British company — probably owned by a non-resident Indian — picked up 8 per cent of IGF's shares at prices ranging between $13.95 and $18.56.

Like most country funds, both funds trade below the intrinsic value per share, or net asset value (NAV). However, when the Indian economy boomed in 1989 and 1990, both funds quoted at premiums to NAV crossing 20 per cent. Mahesh Gandhi, deputy general manager of the international funds division, notes that the Iraq war changed attitudes abroad because of higher currency risk — the IF started quoting at a discount from August 1990. In mid-May, its discount had reduced to 8 per cent, but Rajiv Gandhi's

assassination pushed it upto 28 per cent.

Gandhi notes that although UTI has four more foreign funds lined up, ready to raise about half a billion dollars, political stability is awaited.

computerised trades, it is impossible to maintain complete broker honesty. At the same time, he emphasises that UTI has a system which rates brokers on research, capital adequacy and integrity. Over the past year, UTI has weeded out several brokers who did not make the grade. A change from the past? Not really, says Kapur. The difference under Dave is that the rating system is now formalised. Also, as Kapur states, UTI gives its broker a price limit after factoring in a brokerage. It is up to the broker to get that price, regardless of his own cut.

G.S. Patel is a stern critic of the way mutual funds operate in stockmarkets, although he singles UTI out for praise. "Most of the new breed of mutual fund managers are like cowboys," says Patel, "or people who play poker without looking at the cards. This is because they are from banks and do not have experience in market operations."

The introduction of the rating system and similar modifications in systems is evidence of a big internal change in UTI.

Kapur: "Prices reflect fundamental factors"

Since becoming chairman last year, Dave's mission has been to consolidate UTI into a more manageable structure.

Dave views decentralisation as one of his important on-going tasks. Until he took over, UTI's 25 branch offices did not have the authority to issue any cheques even for electricity or rent; their cash spending limits were a mere five rupees. Similarly, investors desiring to cash units up to Rs.25,000 had to frequently wait for one of UTI's four regional offices to issue the cheque.

The next step, A.N. Palwankar, general manager for personnel and administration, notes, is to convert regional offices into zonal offices which will control the fund mobilisation and client servicing of branches under their jurisdiction. The head office — currently in control — will become a corporate office with policy and review functions only. The investment function will, however, remain in Bombay. The restructuring has been planned by S.K. Bhattacharya, a firm of management consultants.

Mammoth paperwork

Although client servicing is already computerised, UTI has a mammoth internal paperwork problem. On 3 June, CMC, the Bombay-based computer firm, was awarded a Rs.10-lakh contract to study hardware and software requirements.

Dave has also stressed improvements

n labour relations. After formal delinking from RBI in 1977 — when 93 per cent of its staff returned to RBI — UTI has worked hard to build a cadre of loyal staff. Labour turnover has historically been low — last year, only five people left the organisation. For the first time, UTI has recruited 12 fresh IIM graduates this year. Palwankar hopes to retain this notoriously fickle group by offering them significant responsibility. "Where else", he asks, "could a fresh graduate manage a Rs.100-crore fund within 5 years of employment."

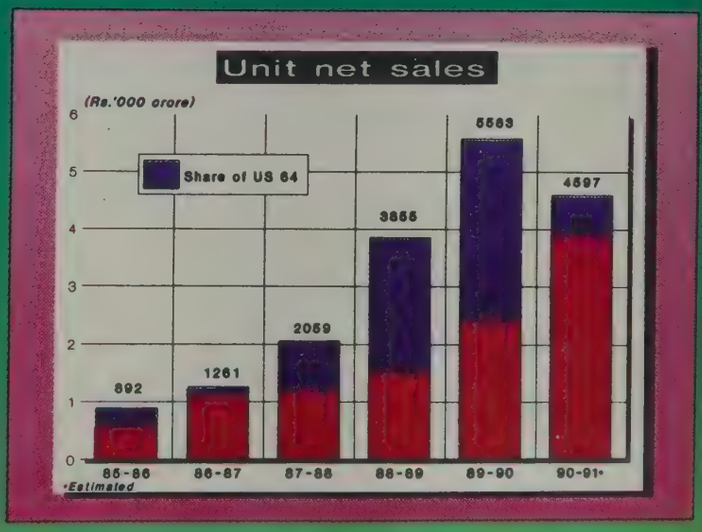
Salaries are high — the average officer earns Rs.6,000 per month apart from housing, while other staff average Rs.4,000 per month. As a productivity boosting measure, a 5-year settlement signed in November 1990 gives UTI's 1,300 employees (600 of whom are officers) higher wages, in return for a commitment to flexible assignments. A self-appraisal scheme has also been introduced from this year.

The institute of capital markets at Vashi, near Bombay

The success of US 64

Over 50 per cent of UTI's funds since 1988 have been raised through sales of Unit Scheme 64 units (*see chart*). Its success was because US 64 units offered a yield of 13 per cent (about 3.5 per cent more than inflation and a per cent higher than the highest bank rate) with complete safety, instant liquidity and modest growth of 1 to 2 per cent per annum.

However, the return did not reflect the capital appreciation of the fund at all which has, on average, exceeded annual inflation by 10 per cent. Why did UTI not pass on the benefit?



The reason in the early days was to build investor confidence. The scheme had about 25 per cent of its funds in stockmarkets. If UTI paid out all its earnings every year, annual payouts would fluctuate in accordance with market movements and perhaps destroy the fragile confidence of investors unused to stockmarkets.

Corporate tax benefits. The result has been that savers have been denied the benefit of capital appreciation estimated at over twice the current repurchase price. The success of units is attributable to its corporate tax benefits as, till 1990, dividends received from units were partially tax-exempt (upto 60 per cent). Not surprisingly, over 80 per cent of US 64 investors are corporate bodies attracted also by its liquidity and predictable returns.

This helped sales as long as bank interest rates were fixed, but it hurt when interest rates were liberalised after 1986. For example, there was a funds crunch in March 1990 when call money rates crossed 70 per cent per annum and over Rs.600 crore units were resold to UTI. A change in tax laws in 1990, exempting corporate dividends from tax only if paid out to shareholders, hurt sales to large public sector units that paid out modest amounts.

In July 1990, in order to reduce the corporate stake, UTI raised sale-repurchase spreads from 4.7 to 5.7 per cent of sale prices and halved brokerage commissions on corporate business. Also, the scheme was aligned with rapidly changing money markets, by switching from monthly to fortnightly prices announcements.

The new strategy worked just right. Net corporate sales (after repurchases) plummeted to a negative Rs.90 crore for the 12 months ended March 1991 from Rs.2,150 crore in the corresponding previous period.

Meanwhile, with over Rs.6,000 crore of units still in corporate hands, secondary market trades in units have remained active at Rs.100 crore per day on average. Volumes pick up in May each year as corporations desiring tax-exempt dividend buy units, receive the July dividend and resell the units in July for a deductible capital loss. Banks actively finance such deals, the main players being the Bank of America and Citibank.

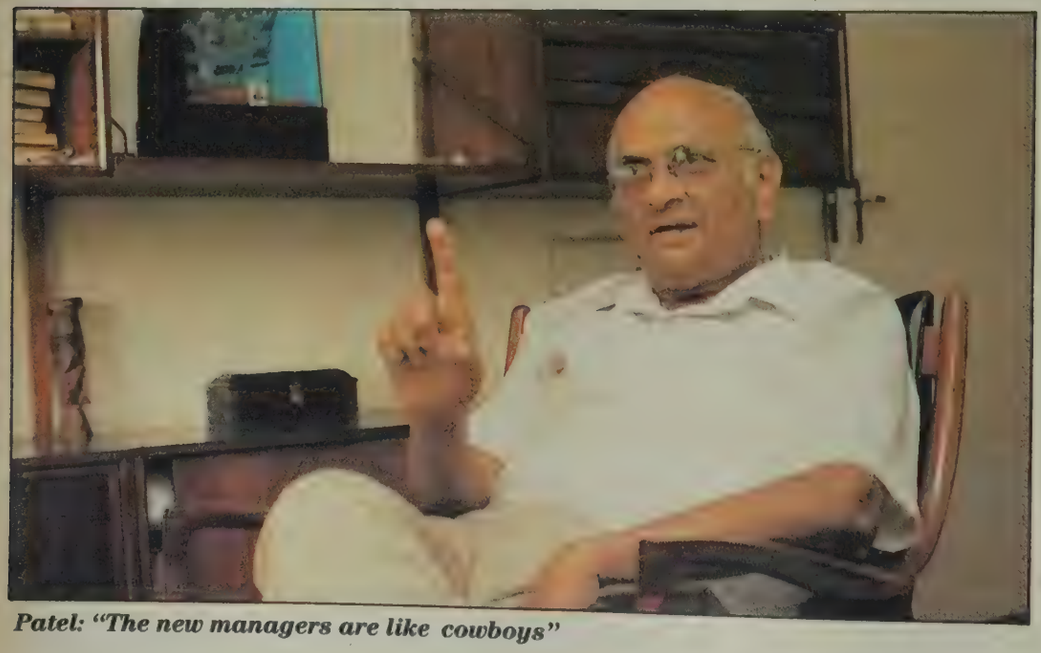
Schemes and schemes

Fixed income schemes constitute 85 per cent of UTI's sales as "our surveys show that investors want safety first", says A.K. Thakur, general manager for planning and development at UTI.

This view is common among mutual funds, notes SBI Capital's S.M. Parande. UTI's fixed income schemes offer annual returns ranging from 12.5 to 15 per cent with the most popular — the monthly income scheme with bonuses and growth (MISG) — offering 13.8 per cent payable monthly, plus any capital appreciation at the end of the scheme. Innovative variations are necessarily few, given the narrow range of returns of such schemes.

UTI decided against competing with Canbank Mutual's Canstar and others which raised Rs.2,000 crore since last August 1990 with their double-in-five-years offerings (implying a return of 14.8 per cent per annum).

Interestingly, with the decline of the US 64 scheme in 1990, closed-ended schemes — ie, those which tie up funds for a fixed period — raised 65 per cent of the total funds compared to 29 per cent in the previous year.



Real strengths. A 64,000-strong agent network, which brings in 95 per cent of the business, and good customer service, are UTI's real strengths notes former chairman M.J. Pherwani. G.S. Patel adds, "As most clients are small investors, tax advantages are not — as commonly perceived — the major attraction."

Patel feels that UTI should pioneer rural marketing of mutual funds. Less than 10 per cent of UTI's sales are rural, despite higher commissions for rural business. Thakur feels that this is because servicing a scheme is costly for investors in the far-flung, rural areas.

After Mastershares, UTI has not listed any more schemes on stock exchanges. Its managers worry that investor confidence could be affected if the schemes quote at discounts to book value — as has usually been the case with Mastershares. A similar concern is expressed about promoting a true mutual fund, ie, one whose sale and repurchase takes place at intrinsic worth (or net asset value).

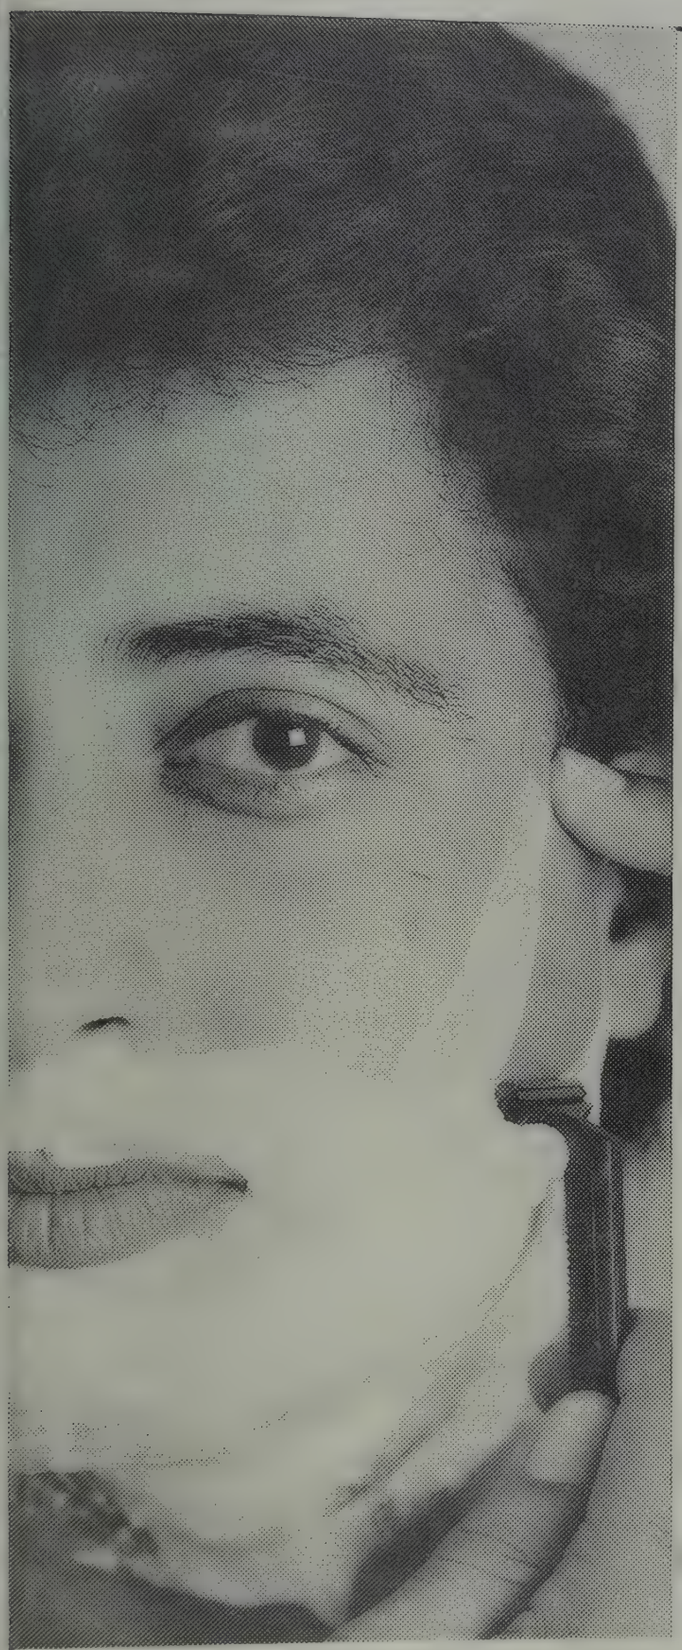
Such concerns are misplaced. Listed schemes and true mutual funds provide investors with invaluable liquidity and diversification opportunities and have been a success worldwide. Although often quoted at discounts to underlying book value, the market value of such schemes invariably rises, as the case of Mastershares proves (*see chart*) when book value rises.

UTI's advertising is lacklustre. Thakur, however, feels that proper targeting and a widespread network of well trained agents are more important than aggressive advertisements.

Patel: "The new managers are like cowboys"

Dave feels that the internal changes have already paid off: the number of investors recorded its highest growth in 1990 when over 3.5 million accounts were added, taking the total past the 10-million mark (*see chart*). Most of the new funds have poured into the phenomenally successful monthly income schemes which will yield Rs.2,500 crore in 1990-91, compared with Rs.890 crore last year. Significantly, the advertising cost per account has also fallen last year (*see chart*).

Dave gets high marks from his peers for his year at UTI. G.V. Ramakrishna, chairman of SEBI, who in recent times has sharply criticised mutual funds for their failure to disclose information adequately, praises UTI's level of disclosure and customer service.



Unrestricted access

Ramakrishna is critical, though, of the mutual fund industry's unrestricted access to investors and suggests an approval procedure similar to a company raising funds for a project. "Otherwise," he argues, "this could even distort savings and investment patterns in the country as funds invested for fixed returns currently chase a limited amount of equity."

Dave, however, argues that "as long as a fund's investments are consistent with its goals, be they fixed returns or growth, why should it matter how much is raised?"

As the unofficial spokesman for the mutual fund industry, Dave would like to be around to answer these and other crucial questions. Yet, when the current political uncertainties subside, Dave's continuance as chairman of UTI will certainly be up for question — if the sorry past practices of most of our politicians is a guide. As the person in charge of a Rs.21,000-crore fund, his job is considered to be politically sensitive. His predecessor was removed on political grounds. Dave, however, appears unfazed by this possibility. He is a man who obviously relishes his job and has managed to steer his own way in the company, building up a loyal group within the firm in the process. His insistance on building systems shows the seriousness with which he approaches institutional development. No doubt, as UTI moves further into the nineties, he has his work cut out for him. ■

CUMI INTRODUCES TWO NEW PRODUCTS BUILT ON THE SAME PRINCIPLE.

CUTTING ACTION. Coated Abrasives Division of CUMI introduces ALPHA and ZETA Resin Sander discs, designed to give a better cutting action. ALPHA discs (with Aluminium Oxide grains) and ZETA discs (with Zirconia grains) offer a high cutting rate with better stock removal, giving the finish required.

These Resin Sander discs are used in metal fabrication work such as smoothening of welds, brazings, solder seams etc.; removing of scale, rust, heavy burrs; blending and preparing sheet metal surfaces for painting, grinding of runners and fettling of castings. Also in flash removal of fibre glass reinforced plastics. ALPHA and ZETA will be launched in June this year. So if you need more information, please write to us.

GIC

No real competition

The company has grown well in the last two decades thanks to its monopoly position. But the customers have really got a raw deal due to price inflexibility, product standardisation compounded with prevalent low employee morale and corruption. The question is why should a service industry be nationalised?

Photos: Deepak Tolani

GIC's Mony: emphasis on service

Last month, the general insurance industry in India celebrated two decades of its nationalisation. On the face of it, the industry had a lot to boast about. Businesswise, it has grown at a steady rate of 16.6 per cent annually since 1971 when it was nationalised. Its net premium income, has grown from a paltry Rs.222.34 crore in 1973 to Rs.2,800 crore in 1990-91; its profit before tax has gone up from Rs.38 crore in 1973 to Rs.500 crore by 1990-91; and its investments from Rs. 316.68 crore in 1973, to Rs.3,409 crore by end-March 1990 in socio-oriented and other avenues.

Unlike in the banking sector where 20 individual banks retained their identities even after nationalisation, or the life insurance where nationalisation helped to produce a giant size monolith, the general insurance industry evolved a unique structure through nationalisation in 1971. To avoid 'unnecessary competition' but yet to retain a degree of competition in premium rates, four companies were kept alive, headquartered in four regions — New India Assurance Co Ltd in the western region, Oriental Insurance Co Ltd in the north, National Insurance Co Ltd in the east and United India Insurance Co Ltd in the south. The earlier 107 small companies were amalgamated to one of the four.

To control and supervise

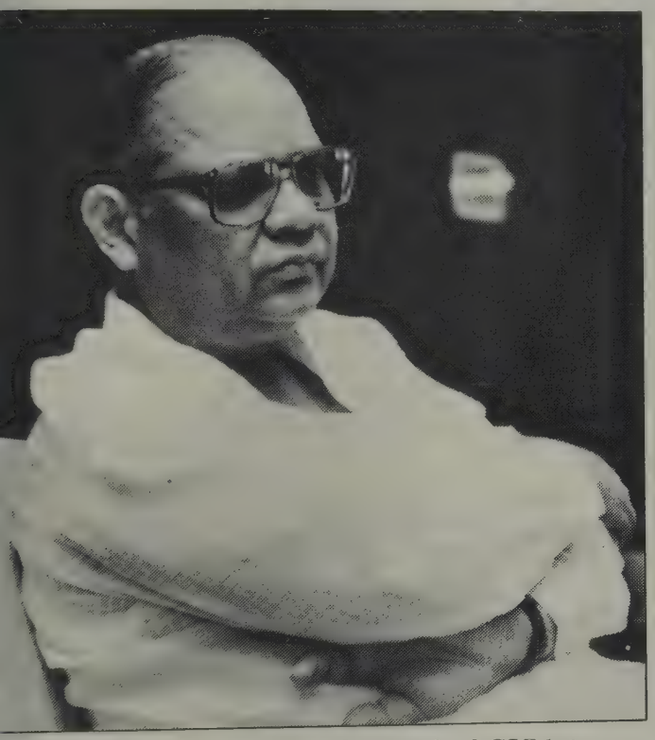
Over these regional subsidiaries was formed a holding company, General Insurance Corporation, the function of which "is to make policies for transacting general insurance business on sound lines, exercise control and supervision over the four subsidiaries and co-ordinate their activities", says B. D. Shah, chairman and managing director of New India Assurance, who was till recently managing director of GIC. The holding company has sweeping powers, from allocating finances for projects at the consortium meetings and overseeing subsidiaries' investments to devising new products and fixing their tariffs as well as employees' salaries and agency commissions. (Except for aviation and reinsurance, the GIC has no insurance business activity of its own.)

GIC has grown sizeably since then. Today its operations are spread over 31 countries through branches and agencies in 17 countries and subsidiaries in 14. Between 1985 and 1990, the direct premiums from its foreign operations totalled Rs.402 crore. And it has gained respect internationally for its professionalism.

However, all is not that well with GIC. Despite its monopoly position, the company, for the past two consecutive years, posted underwriting losses — of Rs.106.84 crore in 1988-89 (as against a profit of Rs.56.31 crore of 1987-88) and Rs.121.49 crore in 1989-90.

But GIC's new chairman, S. V. Mony is not much worried about these losses. According to him, these losses have mainly been due to increased risk in motor insurance and large provisions made in the past two years for the unexpired risks. Insurance companies create a special reserve for unexpired risks — those risks which spill over from one accounting year to the next. Of the underwriting loss of Rs.121.49 crore in 1989-90, Rs.181.5 crore were provided for unexpired risks. This, explains Shah, is a prudent accounting practice and amounts only to a "technical loss"

As for the increased risk in motor insurance, Mony admits, "Our premium base is not wide enough to cover the losses arising out of increased road risk." In 1989-90, for instance, for every Rs.100 collected as motor insurance premium the claim payouts were Rs.111, as against Rs.89.9 in 1985. The new Motor Vehicles Act, which came into force in 1989, has placed an enhanced liability on the insurance companies. Under the act, the companies have to pay unlimited compensation to passengers and pedestrians in case of an accident. Earlier, the maximum compensation payable to road accident victims was Rs.15,000. Now it varies anywhere between Rs.50,000 and Rs.one lakh. Says Mony, "While human life valued higher is a socially positive sign, for the balance sheet of the insurance industry it is not."



Insurance business is ruled by the law of probability. The wider the client base the lesser the claim risk. To improve on this, the motor tariff has been jacked up significantly in April 1990. Says Mony confidently, "The losses for 1990-91 will be cut by half compared to the previous year."

However, losses are not the only problem the GIC faces after 20 years of existence. Even as the claims ratio has increased, especially in motor insurance, unviable premium rates (mainly to popularise general insurance) and rigid systems have taken a heavy toll on customer service — the touchstone for efficiency in any service industry. The system has given rise to corruption resulting in a declining employees' morale coupled with open disobedience of some classes of em-

ees. And the poor quality of service es the basic question: why should a ice industry be under government trol?

phasis on service

y insists that "service and not growth rofits" will be his emphasis during the eties. Having spent more than 30 years he insurance industry, Mony carries h him a varied experience — from the ional and international markets. Soft-

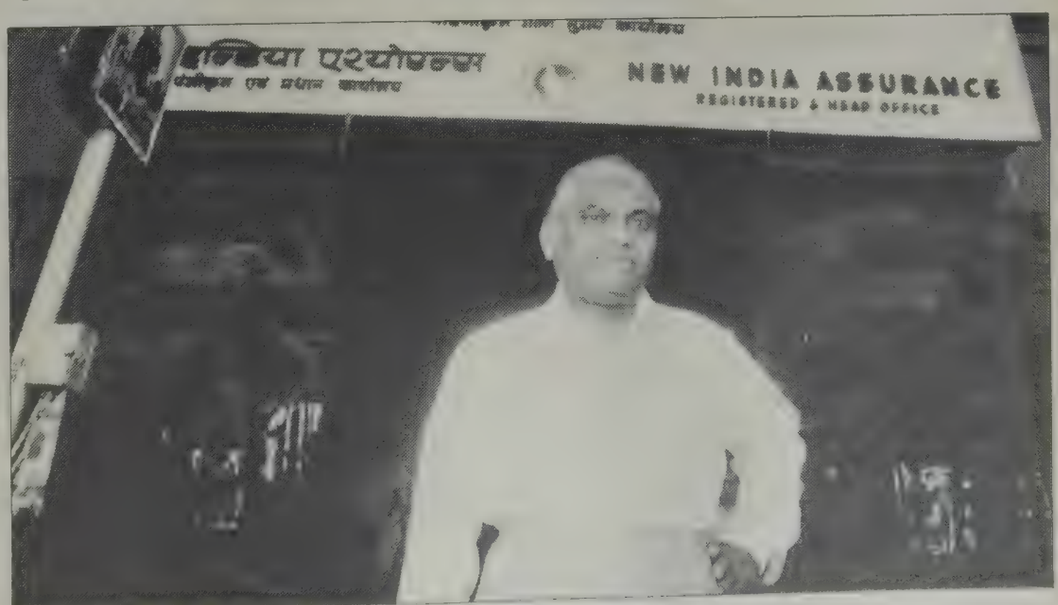
mer chairman Ashok Goenka: pushed GIC into ial schemes

ken but assertive, Mony instills confi-nce among his colleagues.

nsurance industry, Mony explains, will w as the country's insurable assets in-ase. The fact that in a little less than decades, the industry has reached a al net premium income of Rs.2,200 re and an investment portfolio of 3,500 crore, supports Mony's claim. t will Mony succeed in making the gen-l insurance industry more responsive customer needs?

The objective of setting up four sub-iaries was to introduce an element of npetition and ensure better customer vice," says Shah. But is competition operating principle in the general in-ance industry? To begin with, the four sidiaries offer the same products (in-ance policies) at the same rates. There about 100 odd products that they of-— all of them devised by the GIC and erned by the tariff it fixes for them. Admits G.V. Rao, chairman and manag-ing director, Oriental Insurance Co, "Though the insured have a choice of selecting an insurance company... price-wise, there is hardly anything to choose from in a majority of products. Rather, the trend has been...to standardise the products as also the price." Of course, innovators such as M. J. Pherwani, National Housing Bank (NHB) chairman who spent several years in the GIC, feel that "Competition among the subsidiaries could be in devising products outside the tariff", as insurance can cover anything, from roads and lakes to an artist's thumb. But that has hardly happened.

Again, though the four subsidiaries have a primary responsibility to their own regions, they can also write business anywhere in the country 'in a true competitive spirit' as the GIC would put it. However, regional presence has its own advantage. "The business any company acquires is a reflection of the drive its chief has," says Mony.



And what he says is true, not only of the company as a whole, but of the regional offices or even branches of these companies. He cites the size of each subsidiary today to prove his point. "At the time of nationalisation, special care was taken to ensure that each subsidiary started on more or less the same business level," he says. But despite starting at the same capital, reserves and premium income base, today one company (New India Assurance) is much ahead of the other three, which shows its competitiveness (*see table*).

On their toes

The concept of co-insurance too keeps the companies on their toes. Theoretically general insurance policies are of one year duration. Thus, a client can, if he desires, change his insurer every year. Also he can have more than one insurer for the same business or offer a new business to a new insurer. The insurer, on the other hand, competes with others in asking for a share of the existing business or in a new business. Getting or keeping the business in this event becomes entirely dependent on service, which keeps the company on its toes, as otherwise it may lose its share. Says Mony, "As a result of this, the companies, especially the medium and the large ones, are often overserviced."

In co-insured business, the lead insurer gets 40 per cent of the business and the other three subsidiaries automatically get 20 per cent each. Says Shah, "There are instances where New India Assurance has had 80-90 per cent share of the business and only the rest was distributed among the others." For instance, New India being originally a Tata company, its former sister concern even today keeps their entire business with it. But the client has the option to change the leader who is responsible for servicing him, Shah insists.

The insurance companies have to run faster to retain business and grow, and that benefits the customers a great deal. Yet, while the large clients are overserviced, the rest of the clientele constituting

New India's B.D. Shah: disclaiming tariff violations

60 per cent of business, end up receiving inferior service.

However, co-insurance helps GIC fetch foreign exchange into the country. It achieves this objective by first using up all the risk-bearing capacity available in the country, before reinsuring abroad.

Says Pherwani, "Thanks to the strong asset base the GIC inherited and its subsequent efficient funds management, the risk-bearing capacity of the industry is very high." According to Mony, almost 85 per cent of the business is today retained within the country. On the other hand, the low premium rates prevalent here brings much foreign reinsurance business to the country. As a result, the industry is a net foreign exchange earner for the country.

Surprisingly though, the GIC has taken up the unremunerative rural business on its own initiative. Many credit Ashok Goenka, the former GIC chairman, with taking up this social responsibility. The government has not forced targets on GIC. Its business under social schemes is less than 10 per cent of its total business. Also, schemes such as crop insurance or the hut insurance, meant for the rural poor and which are loss making, are administered by the GIC for the government. Nor has the government interfered in GIC's functioning in any manner, as a result of which insurance industry has not only remained professional but is also a healthy profit earner in the public sector.

Poor service

But this takes the policy holder nowhere. Comments a policy holder, "The service in all the subsidiaries is equally bad. All the insurance companies agree that competition is supposed to be only in services and not in tariff rates. Says Pherwani, "Tariff is a blue book and is not to be violated."

However, in a bid to get business, tariff is often breached by the subsidiaries. Says K. S. Samant, joint secretary, General Insurance Employees' All India Association, "To benefit the insured, the tariff is often breached through interpretation." For example, buildings can be classified as category "A", (superior quality) when they are not, only to charge lower premium. "I discovered a leakage of Rs.1 crore in the premium income during a particular year through this route," says a former CMD of one of the subsidiaries. Mony too confirms that there are at present, more than 10 cases of breach pending hearing with the Tariff Advisory Committee. (The TAC has been in existence even before nationalisation, only its composition has changed.)

Says Shah, "A breach cannot go unnoticed as the loser company is bound to make a complaint to the Tariff Advisory Committee of the GIC." And the premium lost has to be recovered. But attempts to recover the loss are not always successful, because, in a bid to retain the client, the new entrant almost invariably pays only lip service to recovery.

Mony admits that there are clients which are not allowed to shift companies but the number is very few. In fact, says he, only ONGC, Oil India and ISRO fall in this category. The reason, for this restriction, according to Mony is that servicing such business requires technical know-how which has been developed in certain companies at high cost. And therefore, it is not cost effective to let these accounts change hands too frequently.

The insurance companies have no quarrel with GIC's role in their business, including approvals of their investments and sharing the consortium loans agr by the GIC. They follow GIC's guidel probably because "the decisions taken by consensus". All policy level di sions are taken after deliberations what is popularly known as the 'c meetings in which the chief executive the four subsidiaries, managing direct of any two of them and the chairman GIC participate.

Industry perspective

Yet when it comes to the crux of the ins ance business — service — the GIC cor out poorly. At the top management lev GIC follows inter-company transfer po cies for all the five companies. Says Ori tal's Rao, "This gives us an indus perspective. And we become profe sionally loyal to the client." In oth words, for executive staff in the indust professional advice to the client is the timate objective and not 'getting' t business. But this rarely happens. Ofte the clients get transferred with the ma ager because to the client, basically it the service of the individual that matte and not service of the company which similar everywhere.

The middle level executives, on t other hand, are demoralised on accou of vigilance. Claims settlement proce has suffered significantly on this cou and so has individual initiative. Even ot erwise, being complex, the claim settl ment process takes a long time in gener insurance industry. Says Ashok Goenk chairman of GIC till early this year, "Ur

ational's Y.D. Patil: staff unions agitate on minor issues

e in life insurance, where the quantum claim is predetermined, in general in- rance decisions on claims have to be bjective because from the occurrence the event to the claiming of the nount, everything has to be determined er the claim." Besides, the nature of ims is varied and if no discretionary wer is given to the claim-settling au- rity, the clients will suffer.

In motor accidents claims tribunal, for stance, a case takes 3-10 years to come for hearing. In the bargain, the insured ffers and all the energy expended by insurance companies to get the busi- ss go waste.

While the management is reluctant to e decisions for fear of inquiry the staff s away with their actions under union otection. Says Y. D. Patil, chairman and naging director, National Insurance , "The industry takes care of its em- oyees' demands well in time. So the ions get time to take on minor issues d agitate." Issues like transfers within same town or city or overwork (cleri- staff have a fixed minimum daily ota of typing policy documents which quire only filling the blanks) are issues which one-day strikes are quite quent.

rst hit

sufferers, of course, are small insured d the in-between cadre of development icers who were earlier called the in- ctors and whose main function was to vide interface between the agents or client and the management. Says a de- opment officer in the Oriental Insur- ce Co, "We are the worst hit because our remuneration is linked to the total business we canvass. But client servicing, which is vital to canvassing business, is not in our hands." Major aspects of client servicing are issuing documents and set- tling claims expeditiously. The question- able productivity of the staff and the indecisiveness of the management make it difficult for the development officers to face clients.

Mony wants to change all this. First, he wants his marketing strategies intro- duced. Combined product marketing is one strategy to sell products. GIC Safe, a product offered by the newly launched GIC Mutual Fund, has the householder's policy attached to it. The premium will be paid by the mutual fund and the claim settlement for such policies has a special faster route. Says S.K. Mitra, managing di- rector, GIC Mutual Fund, "It is a good ve- hicle to market insurance policies." Similarly, Mediclaim is offered by Andhra Bank along with one of its deposit schemes. The mutual fund has mopped up Rs.250 crore already, indicating that the strategy is working right.

But Mony is cautious. Says he, "It is a double-edged sword. While such a combi- nation opens up a new potential, our men will have to closely follow it up to get the benefit." To explore the rural potential, Mony has introduced a cost-effective pro- gramme. "We have selected 80-100 dis- tricts for making a concerted effort in marketing insurance there," he says. The districts are selected on the basis of a rural marketing index on potential insur- ance business devised on the basis of available data.

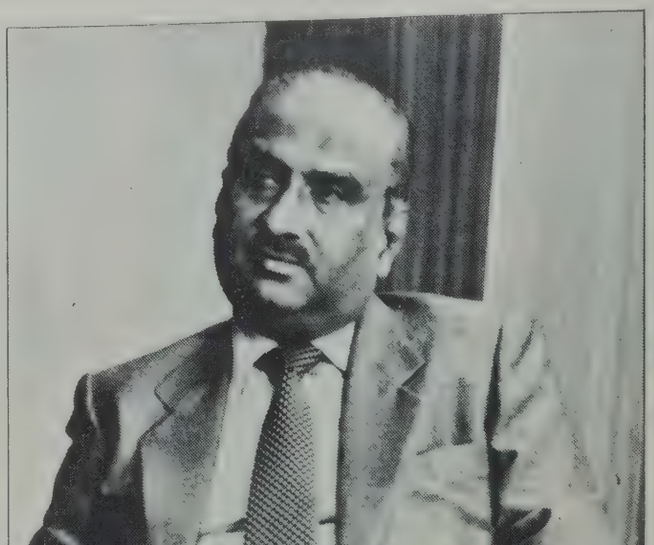
To alleviate customer grievances too,

Overseas operations

The GIC is represented either directly or through branches in 17 countries and through associate/locally incor- porated subsidiaries in 14 other coun- tries. Though one major market, the US, is still untapped, the foreign oper- ations in other countries have been profitable, with net premium income of Rs.714.36 crore and profits of Rs.36.85 crore between 1976 and 1989-90. The profits were 5.2 per cent of the net premium income generated abroad.

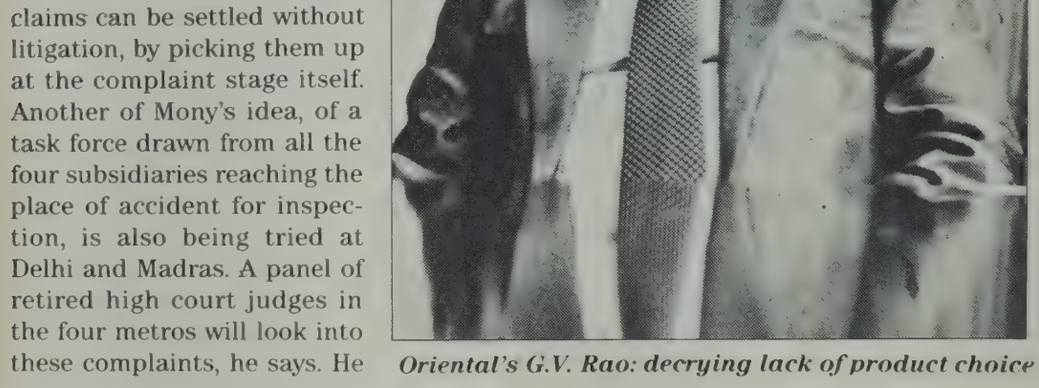
Among the subsidiaries, India Inter- national Insurance PTe Ltd, a fully owned subsidiary of GIC, incorporated in 1988, has outshone the others. Ter- med the second largest in Singapore, it had grossed direct premium income of Rs.42 crore in 1990. The performance of two joint venture companies in Mal- aysia and Kenya too is promising.

Minor losses. The United Oriental As- surance Sdn Bhd is a joint venture company between Malaysian interests and minority shareholding by Indian insurers. The unprofitable motor port- folio has caused some losses last year and is now being pruned. It has been decided to sell the life business.



The Kenindia Assurance Co Ltd, a joint venture between India and Kenya, was promoted in 1978. Indian companies have majority sharehold- ing. The company has been consis- tently declaring dividends besides issue of bonus share from time to time.

India International Insurance Co was set up in January 1988 as a wholly owned local insurance company in Singapore by merging operations of all the four companies in Singapore, with an initial paid up capital of S.$10 mil- lion. The company, in the very first year, showed a net profit of S$1.215 million and S$1.762 million in 1989. Profits for 1990 are estimated at S$2.1 million. This will enable the company to declare a maiden dividend on an en- larged capital base.



More than the earnings of these ven- tures, which are ploughed back in the local business, they serve as very use- ful contact points for reinsurance business from all over the world, in- cluding Europe, Japan and East Euro- pean countries.

GIC has taken a few steps. The *lok adalat* concept introduced in 1985, for instance, seeking to arrive at settlements between the claimant and the insurer through the mediation of retired judges, has shown tremendous potential. "In three years, 100,000 claims worth Rs.190 crore have been settled through this route," Mony claims.

Also, GIC has introduced a system under which motor claims can be settled without litigation, by picking them up at the complaint stage itself. Another of Mony's idea, of a task force drawn from all the four subsidiaries reaching the place of accident for inspection, is also being tried at Delhi and Madras. A panel of retired high court judges in the four metros will look into these complaints, he says. He is also willing to consider suggestions like linking motor insurance premium rates with drivers' accident experience, charging lower rates to drivers licensed by GIC-approved training schools and having a matrix of rates for repair work on the basis of cities and garages classification. To speed up insurance of documents, he is actively considering forming groups of clerical staff and development officers.

Oriental's G.V. Rao: decrying lack of product choice

New India Assurance: holds the entire Tata business

Yet, he agrees that the malpractices in the business are difficult to curb. It is difficult to have objective methods for claims settlement and secondly, physical check on insured assets also is not possible. It is in this context, that the agents become extremely useful to the industry. Though not employed with any insurance company, these agents who canvass business for a commission, keep contact with the individual policy holders. Ironically, however, after nationalisation, with most of the large insurance businesses becoming direct (having been linked to bank finance) and the commission rates for small business declining (now between 5 and 15 per cent), this class of "barefo workers" is fast disappearing.

The middle management employe function *benami* as they are not expect to canvass business. But they cann forego their client relationships or t commission. While for most agents ge eral insurance is just one more financ instrument to sell along with seve others. The result — insurance suffers the agents are not technically qualifi enough to advise clients leading ul mately to customer dissatisfaction.

Poor motivation

But what will marketing alone do wh the manpower is not motivated enoug Mony plans to bring in the necessary m mentum by carefully defining the co tents of the training programme f different cadres of insurance staff, wit "customer friendliness" as a major co ponent across the board. "It is a slo route," he admits, and so, to boost the er ployee morale, Mony also wishes to r vamp the HRD exercise. "Matching abilities with opportunities," is how h defines HRD. This he plans to do by ma ing systematic efforts to export insuranc services which has been sporadic so fa "We are also thinking of introducing good incentive package for our fiel staff," he adds. Hopefully, things wi change for the better.

While Goenka gave a rural orientatio to the industry, Mony, it is hoped wi make it "customer oriented". Mony hin self is confident of changing the stern fac of the insurance companies to custome friendly ones in the next few years. Ye will he be able to influence the behaviou of 75,000 odd employees?

But the root cause of all problems sti exists — absence of real competitio Would entry of private sector push th nationalised giants harder at giving be ter service to clients? "To introduce exte nal or internal competition is a polic matter for the govermnment to decide, says Mony. Regarding external competi tion he says, "Protagonists of competitio must be tempered." He clarifies that a lowing foreign competition would mea "dumping of services" by those com panies in India and therefore, is to b discouraged.

As for competition from the privat sector, Mony is non-committal. He onl poses a counter question, "Will the pri vate sector be willing to take up social in surance business too?"

ALPANA KILLAWAL

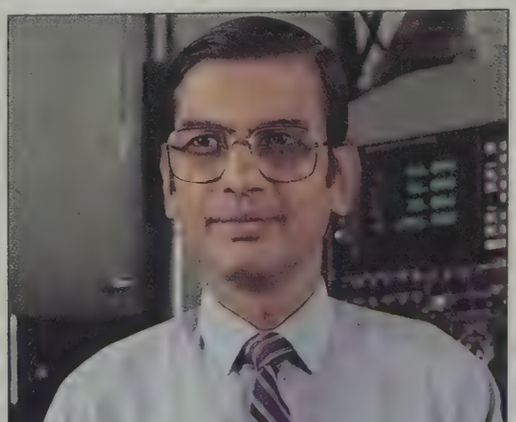
"A LEGEND WITH LEGEND"

INDIA'S FAVOURITE CAR TYRE

MRF RH L1

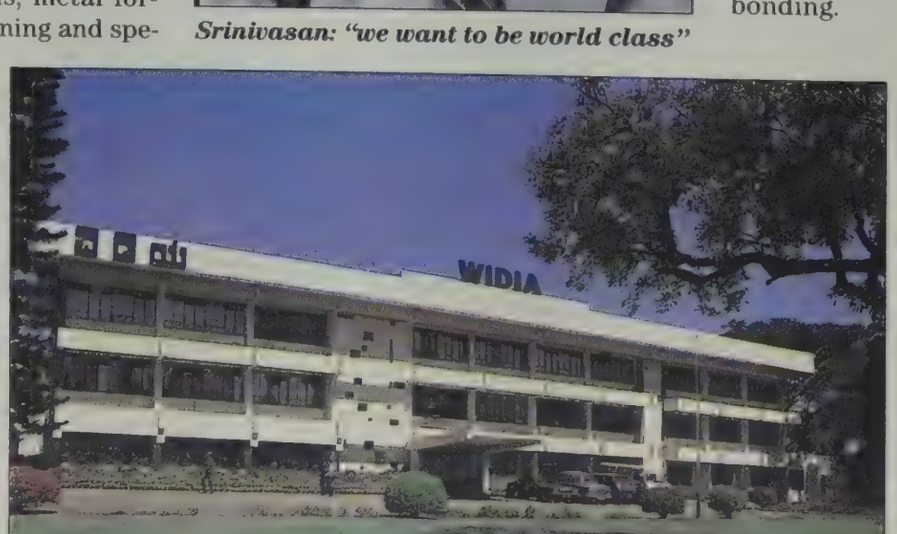
WIDIA INDIA

A cut above the rest



The quest for perfection and constant product innovation have given the company an edge over the competition

As Widia India Ltd, the country's most successful hard metals tool manufacturer, moves into its twenty fifth year of operation, managing director Rangarajan Srinivasan has much to be proud of. The 49-year-old son of a former chief justice of India is the first non-expatriate to head the Bangalore-based company, a position which he took over in 1981. And since then he has been the prime motivating force behind Widia's technology-led growth.



At Rs.68 crore, sales last year were up by 20 per cent, while profit before tax nearly doubled to Rs.7 crore. F.W. Frohlich, chief executive of Krupp Widia GmbH of Germany, which holds the controlling 51 per cent stake in the company, was obviously quite impressed. On a recent visit to India he said, "Widia India is a 100 per cent Indian-managed company and has proved to be of international standards. It has been a market leader in hard metals for the last three years."

Widia, which is a corruption of the German *wie diamant* meaning 'like a diamond', makes over 100 products, which include metal cutting tools, metal forming tools, tools used in mining and special purpose machines. Its users range from core industries like mining, automobiles, oil, steel and power to defence and manufacturers of products like blades, refrigerators, watches and even bullets. It has a 40 per cent share in a market that is estimated to be about Rs.150 crore annually.

Like in the international arena where Krupp Widia competes with the Swedish giant Sandvik, in India the German company's subsidiary fights it out in the market place with Sandvik's affiliate, Sandvik Asia. Three years ago, Widia took over the lead from its Pune-based rival and has since maintained it. Sandvik's turnover for 1990 was Rs.62 crore, though it continues to have an edge in profitability measured in terms of gross profit margin. As against 18.9 per cent for Sandvik in 1990, Widia's was 15.9 per cent.

Srinivasan: "we want to be world class"

Corporate HQ: market leader in hard metals

Sandvik officials were reluctant to comment on Widia's performance. Sa J.R. Sequeira, general manager, sales, "W are a good competitor to Widia in th market place. They have their own nich and so do we." Machine tool insiders fe that Widia has grown faster of late tha Sandvik because of a relatively more re sponsive international parent.

"Count down has begun"

Srinivasan is quite clear about where h wants Widia to head for in the comin years. "We want to be world class. Th count down to the 21st century has a ready begun and we at Widia realise tha perfection holds the key to continued su cess." This quest for perfection has man fested itself in the company's obsessio with technological advancement. "Ou high performance products and ad vanced technology are the result of inten sive R & D, supported by ultramoder manufacturing facilities and a compa nywide emphasis on quality," Srinivasa adds. Widia's two plants at Tumkur, ou side Bangalore, and Patincheru, in Meda district, AP, are among the most moder industrial plants in the country. A pro duction planning and control syster streamlines the entire manufacturin process with the aid of an online mai frame computer. Draughtsmen desig products on computer workstations. Sin tering furnaces are computer-controlle to achieve superior metallurgica bonding.

The two plants hav over 40 CNC machines During manufacture, so phisticated quality testing machines, includ ing laser measuring an marking machines, en sure adherence to exact ing specifications According to H.R. Gupta executive director, pro duction, "Adoption of in tegrated online qualit assurance practice makes the final inspec tion a mere formality – only to put the seal of ap proval on our products The ultimate test of ou quality is our customers rising productivity an their repeated preferenc for our products."

The company spend

se to 10 per cent of its turnover on up-ading its production facilities every ar. And as such is one of the few Indian mpanies that is in line to get the Euro-an Economic Community's ISO 9000 rtification for quality assurance which ll make it easier for Widia to export to stern markets. In fact, its Rs.4.57-crore ports last year went to countries like rmany, France, USSR, Japan and Aus-lia. Said Frohlich of Krupp Widia, "We ve decided to leave the Far East, in-ding the Japanese market, to Widia dia as it has shown it can compete in-rnationally and has the expertise."

Widia, no doubt, is only trying to emu-e what its German parent has been fa-ous for many decades — striving nstantly to be on the cutting edge of chnology. Says S.M. Patil, former chair-an of HMT and currently a consultant to ited Nations Industrial Developement ganisation (UNIDO) on machine tools, Vidia has an edge over its competitors cause of its high technology. Its collab-ator Krupp Widia is ways willing to part th technology."

Krupp Widia GmbH st came to India in 67, five years after ndvik had set up op in the country. eking total control their proposed dian operations the rmans decided not go in for a collaboration with any large Indian business house and settled for a little known industrialist called Autar Krishna as their partner. Krishna, whose family was originally into silver trading is the chairman of the company and has a 25 per cent stake in the Rs.5.49-crore equity of the company, but doesn't have much of a say in the day-to-day running of the company.

For the first fifteen years of its existence, the company was managed wholly by the Germans. It was the first to make sintered carbide tools in the country used in metal cutting. In fact, metal cutting tools are the mainstay of the company's production and contribute 45 per cent of its turnover.

Metal forming tools which were introduced later now make up 15 per cent of the turnover.

The third category of Widia's production is hard metals tipped tools used in mining and drilling, and they contribute 20 per cent of the turnover.

Special purpose machines which are responsible for the rest of the turnover constitute the most recent of Widia's diversification. And most importantly, according to Srinivasan, the technology that is employed has been developed wholly indigenously. So far, Widia has developed 130 SPMs for 25 customers. The selling prices of these machines vary between Rs.7 lakh and Rs.1.8 crore each. They take about 12 months to deliver.

For Widia, constant product innovation is part of its strategy to keep up with the changing needs of its customers, as also an effort to raise the level of technology of the customers themselves.

The customers are equally happy because of Widia's efforts. Says G.C. Parash Ramani, senior general manager, central engineering and R&D, Mahindra & Mahindra, Bombay, "Not only are the tools of excellent quality but their pre and after sales service is also very good."

Widia's edge over its rivals in technology, new product introduction as well as after sales service, has translated into rapid growth in sales in the last few years. In 1987, its sales grew by 11 per cent, in 1988 by 35 per cent, in 1989 by 21 per cent and 1990 by 20 per cent. But due to rising raw material costs, as well as large investments made for expansion and diversification, the company's gross profit margin went down from 15.9 per cent in 1987 to 12.7 in 1988 and 12.6 in 1989 before shooting back to 15.9 per cent last year.

Excellent performance

Its excellent performance last year has been the sole reason why the price of its Rs.100 per share shot up to an all time high of Rs.1,400 a few weeks ago. The company has had a very conservative dividend distribution policy, the payout never exceeding 20 per cent. But the investors are not complaining because in the last eight years Widia has made as many as three bonus share issues. In fact 92 per cent of its present equity is made up of bonus shares.

With Srinivasan leading the way, the future looks very bright for Widia. And the shareholders can expect to see the company perform even better. An engineering graduate of Guindy College, Madras, he went to Germany soon after to train at Buckau Wolf for a year. He joined Krupp Widia GmbH in Germany itself as an apprentice engineer and worked there for nearly two decades before being sent to India as the chief executive. "There is a great deal of optimism and challenge for us in the future. We shall continue to grow by placing ourselves confidently at the cutting edge of technology," he says.

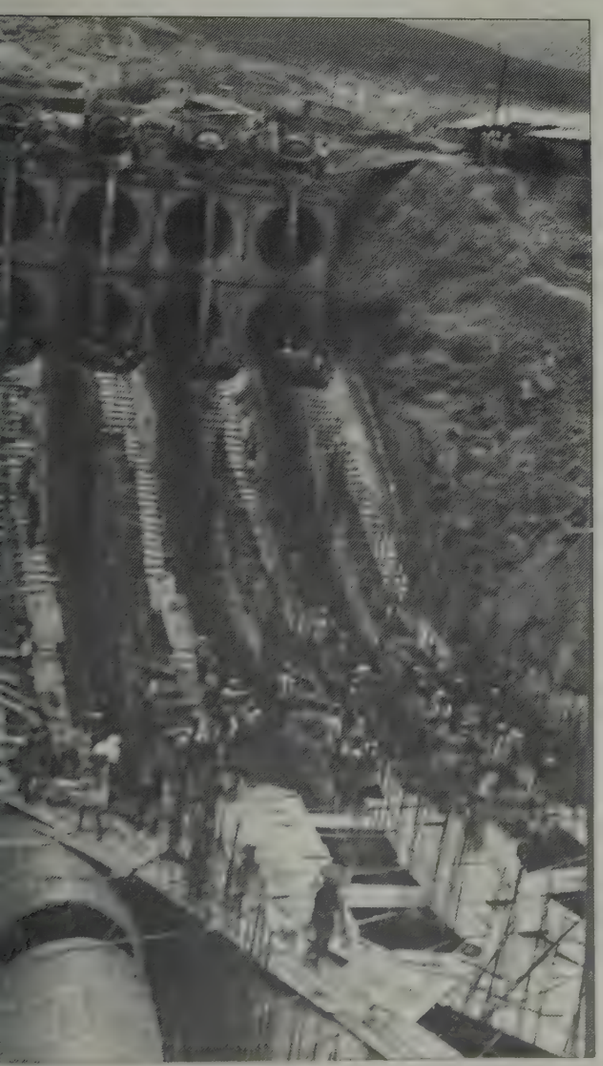
NNON DUNKERLEY

Bargains or burdens?



long running slanging match between brothers Ambika and Kamal rarka (present minister of state in the prime minister's office) have cast a dow over Gannon Dunkerley. The diversified civil contracts company has ently been in the news for attempting to take over two sick companies — pur Udyog Limited, a cement company in Rajasthan, and Hukumchand ls, a textile mill in Madhya Pradesh

Ambu Morarka: the belligerant younger brother

nnon Dunkerley, the Rs.122-crore flag- company of the group earns almost per cent of its revenue from civil con- ction. The other 10 per cent of its nover comes from textiles and trading extile machinery spares. Moreover, company also has several subsidiaries ling in edible oil extraction, textiles, ar processing, alcohol and rmaceuticals.

he company's forte is the building of ustrial structures and it has an envia- list of customers. Overhead expenses have been strictly controlled: wage costs as a percentage of its sales have actually declined over the last several years. This has helped it land orders in an extremely competitive market. The Gannon group also has a history of industrial shopping — buying sick companies. Hence its attempted acquisition of Hukumchand Mills and Jaipur Udyog Ltd, in line with the group's strategy in the past. It was major shareholder Kamal Morarka who introduced the strategy of taking over sick companies.

ur thermal power project

Gannon is owned by two investment companies — Ramkumar Morarka and Sons Pvt Ltd and Henry Davis Co Pvt Ltd, which own nearly 97 per cent of its shares. The two companies are themselves owned by the Morarka family. Four companies — Gannon Dunkerly Ltd, its own subsidiary Gannon Finance Ltd, together with Ramkumar Moraka and Henry Davis, often act in concert while taking over companies as in the case of both Hukumchand and Jaipur Udyog. Much of the actual evaluation of the companies to be taken over is done by professionals.

Gannon's bargains

Companies like Nimar Textiles and Kirlampudi Sugar Mills were acquired at a fraction of what a similar green field project would have cost. Says A.D. Chaudhary, executive director of Gannon Dunkerley, "A company like Nimar, with 25,000 spindles, would cost Rs.10 crore to set up while we paid only Rs.2 crore. A sugar mill like Kirlampudi with a capacity of 1,000 tonnes would cost about Rs.15 crore. We paid only Rs.3 to 4 crore."

However not all of Gannon's acquisitions have turned out winners. For instance, the group acquired Testeels Ltd in March 1986. It was in the business of fabricating and erecting pressure vessels and transmission towers. The acquisition price for 53 per cent of the equity was Rs.76 lakh and the group also infused Rs.2 crore into the company. However, according to executives, the lack of promised support from banks led to the closure of this unit. The BIFR decided that the unit was unviable and ordered its winding up.

Even its own subsidiaries have faced problems. Gannon Pressure Vessels Ltd was forced to close down in 1984. Chaudhary explains that the plant, which manufactured LPG cylinders, was forced to close down after 70 to 80 new licences were given and supply outstripped demand fourfold. Gannon has several other companies which it acquired or started which are today sick and have closed down. But the Gannon management believes that the two companies being acquired now dovetail well with their existing business.

In the case of Hukumchand Textile Mills, a composite unit based in Indore, they argue that it is an extension of their existing business in textiles. Kamal Morarka's father was chairman of the company and the Morarkas held 30 per cent of the stake in the company. Kailash Chand Agarwal (Kamal Morarka's first

ALL INDIA MANAGEMENT ASSOCIATION

18TH NATIONAL MANAGEMENT CONVENTION

on

Internationalisation of Business - The Key to Growth

26-27 July, 1991; Hotel Taj Palace Intercontinental, New Delhi

Convention Chairman
Mr Raunaq Singh, Chairman, Raunaq Group of Enterprises

Convention Advisor
Dr S Chandra, Director, International Management Institute, New Delhi

Speakers
Among speakers invited are :

■ Dr Manmohan Singh ■ Mr H S Singhania ■ Mr S K Birla ■ Dr J S Juneja ■ Mr T Thomas ■ Mr K B Lall ■ Mr M S Ahluwalia ■ Dr B K Modi ■ Mr M Narsimham ■ Mr Kalyan Banerjee ■ Mr M N Goiporia ■ Mr V Krishnamurthy ■ Mr J N Sapru ■ Mr R C Bhargava ■ Dr Ram S Tarneja ■ Dr B L Maheshwari ■ Mr Darbari S Seth.

Objective of the Convention is to highlight, deliberate, and discuss the key issues related to the theme and to generate new ideas, policy interventions and strategies.

Sessions will focus on Challenges and Opportunities for Indian Industry, Government Policies and Corporate Strategies and Strategies for Internationalisation of Indian Business.

Delegates will comprise of top, senior and middle level executives from the private and public sectors, financial institutions, government, academia and entrepreneurs.

Fee
Rs 1200/- for AIMA / LMA Institutional Members
Rs 1400/- for Non Members (Institutional/Individual)
Rs 600/- for AIMA / LMA Individual Members, Academics
Rs 500/- for AIMA Diploma, full-time MBA, IIFT Students

Collaborator : DELHI MANAGEMENT ASSOCIATION
Associates : All Other Local Management Associations

For delegate registration for the Convention
Institutional and Individual Members of AIMA/LMA may contact respective LMAs.
Non-member organisations and individuals may write to Sr. Dy. Director, AIMA.

MANAGEMENT DEVELOPMENT PROGRAMMES 1991

■ **Senior Management Programme**
19-24 Aug, 1991; Bangalore
Course Director : Mr M S S Varadan, Managing Director, Om Consultants Pvt Ltd

■ **Management Programme for Voluntary Organisations in Development (residential)**
16-21 Sept, 1991; Bangalore
Course Director : Prof V Padaki, Visiting Professor, Institute of Social and Economic Change

■ **Time Management for Women Executives (exclusively for women)**
3-4 Oct, 1991; New Delhi
Course Director : Dr Reena Ramachandran, General Manager, ONGC

■ **Top Management Programme on Information Technology in Management**
10-12 Oct, 1991, AIMA New Delhi,
Course Director : Dr Rattan K Datta, President, Computer Society of India

■ **Top Management Workshop on Corporate Strategic Management**
22-23 Nov, 1991, New Delhi
Course Director : Dr M B Athreya, Management Advisor

For particulars, write to:
Sr. Deputy Director, AIMA

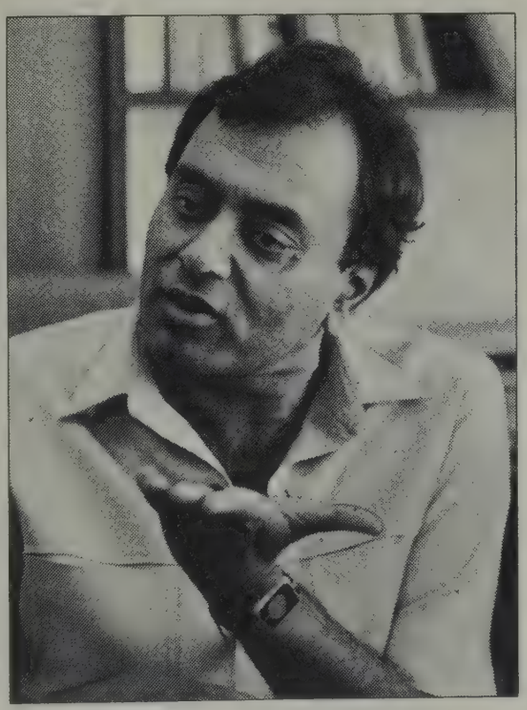
usin) was the main shareholder. How-
er, over the years the mill started losing
oney due to an indifferent management
d high labour costs. Its accumulated
sses were in the region of Rs.45 crore. It
s finally referred to BIFR where a re-
al package is now being worked out. In
nuary 1991 the Gannon group bought
ilash Agarwal's stake of 50 per cent.
e group has been running this mill for
e last three months and they hope to
hieve a turnover of Rs.50 crore in two
ars.

The Gannon management sees a win-
r in Jaipur Udyog. They point to the
gh cement prices and the likelihood
at the current imbalance between sup-
y and demand lasting till at least
94-95. Estimates of the Cement Manu-
cturers' Association put the shortfall at
ır million tonnes in that year. In such a
uation even a plant as inefficient as Jai-
r Udyog could make money. The attrac-
eness of JUL to the Gannon group is
at a green field project of similar capa-
y would cost almost Rs.200 crore. While
ipur Udyog has substantial liabilities
ese would reduce considerably in the
habilitation package.

JL mismanaged



veral members of the cement industry
ubt whether the current shortfall will
st more than two years. They point out
at 16 million tonnes of fresh capacity is
various stages of implementation. The
rrent surge in prices would encourage
isting producers to increase produc-
on. And if prices do not continue their
ward trend Jaipur Udyog has little
ospect of long term viability because of
e dismal shape it is in.

Jaipur Udyog Ltd, situated in Sawai
adhopur in Rajasthan, has been closed
nce 1987. Set up in 1947, it was owned
Alok Jain, part of the Sahu Jain family.
ipur Udyog Ltd has an installed capa-
y of 855,000 tonnes per annum with
ur kilns. Mismanagement by Alok Jain
ayed a major role in the company turn-
g sick. The main constraints that it
ced were lack of power, and deteriorat-
g plant and machinery — it uses the
tmoded wet process technology — and
gh transportation costs of limestone.
ts quarries are 20 kilometres away from
e plant and coal.)

JUL started making losses from
71-72 and faced its first closure in
75. In 1978, there was an abortive at-
mpt to nationalise the plant and subse-
ently it was run by a consortium headed by senior state government officials. The company, however, got caught in a spiral of low production and continuing losses. In 1987, the company was referred to BIFR and ceased production. Two years later BIFR passed a winding up order. It was only the eagerness of the Rajasthan government to find a suitable partner to restart the plant that led the BIFR to keep the order in abeyance. Gannon Dunkerley expressed its willingness to take over the plant in March 1991 after Alok Jain approached Kamal Moraka for assistance. Jain's shares were acquired for an undisclosed price.

Huge dues

The major problem that any rehabilitation faced was the huge amount of dues, both statutory and otherwise. Under the current package being worked out by the IRBI, these concerns would be laid to rest. The Rajasthan government has stated that it would waive the entire Rs.26 crore owed to it. The workers too have decided to scale down their outstanding from Rs. 19 crore to Rs.3 crore.

Kamal Morarka: corporate healer?

Whether the SBI will be willing to scale the Rs.34-crore in principal and interest and also agree to a moratorium on the payments is undecided. The bank is apparently willing to accept a one-time payment of Rs.7.49 crore as the initial capital lent, and is also willing to negotiate the interest payment. Its stance is that on no account would it be willing to accept a total write-off of the loans, because this would set an unhealthy precedent. It is also not willing to accept a moratorium on the payment of the principal account.

There are other technical problems. Limestone availability has always been a constraint. Now the Rajasthan government has promised the company new mining sites for limestone. While the management claims that the new sites will be about 20 km from the plant, sources in the Rajasthan government suggest that it could be as far away as 35 km.

Other cement companies point out that this is a long distance. An aerial rope-way to transport limestone from the quarry to the plant would cost more than the current rehabilitation package — Rs.33 crore. However the Gannon management plans to use trucks and has factored in Rs.105 per tonne of limestone while the mining cost alone should have been in the region of Rs. 45.

Wet to dry

Industry insiders point out that modifying the plant completely from the current wet process to the far more efficient dry process plant would cost in the region of Rs.100 crore. However, current plans are to continue using only wet process technology. According to Choudhary, "Two of the kilns should be operational immediately while the other two will take some time to revive." There is some apprehension in the industry regarding the size of the rehabilitation package. Out of the current package of Rs. 33 crore only Rs. 25 crore will be available for the renovation of plant and machinery, pollution control and for mining modernisation. This seems rather inadequate, but the Gannon management is confident of producing cement at Rs. 1,650 per tonne against the prevailing price of Rs.2,400 per tonne in the north. While they expect utilisation in the first year to be 50 per cent, they expect to touch 75 per cent by the third year.

Outside the group the takeovers are viewed with great scepticism. But since both companies are before BIFR, and their liabilities will be considerably reduced, the risk for the group is low. And if nothing else Jaipur Udyog has a large amount of real estate in Bombay, Delhi and Jaipur. If the Gannon group is able to make a success of these acquisitions, it could very well pull off a coup. If it doesn't, the largest risks will have to be borne by the banks who will have to finance the rehabilitation package.

At Modi Olivetti we'd never dispute the markable effect computers can have on e performance of your company.

(After all, we make computers because we elieve in them.)

However, we do dispute the dangerous ssumption you've probably made that *all* mputers are more or less equal—and *any* mputer can help transform your rganisation.

It's simply not true.

Because, ultimately, the performance of e computer system you buy depends on e way it's built.

And *none* of the computers sold by e 175 odd computer companies in India built the way a Modi Olivetti system is.

Take a closer look.

Each of our computers come from e Modi Olivetti factory at Rampur—one the most advanced computer production cilities in the world.

It's our way of ensuring you get Olivetti's uelly high international standards of erformance and reliability when you buy Modi Olivetti computer.

(For example, dust, moisture and ven fingerprints are banned—amazing isn't it ?)

You'll also be amazed to know that every indigenised component is first sent to Ivrea in Italy, for approval by Olivetti. Only then can we start using it. (Believe us, they're very very fussy.)

modi olivetti
WORLD CLASS COMPUTERS
AT INDIAN PRICES

This ensures the components of Modi Olivetti computer systems are standardised—and you'll never have a problem with spares.

(Here may we point out that according to a Dataquest survey published in Feb. '91, we're rated No. 1 in India for customer satisfaction.)

Finally each Modi Olivetti system is tested to the limit before it leaves us. And is then supported by the renowned 'Oliservice'.

Well, for details all you have to do now is get in touch with the nearest Modi Olivetti dealer or office.

Simply because it's probably the only way to really transform your company.

And that's the truth.

SOFTWARE THEFT IS A CRIMINAL OFFENCE.

Now's the best time to *talk* to Modi Olivetti.

Gentlemen, I'd like details of the systems I've tick marked below.

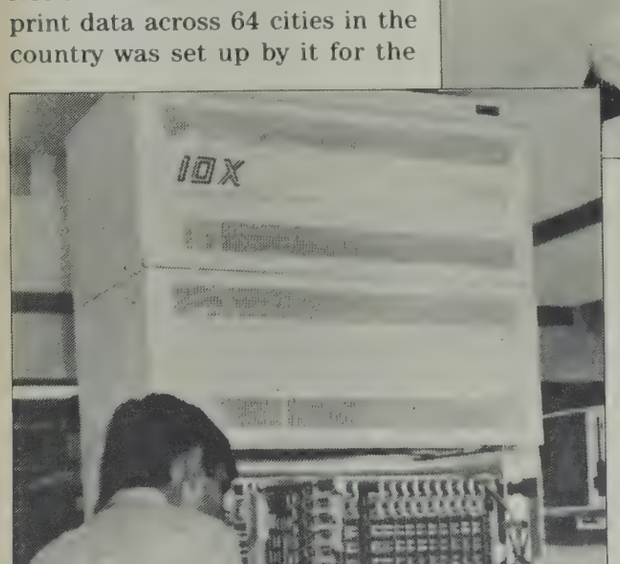
TATA TELECOM

The going is good



A systematic turnaround put paid to the poor financial performance that had marred the company's technical excellence and brought it a string of technological firsts in the telecom sector

The mood at Tata Telecom is upbeat. Late last year it notched up another first to add to the many that stand to its credit. The company produced its first electronic EPABX (electronic private automatic branch exchange) line in March 1988. From March 1988 to December 1990, the company's cumulative production of EPABXs at its Gandhinagar plant in Gujarat was 100,000 lines. No other Indian company has matched this performance so far.

Tata Telecom was also the first to set up the largest private exchange in the country — a 3,600-line exchange for Tisco in Jamshedpur. The first integrated private network of its kind called SB/Net that handles both voice and print data across 64 cities in the country was set up by it for the State Bank of India. Another first was scored with the setting up of an international voice cum data link — a project completed for Modi Xerox which integrates Modi's national network with that of Xerox International. The company's technical excellence was, however, till recently, marred by its poor financial performance.

V.K. Gupta: "we will not steal market share from competitors"

A 500-line IDX (Integrated Digital Exchange) system under testing

Current corporate statistics are more in line with the company's technical skills.Tata Telecom was established in 1986 with an initial investment of Rs.12 crore and a capacity of 50,000 lines a year, in technical collaboration with Oki of Japan. (A little over half of the company's Rs.4.5-crore equity is held by its promoters and associates while the rest is held by the FIs, the company's employees and the public.) But the company reached its breakeven point of 20,000 lines only in 1988-89. This meant that the company had accumulated losses of Rs.1.39 crore when it began fiscal 1989-90.

The losses were made worse because of several factors. First, the market was new — EPABXs were introduced into the country only in 1987-88. Second, the company's sales were poor as marketing outlets existed only in the four maj metros. Third, clients could not be s viced adequately. And fourth, the co pany invested heavily in its plant - compared to its competitors and th had to write off large amounts for depr ciation in the initial 2-3 years of t plant's operation. All this changed 1989-90 when the company expanded i marketing network, improved servicir (it conducts customer satisfaction su veys every six months now) and sol 42,172 lines. In that year it made a n profit of Rs.1.46 crore and wrote off th entire accumulated losses.

Similarly, the total number of lines pr duced increased by 74 per cent in 1989-9 compared to production in the previou year. Net profit in 1989-90 — before ac counting for the accumu lated losses — at 6 per cer of the total turnove (around Rs.25 crore) was i fact amongst the highest i the telecom industry. And a V.K. Gupta, general manage operations, Tata Telecom points out the company di even better in the first half o 1990-91, "Actually, ti end-1990 we had main tained net profit at 8 pe cent of turnover. However steep hikes in cash margin for imports followed and ou margins nosedived." Indi genisation of the company' product line is still fairly low at around 6 per cent and this makes the compan vulnerable.

More indigenisation

However, Gupta points out that the mar agement is aware of this problem. It ha decided to increase indigenisation by 1 per cent in the current year. Simul taneously it has made serious efforts t develop domestic vendors. Currently, th company purchases bare printed circui oards from domestic manufacturers. tie-up with the Ahmedabad-based Spac Applications Centre has helped it to de velop the expertise to test and evaluat them. This was not a capability it had ea lier. This domestic sourcing currentl saves the company forex to the tune Rs.1.3 crore a year.

In 1988, when the company first bega production of EPABXs the management projections indicated that the total a nual demand was round 150,000 lin and would grow slowly in the next 2-

Coming up in Bangalore!

FACILITIES OFFERED:

- ★ Single Point Custom Clearance & Inspection
- ★ Bonded Warehouses
- ★ Centralised Power Supply
- ★ Water Supply
- ★ Roads
- ★ Electronic Telephone Exchange
- ★ Satellite Communication Facility
- ★ Civic amenities like Banks, Post Office, Fire Brigade and Canteen etc.
- ★ Security.

field Industrial Area, near Bangalore, is being developed by
ne Karnataka Industrial Area Development Board as a 100%
ort Oriented Industrial Zone(EOIZ) with all the facilities that
exist in other Free Trade Zones.

ndustries like Electronics, Telecommunication, Informatics,
Goods, Automobile Components, Machine Tools, Gems &
lery, Watch and Watch Components, Bio-technology, Food
Processing, Diamond Cutting & Polishing, Essential Oils,
Agarbathis, Handicrafts, Silks etc., can utilize the facilities
provided at this ideally located Zone.

KSIIDC, as the Nodal Agency co-ordinating the establishment of the EOIZ, invites prospective entrepreneurs to register their claims.

Details of their project, like the product to be manufactured, estimated capital investment and turnover, employment, requirement of infrastructural facilities like land, power, water etc. may be furnished. Applications should reach on or before 15th June 1991, addressed to the Chairman & Managing Director.

MC/A/KSIIDC/64

years. However, the management soon realised that it had underestimated the growth potential of the market. The market grew at an average annual rate of 22 per cent and demand is now estimated to be around 250,000 lines a year.

The market would probably have continued to grow at this rate had the government actually implemented its proposal to spend Rs.20,000 crore on the Department of Telecommunications as scheduled in the Eighth Plan. Given the present state of the economy government outlays on this scale seem unrealistic. Tata Telecom therefore expects the market to grow at a much slower annual rate, say 5-7 per cent, in the next 3-4 years.

If the market does grow according to this conjecture, will Tata Telecom try to take away its competitors' market share?

Automatic functional testing for Analog Boards

Other players in the telecom market include Northern Digital Exchange (NODE) — a joint venture between the Thapars and the Punjab state government — Unitel, Escorts, BPL and Blue Star. But the market leader is clearly Tata Telecom.

At present, it has just about a fourth of the total market — it sold 60,000 lines in 1990-91. Its closest competitor, NODE, sold only 41,000 lines and can boast of only about 17 per cent of the market. Escorts's EPABX division is also a competitor but cannot compete across the entire range; the Escorts division makes only small EPABXs. (The product profile for Tata Telecom is 40:60 small and medium systems to large systems respectively.)

Few competitors

The only other competitor Tata Telecom would take seriously, says Gupta, is a revivified Unitel — its recent sale has apparently raised expectations of a turnaround in the next 1-2 years. Says Brigadier K. Balasubramaniam, Tata Telecom's managing director, "We score over the others because both our products and our manpower training are superior." In the last financial year, about 700 mandays and Rs.50 lakh were spent on training programmes.

However, Gupta points out that Tata Telecom will not really steal market share from its competitors. First, because government buying accounts for a significant share of the market and sales are made via tenders. And second, because even at the supposed growth rate of 5-7 per cent, the market will grow adequately to absorb Tata Telecom's entire production. At present, the Gandhinagar plant is already operating at 120 per cent of its installed capacity. And, in fact, Tata Telecom will be forced to increase its installed capacity — analysts forecast a doubling of capacity to 100,000 lines — if it is to maintain its market share in the modestly growing market.

But the company is also planning to diversify into other communication equipment. It has already signed a collaboration agreement with C-DoT to make digital UHF wireless communication systems with ten channels. It is also actively scouting around for foreign collaborators for other sophisticated communication systems.

A large part of the company's success is due to its superior technology. Both Tata Telecom and NODE use Oki technology, unlike also-rans like Unitel which used technology from GTE Belgium and BPL which uses technology based on that developed by CSF of France.

Several aspects of the Oki technology have proved beneficial to both Tata Telecom and to NODE. The Oki technology was good but more so the company, unlike other collaborators, kept its promises in entirety. High staff skills at both Tata Telecom and NODE enabled them to absorb the technology. In fact, Tata Telecom has now designed new EPABXs of 100 and 325 lines respectively that are not Oki products. Tata Telecom's collaboration agreement with Oki will terminate March 1993. NODE's agreement will a run out at about the same time. Gu would like an extension and indus sources feel so would NODE.

Different market segments

Interestingly, both companies have c ferent segments of the EPABX mark Tata Telecom is extremely strong in t private corporate sector and the banki and hotel segments. NODE is the big player in the public sector and the g ernment segments. Says Hemant Luth executive director, NODE, "The two co panies also have different regio pockets of strength. NODE is strong the south and the east. Tata Telecom h a virtual monopoly in the western regi In the north both of us fight for gover ment orders which make up the maj business." Industry sources also point o that Tata Telecom's 1990-91 producti of 60,000 lines compared to NOD 41,000 lines in the same year overstat the former's market share and also i flates the total demand in the year.

Apparently, Tata Telecom had ma large unexecuted orders on its ord book in 1989-90 which were carried out 1990-91 — if these are disregarded also the lines invoiced to Tata compani by Tata Telecom and to Thapar co panies by NODE, then it becomes appa ent that the order book position of t two companies for 1990-91 was roug comparable. (Gupta claims that of the t tal volume of Tata Telecom's busine other Tata companies account for onl per cent.)

Industry sources are more optimis about the growth rate of the entire ma ket than is Tata Telecom. They feel th the market will grow at least at 10 p cent per year in the next 3-4 years even the economy slows down further as the is a pent up demand that will have to met. In fact, some industry analysts a categorical that political stability af the elections could well see the mar grow at a rate of 25 per cent per year!

Some industry analysts believe th though the market will continue to gr there will be a clear shift in demand fr large EPABXs to small and medium on However, even if this happens Tata Te com and NODE will continue to domin the market. Escorts which makes o small systems apparently lacks top ma agement support and will pose no ch lenge to the big two.

TRACTORS

Turn for the better

Under favourable conditions, the industry is recovering from early losses and the manufacturers are gearing up for modernisation and expansion

While the last 12 months have brought considerable misery to several sections of the automobile industry, tractor sales are going up relentlessly. Like the proverbial tortoise, the tractor industry, down in the dumps only four years ago, has patiently moved ahead, and come on top during the financial year 1990-91, with a growth in sales of 15 per cent.

The dozen-odd tractor manufacturers have successfully churned out increased profits despite the bloating costs of tyres and steel, adding to the overall price of the tractor which has been rising at the rate of 20 per cent per annum. Nevertheless, industry observers are sceptical of how long the party would last.

The most important factor in the growth of the tractor industry has been the money disbursed by banks towards purchase of tractors. Besides, the National Bank for Agriculture and Rural Development's (NABARD) refinancing has been playing a crucial role in providing liquidity to banks for disbursing tractor loans. In the past (1982), a credit squeeze imposed by NABARD produced a recessionary effect on the industry. In the subsequent years, commercial banks flushed with funds supplemented NABARD.

Signs of a slow down

The current credit squeeze could turn ominous if extended to the agricultural sector and tractor sales may get affected. "The demand for tractors itself is good, but the resource crunch is posing problems and we see signs of a slow down. Our business is dependent on the lending available from banks to the farmers," explains Mallika Srinivasan, vice-president, Tractors and Farm Equipment (TAFE) of the Amalgamations group.

For 1991-92, the industry hopes to maintain its growth rate at 12 per cent achieved last year. Which means it has targeted a sales of 147,584 units valued around Rs.1,600 crore. Of this, NABARD has already finalised allocation of refinance assistance to the tune of Rs.320 crore to the banks for the year 1991-92 for the farm mechanisation programme.

"But this makes up for a mere 20 per cent of the industry requirement. Our industry is totally dependant on bank finance. In fact, 99 per cent of the tractors purchased by farmers is through bank loans. And so the tight money market with banks going easy on lending could have a crippling effect on the manufacturers," says Alan Durante, executive vice-president (marketing) of Mahindra & Mahindra (M&M), the market leaders with a 19 per cent share. However, companies with more than one product will continue to enjoy the benefits of diversified risk.

Some 82,000 tractors were sold in the country in 1986-87. In the subsequent four years, when fortune favoured the industry, sales acclerated, with an average annual growth of 14.2 per cent. And if the industry's optimism can be relied on, the 1986-87 figure is going to double in 1991-92, when 160,000 more farmers will become tractor owners. Says A.P. Gandhi, vice-president at Escorts Ltd, "We are targeting for a 17 per cent growth this year."

Tractor manufacturers are happy with the market condition that prevails. Sitting pretty in the sellers' market are Mahindra & Mahindra, Escorts, Eicher, TAFE, HMT and PTL (Punjab Tractors Ltd), which together control 97 per cent of all-India sales.

The generous monsoons witnessed during the last four years have doubtless contributed to this good showing. "But it is a combination of several factors—the government policy on credit availability, the increasing awareness about mechanisation in farming and, of course, the gener prosperity of the farmer due to good mo soons—that have all worked together bring about this boom," says S. Bhargava, chief executive at Eicher.

Crucial in deciding the fate of the tra tor industry is the government's role a credit-supplier. Which should be evide from the fact that no tractor is picked u for cash: it always reaches the farme through loan applications at banks. Th deep recession between 1981-82 ar 1986-87 is attributed by all to the credi squeeze imposed then by the RB though the two drought years of 1986 an 1987 contributed to the blow.

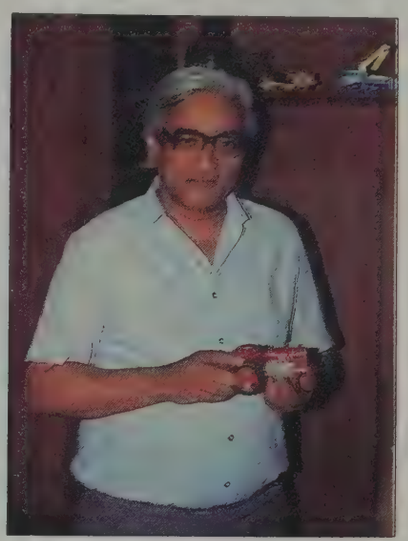
Photos: Vive

The Eicher plant: streamlined production

The first slump year saw a slide of 18. per cent in all-India sales, while the re maining four-year period witnessed a de pressing stagnancy, with annual sale hovering around the 75,000 mark. The in dustry was desperately trying to cut over heads, and production cuts (by 35 to 5 per cent) immediately registered in pro itability figures.

In 1987, the then government mad two changes in the existing rules goveri

g loans for tractors. The eligibility qual-cation of owning at least 10 acres was duced to 8 acres, and the repayment eriod extended from 5 to 7 years. And, most miraculously, tractor sales began boom. Says Bhargava, "It's not just the ecision that mattered. It was the politi-l message sent to the lending institu-ons about giving priority to the gricultural sector that made all the fference."



What made the recovery of the industry ppear all the more spectacular was the per cent leap in sales during 1987-88. here was a pent-up demand," explains Ganapathy, general manager, market-g, at Eicher, "the farmers were in need machines, so the moment finance be-me available, there was a rush for actors."

apacities increased

here was a mad scramble then for en-ncing capacities. TAFE raced ahead in e 35 hp category, increasing production om 11,500 machines to 15,000. Escorts, hich was churning out 4,100 tractors nually in this category, almost doubled s production in one year. Eicher, a ader in the 25 hp segment, also went full rottle to hike output from 11,800 to ,600 tractors a year. PTL, which was oducing a measly 1,800 25 hp tractors 1985-86, touched 3,900 mark next ar. After languishing in a lull for over e years, the industry was only too eager storm a receptive market.

And when the market grew, it was not ly demanding more tractors, but doing in new areas as well. Hitherto, the tra-tional market for tractors comprised e northern states of Punjab and Hary-a. But tractor companies began char-ring new territories, and found the exercise rewarding.

These include the sugar belt of Maharashtra, where M&M is establishing a niche, the eastern tracts of Uttar Pradesh, where Escorts and Eicher are making it good, southern Andhra Pradesh, where TAFE is pushing hard, and the hinterland of Madhya Pradesh, which is proving to be a hotly contested ground because of its vast market potential. While the traditional Haryana market could grow by only 8 per cent last year, Maharashtra, Gujarat, Karnataka and Madhya Pradesh had growths ranging from 15 to 20 per cent. Sales in Andhra Pradesh shot up by 22 per cent, while Uttar Pradesh topped honours with a whopping 28.5 per cent growth.

Bhargava: "political message"

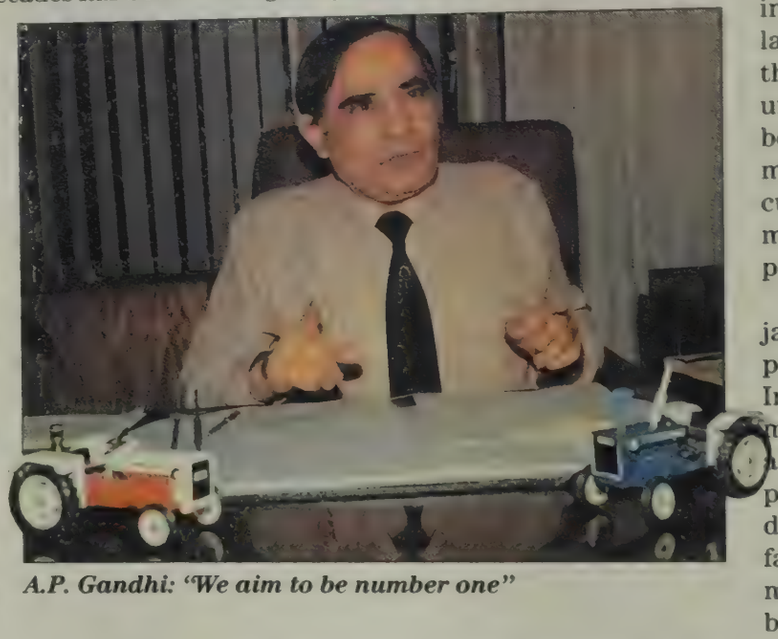
While the companies were doubtless raking it in, there was a fierce competition brewing. "That ensured that there was no complacency on our part. Our quality had to be the best," says Gandhi of Escorts. Adds Bhargava of Eicher, "Despite a boom market, several didn't make it, like Kirloskar, the public sector UP Tractors and Bihar Agro." The ones that did have, in the last four years, coupled capacity upgradation with improving designs and models and getting new technology for enhancing product performance.

Eicher went in for a Rs.16-crore modernisation programme to streamline production at its plant at Faridabad in Haryana, and is planning a further 35-crore investemnt in its plants at Alwar in Rajasthan and Parmano in Himachal Pradesh. It also introduced a new 8-gear model with automatic depth gauge operation, and is working on the design of a special model for use in paddy operations.

Escorts has brought out a new range of fuel-efficient tractors in all three horsepower segments, with design variations to improve the transmission box and with a different sheet metal covering. The main attraction of this series, though, is a multiple-utility 12-gear operation. Says Gandhi, "We have to constantly upgrade our tractors, but at the same time, we are working on other farm-related equipment." Escorts is buying technology for a 'combine harvestor' — a cutting and threshing machine for post-harvesting operation. Explains Gandhi, "With the increasing mechanisation in farming, we foresee a good market for the harvestor which is 15 per cent more efficient than human threshing work."

M&M have recently introduced the direct injection series in the 25, 35 and 45 hp range. "Besides being 20 per cent fuel efficient, the oil change is one-fifth of what it was earlier. Also, because of direct fuel injection, the tractor has no starting problem in cold conditions — a major hassle in the North. This will help to increase the battery life," explains Durante.

Meanwhile, TAFE is setting up a new plant outside Bangalore, in phases. The company is already assembling tractors at this plant, but this activity will be stepped up with an investment of Rs.20 crore planned for this plant over the next two years. The main plant at Semliam, Madras is also being modernised to upgrade the tractor models. "Fuel efficiency will be the main focus, with a targeted improvement of 5 per cent in this area in the next 2 to 3 years. Comfort and aesthetics are other aspects being looked into," explains Srinivasan.



Unlike other automobiles, tractors don't come in differnt shapes and sizes. For the layman, if he's seen one, he's seen all. But the average farmer knows better. Broadly, tractors are characterised by the power their engines can wield. Indian

w Escorts models: more fuel-efficient

machines normally come in the 25 hp, 35 hp and 50 hp categories (though the former varies from 24 to 30 and the latter from 45 to 52). The volume of 25 hp tractors has grown sharply since 1985 when it occupied a mere 24 per cent with just three players — HMT, Eicher and Swaraj. Thanks to a government decision to exempt tractors of less than 1800 cc (roughly 30 hp) from paying excise duty. Its share of the Indian market today is 35 per cent. The top-selling segment is the 35 hp machine, which accounts for 47 per cent of all tractors sold.

Eicher, which for two decades has been producing only 25 hp machines, is expectedly the leader in that segment, servicing 43.4 per cent of the market. But competitors are hot on its trail. HMT and PTL have always had a competing model, but their sales have not been commensurate with the growth in the market. M&M introduced a model in this category in 1986, and already has cornered 14 per cent of the market. TAFE similarly entered this category as late as 1988, and today has 11 per cent of the market.

A.P. Gandhi: "We aim to be number one"

In the largest-selling 35 hp segment, there is stiff competition among TAFE, M&M and Escorts. The former has a slender lead at the moment, but must be finding it tough with the others virtually breathing down its neck. In 1990, while TAFE sold 19,300 tractors, M&M notched 16,500 and Escorts delivered 10,700. Also, Eicher, for long sheltered in the lower end, has finally decided to move up the power line. It is now test-marketing its version of the 35 hp model, and expects to start regular production in mid-1992. It's also going in for a foreign collaboration for the manufacture of 50 hp engines.

Among the more powerful variety, which account for 17 per cent of the total market, the Ford tractor of Escorts Tractor Ltd (as distinct from Escorts Ltd, though under the same management) holds the fort. It is followed by M&M, with the Masser-Ferguson model of TAFE in third place. Overall, it is Escorts (combining the Escorts and ford models) which is *numero uno* in the Indian market, with sales in 1990-91 of 35,109 machines. M&M is all-india runner-up with 26,885 and is followed by TAFE and Eicher with about 21,000 each.

The improvements in product that competition has spurred has also been accompanied by aggressive marketing. Escorts claims it has the 'largest and best' network for an effective sales pitch. Eicher late last year hired four video-on-wheels which are doing the rounds in MP and UP, which, according to the company, is proving to be an excellent marketing tool. The Tamil Nadu-based TAFE, which is fighting vigorously for the MP market, has more than doubled its team in that state. Says Bhargava, "The farmer is a cautious customer and a discerning buyer. He has to be totally convinced."

Cyclic industry

While eager to stress on sales, tractor companies are a trifle lukewarm when talking of profitability. Says Bhargava, "If we have increased profitability by 6 to 8 per cent in 10 years, it is no crime." According to Gandhi, "Return on investment is up, but it is being ploughed back. I won't say this industry has reaped profits, like others have." Nevertheless, while cost has been going up 7.5 per cent annualy (except 1990-91, when it shot up 10.4 per cent), retail price increase in tractors has averaged 9 per cent.

Historically, the tractor industry has been plagued by a 6 to 7 year cycle of ups and downs. The 1972-77 slump was followed by a six-year boom, when again the brakes were applied by the 1982-87 recession. The boom began in 1988 due to good monsoon and the government's attitude in the agricultural year. The question being asked now is "how long will this bo last?" Quips Gandhi, "Well, we can hop defy the cycle this time." The Eicher m agement, however, appears cautious, it has only targeted for an 8 per c growth for 91-92. Explains Bharga "Keeping in mind the precarious finan status of the country, a credit squeeze the near future is not unexpected."

However, all companies feel that eve such a squeeze does materialise, it wo last long. For whichever party or coaliti comes to power, they reckon that the a cultural sector is the last to be touch for resources. Moreover, while the gro ing population rate as evidenced in t latest census is causing concern to ma the tractor industry (at the risk of bei uncharitable to it) is viewing this wit benevolent eye. "You will have lots mo mouths to feed, so we cannot afford a cutback in the agricultural sector: a mechanisation is the best way to enhan productivity," they chorus.

If the intensity of tractorisation in Pu jab is any indication, there is a mammo potential waiting to be tapped in t Indian market. The growing awareness mechanisation along with the promise a fourth successive good monsoon, mak prospects of the industry appear brigh delivering more and more power to th farming sector. As one industry spoke man said, "Others may just talk about but it is we who actually give power to t people."

Tractor sales, however, will be affecte by any change in terms of credit for tra tor loans. If the minimum landholdi size is reduced, a greater number of sm farmers will be induced to buy tracto The number of tractor loan applicatio will also increase if the loans repayme period is extended or the interest rate loans is lowered. Another important fa tor is the agricultural policy and the location to agriculture in the total uni budget. Also the allocation of expen ture to irrigation in the agricultural bu get would have a bearing on the tract industry. Interestingly, the effort to intr duce irrigation in monsoon-depende states coupled with the spread of gre revolution to the rice-belt areas will c ate new markets for tractors. The mul ple applications of the tractor on and the field is yet another factor contrib ing to increased tractor sales. But all t boils down to the availability of insti tional finances.

■ R.S. VENKATESH with LANCELOT JOSE and DHARANI K. PA

Shhhh.

Discover the secret that Telco, Maruti, Premier, Ashok Leyland, Eicher, Bajaj, DCM-Toyota, Escorts and Mahindra & Mahindra share.

There are whispers in the automotive industry. Whispers about the Standard Furukawa battery's outstanding performance.

And that's not very surprising, really. Considering that the battery is made by The Standard Batteries Limited, an associate of the Macneill and Magor Group, in technical collaboration with The Furukawa Battery Company Limited of Japan.

Furukawa is the largest supplier of O. E. (Original Equipment) batteries to Suzuki, Japan, and is also a supplier to Honda, Nissan and Toyota.

What's more, the Standard Furukawa is made with 1.8% selenium. It has the lowest antimony content amongst all Indian batteries. Which means, it needs topping up less frequently and less maintenance. That's why the last 18 months have seen more and more leading manufacturers using Standard Furukawa as O. E. batteries.

So if you're replacing your vehicle's battery, listen to what the manufacturers are whispering about. The performance of the Standard Furukawa battery.

STANDARD FURUKAWA AUTOMOTIVE BATTERIES

Advanced, by design.

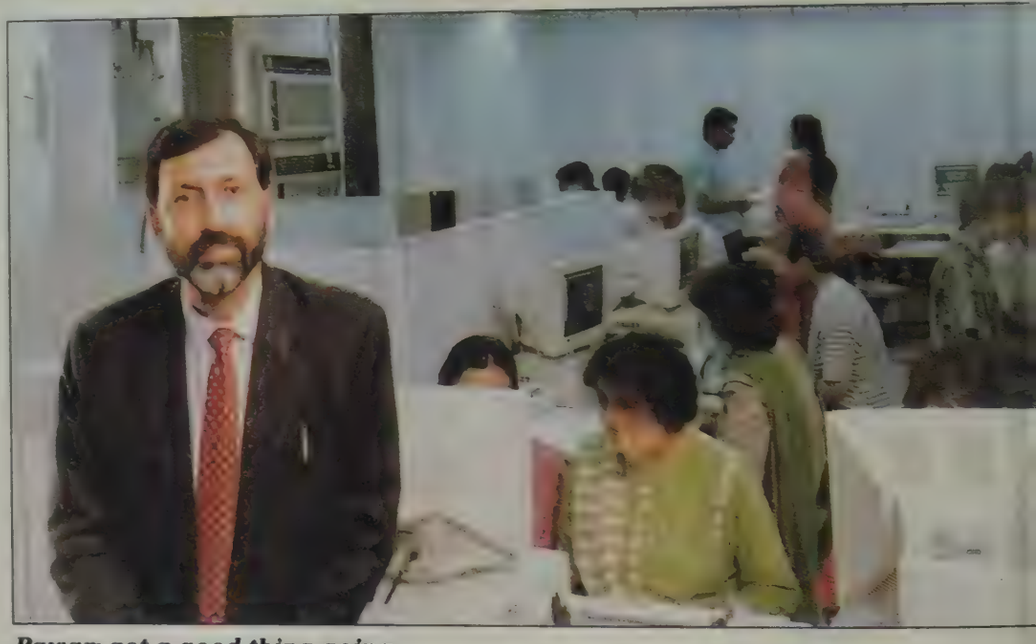
NIIT

Expanding its horizons

Over the past decade, the National Institute of Information Technology (NIIT) has managed to establish a sound reputation in computer education — a reputation which has now taken NIIT overseas in search of new opportunities and also prompted it to restructure its domestic operations.

Recently, Singapore's National Computer Board (NCB) selected NIIT to impart training in Unix for its systems education centre. The US-based Educational Development Centre (EDC) also tipped NIIT to develop software for its interactive video disc programme. And last week, the institute got an RBI clearance for setting up its first office abroad. With this, the Rs.25-crore company has come a long way from being only a computer training institute.

Much of the credit must go to managing director Rajendra Pawar, whose gusto and innovative skills have made NIIT a name to reckon with. But Pawar modestly defers to NIIT's highly-trained employees, saying that they have made it all possible. In fact, of the total work force of 800, 200 are MBAs. Ashish Basu, head of instructional R&D, is one such. An MBA from IIM Bangalore, Basu has been with the company since 1983 and has no intention of shifting jobs. He says, "Job satisfaction is important. And here, that is the big plus point."



The story of NIIT began in the early eighties during a computer boom, leading to a demand and supply gap in computer personnel. Pawar, then corporate planning manager, with Hindustan Computers Ltd (HCL) was quick to take advantage of this. He realised that though the hardware companies provided in-house training facilities, training would never be a priority area with them. Scarcity of computer professionals would prove to be a major constraint to the growth of the computer industry. So Pawar left HCL to set up NIIT in Dec ber 1981. His friend, Vijay K. Thadani Keltron to join him. Says Thadani, "(friends were very skeptical about whole idea, as private education was c sidered a shady business." But little they know how wrong they were.

Teething problems

Like any other new enterprise, NIIT had its teething problems. Says Pawar, was a nightmare initially. No bank w ready to finance a coaching centre as th were not sure about returns." Finally, t Indian Overseas Bank (IOB) bought t idea. NIIT was set up with a start-up ca tal of Rs.12 lakh.

Interestingly, Shiv Nadar, chief exe tive officer of HCL, is a major shareholc in NIIT. He is not, however, involved in t day-to-day operations of the company. he does is to look at the performance ports of the company once a quarter. spend not more than two or three hou on it," he says. Apart from Nadar of HC the rest of the shares are held by Paw Thadani and P. Rajendran, who also signed from Keltron to join the duo.

From one training centre in Bombay 1982, NIIT now has 25 centres spre over seven cities, apart from the 53 fra chising units which contributed Rs.2 crore to the turnover of Rs.18.7 crore the year 1989-90. NIIT also earned a profit of Rs.3.08 crore and declared a di dend of 125 per cent. Today, the co pany's reserves stand at Rs.15 crore wh its share capital is Rs. 23.89 lakh. T company is very sound financially and on the verge of a public issue, said to be about Rs.10 crore.

Pawar: got a good thing going

Courses are frequently designed and re-designed to meet changing needs

Like most private stitutes, NIIT ini- ally adopted urses from foreign iversities. But ese courses proved be unsuitable for dian conditions. war then decided indigenise the urses.

The new courses clude a two-year vanced pro- amme in systems anagement to pre- re Indian profes- nals for using the test international ftware. The mputer-drome set in Delhi, which is to begin functioning, will help NIIT udents make maximum use of com- ter time.

In addition, a "take a computer home" heme was launched in Bombay and ne only. Under this scheme, NIIT allows udents to take a computer home during e duration of their courses. "The heme was launched in Bombay and ne because NIIT was facing increasing mpetition," says A.D. Narula, director, ining, at Datapro. He adds, "The heme was a very astute move." Nishar rees and says it is, "a very clever mar- ting move".

Winning team: Pawar, Thadani and Rajendran

aximum learning

ys Gopal Chakravorty, head of the edu- ion services group, "Today we are in a sition to design any course which could e maximum learning." Almost 50 peo- are exclusively involved in the R&D ef- t, which accounts for 12 per cent of T's turnover. "This is necessary," says adani, "to keep up with the pace of anging technology. A very efficient R&D m is a must."

Today, NIIT courses even have credit ommendations of the American Coun- of Education (ACE). This is an asset en NIIT students apply for admissions American universities. Apart from this, T will also begin a credit course at RI, Jamshedpur on a regular basis. ul Nishar, managing director of Apple sing and Industries and a competitor s, "They are very good at marketing, y create concepts out of nothing."

NIIT's success soon attracted others to area and Apple, Computer Point and Datapro entered the fray soon after. But, Thadani claims, "We pioneered quality computer education in the country and will continue to be ahead of others." Again, he says, private education has an edge over the conventional education system in this area since it takes a longer time in the latter's case due to governmental hindrances. Moreover, since the syllabi have not kept up with the changes in the industry, programmes like the masters in computer application (MCA) at the universities have actually become redundant.

However, being only a computer training centre was not Pawar's goal. Says Pawar, "Today, education is not a high growth area. Moreover, it is becoming more competitive." The high growth areas are end-user computing, information systems planning, development of computer systems and turnkey solutions.

As a result of this, NIIT has restructured itself into two separate business groups — the education services group (ESG) and corporate services group (CSG) — to meet the challenges of the international market. While the ESG caters exclusively to training, the CSG looks after consultancy, software development and exports. Though the ESG continues to be the major revenue earner (60 per cent of the total turnover), the thrust in this decade will be in the CSG. Arvind Thakur, general manager of the CSG, expects it to contribute 50 per cent of NIIT's total turnover by next year.

Exports will play a major role in the next couple of years. NIIT has tied up with a number of companies in the Far East, Middle East and the US for developing software and providing customised training and computing technology. The company has participated in three major computer and technology exhibitions — the Comdex 90 and CBT Conference in the US, and Cebit 91 in Europe — to get a feel of the market abroad.

NIIT plans to define and enter clear-cut niches rather than go for general exports. It entered the international market only last year, with a careful foray into computer consultancy. Its first office is being set up at Atlanta, US, and is being headed by C.N. Madhusudan, who earlier looked after human resources development and corporate planning at the head office. He will market software products developed by the company's advanced technology group. The company will be marketing five software packages developed with the overseas customer in mind.

Getting a feel of the market

Says Pawar, "This is the first step to make our presence felt in the international market. The Atlanta office will initially study how to deal with the customers there, set up closer interaction with all the companies we are dealing with now, follow up the leads that were generated during the various exhibitions and fairs and study the market." Similar offices are planned for the Far East also. Says Thakur, "We are also looking at partners overseas who could market our indigenously developed products abroad."

With a 60 per cent growth rate, the three musketeers, Pawar, Thadani and Rajendran, are all set to reach the Rs.100-crore mark by 1994. Even though the computer industry is currently facing a recession, the NIIT top brass remain confident about the growth of information technology industry. Says Pawar, "At least for this decade, the industry will continue to grow at 20 per cent plus. May be not as fast as it did earlier but definitely at a good pace."

NO ROCK 'N' ROLL

BASSURROUND

THE SANYO MCD-Z50 BASSURROUND
Nothing But Solid Sound

Turn it on and you'll know why you won't get any rock and roll in Sanyo's sleek, new MCD-Z50 Bassurround - the CD, tape and FM/AM portable.

You see, we've added strength and weight to the speaker enclosures, so you get pure, vibration-free music - even when you turn the volume up. You'll appreciate how Sanyo's newly developed Straight Duct Twin Chamber Play gives you a solid bassurround stereo sound. What's more, Sanyo's straight duct mechanism reduces low-sound distortion for better reception. Put them together and what you ultimately get is a feature-packed remote-controlled portable that gives you nothing but rock and roll-free music.

So, if you really appreciate pure, solid music, you'll love Sanyo's new MCD-Z50 Bassurround.

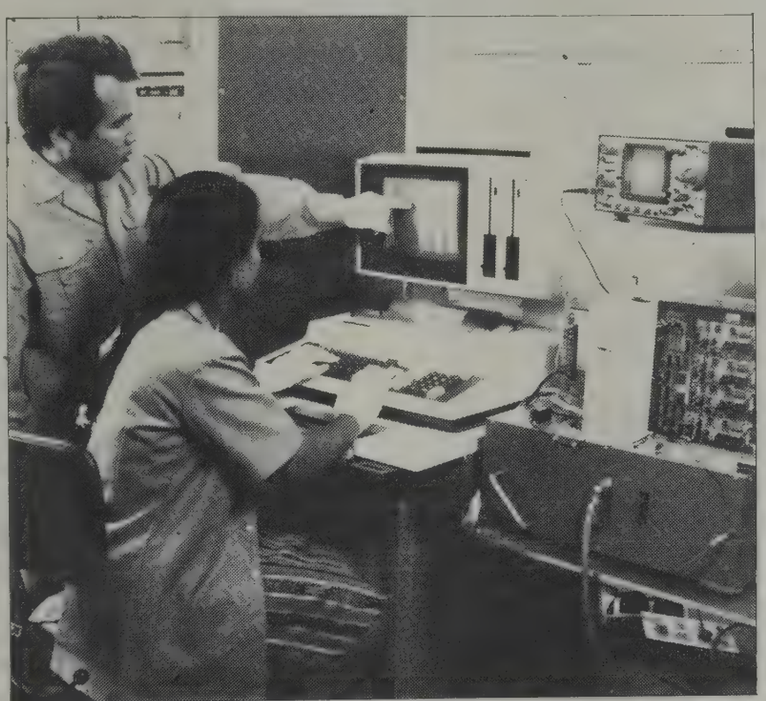
RENCHMENT

painful downsizing

irst inkling that something was at Hindustan Computers Ltd came during the last week of . A senior manager at the company, as wooed back three years ago and promoted thereafter, was asked to nother job. Says the manager, "We nformed that the company's funds on was not good; that there were too receivables. And that a course of ad been planned to 'rectify' the situ-." The first to go were 350 orary, marketing-support and ad-trative staff hired to handle the ex-usiness during the final quarter of ar. Subsequently, a number of regu-nployees were also asked to leave.



L's decision to sharply trim its strong work-force comes after a dif-financial year for the computer in-y. Some industry analysts believe ayoffs were a pre-condition to the er of HCL's computer division with ett-Packard. (In fact, several of competitors are categorical that as as 30 per cent of the total number ployees at HCL will have to go be-of the terms of the merger).

kers

company touched a turnover of 8 crore in 1990-91, but stretched it-nancially in the bargain. Receivables ear stood at the equivalent of 126 sales. "During the year the company to sell its receivables in the market toring companies but there were no s," says Thomas Joseph, senior vice-dent of International Computers n Manufacture (ICIM). HCL's le-e grew in a three-year period from 1988 to 4 in 1990, making it partic-vulnerable in the current down-

umber of other companies are now ing the HCL route. ICIM which tou-sales of Rs.81 crore in 1990-91 — 30 nt higher than the previous year — od-bye to 120 people in 1990 (a 12 nt cut). Zenith Computers, which ded sales of Rs.30.5 crore in the year, 20 per cent higher than that in will lay over a 100 people off this Wipro Infotech and Hinditron will ewise. Trimming manpower is now dustry-wide strategy. Says Shashi director of Modi Olivetti, "The mo ment the industry got into trouble it used the soft option: get rid of people!"

The seeds of the present problem were sown in 1988-89, when a set of tax incentives fuelled tremendous growth. The investment allowance and the depreciation prompted people to buy more computers to save on taxes rather than to meet actual needs. "This explosive growth phenomenally increased the use of working capital. Excessive working capital needs also indicated that sales were recorded but had not been paid for," says Joseph. As demand grew, companies expanded, added infrastructure and hired more employees.

Changing technology needs new skills

Simultaneously, their debt also grew. Vendors had to resort to borrowings to fund growth, thereby putting profit margins under pressure. Outstandings, which on the average stood at three months of sales, worsened the pressure. "The main growth segment was personal computers where profit margins are traditionally small. Profits work out to 5 to 7 per cent of sales realisation after overheads but excluding interest costs. So if you can't collect money within three months, your profits disappear," says Joseph.

No clue

Demand soon settled down to a more sedate level in 1990, once the fiscal incentives were withdrawn. Vendors were not, however, unduly concerned as sales are normally skewed towards the final quarter — the bulk are made in the second fortnight of March. But the Gulf war and ensuing forex crisis prevented that from happening.

Despite clear indications of a slowdown, recruitment continued in the hope that sales would pick up as usual. Zenith and HCL, in fact, hired people just before the final quarter of 1990-91. Says Ullal, "Basically, management skills in the accepted sense do not exist in the industry. People are catapulted into key positions without any experience. So, when the industry found itself in a crisis most senior managers had no clue on what to do."

Not everyone went through the same phase. ICIM, which had accumulated losses of Rs.6 crore in 1989-90, reorganised its operations. Says Joseph, "We made a decision to retrench purely on a skills basis." As technology has changed, the skills profile of employees has also changed. ICIM, DCM Data Products and Modi Olivetti — three companies which consolidated their internal operations — thus had a good year.

Now, with the first quarter of 1991-92 already over and the Computer Society of India's annual carnival scheduled for September, no buyer is expected to make any major decision without first viewing the latest technology on display. So, demand will stay slack. Companies seem to be acutely aware of this.

For example, as headhunter Satish Doshi points out, Wipro Infotech, a more conservative company, is not hiring any marketing people for the next four to six months. It is not even filling vacancies caused by people who have left. "When it comes to pruning costs, manpower is always the first consideration," explains Raj Saraf of Zenith computers. The layoffs could be a precursor of more drastic restructuring in the industry if the bad times become worse.

■ AROON SARKER

ABSOLUTE MAJORITY!

Right through 2 decades!!

Leadership in Readership

Consistently acclaimed by

NRS I, NRS II, NRS III and NRS IV-1990

Fourth National Readership Survey, IMRB and Media Search 1990 places Daily Thanthi at the top of the chart in Tamil Nadu where it belongs, for over two decades.

Now, Daily Thanthi is,as ever before, the No.1 among Tamils in Tamil Nadu and Pondicherry. The just released NRS IV – 1990 findings also demonstrate Daily Thanthi's growth on all fronts in all classes and categories.

- Daily Thanthi's urban readership has grown from 27.08 lakhs (ORG – NRS '89) to 33.50 lakhs (NRS IV – 1990).
- Daily Thanthi's total urban readership is 61.40% of the total Daily readership in Tamil Nadu.
- Daily Thanthi's sole readership is 17.80% of the total Daily readership in Tamil Nadu.
- Daily Thanthi's Madras Metro readership of 9.58 lakhs is 57.89% of any Daily readership.

THE NO.1 TAMIL DAILY

rocessed food exports: a irage?

ong various areas identified by var- s government and business organisa- is as thrust areas (ie, areas of hope) the future of exports is that of pro- sed food exports. The vast resources country has in terms of sunshine, fer- land, various climatic regions, good fall and so on, the theory goes, can be nslated into large exports of food ducts.

urther, the proponents say that pro- sed foods fetch better prices than raw mmodities and so are the hope of the re for large export earnings. If this ory is not applied carefully, it could in an exercise in futility. Recent ds in agricultural prices, even before massive increases that those arguing "Bharat vs India" called for, seem to gest that this prospect of abundant ort earnings from processed food ex- ts may recede continually like a age.

e factor

sider milk. With floods and deluges g created practically daily by offi- dom, one gets the impression that the ndant milk flowing in this country resents a valuable export resource, ei- directly as a milk product (eg, pow- butter, etc) or as an input into ducts such as biscuits that use cereals milk among other substances. How- , the price of milk suggests otherwise. ilk in Bombay (before the recent e increase) costs from Rs.9 to Rs.14 litre depending on its origin, and fat SNF content. Translated into US dol- this would be between $0.45 to $0.70 litre or $1.80 to $2.80 per US gallon.

irst, this price is comparable to US re- prices, even though our milk is pro- ed in a supposedly lower cost nomy.

econdly, could any award winning y specialist explain why a litre of milk ld cost the same as a litre of petrol h has been:

ade from oil that has been pumped rom 10,000 feet below the earth's sur- , from wells dug after very expensive mic exploration and test drilling, h produces some 49 dry wells for ev- roductive well;

ansported thousands of km to refin- eries in India:

- refined in expensive refineries costing thousands of crores of rupees:
- distributed to every nook and corner of India over thousands of km, undergoing evaporation and storage losses: and
- subjected to a tax of some 200 per cent of its ex-refinery cost?

If you think milk is special, perhaps because it is perishable and needs refrigerated storage and transport, etc, consider sugar. It is now said authoritatively that India is the largest producer of sugar in the world. Yet consider the price of Indian sugar. At Rs.8 per kg, it works out to Rs.8,000 per tonne or $400 per tonne. In contrast, the international price of sugar reigns at around $275-300 per tonne (incidentally in a recent export auction, the Indian government fixed a floor price of $280 per tonne).

Once again, the retail price compares with the retail price in the US even though India is supposedly a lower cost economy, and what's more, the international bulk price is significantly less than our prices, necessitating subsidies for exports. This despite our being the largest producer in the world and despite fertiliser, water and power subsidies to agriculture. Clearly, inattention to yields and productivity are the culprits in this sad scenario.

Grim picture

Moving on to cereals, take wheat; our prices reign at around Rs.4 per kg, ie, Rs.4,000 per tonne or $200 per tonne. In contrast, world prices are around $75 per tonne, or a third of our prices. Once again, this is despite our having one of the largest wheat crops in the world. Rice presents a similar picture. Edible oils are of course a horror story in themselves, and so are pulses/legumes.

In this sort of a situation, can we really expect significant exports of processed foods? First our raw material costs are also high, as has been pointed out above. Secondly, our machinery costs are high because of import duties. Thirdly, our working capital costs are high because of high interest costs. Finally our weather poses a severe problem for storage of food products, even in processed form because of rapid oxidation and infestation by pests. The picture is grim indeed.

The only consolation is that much of the export price is foreign exchange value added, because only some of the machinery and perhaps packaging are imported. Nevertheless, if exporting is a losing proposition without heavy subsidies, which are not likely to be sustainable in the long run given the Indian budgetary situation and the international trade situation at GATT, it is difficult for individual enterprises that have to achieve the actual exports to mount a sustained effort and aim at substantial market expansion.

Niche products

Where the picture could be brighter is in the case of niche products like exotic fruits (and flowers). Alphonso mangoes are a good example, if only we would improve our packing and shipping practices, as well as establish grading standards (quality plus size), so that the buyer is assured that he is buying a known product, instead of some variable product that he must closely inspect to assess its value. Nevertheless, even in these areas, attention must be paid to yields and productivity to meet the needs of the growing markets which we are aiming at.

Newer products too can be thought of, such as pomegranates and guavas, if international marketability considerations are injected strongly, into growing, processing, storing and shipping and selling them as the New Zealanders have done with their Kiwi fruit.

Finally, it never hurts to re-emphasise the need for establishing strong Indian brands/appellations-of-origin. As an example, the Israelis have done a splendid job with Jaffa oranges and we have much to learn from such successes.

MAKE AN INTELLIGENT MOVE

EXEMPT YOUR CAPITAL GAINS FROM TAX

INVEST IN

IDBI

CAPITAL BONDS

Long term capital gains from the sale of land, buildings, jewellery, shares etc. attract Income Tax. But there is a way out. Invest in IDBI CAPITAL BONDS, keep your capital intact and earn interest too.

- Bonds available at par throughout the year.
- Exemption from tax on Capital Gains under Section 54E of the Income Tax Act, 1961.
- Income tax benefit under Section 80L.
- Exemption upto Rs. 5 lakhs from Wealth Tax under Section 5(1) (xvie) read with Section 5(1A) of the Wealth Tax Act, 1957.
- Interest at 9% p.a. payable half yearly.
- At the investor's option, interest for the full period of 3 years can be paid in advance on discounted basis.
- No deduction of tax at source.
- Outstation cheques accepted and cost of collection borne by IDBI.

ALSO CONTRIBUTE TO THE INDUSTRIAL DEVELOPMENT OF THE COUNTRY.

TURAL GAS PRICING

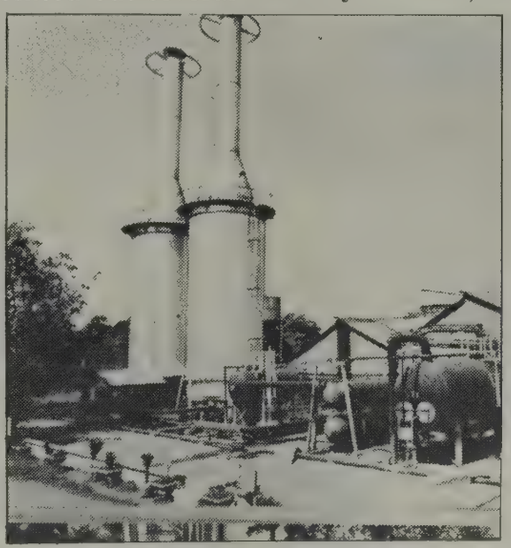
he contentious Kelkar report

some time now, gas consuming indus- s have held that domestic prices are high. Producers hold that present es do not adequately cover costs. The artment of petroleum and natural gas PNG), which is aggressively promot- natural gas use to replace conven- al energy sources now must reach a sensus.

or the moment that is proving diffi- . There is substantial disagreement ween the recommendations of the mittee constituted to review the price atural gas (headed by BICP chairman y Kelkar) and the DOPNG over both method of computing ONGC's cost of duction and the final price.

fering prices

ally, the ministry of petroleum and micals has altered several of the com- tee's recommendations. It has argued t it is unnecessary to charge different es to producer and consumers and gests that the final price of natural should be fixed at Rs.2,500 per thou- d cu.m. instead of Kelkar's recommen- ion of Rs.2,000 for consumers and ,500 for producers.



his is not a new disagreement. An r-ministerial committee had (in 4-86) similarly recommended the de- ing of producer and consumer prices. consumers' price of gas should main- parity between it and the fuel that it laced in the user industry (its oppor- ity cost) was a committee suggestion. t of producers' would compensate m in accordance with their long run rginal costs (in this instance, the MC of gas production at South Bas- , ONGC's newest free gas facility).

he government and the committee of retaries, however, rejected the recom- ndations of the committee and prices ained identical for both producers consumers (the producers' price). price implemented in 1987 would for a period of three years until its n expired in March 1989. A fresh com- tee was appointed thereafter.

ow, the Vijay Kelkar committee has ommended that the present price of ,400 per thousand cu.m. was inade- te. Besides, it also, like its prede- sor, sees the necessity of separating ducer and consumer prices. A final price of Rs.2,000 per thousand cu.m, it said, appropriately reflected the consumers' ability to pay. This price would be reached in three years with annual jumps of Rs.200 per thousand cu.m.

To arrive at a producers' price the committee used the long-run average cost of gas production from the South Bassein field. Using ONGC's cost of production (computed to Rs.1,450 per thousand cu.m. considering that the development of future gas fields will be more expensive than South Bassein) the committee recommended a final producer price of Rs.1,500 per thousand cu.m.

The DOPNG has pointed out several flaws in such a calculation. The committee considered cost data only for the South Bassein gas field, the last major field developed by ONGC, while ignoring costs of gas development elsewhere in the country. The committee has said that data for others is incomplete and it is difficult to apportion costs between gas and crude production in associated fields. Over the last few years the trend of exploration has been the discovery of small and marginal fields. The cost of developing these is much higher.

Therefore, the DOPNG concludes that the long run marginal cost rather than the long run average cost is the more appropriate principle for gas pricing. A producer price of Rs.1,500 per thousand cu.m. does not consider losses incurred from foreign exchange fluctuations and the higher corporate income tax that is higher now at 43.2 per cent instead of the assumed 40 per cent.

It is important to consider that the Eighth Plan envisages gas utilisation of 98 million metric standard cubic metres a day (MMSCMD) (equivalent to 33 MT of oil). To make this possible a significant portion of the Rs.27,650 crore investment allocated to the oil sector during the Eighth Plan will be apportioned. Besides, ONGC and OIL will be investing Rs.4,000 crore directly in gas projects and GAIL another Rs.3,500 crore. Such investments are unlikely if there is insufficient resource generation.

For the consumers, the committee computed the price of natural gas on the basis of the replacement costs of the feedstock for several industries (that price of natural gas which will give the same per unit cost of the final product using the original fuel which reflects the consumers' ability to pay). The replacement value of gas in the fertiliser industry works to Rs.2,495-2,951 per thousand cu.m.; between Rs.1,942 and Rs.3,280 per thousand cu.m. for the power sector and Rs.3,200 per thousand cu.m. for sponge iron.

The DOPNG, however, pointed out that it will be discriminatory (and impractical) to charge different prices to each industry. Instead, the CIF import cost of fuel oil (Rs. 2,000 per thousand cu.m.), the replaced fuel in the major consuming industry (fertilisers), represents the true economic cost of the domestic use of natural gas. The DOPNG considers using CIF price of fuel oil erroneous, natural gas replaces naphtha in the fertiliser sector, and HSD in power plants. Consumer price then must be the CIF value of naphtha/HSD which is Rs.2,500 per thousand cu.m.

Transportation cots

For the costs of transportation, the committee said that the present price of Rs.850 per thousand cu.m. was adequate against GAIL's request of Rs.1,037 per thousand cu.m. The committee has besides assumed 100 per cent utilisation of the pipeline for 365 days a year. That is unrealistic, a throughput of 16.2 MMSCMD for 330 days would be more appropriate. Besides, for the present rate of utilisation, the cost of transportation is even higher. The DOPNG has said that transportation costs must be at least Rs.1,219 per thousand cu.m. The committee has, however, turned down the request for a different cost along the HBJ pipeline owing to practical difficulties of computing costs. All this adds up to a string of contentious issues.

THE

Business India

GROUP

Company executives, businessmen and frequent visitors to Delhi.

You can now enjoy the privilege of owning an executive residence in the Capital city.

Ashiana's

STUDIO IX

Executive Club

A new concept in living for those visiting frequently on business. A home away from ho not a hotel but you still enjoy all the luxuries a comforts without paying through your nose.

Each room is tastefuly decorated and furn with piped music, channel video, air-condition telephone, refrigerator beside facilities like STD/ISD, fax. telex, and secretarial services.

The club is conviniently located in a poshe colony of south Delhi. A five minute drive from Nehru Place.

The club membership is available in multi a week (can be used staggered/flexible) each Rs. 25,000/- which you pay only once in a life And that's not all, you also get a money back guarantee.

The project is beeing developed and prom by Ashiana group of builders and real estate promoters. The group has the experience of executing more than 14,00,000 sq. ft. of comm industrial and residential projects. Plans are a build more such clubs in other industrial cities metro centres in India.

Now, you can own a prestigious executive ad in Delhi. For further details contact:

Executive Club

Mahima/APPL/91.

A new concept in executive li

attered economy

raged by a record inflow of over 00 tourists in 1988, the Jammu and nir Tourist Development Corpora- ad decided to set up three new res- nts. On one of the restaurants alone prestigious Wazwan at Srinagar — nt Rs.18 lakh. But a year later, Waz- as forced to shut down after a bomb by Islamic funda- alists who protested rving of liquor.

other two, also in gar — the barbecue ashmashahi gardens, fetched Rs.7 lakh a n for JKTDC, and the un restaurant on vard road, which d Rs.8 lakh a season ur months) — soon the Wazwan way too. te of these three res- nts typify the impact litancy on trade and try in the state.

rism, the state's revenue earner, has into a tailspin, with hope of revival unless olitical climate there changes dra- ally. The initiative gained by the after its Rs.2.7-crore advertisement n 1987 has been lost in the fear psy- s generated by the tension between overnment and the militant groups. rding to travel agents, who are faced nass cancellations, Srinagar is regu- being struck off tourist itineraries. ear, only a pathetic hundred tour- turned up at this picturesque ation.

988, over 600,000 domestic tourists pproximately 60,000 foreigners vis- ashmir. Though the number of for- ourists rose by 8,000 in 1989, overall t arrivals declined by approx- ly 200,000. And in 1990, only 400 ts were attracted to the state.

lier a *shikara* owner earned between Rs.75 and 150 a day. Today he has no work. Craftsmen and handicrafts merchants too have no tourists to sell their wares to. All the small-time traders and businessmen are caught in the crossfire between security forces and the secessionists. They walk a deadly tightrope between not betraying militant friends and relatives, and not alienating the government. "Still," says 49-year-old Ghulam Qadir (not his real name), a *shikara* owner on the Dal Lake, "it is safer to speak against the security forces, than to speak against the militants. The latter is sure to result in death."

Travel agents rue the fact that they can no longer include Kashmir, a major Indian attraction, as a holiday destination in their brochures. Says Navneet Sahni, deputy manager of Inter Globe Holidays, a travel agency based in Delhi, "We had reached a stage when Kashmir was included in the itinerary of every Spanish travel agency. But now we have lost between 30 and 40 per cent of the Spanish tourists, who visit India only for Kashmir." Says Inder Sharma, chairman of Sita World Travel: "We tried to replace Kashmir with Kulu-Manali, but that did not succeed due to a lack of infrastructure." Nepal has been quick to take advantage of this vacuum and Kathmandu has become *the* summer destination.

Bomb attack in Srinagar: tourism up in smoke

The first time blow to tourism came in June 1983 when the state witnessed large scale rioting after a controversial assembly election. The tourist inflow declined further when violence escalated in Punjab, and the year 1984 ended with arrivals of only 400,000.

The state's tourist industry tried to combat this by sending officials on goodwill visits to foreign countries. Also a plan was chalked out to develop the Jammu-Srinagar national highway, and new facilities were provided in government hotels. New tourist spots like the historical Buzorama near Harwan and the ruins of Avantipura were promoted.

At a stand-still

Then again, the slopes of Gulmarg were to be sold as a major centre for winter sports with cable car facility. Towards this end, the Jammu & Kashmir Cable Corporation was floated in 1986 to raise finances. The project was partly financed by the Centre from the Rs.1,000 crore promised by the then prime minister, Rajiv Gandhi, when he visited the state. Sadly, the cable car project became embroiled in kickback controversy and is now at a stand-still.

To make matters worse, technocrats from foreign companies providing knowhow for projects in the state are now wary of visiting the state. This follows the kidnapping of two Swedish engineers, working at the URI civil project of NHPC, by militants, and the alleged molestation of a foreign woman by security forces stationed in the tourist reception centre complex itself.

The tragedy of Kashmir is compounded by the apparent hopelessness of the situation. As the determination of the militants fighting against the Indian presence becomes stronger and gains popularity, the economic hardship faced by the people in the valley is increasingly being interpereted as sacrifice for a better tomorrow. Says a spokesman of the Muslim Jan Baaz Force, a separatists outfit, "This is a temporary phase for Kashmiris. We have been neglected by India, and our development is negligible. Once we are free from India, we will progress. *Inshallaha*."

However, the average Kashmiri's primary concern is bread and butter. A houseboat owner summed up the sentiments of the people accurately when asked if he was in favour of Pakistan, India or Independent Kashmir: "I want business so that I can feed my family as I used to."

■ E.O.M

COCONUT FARMING

Sprucing up in Kerala

During the Second World War — so goes the military legend — coconuts saved many lives. Wounded soldiers were given transfusions of coconut water, the only available fluid which was safe, being absolutely sterile. Today this humble nut itself needs a health-restoring transfusion to rejuvenate its ailing state.

Kerala, the country's principal producer of coconuts, has been witnessing a production stagnation during the past decade. In 1979-80, the state produced 3,032 million nuts. Production continued to hover around this level in the years that followed, dipping to a low of 2,602 million in 1983-84. The percentage growth over the decade 1974-75 to 1984-85 was negative: -8.7. In contrast, this percentage for neighbouring Tamil Nadu grew by 49 per cent.

Production rises

But by the beginning of the nineties, things looked up. Good rainfall in 1988-89 enabled production to rise by more than 25 per cent over the previous year to reach 4,215 million nuts. This growth continued and the next year Kerala saw the highest ever production of 4,394 million nuts (*see table*).

However, cheerful these tidings may have been, productivity has been on the slide. From around 5,500 nuts per hectare during the seventies, productivity dropped to 4,500 during the early eighties. How dismal these levels are becomes obvious when placed alongside the figures for neighbouring Tamil Nadu. In 1984-85, Tamil Nadu's productivity was 10,650 nuts per hectare, over twice Kerala's level of 4,925 nuts.

Much of the cause for Kerala's low productivity can be traced to poor farm practices. Adding to the problem is the scourge of recent years — root wilt disease, for which no cure has yet been found and which causes an annual loss of around 1,000 million nuts, chiefly in the eight southern districts of Kerala. The State Planning Board estimates that out of a total palm population of 16 crore, over two crore has been made uneconomic by old age or disesase, and needs to be immediately replaced.

Plantation density is one problem. According to agricultural scientists, productivity suffers when density crosses 200 trees per hectare. But in Kerala the average density is over 230 trees per hectare. The state's directorate of agriculture and Kerafed, the Federation of Cooperative Societies of Coconut Farmers, have been trying to get farmers to fell old palms so that production will increase in the medium term. They stress replanting with hybrids developed by the Central Plantation Crops Research Institute and the Kerala Agricultural University.

Another problem area is fertiliser use. The commonly used fertiliser formula known as 'coconut mixture' cannot be uniformly applied to all soil conditions. Factors like soil type, distance from the coast and availability of water necessitate alterations in the fertiliser mix. Further, application should be during the manuring seasons of the monsoons, ie, May-June and October-November. The Kerala government agencies have also been trying to dissuade farmers from cutting the palm leaves for sale, an act which deprives the palm trees of mineral nutrients, particularly if the leaves are green.

Scientific package

To prove to farmers the efficacy of these agricultural techniques, Kerafed has created 3,600 demonstration plots in its cooperatives. Each plot covers an ar 0.25 hectare and applies the entire p age of scientific techniques. Many of t measures have found a ready avenu the 'group management' system for c nut cultivation that the Kerala gov ment launched last year. On the hee the successful group management tem, 638 panchayats have been sele to represent the state's major coc producing regions. Around 5,000 gr ings of coconut farmers were forme these panchayats. Irrigation, scien manuring, spraying insecticide and o agricultural management measures now undertaken on a group basis.

Stable prices encourage better farming

thused by the results, the state gov ment has raised by Rs.50 lakh the buc for the scheme. The directorate of agri ture thus has Rs.175 lakh this year group management of coco production.

Not surprisingly, agricultural ex sion workers have discovered f Kerala's coconut farmers a direct relation between price stability and vestment in good farm practices. F 1986 to 1988, for instance, when coc prices were depressed, farmers sl away from using fertilisers. This promptly reflected in production fig (*see table*).

But for the past couple of years, ma intervention operations by Kerafed helped maintain reasonable price le for coconut and its products like co This has in turn motivated farmer plough back part of their earnings productive agricultural practices. one senior officer of the state's direc ate of agriculture, "There is no doubt the outlook for coconut has improve a lot more can still be done if scien practices spread." ■

WHEN YOU HAVE ARRIVED, LET YOUR CARD DECLARE IT.

THE MARK OF
A FAST-TRACK
EXECUTIVE

If you don't deserve the ANZ Grindlays Visa Card, then who does?

You have worked very hard indeed to get where you are in your profession, haven't you?

Well, why shouldn't everyone know it?

Respect is not all that the card gets you. It is accepted at over 8,000 establishments like shops, hotels and restaurants.

You can buy just about anything on your card. For your home. For travel. For entertainment.

You can choose how you would like to pay. You can pay the entire bill at the end of the month. Or just 10% of the total outstandings. Or any amount over 10%.

Cash at 56 branches across the country. Show your card at any of our branches and you can get instant cash.

Your spouse, and children above the age of eighteen years can have their own cards, charged to your account.

You need not even have an account with our bank to get our Credit Card.

Now that you have arrived, claim the privileges you deserve.

Telephone or write to your nearest ANZ Grindlays Bank Branch or to:

Card Services Division, ANZ Grindlays Bank, 132 Mint Road, Bombay 400 001. Phone: 2623081, 2623082.

HEWLETT PACKARD
A better way.

MAA COMMUNICATIONS-DEL

ADDISONS & CO

A study in excellence

The Madras based Addisons & Company Ltd, belonging to the Amalgamations group, is another one of those little heard of, low profile companies. Yet, it happens to be the largest manufacturer and exporter of high speed steel (HSS) cutting tools in the country. Cutting tools are an important adjunct to machine tools as the performance of the latter is directly dependent on the cutting tools used.

Addisons finished the year with a turnover of Rs.70 crore, of which exports constituted Rs. 16 crore. The company has had a phenomenal export growth rate of almost 700 per cent during the last decade. (Its total export sales was only Rs.2.13 crore in 1980-81.) "We are all set to reach an export sales figure of Rs.21.5 crore in the current year," says J.V. Harinath, general manager.

No foreign technology

Addisons initially distributed imported HSS cutting tools and went into its manufacture in 1955. No foreign technology was considered and by 1980, the company had become the country's largest manufacturer and exporter of HSS metal cutting tools. Currently, Addison's cutting tool exports exceed 70 per cent of the country's total export of HSS metal cutting tools. The present range of cutting tools manufactured includes twist drills, milling cutters and reamers. The company has the distinction of being one of the largest manufacturers of twist drills (tools used for punching holes in metal) in the world.

Addisons' first foray into the exports market was in 1964, when the company realised that it was not possible for the domestic market to absorb the entire production. Says Harinath, "In order to ensure optimum utilisation of our plant, it is our conviction and policy that the export market should act as a buffer especially in view of the periodical uncertainties in the domestic market. It is also not possible for any product to maintain a consistent growth by depending only on the home market." Exports have enabled Addisons to achieve a capacity utilisation of over 100 per cent during the last six years.

Cutting tools are among the thrust products identified by the government for export. In 1990-91, Addisons exported cutting tools to 25 countries around the world, covering the continents of Europe, the Americas, Australia, Asia and Africa. All the exports of the company are to hard currency areas. Addisons has been a net foreign exchange earner during the last eight years despite intense competition from leading tool manufacturers in the industrialised countries as well as from tool manufacturers from South Korea, Israel, Brazil, China and East European countries.

Cutting tools: more than 4,000 types manufactured at any point in time

This has been made possible because of stringent quality standards maintained by the company. Capital expenditure incurred in the last decade for upgradation of technology and modernisation has exceeded Rs.17.50 crore and for the current year (1991-92), a capital expenditure of Rs.5 crore has been earmarked. Besides, the unit cost of production has been reduced as a result of an automation drive and adoption of highly productive and sophisticated machines. The introduction of numerically controlled (NC) and computer numerically controlled (CNC) systems on machine tools has increased the demand for the manufacture of a new generation of metal cutting tools.

Another reason for Addisons' success is its close personal rapport with overseas clients. "Our major strength in the global market is the strict adherence to delivery schedules which is normally a critical proposition in the cutting tool industry as there are more than 4,000 different types, sizes and specifications of cutting tools manufactured at our works at any point of time," says Harinath.

Focus on exports

The overseas market for cutting tools is broadly classified into two categories. Industrial distributors supply cutting tools to the ever increasing replacement market. And the second group of buyers consists of leading cutting tool manufacturers who distribute the products manufactured by little known companies under their own brand name. Addisons has an equal share in both these sectors.

According to senior officials in the Addisons marketing department, they have been successful in persuading some of the leading tool manufacturers in Europe, the US and Australia to stop manufacturing some of the cutting tools in their range and instead source them from the Madras company. "This was feasible because the manufacturing cost has been accelerating at a very high rate in all the developed countries and the quality of our products meets international standards," says Harinath.

But even though Addisons has been remarkably successful in the last decade, the rapidly changing global scene is causing concern. Developed countries are slowly closing their doors to India. The new trade pact between the US and Canada, Super 301 and a post-1992 unified European market — are all pointers to lesser trade relations with India. With the help of the Confederation of Engineering Industries, Addisons has taken the initiative to secure the all-important ISO 9000 accreditation. Simultaneously, other markets are being looked at. The focus is on exports to central America. "While only 2 per cent of our export sales was to the developing nations in 1988, in 1990-91 this was 20 per cent. We plan to increase it to 30 per cent in the current year," says Harinath. If Addisons continues to use its winning formula, this target should not be difficult to achieve.

■ A. S. PANNEERSELVAN

SUBSIDIARY AGENCIES

Fortune favours a few

Some call them 'satellite agencies'. Others prefer the term 'associate agencies' or simply 'second agencies'. As it tends to happen in the advertising world, there's a different label for the same thing.

In the late seventies and early eighties, major Indian agencies followed the international precedent of launching subsidiaries in a bid to grab a bigger share of the booming advertising market. Big agencies, with clients in almost every product category, were loath to lose competing accounts to rivals. With the birth of the babies, the conflicting accounts could be kept in the family. An additional benefit was that the smaller agency could take on the small budget clients, whom the parent agency found uneconomical to service.

Clarion Advertising Services was the first with Acil, but it was when giant Hindustan Thompson Associates started Contract Advertising and Promotions Ltd in 1979 that the trend caught on. Says Bal Mundkar, chairman, Ulka Advertising, "We were getting more business than we could take on, so we took a page out of Thompson's book. It's very difficult to turn down business." Ulka established the Delhi-based Interface in 1983, Everest Advertising started The Edge in 1985, DaCunha Associates came up with Victa, Ogilvy and Mather had its own protege, Artig, and Lintas branched out with Karishma. The newest offspring is that of Mudra Communications, which spun off Interact as a separate agency and bought over the 21-year old Vision Advertising last year.

Skewed profile

At the end of the decade, the profile of these second generation agencies is still skewed. Contract towers over its peers with billings of Rs. 28 crore. The eighth largest agency in the country, it is the only subsidiary which has made it to the top ten. Says Ram Sehgal, president of Contract, "In 1986, when we restructured Contract, our aim was to reach the top ten." In 1986, J. Walter Thompson acquired a 40 per cent stake in the Indian Grant Kenyon Eckhardt, and HTA bought 60 per cent. GKE was renamed Contract Advertising India Ltd, and the earlier agency, CAPL, turned into Fortune, HTA's financial communication division in 1990.

The only other major success story among the subsidiaries is Karishma. Set up in 1986, it has pushed ahead of the others with billings of Rs. 12 crore. Not coincidentally, Karishma's mentor Lintas is advertising's other Big Daddy.

While HTA and Lintas are proud parents, others haven't had the same kind of luck with their offspring. In 1988, the Everest-owned agency, The Edge was a rising star on the advertising firmament with billings of Rs. 6 crore. But soon things started going wrong with the agency. One major client, Burroughs Wellcome, decided to close down its consumer division, and Double Cola reneged on bills amounting to Rs.50 lakh. The exit of Mukesh Gupta, managing director of

Photos by Pankaj Desai

Sehgal: aiming to reach the top

The Edge, last year with accounts like Leela Kempinski, Cliff shirts and Clue Leisure Wear, followed by the resignation of Everest's managing director Munawar Syed was the final blow. The beleaguered Ahmed Ibrahim of Everest cried off from talking to *Business India*, asking to be left alone to put things in order.

Where The Edge has had a spectacular fall, others have hardly made any waves. Acil has sunk without a trace with Clarion battling for its own survival and Victa has quietly closed shop, its people returning to the DaCunha fold. Interface is still in the minor league with billings of around Rs.3 crore. Says Mundkar of Ulka, "Our Delhi branch, in fact, does business of Rs.6-7 crore annually. But we are in no hurry to grow. Interface is a productive profit centre, and is doing good work." Artig, which is in the O&M fold has its main business in Calcutta and Madras, and is plodding along with billings of Rs. 4 crore. While O&M has no financial stake in the agency, (it is owned by the staff, most of whom are former O&M employees) it has been providing managerial expertise to the agency. Says S.R. Ayer, chief executive, O&M, "Artig is loosely associated with us. As such, we have no second agency."

What makes a second agency tick? "To make a success of a second agency, the parent must itself be established, dominant, and have enough accounts in diverse product categories. The market must be big enough for both," says Ram Sehgal, who was transferred from HTA to run Contract. Adds Abhijit Almeida, director, Vision Advertising, "Mudra has only now reached the stage when a subsidiary makes sense."

Trikaya Grey's managing director Ravi Gupta also feels that the stature of the first agency is important. "For us, it makes no sense to start a subsidiary. We ourselves are growing, and we have so many categories open. A subsidiary would only fritter our business and talent."

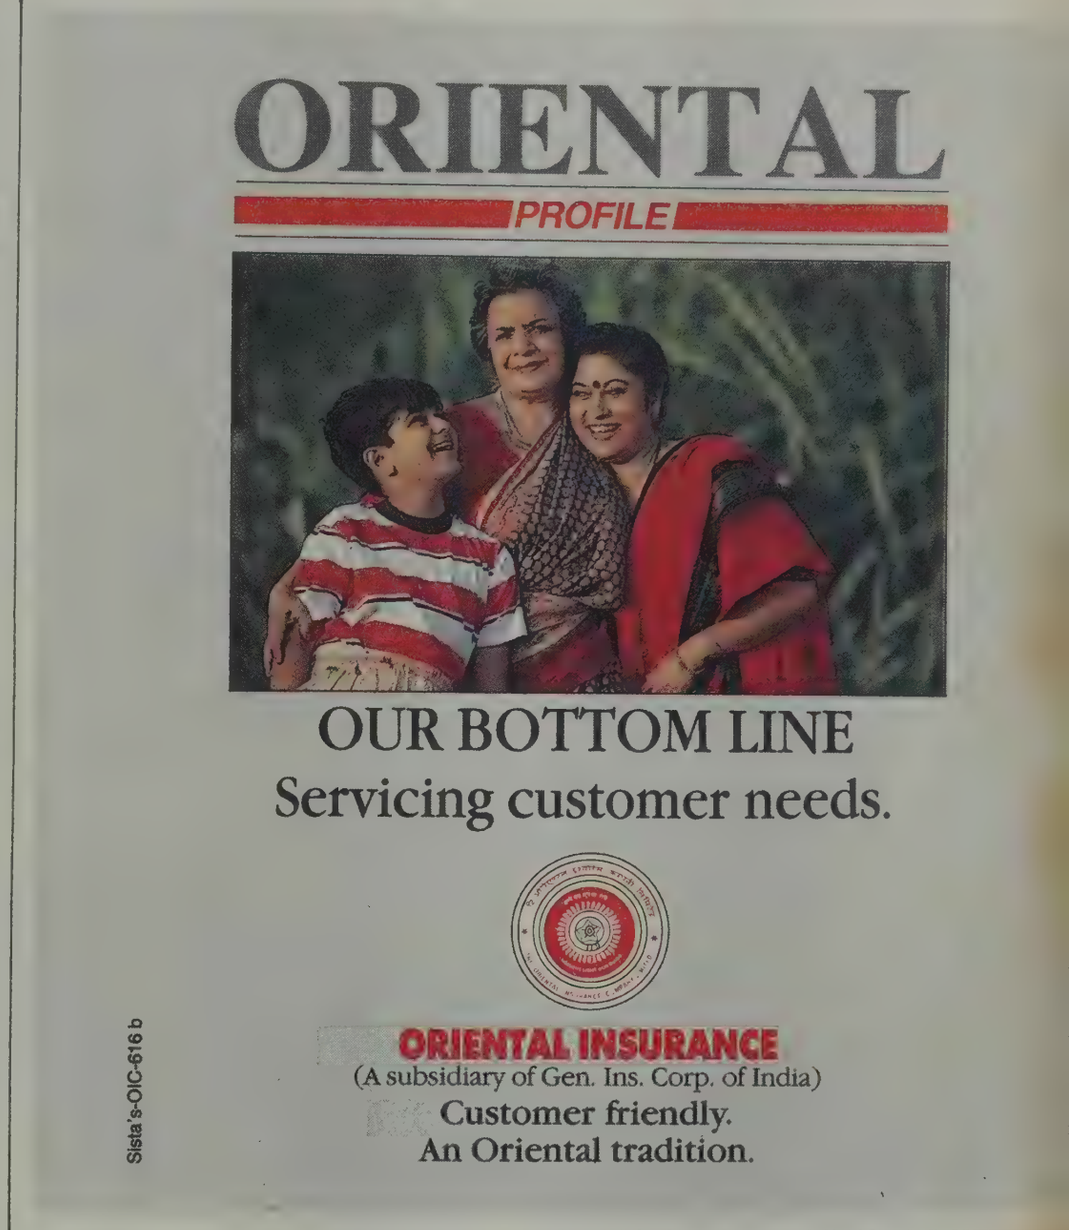
Most agree though, that it is the attitude and objectives of the parent which decides a subsidiary's fate. Says Ayer, "For O&M, we believe our growth opportunities are in other areas like direct marketing, public relations, and financial communication. A second agency doesn't fit in our growth plans." Mudra, on the other hand, is going all out for growth the subsidiary way. Interact has billings of Rs.8 crore, and Vision finished the first year in the Mudra fold with Rs. 4 crore and a branch in Bangalore. " We are targeting at the smaller clients, with budgets between Rs. 10 lakh and Rs. 100 lakh only. Interact is focusing on the local business in the states. We have clearly defined niches, objectives and growth plans," says Almeida. He estimates that the group will cross the Rs. 100 crore mark this year.

Better off

Those who chose to take over existing agencies seem to be better off than those who set up from scratch. Mudra bought Vision when it's business was only around Rs. 10-15 lakh. "The fact that the agency had its infrastucture in place helped a lot," says Almeida. Sehgal agrees. "The fact that GKE had its offices and infra-

structure set up saved me a lot of time and effort. I could concentrate on getting clients instead of setting up the infrastucture," says he.

Besides clearly defined objectives, it is the agency's level of independence which matters. A subsidiary can make a mark only if it is left alone to formulate its own strategies, without the parent agency interfering in its functioning. Prem Mehta, deputy chief executive, Lintas, attributes the success of Contract and Karishma to their total independence. Noshir Desai, the only one transplanted from Lintas as the head of Karishma, is even more vehement. "Karishma is part of the Interpublic group, and Lintas is only the holding company. If an agency is seen as a little brother, the best clients and talent will stay away from it." But despite this, being in the catchment area for the overflow from the parents has definitely helped both Karishma and Contract. Sehgal concurs. "The HTA connection definitely helps in establishing credibility. A client is assured of a tradition of professionalism and confidentiality." Almost 87 per cent of Contract's business is with clients who are in direct competition with HTA's clients.



Client's misgivings about confidentiality has been a stumbling block for many second agencies. Admits Mukesh Gupta, now senior vice-president of Clarion, "We had to check with both the existing and prospective clients before taking on competing accounts, and sometimes they didn't agree." Karishma, which recently bagged the Rs.3-crore Kelvinator account, seems to have established a separate identity, not overshadowed by Lintas. "The idea behind Karishma was to cater to clients and employees who prefer a small agency atmosphere while guaranteeing the same level of professionalism," says Mehta.

Desai: transplanted satellite chief

The increasingly competitive atmosphere in advertising, too, has made the going tough for many. "Clients want value for money. With the rise in media costs and credit squeeze, we have to stretch every rupee," says Desai. Many in the business admit that the agencies are under pressure financially, and there is a cash flow problem, as payments are getting delayed. Says Almeida, "Thank god, we have had good clients. For a small agency, delayed payments can be crippling." Though, an agency backed by the financial clout and expertise of a well-established parent has a better chance of surviving than a new entrant. The glory days of the eighties have given way to more demanding clients and slower growth rates. For the parent, then it is a burden to support an ailing or stagnant subsidiary, when they are themselves under pressure. Another development has been the fast growth in areas like financial communication, market research, public relations, and direct marketing, and agencies see their future growth in these areas. And in advertising, everything revolves around the people involved. "There is a severe dearth of good people around. Where am I going to get the best talent for a subsidiary, when I can't find enough for Trikaya?" asks Gupta. The cream of the advertising talent is not so easily attracted, especially to a subsidiary. Unless a second agency can make its own mark, it is inevitably regarded by clients, too, as second rate. And in advertising today it's a struggle for those on the second rung.

OVERSEAS POSTINGS

Valuable experience

At this time last year, Shanu Mukherjee was based far away, as country manager of AI's branch office in Tokyo. Meanwhile, P.P. Asirvatham was stationed at the London headquarters of Hindustan Lever's parent company — Unilever. As the senior operations manager in the international audits division, he supervised the east Asian operations. He spent 50 per cent of his time in London and the rest shuttling between the 35 associated Unilever companies in the east — from Taiwan to Thailand.

Both Asirvatham and Mukherjee belong to a burgeoning band of executives who are being posted overseas by their companies to gain hands-on experience of and exposure to the international business environment. In fact, as more and more Indian companies set their sights on the global market place, such postings — whether long or short — are becoming inevitable and managers like Mukherjee are finding themselves placed in charge of international operations. Then again, as multinational companies and banks integrate and standardise their worldwide operations, executives from India, like Asirvatham, have to be circulated among the parent company's headquarters or other subsidiaries.

Asirvatham (right) *and colleagues from Australia, US and Zimbabwe: "continuity with value added"*

A part of progress

In fact, in some companies overseas, transfers are compulsory for senior executives. At Hindustan Lever, for example, at any given time, nearly 35 to 40 senior executives with over 10 years' experience are posted in various parts of the world, for two to three years. "It's part of an executive's progress in the company. It's seen as continuity with value added," explains Asirvatham, who is currently treasurer at Hindustan Lever.

Eligibility norms, however, differ from company to company. In a smaller set-up, merely a recommendation may be enough. In large public sector organisations, like the Bank of India (BoI) or AI, the much coveted posting would be dependent on lengthy performance appraisals. Also, at BoI, only branch managers and their seniors are eligible for senior assignments at any of its 27 branches abroad.

Multinational banks meanwhile have a different rationale. At ANZ Grindlays Bank, explains Girija Pande, general manager, investment banking, "executives considered as group resource material in specialised functions, are usually posted overseas". At Bank of America, says its India chief Vikram Talwar, "Postings abroad are need-based, depending on the calibre and expertise of the executives and where they are required".

And Talwar was required in many places. In his 22 years with Bankam, Talwar has been stationed in America, Japan, Hong Kong, Indonesia and Singapore. Many of the others have also globe-trotted frequently. In his 15-year career with Grindlays, Pande has worked in Seoul, Hong Kong and Bahrain. Similarly, in his 22 years with AI, Mukherjee, currently commercial manager sales and space management, has spent nearly 12 years in various postings in Athens, Paris, Geneva, Singapore and most recently in Tokyo.

How did these jet set executives adjust themselves to a new environment? For those from multinationals, it was not apparently a radical shock. "The Grindl culture prevailed everywhere," sa Pande. At Unilever, uniformity perm ated even the accounting systems a methodologies, making work even eas for Asirvatham. Helping him further w also a structured one-week inducti programme.

New pressures

But while the broad management cultu was familiar, the pressures and the pa were undoubtedly new. "I had to adju very fast. The pace was frenetic in Seou says Pande, recalling his first forei posting in the Far East, as manager cre and marketing. Indeed, after the slow a bureaucratic tempo of working in a pr tected environment here at home, the e ecutives were jolted by the realities open, deregulated markets, and that international competition.

There was excitement as they exper mented with new products, technologie and strategies, untried by them before Then, there was volatility too, especiall for the bankers, who had to get used t living dangerously. The risks were highe the transactions much larger, but th margins were miniscule — often just quarter or even an eighth or sixteenth o a per cent — and responses had to b sharp and quick. "No issue could be post poned by saying, 'We'll see,'" says Pande "We could not afford that luxury."

To compound matters, many of the ex

utives were posted in untries which were dergoing dramatic onomic upheavals. nde saw the changing e of Arab capitalism en he was in Bahrain ween 1986-88 — as oil ices had plummetted $8 per barrel, the GNP d declined by 25 per nt, and there were nkruptcies galore. ys Pande: "We had to t back, suffer major ses due to write-offs d restructure our erations."

Talwar too played uble shooter while he s country manager in lonesia. A shaky onomy, combined h some poor deci-ns taken by the bank, d contributed to an unhealthy state of airs. What did Talwar do? "Got grey r," he says.

Mukherjee (left) *with Japanese colleague: took calculated risks*

cellent response

the other hand, L.M. Devare, currently I's chief, corporate planning, was nch manager in Tokyo between 1981 d 1987, when Japan was becoming a su-power. "As against working on a mar- of half a yen against the dollar lier," recalls Devare, "there were wild ctuations — sometimes upto 9 yen, king it a paradise for forex dealers."

apan proved a rewarding experience n for Mukherjee of AI. "It became a y profitable route and added substan-ly to the airline's bottomline." To ieve that, Mukherjee promoted India ressively among the Japanese and the ponse was excellent. In fact, despite Japanese perception that India was far away and their aversion to its pov-, heat and dust, "the average, annual 4 per cent growth in visa applications e to 28 per cent in 1989," says kherjee.

or long, AI had been operating three hts from Japan to India via Bangkok. kherjee took the risk of adding one -stop flight, which meant more efforts nsure a full flight. Mukherjee was also rumental in AI's tie-ups with the Ken-, Ethiopian and Zambian airlines, ch enables AI to transport Japanese rists bound for African safaris via nbay, where they change flights for Nairobi.

Working at Unilever, however, was not as competitive as expected. "It's more challenging here as the resources are scarcer, so optimum utilisation becomes more important," says Asirvatham. But the level of achievement was definitely higher at Unilever as decisions once taken were implemented with lightning speed.

Operating flexibility

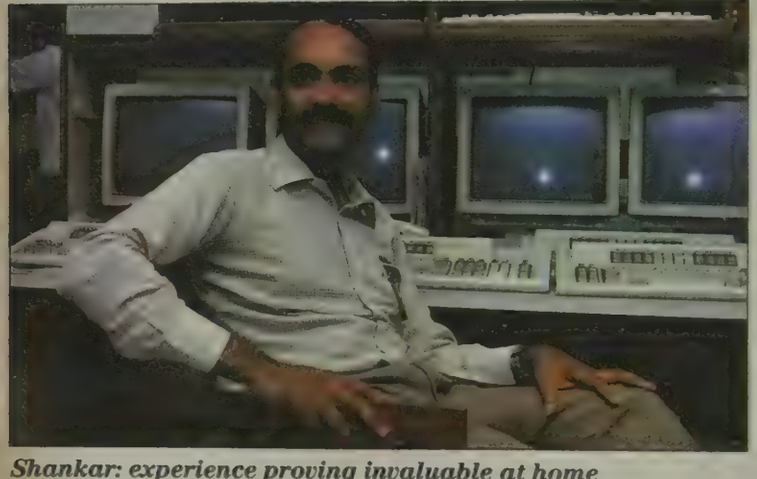
How do Indian branch offices function abroad? Are their operations truly international? "Of course," says Devare. "Otherwise we have no reason for being there. We can be profitable only if we do business suitable to that environment." RBI guidelines cannot be breached, but there is a lot more operating flexibility. They can, for example, negotiate larger exchange deals and consortium advances then possible here.

Talwar: got grey hair in Indonesia

The disciplined and methodical ways of the Japanese have left a lasting impression on both Devare and Mukherjee. Collective achievers, the Japanese needed little or no supervision. And morning or midnight, work was never left pending. "I have never encountered workaholics like them anywhere else," says Mukherjee. "Also, their planning was meticulous. If 100 people were booked on a tour, rarely did the number drop to 99."

In Mauritius, however, the picture was totally different. Exotic though this 20x25 mile island was, it was not very exciting managerially — as it had no work culture at all, especially between 1973-83, when Pratap Jain was company secretary and chief accountant at Raymonds Mauritius Limited (RML). A joint venture, RML was set up by Raymonds with the local financial institutions to make garments, primarily menswear, for export to the EEC countries. "The Mauritians," remembers Jain, "though intelligent, lacked the will to work hard. Absenteeism was very high. It had a typical tourist island culture of long weekends, and eating, drinking and merrymaking."

Jain, who is currently general manager finance and accounts at Raymonds, also faced the unpleasant task of winding up RML when the EEC changed its rules of origin and competition from Hong Kong caught up with the company. Yet, with 20 per cent of Raymonds' fabrics being sold locally, Jain, as a finance man, gained new experience in marketing.



Settling in quickly

With friendly colleagues and the resident Indian community only too willing to quickly launch new compatriots into the social scene, settling into the new and often affluent lifestyle is quite effortless

for most executives. What would have been exorbitant bills — for accommodation, transport, education and regular holidays to India — are footed by the companies. And the pay scales are international, though only for the executives in multinationals.

Executives in foreign branches, otherwise, are on the Indian pay scale supplemented by overseas allowances. "That is not very rewarding," says Jain, "I could have made more money in the Gulf." But Devare was satisfied: "The bank looked after us well. We go with Indian values, and don't suddenly turn extravagant."

The complaints, however, begin once these executives come back. The absence of the quality of life that they get used to

Shankar: experience proving invaluable at home

— the supermarkets, malls, *et al* — does pinch, especially the family. Professionally, the attention to service, the challenge of competitive business, the business-like attitude of the people and the infrastructural support, are sorely missed. "Whether it was a box of floppies or a new terminal on my desk, it was given immediately," recalls V.S. Shankar, "So we achieved a lot more in an 8-to-5 working day than is possible here in a 12-hour day." Shankar, currently a consultant at the Tata Consultancy Services in Madras, was posted to Kuwait in 1981 while he was working with the public sector Petrochemical Industries Company. He spent seven years in Kuwait developing new software systems.

Though it takes time, eventually, of course, they all do readjust, and are glad to be back. The reason: it is impossible to become a part of a foreign country and totally identify with it politically and culturally. After all, as Devare says, "India is where we belong."

In fact, if the good life alone mattered, there were opportunities aplenty abroad. Many have been tempted to make their postings permanent. "But," says, Pande. "I would succumb, if I was dissatisfied. But when the organisation is giving the right signals, and I am thoroughly enjoying my work, I have no need to even consider another offer."

But Vijay Vittal did consider another offer, though not abroad, as the bank he was employed by, the Bank of Credit and Commerce International (BCCI), was in big trouble. Accused of laundering drug money of the Latin American mafia, BCCI's reputation was in a shambles internationally and the bank's continued existence was in doubt. So in 1990, while he was BCCI's manager credit and marketing in Seoul, Vittal decided to quit and join Classic Financial Services and Enterprise in Bangalore as regional manager. Vittal had even been posted to BCCI's Hong Kong and Bangkok branches. According to Vittal, family commitments — of looking after his elderly mother and his daughter's education — also prompted his decision to be based in India.

The need to re-enter the corporate mainstream, can also be a powerful motivation for coming back. Besides, as these executives ascend their companies' hierarchies, it makes sense to return. As Mukherjee says: "If you really want to manage things, you have to be at the company headquarters."

Indelible mark

The overseas experience always leaves an indelible mark. Executives pick up traits or develop new work habits that become intrinsic to their management styles. Not for Pande the paternalistic culture prevailing here. For him, interaction between seniors and subordinates must be business-like, and yet informal.

Mukherjee, meanwhile, values the people management skills he acquired. So does Devare, who also insists on arriving at a common consensus on projects, like the Japanese. Asirvatham now firmly believes that better preparation, leads to better results. He says, "At Unilever, the pace was not hectic because they were excellent managers of time. Day-to-day activities were planned weeks in advance

More than any other gain, finally, wh makes it worthwhile is that, as Jain sa "The management values our exposur The wider perspective and independe decision-making capabilities develope the fund of innovative ideas accumulate familiarity with the latest technologi and the successful management of peop from different nationalities in an alie environment, are invaluable assets f companies — sometimes intangible, a

Jain: family commitments prompted hi return

sometimes tangible, as in the case Shankar.

The knowledge of the latest hardwar and software, like relational database and UNIX machines, that Shankar ac quired while he was in Kuwait, is now pro ving handy as TCS is doing a lot of work i this area. Pande's experiences are als being put to use. He manages Grindlays international investment portfolio eve here, and since he has worked on thos markets, he can appreciate a foreigner' expectations. Says he: "The global per spective is instinctive now. Some day w too will have to face similar issues, prob lems as well as benefits. It is is importan to be prepared if we want to be aligne with the world."

Even though the country has been slo in entering the international mainstrea at least some companies have had th foresight to begin spreading their wings Consequently they will be the first to ben efit as they are already grooming peopl for the eventuality, long though it may b in coming!

FORMULA-1

Ceat Formula - I Radials are a different breed of tyre. Different by design. And by construction.

That's how they offer you unbeatable car control. Through a sum total of their inherent properties.

The special textile belt ensures tread rigidity. As well as sustained tread contact with the road.

Result: a superb grip, along with better traction, surer braking, and steering stability.

The ply-cords, running perpendicular or radial to the circumference of the tyre, enhance flexibility and the capacity to absorb shock.

Result: a smoother ride.

All of which adds up to enhanced tyre life, fuel economy and higher puncture resistance. And, of course, better car control.

That's the advantage of having advanced tyre technology from Yokohama Rubber Company, Japan.

Ceat Formula - I Radials. A whole new dimension to driving.

SORRY MR. NEWTON BUT THE CENTRE OF GRAVITY AT AKAY IS THE CUSTOMER.

Changing times has brought about changing needs amongst customers. Understanding and anticipating their needs is of prime importance to us. Hence development and upgradation of products to match customer requirements is an on-going process with us.

Our CAD/CAM systems, automated manufacturing facilities and advanced test facilities have been instrumental in customisation and standardisation of our products – Chemflo process pumps and valves that match international standards. Add to it is our excellent service back-up. And when our customers approach us they get the full advantage of our leadership quickly and dependably.

So Mr. Newton we are sure you will understand why in our case the centre of gravity is shifted to the customer.

SOVIET UNION OR DISUNION

Comrades still?

By ALEXANDER PUMPIANSKI *in Moscow, USSR*

ONE OF THE most vivid recollections from my childhood was the day of the elections for the Supreme Soviet when my grandmother got up before dawn and, tiptoeing quietly out the door so as not to wake any of us, went out to vote. The voting booths opened at 6 a.m., so my grandmother had to traverse the entire distance on foot. She went to vote in the Stalin district, where Josif Vissarionovich himself was on the ballot. She wanted her vote to be the first one cast.

Under Stalin, voting was a ritual, a religious rite. The political god was one and indivisible—Stalin, the Party and the Government—just like the Holy Trinity. The people, too, were a monolith and during elections formed an "indivisible bloc of communists and non-party members." There were no choices in elections; voting was merely an act of affirming the faith.

But then Stalin passed away and he was retroactively taken down from his pedestal—and physically removed from the Lenin mausoleum. But the Party and Government remained just as they had always been, words written with capital letters and written side by side. "The Party and the Government have resolved..."—this was a standard cliché, one which in spite of its awkwardness never struck anyone as out of the ordinary. And elections, though of a more down-to-earth nature, remained a political ritual.

The regime had to receive assurances of the boundless love and trust of the masses. All this was mathematically demonstrated: 99.9 and 99.9. This formula meant that 99.9 percent of the population eligible to vote voted and 99.9 percent of them voted For. One-tenth of one percent was allowed not to vote and an equal percentage allowed to vote Against. No more.

Comrades still?

Continued from previous page

Under Khrushchev, Brezhnev, et al, no one hurried to be the first at the voting booths at 6 a.m., they instead hurried before they closed at 9 p.m. Everyone was supposed to cast a vote. Agitators canvassed houses, promising to fix plumbing that had been broken for the past three years or resurface streets that had been dug up after the last election. Even being ill did not save one from the ritual; they were happy to bring the ballot box to you.

My daughter, who for the sake of good taste I attempted to bring up as a political agnostic, ignored the elections, but her lazy resistance did not affect the general voting statistics. Her grandmother, my mother, raised in a spirit of greater social responsibility, voted for her. The "celebration of democracy" could not be spoiled by absenteeism.

On March 17, 1991, the day of the union referendum, we went out to vote. It should be said that my daughter had better things to do. She was 3,000 kilometers away, skiing in the Caucasus. Having arrived at the polls, my mother began apologizing for my daughter's absence, saying she had to go away on a business trip of extreme importance. The response by the poll worker was astounding. Instead of handing us, as usual, an extra ballot, she yawned indifferently and answered, "So what?" This time, we were to cast only our own votes. But for what?

If one views the referendum as a tug-of-war, then it was a game in which several competing teams were all tugging at the rope in different directions. One team was made up of conservatives who think that if anything changes, the entire system will collapse. Another team consisted of reformers who feel that everything will collapse if left as is. Then there were supporters of central authority and supporters of local authority. There were those in favor of secession from the union and those who see secession as the end of the world.

The final result was a paradox. Everyone achieved victory. In all, at least 70 percent of those eligible to vote went to the polls and 76 percent of them voted in favor of the union. Supporters of a single union breathed a sigh of relief.

In reality, there was little else one could expect. Whatever else might have been concealed in the wording of the question, among the majority of voters the question came down to one of patriotism, order and loyalty—and the majority never wants to see a disruption of the status quo.

The opposition called for a No vote or a boycott of the referendum not because it was against the union; but because it was convinced that the center would use a Yes vote to prevent change and maintain the "imperial" order in the country. Alas, that line of reasoning was too complex to be clear. But the opposition did not lose completely.

In the two major cities of Moscow and Leningrad, the vote was evenly split and in Kiev and Sverdlovsk the majority voted No. These cities are the ones which contain the most enlightened opinions and one can clearly make out trends in public opinion. The leaders of the opposition were not in the least bit disgraced and, in fact, came out smelling like roses. The proposal for creating an elected president of Russia received a resounding 70 percent Yes vote, and the proposal for an elected mayor of Moscow enjoyed even greater support.

Thus, not only Gorbachev, but Yeltsin and Popov secured victories.

Nazarbaev and Kravchuk also came out winners. These leaders of, respectively, Kazakhstan and the Ukraine were very subtle; they didn't completely refuse to heed the call of the central government, but still managed to strengthen their authority through the affirmation of sovereignty of the republics.

Other winners included Landsbergis in Lithuania and Gamsakhurdia in Georgia and others who have been referred to as nationalists and separatists. They too displayed their strength and, by ignoring the union referendum, took yet another step towards secession.

There are many winners, but one should not expect a victors' banquet. They will not all sit down at one table—and this metaphorically expresses best the fact that the once indissoluble Soviet monolith no longer exists.

Arguments about who were the winners and who were the losers may go on for a long time. Nonetheless, it was the first referendum in the history of the USSR and in spite of all its flaws it will go down in history as an important event. When the dust settles, perhaps we will see how far the country has come from the electoral liturgies which were an integral part of my childhood, adolescence and much of my adult life.♦

Georgia's raging rebel

Is independent-minded republic headed by patriot or a Mussolini?

BY LEONID MLECHIN
in Moscow, USSR

"UNTIL GEORGIA IS free," pronounced Zviad Gamsakhurdia, head of the volatile Georgian republic, "I will not set foot in the Kremlin." With statements such as this, the 52-year-old Georgian has cast himself in the role of a modern-day Saint George fighting the Soviet dragon.

Georgia is just one of the Soviet republics led by an anticommunist, nationalist opposition. The Georgian Parliament has declared Georgia's 1921 inclusion into the Soviet Union an illegal act, refused to abide by Soviet laws and announced the beginning of a transition period which is to end with the declaration of an independent Georgian state.

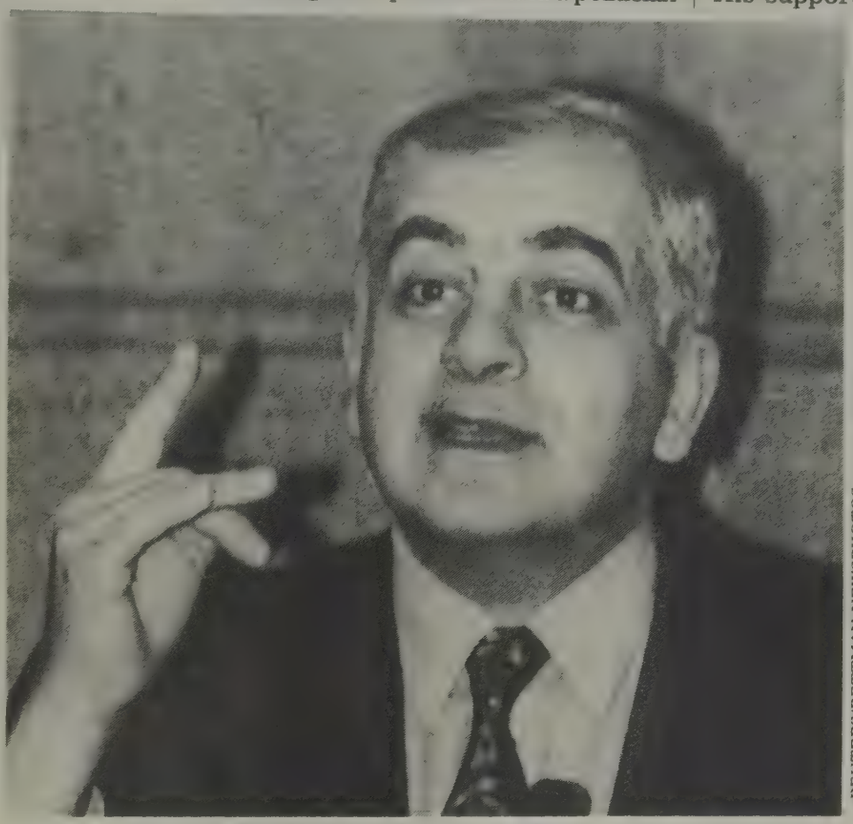
Georgia is repeating the pattern set first by Lithuania last year when it decided to secede from the Soviet Union.

The big difference, however, between Georgia and the Baltic republic lies in Georgia's stormy nature. Last year in Georgia, the independence struggle began with a grim round of political terror. Gunmen have been shooting not only at political rivals, but ethnic rivals as well. A full-fledged war is underway between the Georgians and Ossetians, another nationality in the republic that favors remaining in the Soviet Union.

Another important difference between Lithuania and Georgia is the character of their leaders. Lithuania's Vitautus Landsbergis is a professor and a politician governed by reason. Gamsakhurdia is an implacable person with an explosive character whom various political observers refer to, depending upon their political orientation, as a democrat, a nationalist or even a second Mussolini.

Gamsakhurdia, the son of a well-known Georgian writer, is one of the most enigmatic figures in Soviet political life.

Before perestroika, the existence of a common enemy—the communist dictatorship—united all members of the opposition. The name of Gamsakhurdia was uttered along with Nobel laureates Aleksandr Solzhenitsyn and Andrei Sakharov.



But since coming to power in Georgia, Gamsakhurdia has made statements which have startled his old allies in the Soviet liberal intelligentsia.

His statement "Georgia for Georgians" was a complete and utter shock. His supporters tried to cover for him, saying that he had been misunderstood. Nonetheless, Gamsakhurdia said just what he meant when he stated that mixed marriages were "a threat to the survival of the Georgian nation."

He forbade participation in the March 17 union referendum and later held his own referendum on Georgian independence, which Georgians resoundingly endorsed.

The majority of Georgian's see Gamsakhurdia as a strong, patriotic leader and support him. His plans for the creation of an independent Georgia flatter their self-esteem.

Many in Georgia fear that Gamsakhurdia's intolerance will provoke military intervention by Moscow. But in Georgia, Moscow has no support; there is no fifth column to be found in the local Communist Party. In addition, Georgians are not Lithuanians. They are prepared to fight for their homes, weapons in hand. Gamsakhurdia has warned that if Moscow tries to interfere, Georgia will become "another Afghanistan."♦

Turkey backs unity, reform

Ankara hopes for a stable northern neighbor

By Haldun Armagan
in Ankara, Turkey

IN THE EARLY 1970s, Pan-Turkism was a significant political movement in Turkey. Supporters of the movement jealously eyed Soviet republics in which reside large numbers of Turkic-speaking nationalities, such as Uzbeks, Tatars, Kazaks and Azerbaijanis. Now, however, though the current tumult within the various republics of the Soviet Union seems to present proponents of Pan-Turkism with an opportunity, their voices are conspicuously silent.

Some say Turkey has learned its lesson after opening its doors to ethnic Turks fleeing Bulgaria when that country was in the midst of its own civil strife. Three years ago, repressive policies against ethnic Turks reached a peak and the former communist regime in Bulgaria tried to force ethnic Turks to change their names to Bulgarian ones. Many of the immigrants found life difficult in Turkey; jobs were scarce, finding housing was difficult and they were disappointed they were treated like foreigners. Since the resignation of the Stalinist Bulgarian president, Todor Zhivkov, in 1989, more than half of the Turkish Bulgarians who fled Bulgaria have gone back.

Some social commentators say the experience has changed Turkish attitudes and helped to squelch utopian dreams. Nonetheless, Turkish authorities are concerned about ethnic Turks in the Soviet republics. President Ozal toured Soviet republics and met with President Gorbachev soon after the Gulf War ended.

But Ozal did not go to chastise the Soviet leader. Turkish policymakers believe the West should still support Gorbachev. For the moment, that means a policy that encourages regional stability —and discourages the breakup of the Soviet Union.

Ozal also proposed the formation of a Black Sea economic community which is to include Turkey, the Soviet Union and Balkan countries. The idea was welcomed by Moscow and negotiations are pending.

Turkish investors are encouraged to invest in enterprises in the Soviet republics not only to help improve the plight of ethnic Turks, but to become an important player in the economic renovation of the Soviet Union.

Nontheless, some political observers here are pessimistic about the prospect of a stable Soviet Union surviving intact. Retired ambassador and foreign policy commentator Coskun Kirca is one of the pessimists: "The Communist Party and Soviet state bureaucracy are now giving a final fight to avoid giving up privileges. Despite the referendum results, the chance of the Soviet empire collapsing seems much higher than of the Soviet economy improving."

For now, Turkish policy remains supportive of Gorbachev and is more concerned with regional stability and prosperity, especially after the recent brush with potential disaster in the Gulf War.♦

CZESLAW CZAPLINSKI (WARSAW)

At left, Walesa puts Poland first.

Poland's eastern policy: to be everyone's friend

Solidarity government seeks new friendships from old hatreds

By David Warszawski
in Warsaw, Poland

POLAND IS IN an uncommon geopolitical situation. It changes neighbors without changing borders.

Traditionally, the question, Whom does Poland border upon in the East? is politically loaded. The obvious answer, the USSR, no longer seems so obvious, and another one—Lithuania, Byelorussia and the Ukraine—is gaining credibility every day.

As the Soviet empire appears to crumble, Poles are starting to reassess their *ostpolitik*—or, rather, to build it from scratch. In the 1980s, Solidarity established close ties with emigré nationalist movements from bordering Soviet republics in the name of the common struggle against a common enemy. By 1981, the Solidarity congress had issued an appeal to Eastern bloc workers, urging them to follow the Polish example.

David Warszawski is an international affairs commentator for the Polish daily *Rzeczpospolita*.

But the region's nations shared not only a common enemy, but also a common history of mutual hostility. Much of what is now Lithuania, Byelorussia and the Ukraine used to be part of Poland until 1939, when the Soviets marched in under the Ribbentrop-Molotov pact.

Gradually, the new Solidarity-led government has developed a two-track *ostpolitik*: maintaining friendly ties with Moscow while developing contacts with bordering Soviet republics. As repression in the Baltics became imminent, presidential candidate Lech Walesa endorsed the cause of Lithuanian independence. Once elected, however, Walesa backtracked and declared, in the face of strong pro-Lithuanian feelings in Poland, that Polish national interests should come first.

But concern over a hostile Soviet reaction to the Polish government's position was not the only issue involved. Lithuanian nationalists fear possible Polish domination over this small nation (Lithuania had been part of Poland for most of its history), while Poles in Lithuania tend to oppose the country's independence, fearing a possible anti-Polish backlash. The situation remains delicate.

Last October, the Polish minister of foreign affairs, Krzysztof Skubiszewski, visited the capitals of the Russian, Byelorussian and Ukrainian republics. Friendship treaties were struck with Russia and the Ukraine, but Byelorussia backed away.

The old-guard communists still in power in Minsk direct their ire not at Moscow, but at Warsaw, protesting alleged discrimination of the Byelorussian minority in eastern Poland.

Relations with the Ukraine are surprisingly fruitful. The treaty signed by Skubiszewski in Kiev opens the prospect for substantial low-level cooperation, contrary to pessimistic forecasts made by observers before the visit. Though anti-Ukrainian feelings still tend to run high in Poland, as do anti-Polish sentiments in the Ukraine, both nations feel sufficiently strong not to fear the other side's meddling.

The Polish government seems to be betting on an evolutionary development of the current Soviet crisis. Poland, though sympathetic to the aspirations of the Soviet-dominated republics, does not give all-out support for their struggle against Moscow and differentiates between claims made by the once-independent Baltic states and other republics.

But Poland has an economic interest in a stable Soviet Union, a traditional outlet for Polish goods, which are not competitive on Western markets. Turmoil in the East would certainly hurt Soviet markets and the crisis-ridden Polish economy would be seriously affected. Poles also fear the unavoidable influx of immigrants and refugees.

On the other hand, Poland is seriously interested in reducing the awesome power of the Soviet state.

For now, Poland is making contingency plans. The Polish Army is being moved eastward. Official delegations visit Vilnius and preparations are being made to develop formal relations, once Lithuania's status is internationally recognized. Finally, the announcement of Lech Walesa's visit to Moscow was seen as an expression of support for Gorbachev. Though the Soviet leader is not loved in Warsaw, the chaos which seems to be the only plausible alternative to his rule is feared even more.♦

Can the Soviet center hold?

And even if it does, what is to be done?

By Tatyana Ivanova
in Moscow, USSR

WHAT LIES BEHIND what we call the "center" in Soviet politics? There is the president, the Central Committee of the Communist Party, the Communist minister of defense and the Communist chairman of the KGB. In a word—the center: the leadership of the entire Soviet people.

If one looks at the center as a collective image, it becomes a middle-aged person who is poorly educated, noncharismatic, has a far from ideal command of the Russian language, lacks any sense of humor and is completely outdated in his manner, habits, dress and thinking.

He is most often seen standing before a statue or bust of Lenin delivering a long-winded harangue and using words that ordinary people never use in everyday speech. But his most typical pose, which no one ever sees, is the following: he stands in the middle of his office with a lost look in his eyes and his hands at his sides in a gesture of helplessness. What is to be done now?

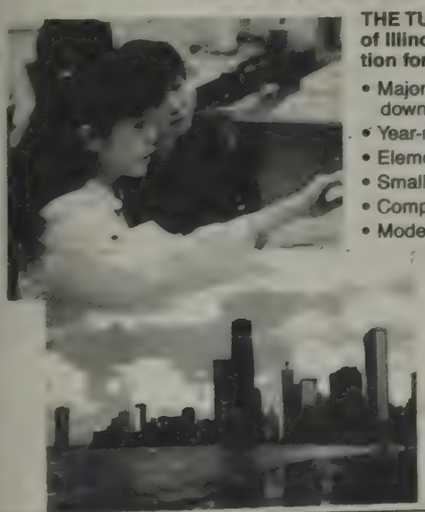
Many have grown accustomed to the endless, unmotivated, completely illogical and senseless actions of our unique center and have contrived to gain some advantage over it.

For example, the chairman of the Moscow City Soviet, Gavril Popov, jumped at the opportunity the union referendum offered and added a question to the ballot. So, he asked Moscow, do you believe in me, trust my programs, do you want me as your mayor? Yes, answered 80 percent of the voting Muscovites.

The Russian Parliament asked whether there should be direct elections for a president of the Russian republic. Yes, we would like to elect a president, Russia responded—and, yes, we will probably elect Boris Yeltsin president. Russia trusts Yeltsin and expects only good things from him.

In Kazakhstan, the center's question was answered in the following way: yes, Kazakhstan will become a part of the Soviet Union, but only as a sovereign state.

And now, what is to be done? What the republics, cities and capitals should do is clear. But what should the center do after millions of rubles have been spent? Consider all the funds spent on the propaganda campaign, nothing of its kind had been seen for decades, and consider the cost of deploying all those troops, not a cheap exercise, to merely put on a show of force.



What is to be done now? That comical figure alone in his office before the portrait of a former leader is, no doubt, pondering his options. Since his ultimate goal is self-preservation and as he cannot find the means to achieve this end, he will ultimately employ fear, the simplest method.

A good friend of our center, Saddam Hussein, is now engaged in his own similar struggle for self-preservation. And if our center resorts to the same means employed by Hussein, things will no longer be funny.♦

Rude awakening to history's cunning

BY SILVIU BRUCAN
IN BUCHAREST, ROMANIA

INITIALLY, EVERYONE IN the East and West assumed that in post-communist societies the transition to democracy would go hand-in-hand with the establishment of a market economy. Since both were considered a must, idyllic programs were presented in all Eastern European nations promising quick progress on both reforms, in perfect harmony. One year later, we have discovered to our deep chagrin that between the two historical tasks there is actually a striking contradiction.

The initiation of a market economy is an extremely difficult and painful social process. The old Stalinist economic model was a politico-ideological construct in which social (dictatorship of proletariat) and political (party monopoly of power) considerations prevailed over economic ones, forcing the economy to function according to the above-mentioned politico-ideological interests. Economic data were falsified and doctored to fit ideological claims; the whole economic picture was a big hoax and East Germany is probably its most glaring illustration, which many Western analysts praised as the "Communist showcase."

The demolition of that monumental make-believe is not only a daunting economic undertaking, but also a psychological trauma for the people involved. And since there is no previous historical experience of such a U-turn and no theory to guide us, we are all groping in the dark. We are going through a period of confusion and chaos even in the countries most advanced on that road, such as Hungary and Poland, in spite of the billions of dollars pumped into these nations from the West.

The situation has made Eastern Europe ripe for social upheaval. The liberalization of prices with the purpose of making them reflect economic reality triggers rampant inflation and, implicitly, a deep dissatisfaction among blue- and white-collar workers and pensioners. For five years Mikhail Gorbachev has been reluctant to face the social effects of price reform. The privatization of industrial plants, which were over-staffed under communist rule, generates massive unemployment.

At the same time, the restoration of democracy brings freedom and the right to set up free unions and to organize strikes. Hence, people in Eastern

I. SMIRNOV (MOSCOW)

Europe are using their new freedoms and rights to protest the sufferings and privations brought about by the transition to market economy; workers resort to strikes against both inflation and privatization. At a time when national productivity is slowing (Romania, 25 to 30 percent; Poland, 30 percent; Hungary, 15 to 20 percent; and Bulgaria, 30 percent) the unions are demanding higher wages and governments, operating under populist pressures, are forced to meet the demands of workers. The new political leaders are "soft on democracy."

Thus, a legitimate question arises: How can one overcome recession if prices and wages are going up while production and productivity are going down?

The first political casualty of that contradiction between market and democracy was the Polish prime minister, Tadeusz Mazowiecki. Considered a serious man for economic reform, he was praised throughout the West for his brave shock therapy. His adversary in the presidential elections, Lech Walesa, seized power on a platform of authoritarianism blended with Polish nationalism, hardly the ideal representative of "the triumph of democracy in Eastern Europe."

Actually, from a historical perspective, the advent of the modern market economy, in its initial stage, also went through classical authoritarian regimes: Cromwell in England, Napoleon in France and Bismarck in Germany. And it took Western capitalism about two centuries to reach the present balance between democracy and the market.

One could also add that, in our time, the success of the four tigers of the Pacific (South Korea, Taiwan, Singapore and Hong Kong) was made possible under authoritarian regimes. But recently, the information revolution has compelled the tigers to adapt their political systems to the imperatives of democracy in the information age. By changing efficiency and productivity and making the individual's creative contribution the engine of progress, the information revolution has dictated democratic reform.

In Romania, the market-democracy contradiction is striking the nation with a vengeance. The government's decision last October to liberalize prices has been met by unions with a wave of strikes. The recent railway workers' strike pushed the national economy close to the brink of collapse. The strikers seemed to act according to the French adage "*Après moi, le déluge*" or the popular American one, "What's in it for me?"

In other words, they did not care at all that the disruption of the economy may undermine the very basis of the new democratic regime, the only point where politics gets a chance to meet the economy. After half a century of brutal and effective dictatorship, people in Eastern Europe are learning democracy the hard way.♦

Silviu Brucan is *The WorldPaper* associate editor for Eastern Europe.

They got married.
They had children.
Their children got married.
Then the children went away.
But their Allwyn Refrigerator remained.
Yesterday. Today. Tomorrow...

"Quite often we think of buying a new refrigerator, but till this moment we have not been able to make up our mind. I wonder if we have fallen dangerously in love with our lovely Allwyn."

- Mr. Mrinal Sen, Calcutta.

"My children are now all married and settled abroad. But my Allwyn Refrigerator is still with me. Quiet, Sturdy and Faithful. It is indeed a Heritage of Confidence."

-Mrs. Iona Goodwin, Bombay.

"It is not we who should be honoured but your entire company deserves it. As a kid I remember my grandfather say, 'This is not Allwyn its Always'. How true he was."

- Mr Mahesh M Manghani, Thane (E).

"MANY OF OUR FRIENDS HAVE CHANGED REFRIGERATORS TWICE OR THRICE DURING THE PAST 30 YEARS AND HAVE SHIFTED TO ALLWYN AFTER FEELING JEALOUS AND ENVIOUS OF OUR 'OLD FAITHFUL'."

- MR. T.P. SABERWAL, PATNA.

"Many years ago a large lizard got entangled in the grill on the rear. I shot it with a pistol and the bullet flattened the main pipe circulating gas but this has had no effect on performance of my Allwyn."

-Lt.Col.Jasbir Singh(Rtd), Gurgaon.

"Since the compressor is still as good as new, we have every confidence that our old faithful will carry us through to the 21st Century."

-B. Parija, Cuttack.

"Thank you ever so much for this wonderful equipment. The question now is whether I at my age, or this Allwyn piece will kick the bucket first!"

- Mr. Jal Irani, Bombay.

"Seeing my good old Fridge friend, my two other sisters have also bought Allwyn and my brother on his return from abroad has bought an Allwyn refrigerator, all these of course, are later models".

-Mrs Kalpana Bhattacharya, Calcutta.

HERITAGE OF CONFIDENCE

So go the stories of confidence. Each one differently told, but all of them saying an Allwyn Refrigerator is quiet, sturdy and faithful.

How about you? Own an Allwyn today and you could well be writing your very own story of confidence.

PS Copies of the original letters sent by our customers are available at all Allwyn Area Offices for any further clarification.

INTRODUCING CASTROL GTX2

In these times, when every drop of petrol is precious, we would like to introduce you to the new generation engine oil.

***Castrol* GTX 2.** It saves you enough fuel in a year to give you free petrol for a week.

This fuel conservation is made possible by ***Castrol* GTX 2**'s selective Friction Modifier, which dramatically reduces friction; conserving energy and fuel.

Only ***Castrol* GTX 2** is certified as energy conserving by the American Petroleum Institute. It conforms to the highest gasoline engine performance specification in the world - API SG.

API SERVICE SG/CC
SAE 15W40
ENERGY CONSERVING

FREE PETROL FOR A WEEK

Your engine needs ***Castrol* GTX 2.**

If not for its ability to conserve fuel, then surely for its ability to increase your engine's working life. Protecting it better over vast temperature ranges; smooth running at scorching temperatures and quick cold starts.

And if even this is not reason enough, you may still wish to buy it. Because it comes to you from Castrol.

Available at leading auto accessory shops. In case of difficulty contact Delhi: R. Kaul 3318038. Bombay: S. Chatterjee 4923707. Calcutta: S. Bannerjee 201996. Madras: Venkatachalam 513844.

LLADI GROUP

romises to keep

r consolidating its position as the sole manufacturer of ephedrine rochloride, the group is going in for expansion and diversification

a turning point of sorts for the ras-based Malladi group (turnover: 3 crore for 1990-91), the country's manufacturer of ephedrine hydro-ide (used in the treatment of respi-y ailments). "We are entering a r phase of growth," says group chair-M.L. Avadhani. In addition to consol-ng its position in ephedrine ufacture by increasing production city, the group to add a range of products and en its R&D focus. e Malladi group is sult of a yearning g four brothers L.N. Sastry, M.L. hani, M. namurthy and Murthy, hailing Malladi in ra Pradesh — to eir own masters. the working en-ment and man-ent styles in most isations, we d a change," ex-M. Krishnamur-managing or, MDPL.

Krishnamurthy: "We wanted a change"

Avadhani: "We are entering a faster phase"

brothers, therefore, decided to "ex-ent", in 1972, by encouraging their est brother, M.S. Murthy, a student ineering, to get into the detergents ess with an initial investment of 00.

thy concentrated on the detergents t between 1973 and 1977 but fi-decided to opt out. Selling deter-effectively calls for a huge ting network and heavy advertising h of which the budding entrepre-could not afford.

979, Sastry felt they were ready to usiness. Each brother chipped in s.5,000 to set up Malladi Project ement Centre Pvt. Ltd (MPMC), a tancy offering project engineering es in fine chemicals, drugs and aceuticals. They chose Madras a y were familiar with as their base. aneously, they floated Saka Marketing Services Pvt Ltd (SMSPL), a marketing consultancy that also took on selling pipes and pipe fittings. By 1982, both these ventures helped the brothers reach a turnover of Rs.8 lakh.

Then came the big break. In 1981, they approached Southern Petrochemical Industries Corporation (SPIC) with the technology for the manufacture of ephedrine hydrochloride. Sastry had held discussions with the Tamil Nadu Industrial Development Corportion (TIDCO) but the deal had fallen through, because SPIC felt that MPMC had still not perfected the technology. TIDCO's then managing director, H.B.N. Shetty encouraged Sastry to think in terms of implementing the project himself.

The project was expected to cost Rs.1.5 crore including a promoter's contribution of Rs.10 lakh — a sum beyond the financial capacity of the brothers. So, working with the basic research findings of the Central Drug Research Institute (CDRI), Sastry fine tuned the technology for MPMC, which was then offered to the newly set up Malladi Drugs & Pharmaceuticals Ltd (MDPL) for a fee. This amount — Rs.8.5 lakh — formed the promoter's share of the equity of Rs.35 lakh. Rs.26.5 lakh was collected through loans from institutions. The unit at Ranipet, with a 30-tonne a year production capacity, commenced production in 1982.

Ephedrine hydrochloride was then imported, the largest manufacturer being Knolls of Germany. In the beginning, the brothers encountered a series of problems. Molasses, the prime raw material was in short supply, since it was diverted to alcohol manufacture. A 100 per cent power cut slapped on new units applied to MDPL too and the BICP fixed prices at Rs.847 per kg against a viable price of Rs.950 per kg. To top it all, the international prices were much lower than the domestic prices, and there was no control on imports. By 1986, MDPL totted up accumulated losses of Rs.2 crore and the unit came under the BIFR.

"But, all at once, the tide turned in our favour," says Krishnamurthy. MDPL improved the technology, increasing yields from 40 to 70 per cent. Simultaneously, the international prices rose (now Rs.2,000 per kg), making the domestic product (currently priced at Rs.1,650 per kg) more attractive. Firm allotment of molasses was obtained, the power situation improved and the unit got back into shape. "By 1990, our accumulated losses were wiped out," says Avadhani. For the year 1990-91 (provisional), MDPL's turnover touched Rs. 12 crore, with a profit after depreciation of Rs. 2 crore. "MDPL is now well out of the woods," affirms an industry source.

Mahendra Dadha, managing director, Tamil Nadu Dadha Pharmaceuticals Ltd, a client, says, "MDPL is one of the few companies in the drug sector which has ventured into biotechnology-based research.

Efforts recognised

MDPL's inhouse R&D effort also received recognition. It got the Acharya Sir P.C. Roy Award in 1986 and the 1990 award from the department of scientific and industrial research for work done on ephedrine. Once MDPL started functioning, Sastry ensured that an R&D lab was also set up, at a cost of Rs. 10 lakh.

In 1986, Catazyme India (CI) was

floated to manufacture pseudo-ephedrine — a purer form of the drug used in paediatric medicine. It also manufactures catalysts of precious metals, with indigenously developed technology. Emmellen Bio-tech Pharmaceuticals Ltd (EBPL) was set up at Mahad in Maharashtra, with financial assistance from State Investment Corporation of Maharashtra) (SICOM), to produce 30 tonnes of ephedrine hydrochloride every year.

In March 1991, Avadhani took charge as the group's full-time chairman. Sastry, as founder chairman, "plays an advisory role, and is now more keen on getting involved with the R&D aspect," says Avadhani, who is bent on taking the group onto the fast track. Also, TIDCO disinvested its shares in MDPL, giving the family a free hand. The payment which was 2.5 times the value of the shares, "will provide MDPL with the flexibility it needs to grow, without the usual process of sanctions and clearances," observes Avadhani.

The group now plans to diversify into the manufacture of chemicals. Kaushik Chemicals Ltd (KCL) has been set up at Ranipet to manufacture FCC (free from chlorine) benzaldehyde, a chemical used in the manufacture of synthetic ephedrine, currently imported. Out of the total investment of Rs.3.16 crore for this project, Rs.1 crore will be internally generated and the remainder obtained through term loans. Commercial production is scheduled to start by November 1991.

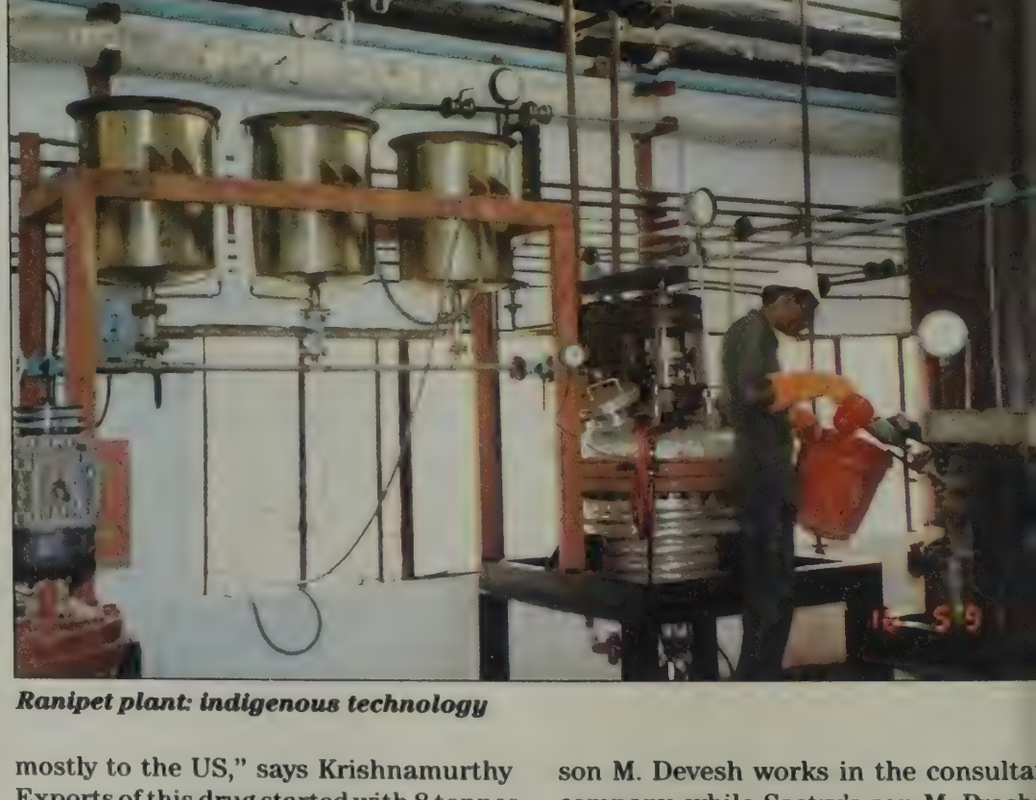
Versatile unit

Another new unit, Catazyme Drugs & Pharmaceuticals Ltd (CDPL) (under construction at Ranipet), will involve a total investment of Rs.2.6 crore. State Industrial Promotion Corporation of Tamil Nadu (SIPCOT) and the Tamil Nadu Industrial Investment Corporation (TIIC), together will chip in with Rs. 1.40 crore, the balance coming from group companies. Being a versatile unit, CDPL will manufacture bulk drugs — to be identified by the R&D wing from time to time — for export.

Manufacture of cephalosporins (antibiotics) will be taken up through a joint venture — Karnataka Malladi Biotics Ltd (KMBL), in conjunction with the Karnataka State Industrial Investment Development Corporation, which will take 11 per cent of the equity. To be set up at Mandya in Karnataka, the project involves an investment of Rs.10 crore with an equity of Rs.4 crore. A public issue of the value of Rs.3 crore (promoters' contribution will be Rs.1 crore) is in the offing later this year. Commercial production is scheduled to begin by July 1992.

The group will consolidate its position as a monopoly manufacturer of ephedrine hydrochloride. "The process has not been replicated by other Indian companies, since a lot of applied research is necessary to perfect the basic technology," says an industry source.

Ephedrine capacity at EBPL is being doubled to 70 tonnes at an investment of Rs.3 crore. MDPL's ephedrine capacity was doubled to 70 tonnes last year. "About 100 tonnes will be exported, mostly to the US," says Krishnamurthy. Exports of this drug started with 8 tonnes in 1988-89, which increased to 25 tonnes the next year.



MDPL will also diversify into the area of immunologicals and antigens. It has entered into an agreement with the CDRI, to manufacture filaria diagnosis kits, developed for the first time in the country.

TIDCO's disinvestment will mean an end to orders from government hospitals and dispensaries — hitherto a Rs. 3-crore a year business for MDPL — but the company has been preparing for this eventuality. In late 1990, MDPL made an entry into the open market in A.P. and Tamil Nadu. "Sales of Rs.25 lakh have been effected in eight months in this segment," says Krishnamurthy. This year MDPL will go into Karnataka and Kerala.

R&D will also get its share of attention. In March 1991, the Malladi Research C tre was inaugurated at Madras invol an investment of Rs.2 crore. This unit also handle projects relating to che cals, biotechnology and immunol Also on the cards is an analytical lab tory, to serve the needs of other c panies in Madras. "The aim is to gene resources to make R&D a self-sustain activity," says Krishnamurthy. Curre the spending on R&D is Rs. 1.2 crore annum, involving 15 scientists.

The group is still family-managed. Sharma, the managing director of CI brother-in-law, as is L.L.K. Sastry, managing director of EBPL. Avadha son M. Devesh works in the consulta company, while Sastry's son M. Prash is the executive director of MD "Through a corporate review gro (CRG) which includes the chief exe tives and the vice-presidents, the poli and performance of the group is revie and discussed," explains Murthy, feels that "in time, the group will professionally-managed to a very gr extent." Even outsiders are optimi about the potential of the company. cording to a source in financial circ "The group had some initial teeth problems but it is now doing very well is generating cash profits. It is in a nopoly situation and is gearing up for port. "By 1993-94, we will net a gr turnover of Rs.200 crore," st Avadhani.

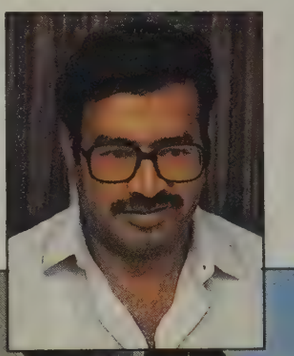
lso deals in hooves and horns, the
r used to make buttons.



Bones being cured before crushing **(inset)** ***Subbaraj***

ple process

manufacturing process is fairly sim-
"Bones are collected from fallen ani-
— cows and goats — and also from
ghter houses," explains P. Subbaraj,
rietor of the company. Tamil Nadu,
articular, has an organised collection
em. Butchers, cattle owners and
ghter houses sell the bones to agents.
ce the agents have collected 7 to 8
nes, we send a truck to collect the
material," he explains. The bones are cured by being dried in the open for a month, until the "rawness" goes. A quality inspection takes place at this point, and bones which are fibrous, with bits of gristle or hoof sticking to it, are discarded. They are crushed mechanically and then manually sorted into various sizes. These are then packed and despatched for exports.

Bones were certainly not on Subbaraj's mind when he graduated in philosophy. His father, the late Perumal Naidu had turned to bone exports in the early fifties, with a unit set up at Kadambur in the Tirunelveli district of Tamil Nadu. Subsequently he set up units at Villupuram, Madras and Shencottah, all in Tamil Nadu, and also at Vijayawada and Guntakal in Andhra Pradesh. In 1971, Naidu despatched Subbaraj to Vijayawada to oversee the family's now defunct bone meal plant. Thus began Subbaraj's involvement in the business. Thereafter, under his father's guidance, Subbaraj set up a bone crushing unit at Nelkundam, 10 kms away from Madras, in the mid-seventies, involving an investment of about Rs.2 lakh.

In 1976, Subbaraj invested Rs.2 crore to set up a bone crushing unit at Kondapalli in Vijayawada using family funds. Till 1979, he concentrated on supplies to ossien manufacturers like the Kerala Chemicals & Proteins Ltd, India Gelatine and Hind Nihon. In 1980 he started exporting crushed bones, the first consignment being worth Rs.30 lakh.

Gradual expansion

Soon he realised that in order to increase export earnings he would have to offer a range of products. By 1982-83 he set up a glue and de-gelatinised bone plant at Kondapalli near Vijayawada, with an investment of Rs.25 lakh.

"The large spurts in exports came only after 1985, when we increased our product range," says Subbaraj. In the early eighties, crushed bone constituted 75 per cent of the firm's exports. Currently, that accounts for 20 to 30 per cent of the company's exports; de-gelatinised bone 30 per cent; and glue and bone grist, among other products, the remainder.

Last year, European companies were the big buyers of bone and bone products, but this year, Japan is emerging as a major buyer and is offering better prices, says Subbaraj. During 1989-90, only 15 per cent of his exports went to Japanese companies (the rest to Europe) but this year the Japanese offtake has increased to 30 per cent.

"Competition from developed countries, especially the US, where the meat trade is organised, is on the increase," observes Subbaraj, who remembers a time when Pakistan was India's main competitor. Local demand which is an estimated 70,000 tonnes per annum has also been increasing. About 250 small units have come up recently but "only 15 to 20 of these are exporters", says Subbaraj. In an attempt to encourage supply to local ossien and gelatine manufacturers, the government has pegged exports at 25,000 tonnes per annum. However, exports from India today amount to only 10,000 tonnes, at a price of Rs.4,500 per tonne. Therefore Subbaraj will continue to rake it in from his unusual business, and make no bones about it.

OMBAY HOSPITAL

Deathly experience

patient dying on the operation table is ery surgeon's nightmare. But when two aths occur within a few hours of each ner in a single department of a reputed stitution like the Birla-run Bombay spital at Bombay, it's straight out of a rror story. "At least two patients died at day," says Devendra Saxena, one of e seniormost surgeons attached to the rdiothoracic (heart and chest) opera-n theatre (OT) of Bombay Hospital. e two patients died in this OT on 21 y 1991 after they were given injections a spurious drug.

Two other patients also died in the me department between 18 and 20 May 91 but they had complicated problems d would possibly have died anyway, ac-rding to J.K. Suchdeva, the hospital's edical director.

urious injections

e death of Rameshchandra Sharma in e small hours of the morning of 21 May s, however, clearly attributable to spu-us injections of sodium bicarbonate odabicarb for short). Sodabicarb is ven routinely by doctors all over the rld to correct the acid level of blood en it becomes high enough to damage e body tissues.

The causes of a rising acidity may be any — from a simple starva-n of oxygen supply to a ronic failure of the kidneys. t the antidote is almost always e same — sodabicarb. "And body suspects the drug," says adeep Joshi, an anaesthesiolo-t with Masina Hospital, also in mbay.

It all began on 16 May when a nsigment labelled (obviously ongly) as sodabicarb, marked atch no. SB 1" arrived at the ores department of Bombay spital. The supplier was Intra boratories Ltd of Patna which d fulfilled Bombay Hospital's mplete requirement of the edicine since May 1990.

According to the label of the est consignment, the material d been packed in April 1990 d could safely be used any time ring the next three years. The xt day a request came from the cardiothoracic operation theatre for a fresh supply of sodabicarb. This was the first department to be supplied from the batch that later proved to be spurious. A relatively quiet weekend followed, during which the department must have used up the remainder of its own stock of sodabicarb. But, by Monday, 20 May it was fully utilising the fresh supply.

Within a few hours, things began to go wrong. Rameshchandra died at about 3 am and another patient, a woman who was dangerously ill to start with, died soon after. By that time blood tests on Rameshchandra had shown that sodabicarb administered in order to correct his high acid level had failed to do its job. Immediate tests on an ampoule of the suspected medicine in the hospital laboratory indicated that the solution in the ampoule was not sodabicarb at all! At that point they were unable to find out what the substance really was.

The hospital administration reacted swiftly. On 21 May 1991, all operations in the cardiothoracic theatre were cancelled forthwith. A complaint was sent to the Maharashtra Food and Drug Administration (FDA) but the latter returned it because apparently the format of the complaint was not correct. The next day, the FDA was closed because of Rajiv Gandhi's death and the complaint was registered only on 23 May. Stocks of the suspected drug were withdrawn from the operation theatre and another consignment marked "SB 1" which arrived in the hospital on 18 May was tested thoroughly. But the second lot was found to be okay.

Pankaj Desai

Increased acidity

Soon the FDA got into the act. Preliminary tests on the suspected sample conducted in the FDA laboratory in Bombay showed that the ampoule contained not sodabicarb but ammonium chloride a compound that actually increases acidity in the blood! This explained why the patients' blood acid level went on rising instead of going down when the injection was given. "The final report will be ready in a week or so but there is very little doubt," says FDA commissioner Arun S. Mago. The FDA also examined in great detail the records of Intra's sales depot in Bombay and interrogated branch manager V.K. Kapoor.

When contacted by this reporter, Kapoor was unwilling to provide even innocuous details like the turnover of his company, what other products it manufactures and the size of each batch of the medicine. He only said, in an injured tone of voice, "We have sold over 150,000 vials of sodabicarb in Bombay in the past year and no one has ever complained."

Last week, a letter was issued by the FDA to 14 hospitals in Bombay city who had obtained supplies from Intra Laboratories, not to use the medicine from batch "SB 1". It also requested these hospitals to report if they had any stocks drawn from the suspected batch. But three days later, Mago found that only the Western Railway's Jagjivan Ram Hospital had informed them about their stocks of sodabicarb. In spite of this, by 5 June, the FDA had seized 12,000 vials of the medicine from various hospitals.

That is where the matter rests at the moment. Much depends on what FDA enquiry reveals. Meanwhile the drug may have killed other patients in other hospitals but many months may pass before it becomes known.

Another possiblity is that relatives of some of the deceased might drag the hospital to court. "We would have to bear that," says Suchdeva. But he does not support the idea of routine checking of the hospital's stores. "No hospital in the country can afford that," he says.

LEADING LIGHTS. IN PUBLIC SAFETY

Philips Lighting

PHILIPS

Philips Lighting In Action.

Marine Drive, Bombay, with Philips Lighting.

Drive home from work at midnight. Take a walk with the family, while it's twilight. Travel miles of deserted roads and busy highways, right through the night. All... in total safety. With Philips Lighting to guide you and protect you.

Philips Public Lighting: For public safety.

Philips are the acknowledged experts, the world over, in providing the vital community service of public lighting. Their modern luminaires with computer designed optical systems and lamps with advanced technology work together to produce optimum levels of illumination... whilst saving on energy consumption.

In fact, only Philips offer the latest, revolutionary POT optics. Where... the perfect combination of a tubular sodium lamp and a luminaire with POT optics helps reduce the number of points over a given stretch of road... by as much as 30%. Translate that into actual energy savings, in thousands of kilowatts per hour!

Today, PHILIPS INDIA have lit some of the major roadways in the country. The Queen's Necklace at Bombay's Marine Drive. New Delhi's Ring Road. The Marina Beach, Madras. And the Eastern Metropolitan Bypass at Calcutta... to name just a few.

Each one exemplifies Philips Lighting expertise. And is also a triumph of technology for Philips LiDEC. The Lighting Design and Engineering Centre that uses technology to move light years ahead... in safeguarding private lives and public property.

Leaders in Public Lighting. Worldwide.

HTA 2899

BUKHARA RESTAURANTS

Winning with recipes

Originating in the plains of central Asia, it crept into the north-eastern province of India and is now a favourite with diners at Sheraton hotels in Delhi, Hong Kong and Bangkok. The object of admiration: an exotic *tandoori* cuisine served at the Bukhara restaurants in these three cities.

ITC's hotel division Welcomgroup, a franchisee of Sheraton for its five-star hotels in India, takes the credit for this. This breakthrough is an achievement of sorts in the restaurant business where, normally, original ideas flow into India from abroad. The speciality restaurant Bukhara first surfaced in 1976 at the Delhi based Maurya Sheraton, Welcomgroup's flagship. Today, Bukhara is the most popular upmarket restaurant in Delhi, chalking up a revenue of Rs.1 lakh every day. Encouraged by the runaway success of its first franchised Bukhara in 1989 at Hong Kong Sheraton Hotels and Towers, the Sheraton chain recently added another Bukhara at the Royal Orchid in Bangkok.

Delicious cuisine

Bukhara takes its name of the city in central Asia, from where many delicious cuisines emerge. The locals, nomadic *pathans*, opt for a healthy diet based on dishes seasoned with many herbs and spices but devoid of hot chilli and peppers. The cuisine at the Bukhara is basically a modification of this diet, but which has consequently been perfected by Madan Lal Jaiswal, Welcomgroup's master chef in Delhi.

Jaiswal hails from Lahore where his father had a *dhaba*. A master in *tandoori* preparations, his success lies in the innovative combination of spices that goes into the marinate, the intricate incisions he makes into the meat and his control over the required temperature. The rustic decor of the Bukhara restaurants complements the eating style which encourages the use of fingers instead of forks and spoons.

The stupenduous success of the Delhi Bukhara encouraged ITC to promote similar ventures abroad. Moreover, according to S.S.H. Rahman, senior vice-president (operations) at Welcomgroup, Delhi, Ajit Haksar (former ITC chairman) and J.N. Sapru (present chairman) are avid proponents of Indian culture, art and food. Adds Rahman, "In fact they believe in anything Indian." Therefore, in 1986 the ITC, in collaboration with a group of NRIs, set up a joint venture, ITC International (ITCI), in New York with ITC having a 51 per cent equity participation. Says Rahman, "So began the export and globalisation of Indian cuisine."

Spurred by their success at New York, ITCI set up another restaurant at Chicago in 1988. And the next year, Sheraton approached ITCI to franchise Bukhara in their Hong Kong Hotels and Towers branch. According to the franchise agreement, Sheraton has to pay a fixed royalty, based on the net revenue earned by the restaurant. Says K. Vaidyanath, senior vice-president (finance), "The fee varies between two to five per cent of the revenue, depending upon the earning capacity of the location."

In return, Bukhara lends its name and cuisine. The salaries of the chefs — appointed by Welcomgroup — are paid by the Hong Kong and Bangkok hotels. These hotels also buy the pottery from India as well as the uniforms for the staff.

The challenge

But what proved a challenge for Jaiswal was the Far East. He had to prepare the basic Bukhara menu and lace it with Chinese add-ons so that each item was a ceptable to eaters in Hong Kong. Jaiswa knack for innovative cooking create wonders at the Hong Kong Bukhara.

The revenue earned in 1990 was an in pressive $52,000 and confirmed the risin popularity of Indian *tandoori* food. Sa Rahman, "The franchises are adva tageous for us." In February this year th Bukhara was introduced the Royal Orchid, the She aton hotel in Bangko Within three months, it ha made 85,000 bal (Rs.71,400). The royal here is fixed at 5 per cent the net revenue.

Following the populari of the Bukhara restaurant in three loca tions, requests have been pouring in fro various other Sheraton hotels. Ne Bukharas will be introduced in Singapor Malaysia, Indonesia and Cairo. Says Rah man, "With increasing requests we hav decided to add two restaurants each year The next Bukhara restaurant is to come u at Odessa in Russia, where it will be a joi venture between the ITC and the city cou cil, with ITC having a 15 per cent equi participation.

Thus, what started off as an exper ment at the Delhi Sheraton 15 years ag has, today, turned into a net foreign e change earner for Welcomgroup and IT In the process, the speciality restaura has not only fetched good publicity f the hotel chain, it has also succeeded propagating the virtues of Indian foo and cooking.

RD

he vision and the reality

inauguration ceremony of the Euro- Bank for Reconstruction and Devel- ent (EBRD) was, by all standards, ressive, as was the swiftness with h the bank itself has come into being. are the bank's objectives wanting in ness. Created by a path-breaking ter that stands apart from those of r development banks, the EBRD has given a wide brief and berth to ch itself truly as not only a catalyst growth of the East European econ- es but also as a friend, philosopher guide, protector of environment, pro- er of human rights and democracy what have you. In the circumstances, could not fault the bank's president, ues Attali, for seeing grandiose vi- s of his bank as the first institution of new world order.

he reality, however, is far from reas- ng. The bank's target area is a part of world whose net hard currency debt grown 20 times, from about 6 billion ars to about 120 billion dollars, in the 20 years. By Attali's own admission, East European countries would re- e capital of the order of 2,500 billion ars in the next twenty years to match economic level of the West, into which opes to integrate the East to build a mon house of Europe.

ging the question

gainst this, the bank has a guaran- capital of merely 13 billion dollars about 30 per cent of it paid up. It es to raise the rest of the resources the international capital markets. ough the bank can use the savings of Easterners themselves to spur invest- t, this amount is too meagre in rela- to the requirement. So the bank's endence on the lenders in the market omes all too pronounced. That begs question whether there is so much liq- ty available in the world market to be just to East Europe.

ssuming funds are indeed available, will the bank or the debtor nations rantee their repayment without tang- assurances of commensurate returns nvestment? With several advantages s side, the former East Germany has been able to attract enough private stment from even West Germany, not peak of other West Europeans. Past returns on the small investments made in Eastern Europe have been so abysmal that it gives little hope that investors would be more impressed this time.

To attract private investments from outside, what the eastern nations require to do is to put in place the by-now-cliched market economy. But, before they can do this, they require political stability, a lower rate of inflation, convertible currencies, removal of subsidies to industries and private ownership of the means of production. Also no less important for raising investor confidence is a change in management ethos and work ethics. What obtains today, however, is quite the opposite.

Created by a path-breaking charter, the EBRD has been given a wide berth to launch itself truly as not only a catalyst for growth of the East European economies but also as a friend, philosopher and guide

Hungary and Poland have had a head-start though, having dabbled in reforms of sorts for years now. Yet, even here, there are far too many monopoly elements in the form of state and collective enterprises for the market to be called decontrolled. In Rumania, people have voted very recently in a poll to say that they prefer slower reforms rather than suffer the present for a better future. In Bulgaria and the Soviet Union, there is not even a semblance of political stability what with ingrained ideology taking head-on unclear visions of liberalism.

What does all this portend for countries such as Bulgaria, Rumania and the Soviet Union? It appears that they will have to live with the current convulsions in the coming couple of years and that means no meaningful loans or investments may be available for these countries in the foreseeable future. As they attempt some half-hearted reform measures, they will succeed in getting some political loans from some quarters that may have interest in sustaining the regimes of the day. Poland, Hungary and Czechoslovakia may, however, see some interest shown in them by lenders, if not investors, if the political climate continues to be conducive.

In the meanwhile, for the foreseeable future, the East European governments and EBRD have their roles clearly cut out for them if their objectives are to be achieved. The governments for a start must open up their markets within, for domestic competition, permit only necessary imports but allow these freely, welcome outsiders to invest with clear incentives for ploughing back profits and with guarantees for repatriation after a given number of years and a total freeze on military and other non-productive expenditure. The governments must also come up with specifically attractive debt-equity swap programmes on the lines of programmes in countries like Chile which have reduced their debts enormously through this medium.

Importance of human resources

The dynamics of free enterprise has its own dictates such as singular orientation towards profit, elimination of redundant workforce, etc. But the people of East European nations have not known private management or the system of reward and punishment, having enjoyed state patronage for several decades.

This does not, however, mean that an entire generation of workers may simply be asked to pack up and go home. With the bank's charter having envisaged a far wider role than mere lending, nothing is more appropriate than it concerning itself with improving the quality of the most available material: the human resource. This resource is the most stable and basic infrastructure and the bank must promote all endeavours that aim at providing training at all levels, encourage all avenues aimed at modernising and automation of factories and providing motivation to the workforce.

In the ultimate analysis, it is the work ethos and culture of the people, among other factors, that will determine a state's economy. Attali may yet be president. For the time being, however, it seems it is the novelist Attali, and not the socialist-economist, who is speaking.

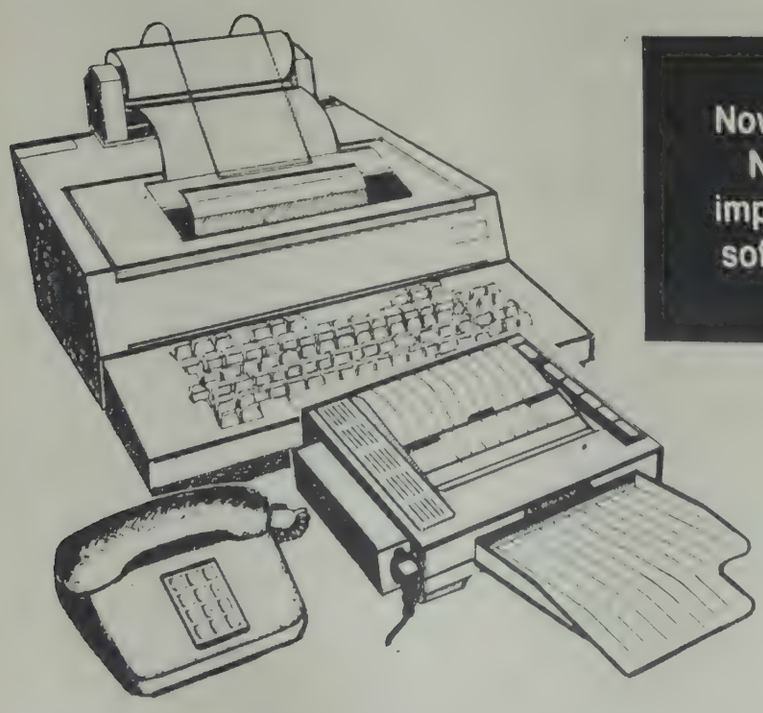
Cut Your Phone Bills: Install Aurelec PC-Telex

Only Rs. 6,999/-
(exclusive of local sales tax, octroi, installation and training)

The cheap and convenient computer-age way to get your message across: Aurelec's PC-Telex card.

Although cheaper and more reliable than the phone, the telex is rarely used if you have to make do with a clumsy electromechanical telex machine, but with Aurelec's PC-Telex card, your computer makes your telex usage more attractive than your phone or Fax, with greater efficiency and far lower costs!



With a vast experience gained from over 1,000 installations, a vastly improved software and unique "no quibble" 30-days money back guarantee, you owe yourself a demo. Contact Aurelec for the address of your nearest dealer. We've got over 20 dealers throughout India.

- New improved software
- fast to install, easy to use
- pays for itself in rental saved and cheaper night transmissions tariff
- fits snugly INSIDE your PC and does not use up a serial port
- lets you use your PC normally
- superior immunity to noisy lines
- full multi-user support on LAN's
- superior features like:
  - password security
  - text editor with abbreviator
  - automatic reference numbering
  - 2 queues: normal & priority
  - group dialling
  - bills with estimated costs and department-wise break-up
  - user friendly menu driven software
- TRC approved
- Unique 30-day money back guarantee

which have traditionally been 9 per have edged forward to 10 per cent. the exports front, the f.o.b. value ropped sharply from Rs.4.83 crore 89 to Rs.2.58 crore. This is due to a f consumer product purchases from SSR during the second half of 1990. er, imports have increased by more 50 per cent to Rs.2.79 crore. Thus it ecome a net importer to the tune of 1 crore in 1990 as against a net ex-r of products worth Rs.2.14 crore. ider gap between imports and ex-has led the company to look into the t of food items like spices, bulk and barley.

to better performance, which has led to a higher bottomline, the EPS works out to Rs.11.14, compared to Rs.9.55 in 1989. RCIL has matched its FERA brotherhood in maintaining high dividends. The company has declared a 7.5 per cent higher dividend giving a payout ratio of 43 per cent (49 per cent).

RCIL last declared a bonus in 1988 in the ratio of 1:1. The board of directors of RCIL have now proposed a 3:5 bonus through capitalisation of Rs.5.03 crore from the general reserve. This should increase the share capital to Rs.14.29 crore. The scrip is now quoting at a cum bonus price of Rs.267.50; which is close to its 1990 high of Rs.270.

Comet Steels

Skips dividend; expansion of production capacity completed; working affected due to higher interest, depreciation and the absence of trading operations; equity expands on conversion of debentures

Comet Steel belonging to the Bombay-based Lloyd Steel group is engaged in the manufacture of cold rolled steel strips and coils. For the year ended 31 March 1991, the company has skipped dividend following severe set-back in its working. The poor working was on account of a number of reasons like lower income from other sources, higher interest and depreciation charges, increased manufacturing expenses and the lower price realisation of iron and steel products.

During the year under review, production capacity was expanded from 10,000 tpa to 50,000 tpa. Production of cold rolled strips/coils recorded a growth of 87 per cent from 28,374 to 53,136 tonnes and sales volume went up by 88 per cent to 52,421 tonnes (27,837 tonnes). Trading operations of iron and steel had contributed Rs.18.77 crore to total sales the previous year, but the contribution was nil during the year under review. Other income declined by about Rs.1 crore for which no explanation is available in the abridged annual report.

Interest charges shot up by more than two fold and depreciation charges more than doubled. As a result, gross profit declined by 46 per cent and profit after tax by 82 per cent. Even zero tax liability for 1990-91 (Rs.77 lakh) could not prevent a 79 per cent fall in net profit. EPS declined from Rs.4.11 to 88 paise.

The company recently issued fully convertible debentures aggregating Rs.7 crore on rights basis to finance the cost overrun of the expansion plans and to meet long term working capital requirements. On conversion of the debentures, equity capital has increased by Rs.5.35 crore to Rs.15 crore in the current year.

1990: High	15.00		
Low	14.00		

During the year under review, steep increase in administered prices of hot rolled coils (major input for CR coils) and the cost of imported raw materials also went up substantially due to hardening of foreign currencies. With a 200 per cent margin and 25 per cent surcharge of import finance, cost of imported materials will go up further in the current year. The c.i.f.value of raw materials imported during the year under review amounted to Rs.42.14 crore.

The scrip, currently priced Rs.14, discounts its earnings by 16 times. There is little scope for capital appreciation as the current year's working is unlikely to improve.

TRENDS

Ingersoll Rand

Ingersoll-Rand (India) in which the US-based parent company has a 74 per cent equity holding, manufactures vacuum pumps and air and gas compressors. For the second half ended March 1991, the company has reported a 21 per cent increase in sales, which together with sales

When your boss asked you for the sales breakdown in the last quarter, he surely didn't mean this.

To be optimistic is indeed a positive attitude. Especially about the future. Record sales. Higher profitability. Better working conditions...

But while you look at all the things that should go right, it makes good business sense to consider what could go wrong. A riot that affects your office. A fire in the warehouse. A damaged consignment. An accident in the plant.

At United India, we've spent years understanding risk. And how it can be reduced, controlled and covered. Because, we believe that the greatest business risk you could ever take is to ignore the ones you already face.

Come, call on us at any of our 1120 offices. Together, let's make risk management work for you. Risk management which denotes innovative covers, personalised service, and speedy settlement of claims.

gross profit has fallen by 19 per cent. Also the EPS (on an annualised basis) has dropped to Rs.3.23 (Rs.5.07).

The company had been charging heavy depreciation which kept its cash earnings per share above Rs.20 for the last four years. Also, the tax outflow has been minimum due to the heavy depreciation. The book value placed at Rs.41.52 makes the company fundamentally strong.

Meanwhile, the company is expanding its paper unit which should see the margins improve in the current year.

Synthetics and Chemicals

Synthetics and Chemicals, engaged in the production of synthetic rubber, announced encouraging results for the six months ended March 1991, compared to the corresponding period of the previous year. Not only has turnover increased by an impressive 35 per cent, profits from operations have also jumped by 150 per cent. Furthermore, net profit has increased by over three times, giving an EPS

of Rs.4.05 (on the expanded equity) for the current six months, compared to Rs.1.84 in the corresponding period last year. However, the company's results for the same period in the past four years were turbulent.

Synthetics and Chemicals is currently producing at over 100 per cent capacity. According to company sources this has been one of the major factors for increase in sales over the years, a 35 per cent increase over the previous period. The company is in the process of increasing its capacity from 40,000 to 70,000 tpa at a cost of Rs. 80 crore to be partly funded through a convertible debenture issue of Rs.20.11 crore. The expansion is now 30 per cent complete say company sources and should be operational by July 1992. A non-convertible debenture issue of Rs.25 crore will be introduced in June '91 to fund its second phase of expansion from 70,000 to 1,20,000 tpa.

The scrip has been traded at a 1990 high of Rs.83.50 and a low of Rs.33.75. In January 1991 the scrip reached a low of Rs.42.50, but is now trading at a high of Rs.56.25.

Mafatlal Dyes and Chemicals

Mafatlal Dyes and Chemicals have posted sales of Rs.33.12 crore in the six months ended March 1991. This is 21.5 per cent higher than sales in the corresponding period last year. Gross profit has increased by 32.8 per cent to Rs.1.62 crore. While both interest and depreciation

show an increase of 13 and 33 per cent respectively, salaries and wages are down by 10 per cent. Net profit increased by 34.5 per cent from Rs.0.58 crore, in the corresponding period last year, to Rs.0.78 crore. Margins have improved only slightly — at net level it has gone up from 2.13 to 2.35 while at gross level it rose from 4.47 to 4.89.

RESULTS ANNOUNCED

Shree Cement

Jump in turnover and profit margins for the year ended 31 March 1991: carry forward deficit wiped out

With sales turnover up 44 per cent at Rs.134.55 crore, gross profit margin doubled to 16.8 per cent (8.7 per cent). On a fairly large equity base of Rs.20 crore, net profit shot up from a mere Rs.3.90 lakh to Rs.13.88 crore giving an EPS of Rs.6.94. The healthy bottomline will enable the company to comfortably wipe out the carry forward deficit of Rs.38.35 lakh.

Manjushree Plantations

Rise in sales and profitability for this dividend stepped up by ten points, a 1:2 bonus proposed for the year ended 31 March 1991

Manjushree Plantations, engaged in the production of tea, cardamom and coffee, reported higher price realisations for tea (up by Rs.2.35 per kg) and coffee (up by Rs.0.50 per kg) but lower profitability on cardamom (down by Rs.27.20 per kg). On a sales of Rs.13.10 crore (up 7 per cent), Manjushree posted a gross profit margin of 53 per cent (51 per cent). On a minuscule equity base of Rs. 65.68 lakh, the company earned Rs. 49.24 per share (Rs.40.76) of Rs.10 face value. The company will pay out Rs. 5.50 per share as dividend (Rs. 4.50) at a conservative payout of 11 per cent. The scrip quotes at Rs. 385 (Madras Stock Exchange), discounting these earnings 7.8 times.

Godfrey Phillips

Sales up 14 per cent at Rs. 531.96 crore, bottomline fattens with a rise in profit margins for the year ended 31 March 1991

Even as Godfrey's new brand in the super premium segment 'Jaisalmer' has created a stir, its unaudited results seem impressive. With gross profit margin up by 2.3 points to 4.4 per cent, at the net level, EPS has trebled to Rs.45.65. The scrip quotes at Rs.315, discounting these earnings 6.9 times.

GTC Industries

Rise in profits albeit a slight drop in sales for the year ended 31 March 1991

GTC's gross profit margin was 4.3 per cent (3.6 per cent) on a sales of Rs. 2(crore which is 8 per cent less than last year. On an equity base of Rs.5 c EPS rose to Rs. 14.16 from Rs. 10.80 scrip quotes at Rs. 108.75 giving a P/ 7.68.

ITC

Sales cross the Rs.2,000-crore n while bottomline is up 47 per cer Rs.77.52 crore

Sales, at Rs.2,286.49 crore, was up 26 cent yielding a gross profit margin o per cent. On a large equity base Rs.66.34 crore, EPS has crossed face v at Rs.11.69 (Rs.7.93) while an inte dividend of Rs.5.40 per share has b proposed (total dividend for 31 Ma 1990 was Rs.3.75 per share). The s quotes at Rs.164 giving a P/E ratio of

TAKING ACCURACY IN

Not a zero more,

ividend list with a five point higher of 20 per cent as against 15 per cent in 1987

the company's turnover for the year d March 1991 registering a growth of er cent to Rs.54.72 crore, Piramal ning and Weaving EPS has peaked to .45. This has been the company's performance since inception. It has nly wiped out all previous losses ag- ting Rs.3.30 crore but has also made plus of Rs.6 lakh.

e company attributes the splendid rmance to the good cotton crop in previous year as a result of which was no shortage of raw material. increase in the demand for fabrics, cularly from garment exporters and omies of scale as a result of improved uctivity — better control over cost of uction and improvement in the uct mix — helped.

anwhile, the company contemplates asing its production through mod- ation. It plans to update its spinning inery to improve the quality of its s besides proposing to expand the rocessing division to cater to over- narkets. In the weaving department replace all the ordinary looms with automatic ones. This should reduce cost and improve the bottomline.

The company plans to increase its export turnover by about four times from its current Rs.3.5 crore and has already bagged orders worth Rs. 4.5 crore in the first two months of the current year.

The company's proposal to amalgamate The Niranjan Mills into its fold is pending with the appellate authority of the industrial and financial reconstruction. If the proposal goes through, the company will get a steady supply of grey cloth.

Kothari Sugars and Chemicals

Poor performance of the polybutene division dampens performance

Kothari Sugars and Chemicals (KSCL), which had an extended 16-month accounting period ended March 1991, has notched up a 9 per cent higher turnover of Rs.33.11 crore on an annualised basis. However, after providing for depreciation of Rs.2.27 crore (Rs.50 lakh) and interest of Rs.3.14 crore (Rs.53 lakh), net profit works out to Rs.1.83 crore (Rs.3.20 crore).

During the 1989-90 season, the sugar factory crushed 306,000 tonnes at an average recovery of 9.88 per cent. The current season's crushing operations are in progress. It has already crushed 387,000 tonnes and by mid-June, when the crushing is complete, the company expects to have crushed over 420,000 tonnes at an average recovery of 9.6 per cent.

The working of the polybutene division which was commissioned in March 1990, suffered due to the Gulf crisis that resulted in a low offtake. KSCL has also undertaken the implementation of the PNCB/ONCB project at Karaikal at a cost of Rs.30 crore. It plans to tap the capital market to part finance this project with a convertible debenture issue totalling Rs.8 crore.

1991. While turnover is up 38 per cent to Rs.1,404 crore, profit after tax has increased more than proportionately by 122 per cent to Rs.91 crore. Interestingly, during the period under review, the company has not provided for tax as against Rs.7.30 crore last year when the profit before tax was placed lower at Rs.50.27 crore. It has also reported a profit on sale of trade investment to the tune of Rs.17.06 crore.

Cemindia

Turnover up and dividend maintained for the year ended March 1991.

Cemindia, an active player in the construction industry, has maintained a dividend of 30 per cent. While turnover is up 2 per cent to Rs.23.63 crore, gross profit is down to Rs.2.12 crore (Rs.2.21 crore). After providing for depreciation and taxes, net profit is placed at Rs.75 lakh (Rs.72 lakh).

Vindhya Telelinks

Poor performance for the year ended 31 March 1991

Gross profit margin fell by four points to 11.3 per cent on a sales turnover of Rs.57.75 crore (up 7 per cent). At the net level, earnings took a plunge with EPS dropping to Rs.2.82 from Rs.15 and the payout thereby being stretched to 85 per cent (16 per cent) to maintain the dividend at Rs.2.40 per share. The scrip quotes at Rs.64 discounting these earnings 23 times. The full statement of accounts however could see an improvement in EPS as depreciation includes the charge on revalued amount thereby depressing net profit to that extent.

Asian Cables

For the year ended 31 March 1991, turnover crosses the Rs.100-crore mark while profit margins register a slight drop for this RPG group company which manufactures power cables

Turnover at Rs.101.9 crore, up 23 per cent yielded an operating profit of Rs.12.9 crore (Rs.11.47 crore). A hike in interest payment saw the gross profit margin slipping to 5.7 per cent (6.9 per cent). On an equity base of Rs.5.59 crore, the company earned Rs.6.80 per share (Rs.6.23) and will distribute Rs.1.50 per share (Rs.1.40) as dividend. The scrip quotes at Rs.39 discounting these earnings 5.7 times.

Finolex Cables

Sales up for the year ended 31 March 1991 but higher tax provision depresses the bottomline

Producers of jelly filled telephone cables and electrical cables, Finolex earned a gross profit of 12.8 per cent (12.3 per cent) on sales of Rs.117.36 crore, up 7 per cent. With a higher tax provision, EPS slid to Rs.21.79 (Rs.28.21). The market price at Rs.212.50 discounts these earnings 9.8 times.

Colgate-Palmolive (India)

Rise in sales and profits for the 15-month accounting period ended 31 March 1991

A dominant player in the health care segment, Colgate-Palmolive's sales stood at Rs.405.25 crore, up 19 per cent. Gross profit margin was stagnant at 19.5 per cent though. On the equity base of Rs.31.44 crore, Colgate has earned Rs.10.36 per share (Rs.7.97) on an annualised basis. Three interim dividends totalling Rs.6.25 per share have already been paid. The scrip quotes at Rs.315 discounting not just these earnings but also the expected bonus 30.4 times.

VST Industries

VST, famous for its Charminar and Charms brands of cigarettes, posted good results for the year ended 31 March 1991

With sales up 15 per cent to Rs. 429.85 crore, VST earned a gross profit margin of 4.9 per cent (3.7 per cent). On an equity base of Rs.9.65 crore, EPS at Rs.10 touched face value. On including the capital gains accruing from the sale of the company's shareholding in Bhadrachalam Paper, EPS works out to Rs.24.24. While dividend has been stepped up by fifteen points to 45 per cent, a 3:5 bonus has been proposed which will take the equity to Rs.15.44 crore. The scrip quotes at R discounting the EPS of Rs.10 by six times.

Goetze (India)

Rise in sales but margins remain s for the year ended March 1991

Under the fold of the Nandas, this ma leader in piston rings saw sales goin by 28 per cent to Rs.61.15 crore givi gross profit margin of 18.6 per cent. rose to Rs.8.67 (Rs.6.75) and the ma price at Rs.122.50 discounts these e ings 14 times.

IN BRIEF

Crompton Greaves is jointly promot a new company, CG-Newage Electr Limited, with the UK based Newage In national, to make brushless AC gene tors, at Ahmednagar. With techni knowhow from Kato Electrical Compa Japan, Crompton Greaves is also sett up a plant at Aurangabad to make in lating oil purifiers and liquid separat

Thirumalai Chemicals Ltd is setting a Rs.100-crore project in either Guja or Maharashtra to make 10,000 tpa toluene-di-isocyanate. Technical kn how will be provided by Organi Zachem, Poland.

Advani-Oerlikon will make welding el trodes and consumables in Malaysia, in nancial collaboration with a lo company there, called Timah Lan Berhad. The project cost is Rs.5 crore.

The Steel Authority of India's Rs.1, crore programme for energy conservati and pollution control is likely to be p funded to the tune of Rs.500 crore by t World Bank.

Over 6 per cent of the UB group's stake **Berger Paints** has been acquired by Delhi based UK Paint Industries, a co pany owned by K.S. Dhingra.

The major chunk of **Assam Compan** shareholding, about 74 per cent, has be bought over by Mehta International, NRI, Bermuda based group of compani Assam Company is the oldest tea co pany in the world and owns 16 gardens Assam.

Uvifort Metallizers is setting up a pl at Aurangabad to make 3,200 tpa of m alised paper and film. The capital out for the project will be Rs.28.74 crore.

For those who love frontier cuisine but can't take sand storms and camel rides.

The cuisine of the North-West Frontier. In more comfortable environs.

Revel in the smoke and sizzle, as the roaring flames of the charcoals light a fire in your heart.

Savour Kakori Kabab, Raan Musallam, or Murg Khurchan. Dishes straight out of Kandahar's exotic new menu.

Let the true flavour of marinated meats transport you to the sand-swept expanse of the North-West.

At Kandahar, the preparation, visible through the glass pane, is only a prelude to the promise ahead.

And if the curtain-raiser proves to be too over-whelming for your taste buds, let your eyes scout around.

View the Queen's Necklace. And the Arabian Sea.

Take in the quaint old paintings, the ancient door carvings and the staff, in their Pathani suits.

The romance of the Frontier, done to a turn.

Kandahar.

It's an easier way to enjoy the cuisine of the North-West.

Without risking sun-burn and sand in the eyes.

Kandahar

At The Oberoi, Bombay.

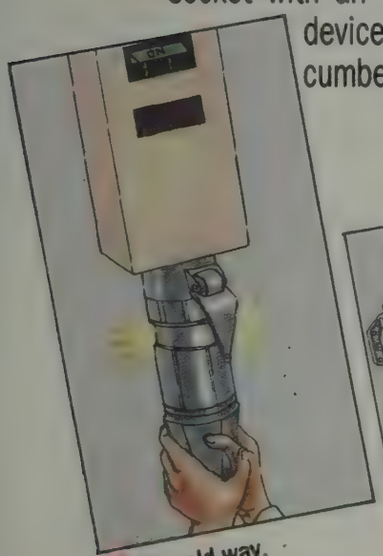
The fine art of dining out.

Lunch 12:30 pm to 3 pm, Dinner 8 pm to midnight. For reservations, please call 2025757 Ext 6183.

FUTURE SHOCK

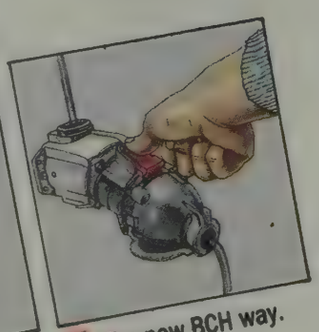
Prevent it

Switch to On-Load DS Decontactors



When it comes to industry, there's nothing like too much protection.

All it takes is a bit of careless handling, and the damage is done.



That's where DS Decontactors★ from Bhartia Cutler - Hammer demonstrate their superiority.

Plug and socket with integral switching device.

The Decontactor is a plug-and-socket with an integral switching device which eliminates cumbersome interlocked switch socket outlets. They allow On-Load disconnection unlike the ordinary plug and socket.

The old way.

The new BCH way.

Safety first

The socket is safely covered with a lid. Further, a safety disc prevents access to socket contacts when no plug is fitted. And a latch-button enables safe On-Load disconnection.

The interior keying system with 24 different positions prevents equipment being used on incorrect supply voltage.

Reliability

The DS Decontactor's features include the silver-tipped, spring-loaded, self-aligning, self-wiping butt contacts which are superior to conventional pin and sleeve type contacts.

In butt type contacts the inserting force is parallel to the direction of contact pressure. Wear is negligible, ensuring predetermined contact pressure and keeping contact resistance and temperature rise within limits.

The voltage drop across the contacts is low – so watt loss is minimized and there's less heating, less deterioration, less oxidation. In one phrase, less problems.

Get in touch

The BCH DS Decontactor is unique and far superior to anything you've used before.

Spare yourself future shock. Write to BCH at the address given here for details.

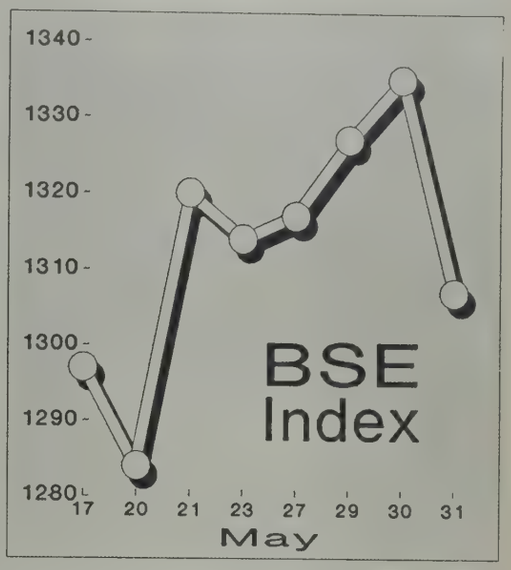
KMARKET REVIEW

surprises

the fortnight ended 31 May 1991)

	31.5	17.5	percentage change over fortnight	year
Sensitive Index	1,307.34	1,297.69	+0.7	+63.3
National Index	649.69	642.66	+1.1	+51.1
Rs.cr) fortnt. ended	129.09	107.79	+19.8	—3.5

tockmarket had more than its usual of unusual events over the fortnight review. Since uncertainty generally s the increased possibility of large changes and is a boon to specula- s a result, volumes soared. On 21 he day of Rajiv Gandhi's assassina- volumes rose to a 1991 high of 6 crore as cement bulls closed in on and a number of other cement s (*see chart*).



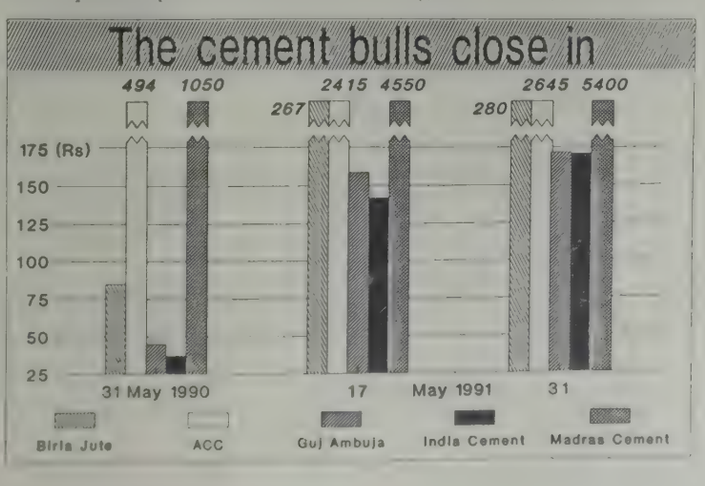
next trading day, 23 May, saw vol- reach another high of Rs.181 crore, tual funds went on a buying spree g to pick up shares cheap from -stricken bears. Expectations of a athy wave for the Congress then narkets bullish. Even the debunking sympathy wave by the press had lit- ect, although the news that India's rating on long-term debt had been l in the speculative grade hurt mar- wards the end of the fortnight. The that the monsoon had started on ule had surprisingly little effect on arkets.

ructuring. The market, therefore, appeared to be completely delin- om reality over the past fortnight. r good nor bad news affected its ,300 level. However, there was a re- oning of several stocks based on erformance. In spite of the 31 May ne for unaudited half-yearly re- several large companies such as Reliance, Tata Steel and Tata Loco- had not announced their results. n contacted, the BSE executive di- M.R. Mayya said that companies inform the BSE that they will an- their full year audited results by d of June get a month's grace Tata Steel and Tata Locomotive rtainly announce their results in nd ACC is expected to do so as well. e — which has not informed the its intentions yet, perhaps because tion uncertainty — however re- a question mark.

Reliance and L&T shares were actively traded over the fortnight. Reliance was in the limelight because of the possible Rs.900-crore issue to finance its naphtha cracker project and the scrip closed the fortnight at Rs.147.50, up from Rs.142.50. Not surprisingly for Reliance, the issue size is now Rs.900 crore instead of Rs.570 crore proposed a few months ago, while the project itself metamorphosed into a naphtha cracker project from a gas cracker project.

L&T shares were active due to its excellent results while its convertible debentures too were actively traded as a result of speculation regarding the pruning of its mega-issue size. If pruned, the debentures are likely to fall substantially in value as holders would be denied the allotment of new shares substantially below the current market price (*see next piece*).

Zero profitability. The trend of corporate results confirmed the general view of a stagnant second half of the fiscal year 1990-91. Companies in a wide range of industries, including engineering, shipping, pharmaceuticals, consumer products, diamonds, chemicals and synthetic fibres have shown zero profitability in this period. An unexpectedly strong performer, though, has been the tyre industry, with both Apollo Tyres and Modi Rubber reporting better second half results. Apollo Tyres closed the fortnight at Rs.71, up from Rs.65, while Modi Rubber closed at Rs.67.50, up from Rs.65.



Another tyre company, MRF, has been the focus of speculative action along with HDFC and ICICI on rumours of a shift to the specified list. Over the fortnight these shares were stagnant on further rumours that the shift had been postponed. When contacted, Mayya confirmed that consideration of the shift had been deferred for the time being.

Textile company Standard Industries was actively traded over the past fortnight. Rumours of a takeover abound, although a spokesman for the company denied knowledge of this. The company's performance has been mediocre last year. It earned Rs.1.20 per share in the year to March 1990 and Rs.1.90 in the next six months. This was generally below the performance of other textile shares. The scrip, though volatile, is thinly traded. In April, it recorded a turnover of Rs.1.23 crore, ranking it 68 by volume among 79 specified shares in Bombay.

Tata Tea's shares were also actively traded. The scrip shot up over the fortnight before closing at Rs.330. The volatility was reportedly due to purchases of about 300,000 shares by a mutual fund. Tea companies on the whole have announced marginally better second half results and the shares have been steady on better expectations for 1991.

There has been a drought in the nu-

mber of public issues since May. During June too there were not many public issues. The confusion arising from the current political imbroglio, coupled with the tossing about of responsibility between the financial institutions and the Controller of Capital Issues (CCI), has led to a lull in the new issues market. Only in July, once the new government takes over, are 10-15 new public issues slated to open. Investor confidence is also believed to be lacking, and market sources say that while there is no dearth of money among investors, they are only willing to back issues from well-reputed companies. Therefore the trend towards oversubscription of public issues may be not so pronounced as it has been over the last year. The overall steadiness of the market could be attributed to the BSE's commendable decision to keep the markets open in the days after Rajiv Gandhi's assassination. Nevertheless, the markets have several uncertainties to face over the next fortnight, including the elections and the monsoon. For the moment, then, it's status quo.

■ RAFIQ DOSSANI

L&T SHARES

Speculation is rife

In October 1989, L&T unleashed its 'vision' — the Rs.820-crore fully convertible debentures (FCDs) issue — on the Indian public. The major reason for it was to let the then sister company Reliance Industries Ltd (RIL) avail of suppliers' credit from L&T.

Each FCD was of Rs.300 and the attraction was the easy payment system phased over one year. Today, 20 months after the original issue, more than 50 per cent of each FCD ie; Rs.150 is still not called up.

After the historic Supreme Court verdict on L&T, upholding the above issue, a quixotic situation has arisen. RIL has refused to avail of the suppliers' credit from L&T and on its side, L&T does not have any approved projects on hand. A reason cited by RIL to reject L&T's credit is that it did not want to rely solely on a single source of finance. Also with the project changing from a coal-based cracker to a gas-based cracker unit, RIL had approached CCI for a Rs.520-crore convertible debenture issue, which has since been revised to Rs.900 crore.

With L&T making headlines its share price has been showing a steady uptrend. Along with the rise in L&T's share price, the price of the debenture (Rs.140 paid up) has also been rising. The jump in debenture prices has been more pronounced, with prices shooting up from Rs.228 on 17 May 1991 (a price which it hovered around for the early part of May) to Rs.242.50 on 23 May 1991. The price of L&T's shares and debentures have attracted attention due to the court verdict which upholds the conversion terms detailed in the prospectus at the time of the issue. Brokers who keep pace with the pulse of the market say that the prices are rising because "some very good speculative parties are interested in it"

At present, the L&T debenture is available in the market at around Rs.250. If the Rs.150 per FCD is called up the total cost price will be Rs.400. As per the terms of conversion, each debenture will be converted into five equity shares. So the effective cost per share will be Rs.80 while its current market price is Rs.114 (3 June 1991). Speculation centres around whether the balance money will be called. With a cash surplus of Rs.200 crore, it may not be called if RIL rejects the credit and L&T shareholders agree. If so, current holders of the convertible debentures will get 2.5 shares. At its current price of Rs.255, this entails a big loss since the price factors in the allocation of the balance 2.5 shares at Rs.50 each.

Ashok Thakkar, a broker who is among the watchers, expects full conversion. "This is because the company has already promised conversion into five shares. Not keeping it would be an undue practice," he says. But the market is not sure. Recently the CCI's joint meeting with L&T and RIL led to no solution. This is the stuff of speculation and the scrip has been actively traded of late.

■ MANALI RESHAMWALA

CEI SEMINAR

Outlook for capital markets

The Confederation of Engineering Industries (CEI) chose "Focus on the Outlook for Capital Markets" as a part of its annual theme this year, which is "Challenge of a free economy"

The capital markets in India are poised to grow dramatically over the next new years. From 15 million shareholders, the total investors' population is expected to grow to 50 million by the end of the century. Sanjiv Goenka, chairman of the nomic affairs committee of CEI, in welcome address said, "Capital mar mobilised Rs.550 crore during the F Plan and Rs.21,500 crore during the enth Plan. They could very easily co Rs.40,000 to Rs.50,000 crore during current plan." With India's middle cla 150 million growing at 15 per cent pe num the potential seems limitless.

Regulated, not controlled. "Howe this growth should be regulated, thc not controlled," says G.V. Ramakrish chairman of the Securities and Excha Board of India (SEBI). Freeing the c tal markets will need rules and a refe SEBI is expected to play a pivotal rol a regulatory body in future. "Good reg tion is akin to a traffic policeman blows the whistle irrespective of whe a Maruti or a Mercedes jumps the tr lights. But control is like the police who stops each car and asks the driv he plans to jump the light," Ramakrishnan.

Investor protection is an aspect cle within the purview of SEBI's operati Every month, 5,000 letters are sen them, 60 per cent of which relate to pr lems of transfer and registration shares. Another point Ramakrish brought up was the woeful lack of legi tion in respect of debentures. Seve other suggestions made by the part pants were in the area of investor edu tion. A stockbroker from Cochin opi "A knowledgeable investor is easie service, and SEBI should do someth about that."

Hemendra Kothari, president of Bombay Stock Exchange (BSE), sp on the infrastructural requirments of exchange. Today, on an average, the change conducts 50,000 to 60,000 d an hour which, on occasion, has rise 88,000 deals. To handle the increas load, the BSE has acquired two m frames and proposes, in the near fut to conduct all its operations on line.

"With inflation at 15 per cent, savi which stand at 24 per cent of GNP, w be killed if capital markets don't pro a hedge against inflation," said P.N. M kad, former Controller of Capital Iss Clearly the stockmarkets are gai ground as an avenue for investors. He ther said, "With India's thrust towa privatisation, and the possibility of stockmarkets going global, their im tance will grow. But the crucial poi that growth with discipline is a must

Eight at the top

Political uncertainties saw the market rise first then go down. Despite the conflicting signals we have eight winners this time. They are R. Ramamoorthy, P. Ramakrishna Rao, Kamal Karamchandani, N. Mehta, S. Muragavel, R. Ramasamy, Vasant Kumar Ekbote and S.K. Rath.

Scrips	Prices as on Friday 19 April 1991 (Rs.)	Prices as on Monday 20 May 1991 (Rs.)	Ranks
Ballarpur Ind	305.00	300.00	4
Brooke Bond	140.00	139.00	3
ITC	165.00	157.50	5
Lipton India	96.00	101.00	1
Modi Rubber	62.50	65.00	2
Varun Shipping	26.25	25.00	6

Given here is a new list of six scrips, and their closing prices on 31 May 1991. Pick the share that you think w rise the most in percentage terms by 1 July 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 1 July 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the nex consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for the purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 27 June, 1991.

6. **Business India**'s decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residen India. No employee (or any direct rel of an employee) of the **Business I group of publications** is entitled to the contest.

8. The prize of Rs.5,000 will not be ca forward if there is no winner. In the that there is more than one winner prize will be shared equally.

Name of scrip	Prices as on Friday 31 May, 1991 (Rs.)	Rank as on Monday 1 July, 1991 (please fill in number)

Case for a consumerist conscience

MORALITY AND THE MARKET
By N. Craig Smith,
Routledge, 1990. pp 351, Rs.450

In the 'free market' of neoclassical economic theory, consumers make purchase decisions based solely on self-interest. They buy products that look better, work better and cost less, while refusing to buy those that do not meet their needs. Firms which are open to the 'message' consumers send out every time they shop — ie, those which are in tune with 'the market' — prosper, especially if they respond quickly. Other firms which ignore the message suffer.

This theoritical 'free market' does substantial work in the marketplace of free, liberal economies. But as experts have now begun to discover, this 'market' is merely a notional construct which explains only a part of the picture as it allows only for the interplay of economic forces. The 'marketplace', on the other hand, is a real place in the real world. Here things happen for more complicated reasons: self interest is not the only deciding factor.

Ethical stands

Professor N. Craig Smith debunks the concept of the consumer as merely a self-seeking, economic automaton. He starts by pointing out what economists have always chosen to ignore: people often buy products, or refuse to, for reasons that have little to do with the quality of the products themselves. Thus, some people refuse to buy South African wine for, in their minds, it is soured by apartheid. Others buy Israeli products to affirm their approval and regard for a country many Jews consider their homeland, even if they do not live there. By making these decisions, they take a moral stand. They exhibit what Smith labels, "ethical purchase behaviour".

Though this book examines ethical purchase behaviour in great detail, it is not, in any sense, an attack on the great market-driven society. Smith makes no attempt to replace the rationality of economic man with the morality of ethical man. Rather, he argues that economic man is both rational and ethical.

Essentially, the book's premise is this: yes, it is true that consumers exercise their sovereignty through their purchase decisions. But if by buying a product, or not buying it, they cast what economists have called "their dollar votes", it is also true that they take more than self interest into account before doing so. This book is thus a case for a consumerist conscience.

From this perspective, Smith explores three major questions. How can consumers use their sovereignty to exercise control over business firms? Can consumer sovereignty ensure the social responsibility of business? And, finally, how far does consumer sovereignty really extend?

Pressure groups

While answering the first question in the course of the book, Smith documents what consumers have actually done in an effort to get business firms to change their behaviour. He points out that consumers have effectively formed pressure groups that have had a significant effect on business firms. And the one tactic they have relied on greatly is the consumer boycott.

Boycotts, of course, are not exactly a new phenomenon. Gandhiji's boycotts of British salt and cloth, for example, were organised half a century ago. And the Boston Tea Party which heralded the American battle for independence is clearly an even earlier example. Smith looks at five more recent cases: the boycott of Barclays over its links with South Africa; of Tarmac and Man-VW over their involvement in Cruise missile contracts; of Douvwe Egberts over its processing of Angolan coffee; of Nestlé over its marketing of baby milk powder in the Third World; and of California grapes over farm worker unionisation.

All these five boycotts showed that not only can consumers determine the s responsibility of business but also force it. In fact, two of them demonstr that even powerful multinationals c forced to be accountable. Barclays, H an over 10 percentage point drop i posits, withdrew completely from S Africa. And Nestlé, threatened wi worldwide boycott of its other even r lucrative products, stopped its aggre marketing of milk powder in the T World. And of cousre, the most sa fact about these boycotts was that were non-violent.

Smith does not adequately treat cotts turned aggressive, where there

Smith explores three majo questions. How can consumers use their sovereignty to exercise control over business firms Can consumer sovereignty ensure the social responsibility of business And, how far does consume sovereignty really extend?

been, and continues to be, significant lence. A good example is the on going boycott in Europe and America. You fervent environmentalists prepare boo posters and films documenting the elty of furriers. They try, in many ways convince people that buying fur cloth is rather like committing a sin. But w some people do not listen, these zea turn violent. They attack women wear fur coats with more than words. They out knives with which they rend offending pieceof apparel.

Is this a legitimate form of consu protest? Does consumer sovereignty tend to some people enforcing what o people may eat or drink or wear? T question remains unanswered in book because it is not asked. Like m people who approve of direct consu action because it is in some sense 'ri Smith is strangely averse to a close ex ination of areas where it is wrong. T reticence mars an otherwise fine b that assesses both the theory and p tice of ethical purchase behaviour wi great deal of care and passion. ■

Success stories

THE INNOVATORS
The Essential Guide to Business Thinkers, Achievers and Entrepreneurs
By William Davis
Ebury Press, London. Distributed by Book Channel, Bombay. pp.408, Rs.225

"Perhaps, at the outset, a distinction should be made between the two terms 'inventor' and 'innovator', because they are so widely confused," says the author in his introduction to this painstakingly compiled and wonderfully informative chronicle of the achievements of those "whose lives struck me as particularly fascinating, and whose thoughts and actions seemed to me to hold valuable lessons for the rest of us".

Independent entrepreneurs, he says, are mavericks with "something about them that sets them apart from the crowd" but with one common factor: a great enthusiasm for new challenges

But William Davis, former editor of *Punch*, originator of BBC TV's *Money Programme* and self-made millionaire, merrily mixes the two himself. Independent entrepreneurs, he says, are mavericks with "something about them that sets them apart from the crowd" but with one common factor: a great enthusiasm for new challenges.

Not all the people described in the book were successes themselves — Horatio Alger, 'creator of the American Dream', was personally a failure and died flat broke though his books gave people the confidence that, yes, they could make it; Billy Butlin, the man who organised family holidays for millions, seldom took his own children for one. But steel magnate Andrew Carnegie, who coined the phrase "Pioneering don't pay", was a living proof of the fact that it did.

Davis takes care to give detailed explanations of terms and activities like arbitrage (in the section on Ivan Boesky), speculative gains (in describing the financial manipulations of 'successful contrarian' Richard Dennis), and how advertising revenues are essential for a publication (Henry Luce, who founded *Time*, *Fortune* and *Life* magazines). But these details, while probably unnecessary for the 'business thinker', are often rather too much for the lay reader — as the treatise on monetarism in the chapter on Milton Friedman.

One basic fact the book highlights is that though there is often a common thread running through the lives of the diverse innovators it deals with, there is finally no real guideline. The story of Warren Avis, of 'we're number two, we try harder' fame, highlights the fact that the big idea is likely to arise from some big public need. But Masaru Ibuka built up electronics giant Sony on the philosophy of developing a product when there was no market, and then creating one.

Coco Chanel, the French designer who liberated women, believed that "a garment must be logical".

One feature that sets the book apart from many others of its genre is the fact that it is not just a chronicle of the lives of the rich, famous and intelligent. Davis, in his insights into what made his innovators what they are, makes his own statement too; like when he comments on the deleterious effects of opinion polls and discounts George Gallup's statement that he never voted "because I've always felt I shouldn't get involved in politics".

Not without faults

The book is not, unfortunately, without its faults. Davis seems to have a recurring problem about his subjects' ages,

Many of Davis' sentences, too, are surprisingly involved, considering his experience as a journalist and writer (of 12 earlier books). By the time you get to the full stop you may well have forgotten whom you were reading about.

■ SEKHAR SESHAN

Weatherman's tale

CHASING THE MONSOON
By Alexander Frater
Viking, 1990. Distributed by Penguin Rupa
pp.275; Rs.250

This book came out of a chance meet The author, Alexander Frater, had fered a serious injury while travelling rough roads from Pakistan to Kashga China through the newly opened rakoram highway. No real treatment available and Frater became depres about a loss of nervous control wh made him feel very clumsy.

Back in London, he had gone fo checkup at the National Hospital for N vous Diseases. There he met an Ind couple, the Baptistas, who both fa nated him and inspired him to w about the monsoon. She, with cinnan coloured skin, green eyes and with "an thentic upper crust" British voice, wo Spanish skirt and wide-brimmed hat was slightly dotty, but curiously eru on the subject of the monsoon. While t ing to them, Frater decided to follow monsoon on its journey from Trivandr to Cherrapunji.

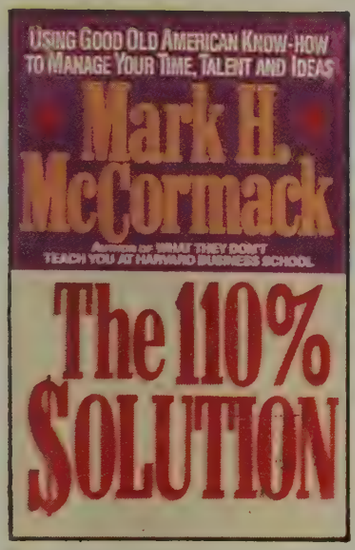
Nothing new

For Frater, neither the study of weather nor Cherrapunji were new. father, who worked as a doctor on ar land in the south-west Pacific, had at time a passion for the weather — w with his need to travel from island island by boat while keeping an eyeout storms. Also, the elder Frater had a fri in Cherrapunji, once the wettest pla earth, who was as impassioned about weather.

Frater then, the journey from Tri-
ım in the south, up north to Delhi
ıen to Cherrapunji in the north-
as one of renewal. His description
the monsoons are generated is lu-
l his descriptions of their actual ar-
spectacular. And there is more to
ok yet. As a journalist, he writes
n acute eye for detail. Yet the very
iliarity of the Indian landscape
a freshness to his observations.
he same time, this isolation leads to
ptions of Indians who often resem-
aracters out of a novel by Evelyn
h. For the most part two dimensio-
hey appear to make attempts to
Peter Sellers' cruelly wicked per-
nce as an Indian in *The Guest*. But
so, Frater's encounters with India
ilarious and the book is un-put-

is description of how the onsoons are generated is id and his descriptions of their actual arrival, pectacular. And there is more to the book yet

able. Especially, when most of the
cters, including the Baptistas whom
encounter again in Goa, are real
ıe reader might just know some of



officiousness

was obviously enraged by the petty
usness that greeted his attempts to
Cherrapunji. Getting permission to
the tiny village in the state of
alaya, which had been declared —
ill is — a disturbed area, was a her-
task. He first applied at the Indian
Commission in London where he
success. After battling the bureau-
n Delhi, he gets permission and ac-
visits Cherrapunji. Subsequently,
eives a letter from the High Com-
n saying that his request has been
l down!

ter liberates language from its
ay mould and there are passages of
beauty. He writes with obvious af-
for the average man: the "coffee
queen" at the Taj in Bombay, a
of people he meets while waiting
ferry in Quilon, and many more
whom he writes with a wry wit.

EAPEN THOMAS

Surpassing mere excellence

The 110% SOLUTION
By Mark H.McCormack
Random House, 1991, distributed by IBD
Bombay, Rs.432

It would be easy to write this book off. It has the most improbable title and the blurb on the cover speaks in words close to Zen Koans, eg, "We feel best when we are at our best", "With total involvement comes exaltation", and so on. Having seen so many of those on the stands one is loathe to pick this up as being another example of American naivete. Another 'passion for excellence'. However, it would be a mistake if one allowed this thought process to prevail.

McCormack is better known as the author of a best seller, *What they don't teach you at Harvard Business School*, which stood at the top of the lists for a considerable time. McCormack's rise to fame is reflected in the subject matter of his books. An associate in a Cleveland law firm, his passion for golf introduced him to Arnold Palmer, then unknown but later to become one of golf's greats. This leads to narratives of other leading lights in the world of golf, tennis, music, fashionwear, equestrian sports and even some foundations, the most noted of which is the Noble Foundation.

Easy reading

The book makes for easy reading, being written in a style almost resembling a fireside chat. Important pieces of advice are put across lucidly. In ten chapters covering 203 pages, the author goes over such varied subjects as finding yourself and what you are good at, and then doing something about it. While his thoughts are not new, it is the manner of their saying that makes the difference. Each of the chapters has a number of sections with each section summarised into two lines for easy remembering. Finally, in almost every chapter, there is an account of how his rich and famous clients manage their 110% solution. Thus "life is a school and finding one's talents is a life long process" or "feedback is learning about yourself, it always points you in the right direction" are good examples.

In the chapter entitled "How to make a career" and on page 99, there is some good advice for young executives whose careers could well flounder due to their relationships with their bosses, because of the latter's overwhelming need to know. The counsel is: "Bombard the bosses with bulletins ... No one has ever lost his job for telling the boss too much. Also if you do it right you will get ahead — and make your boss's day."

An interesting feature that runs throughout the book is the unique way in which McCormack taps ordinary human processes for effective solutions to seemingly big problems. It is this very special ability to sift through all the surface action and hold up for view that very essential human want, motivation or even fear that human beings experience evokes from us that sharp intake of breath or that rueful smile that says "So that's what it is." It is very reassuring that high achievers whose names we read in the papers like Martina Navratilova, Chris Evert, Jack Nicklaus, have also been in similar straits and have worked their way out of them.

■

A.D. JOSHI

An interesting feature that runs throughout the book is the unique way in which McCormack taps ordinary human processes for effective solutions to seemingly big problems

The reviewer is vice-president, personnel and corporate planning, at Cadbury India Ltd.

Our client is a reputed Group of Companies associated with Manufacturing, Trading and Marketing Services, and having a turnover of above Rs. 350 crores.

CHIEF EXECUTIVE OFFICER (CEO)

Rs. 5.00 lakhs and above

+ +

We have been retained as Management Consultants to recruit a highly experienced, mature person to take charge of one of the companies engaged in the manufacturing of speciality products and other manufacturing activities in Western India. The present turnover of the Company is Rs. 50 crores, with potential to grow beyond Rs. 100 crores within two years. The person to be appointed is the

Age: 40 years.

Location: At the plant site which is in the interior of Western India – with the necessary social infrastructure and facilities of more than a small town. It is 2 hours away from a bigger city which has an airport, railhead, hospitals, etc.

Reporting to: Directors.

Experience: 5-7 years as the head of an organisation, with similar responsibilities.

THE JOB To be completely responsible for all the activities of the Company which include Plant Management at the Works, Marketing, Exports, New Projects, Finance, HRD, Materials, etc. etc. New Expansions plus other basic growth areas.

- To ensure achievement of the targeted bottom-line in order to account for profitability in all spheres.
- To function like an entrepreneur, with a high degree of responsibility towards shareholders/investors, as the Company's Management firmly believes in regularly declaring dividends to investors/shareholders, year after year.

THE MAN He shall have ample Senior Manager-level experience in a post such as General Manager or President or Vice-President, or similar superior positions, in a highly reputed company with excellent overall exposure to all aspects of general management at Plant/Works level, as a cost-cum-profit centre, with expertise/definite exposure to Labour Management.

- The right candidate will be of technical bent of mind and high productivity oriented-cum-sound financial analyst with shrewd marketing acumen, supported by modern management knowledge/ techniques and must have worked in a computer-oriented environment. Above all, he will necessarily be a systems-oriented person.
- He must be constantly open to the learning process and a leader of men, while being an effective team – builder and moving spirit.
- This then is the man: Being at the helm, he is a professional executive to the core, with the rare ability to transform the vision of the Board of Directors into REALITY. In other words, he is totally attuned with the definite conviction to achieve the Company's objectives without deviating from laid-down systems, founded on "sacrosanct" principles.

If you think that you can fulfil most of the above requirements, plus have the ability to handle three critical jobs as well: Evolve the corporate strategy; get the employees aligned behind it and develop a successor; and thus convert the potential growth possibility within our client's organisation in realistic terms, within the stated span of time, then we definitely need you.

Please send us your complete resume and a recent photograph in strict confidence within 15 days to:

CHIEF EXECUTIVE

COMPUTERS

West Africa **Savings USD: 40,000 per annum +**

THE COMPANY:
One of the leading professionally managed conglomerates is looking for outstanding professional to head its Advanced Technology Division which represents major manufacturers of Computer Hardware, Peripherals and Software mainly from the U.S.A. and Europe.

THE JOB:
The appointee will head the Division and be responsible for its overall profitability and growth. Providing impetus and direction to the Division which is in the critical growth phase and planning for the great leap forward will be the key result areas. He will be supported by a competent professional team.

THE MAN:
We are looking for an outstanding 'Solution Marketing' professional with a proven track record of around 15 years in the computer industry. He should have independently managed a Division or headed sizeable marketing operations. Engineering background and business school qualifications are highly desirable. Preferred age group: 35—40 years.

THE REWARD:
The Company offers a very generous compensation package with assured savings of over USD: 40,000 per annum.

Write in confidence quoting Ref. No. CKM/F-4220 and mentioning contact telephone number.

GENERAL MANAGER

(COMMERCIAL)

(Rs. 3.00 lakhs and above + +)

The Company is part of a group with a turnover of more than Rs. 350 crores. The Company's turnover alone is approximately Rs. 50 crores, with a strong potential to rise to Rs. 100 crores within a year or so. The Company employs a team of professionals. It believes in scientifically laid-down systems rather than a personalized style of management.

Age: 45 years.

Qualifications: CA/Cost Accounting/MBA (Finance).

Location: Interior Western India.

Reporting to: CEO.

Experience: 10 years' relevant.

GENERAL MANAGER (Commercial)

Finance Dept. | Budget Dept. | PARTA* Dept. | Legal Dept. | Warehouse Mgmt. | Excise, Taxation | Accounts Dept. | General Admin. | Materials Dept. | Inventory Control | Costing Dept.

** PARTA is the unique Daily Report System originated in Marwari Companies which has been highly professionalized and systematized in this company.*

THE JOB

• To oversee and control effectively all the various Departments of the Company as indicated in the above chart.

THE MAN

• At this level the incumbent is naturally expected to be a thorough professional – highly motivated, deeply dedicated and totally committed to his job. • He should also think like an entrepreneur with a razor-sharp mind for business profitability. • Last but not least, the person must especially have been exposed to areas like materials management – purchase, stores, inventory control, warehousing, general administration of a plant, etc.

The placement location has schools, colleges, clubs, hospitals and other basic facilities conducive to harmonious living.

Why a successful company with proven professionals still needs more

Growth is an integral part of successful companies creating new challenges for high calibre professionals. Deepak Nitrite selects and nurtures the best of talents and provides a conducive environment to meet these challenges. It is ultimately this commitment for its people that distinguishes a great company from a good company.

Deepak Nitrite has formed a new division Nitro Aromatics which is currently in an advanced stage of setting up a Nitro Aromatics plant at Nandesari about 20 kms. from Baroda. This is a Rs. 50 crore project with state-of-the-art technology provided by Mario Biazzi SA, Switzerland for manufacturing Nitro Chlorobenzenes, Nitro Toluenes, Nitrated Esters, etc.

GENERAL MANAGER (OPERATIONS)

(Nandesari)

(Attractive Salary & Perks + Housing & Car.)

General Manager — Operations, will be responsible for managing overall plant operations consisting of production, technical and engineering services, commercial and administration functions.

Candidate should have a Degree preferably in Chemical Engineering/Technology and 15 years' experience in production/plant management in the chemical process industry. A Business Management qualification would be an added advantage. He should have the ability to run the plant as a profit centre.

This is a challenging position which requires a professional of the highest calibre. The remuneration package will be attractive and commensurate with qualifications and experience.

Please apply within 10 days with a detailed resume, present and expected remuneration to:
The Chief, Organisation Development & Co-ordination,
Yamunakunj, 53, Kunj Society, Alkapuri, Baroda-390 005.

A determined drive for excellence

FOOD FOR THOUGHT FOR TOP MANAGEMENT

Think of an even brighter future... think of joining up with a young dynamic engineering company producing food processing machinery... with European collaboration... at Indore. Our activities embrace a full range of food processing machinery, with the emphasis, at present, on frozen food related equipments. We also have an all-India set-up of branch offices, and we are marketing equipments and projects in India and abroad.

We offer excellent prospects for dynamic General Managers, who will help us achieve our ambitious goals. The positions are all based at our Head Office, at Indore.

GENERAL MANAGER (FINANCE) & COMPANY SECRETARY

A senior person having good experience in the field of finance, accounts and commercial operations. A candidate who has worked as a Company Secretary will be preferred. Chartered Accountants will also be given preference. Alternately, a Company Secretary with relevant exposure can be considered.

GENERAL MANAGER (MARKETING)

The incumbent will lead a team of Marketing Managers. An Engineering Graduate and/or M.B.A. will be preferred. We are seeking a person with innovativeness, flexibility in thinking and the ability to accept total responsibility for the function. Atleast ten years experience as a leader of a team marketing industrial products, required. Project marketing experience and exposure to markets abroad, preferred.

GENERAL MANAGER (TECHNICAL)

The incumbent will be required to take full responsibility for all technical functions including R & D, Production, Design, Contract Manufacture and After-Sales-Service. Excellence of international standards is expected to be maintained, or improved upon, by the incumbent. The candidate should be a graduate in Mechanical Engineering from a good University, with manufacturing and design experience in the refrigeration and/or stainless steel fabrication industries.

These are top management positions, reporting to the Directors. The posts essentially call for excellence as a team-leader. Every General Manager should be able to guide, motivate and mould talented individuals under him to give of their best and work together as an outstanding team. Candidates should have a minimum of 10 years relevant experience in a senior position. Age around 45 years, preferred.

Handsome remuneration and bright prospects for those selected. Persons drawing less than Rs.1 lakh gross annually, need not apply.

Kindly apply with complete bio-data and recent photograph to:

Indian Petrochemicals Corporation Limited

(A Government of India Undertaking)

Advt. No. HRD/R/91/08

REQUIRES

SENIOR EXECUTIVES FOR HUMAN RESOURCES MANAGEMENT

Indian Petrochemicals Corporation Limited (IPCL) is a leading entity in corporate circles in India. IPCL's business portfolio comprises petrochemicals (plastics, synthetic rubber, synthetic fibre and fibre intermediates, solvents, surfactant chemicals, industrial chemicals, synthetic resins), engineering plastics, catalysts, adsorbents and wire and cable compounds.

IPCL is set to grow from its turnover of over Rs. 1313 crores in 1990-91 to approximately Rs. 3000 crores by 1995-96 and on gross assets from Rs. 2348 crores to approximately Rs. 5000 crores. This asset base will be comprised largely of its existing naphtha based petrochemical complex at Vadodara (Gujarat), a Rs. 1390 crores gas based petrochemical complex at Nagothane (Maharashtra) which will be operational this year and a new Rs. 2915 crores gas based petrochemical complex at Gandhar (Gujarat).

To provide dynamic leadership to its Personnel and Administration functions, the Corporation is looking for professionals in the field of Human Resources Management.

GENERAL MANAGER
(PERSONNEL & ADMINISTRATION)

The incumbents will have total responsibility for all aspects of Human Resources Management at their respective places of posting, including formulation of strategies, evaluation and updating of personnel policies and procedures, manpower planning, employee and community relation, salary and wage administration, industrial relations, employee welfare, administration of services like housing in township, canteen, transport and security, personnel selection & recruitment, training and development of personnel including performance and potential assessment. The professionals we are looking for will play a key role as a planner, motivator, problem solver, negotiator and administrator.

The job involves establishment and maintenance of excellent labour relations, rapport with associations / unions of employees, management team and statutory authorities with a view to achieve high standards of organisational performance.

The applicants must possess a Post Graduate qualification in Personnel Management / Social Work / Labour Welfare from a recognised institute / university. Additionally, a degree in law would be desirable. They should have around 20 years of relevant executive experience in personnel management, out of which at least 5 years should be at a senior level as a head of personnel function in a comparable large scale industry. The applicants should not be older than 50 years in age.

SENIOR MANAGER
(INDUSTRIAL RELATIONS)

The Corporation also requires a professional in Human Relations as Senior Manager (Industrial Relations) for Maharashtra Gas Cracker Complex to assist the General Manager (Personnel & Administration). The incumbent shall be called upon to demonstrate exemplary skills as anticipator of group behaviour, counsellor, negotiator and motivator. Abilities to formulate IR strategies, maintaining rapport with various employee groups, management team and statutory authorities are essential pre-requisites. Thorough knowledge of labour laws and practices and knowledge of Marathi are essential.

The applicants must possess a Post Graduate qualification in Personnel Management / Social Work / Labour Welfare and a degree in law from a recognised institute / university with around 17 years of executive experience in management of Human Relations of which minimum 4 years should be at responsible managerial position in industrial relations function, in a comparable large scale industry. The applicants should be around 45 years of age.

GENERAL : Candidates selected for the posts of General Manager (P&A) and Senior Manager (IR) will be placed at the appropriate stage in the scale of pay of Rs. 3500-100-4000 (total minimum emoluments including Basic Pay, Industrial Dearness Allowance & Ad-hoc relief will be Rs. 6523/- p.m.) & Rs. 2600-100-3600 (total minimum emoluments including Basic Pay, Industrial Dearness Allowance & Ad-hoc relief will be Rs. 5248/- p.m.) respectively. The scales are under upward revision. Besides, incumbents will be eligible for reimbursement of local travel expenses, house rent allowance (where company accomodation is not provided) and other perquisites including medical assistance, leave travel concession, insurance coverage, provident fund, gratuity etc. according to applicable rules.

RELAXATION : For SC/ST candidates requirements in experience and age may be relaxed by 2 years and 5 years respectively. SC/ST candidates should furnish a copy of certificate from the competent authority along with the application. **Requirements may also be relaxed in case of exceptionally suitable candidates.**

Candidates called for personal interview will be reimbursed rail fare (air conditioned first class) or air fare by the shortest route.

Candidates meeting with the requirements may send their applications with detailed bio-data, passport size photograph and copies of credentials, in confidence to the General Manager (Corporate Personnel), Corporate Office, Indian Petrochemicals Corporation Limited, P.O. Petrochemicals Township, Vadodara-391 345 within 15 days.

Those working in Central / State / Semi-Govt. / Public Sector organisations should route their applications through proper channel.

MOTOROLA

Aplab

Aplab Group had yet another successful year with sales exceeding Rs.25 crores. A company that is synonymous with the state-of-art indigenous technology and R&D in Test & Measuring Instruments and Power Systems. Little wonder that Aplab products have found acceptability in UK, France, Germany, Italy, Australia amongst others.

We are set for a big leap forward in the 90's with a well planned growth for the future.

To meet the challenges we urgently need sincere, dedicated people who want to be a part of the excitement in a thoroughly professional organisation — an environment where you breathe freely.

MARKETING MANAGERS

[Code-MM (T&M:HP:OSC:PS) No. of Vacancies—4]

One each for Test & Measuring , Uninterruptible Power Systems, Oscilloscope & D.C. Power Supplies.

Yes, we need a Marketing Manager for each of our Divisions which work independently as profit centres (almost separate companies within the Aplab Group). The incumbent should have thorough knowledge of the Market in the respective product line applied for. Emphasis is more on Marketing and the person will lend complete Marketing support to the Division. It calls for preparing Marketing plans; Strategies, Market Research, Marketing Intelligence and effective use of Techniques of Direct Marketing and will be supported adequately to do this function effectively by a Marketing Communications Manager (Corporate) and his staff, plus assistance coming from Regional Sales/Marketing Managers and his team. If you think you can successfully direct the Company's drive with all your knowledge and expertise, your hunt for such a position is over. You should be working as a Sales/Marketing Executive for approx. 5 years and feel its time you climbed the ladder. (The position reports to the General Manager of the respective division).

MARKETING COMMUNICATIONS MANAGER (CORPORATE)

[Code-MCM(C)]

This is a new position created in the Group to manage effectively with judicious use of media both internal and external communication, planning and strategy. Idea is to create a proper corporate image for the pioneering work and R&D contribution of the Group to the country. Will be also responsible for production of Technical/Sales promotion literatures, Corporate Brochures, Catalogues, Presentation Slides, Corporate/Product Video Films, House Journal etc. To achieve this there will be adequate support provided by a Technical Writer, Art Department, DTP and Ad. Agency. As a part of the Corporate Marketing Cell, you will work closely with Marketing Managers. Preferred age is around 30 years with relevant suitable experience preferably in a good recognised electronic company or an Advertising Agency.

CUSTOMER SUPPORT MANAGER

[Code-CSM]

This is a new position created in the Corporate Office to manage effectively after-Sales-Service/Support on an All India basis, for Aplab's wide range of products being offered by various Divisions. Besides technical knowledge and competence, the position calls for a lot of inter-personal relationship skills, trouble shooting ability and a close inter-action with Aplab's large Customer base. A person has to have a lot of drive in him and be able to work under pressure. Relevant successful track-record with a medium or a large Electronics Company is desirable. The incumbent will be required to strive for maximum Customer Satisfaction Rating.

A person in the age group of 30 years with about 5 years'relevant experience will qualify. The position reports to the General Managers of various Divisions and adequate support would be available from the regions to accomplish the task.

Remuneration package matches the best the industry can offer.

Applications together with a Passport Size Photograph and detailed Bio-data indicating the Code of the post applied for duly typed be addressed within 10 days to:

Can you do what Schwarzkopf just did?

MAA Communications plans to overrun Bombay. Is there a general in the city who can do the job?

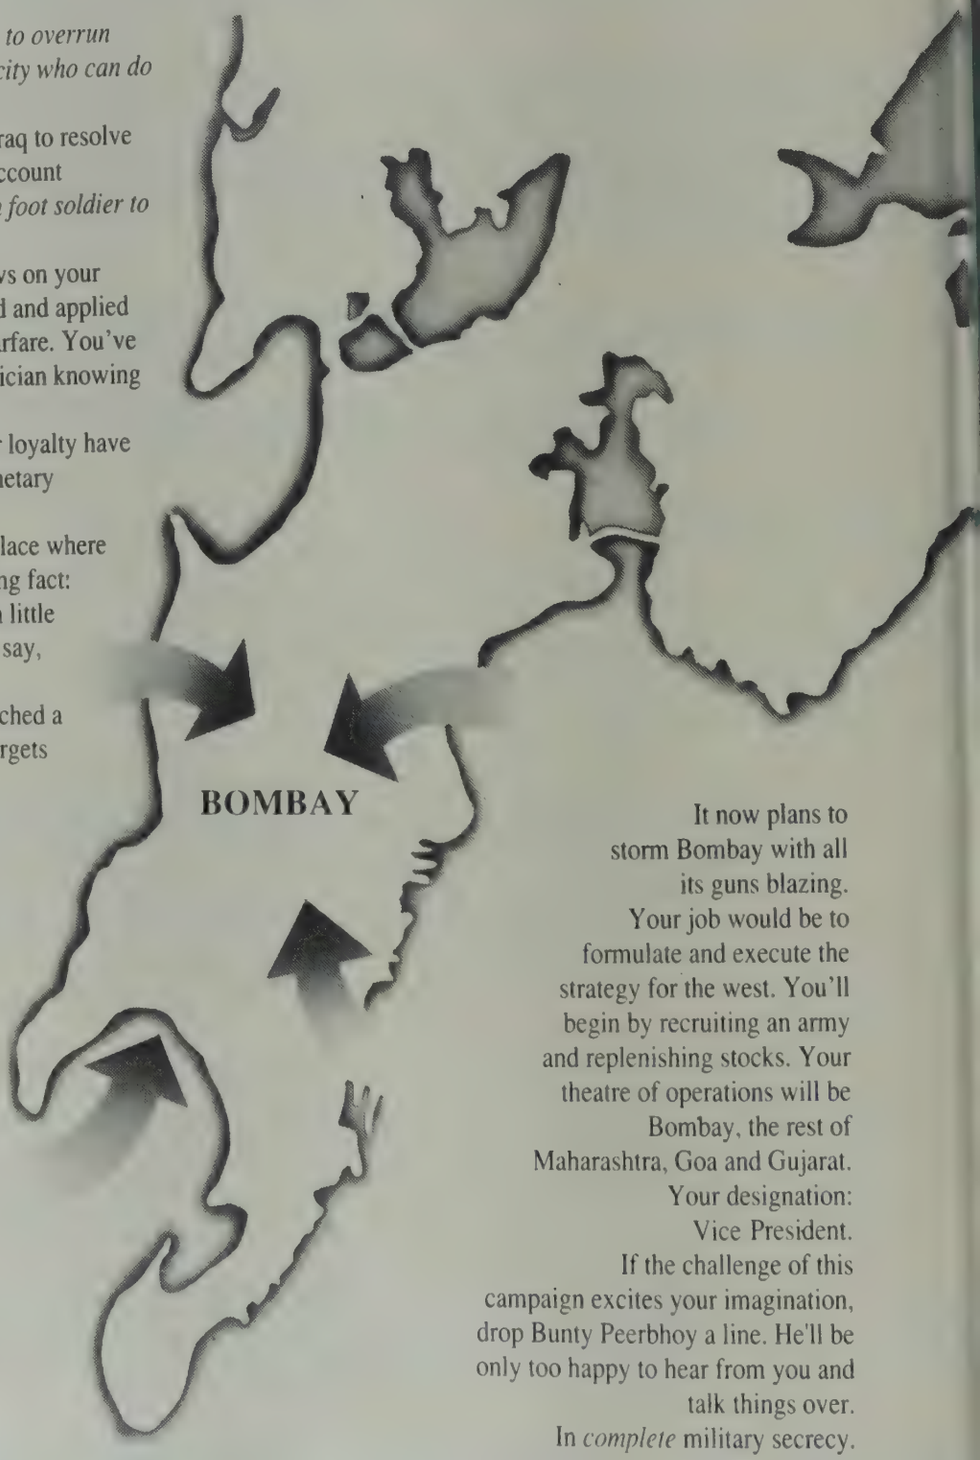
In the time it took Iran and Iraq to resolve their differences, you rose from Account Executive to Vice President. *From foot soldier to general in less than ten years.*

The action you've seen shows on your battle scarred face. You've learned and applied the intricate rules of marketing warfare. You've evolved into a strategist and a tactician knowing which role to play when.

Your contributions and your loyalty have won you ribbons, medals and monetary rewards.

You love your job and the place where you work but for a single disturbing fact: you're a general at thirty two with little chance of being chief of staff for, say, *fifteen, twenty years.*

In other words, you've reached a plateau in your career with few targets ahead.



Recapture your career.

One company that can help you do this is MAA Communications.

In national rankings, MAA Communications has marched from nowhere to number twelve.

It has done this with a complete arsenal: advertising, marketing, direct marketing, film making, issue support, public relations, educational software.

At its command is a *prescriptive* media model, the only one of its kind in India.

It now plans to storm Bombay with all its guns blazing. Your job would be to formulate and execute the strategy for the west. You'll begin by recruiting an army and replenishing stocks. Your theatre of operations will be Bombay, the rest of Maharashtra, Goa and Gujarat. Your designation: Vice President.

If the challenge of this campaign excites your imagination, drop Bunty Peerbhoy a line. He'll be only too happy to hear from you and talk things over.

In *complete* military secrecy.

MAA COMMUNICATIONS PVT. LTD.

MAA House, No. 6 Service Road, I Stage, Domlur Layout, Bangalore - 560 071.

GRINDWELL NORTON LTD. REQUIRES MANAGERIAL PERSONNEL: INDUSTRIAL MARKETING

We are an integrated manufacturer of industrial abrasives and ceramics in collaboration with NORTON CO. of USA, the world's largest manufacturer of abrasives.

We consider MARKETING as one of our major strengths. The marketing organisation consists of over 18 field offices all over the country, an extensive network of dealers and stockists, and a strong marketing services function.

In 1990-91, we have achieved a significant improvement in our market share in bonded abrasives and have a leadership position in all the major businesses that we operate. To fuel the growth, two new divisions focussed on Exports and New Business Development have started functioning at Bangalore. To sustain the momentum, we wish to strengthen our organisation in the following areas:

PRODUCT MANAGEMENT – BOMBAY/MORA(URAN)/ BANGALORE

The job involves identifying emerging customer needs, initiating product and market development, identifying technology and manu facturing requirements, developing and implementing Product Market Strategies, profit improvement and promotion plans for each of the major strategic Business Units in Bonded & Coated Abrasives.

MARKET MANAGEMENT – BOMBAY

(a) ***Dealer Sales:*** Over 55% of our volume is achieved through a network of 400 direct dealers and 2000 authorised stockists. Our dealer business philosophy seeks to build long term business value through a partnership concept with our dealers. Extensive Technical, Marketing and Managerial support is provided to the dealers. The job involves formulating and implementing policies, developing integrated promotion programmes and expanding the network to keep pace with emerging needs so as to achieve targetted market share and growth.

(b) ***Direct Sales:*** Over 40% of our sales is achieved through a base of 1200 customers covering the entire gamut of Automobile, Steel, Bearing, Machine Tool and General Engineering Industries through a team of trained Sales Engineers. The Company is working on an ambitious programme to enhance significantly the service value offered to these customers defining new standards of service in industrial consumables. The job calls for a high degree of integrating skills so as to focus the entire resources of the company viz manufacturing, application engineering, field sales, customer support services, on the user industry to achieve targetted market share and growth.

FIELD SALES MANAGEMENT – BRANCHES, ALL OVER INDIA.

Our branches are responsible for sales, technical service, product development and all commercial functions. Typically a medium sized branch handles Rs.5-8 crores of business and will have a team of Sales Engineers. We need leaders to head some of our branches.

In all the above areas, positions exist at the level of **Manager/Asst. Manager**

The **profile** will be as follows:

MANAGER – Engineer MBA with about 7 years' experience or Engineer with about 10 years' experience.

ASST. MANAGER – Engineer MBA with 5 years' experience or Engineer with 7 years' experience.

We would prefer persons with experience in an organisation dealing with industrial products, preferably consumables.

We welcome responses from persons with experience in any of the three functional areas mentioned above. For the branch positions, supervisory experience is essential.

Gross emoluments will be attractive enough for a person to make a change. The branch heads (except at Bombay) will be provided Company accommodation and will be covered under our Vehicle scheme.

Write within 10 days to Deputy General Manager-HRD, Grindwell Norton Ltd, 114, M.G. Road, Bangalore-1.

NORTON GRINDWELL NORTON LTD.

MANAGERS – IMPORT TRADE

(AGRI — PRODUCTS/METALS)

Delhi/Bombay

Our client is one of India's largest, highly professional and well diversified group of companies in the private sector with current turnover in excess of Rs. 1000 crores. They are brand leaders in their current areas of interest. As part of their diversification into international trade, they are looking for 2 professionals to head their import trade in agri — products and metals respectively. Both positions report to the Vice President — International Business Division.

Key result areas include identifying import opportunity areas of goods/commodities/ products for sale in India, identification of overseas manufacturers looking for representation in India, import of OGL items on stock & sell basis, setting up distribution/sales channels, identification of products/areas where import against additional/REP licenses would be preferable to selling off licenses.

The successful applicants will be graduates, preferably with post graduate qualifications from IIFT, having a proven track record in a similar product line and thorough knowledge of exim policies, licensing, custom rules and regulations etc., with 8-10 years relevant experience. Experience of having handled a diversified import basket in a large Export House/Trading House will be an added advantage.

For Bombay based position, candidates with own accommodation will be preferred.

The group offers excellent growth opportunities backed by a very professional work environment. The compensation package is negotiable and will not be a limiting factor for the right candidate. The package includes HRA or housing, LTA, medical, retirement and other benefits.

Preferred age : Under 40 years.

Please apply in strict confidence within 10 days to:

A F Ferguson Associates
Hansalaya
Barakhamba Road
New Delhi 110 001

giving full details of age, qualifications, experience, salary drawn alongwith a recent passport size photograph and contact telephone numbers. All applications and envelopes must be marked with reference **'MS/4996'** for Manager — Import Trade (Agriproducts) and **'MS/4997'** for Manager — Import Trade (Metals) respectively.

Why a successful company with proven professionals still needs more

Growth is an integral part of successful companies creating new challenges for high calibre professionals. Wipro Systems needs people of the right-brained variety.

Deal clinching or brand building? Tactical selling or strategic marketing?

Come to think of it, it rather depends on what your left brain has to say. Is the right choice the right choice? Is the software industry the poor cousin of its hard counterpart? Can legal software succeed against the onslaught of piracy?

Enter Wipro Systems. The software company that has silenced the doomsday prophets to record a 100% growth over the last year. With the right use of the right brain, the company has thought, strategized, created... its way through to carve a niche in product software with international best-sellers like InstaPlan (a Wipro Systems product) and the dBase range and Framework III (from Ashton-Tate of USA).

To move along in the right direction faster, Wipro Systems is looking for people in the same right-brain mould – to launch COMPACT, an exhaustive accounting package that runs on multiple platforms, dBase IV on Unix and other higher-end business packages.

P.K. Jain has been nominated president of the UP Stock Exchange Association Ltd

Jai Dev Kapur has been elected president of the All India Cycle Manufacturers Association

Kailaschand Bhagchand Thole has been re-elected president of the Maharashtra Fertilisers, Pesticides, Seeds Dealers Association

R.N. Dravid and **Mir Zahiruddin Ali Khan** have been elected chairman and vice-chairman, respectively, of the Indian Society for Training and Development

Pravin P. Sanghvi has been elected president of the Bombay Stationers' Association

ilding businesses

lwar, 42, is division executive, South Asia and East division of Citibank, based in Singapore

lers and biographies are as much on for him as "building busi- So is golf, an interest he shares wife Roop who is one of the lead- golfers in Singapore. And a han- 11 indicates his long association sport. But his connection with is longer. He is among the few responsible for implementing 's global consumer banking

Talwar, who did his BA from hen's College, Delhi, joined Cit- India as an executive trainee in he of the few Citibank officials worked in all the four Citi cen- India, Talwar's first posting was to Saudi Arabia in 1977. en, he has returned to India only ys or to take stock of Citibank's r business here.

omain. Posted in Singapore for hine years, and in charge of con- nking and credit card business h Asia and the Middle East, oday controls an area extending v Zealand to Saudi Arabia. His ncompasses 13 countries, 7,000 s, $9 billion in deposits, $8 bil- ans and a $105 million in after- s.

is a workaholic and a constant Though he handles a heavy load ersonally, he also "delegates to a fault, at times". And he views this characteristic as his strength since "that's how you help people grow".

According to Talwar, starting consumer banking in India was "the beginning of a new phase". Citibank succeeded in the consumer banking area, he says, because "few other institutions had focused on directing their services to individuals".

And Talwar's credentials speak volumes about his innate ability to build businesses. He was responsible for Citibank's highly acclaimed "Asian Banking Centres" which today span the entire Pacific rim. He introduced the consumer services group in India which has mobilised Rs.2,000 crore in deposits from 55,000 non-resident Indians. And he is proud of this achievement. "We have used our global strengths," he says. "Being a part of the team that has changed the company's profile completely in the country is something to be proud of."

Talwar feels that many of the other foreign banks operating in India have not encouraged innovation and have suffered due to an in-built bureaucracy. "We have to apply the technology and experience from other countries here to be innovative," he feels, stating that the Indian banking industry requires more competition and a little less of over-regulation.

Despite economic recession, Citibank's Asian Consumer Business has maintained an enviable record of growth, and the credit for that goes to Talwar. And this is well accepted in the portals of Citibank too, as is indicated by its chairman John Reed's reference to Talwar and his contribution in a recent interview to the *Harvard Business Review*. Talwar takes it in his stride, even when three more countries are added to his domain. "As long as I am stimulated by work and people, I'll continue working. The day I stop enjoying, I'll quit," he says.

■ RAHUL SHARMA

FRONTRUNNERS

"The entire strategic and operational planning for both domestic and overseas market for our company was conceived by my team," asserts **B.S. Pani**, (39), the marketing manager of the Rs.2,500-crore public sector aluminium giant, National Aluminium Company Ltd (Nalco).

A metallurgist with an MBA from the University of Leeds (UK), Pani trained in aluminium smelting in the USSR. Since 1970, he has been with one aluminium manufacturer after the other (INDAL, Balco and Nalco), working on project, construction and commissioning of units.

Involved in academics and management studies in and around Bhubaneshwar, Pani is a visiting faculty member with Xavier Institute of Management Studies, universities of Utkal and Berhampur and various entrepreneur development institutes.

N.R.

R.P. Yadav, 34, the general manager — marketing of the Calcutta-based Rs.18-crore Business Forms, India's largest computer stationery manufacturer, is a science graduate from Ranchi University. He began his career 14 years ago as a sales representative with Johnson and Johnson.

Yadav has built a reputation as a person who spares no efforts. He switched over to Christine Hoden, the makers of Comfit napkins as a sales executive, and rose to the position of regional sales manager of the company. "My interests lay in institutional marketing and so, I shifted to Usha Fans and Sewing Machines. Later I joined Jay Engineering," says Yadav. He then shifted to HCL.

From there, it was just a hop to computer stationery and MICR cheques. "I now control an all-India market leader's team. I intend to double the target by end-1991," he says.

S.D

CALCUTTA FOOTBALL

Money is the name of the game

The exhibition match that marked the beginning of this year's football season in Calcutta last month, also marked the end of hectic horse-trading involving some of the best football talent in the country. But much before the teams were finalised, rumours were rife about the final line-up of the teams the big three clubs of Indian Football — Mohun Bagan, East Bengal and Mohammedan Sporting — will be fielding.

One feature that demarcates the three clubs is the fact that they offer no official remuneration to players when they sign them up to don the club colours. Around the undoubted prestige of playing for one of these three clubs and the dubious "amateur" status of the players evolves the story of big money in Indian football.

Not mere football

But there is a great deal more to these big clubs than mere football — the ultimate goal being prestige, power and popularity. Each of the clubs signs up two dozen or more of the top players in the country to don their colours in exchange of "reimbursements". It tries its best to put together a team that can bring home the *trimukut* of Indian football — the IFA Shield, the Rovers Cup and the Durand Cup.

Mohun Bagan sprang into prominence in 1911 — a nondescript north Calcutta club that defeated a first-rate English team. At the club, the world revolves around Swapan Sadhan Bose, better known as Tutu Bose or Tutuda. His family has been bankrolling Mohan Bagan for generations. Football circles estimate his financial involvement in the club to be around Rs.35 lakh annually.

Close on the heels of Mohun Bagan came the East Bengal Club, originally representing players from the Dhaka area. After Partition, it came to represent the aspirations of the weary, dispossessed Hindu refugees from erstwhile East Pakistan. Poltu Das, the pivot of the East Bengal Club, is a businessman with interests in Calcutta's burgeoning suburban real estate and other businesses. Partha Sengupta, the general secretary of the club, says, "Poltuda can raise Rs.10 lakh in a day with a few carefully placed phone calls."

The last but not the least important of the trio, Mohammedan Sporting represents Muslim competitiveness, although all its players are not Muslim. At this club, the top gun is Mir Mohammed Omar. He can come up with enough funds his club requires anytime, and his supporters consider him responsible for pulling the club out of financial crises.

Audited accounts of the three clubs are difficult to come by. Mohun Bagan has a football budget of around Rs.30 lakh this year to meet the expenses of the 28 players it has signed on. Anjan Mitra, a chartered accountant who handles the finances of the club claims that Mohun Bagan pays its players only in white money. "But if a supporter gives a player some money, it is no concern to the club," he says. According to Mitra, no player receives more than Rs.2 lakh per from any club, and that too, only a reimbursement vouchers for play and equipment, toiletry, conve medical expenses, allowances for town trips, etc.

According to informed sources Mohun Bagan camp, their highes player, Shishir Ghosh will make lakh this season through reimburs of expenses and donor largesses. East Bengal tent, similar figur quoted for Krishanu Dey and B Panji. Sengupta of East Bengal say his club has also set aside Rs.30 l find its team this season.

Obviously, this requires that the be well-equipped financially. They the required funds in a wide vari ways — through annual subscrip from appearance money in outs tournaments, from advertisemer souvenirs and new memberships.

No fees

The legal position on the payments clear. Says Mitra, "The players are n employees or even under any contr us. There is no question of tax ded at source under these circumsta Since there is no written contrac ween clubs and players, it leaves e scope for manipulation.

Club bosses rant against the unp sional attitude of the players as wel the authorities. Players arrange p matches and pocket the collection. at foreign players who get fined by clubs at the drop of a hat. Can we eve our players?" Das asks. The clubs complain that they never get any sh the gate collections. And, Doorda does not recognise television broa ing rights.

As a result of the legal vagueness entire system, it is muscle, black and smart hustling that works. P cannot be kept in line. Bosses who keep their commitments with playe lose them the next season to some club. The lucky few who make it line-ups in these clubs are fully aw the lacunae in the system and try t advantage of them.

For they know they will be at thei only for a few years. And it is in this period that they will be able to enj trappings that go with playing for the three clubs: fame, money, and chance to be counted among the b the country.

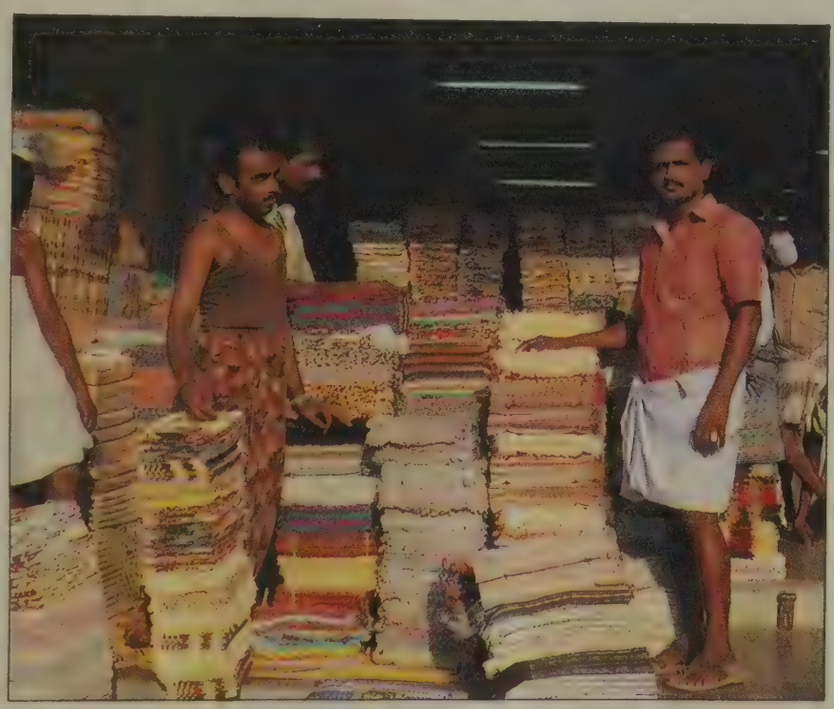
Calcutta football: money on the hoof?

Tuesday at Erode...

ss and undistinguished it may be r days, but come Tuesday, the rters of Periyar district in Tamil ts transformed beyond recogni- out 100,000 textile traders wind y to Erode to participate in the extile market, and Erode's by- come India's largest centre for ganised textile trade. This flour- holesale trade, in both handloom erloom products, fetches an an- nover of Rs.200 crore.

norning every Tuesday, this town ive and a mad scramble for space n Gani market, the municipality place, an average shop than nine sq ft in size, out for Rs.1,350. There t 3,000 shops selling anging from hand- s costing Re.1 each to e silk sarees priced 0. The sale continues Thursday morning, ning before that wit- remendous activity.



eavers' venture

ome from all over the but sellers are largely all towns and villages km radius of Erode. million people are in- this profession. Says dam (52), who has ing his wares in this or the last three de- Most of us are small who own 10 to 15 eryone in the family has to play his business. My wife looks after , my sons procure yarn and su- he day-to-day activities, my s-in-law do the dyeing. I bring ed goods and sell them in this

rket goes back to 1958. "In the s, a credit system was intro- the wholesale textile trade in du. It hit the small weavers' pro- s their cash reserve depleted in ce of the immediate cash pay- ence, they decided to go to the directly. Erode was the obvious or the weavers were mostly ated in the villages around," ataraja Mudaliar, a leading handloom merchant of the area.

So, in 1958, about 40 weavers piled their bales for sale near Erode clock-tower one Thursday to mobilise cash for workers' weekly salaries. Public response was so overwhelming that more and more traders started trekking to Erode. Soon the lungi weavers from Chertala in Kerala also started coming to Erode to sell their goods, and the market became a regular feature.

All dealings here are in hard cash. Most nationalised banks have branches in Erode. During the market days they stock up their cash reserves to meet the market demand. Says the manager of the local branch of the State Bank of India, "We keep cash to the tune of Rs.1 crore during the market days, as most of the buyers bring drafts."

A.S. Panneerselvan

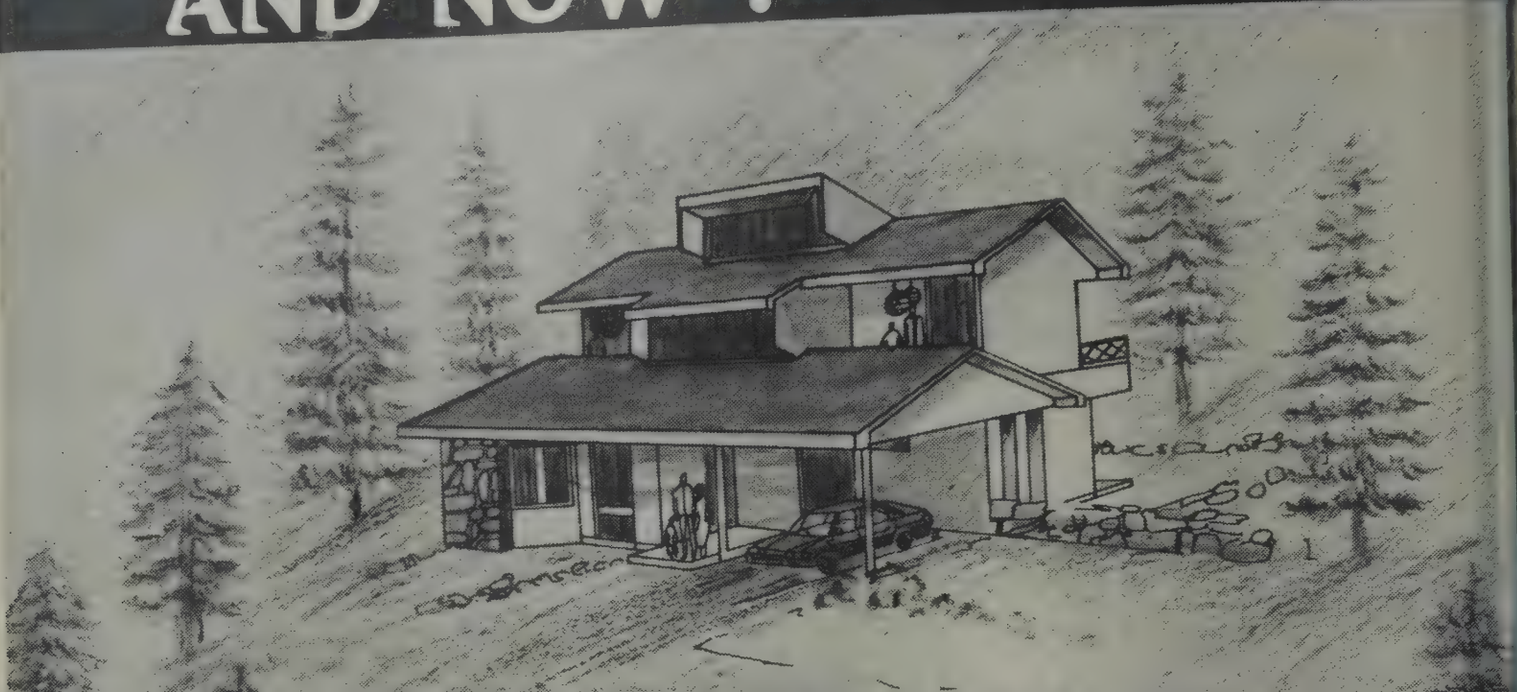
The Tuesday market: India's largest textile trade centre

The prices at the market are really competitive and there is no compromise on quality. "The minimal overheads make our prices competitive. The same products cost nearly 100 per cent more in Bombay and about 40 per cent more in Ahmedabad," says J. Ganesa Mudaliar, a local weaver.

Wide choice

Ashok Kumar Kalvi, a trader from Jaipur, and a regular visitor to the market, is attracted by the wide choice. According to him, such variety is not found elsewhere in India. Another major attraction is the availability of transport. Erode is connected by rail to all major cities," says A. Fernandez, a buyer from Bangalore.

The trading system has now become well-organised. Once the deal is struck, the sellers do the packaging and make the necessary arrangements for transportation. "I have been visiting this place since 1975 and till date there has been no instance of any fraud. More than the competitive prices, it's this dependability and credibility that attracts people from all over," says S.K. Bhide, a visitor from Belgaum.



Erode now faces all the problems of success. The already densely populated town bursts at the seams during market days. Sanitation breaks down, and there is an acute shortage of accommodation. In 1984, there were only five lodges in the town, now there are close to 70, accommodating about 6,000 visitors. But this is not sufficient.

According to the district collector V.K. Subbaraj, traffic management is another perpetual nightmare. "The number of vehicles have increased from a mere 4,500 in 1980 to about 65,000 in March 1991. The population is about 160,000, and at the present rate of increase, vehicles are going to outnumber people very soon," he says. Everyone seems to own a two-wheeler or a light motor vehicle.

Improvements are round the corner. Erode Handloom Merchants Association (EHMA), has taken the initiative to move the market to a more spacious place. Says R.K. Senthamarai, president, EHMA, "The only way to develop our trade is to set up a textile township. For this purpose, we have purchased 92 acres of land near Sooriyampalayam, six km away from Erode. We propose to construct 900 permanent shops there. We have allocated about 20 acres of land for the market." EHMA also plans to construct a 100 ft road to this area. The association is in the process of raising funds from banks for the purpose, and expects the work to be completed by 1995.

AND NOW !

EVEN YOU CAN OWN AN INDEPENDENT & EXCLUSIVE BUNGALOW IN COONOOR'S PRESTIGIOUS ELKHILL ESTATES!

Yes! Coonoor Construction Company Pvt Ltd, now offers to you PHASE II of their ELKHILL ESTATES, in COONOOR.

PHASE I met with an overwhelming response and today all the bungalows booked are at various stages of completion - and on schedule. A model bungalow is now ready for your inspection. Even as PHASE I continues, and due to the tremendous demand for smaller bungalows, ELKHILL ESTATES offers to you bungalows in built-up sizes of 1,000 sq.ft; 1,500 sq.ft; 2,000 sq.ft and also of 2,250 sq.ft areas. All these in plot sizes ranging from about 5,000 sq.ft to about 18,500 sq.ft. Architect designed to suit your discerning taste and style - and yet AFFORDABLE. Retaining all the amenities and features such as professionally landscaped plots surrounding the bungalows, telephone connections, dish antenna, provisions for generator, servants amenities, etc., All so conveniently located within the Municipal limits of COONOOR Town. Close to the best schools of both KETI & OOTY. Walking distance from SYMS PARK, THE COONOOR AND WELLINGTON CLUBS. An hour and a half drive from COIMBATORE'S Airport which connects daily flights to the International Airports of BOMBAY, MADRAS and BANGALORE. With ample water supply from both it's wells and also from the Municipal water supply, ELKHILL ESTATES is today considered as the best investment that money can buy. What, with it's range of facilities provided in it's commercial complex adjoining the estate, such as Beauty parlour, Florist, Supermarket, Restaurant, Poly-clinic, Post office, Bank etc.,

ELKHILL ESTATES... SO MUCH... FOR SO LITTLE...

many parts. Now the
best known traffic cop
brought out his first
title, *Traffic Manage-*
Long Way To Go, may
and uninspiring, but
uthor himself, it is full
of lively anecdotes. Pasricha, a PhD in traffic management, is now posted as an additional commissioner of Bombay. Taking the city as a case study, his book examines the present traffic system and raises some relevant questions. According to Pasricha, the book is aimed at the common man. Though one does wonder which common man would ever get to see a book with a price tag of Rs.175.

It was meant to be a sombre occasion. But the celebrity gazers who thronged a college hall in south Bombay last fortnight had other ideas. They tripped over one another to have a "dekho" at Shabana Azmi, Dilip Kumar and Sharon Prabhakar, participants at the public meeting on "Violence And Democracy". Politicians Murli Deora,

VIOLEN

Mrinal Gore and Madhu Deolekar spoke. So did adman Alyque Padamsee and former bureaucrat J.B.D'Souza.

The grand old man of Indian industry, **J.R.D. Tata**, started off on a humorous note by saying that since he had been asked to speak, violence had been committed. But he then added seriously, "This violence is due to the resentment caused to people for being denied rights as human beings and as Indians."

It was a muggy evening with the mercury hovering around 40 degrees and the wind playing truant most of time. But that did not prevent over 700 people, both young and old, including the likes of Vasant Sheth, chairman of Great Eastern Shipping, from travelling to Manori beach in the north of Bombay for an all night session of Jazz and Blues by some of the city's most talented musicians.

The rush of musicians wanting to play that night was even greater than the rush of people wanting to get in. In fact, a group that had flown in specially from far away Manipur could not even make it to the stage. The show was a first in the Sea-side Jazz series organised by Bombay restaurateurs **A.D. Singh** and **Naomi Khatau**, who last year gave the city its first jazz cafe — Just Deserts. The ten-hour non-stop music was a good experience, but the heat was unbearable.

No doubt at least Parle's did make the best out of the occasion. Citra and Thums Up, the only soft drinks available, were selling at Rs.6 a bottle; while a bottle of Bisleri mineral water, was going for Rs.12.

Birla 3M has still to flood the Indian market with its innovative products but the company has already come forward for a noble cause. It recently hosted a fund-raising dinner at Bangalore. The collections, totalling about Rs.6 lakh, are being used to organise coaching camps and provide sports kits for 46 atheletes who will participate next month in the International Special Olympics being held at Minneapolis, US (where the 3M headquarters is located). The International Special Olympics, in which more than 6,500 mentally retarded atheletes from 101 countries will participate this year, was founded by the Kennedy family in 1988. Says **William Scrivens** managing director, Birla 3M, "Our involvement will continue in the future."

Couples in business

In a society where family businesses have been the norm, men have generally assumed the dominant role. Today, however, more husbands and wives are joining forces to survive in an increasingly competitive world. And women themselves are playing a vital role in businesses that range from service-oriented ones such as public relations and interior design to those that involve the manufacture and sale of machinery.

Pragnya Mestry, a young woman living in Bombay, was eager to do something beyond her duties as a housewife. Her husband, Anil, then employed with a Pune-based company, did not approve of her working for someone else, saying that "after working in the office she will have to work at home as well, which is unfair". But he agreed with Pragnya that with their own business, she could enjoy flexible timings. So in 1981, at Pragnya's urging, the Mestrys started Nova Arts to manufacture gift articles. At that point Anil retained his job, although he resigned not long after. The next year, Pragnya took up an agency for Dahanukar machine tools.

Deepak Tolani

The Chickgurs: much money saved on salaries

Business really took off in 1985, when they started manufacturing multi-purpose tongs. The response at their Bangalore exhibition was enthusiastic, and they subsequently launched a whole range of kitchen products. Today, they manufacture such novel products as a ladder which can be converted into an ironing table and drawing board; selling them at major department stores as well as at exhibitions like those organised by the Association of Women Industrialists/Entrepreneurs of Maharashtra (WIMA), of which Pragnya is a member.

Separate but related

Like the Mestrys, Sudhir and Anu Behl work jointly and run separate, though related, companies. Anu had her own agency — Conference and Marketing Services — going in 1986. Sudhir, tired of the corporate world after spending 28 years in companies such as Lintas, Frank Simoes and Larsen & Toubro, decided to break away. Initially, he considered joining Anu's firm. "But I realised the company was so small that we would step on each other's toes," he says. So in 1989, Sudhir set up Spectra PR Consultants. The two, however, share the same office and complement each other when it comes to dealing with clients.

Sudhir's forte is administration, research and technical projects; Anu excels in creativity and provides the warm personal touch so essential to their field. Meanwhile, though she had started off by organising conferences, she found her scope widening automatically — her clients wanted public relations services too, through Sudhir's contacts.

Though too much togetherness is not always a great thing, setting up business jointly can be a wonderful way of bringing couples closer. For 15 long years, Sunil Panday had been in the merchant navy. When he went home on leave, his wife Sonal took time off from her job as marketing executive with Mahindra and Mahindra. They made up for the long separations then, with bouts of frantic partying. But real family life — sitting around the TV set together, sharing meals — was almost non-existent most of the time.

So when Sonal's brother, Tushar Oza, wanted to set up an export-oriented knit-

rs, says domestic arguments af-

fect work only to the extent that you could be "less chatty" and Sudhir points out that marital squabbles involve the heart while office work involves the head. As for quarrels in the office, the Behls are confident that they agree with each other in principle on major issues — it's the nitty-gritty and personal styles of functioning on which they might disagree.

Talking shop

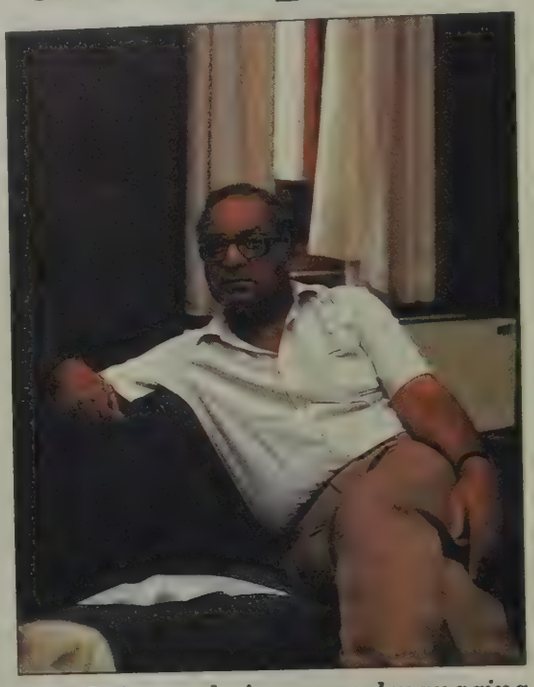
However, most couples — and their children! — complain that at home, talk usually centres around work. If there is any scope for conversation left by the end of the day, that is. Krutika and Uday Thakkar, of Printol Enterprise, are among the few who find something to say to each other, even after spending six hours together in the office. Most people are like Umesh and Shubha Pachigar, an architect team, who find there is little to say by evening. "Sometimes I feel it is best to keep quiet," says Shubha, "because if we do talk, we'll start discussing work. A lack of communication is really a disadvantage while working together," she says. This, despite the fact that they handle their own clients, preferring not to involve the other unless absolutely necessary. The Behls' 18 and 21-year-old daughters, meanwhile complain that their parents discuss only work when they return home. Even Anu gets exasperated by the monotony of the discussions that are carried over from the office. As for the Singhs, they say that though they can "get on each other's nerves, a strong bond has developed".

Most couples make conscious efforts to keep home and office apart. Jayshree Bharath was particular about locating the office away from the home in order to keep the two separate. "Any working woman has to separate home from office, otherwise it will be chaotic," she says. The Singhs, after years of "trying to make their lives more disciplined", have finally succeeded in drawing a line.

Pankaj Desai

The Thakkars: still conversational at the day's end

The Mestrys: being fair to each other



But what happens to the good old family vacation? The Mestrys have found an ideal solution, combining holidays with work, travelling to participate in home product exhibitions. Most, like the Thakkars, have to be content with short trips, if at all. Tehmi Chichgur had to do without holidays for five years until her sons were old enough to join the business.

When husbands and wives work together, who is the boss? On the surface it seems to be the man. Tehmi prefers to let her husband do the talking but she handles finances and settles family quarrels in the office. Mestry does not let his wife deal with clients like "local shopkeepers who will get put off seeing a woman". Anu Behl openly says that her husband has the upper hand.

Yet, women in business are not mere appendages to their husbands — even if all husbands do not recognise the fact.

■ MENKA SHIVDASANI and MAHIRA SHEIKH in Bombay with bureau reports.

"Reduce fuel consumption"

R.K. Gajree, *chairman and managing director of Bharat Petroleum Corporation Ltd (BPCL), now into the last nine months of his career — which began with Burmah Shell in 1961 — is currently presiding over a situation where the country might have to brave yet another fuel crisis. In this interview with* Business India*'s Devendra Tak, he remains optimistic but stresses the need for structural changes in the economy*

Last year we noticed long queues for diesel. Now that India is facing another Forex crunch, is another fuel crisis in the offing?
The problem last year was caused not so much due to a dearth in High Speed Diesel (HSD), as a lack of discipline among dealers. It was the hoarding of diesel that created an artificial scarcity. We had made a conscious effort to reduce consumption by 10 per cent, and curtailed supplies for a certain period, so dealers had resorted to hoarding. Once supplies were normalised, we noticed that there was a dip in sales. Even now there is no problem in the available indigenously. If we can raise of having enough foreign exchange to be able to buy it. Of the 22 mt total consumption of HSD, 17.7 mt is available indigeniously. If we can raise funds to buy HSD from abroad, or reduce consumption by 10 per cent, there should be no scarcity of HSD.

What is the current inventory of HSD? And what is the long term solution for the fuel problem?
I really do not know how much the inventory is. But I know that our refineries are working full steam. If certain structural and fiscal changes can be implemented in the 12 existing refineries in the country (average output: 6 mt, if the three proposed refineries (Karnal, Mangalore and Assam) can be implemented, and another refinery be approved, we can well continue to cover at least 60 per cent of the total consumption. Also, there is a need to set up co-generation plants in all the refineries. Earlier, the state electricity boards used to complain against the setting up of the plants, but gradually they have relented.

The total consumption of crude in the country is 55 mt, and we need to import 20 mt of crude. There is a 7 to 8 per cent growth in demand every year. If crude prices go up, the foreign exchange outgo will be larger and more difficult to meet. In the long term, if the nation wants to survive there is no alternative but to reduce consumption. For example, a proposal that was recently discussed with the petroleum ministry was to urge conservation measures among farmers who utilise over one million diesel gensets. Over the last few years, we have invested about Rs.110 crore in conservation measures. Efficient furnaces and heat exchangers have been installed and better energy control management is being initiated. Gas stoves having improved efficiency from 60 to 70 per cent have been introduced. While in the short term there is no alternative but to borrow money, in the long term, the energy output (1/16 is the fuel input ratio at the refineries) has to be less for the same production.

But there has to be simultaneous action taken by the government, in a pragmatic and business-like manner.

Why is it that the problem has become so acute in our country?
Our approach has been very disoriented. We became very complacent ever since we discovered oil at Bombay High. That affected our approach to the oil problem.

We would have otherwise been forced to opt out of personal modes of transportation etc, and the dependence on public modes of transport would have matured.

Recently there was a controversy the hasty issuance of letters of i (LoI) for LPG, kerosene and die dealerships, by the petroleum minister. Was there a need for additional dealers especially sin inventories of kerosene, gas and petroleum products is known to dismally low?
The appointment of new dealershi just one of the things that the min discussed with the heads of petrol companies, in an attempt to clear pending matters. The minister has discretionary quota for which he d need approval from the OSB. Thou the application for dealerships for petrol pumps and gas agencies is a drawn process, the LoI for the sam and should, be speedily implement any case, appointments made were for the long term. And the building a large infrastructural network of dealers definitely adds to the convenience of consumers. Even be the Janata Dal government was for the OSB had been dissolved. Once government is set up, the OSB will reformulated. The dissolution of th OSB is done to facilitate changes i board's members as per the perspe of a new government.

How many new retail outlets wer established by your company dur the last year?
We have a network of 3,965 retail outlets. Of these, 907 were for LDO and 767 were LPG distributors. Th were 71 new outlets added in the l year, as compared to 75 in the pre year.

If you multiply our figures by fiv you'll get the total of all the oil companies.

What are your aspirations for th company in the remaining nine months that you would be its chairman?
I want to push through the propos another refinery. Our results, whic awaiting the government audit ha been highly satisfactory. Even though this was the conservation year, and there was only a margin increase in sales, our gross profits Rs.350 crore as compared to Rs.30 crore last year.

LETTER FROM THE PUBLISHER

Now that the new government is in place, the first order of business on the economic front will be to regain our lost credibility.

Fortunately, for the first time, a consensus is emerging between businessmen and independent economists, and the bureaucrats in Delhi, on the need for a loan. There appears to be an emerging political consensus too.

One reason for the emerging consensus is the sensible realisation that the IMF is no bogey. It is an international multilateral institution. India is a member country, and having contributed to the capital is entitled, under certain conditions, to borrow from it. Quite frankly, there is no reason why borrowing from the IMF should be considered an act of bankruptcy or an act of national dishonour. Yet, more than just a few politicians have traditionally used the IMF as a whipping boy and portrayed the "conditionalities" as a white man's diktat.

The truth of the matter is that all the IMF insists upon, as bankers, that we make some attempt to manage our economy efficiently and live reasonably within our resources. Sensible advice that nobody can argue against. Except that our politicians take umbrage when non-Indians say this. When we look back some years from now we will wonder why we put ourselves in such a bind over a few billion dollars of foreign exchange. In the overall context of an economy of our size even $5 billion is not really a large amount. It only reflects the level of our economic (mis)management.

Do we have any options left but to take a loan? Certainly. We at *Business India* have long taken the view that since Independence we have needlessly treated foreign exchange like a sacred cow. It is quite simply a commodity, like many others, which has a value or a price to it. Our columnist Sudhir Mulji has also consistently argued for full convertibility of the rupee (remember, traditionally the rupee was the strongest currency in this part of the world). Not so long ago, he also advocated selling some of our gold — another commodity, albeit a valuable one — freely available at a price. It is now universally accepted that rigid exchange controls have only served to stunt our industry and our growth over the years. Everyone is agreed that there must be significant loosening up, but the only argument is that our economy will not be able to stand the shock. Of course, our Pakistani neighbours seem to have adjusted quite easily.

But the corollary to this route is the need to redefine economic self-sufficiency and independence. We strongly believe that self-sufficiency does not mean an isolated self-contained economy behind high walls. It simply means an ability to pay our way in the world and to be able to earn enough from exports of goods and services for all our foreign exchange needs. Only then can we, with pride, say we are equals amongst the other nations of an interdependent world.

Introducing

Mymoney

The deposit you can draw on without paying to use your own money.

ANZ Grindlays Bank has introduced Mymoney in answer to a frequently asked question "Why should I pay interest to use my own money?" And that is exactly how each of us feel when we draw against our fixed deposits. Whether it is to buy something special, go on a vacation, meet a medical emergency or even to take care of unbudgeted expenditures.

Mymoney is the way to deposit your earnings from share dividends, bonuses and other annual payments. Perhaps even gift money!

This is how Mymoney works. The amount you save is held in deposit units of Rs. 1000/- each. You can draw one or more deposit units of Rs. 1000/- each. The rest of your Mymoney deposit continues to earn the same rate of interest. (Deposit units withdrawn will be treated as partial withdrawals and interest thereon will be subject to directives issued by RBI from time to time.)

Mymoney is your money, designed to give you high returns in interest plus the freedom to draw from your deposit.

Make Mymoney a part of your saving plan. Walk into any ANZ Grindlays Bank branch convenient to you and meet our Customer Services Officer or telephone us at the numbers given below or find out all about Mymoney by mailing this coupon to reach Marketing Department, ANZ Grindlays Bank plc, 132 Mint Road, Bombay 400 001.

ANZ Grindlays Bank

"You are right : Why should I pay for what's mine?"

I'd like to know how Mymoney can earn higher interest on my deposit. Please send me more information.

• Customer's role

This refers to the review of the book, 'The competitive advantage of nations' (Books, 18 March 1991). The most interesting point made by Porter in the book is the role of customers. Customers with sophisticated tastes, who do not compromise on quality, can put pressure on their suppliers to come up with better products and in the process upgrade their competitive advantage. In this context Indian consumers fare rather poorly. While the government rarely makes a scientific evaluation of supplies made by vendors, even private enterprises in our country generally do not blacklist erring vendors. Consumers rarely approach a consumer forum for redressal of their grievances. It is this combination of indifference and diffidence which allows our vendors to get away with shoddy products.

Hooghly

• Here's a suggestion

This refers to the item titled 'Capital fillip', (Listening Post, 1 April).

The guidelines of the Controller of Capital Issues need to be modified to cater to the needs of small investors. Many companies take a long time to dispatch refund orders to share application money. I suggest that instead of sending refund cheques, companies should credit the amount in the bank account of the applicants. This will ensure timely repayment of application money and eliminate the possibility of cheques being misplaced, misused or forged. It will also curb the malpractice of multiple applications by a single individual.

• RBI curbs

The Special Report on the recent RBI curbs (27 May) was both useful and topical. You have correctly pointed out, that even companies having an efficient flow of working capital funds would be hurt by the recent norms.

But what is surprising is that J.B. Chemicals will, in no way, be affected by the import curbs. This company is supposed to have a big import bill of around 60 per cent of its total raw material requirements exporting mainly to USSR.

Further, it's being rumoured that the RBI will devalue the rupee which should further hurt big raw material importers.

AVINASH GORAKSHAKAR
Bombay

• Credit card craze

I read with great interest the article 'Towards One India Card' (13 May). Credit cards have caught up in a big way, in India and this business is expected to cover, at the least, two million people as members in the next five years.

At present there are 500,000 credit card holders in the country. Canara Bank seems to be the leading issuer in the business with 150,000 CanCard holders. Dena Bank was the first to introduce farm credit card. An agricultural credit card holder is eligible for instant credit facility without going through the trouble of filling up forms.

N.K. BAKSHI
Bayana (Rajasthan)

• In memoriam

Your Cover Story (27 May) on Rajiv Gandhi's assassination raises issues that should cause us grave concern — the use of violence to settle political issues. Indira Gandhi's assassination in 1984, the killings of candidates in Punjab and violence during polling underscore this. Another issue is the growing dominance of caste, creed and religion in elections.

Instead, the current elections should concern themselves with inflation, population control, unemployment, poverty alleviation, balance of payments and technological progress. None of these is being debated in election campaigns.

Rajiv Gandhi's untimely death leads to a testing time not merely for the Congress party, but also for the country. We should resolve political problems through discussion rather than terrorism and liberalise the economy to achieve higher rates of growth. Only then, Rajiv's death will not have been in vain.

BILLU
Bombay

• Despite his shortcomings and weaknesses, Rajiv Gandhi was dynamic. Even the most elderly and seasoned politicians in the Indian political field did not have the capacity to match his courage, grit and dynamism. And, he commanded worldwide respect.

Violence was rampant in the states on the day follow the assassination. Should r mal life be disrupted every ti a leader dies? And, is this way we pay our respect to departed leader?

S. KRISHNA KUMAR
Hyderabad

• Let MNCs in

"ONGC: the price of excess' tempts to place the blame the flogging of Bombay H wells and consequent los production on S.P. Wahi (Pu Sector, 13 May). Flogging over production of crude at cost of gas has been the bar the ONGC since inception.

In the process it overloo all sane advice including f CFP associated with Bom High development s 1973-74. Even the Soviet U had never tired of telling ONGC to attend to its "dama wells". There is no alternati resting these wells now. Bu could more than make up such losses by injecting cor tition — parcelling out mammoth 500,000 sq km o Bombay High area to MNCs ing to bear risk capital in ex ration and bring in technology.

The peace wave

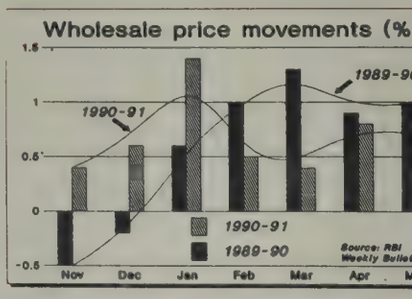
It was not a sympathy wave and not an anti-establishment wave, but a peace wave. This was the most important factor in the recent general elections. With almost remarkable uniformity — and with dramatic impact in Assam, Bihar, Gujarat, Madhya Pradesh, Maharashtra, Uttar Pradesh and West Bengal — the electorate has chosen to stay with governments that have given them peace in their neighbourhood and removed the governments that did not. The confrontationist Mulayam Singh Yadav and the rambunctious Devi Lal/Chautala combine have been sent packing.

The reason in retrospect is obvious. Without peace in society, a civilisation cannot progress. India has had more than its fair share of civic turmoil over the past decade. By the start of this year, it had reached the stage where it had become the most significant factor in people's lives over vast stretches of the country. As a result, the message given by the electorate was: give us security without tension in our daily lives and we will vote for you.

The first lesson for politicians coming from this is: the electorate is not interested in divisions between people. These do not make intellectual sense as overriding election issues and, as a result, do not win enough votes. People, in other words, are far more sensible than politicians think. This has been proven to be especially true in the rural areas. Madhya Pradesh is the clearest example of this.

The second "don't" for politicians: do not rely on an anti-establishment vote; Maharashtra and West Bengal have repeatedly demonstrated that people can become fond of a government that works. Where the government does not work, it has translated — as it must in a poor country — into civic disorder and, only thus, into anti-establishment votes.

There have undoubtedly been some exceptions to the peace wave. The improvement in Congress votes after Rajiv Gandhi's assassination has been attributed to higher tu outs by otherwise disaffected voters (particularly wome and sympathy. But the improvement was by no means ov riding or general.



The other exceptions have been the continued support the Congress government in Karnataka despite riots northern Karnataka last year (although the BJP did well those areas) and the switch to the Congress in Orissa desp reasonable social order. But in the latter case, Biju Patnai erratic actions and pronouncements must not be forgotte

The message of the peace wave, though comforting in broad rejection of social and religious divisiveness, neverth less carries two striking messages. The first is that the pub votes according to the situation in its own back-yard and n necessarily on a party's performance on providing a peace environment at an overall national level — which could quite different. For example, the public in Maharashtra w willing to vote for the Congress without really worryi about its performance just south of the state border.

The second striking message is a dismal one. Forty-fo years after independence, the national situation still mands a consideration of personal security first. Oth pressing issues, such as how the economy ought to be tack or the size of education budgets, which are really what inf ence the quality of people's lives in the long-term must main on the sidelines.

This situation will continue until civic peace becomes norm rather than the exception it currently is. An advanta over the years until the next election is that each major po ical alignment has significant power at the state level a therefore an adequate opportunity to demonstrate its qu ties — provided at least one major group performs cons tently across the different states it rules in.

Buying time for restructuring

The slowdown in the inflation rate since January (*see chart*) suggests that the tight money policy is working; the slow but steady change from the huge parallel economy to a more monetised and organised one (thanks in part to incentives such as tax-free exports) has made the economy more susceptible to government policy. The other reason is, of course, that the tightening of money supply has been achieved by a particularly savage increase in statutory funds appropriated by the Reserve Bank.

In tightening money supply, the government has taken the risk that there will be significant economic disruptions es cially in the credit-dependent small-scale manufactur and exporting sectors. While it is too early to say whet growth will also slow down, the outgoing government ca least take the credit that apart from successfully cooling flation it has bought some time for restructuring the ec omy. Equally important, it has demonstrated the workabi of credit policy to foreign lenders.

But how should the economy be restructured? Restruct ing could mean anything from liberalising interest rate

massive privatisation. Pakistan has liberalised with a privatisation programme and simpler rules for foreign investment in equity. The early evidence suggests that there has been a net inflow of foreign exchange as a result.

The lesson for India should be that restructuring is a must. It is also urgent: the credit squeeze cannot be maintained at this level for more than a few months without leading to a severe recession. On the other hand, any relaxation of the credit squeeze without restructuring will mean a return to high inflation and other imbalances.

It is likely that a process of piecemeal liberalisation will begin in the financial sector — via floating interest rates (except for agriculture), private-sector access to mutual funds and foreign access to stockmarkets. But privatisation of the public sector, trimming the power of unions and exposing the private sector to world competition are unlikely.

Unfortunately, the problems of the economy lie precisely in those sectors where liberalisation is unlikely. Liberalising financial services is necessary but its goal should be solely to improve the access to financial resources. It cannot improve the productivity of the protected sectors in the economy.

Therein lies the political dilemma: a process of partial and gradual "managed" restructuring may not work while wholesale restructuring is a painful process which can even result in social upheaval if not handled correctly. It will require considerable political will and finesse if the economy is to be opened up fast enough to benefit from the time bought through tight credit.

The election results make the task more difficult. A majority party could have pushed reforms through Parliament in the knowledge that there was enough time for the benefits of reform to emerge before the next election. A minority government has no such security.

The world's economic scenario compounds India's problem. The recession in the developed world has led to reduced demand for, and lower prices of, the country's exports — as are witnessed by trends in the tea, aluminium and sugar sectors. True, imported capital goods have become cheaper, but the depreciation of the rupee has removed this advantage.

Then there is IMF, which has evinced a willingness to hold India's hand but only on a straight and narrow path. Some of its prescriptions, such as reduced government expenditure, will be consistent with the government's own ideas and may even allow for some of the political arrows to be deflected on to IMF. Other possible prescriptions, such as the taxing of agriculture, will be less palatable and will require considerable negotiating skills.

The situation requires a government with considerable integrity and political will to undertake the painful restructuring that is needed; a government with enough political finesse to handle two opposition blocs and win their consistent support for reform; and a government that IMF is comfortable with.

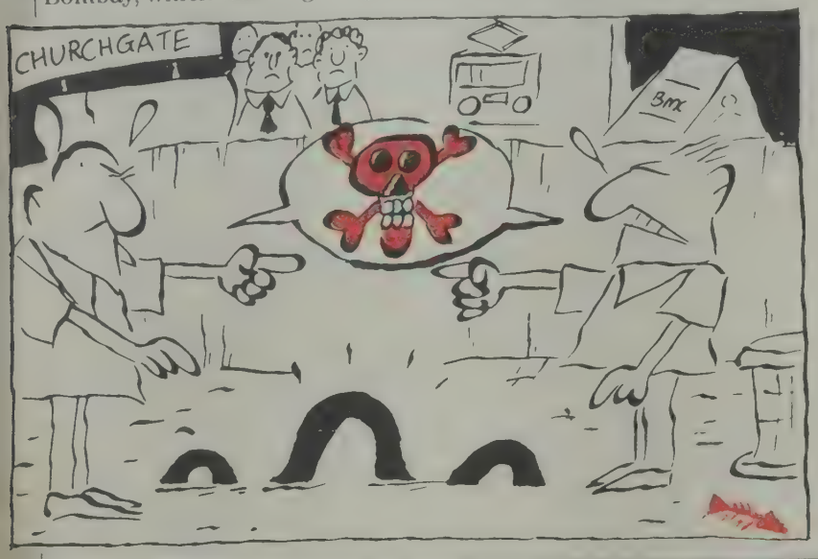
The crisis is daunting enough to make almost any politician grateful for sitting it out in the opposition for the next few years while the government sweats in the front benches. The manoeuvring that has gone on in the Congress as it plods its way towards a government is nothing compared with the negotiating skill that will be required in the next two years. As it makes its deals, the government ought perhaps to remember the decisive — if unpopular — short-term measures of the outgoing government that bought it some time.

Lessons from Bombay Hospital

Last month's fake soda bicarb scandal at Bombay Hospital, because of which at least one person died, saw the hospital at the receiving end of public flak. True, its sole supplier was an unregistered firm without a manufacturing licence. But, like the ten other hospitals that received the spurious drug from the same firm, it was constrained by the total absence of reputed suppliers (nine of the ten known suppliers are not listed in the Indian Pharmaceutical Guide 1990, which lists appoximately 20,000 drug companies nationwide).

This sounds paradoxical given that injectable soda bicarb is a low-tech product and cheap to produce. Further, a tablet version is made by a reputed supplier, Boots, which could easily supply the injectable formulation.

The answer to the puzzle lies in the controversial drug price control order (DPCO) which lists the product as a life-saving drug and controls its selling price. Since demand is limited (estimated annual sales are less than Rs.1 crore), the combination of simple technology and low prices has meant its production by a host of small firms whose quality standards are unknown.



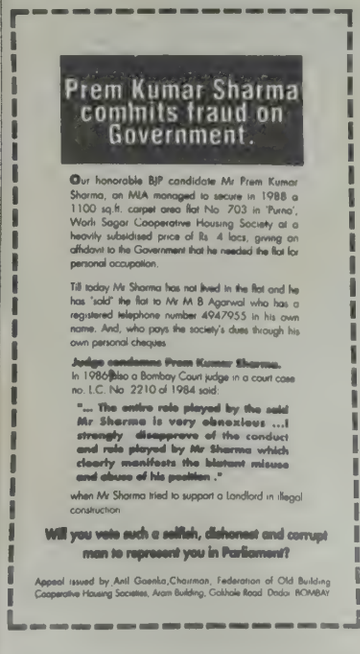
Guaranteeing quality under such a controlled regime requires an expanded and expensive quality control establishment. It may not even work, given that a firm's costs of controlling quality may exceed the controlled selling price.

In fact, there is a simpler way to guarantee quality given that reputable hospitals will always go for reputable suppliers even if its prices are higher. What is required, is an attractive enough price to attract good firms.

The DPCO's technique of looking only at manufacturing costs and the importance of a drug while determining its price is incomplete and it bears part of the responsibility for the tragedy. At the very least, any price control regime must consider the individual peculiarities of supply and demand. In the case of injectable soda bicarb, the situation clearly demands a more liberal approach to pricing the drug.

What's up at Churchgate?

There has been a hue and cry over the delay in the construction of the Churchgate subway in Bombay, which was originally scheduled to be ready at least a year ago. The inside story is very revealing. As the excavation progressed, a cable was discovered. While the BEST (electric supply) and the telephone department kept pointing to each other, the work came to a standstill for fear of it being a live cable. Eventually, it turned out to be a cable long replaced, redundant and dead.



In the same excavation, the uncovering of a huge storm-water line called a halt once again as the administration and the contractor tried to settle the dispute of extra work involved and the consequent escalation of cost by Rs.18 lakh. Amazing, as it may seem, no one was aware of this line's existence and hence it had not figured in the original contract.

Excerpted from *Traffic Management — a long way to go* by P.S. Pasricha

Dirty linen in public

Electioneering advertisements took a vicious turn in Bombay last fortnight as two of the leading contenders for the south Bombay Lok Sabha seat launched an attack on each other through newspaper ads. While Prem Kumar Sharma, the Bharatiya Janata Party (BJP) candidate issued ads in which he said that Murli Deora the Congress-I candidate "spoke for 3 minutes in 15 months in parliament, distributes chocolates, ribbons and pencils, usurps credit for government work and runs errands for power brokers," Deora called Sharma a fraud.

N.R.
Bombay

Prem Kumar Sharma commits fraud on Government.

Our honorable BJP candidate Mr Prem Kumar Sharma, an MLA managed to secure in 1988 a 1100 sq.ft. carpet area flat No 703 in 'Purna', Worli Sagar Cooperative Housing Society at a heavily subsidised price of Rs 4 lacs, giving an affidavit to the Government that he needed the flat for personal occupation.

Till today Mr Sharma has not lived in the flat and he has 'sold' the flat to Mr M B Agarwal who has a registered telephone number 4947955 in his own name. And, who pays the society's dues through his own personal cheques.

Judge condemns Prem Kumar Sharma.
In 1986 also a Bombay Court judge in a court case no. I.C. No 2210 of 1984 said:

"... The entire role played by the said Mr Sharma is very obnoxious ...I strongly disapprove of the conduct and role played by Mr Sharma which clearly manifests the blatant misuse and abuse of his position ."

when Mr Sharma tried to support a Landlord in illegal construction

Will you vote such a selfish, dishonest and corrupt man to represent you in Parliament?

Foreign banks forge ahead

Nationalised banks have been cribbing about foreign banks taking away business from them for some time now. Much of it may be mere griping but not all. Recently published RBI data show that in the city of Bombay alone, the share of foreign banks in business has almost doubled in the past five years and the share of nationalised banks plummeted by 10 per cent.

From 49.76 per cent in December 1985, the nationalised banks' share in banking business in Bombay was reduced to 38.48 per cent by December 1990, while the foreign banks walked away with 16.60 per cent in December 1990 as against a mere 7.91 per cent in December 1985.

The benefit seems to have come mainly from technology which the foreign banks adopted wholeheartedly whereas the Indian banks are still dragging their feet — thanks to the government and the bank unions.

Voice mail

The Videsh Sanchar Nigam Ltd will shortly be introducing voice mail services which they claim is new concept in communication technology receive and store overseas calls.

The two chief advantages the facility gives to telephon users are that it can store information (it has a five minute capacity) and secon it can only be accessed by th user (it has a special code number).

The voice mail box can store up to six messages within five minutes. But in case your mail box is full ar more messages come in, the new messages are placed in separate area and come int your mail box when it has space. Hence you will not lo messages even if the mail b is full.

Says I.K. Agarwal, deputy general manager, marketing "The voice mail service will initially be started on an experimental basis and give free of cost to select leading companies. After that an amount of around Rs.4,000 per mail box per annum ma be charged." The voice mail system is awaiting government clearance however.

"We have spent nearly Rs.50 lakh on this system a will be able to provide membership to 200 subscribers at a time," adds Agarwal.

More power to cable operators

You must have heard about cable TV but did you know there was such a thing as cable power? Well, that's what some enterprising Calcutta youths decided to take up as a business venture. And thanks to frequent load shedding in the city, cable power is gaining ground.

When there's a power cut (using generator sets) these entrepreneurs can supply power to the residents for up to four hours a day. Payment is made on a per point basis and works out to approximately Rs.30 per point per month, whether one uses the facility or not. The points include lights, fans, and television. If you have a fridge it's slightly more expensive.

For the love of ....

"Ram and Roti
Forget everything
Only Think of me!"
Election Fever, Kaypee

News has acquired a new connotation — that of love. For the first time all kinds of greeting cards including romantic cards were sold under the series of 'election fever' and 'election special'. The two Delhi-based card manufacturers Dushyant's and Kaypee were the first card companies to cash in on the elections. While the former combined election manifestoes with the names of leading news magazines such as *Society*, *Sunday*, *News Week*, etc, the latter took off on controversies 'Mandir or Masjid?' 'Ram and Roti'. Apparently both manufacturers did good business.

One up for Pakistan

India has been talking about economic liberalisation for long. There are controls on who should enter which industry and when (licence Raj) and or how much may be spent on imports and exports. On how much foreign exchange (FE) one can take outside the country and how long one can keep it when one returns. Holding any FE beyond these limits is a crime.

But while we are still talking of liberalising, Pakistan has stolen a march over us.

The Pakistani finance ministry has brought out the following reforms.

- There are no restrictions on resident Pakistani, non-resident Pakistani or foreigners for bringing any foreign currency into Pakistan, possessing or taking it abroad. No currency declaration is required on entry into Pakistan.
- All resident Pakistanis can maintain foreign currency accounts with banks in Pakistan. Such accounts can be fed by foreign exchange in any form including FEBCs, remittances from abroad, TCs, bank drafts or currency notes. No question shall be asked about the source of such funds. Transactions through this account can be made without any prior permission of the State Bank of Pakistan for remittance abroad or for conversion into local currency.
- Loans in local currency can be obtained against the credit in foreign currency accounts.
- Non-resident Pakistanis and foreign investors are permitted to invest in the share capital of companies listed on the stock exchange by payment in foreign exchange. Remittance of principal and dividend against such shares will be allowed without prior permission. However, capital gains tax will be payable if applicable under the rules.
- Government is issuing Dollar Denominated Bearer Certificates on the pattern of FEBCs. These certificates can be purchased by any resident Pakistani, non-resident Pakistani or other foreign investor against payment in foreign exchange. These dollar denominated bearer certificates can be encashed in foreign exchange or local currency. Profits will also be payable in foreign exchange or in rupees at the option of the bearer.
- Foreign exchange is available to Pakistanis for the following purposes:

(*a*) There is no limit for membership fees of educational, technical and professional organisations.
(*b*) Remittance for correspondence courses abroad is allowed freely by the banks.
(*c*) There is no limit for payment of fee for examinations abroad.
(*d*) For undergraduate education abroad there is no restriction on the types of courses or the educational institutions.

- Arriving passengers in Pakistan can pass through the customs green channel without customs check, if they do not have any dutiable goods to declare. Custom officials will check upto 5 passengers on each flight at random who pass through the green channesl.

Excerpt from *the Press conference on 7 February 1991*

To the average person, he is a social outcast.

To a Lion, he can return to a normal existence

He had leprosy, and society made him an outcast.

Like so many others, even his family rejected him.

Long after he was completely cured.

And the social stigma remained.

What he and 4 million other patients in India need, is help in the form of medical assistance and moral support.

And more importantly, the chance to relive their lives — without the stigma.

After all, both leprosy and the stigma attached to it, can easily be eradicated. Through a mass awareness and rehabilitation programme.

But not all understand this.

That's why it has always taken a special kind of person to be a Lion.

Special men and women who share a common concern. A concern for the society in which they have succeeded.

Who realize that beyond the achievements of everyday life is that most elusive object: inner satisfaction.

And who have come together to touch the lives of others less fortunate than themselves.

Needless to say, people like these aren't many.

After all, if everyone in the world had the vision of a Lion, there wouldn't be an average person.

Millions of people make up this wo
But just a few shape it.

Big Blue is coming back

Large multinational companies from the US and Europe are again showing positive interest in making large investments in India. Close on the heels of Hewlett Packard tying up with HCL, IBM, the largest computer company in the world, is planning to come back to India.

According to reports, it is tying up with the Tatas for a joint venture to manufacture their PS/2 systems in India. Apparently, Ratan Tata will be floating a new company to participate in the joint venture since almost all his electronics companies already have a tie-up with various international corporations.

Tata: joint venture with IBM?

IBM has decided to pitch in their lot with a 40 per cent equity stake in the new company. Though the tie-up is yet to be announced, IBM is only waiting for the new government to be in place before the announcement is made.

A fashionable move

The multinationals from Europe are not far behind either. After Chandra Industries signed an agreement to manufacture Pierre Cardin fashion garments in India, Delhi-based Stencil Industries has teamed up with Lacoste of France to make their brand of shirts and T-shirts in the country. A formal announcement, again, will come after the new government takes charge at the Centre.

PNB ventures into factoring

The Punjab National Bank, one of the five largest public sector banks in the country, has shown increased profits this year. However, what is important is that the bank has finally decided to get into the factoring area. Later this year, the bank will be floating a new subsidiary, its third, in collaboration with SIDBI and some other north Indian banks for debt collection. The other banks, which will participate in the company, are yet to be identified, though it seems that the likely partner would be the Punjab and Sind Bank Ltd.

Selling credit

Citibank is trying out some new avenues for marketing its credit cards. It is trying to tie-up with Housing Development Finance Corporation (HDFC) to market them to HDFC's list of clients. Since the creditworthiness of HDFC's clients is excellent, Citibank hopes, they are good potential customers for their credit card.

Similarly, Citibank has also come to an arrangement with Real Value (P) Ltd (the makers of Ceasefire) for marketing their credit cards. Real Value has a 70-branch network and a team of 700 salesmen. Real Value itself has recently had to cut back drastically on production (sales have dropped to 45,000 pieces a month from 65,000 earlier) and its sales force (from 1,000 to 700). May be the tie-up with Citibank will help them better utilise their work force.

Second thoughts on the cup that cheers

The tea king B.M. Khaitan and the coffee giant Nestle's plan to form a joint venture to manufacture soya-based products seems to have fallen through. The two together wanted to set up a Rs.70-crore project in South India about a year ago. But with the failure of Nestle's packaged tea "Taster's choice" to grab a significant share of the market, the Khaitans are believed to be reconsidering their tie-up plans with Nestle.

Is it that the marketing savvy that makes Nescafe the largest selling coffee in the world cannot be transferred to tea? Or is it that coffee drinkers just do not drink tea!

A new epidemic

With the extremely tight money position, the private-sector leasing and finance companies are going to be squeezed very hard.

To start with, most banks have already served notice that they will charge them much higher rates. Now the next blow is the news that the financial institutions, who are scrambling for funds themselves, are not making any new commitments to give long-term funds to these companies. At the same time their customers, faced with sharply increased finance costs, are slowing down taking loans.

Will there be a new epidemic of sickness in these companies too?

An image booster

In recent times, much ado has been made about India's poor image in international financial circles, what with its credit ratings falling and all that. But perhaps not everybody thinks the country to be a bad risk, if the decision of the International Finance Corporation (IFC) Washington, is any indication. The IFC has decided to invest $25 million (Rs.50 crore) in the equity of various Indian companies. The Industrial Credit and Investment Corporation of India, (ICICI) one of the three premier term-lending institutions in the country will make the investments on behalf of IFC and manage the portfolio as well.

ICICI: will manage IFC (W) portfolio

While the money has been received by the ICICI, the IFC will make the final decision as to the companies to be invested in, and approve them on a case-to-case basis.

KCP

Stalemate still

Things are back to square one at KCP Ltd, a major manufacturer of cement and sugar machinery based at Madras. Its heavy engineering unit at Tiruvottiyur in Madras has been under lock-out since 30 October 1990, (see *Business India*, 12 November 1990) following disagreement over a charter of 31 demands presented by the labour union at the time of wage negotiations in May 1990.

However, a solution seemed in sight when the government issued an order in May this year to lift the lock-out. The management had complied, but its 525 workmen refused to resume duty. "Their main objection related to 20 workmen, who have been chargesheeted. The order allows for the non-entry of these workmen, and until the enquiry is completed, they will not be admitted," maintains V.L. Dutt, chairman and managing director of the company, who is determined not to budge on this issue.

Once the charter was presented, minor skirmishes between the union and management followed, and the workers struck work from 26 October to protest the transfer of a worker to a different department. Protracted discussions involving the state labour department followed the clamping of the lock-out. The talks failed and the charter of demands, pruned to 20, was handed over to a tribunal in April 1991. And the union and the management were ordered, under section 10B of the Industrial Disputes Act, to resume production.

However, the union had not counted on the government order, to exempt the suspended workers from entering the factory. Therefore, a decision to strike was taken at a general body meeting of the union, and the workers abided by this decision, by staying away.

"Since the charter of demands has been referred to a tribunal, the workers do not derive any immediate benefit. "At this point, we cannot ignore the cause of the suspended workers and resume production," explains S. Paramasivam, president of the KCP employees union. Further, the government order does not place an obligation on the management to pay wages for the period under lock-out, and this rankles. "The union plans to go to court against the government order, once the Madras high court reopens after its summer vacation in June," he adds.

Order position good. Strangely, the continuing impasse has not had an impact on the order book position of the engineering division, due to KCP's reputation as a quality manufacturer. In September 1990, the order book position stood at Rs.57 crore. Though in the interim, the company has executed only Rs.16 crore, by sub-contracting, between October and April 1991, they have got an additional Rs.66 crore of orders. "An important fall-out of this labour wrangle is that KCP will henceforth depend on sub-contracting to a greater extent, while simultaneously beefing up the quality aspect. The core equipment, however will be manufactured at Tiruvottiyur," says Dutt.

Given the boom in sugar and cement, the lock-out has not had an impact on the overall performance of the company. During 1990-91, KCP's turnover (unaudited) touched Rs.134 crore, with a net profit of Rs.7.98 crore. The management has the staying power, and is prepared to wait. The stalemate it seems, will continue, at least until a new government is ushered in.

■ DHARANI K. PANI

MALCO

Fighting to stay on

A sense of *deja vu* prevails at the Madras Aluminium Company Limited (MALCO). For the second time, the threat of closure looms large (see *Business India*, 26 June 1989). The Board for Industrial and Financial Reconstruction (BIFR) issued its first show-cause notice in November 1988 after MALCO was unable to convince the state government of the need to step up power supply to the plant. Their second show-cause notice (5 June 1991), maintains that MALCO is not a viable proposition. Its smelter capacity of 25,000 tonnes a year, is considered "sub-optimal" (most aluminium companies have a smelter capacity of 100,000 tonnes a year). A more serious one here is that of power availability in power-starved Tamil Nadu.

The squabble. MALCO was set up in 1960 by R. Venkataswamy Naidu, brother of R. Ramakrishnan, the present chairman and managing director. And Ramakrishnan's son, R. Prabhu is a former Congress (I) minister of state for fertilisers. The seventies saw a protracted legal battle with the Tamil Nadu Electricity Board (TNEB) over payment of arrears of up to Rs.20 crore, with MALCO contending that TNEB had overcharged them to the tune of Rs.42.5 crore over the years. This came to an end in March 1991, with the Supreme Court ruling that MALCO had to pay TNEB at the prevailing tariff rates for aluminium companies. TNEB in turn was asked to ensure supply of 47 MVA of power.

Taking off from the SC judgement, the BIFR in April 1991 pronounced MALCO unviable at the present tariff rate of Rs.1.29 per unit of electricity. Company sources, however, maintain that MALCO can be revived. "To set up a unit of this capacity will cost Rs.360 to Rs.450 crore. MALCO can be revived by investing a mere Rs.20 crore," they maintain.

The winding up notice has revived rumours of a takeover. The Government of India is keen on setting up four export-oriented alumina plants. The parties interested in these projects are reportedly, Essar Gujarat, L&T, Birla Technical Services and Tatas. The prevailing opinion is that "any of these parties could be interested", since MALCO, over the past two years has concentrated on the production and export of alumina — an intermediate product in the production of aluminium which is not power intensive. Though a crash in the international prices of alumina has made exports unremunerative, MALCO is still a tempting buy.

Staying power. Company sources maintain that "no takeover can come about without the support and goodwill of the promoters and collaborators" Currently the Italian collaborators Montecatini Edison hold 26.6 per cent of the equity, the promoters and their associates 25 per cent, the Tamil Nadu Industrial Investment Corporation Limited (TIIC) 10 per cent and the remainder is held by banks, financial institutions and the public. As long as the Italian collaborators support the promoters, MALCO will be relatively safe from marauders.

The management plans to submit its revival proposal to BIFR shortly. Now that the DMK is routed and that R Prabhu has emerged victorious in his constituency — the Nilgiris — if political clout matters in business, MALCO has a good chance of getting back on the rails.

MERCARD

Merc Luck

Use your MERCARD and win a trip to SINGAPORE and back

Merc Luck.

A great new scheme from Mercard.

Here's your chance to win a trip to Singapore.

Make all your purchases with Mercard.

And you become eligible to participate in this scheme.

Remember two things.

One — the more you use your Mercard, the greater are your chances to win a prize — and there are many wonderful prizes too!

Two — you have a chance every month to win a prize.

First Prize: One ticket to Singapore and back or Mercard Gift Vouchers worth Rs.7,000/-.

Second Prize: A holiday to any place of your choice to the value of Rs.4,000/- or Mercard Gift Vouchers worth Rs.4,000/-.

Third Prize: A Titan watch worth Rs.2,000/- or Mercard Gift Vouchers worth Rs.1,500/-.

And 15 Better-Luck-Next-Time prizes of Mercard Gift Vouchers worth Rs.200 each.

Get going with your Mercard.

ECONOMY

Exports to USSR disfavoured

The Soviet Union has failed to pay Rs.2,000 crore for goods purchased this year. The USSR is also apparently unwilling to adjust this payment against imports of defence items from India.

Commerce minister Subramanium Swamy says that value-added item exports to the USSR are proving a 'drain' on the country's exchange reserves and the government now plans to discourage such exports.

Japan extends loan

Japan has granted an additional loan of Rs.300 crore and a debt relief grant amounting to $ 3 million. The loan is to cover the refinance extended to subborrowers by the Small Industries Development Bank of India (SIDBI) for developing small industries. This constitutes the third phase of Japanese support for SIDBI programmes.

Reversal in trends

Exports to rupee payment areas which went up by 49.6 per cent in dollar terms during April-August 1990, has since dropped to 6.3 per cent. On the other hand, exports to the general currency areas has increased to 9.6 from 8.8 per cent in the earlier period. This reversal in trend is attributed to measures taken by the government to push exports and curb imports.

CCS rate raised

The cash compensatory support rate for exports to general currency areas has been raised while exports to the Soviet Union will continue at old rates. This change is expected to step up exports of agricultural and marine products. Spices, processed food, dehydrated fruits and vegetables and leather goods are among the items included in the list of items eligible for CCS benefits.

Foreign trade surplus

For the first time in the last 50 months, the Union commerce ministry announced a foreign trade surplus of Rs.135 crore for April 1991. While exports were worth around Rs.2,950 crore, imports were only Rs. 2,815 crore. This surplus is attributed mainly to the efforts of the commerce ministry in containing the trade deficit at Rs.10,000 crore as against the expected Rs. 140,000 crore for this period.

CMIE study

A Centre for Monitoring Indian Economy (CMIE) study titled 'Public sector in the Indian economy' says that the public sector has drawn heavily on the surpluses of the private sector for capital formation.

While the average gross saving rate doubled from 10.3 per cent to 20.6 per cent, the public sector's contribution was only 5 per cent of additional saving.

WB loan for India

India's efforts to promote environmentally sound industrial developments has been given an additional boost by the World Bank and its affiliate — the International Development Association. The two organisations have together sanctioned a loan of $156.6 million. This loan will be used to finance a programme designed to reduce pollution caused by chemical industries.

Credit relaxation mooted

The Orissa Industries Federation (OIF) has urged the RBI to relax the credit squeeze on small scale industries. Any form of transfer of loan accounts from one bank to another has been banned and a blanket prohibition has been placed on any new proposals from any company till further notice.

Export incentive schemes

The department of electronics has made some major changes in its proposed scheme for partial internalisation of foreign exchange requirements of the electronic sector. In the revised scheme, provisions have been made for grant of additional electronic REP licences of 45 per cent of the f.o.b. earnings to exporters as against the 30 per cent suggested in the draft scheme. This scheme, designed at making the electronic sector a net foreign exchange earner, will result in transfer of some profits from domestic market-oriented units to exporters.

Import entitlements cut

In another bid to restrict imports, the government has further tightened procedures for issue of automatic as well as supplementary licences. A 15 per cent cut has been enforced on the import entitlement of all actual users against their licences for raw materials, components, spares and consumables.

These licences will enable actual users to meet part of their import requirements of limited permissible and restricted items. This cut has been only effective in the import entitlement of actual users manufacturing automobiles, electronics and consumer durables.

EC exports decline

Indian engineering exports to the European Community (EC) have registered a 2.5 per cent decline. Exports amounted to ECU 301.88 million in 1990 compared to ECU 309.82 million in the previous year.

A study conducted by the Indian mission to the EC shows that India has lagged way behind countries like China, Brazil and Romania in the utilisation of the General Preference Scheme (GPS). The low

utilisation of the GPS reflects the poor competitiveness of Indian products.

FE against LCs

Foreign banks operating in India have expressed their willingness to advance foreign exchange against export orders to be executed over the next six months. The procedure will entail a leading foreign bank to sign an agreement with a local business group on pre-payment of proceeds from exports to be made against opening of letters of credit (LCs). Though this initiative relates to merchandise exports, the banks are also examining the forfeiting of deferred payment exports.

IOC to the rescue

India will get a 180-day credit from international oil suppliers to buy its quota of crude oil and petroleum products for 1991-92 was thanks to the efforts of Indian Oil, the canalising agency for oil imports. Indian Oil has also succeeded in getting Rs.300 crore from the Asian Development Bank for meeting the foreign exchange requirement for oil imports. This facility will help honour the commitment for supplies made in the last two months.

CORPORATE

LML to return deposits

Lohia Machines Ltd has given an undertaking to the National Consumers Disputes Redressal Commission to submit, within a month, a scheme for repayment of deposits made at its offices for booking LML Vespa scooters. The 350,000-odd people who made the deposits have neither been supplied scooters, nor have their money been returned.

EIL bags contract

Engineers India Ltd (EIL), a public sector company, has bagged a contract worth $17

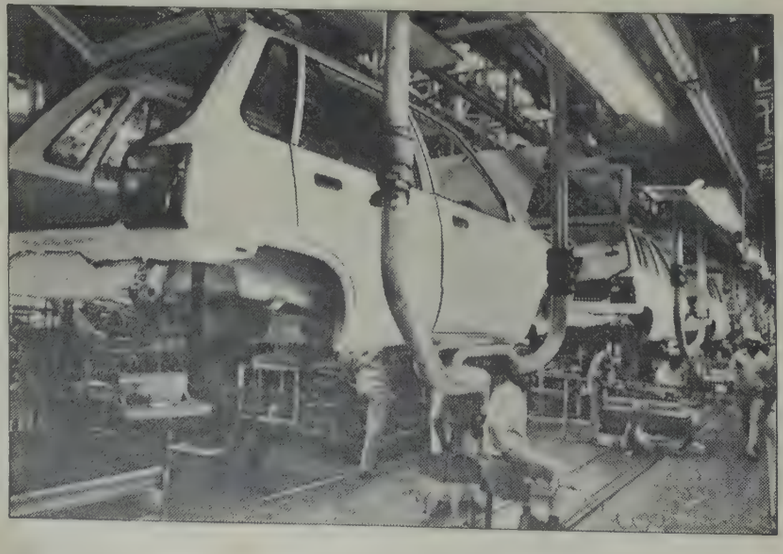
million for providing services for a $2 billion petrochemical complex in Iran.

The complex consists of a naphtha cracker and 18 other process plants. As managing contractor, EIL will provide project management and coordination services, quality assurance, assistance in inspection, testing precommissioning and commissioning of various plants apart from others.

MUL expansion

The first phase of the Rs.1,000-crore expansion plan of Maruti Udyog Ltd (MUL) has been cleared by the industry ministry.

Phase I involves investment of Rs.441 crore which will enable the company to increase production by 70,000 units. This includes production of a new model which will be primarily for exports but will also be sold in the domestic market. The rupee component of the investment is proposed to be raised through internal generation while the foreign exchange component will be financed by external borrowings. There will be no government support.



New Canara Bank subsidiaries

Canara Bank has received clearances for floating two new subsidiaries. Andhra Bank and SIDBI will be the partners for one of the subsidiaries which will deal in factoring services and will begin operations in a couple of months. The other subsidiary will manage the credit cards business and travel-related services like travellers' cheques, air/rail/hotel rooms bookings, car rentals, etc. The bank is also planning to take over the Kerala-based Lord Krishna Bank Ltd for which government approval is awaited.

Export cartel

Three soda ash manufacturers, Saurashtra Chemicals, Tata Chemicals and Gujarat Heavy Chemicals Ltd (GHCL) have formed an export cartel. An agreement formalising this was signed in November 1990, according to which the manufacturers will form an export fund through a contribution of Rs.100 per tonne of soda ash produced. On a total production capacity of 4,000 tpd, this would result in an inflow of about Rs. 15 crore to the fund. The money will be utilised for subsidising lower-price realisations on exports. Currently, the price-difference between domestic markets and exports is about Rs.1,400 per tonne.

The accounts of the fund will be managed independently by A.F Fergusson and the money will be deposited in a Bombay branch of the State Bank of India.

IDI sets up subsidiary

Indian Dyestuffs Industries Ltd has set up a fully-owned subsidiary called IDI Europe Ltd. The UK-based subsidiary will begin as a trading outfit and will help IDI strengthen its presence in the European common market.

Currently, IDI exports dyestuffs worth around Rs.16 crore to Europe. The company will plan additional investments in IDI Europe after the export-turnover to the continent doubles.

Pierre Cardin in India

Chandra Industries has concluded an agreement with Pierre Cardin to manufacture, market and export fashionwear and accessories in India and abroad. A new company, Pierre Cardin India, has been incorporated for this purpose.

The first factory of the new company will be set up in Pune and more units will follow throughout the country. The

ompany plans to produce 00,000 pieces in the first year nd increase production by 25 er cent every year. A major ortion of the production will e exported.

Tata unit shuts down

he export division of the Taj rade and Transport Co Ltd TTTL) of the Tata group has een shut down. The division perated three leather garents manufacturing units in ew Delhi. The decision was aken reportedly due to heavy ancellations of export orders nd huge stocks of unexported inished goods. Over 230 emloyees have been affected by he closure.

TTTL also functions as a ravel agency for the Taj group f hotels, has a car-rental busiess and operates pastry shops n various Taj hotels. These oprations of the company will ontinue.

NDUSTRY

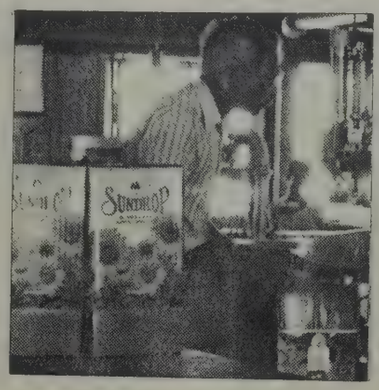
Garment quota up

t the "Partners for Progress" nport fair held in Berlin reently, orders worth DM 36 milon were placed with Indian xporters. The garment import uotas granted for Germany by he EEC for this fair were to the ne of around DM 400 million. he quotas made available to dia went up by 30 per cent. dia was also the largest parcipant at the fair, with over 0 exhibitors.

ea import criticised

he United Planters Associaon of Southern India (UPASI) as opposed the campaign by ome multinational interests" import tea into India, suposedly for value-addition and -export.

According to the UPASI, the ex body of the South Indian anters Association, import of a is not called for as India is e only country that produces l types and varieties of tea. Further, such imports would also affect the balance of payments position.



Snag in diamond export

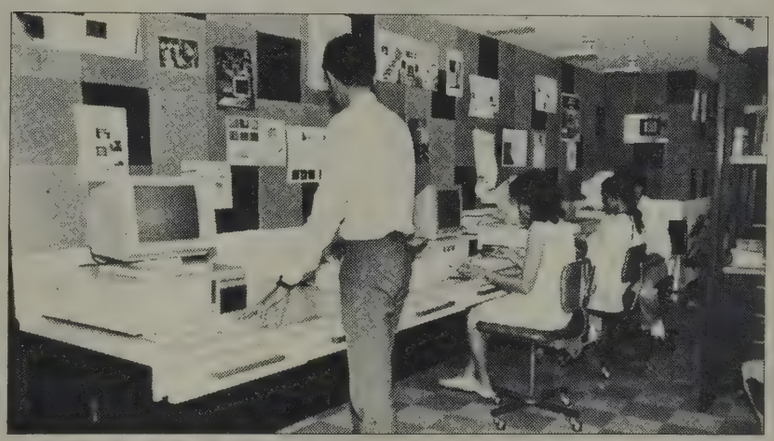
Modern machinery used by diamond cutters in India should enable them to get 30 per cent finished diamonds out of roughs. But a recent study conducted by R.V. Shukla, joint industries commissioner of Gujarat, has shown that only 18 of this 30 per cent makes its way to the export market. No one really knows what happens to the remaining 12 per cent of diamonds, worth around Rs.600 crore annually. Shukla has asked the Central government to investigate into the matter.

Edible oil units hit

As a result of the credit squeeze, vanaspati and edible oil units have turned to non-banking sources as well as to suppliers credit for funds. The cumulative stocking period for raw materials, especially for the vanaspati units is about 30 days. Adding to this the processing period and the stocking period of finished goods, the stocking cycle works out to roughly 45 days. The gap can now be financed only by resorting to non-banking sources.

Prices of edible oil have shot

up, a situation worsened by the government's failure to import edible oil to meet the demand.



More computer institutes

A study by the Manufacturers Institute of Information Technology (MAIT) says that nearly 300 new computer training institutes were opened in the year 1990-91. The total number of institutes is now 700.

The computer training industry earned Rs.85 crore in 1990-91, a growth of 70 per cent over the previous year's figure of Rs.50 crore. This brings the share of the training industry in the total revenue of the computer industry to 4 compared to last year's 3 per cent.

Information network set up

The Steel Authority of India (SAIL) and the Technology Information Forecasting and Assesment Council have jointly set up a networked system to provide information on technology areas with reference to ferrous metallurgy technologies. This system has been set up at the Research and Development Centre for Iron and Steel at Ranchi, and aims at integrating information already available with government departments,

institutions and research and development agencies.

New coal mines planned

Nine new coal mines are to be opened at Nagpur, Wani, and Patherkheda areas within the western coalfields during the Eighth Five Year Plan. The new projects, primarily intended to meet the coal requirements of the industrially developed eastern and southern regions, are expected to yield more than 1.82 million tonnes of coal. The growth in coal production in the current year is estimated to be 7.2 per cent.

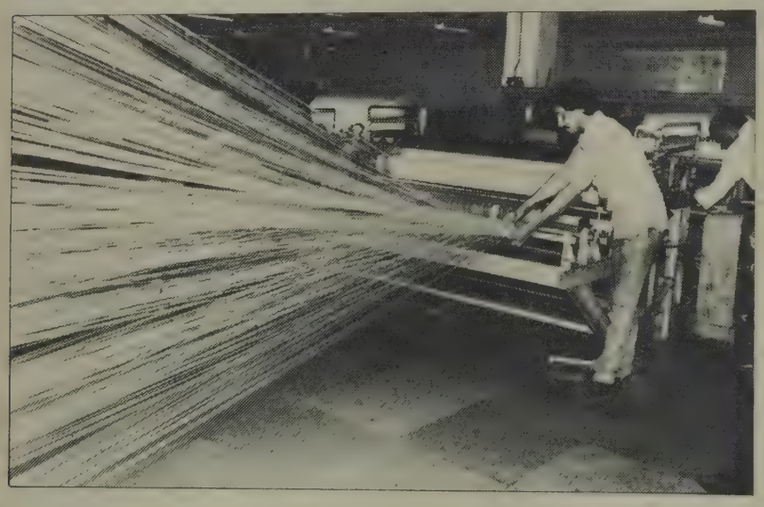
LABOUR

New wage package demanded



Textile workers in Tamil Nadu are pressing for an immediate decision on a new wage package. Led by various trade unions, the massive work force has been campaigning through the entire state for a revision and restructure of their pay scale.

Labour unions claim the absence of a wage structure has resulted in textile workers being deprived of increments and dearness allowance to match inflationary trends. About 252 mills in the state currently operate without a guided wage structure.

Workers' takeover

The Birla-owned Sirsilk Ltd at Sirpurkagaznagar in Andhra Pradesh, under lock-out since 1985, might be re-opened. The AP government has agreed to waive loans and arrange for the transfer of its share holdings to a workers' co-operative society at a nominal price of Re.1 per share.

The state government's decision, however, is subject to the condition that financial restructuring takes effect only after the rehabilitation of the company, and commercial banks agree to the proposed re-opening of the factory by sanctioning the required finance. This is the first time that a workers' co-operative is being facilitated to take over and run a large-sized sick industrial unit in the state.

2 July as Solidarity Day

Public sector workers will observe 2 July as All India Solidarity Day in honour of Dalla cement workers in Uttar Pradesh. The committee of public sector trade unions said this was to condemn the brutal firing on Dalla cement factory workers last week by the UP police, resulting in the death of many workers.

The committee has demanded an immediate judicial enquiry into the firing and also payment of compensation to the families of the killed workers and those injured in the firing. About 500 workers of Dalla cement factory are also protesting against the UP government's decision to hand over three state-owned cement undertakings at Dalla, Chunar and Churk to the Dalmias.

Dairy workers' kids agitate

About 200 children of dairy workers employed in the Maharashtra state government's milk scheme led a morcha in Bombay to demand that the plan to hand over the scheme to private co-operatives be scrapped. Some of the workers along with the office bearers of the Bombay Milk Scheme Workers Action Committee took the opportunity to assail the state government's plan.

No-salary month

The workers of the locked-out Buckingham and Carnatic Mills (B&C) did not get their salaries for the month of May. The management informed the Madras high court that it would be unable to pay the salaries for May due to lack of funds. W.R. Varada Rajan, leader of the CITU union, however, dismisses the management's claim of 'lack of funds'.

LANDMARKS

Appointed, A.C. Shah, chairman and managing director, Bank of Baroda, to the board of directors of the credit card giant Visa International, Asia-Pacific region. Visa International is owned by 21,500 financial institutions worldwide and is managed through a 21-member board of directors.

Appointed, Air Marshal N.C. Suri, vice-chief of air staff at Air Headquarters, as the next chief of air staff. Suri, who was commissioned into the Indian Air Force in 1952, has held several important appointments including that of director of air defence and director of air intelligence at Air Headquarters.

Reconstituted, the Company Law Board as of May 31. The new chairman is S.P. Upasani. The other members are A.M. Chakraborti, C.R. Mehra, K.K. Dhar, S. Balasubramaniam and A.R. Ramanathan.

Named, three Indians, Baba Amte, Biplab Bhushan Basu and M.K. Ranjitsinh among 48 individuals and organisations worldwide for the United Nations Environment Programme's roll of honour for environmental achievement in 1991. While Amte was recognised by UNEP for his Anandwan concept for resettlement of leprosy victims, Basu founded the Young Scientists Society in Calcutta in 1964, which since then has been promoting scientific and environmental awareness among villagers in West Bengal. Ranjitsinh, an additional secretary in the department of environment, has been instrumental in planning and developing new natural parks and sanctuaries in India. As the regional advisor to UNEP, he has helped natural conservation in Thailand and Bangladesh.

Commissioned, the first Indian-built, fast attacking missile boat, INS Vibhuti, built by Mazagon Dock Limited, Bombay, with technical collaboration from the Soviet Union, by Vice-Admiral S.P. Govil, vice-chief of naval staff, at the naval dockyard. The ship, among other things, is equipped with special facilities to remain in a nuclear fall-out zone for a few hours without endangering the personnel on board. It is the fifth in its class belonging to the 22nd Missile Squadron of the Indian Navy.

Died, Ramaia Naidu, Asia's first nuclear physicist and father of noted actress Leela Naidu, at 87. Naidu worked under Madame Curie and studied nuclear medicine in the US. One-time personnel director at UNESCO, he received a BARC award recently for being the first Asian scientist to specialise in nuclear medicine.

Swissair Customer Portrait: Harry Singh and family, Industrialist.

Holidaying in Europe, the Singhs are happy to discover that memories are made on the wings of Swissair. Harry Singh's family vacation gets off to a flying start with Swissair. Opening up the picturesque Europe via Zurich. Quite naturally, even when business demands, Harry insists on Swissair. With prompt connections to over fifty European business centres, seven gateways to the U.S.A. and two to Canada. As the Singhs would tell you, business or holiday, Swissair is the finest way to get carried away.

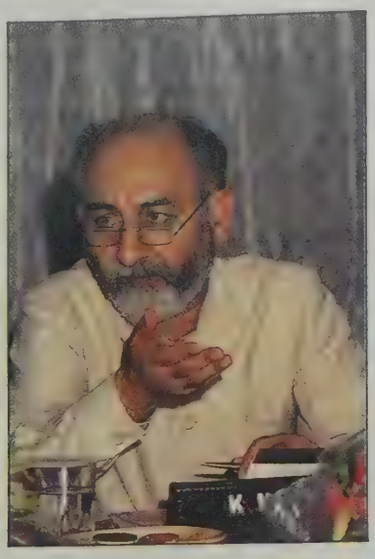
SHASHIDHAR PATIL



Four-year-old Bangalore-based Basant Tiles Pvt Ltd has entered a new area of marketing: export of granites. It recently bagged an order for two containers of granites valued at $15,000 to the US. Says Shashidhar Patil,

managing director, Basant Tiles, "It's a major breakthrough for us. More orders are expected soon." Efforts are on to secure export orders from Germany, the Middle East and Australia.

K.N. BAKSHI

Though Austria has a small population of 7 million, every year around 16 million tourists visit the country. "So," says K.N. Bakshi, the newly-appointed Indian ambassador to Austria, "there is a great opportunity to cater goods and services to a market much bigger than that of the country's population." India could also use Austria as a base to establish ties with eastern Europe, he adds. Traditionally, embassies have tried to strengthen political and cultural ties and paid little or no attention to business. Bakshi, who was India's ambassador in Iraq when the Gulf conflict broke out, stresses the need for a shift in emphasis to business. "I hope to correct this imbalance," he adds.

SHEKHAR AGARWAL

A mechanical engineer from IIT Kharagpur and a postgraduate in systems engineering from the US, Shekhar Agarwal, 39, has made a name for himself in the textiles industry. Agarwal is the joint managing director of the Rs.87-crore Rajasthan Spinning and Weaving Mills, the flagship of the Bhilwara group. He has now taken charge of setting up Maral Overseas Ltd, a 100 per cent export-oriented unit for spinning cotton yarn.

This new Bhilwara company will install a 20,000 spindles yarn spinning unit near Indore at a cost of Rs.34 crore. Although Maral Overseas is the fifth such EOU in the country, Agarwal does not foresee any problems. "With the international demand for cotton yarn picking up rapidly and India emerging as a major player, Indian exports are bound to grow," says Agarwal

H.S.JALAN

The Delhi-based Indana group of companies (makers of Gold Cafe brand of coffee) is on an expansion spree. Its only public limited company, Indana Spices & Foods Industries, is setting up a flour mill, edible oil refining

and tea blending-cum-packaging unit at a cost of Rs.26 crore. Another group company, Foremost Industries Ltd, is setting up a Rs.42-crore unit for manufacturing granite tiles, sanitaryware, and porcelain tableware. Yet another company is setting up a Rs.22-crore concentrated milk and fruit juices plant. Says group chairman H.S. Jalan, "With all these expansions, the total turnover of our group will go up from the present Rs.150 crore to Rs.1,000 crore."

DHRUV SAWHNEY

Immediately after Dhruv Sawhney took over as the president of the Confederation of Engineering Industry (CEI), a business survey of 232 companies, both in the public and private sector, was conducted. Says Sawhney, "Against the 37 per cent of respondents who were optimistic about the general business situation six years ago, only 20 per cent are now. And whereas only 24 per cent expected a decline, now 36 per cent do." Sawhney has drawn up an agenda for the government and is busy spreading the message that joint initiatives by the government and the industry are imperative to overcome the present economic crisis.

ALAN MATHEWS

Krone Communications Ltd (KCL) is a joint venture promoted by Krone AG of Germany, Karnataka State Electronics Development Corporation Ltd

and M.L. Thukral (the former sales agent for Krone AG in India) and his associates. To be fully implemented by 1992 at Electronics City, Bangalore, KCL has been set up for the manufacture of telephone connectors and allied products. The company has already received orders worth Rs.18 crore, including export orders of more than Rs.2.4 crore. It hopes to achieve a turnover of Rs.25 crore by 1993. Says Alan Mathews, managing director of KCL, "The telecom market in India is on the verge of a take-off and for Krone AG, this could mean another successful company in its fold."

T. RAMANAN

A firm believer in the age-old adage, "Prevention is better than cure", T. Ramanan, insurance and risk manager at Hindustan Lever Ltd, was recently made honorary member of the Association of Insurance and Risk Managers in Industry and Commerce (AIRMIC), UK — a unique offer, since only five people have been hounoured similarly. The first Indian to be so honoured, he is also the first Indian fellow of the Institute of Risk Management, UK. Ramanan, a much respected figure in the industry, has presented several papers on insurance and risk management at international conferences held at places like Singapore, Brisbane, Monte Carlo and London.

K.S. NAIDU

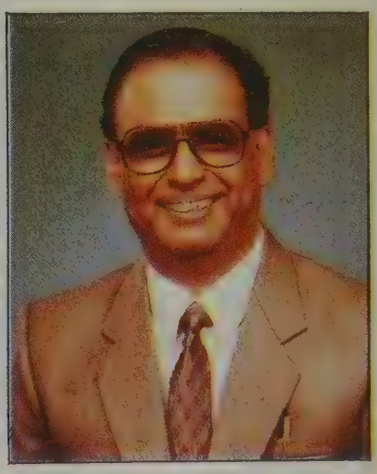
ABN Granites Ltd, a new 100 per cent EOU, will soon commence production. Being established at a cost of Rs.12.55

crore, the company's cutting and polishing units is to be located at Mysore and Cochin. ABN has already acquired 12 quarries in Kerala, Andhra Pradesh and Karnataka. Says K.S. Naidu, ABN's managing director, "These quarries will last us for nearly 50 years." According to him, the company has orders on hand from German and American companies for the supply of 560,000 sq metres of granite tiles. The company hopes to touch a turnover of Rs.27 crore in its very first year of operations.

LALIT SHETH

Lalit Sheth of Raj Travels is going places. He successfully operates tours to foreign countries, and now wants to extend the concept to tours within the country. Raj Travels' "Explore India" scheme entitles a family of four to a holiday of 3 days a year , 3 times a year for 3 years, at a one-time cover price. There will be a choice of 71 hotels at 51 destinations in India and Nepal. The cost per night averages out to Rs.777, a substantial saving on the normal price at most of the hotels listed. There

are also some additional benefits, like discounts at large shops as well as on food and beverages at some of the hotels.



C. RANGARAJAN

The Reserve Bank of India (RBI) has been in the news lately, mainly in relation to its current policies to improve the country's balance of payment (BoP) position. C. Rangarajan, RBI's deputy governor, recently defended some of these measures before a select audience. According to him, these measures fall into two categories — one aimed directly at import containment and the other, towards a restrictive monetary policy promoted to contain the current account deficit in the BoP. "These measures may affect production in the short term but they should not be avoided. Because, unless the expenditure is brought down, it is impossible to improve the BoP problem," says Rangarajan.

P.S. GOPALAKRISHNAN

It is certainly not the best of times to take charge as chairman of the Indian Banks Association (IBA), and P.S. Gopalakrishnan, chairman and managing director of the Madras-based, Indian Overseas Banks (IOB) is aware of this. "IBA's primary concern now is to study and prescribe remedies for the distortions in the money market. Interest rates in the call money market have been ruling too high," says Gopalakrishnan. He is particularly keen that the funds normally meant for the

banking system should flow into it. Currently, short term funds, usually parked with banks, are being diverted to other avenues of investment like mutual funds.

"HRD in the banking system will be another thrust area during my tenure," states Gopalakrishnan. "Customer service should be beefed up, by resorting to computerisation wherever possible, in order to meet increasing customers' expectations."

Some possessions define a character.
Some distinguish it.

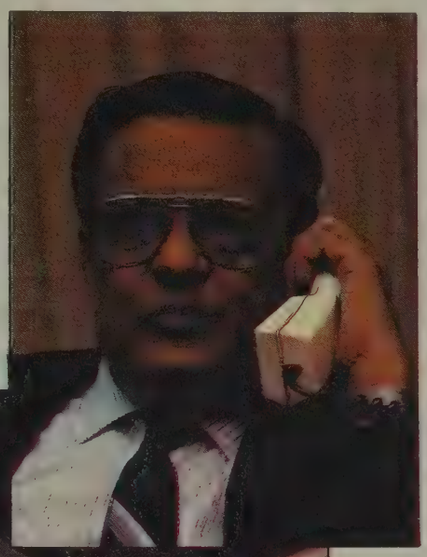
PAPER

Passing on the scarcity burden

Yet another industry — paper — is crying foul. It finds the cash margins imposed on importers by the Reserve Bank of India (RBI) too stiff. The new RBI policy has made it nearly impossible for many of them to import the much-needed raw materials. And the industry requires to import about 480,000 tonnes of waste paper and pulp, worth Rs.166 crore, to produce paper valued at about Rs.450 crore.

Production shortfall. The consequences, according to R.P. Agrawal, chairman of the Indian Paper Makers Association (IPMA) and managing director of Tribeni Tissues, will be far-reaching for the Rs.3,200-crore industry. He warns of a 15-per-cent shortfall in domestic production. This is likely to affect the price structure of the market, he adds.



Waste paper which cost Rs.6,000 per tonne a year ago is now selling at Rs.8,500 per tonne. Shortages are becoming apparent in other raw materials as well. This year, with a below-average monsoon being predicted, less agro-based raw material is likely to be available for paper manufacturers after fuel and fodder needs have been met.

Already, raw material shortages have affected some paper manufacturers. Of the 327 units in the country that produce paper, 33 are in the large sector and 8 of these are closed. As many as 19 of the 57 units in the medium sector and 91 of the 237 units in the small sector have also closed down.

Bamboo, the major raw material used by paper mills in India, and other raw materials like hardwood, agricultural residues and vegetable fibres are getting scarcer. Until a few years ago, bamboo constituted about 75 per cent of all the raw materials used, hardwood 22 per cent and other sources, 3 per cent. Bamboo being scarce, the usage pattern has changed to: bamboo 39 per cent, wood 27 per cent, waste paper 15 per cent and non-conventional sources like cane bagasse and straw, 19 per cent.

Over the years, forest cover has shrunk to 11 per cent from the desirable level of 33 per cent. Now that the government has banned further degradation of forest lands, the paper industry had no other go but to resort to large-scale import of pulp and waste paper.

Complacency on the part of the paper manufacturers has also contributed to the trouble. With the exception of a few paper companies like the Sarapaka-based Bhadrachalam Paper Boards, (Andhra Pradesh), none of the units bothered to work out arrangements with state governments and local panchayats to grow more wood. Neither did they resort to the use of alternative raw materials like jute fibre.

A paper plant and (inset) *Agrawal: low production will affect price structure*

Says the chief executive of a prominent paper company, "Jute fibre is too costly. It is cheaper to import pulp. We cannot develop new resources because no farmer is going to tie up with us for seven years. It is better to plant on degraded forest land with government help."

Demand-supply gap. Paper manufacturers say the government has based its calculations on projections made in the seventies which predicted a 4.5-per-cent annual growth in paper consumption. Last year, against a demand of 2.46 million tonnes (mt) only 1.83 mt of paper could be produced, leading to a demand supply gap of 628,000 tonnes. This gap is expected to widen to 1.06 mt by 1995 when the projected demand is 3.16 mt and the production, 2.09 million tonnes. Says Agrawal, "Between 1979 and 1987, margins in the industry fell, leading to closure of many units. Since then, price rises have restored margins to pre-1979 levels."

Thus, between a government which cannot politically afford to apportion forest land to the big companies and the manufacturers who refuse to settle for smaller profits, the burden of paper scarcity is being passed on to the 200-million strong middle class, the main consumers of paper and paper products.

■ SUDIPT DUTTA

PHOTOCOPIERS

A blurring image

Photocopier manufacturers are in a tight spot. After a steady average annual growth of 20 per cent during the last six years, the copier market has suddenly become sluggish. Unfavourable economic conditions and consequent cuts in government expenditure are giving the nascent Rs.250-crore industry nightmares. Last year (1990-91), the industry expected to sell about 19,500 machines against 14,000 machines during the previous year. But it ended up selling 16,500 machines.

Tough times are ahead for the copier industry

The market was badly affected during the January-March period this year which should have been the peak season for copier sales. (About 60 per cent of the total copier sales every year take place during this quarter.) The cuts imposed on government spending hit the manufacturers very badly. HCL Ltd's sales in this period were down from 2,125 units last year to 1,750 units this year. Kores, another important player, also suffered. According to G.R. Khanna, Kores' zonal manager (north), sales this year to the government were almost half of last year's level of about 5,000 machines.

Rough times. Dynavox and Chowgules, who market Canon photocopiers made by Bee Electronics, also had a rough time. Says Vishnu Bhargav, general manager, Dynavox Ltd, "The change in depreciation norms from the earlier 33 per cent to 20 per cent affected offtake of copiers by the private sector as well."

Since the Indian copier industry is still largely an import-and-assemble industry, it has also been adversely affected by import and credit curbs imposed by the government some time back. Though the old size-to-size photocopiers have been indigenised up to 75 to 90 per cent by various manufacturers, the zoom models (which command over 40 per cent of the total market by volume) have given the companies cause to worry about.

The import and credit curbs are also going to bother the companies in relation to supporting their installed machines with consumables and spares. Only Modi Xerox Ltd makes its own toner, developer and receptor. Others have to import these items.

So it is going to be tough times ahead for the photocopier industry, at least in the near future. But one senior industry watcher is secretly happy with the way things have worked out. "By imposing these curbs, the government has called the copier industry's bluff of a phased manufacturing programme," he says. "These measures are going to affect copier manufacturers for some time. But in the long run, they will make the industry more accountable and help it mature faster." ■

FEROZ AHMED

RECORDING STUDIOS

Bombay's new boom business

It makes sound sense to invest in a recording studio in Bombay these days. Even though the investment on equipment alone could be anywhere between Rs.20 lakh for a basic eight-track studio and Rs.5 crore for a 24-track producer's dream, and sometimes even more, in most cases it is justified. "Music recording studios are making anything from Rs.50,000 to Rs.2 lakh a month," says Daman Sood, recording director at Western Outdoor, a reputed recording studio in south Bombay.

According to one estimate, over the last four years, at least 350 studios have sprung up in the metros alone. On an all-India level, the figure could be close to 500. And the trend is gaining momentum with even the government funding the setting up of studios in places like NOIDA near Delhi.

Audio cassette explosion. Many factors have contributed to the upsurge in the recording business and its fast growth in recent times. Probably the foremost reason is the audio cassette explosion in recent years. "There are 300 to 400 audio cassette companies in the country. And even in a place like Raipur, there's a company that manufactures 10,000 cassettes per day," says Ashok Phadki, sound recordist at T-series' Sudeep Studio in Khar, Bombay.

Another reason has been the massive increase in advertising expenditure and the attendant increase in jingles and associated activity. Over the last five years, spending on television advertising has more than doubled from Rs.93 to 250 crore and that on radio from Rs.24 to 40 crore. Video cassettes and cable TV — the latter took off only in 1987 — were attracting annual revenues of Rs.10 crore by 1990. It is thus estimated that the jingle industry alone is around Rs.30 crore a year.

If one group can be credited with changing the fortunes of the recording studios business, it is the Bombay film producers. For, 50 per cent of the movies made in the world are Indian and most of them are produced in Bombay. In order to cater to the demands of the film industry, most of the studios are working round the clock. Some of them do not close their shutters even on Sundays and holidays.

Systems 1000 91.

This applies particularly to Bombay because, apart from the Hindi film industry, this centre caters to regional films too. The better equipped studios are booked up to six months in advance.

And then there is the deluge of TV serials. "Around 4,000 serials are sent to Delhi for approval every year," says Amar Kakad, a TV serial maker. And then there are the commissioned serials for which Doordarshan pays Rs.40,000 to Rs.50,000 per episode.

Costs down. While business is booming on the one hand, the cost of setting up a studio has come down on the other. Thanks to the advancements in technology, a studio need not be big anymore. "Instead of a large number of musicians, the smaller studios employ midi equipment, like samplers, synthesisers and computers instead," says Rajiv Kenkare, sound recordist at 4D studio located in south Bombay. (Synthesisers, as the name suggests, synthesise the sound of instruments digitally. The sounds they produce, while acceptable, are less accurate than those of samplers in which the sound is copied through recording and recreated with the exact frequency and tone. Midi, or musical instruments digital interface, is a technology which hooks up synthesisers, samplers and computers through special application software and interfaces. This increases the individual's control over a greater number of instruments and sounds and his editing capabilities over the music.)

"As a result of this kind of technological advancement, you can even have a one-man orchestra," says Kenkare. Old-timers in the industry, however, feel that the quality of sound produced electronically is artificial.

Nevertheless, one big advantage that the new recording studios have is cost effectiveness. This is because most of them are small in size when compared to the older studios. "Recording in a smaller studio costs half that of recording in a bigger studio," says Madhur Bhushan who owns Madhur Dhwani, one of the smaller recording studios in Bombay's suburbs.

In Bombay, while the older studios are situated in the main city, most of the new studios have come up in the suburbs. Line In, Sudeep, Sunny, Ginni, Sargam and Arti studios, and the new Rainbow studio, are all situated in the suburbs. Spiralling real estate prices in the main city and the fact that all the film studios — Filmistan, Mehboob Studios, Filmalaya, Esel, Nataraj, etc — are in the suburbs, has led to this situation.

Strong in numbers and employing perhaps the latest technology, the recording studios in Bombay can be assured of riding the boom for some more time to come.

LPG

The queue grows longer

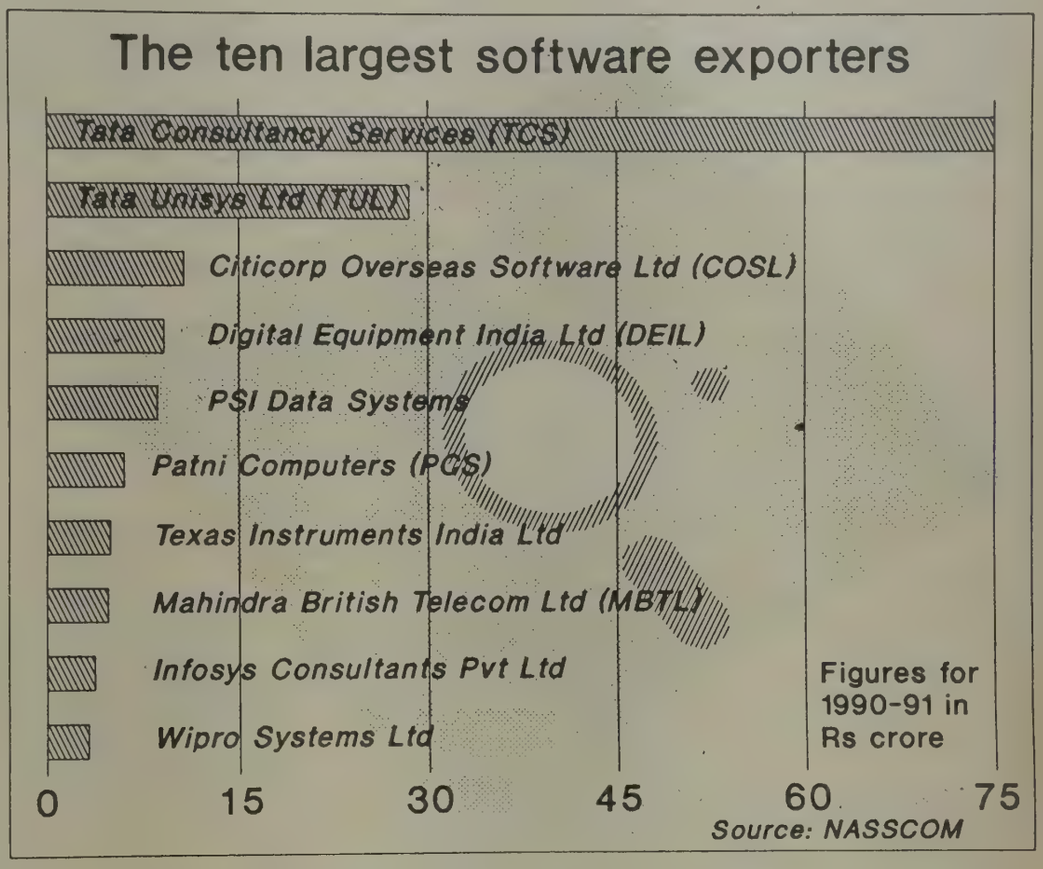
The expectations of the growing middle class is far outstripping the availability of liquefied petroleum gas (LPG). There seems to be no remedy for the growing shortage of the product, in spite of the sales of LPG increasing from 400,000 tonnes in 1970 to over 3 million tonnes in 1990. A long-established network caters to 16.3 million connections. And there is a waiting list for 6 million new connections, the figure increasing roughly by 1 million every year.

While 700,000 new consumers were given connections in 1990-91, during the current year only another 500,000 new connections will be possible. Originally 13 million new connections were to be released during the Eighth Plan, but the government's calculations have gone awry. In certain places, there has been a month's delay even for the replenishment of cylinders.

Over-reliance. The Oil and Natural Gas Commisssion (ONGC) and Oil India Ltd (OIL) need to reformulate production strategies, especially since the Gas Authority of India Ltd's (GAIL) Bijaipur unit has yet to get going. One big problem is that consumers have been steadily over-relying on LPG, because it is convenient to use and considerably subsidised (Rs.55 for 14.2 kg for personal consumption as against Rs.90 for 19 kg for industrial cylinders). Alternate sources of fuel

LPG supply: replenishment delays

like natural gas are being tapped only marginally, or have been completely ignored.



Overall annual consumption of LPG amounts to 2.3 million tonnes (mt), of which around 300,000 is currently being imported. There would have to be an addition in imports in the near future even to replenish existing consumers' stocks, say senior oil executives.

But because of the country's precarious foreign exchange position, the finance ministry is reluctant to approve additional import of LPG even to sustain current levels of consumption. So the caretaker government has kept this approval in abeyance.

The setting up of two LPG import centres at Kandla and Mangalore have been delayed. A further assessment by the new government is expected only in September. Meanwhile, frustration within the industry as well as among the consumers is building up rapidly.

The time has come for the government to tone down its promises to the LPG consumers and work out pragmatic projections. With the other cooking fuel, kerosene, also scarce, the need to be realistic has become all the more imperative. ■

DEVENDRA TAK

SOFTWARE EXPORTS

The pace is maintained

According to a survey conducted by the National Association of Software and Service Companies (NASSCOM), software exports from India during the year ended March 1991 touched Rs. 250 crore, registering a growth of 43 per cent over the previous year. This growth in the face of adverse circumstances has thrown up some encouraging trends as well as certain fundamental issues which have to be addressed by the software industry.

Impressive increase. Spearheading the year's exports was Tata Consultancy Services (TCS), which exported Rs.75 crore, compared to Rs.47 crore in the previous year — an impressive increase of 60 per cent. TCS alone contributed about a third of the country's total exports in this sector. Among the major contracts TCS bagged were one from the Securities & Exchange Board of Switzerland worth Rs.41 crore and one from Continental Insurance of the US, valued at Rs.3 crore.

Even though the gulf between the leader and the rest of the pack is increasing, an encouraging development is the growth of mid-size and start-up companies which grew at rates above the industry average of 43 per cent. Says Harish Mehta, president of NASSCOM, "Mid-size companies grew at 72 per cent and the new entrants at 80 per cent."

This year, NASSCOM proposes to focus on three key issues which are expected to improve the country's export potential. The first relates to the need for a high speed data communication channel for software exporters. A link of this kind becomes all the more significant in the light of the US Congress' recent decision to provide Indian software engineers only the H1 visa — which is more time-consuming to obtain — as compared to the B1 visa needed earlier. The H1 visa requires the Indian company to pay an additional $1000 per man month, thereby causing Indian software to become less competitive. This is not an encouraging trend since today 60 per cent of the total Indian software is directed to the US market.

Another issue relates to tax exemption for profits from software exports. At present, software export earnings attract taxes. The ministry of finance has assured the Indian computer industry that necessary legislation to free it from this constraint will be passed in the next session of Parliament.

Thrust against piracy. And lastly, the industry's campaign against software piracy is expected to get an added thrust with the recently-launched Indian Federation Aganist Sotware Theft (INFAST). This will be a major step in safegaurding intellectual property rights.

Even though individual companies have done pioneering work, the Department of Electronics (DoE) has played a crucial and positive role in promoting the country's software exports. Now moves are afoot within the DoE to set up an independent non-profit organisation to provide effective communication links at competitive prices to exporters.

Despite the hype of the performance of the software exports, a key issue which has to be addressed is the growth of the domestic industry. Both are closely interwoven. F.C. Kohli, director-in-charge of TCS, says, "You cannot export if you do not have a viable base within the country. It is essential to develop the necessary skills at home before venturing overseas."

The fact remains that computerisation has not taken off in the country in a really big way. Most of the present efforts are still elementary and have not affected crucial areas such as operations, management and control. It is therefore very essential to accelerate the pace of

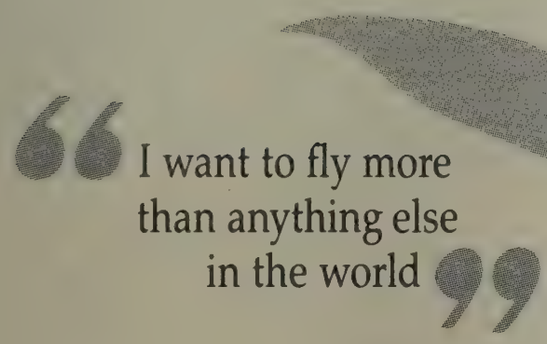
The Chairman Declares To The Shareholders The Largest Turnover In History

Our young management scholars are future corporate leaders in the making, who will one day chart new courses of endeavour. Create corporate history.

At their institutes, the intellect is sharpened. And the spirit motivated to take on the hurly-burly of the market-place.

Ambassador is involved in the grooming of tomorrow's corporate achievers.

Sure, we make a wide range of executivewear, including accessories for today's on-the-move executive.



But the commitment goes even deeper. We are increasingly sponsoring events in the premier management institutes. Debates. Quizzes. Management games. Seminars. We will institute awards that identify potential.

We will even recognise and reward today's young executive stars.

All this so that the confidence of our young talents can take wing.

And discover new horizons of enterprise.

computerisation in the country before even dreaming of increasing India's share in world software export earnings.

■ AROON SARKER

BENZENE CRISIS

Import or perish

A gas cracker plant: not enough benzene

As is generally their practice, the large benzene plants in the country shut down for maintenance every two years. The closures are effected at different times over the year so that there is no shortage of benzene in the market. But in view of the severe diesel crisis last year, the government had instructed Bharat Petroleum Corporation Ltd (BPCL) to postpone the shutting down of its benzene plant. The result was that in April this year, both BPCL and Cochin Refineries Ltd (CRL) went for a simultaneous month-long closure. This led to a shortfall of about 9,000 tonnes of benzene in the market.

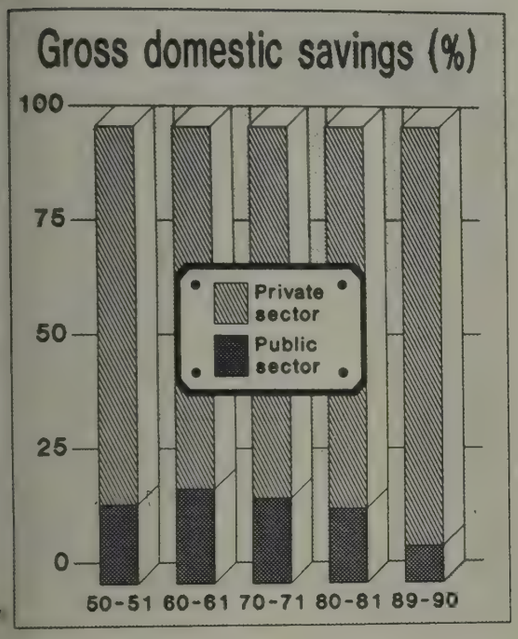
Short supply to continue. The two plants have since re-opened but that does not mean that benzene will now be available for the asking. This is because the government has since instructed BPCL and CRL, as well as the other benzene manufacturers — Indian Oil Corporation (IOC), National Organic Chemicals Industries Ltd (NOCIL) and Indian Petrochemicals Corporation Ltd (IPCL) — to give priority to petrol and high speed diesel (HSD) production. Therefore, benzene is expected to be in short supply for some more time unless additional imports are sanctioned.

But even on the face of it, that seems to be a difficult proposition. A proposal to import 20,000 tonnes of benzene to tide over the present crisis was stalled by the government earlier this month in view of the country's precarious forex crunch. "It is unlikely that the government will approve the import of additional crude for benzene extraction, since priority will continue to be given to petrol and HSD. Therefore there appears to be no short-term solution to the benzene crisis," says a spokesperson for BPCL.

The overall shortage of benzene, with indigeneous production being only 19,000 tonnes per month, is therefore going to be considerable. Besides, the new caprolactum plant of Fertilisers & Chemicals Travancore Ltd (FACT) requires an additional 5,000 tonnes per month. The demand-supply gap is conservatively estimated at 280,000 tonnes a year by the year 1994-95. Gujarat Narmada Valley Fertiliser Corporation (GNFC), Reliance Industries Ltd (RIL) and Hindustan Organic Chemicals (HOC) between themselves require about 10,000 tonnes per month.

Keeping in mind the shortage of benzene, the government had drawn up a priority list in October 1990 which was despatched to all the oil companies. Supplies were to be made in the following priority order: export-oriented units, pesticide manufacturers, for import substitution and, finally, miscellaneous. The list was modified in April this year and preference is now to be given to export units with export orders in hand provided they have received a final go-ahead from Basic Chemicals, Pharmaceuticals & Cosmetics Export Promotion Council (CHEMEXCIL). Pesticide units and HOC are now next on the priority list.

LAB exports affected. The revised list has led to protests from end users, small and big alike. "The smaller customers have been neglected. Even Reliance has been ignored," reveals a senior oil executive. In fact, Reliance requires about 3,000 tonnes of benzene a month for the production of linear alkyl benzene (LAB). Sources at Reliance confirmed that exports of LAB (worth Rs.20 crore last year) have been grossly affected by the unavailability of benzene from BPCL.



According to IOC sources, they have no extra supply to divert towards any new demand. Benzene therefore commands a premium in the open market. While its official price is Rs.12 per kg, in the open market benzene sells for Rs.18 per kg. And since the international price of benzene is about half the normal domestic price, Reliance is pushing hard for permission to import benzene directly.

Major industries which rely on benzene as a raw material are the drug manufacturers, with paracetamol producers being the maximum affected, and the dye and dye intermediate manufacturers. Dye-making and drug intermediate units require 6,000 tonnes and phenol manufacturers about 4,000 tonnes per month. Units making styrene, paints, varnishes, etc, require another 3,000 tonnes. According to K.C. Mashruwala, president of the Association of Small and Medium Chemical Manufacturers (ASMECHEM), the chemical industry stands to lose about Rs.280 crore on account of import restrictions.

The views of a leading petrochemicals trader sums up the situation, "In the first half of the year, there was no scarcity of benzene. If the government can push the proposal of 20,000 tonnes of import, with both the BPC and CRL plants now operating, the situation can be easily normalised." It is upto the new government to decide — with benzene production being accorded a low priority compared to petrol, HSD and kerosene — whether it can afford to lose out on Rs.700 crore worth of exports to save Rs.20 crore worth of foreign exchange.

■ DEVENDRA TAK

Public sector's poor show

The economic mess the country is in, is of its own doing. Up to now (since Independence) every finance minister has been tinkering with the economy and has always resorted to fire-fighting measures rather than structural changes. Among the many problems facing the economy, the fiscal profligacy of the previous years is one of the more serious areas of concern.

If the budgetary deficit has to be reduced significantly, then the efficiency factor in the Indian economy will have to be increased considerably. One of the areas where a lot of money has been sunk with very little return has been the public sector. An efficient or performance-oriented public sector would go a long way in increasing the overall savings rate, which in turn would boost government revenues.

A report by the Centre for Monitoring Indian Economy clearly shows that the public sector in the wider sense has been all pervasive and has grown significantly over the years.

Growing share

In the organised sector, which accounts for about 10 per cent of total employment in the country, the public sector had a share of 6.8 per cent in 1981. Over the years, this share has grown.

In income generation, the public sector accounted for Rs.64,863 crore or one-fourth of the national income of Rs.2,60,532 crore in 1987-88. Though the public sector plays a dominant role in the railways and communications where it has a monopoly, contrary to the general belief, manufacturing activity in the public sector was only 15 per cent. Of course, within manufacturing, it is dominant in sectors like oil refineries, steel plants, fertilisers and engineering.

Prior to Independence, the role of the public sector in manufacturing was almost negligible. But after Independence, the planners gave it a critical role to play in industrialisation.

There are certain sectors in manufacturing where the public sector plays a significant role. For instance, in cotton textiles, the National Textile Corporation accounts for about 5 per cent of yarn production and about 26 per cent of the total cotton fabrics produced by the mills. The total accumulated loss of all the public-sector textile mills including NTC was Rs.1,631 crore by the end of March 1990.

The public sector has a near monopoly in newsprint production. There are five companies with an installed capacity of 270,000 tonnes. The Green Revolution prompted the government to set up fertiliser plants. These public-sector units account for 43 per cent of the total fertiliser production.

The steel sector is dominated by the large public-sector units under the holding company, SAIL. The six integrated steel plants account for 7.6 million tonnes of steel which works out to 64 per cent of the total production. Tata Steel accounts for 16 per cent and mini-steel plants, the balance 20 per cent. The public sector has played a prominent role in developing the engineering industry in the country. In 1989-90, its share in total engineering goods output was 22 per cent.

Insurance a monopoly

If the public sector plays a significant role in the manufacturing sector, its role in the financial sector is dominant. For instance, the 28 nationalised scheduled commercial banks account for 88 per cent of aggregate deposits and 86 per cent of the advances of all the scheduled commercial banks. The life insurance and general insurance business enjoy a total monopoly.

The crux of the problem is that despite its pivotal role in the Indian economy, the public sector has not been able to generate the savings necessary for capital formation. It was able to contribute only 8 per cent of the nation's savings in 1989-90. Also, the savings rate as a percentage of GDP has been declining in recent years. This is mainly due to government enterprises' failure to generate internal surpluses. As a result, the public sector, over the last 27 years, could finance only one-third of its gross capital formation. Given the large investment in the public sector, greater efficiency in its operations would go a long way in reducing the budget deficit.

ASPI CONTRACTOR

SKIP THIS AD AND SOMEBODY SOMEWHERE WILL TURN BLIND

Millions of Indians suffer from cataract. Slowly but surely they are turning blind. There is little hope for them. Except from one quarter. You. By donating as little as Rs. 100, you can help someone see. At the Lok Kalyan Samiti we have organized 275 eye camps in rural and urban areas. These have helped nearly 20,000 cataract patients. But millions are still waiting. For a little help from your side. Please hurry. Because minute by minute, somebody somewhere is turning blind.

Income tax exemption under section 80G of the Income Tax Act.

L/NTAS (DELHI)/LKS/10

Production of heavy and light commercial vehicles: The production of heavy commercial vehicles has grown by 13 per cent over the previous year to 86,831 units. In recent years, the production of LCVs has increased considerably and in 1990-91 this was up 18.5 per cent over the previous year.

Marketshare of light commercial vehicles: The LCV market is dominated by Telco which has a market share of around 35 per cent. In fact, Telco has been increasing its market share over its nearest rival Bajaj Tempo. DCM Toyota is the other manufacturer that is steadily improving its market share.

Wholesale price index: The wholesale price index is marginally up by 0.46 per cent during the month under review which indicates a slowdown in the rate of inflation. In primary articles, the index for fibres was up 6 per cent. In manufactured products, while most items were relatively stable, the index for cement was up 4 per cent.

(1981-82= 100)

	4 May '91	6 Apr '91	5 May '90	% change over month	% change over year
All commodities	192.8	191.5	173.7	0.46	11.0
Primary articles	198.4	197.5	172.5	0.46	15.0
Manufactured products	190.3	189.3	175.9	0.21	8.2

Money and banking (scheduled commercial banks): There is a slowdown in the growth of money supply to 0.38 per cent during the month to 3 May 1991. Both aggregate deposits and bank credit are down 0.49 and 0.50 per cent respectively. On the other hand, food credit is up 12.3 per cent during the month under review.

(Rs crore)

	3 May '91	5 Apr '91	4 May '90	% change over month	% change over year
Broad money (M3)	2,74,444	2,73,415	2,37,746	0.38	15.4
Aggregate deposits	1,97,099	1,98,069	1,70,149	–0.49	15.8

BSE index (1978-79=100)	1,282.8	1,292.93	783.2	–0.78	63.78

(Price of gold is in rupees per 10 gm and silver in rupees per kg)

Natural Rubber

Rubber is a strategic raw material which is used for manufacturing tyres and tubes for cycles, motorcycles, scooters, cars and trucks. It also has wide applicability in other products such as conveyor belts, hoses, footwear, gloves and a large number of other products. The rubber goods industry comprises over 500 units. There are 22 tyre companies, 150 medium-size DGTD factories and almost 5,000 small and tiny units. The tyre industry consumes 52 per cent of the rubber and the non-tyre sector 48 per cent.

Production

Production of natural rubber has not kept pace with consumption. Production was only 140,000 tonnes in 1975-76 which increased to 190,000 tonnes in 1984-85 and has crossed 330,000 tonnes in 1990-91. The increase in production is because of increase in tappable area and yields. Tappable area increased from 178,480 hectares in 1975-76 to 312,00 hectares in 1990-91, up 75 per cent in 15 years. On the other hand, yield per hectare has increased more slowly from 775 kg in 1975-76 to 1,075 kg in 1990-91.

Consumption

Consumption of natural rubber has increased from 342,000 tonnes in 1989-90 to an estimated 390,000 tonnes in 1991-92. The demand supply mismatch is met by imports which were 50,700 tonnes in 1990-91. Considering a 7 per cent growth rate, the rubber industry will need 900,000 tonnes of new rubber by the year 2000 as against the maximum availability of 600,000 tonnes.

QUALITY BAR

GF BRIGHT STEEL BAR

We, at Grand Foundry have often been asked, what makes our Bright Steel Bars so very special. Our reply is always the same: World-class quality at competitive prices. But how would you define it? Let's take a look. Our cold-finished steel bars have closely controlled dimensional accuracy, length control and improved mechanical properties and a lustrous finish. The distinguishing features are, requisite tensile and yield strengths, elongation, reduction – indispensable for applications involving threads, notches, up-setting, etc. Some steel bars have special traits, like our hardened-tempered bars. To ensure all this, we have a Quality Assurance cell. It's our pride. What's optional for others, is a must for us. Bright Steel Bars, as a matter of routine, have to pass a series of stringent tests: inclusion rating, hardness, micro/macro structure tests and crack detection. Only then are they certified fit enough to see the insides of a customer's shop-floor. Today, together with our affiliate, Dhiraj Iron & Steel, we manufacture and market, practically all grades of steel required by the Engineering Industry. Little wonder then, our customers in India and abroad depend on us for their requirements, for over three decades.

The future is 'Steel Bright'

Agenda for the new government

If there is one piece of bad advice the new finance minister is bound to receive, it is that we must take the IMF loan. Three powerful arguments will be deployed: first it will be said that our foreign exchange position is so precarious that the economy cannot be managed without immediate relief; second there will be those who will argue that we need some breathing time to work out the right solutions; as if we have not had forty years of breathing time during which all we have done is to successfully avoid taking harsh decisions. Finally, there will be those who will say that there is no hope of achieving discipline in Indian politics without external intervention; that the politicians will never be persuaded to make the decisions that are necessary unless they are forced to do so in the face of conditions imposed by the IMF.

The shallow cynicism of these arguments is no surety that we will not succumb to them; supine and dilatory behaviour has been the hall-mark of our economic policy and the IMF loan will provide administrators with precisely the kind of latitude to continue an intolerable import and exchange regime for a few months more. For that is all the Fund loan will do. We borrowed $2.0 billion from the IMF in January of this year and blew it by the middle of April. How much will the Fund now lend us? Will they give us $3.0 billion or $5.0 billion? And how long will that last us? Another three months or even a year? What do we do after that? Go out with the old begging bowl asking for more? Then another Kissinger in another American cabinet will describe us as "another basket case". Do we really need to be reduced to this?

Need to take stock

Before he capitulates to his economic bureaucracy, the finance minister should at least take stock of our external account. We have a debt of about $80 billion but we also have liquid assets within the country. Students of economics will remember that fifty years ago Keynes was complaining of exactly the opposite phenomenon, namely, that India had a disastrous propensity to an excess of liquidity. We were, in his contemptuous phrase, "the sink of precious metals." Indeed, in his celebrated book *The General Theory of Employment, Interest and Money*, the only mention he made of India was this:

"The history of India at all times has provided an example of a country impoverished by a preference for liquidity amounting to so strong a passion that even an enormous and chronic influx of precious metals has been insufficient to bring down the rate of interest to a level which was compatible with the growth of real wealth." (Keynes, 1936, chapter 23).

Is it seriously being argued that whilst throughout our history we have been accumulating these precious metals, we are now suddenly in such dire straits that we cannot finance even a few months' imports? We must have been profligate indeed if we have so exhausted our patrimony. And even more so since, according to the 1990 Gold Survey published by the prestigious London-based Gold Fields Mineral Services, we have been steadily increasing our stock of liquid assets by importing gold. In 1989 after allowing for 50 tonnes of scrap, India utilised 172.5 tonnes of additional gold for fabricating jewellery. Since there are no indigenous sources of gold production, this gold, worth about $2.0 billion, must have been imported into India and paid for in foreign exchange, albeit by smugglers.

It is not unreasonable to estimate that, out of a total quantity of 100,000 tonnes of gold mined throughout the world since the dawn of time, at least seven thousand tonnes of gold must now be held in India

Passion for hoarding

This Indian passion for hoarding precious metals has not abated even through an industrial revolution. Very crude estimates suggest that over the last forty years India has bought somewhere around three thousand tonnes of gold, worth about $35 billion at current prices; this inflow has been added to the very considerable stock of gold that existed prior to Independence. Although precise figures must be a matter of conjecture, it is not unreasonable to estimate that, out of a total quantity of 100,000 tonnes of gold mined throughout the world since the dawn of time, at least seven thousand tonnes of gold must now be held in India. At current prices, the value of the total estimated stock of gold is around $80 to $100 billion — well in excess of India's total foreign debt of $80 billion. But gold is not the only monetary asset we possess. We have 100,000 tonnes of silver, perhaps worth another $12 billion. Over and above this, recent estimates of resident Indians' foreign balances — the so called flight of capital — range from $20 to $30 billion dollars. If you add together all this, it shows that we have liquid assets marketable abroad worth at least $120 billion.

Now, it could be argued that if these assets are in the hands of private individuals they are of no assistance to the nation. From an economic point of view, these resources may as well belong to the Japanese or the Koreans for all the good they can do to us. But there is a significant difference: holders of these assets have paid for them not with foreign currency but with Indian rupees, and what is bought in rupees can be sold in rupees. No one will deny that there is a regular rupee price for gold; as an individual — whether the law allows it or not — the average citizen is able to go into the bazaars of Bombay and pay for his gold in Indian rupees; in turn, he could go into the souks of Arabia and sell it for dollars. In that sense the rupee is already a convertible currency; but of course in that sense every currency in the world is convertible. I have no doubt that some Russian expert can probably show you a way of converting a rouble, at some price or the other, into a dollar. It is therefore not enough to show that convertibility is possible but that it can be done with comparative ease.

Convertibility is easy

Fortunately, the laxity of Indian laws has been such that it is easy to demonstrate convertibility. In the midst of this great foreign exchange crisis there is in fact a regular market which determines rupee price for dollars, which for some curious reason is called the "hawala" rate. What is more, this rate is a surprisingly elegant

The American Institute

The Institute of Chartered Financial Analysts, set up in 1959 at Virginia, USA is the only institution of its kind in the world. It offers a three year training programme leading to the designation Chartered Financial Analyst (CFA) which is a highly valued professional qualification. Since its inception it has awarded the CFA designation to about 13,500 candidates. Interested in advancing the cause of professionalism in the field of financial analysis, it is collaborating with the Institute of Chartered Financial Analysts of India, in offering the CFA Programme in India.

The Indian Institute

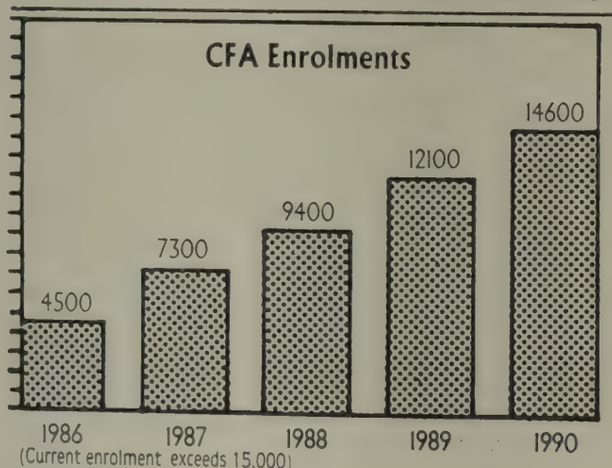
The Institute of Chartered Financial Analysts of India has been established in 1984 as a non-profit educational society. ICFAI is a member of Asian Securities Analysts Council, Japan. The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 59 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff.

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level



Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/ International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: July 14, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

proof of classical propositions of free markets. Economic theory tells us that in unfettered currency markets transactions will take place at a price where the devaluation of one currency against another will be offset by the interest differential between the two currencies. That is to say that no arbitrage possibilities will exist. Looking at the "hawala" rate in these simple economic terms, I find that in the last five years the market has done its job perfectly. In 1986 the hawala rupee dollar rate was Rs.16 to one dollar. In 1991 it was Rs.25. During this period the deposit rate of interest for dollars was between 7 and 7.5 per cent. In order to be able to compensate for the devaluation of the rupee, the Indian rate of interest should have been around 17 per cent, and not unexpectedly, the Indian rate of interest was just about that. In fact, anyone who could have earned more than 17 per cent in India would have made a mistake in keeping his money in dollars.

Since this point is quite important to my argument, I should like to comment in greater detail on the calculations. It is of course true that in taking the deposit rate in dollars and the lending rate in rupees I have not taken like for like. Yet the two rates are appropriate, because Indians holding money abroad can do little with

In unfettered currency markets transactions will take place at a price where the devaluation of one currency against another will be offset by the interest differential between the two currencies

their dollars except deposit it in some Swiss vault. Secrecy and hiding is the key to illegal hoards. On the other hand the resources could be used actively in India to promote enterprises, or even to lend to the stockmarket where, I am assured, that as much as 24 per cent can easily be earned.

Now the reason why these arguments are important to my case is that I wish to show how successfully free markets do work in India. I doubt very much if such simple arithmetical examples would have any relevance to the Russian or other East European markets. But even if the reader will accept my proposition that free markets work in India, he will still wish to know how we can move from the present state of affairs to the point where free markets are allowed to operate in these vital areas of the economy. After all, the "hawala" rate is only at the fringes of the economy and does not affect the main part which is concerned with resources of companies and government. The reader will be impatient to know the specific changes that are required to be made by the government in order to move to a free economy.

Some specific suggestions

The key to the new policy is to integrate the unofficial and official markets of the economy. I shall propose some specific steps that will assist us to do precisely that; but before I do so let me offer one observation on our external debt. We owe about $80 billion but over 50 per cent of this money has been borrowed at concessional rates. The average rate of interest that we are paying is approximately 6 per cent as against 10 per cent by Brazil. The first technical step that the government should take is to negotiate a discount for the nominal value of the debt by raising the interest to a commercial rate. I imagine that this will bring the debt down to about $50 billion. Next, we should arrange for an option to repay the debt either in foreign exchange or by delivering gold. This is necessary because it would be impossible to sell large quantities of gold on international markets at a reasonable price. On the other hand, it should be possible to arrange official transfers for payments to other central governments.

The second step for the government to take is to start buying gold in the local markets. In perhaps the most celebrated passage in the literature of economics, Adam Smith wrote the following:

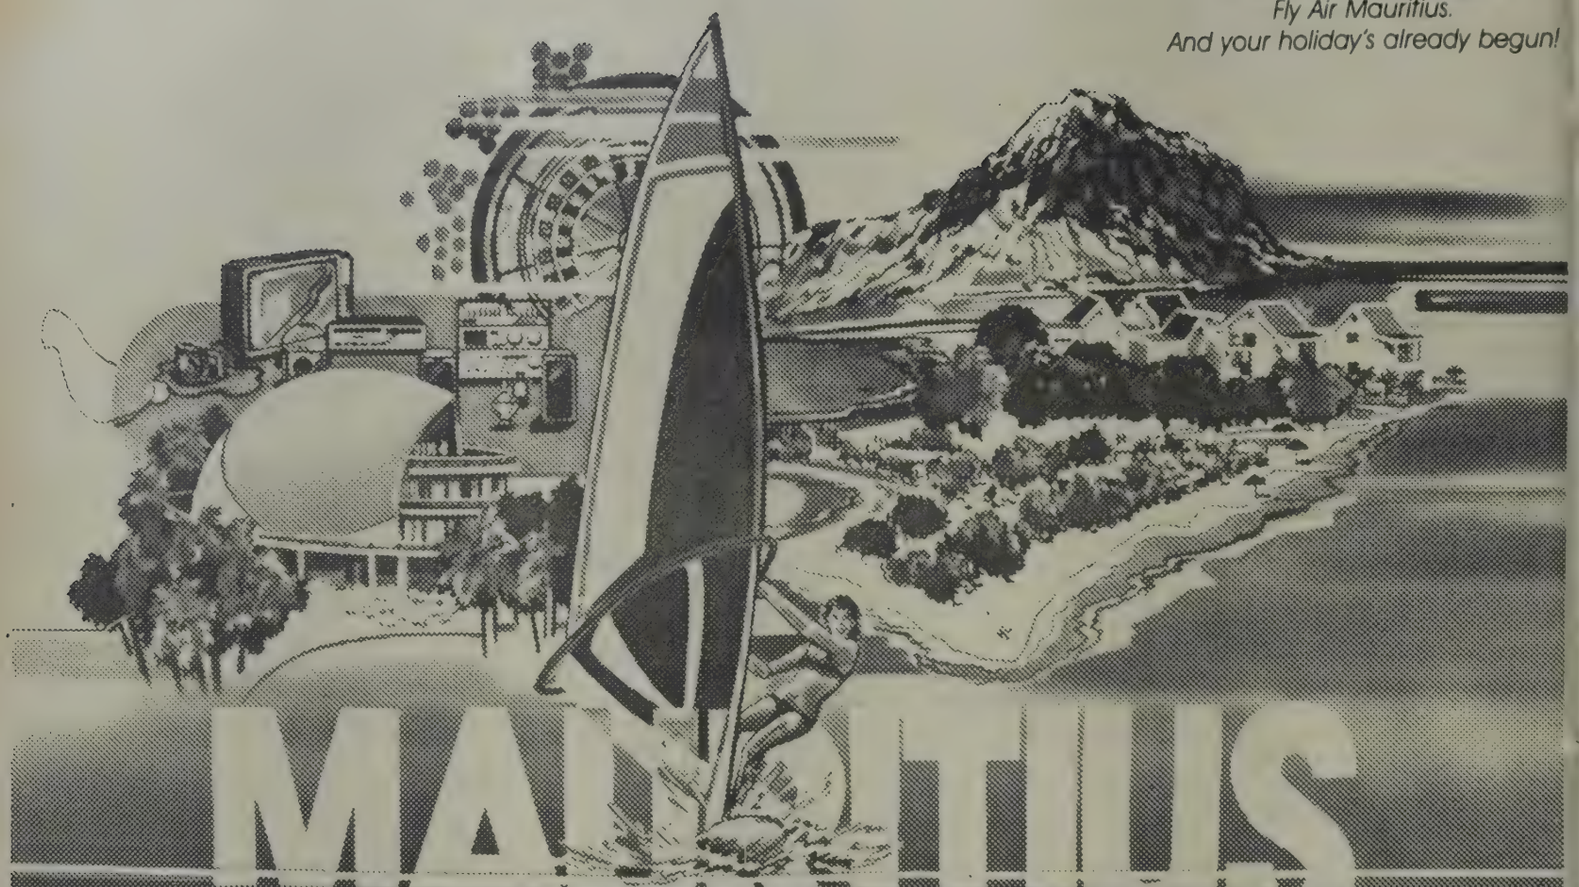
"It is by treaty, by barter, and by purchase, that we obtain from one another, the greater part of those good offices which we stand in need of. ... It is not from the benevolence of the butcher, the brewer, or the baker, that we expect our dinner, but from their regard to their own interest. We address ourselves, not to their humanity, but to their self-love, and never talk to them of our own necessities but of their advantages.

"Whoever offers to another a bargain of any kind proposes to do this. Give me that which I want, and you shall have this which you want."

I have quoted extensively from Adam Smith because it is this harsh lesson of economics that the soft socialist state tries to escape from. There is no shortage of gold or dollars or oil, but for every commodity there is a price at which an exchange can be effected, and if attempts are made to keep the price at a lower level than that at which free exchange will take place then the inevitable consequence

We must sell gold to reduce or repay our external debt. The RBI governor cannot go far without our support. The BJP argument that this would be to sell our national treasure is pure drivel

will be a host of dissatisfied buyers. Further, the only way a government can intervene to ensure a low price for a commodity is by using its sovereign authority. Take that power away from the authorities and you will immediately see those who want foreign exchange go into the market for dollars, and if it is impossible to exchange dollars for rupees, they will do it indirectly by exchanging gold for rupees and dollars for gold.



Gold must be sold

The central point of this over-long article is that we must sell gold to reduce or repay our external debt. The governor of the Reserve Bank has shown extraordinary courage in beginning the process, but he cannot go far without our support. The BJP argument that this would be to sell our national treasure is pure drivel. It would break a pernicious habit that has held us in poverty for centuries. To achieve results we must free the markets for gold and consequently for foreign exchange. The one cannot be done without the other.

Finally, I must say something about the government's own resources; to pay for this programme in a non-inflationary way, the government must sell its assets by privatising the public sector. The monetary authorities need gold that is today in private hands; they must do so by selling companies that are now in the public domain. It is only thus that we will restore pride in our national economy. Otherwise we shall be, as a prominent industrialist once said to me, "like the man who lives in a house worth a crore of rupees but goes begging for a roti".

AIR MAURITIUS

Fly Air Mauritius.
And your holiday's already begun!

MAURITIUS

FOR CONFERENCES CONVENTIONS & INCENTIVES

Why have Ashok Leyland, Bank of America, Larsen & Toubro, Philips India and the UB Group chosen Mauritius as their conference venue?

- **Exotic location So near, yet so far away from it all!**
- **Excellent conference facilities**
- **Economical**

Mauritius has everything to make a conference a success. Scenic beauty — 'a tropical island paradise'. The people — a melting pot of races and cultures. The entertainment — water sports, casinos, sega dancing, restaurants. Some of the worlds greatest chains of hotels and resorts are located in Mauritius, with the most modern conference facilities available. And the bottom line is the cost — it's very inexpensive!

The group return air fare per person is only Rs. 6553 Ex Bombay, Rs. 7756 Ex Delhi/Madras and Rs. 8597 Ex Calcutta (A minimum of 4 persons for 6 days in Mauritius). Hotel packages including food, from US $ 220 upwards.

- **No Visas** • **NTS** (Neighbouring Country Travel Scheme) **US $ 250**
- **MCO facility of US $ 150** per person available to groups of over 15 persons, in addition to NTS.

For details contact Air Mauritius or our GSA Air India or your IATA agent.

An idea whose time has come

J. RAO

Milton Friedman has observed that one thing Japan and India have in common is that they both imitated Britain when they embarked on industrial development. The only difference was in the timing — and that has made all the difference.

When Japan commenced its drive for modern industry in 1868 during the Meiji restoration, the Japanese followed the British way. Britain was at the height of the liberal Whig ideology, when the pursuit of private profit was seen as simultaneously leading to the pursuit of social and national good.

When India looked for models to imitate in 1947, we also chose to follow Britain's pattern. We simply imitated British ideology as it was then. This consisted of a mix of the ideas of Clement Attlee, Fabian socialism, nationalisation of coal, steel, gas, high income and inheritance taxes and talk of a welfare state. Labour-dominated Britain in 1947 had a disdain for business, entrepreneurship and the process of generating wealth, which was considered synonymous with exploitation. We accepted this vocabulary and *Weltanschauung* wholesale.

We were, in fact, very good pupils. We have institutionalised these ideas deep and well in our economy and our body politic. Interestingly, for more than a decade now, Britain has changed course completely. Thatcherite notions of supporting entrepreneurship and privatisation have become the prevailing orthodoxy. The question is: what will be the time lag before we start imitating contemporary British ideology rather than that of 1947?

Making a case

Making an idea easier to sell doesn't make it automatically acceptable. Public opinion needs to be created. It is important to baptise new ideas with credibility, coherence and integrity. The market economy as a means to make India a wealthy nation and as the only paradigm which holds the prospect of a better future for India's poor is an "idea whose time has come". We should buttress our claims with the British precedent. But that's not sufficient. We need to make a case for it independently.

The benevolent state protecting poor citizens from the harsh realities of free markets and providing for their well being is at best a myth. The poor are deprived of the efficiencies and opportunities of a market economy. They are saddled with an intrusive state that lays claim to the divine right of knowing what's good for its citizens. The state consistently fails to deliver the proverbial welfare to the common people, but makes material goodies available to its privileged functionaries.

When confronted with its failure, rather than change its manner of functioning, the state claims that it needs more power in order to fulfil its tasks. Gradually, tremendous power and patronage gets concentrated in the state. The citizens at large keep waiting for the promised welfare. Finally, fed up with their lot, they crave for the fresh breezes of the market economy which can at least produce and sell goods and services efficiently and might hold out the hopes of freedom so long denied by the state.

This is roughly what has happened in the countries of eastern Europe. The harsh realities of the present-day world have helped in the evolution of the *Zeitgeist* of liberalism. Market orientation is an ideology which has been found desperately necessary by the victims of statism.

Fault of liberalisation

The current turmoil in these countries has provided comfort to a certain class of professional Brahminical leftists in India. Their argument is that the liberalising experiments in the Soviet Union and eastern Europe have in fact led to problems. Therefore, it is best for us not to imitate them in this direction. The fact that they are in a mess precisely on account of four decades of the statist experiment is conveniently glossed over. While there are always problems in transition, once these economies have passed through this adjustment process, they have an optimistic future ahead of them. In contrast, the inward-looking, state dominated structures of Burma and North Korea seem to be on a one-way street headed nowhere.

The history of our country shows that whenever the Sultan has ruled with a light hand demanding a modest annual tax and providing an ambience of law and order, the people have prospered. Agriculture has been productive and trade has flourished. Whenever an oppressive and extravagant royal court has tried to intrude excessively into the affairs of citizens, we have had descending spirals of poverty, tyranny and famine. This should be lesson enough. The slogan of the modern emancipator should be: "Leave my people alone. Do not plan for them, control or direct them. They will prosper on their own."

Our history and the intellectual cross roads of our times all serve as beacon lights. Let us not forget that a large quantum of the entrepreneurial energy released by Margaret Thatcher belongs to persons of Indian origin living in Britain. If this outburst of energy can take place there, then why not here on home ground?

Indian computer com
tightening

But will that stop thin

It's not funny.

Because the Balance of Payments crisis has hit the computer industry hard.

Prices have risen, so sales have dropped. And, since sales have dropped, profits have slipped. Now belts are being tightened.

People are politely being asked to leave—particularly those in support functions. Service Engineers are being asked to travel by rail instead of by air. And shortcuts in production are fast becoming standard practice.

Well, Modi Olivetti appears to be the only island in an ocean of chaos.

No deviations from Olivetti's international quality standards will ever be allowed—which simply means that the Modi Olivetti system you buy in India will perform exactly the way identical Olivetti systems perform worldwide.

If you leaf through last month's Dataquest, you'll find we're recruiting even more Customer Engineering professionals—so you don't get anything less than the famed 'Oliservice'.

Finally we'd like you to know that we're rated No. 1 in India for customer

PSU policy

Foremost among the concerns of the new government will be to evolve a policy on public sector undertakings. The largest PSU, the Oil and Natural Gas Commission (ONGC), set up under an act of Parliament, is pushing for a change in status as a corporation. ONGC officials feel that the key to its future progress is access to

An ONGC rig: the forex option

foreign exchange. This implies accessing the external commercial market more often than was done in the past.

This, however, is unlikely to happen unless the government appointees on the commission's board are withdrawn. The projects ONGC are likely to implement over the next plan have a larger foreign exchange component. With the present squeeze on foreign exchange, and with clearances being so sluggish, access to foreign exchange seems like the only option available to ONGC to arrest the slide in production.

Dithering with DoE

The department of electronics is in a quandary these days. The secretary of the DoE, N. Vittal, has introduced many a new scheme to inject fresh life into the ailing electronics industry. But lack of proper direction from the government has hindered the implementation of these schemes. Moreover, the unstable economic condition also does not permit investments in this sector, which anyway is highly import intensive.

Last month Vittal was talking about waiving MRTP regulations for companies setting up 100 per cent export units for manufacture of consumer electronics. But as always it has not found favour with the government. Most of the plans, including software technology parks, are yet to take concrete shape as the response has not been encouraging from participating private sector companies.

Big brother and the banks

A battle royal is on between the department of banking and the nationalised banks following the strict scrutiny by the department, for the first time ever, of the annual results of the banks. In fact, the announcement of the results of many banks has been delayed by the microscopic examination. The department's new interest in the working of the nationalised banks comes in the wake of criticism of the banks' recent actions: bad loaning, dressing up of accounts and other doubtful practices. Even the World Bank has given an adverse report on the functioning of the commercial banks.

The banks, on their part, are not happy with the treatment being meted out to them. Some of them were shocked to receive rebukes and sharp letters from the department. Observers, however, wonder whether the department of banking is itself properly equipped to examine the functioning of banks, particularly given the recent elevation of lowly undersecretaries in the department on to the boards of many nationalised banks.

SJP RIP

Bureaucrats who had seen in the Samajwadi Janata Party regime a cash and carry user-friendly government are now jokingly calling the party the *Swargwasi* Janata Dal. Nevertheless, the money-bags are working overtime to get an entry for the former prime minister into the Congress(I) and to pave the way later for a change in leadership. A Calcutta-based

Chandra Shekhar: political demise?

industrialist who stayed at the Delhi Maurya explained: "Since the Congress will form a minority government, they can never work efficiently. When discontent occurs we would like to have Chandra Shekhar ready to take over." Towards this end the industrialist met Pranab Mukherjee and R.K. Dhawan over breakfast on Monday.

Cotton programme

The ministry of agriculture proposes to launch a special cotton production programme on the lines of the special foodgrains production programme. Forty districts in nine states are proposed to be covered under the programme. For each district a separate plan is likely to be made. This would not only include setting up of targets but also make provision for the supply of good quality seeds, fertilisers, etc.

The plan to augment the production of cotton which is now mostly raised under rainfed conditions, is to allow for an exportable surplus. India's cotton productivity at 260 kg/hectare is now one of the lowest in the world. Even Pakistan has a productivity of 550 kg/hectare and Israel 1,450 kg/hectare.

According to the plan, cotton production, which topped 13 million bales last year (registering an increase for the third successive year), is to be raised to 20 million bales by 1995. This may however be a difficult task considering that there is a slideback this year with production likely to fall to 11.5 million bales.

INTRODUCING THE FALSE CEILING THAT HAS RISEN TO A SUPERIOR LEVEL.

BAKELITE HYLAM

PHENOTHERM

- Unmatched fire resistance
- Excellent sound insulation
- Good aesthetic attributes
- Exceptionally low thermal conductivity
- Does not emit toxic gases in case of fire
- Easy installation
- Retains rigidity over a period of time
- Cost effective
- Longer life
- Easy to clean
- Light in weight
- Substantially reduces electricity bills
- Painting is not required

OTHERS

- Average or poor fire resistance
- Poor sound insulation
- High thermal conductivity
- Emission of toxic gases on burning
- Laborious installation process
- Difficult to clean
- Painting is required

P.V. NARASIMHA RAO AND THE NEW GOVERNMENT

Can we now swing the IMF loan?

Now that the new government headed by P.V. Narasimha Rao is in place, its first task will be to put the economy back on the rails. Mustering the requisite support to allow access to the International Monetary Fund will be the first item on the agenda. While parties like the CPI(M) would balk at providing such support, the Congress(I) should in all likelihood be able to persuade other parties to do so. In any case the new government has few other options

One of the first decisions that the new government will have to take is about going to the International Monetary Fund (IMF) for assistance. It won't be an easy decision; with the IMF bent on integrating the Indian economy with that of the world, it is going to bear down hard. And by now, the Fund is quite used to the skill of the Indian *babu* in agreeing in principle but not in practice. It can therefore be expected to monitor the structural adjustments closely. Failure to shape up could mean suspension of the Fund's assistance even after it is sanctioned.

Time for change anyway

In Delhi, most parties agree that going in for loan will be necessary. Says Pranab Mukherjee, a likely candidate for finance minister, "Some structural change would be necessary. Even if the IMF does not force us, it is time to make them anyway." Yet mutterings have already begun in Delhi that the IMF's conditionality will impose the white man's diktat and, as a leftist leader put it, an extension of Pax Americana. While it would be easy to dismiss these whispers as hysterical, they are the seeds of a more sustained opposition. A structural adjustment could be painful: it will hit organised labour, both in the private and public sector, rich farmers, and industrialists who are not competitive. Based on the experience of other countries, things could get a lot worse before they get better.

"The upheaval caused by the retrenchment of labour, if sick mills are closed down and if subsidies are removed, will cut across the urban-rural divide. It will lead to tension that the government is in no position to absorb," says George Fernandes, the veteran socialist and trade union leader. It is this opposition that any political party will have to contend with. This might also make some parties oppose IMF-sponsored reforms. Yet, the new government has few options before it.

On the flip side, the writing has been on the wall over the last few months. The Indian government has little choice but to go to the IMF once again. In January this year, India secured $1.8 billion from the Fund: $1.02 billion under the Compensatory Contingency Fund Facility (CCFF) and $780 million under a standby arrangement. But more assistance is required urgently; otherwise the nation runs the risk of having its foreign trade come to a grinding halt very, very soon.

Recourse to the CCFF is relatively painless. Intended to help countries get over short-term balance of payment problems, it has few strings attached. And so it was that the January loan was taken. And yet, certain key economic parameters worsened. The Indian economy was by no means a basket case. A succession of good monsoons had boosted agricultural productivity and buffer stocks of foodgrains were a comfortable 21 million tonnes and were expected to reach 27 million by the end of the year. Yet government expenditure and India's balance of payments

An IMF loan will affect agriculture most

were totally out of kilter.

The fiscal deficit, a truer indication of the mismatch between the government's revenue and expenditure than the budgetary deficit, reached 8.59 per cent of the gross domestic product in 1990-91, against 8.05 per cent in the previous year. The then finance minister, Madhu Dandavate, had already made his now-infamous "coffers are empty" proclamation early in 1990. Largely because of the Gulf war-induced surge in oil prices, imports grew faster than exports. The country's foreign exchange reserves had declined significantly. They dropped from Rs.6,500 crore in June 1989 to Rs.5,800 crore in June 1990 (and Rs.2,500 now). Access to foreign borrowing became more difficult and India's credit rating was downgraded.

Assurance belied

The Reserve Bank governor had assured central bankers at a meeting of the Bank of International Settlements at Basle that India had no intention of defaulting on loan repayments. And yet it had to mortgage (or sell?) smuggled gold three weeks ago to meet its most pressing commitments. That naturally created some disquiet.

In fact, without this sale, the country could have defaulted on repayment obligations on a short-term revolving debt of Rs.800 crore. Even prime banks like State Bank found it difficult to extend banker's acceptances, which had to be promptly repaid out of reserves. A default would have wrecked Indian credibility and would have placed the country alongside the severely indebted economies of Latin America.

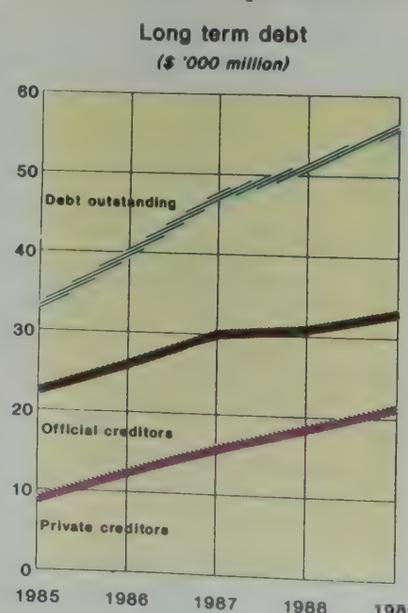
Given this situation, the new government at New Delhi will have to access a facility of a minimum of $5 billion from either the Fund's Structural Adjustment Facility (SAF) or its Extended Fund Facility (EFF). India can theoretically borrow up to $7.2 billion but will probably borrow only $5 billion. It will have to repay the $1.8 billion it borrowed from the IMF early this year, before December.

Unlike the CCFF, the SAF is accompanied by strict conditionality which essentially embody the IMF's vision of how an economy can get healthy. Consisting of a series of economic measures, the package is put together after negotiations between the IMF and the recipient country. It includes the IMF's prescription of how the economy can rectify its current account imbalance.

Simple arithmetic

The essence of the IMF's perspective is simple. The aggregate demand in an economy has to be broadly equal to aggregate supply plus capital inflows over the long-term. In other words, persistant excess of imports over exports means that a country is absorbing more real resources from the world economy than it is contributing.

If a country had no access to foreign borrowings and imports had to match exports, then it would have to go through a deflation — the economy would be forced to slow down, people would have to be laid off till such time as they slowed down on consumption. If there was an unlimited supply of external borrowings, no such drastic



A modern toolroom: improving efficiency and competitiveness

remedy would be necessary. Unfortunately, external borrowings provide only a temporary reprieve. As the size of the external debt rises, foreign lenders would grow more averse to lending as the risk of default increases. This is where the IMF comes in.

While the IMF normally gives structural adjustment loans and concentrates broadly on macroeconomic parameters, the World Bank concentrates on concessional aid to developing countries and sectoral development. The Fund and the Bank are two legally separate institutions but often, but not always, they work together. For example, the Bank is currently negotiating a loan to the Indian financial sector which may, or may not, have similar preconditions to that of the IMF.

In most cases, the cause of imbalance is a rapid growth in government and public sector spending not matched by a commensurate increase in revenue. The IMF's prescriptions aim at the broadest level to deal with the cause of fundamental macroeconomic imbalance, ie, economic inefficiency and demand beyond the productive capacity of the economy. Yet, the IMF also believes that the efficiency and competitiveness of the whole economy can be improved by making it more market driven. The fiscal budget deficit has to be cut, but that is only the beginning. This, in turn, means reduction of government expenditure, subsidies, etc, and the boosting of revenue.

No pain, no gain

The roots of the pain caused by an IMF-sponsored structural adjustment are implicit in this prescription. Of course, a large number of people would like to have high growth, government expenditure, secure jobs, and large dollops of subsidies. Yet, the IMF message is: no pain, no gain. With India's none-too-flattering record of economic (mis)management over the last two years, the IMF will be talking tough.

This is something which will be compounded by the fact that a minority government now holds sway over the country. Such a government is perceived to be weak and without the requisite will to enforce measures to put the economy back on the rails. Thus, the IMF might take it on itself to advise the government on what to do. Says C.D. Wadhwa, fellow at the New Delhi-based Centre for Policy Research: "If a stable government was in office, the IMF might only set out its conditionalities in broad parameters. But now it will go into details about what needs to be done."

Not everybody agrees with that. For instance, S.L. Rao, director general of the National Council for Applied Economic Research, says: "The IMF has also gained experience over the years. It knows from its experience in countries like Chile that it is not desirable to set out such detailed conditionalities." Significantly, a World Bank economist in New Delhi commented that in India there is an awareness of economic problems like nowhere else in the world. Yet the implementation of solutions are continuously postponed. The typical refrains are, "reforms are politically unfeasible" or that "the ruling party is unable to muster political support".

Working closely

Though the mandarins in the finance ministry are tightlipped, it is fairly clear that over the last several weeks the IMF has been working closely with the caretaker government to have a package in place for the new government to consider. In fact, even the Congress (I) had worked closely with the IMF, before the assassination of Rajiv Gandhi, to prepare a skeletal budget. In this, the Congress had agreed to accept time-bound conditionalities.

Information from sources within the Congress, and from the World Bank's country report on India prepared recently by the agency and presently doing the rounds of the corridors of powers, indicate the following IMF conditionalities:

- Reduction of government deficits by reducing expenditure, especially subsidies on fertiliser and power (except to marginal farmers), and an increase in public-sector prices.
- Greater autonomy to the Reserve Bank, decontrol of financial institutions and even the denationalisation of banks. Further curbs on credit, both private and public, to slow down the rate of monetary growth. Financial liberalisation is also likely to be recommended. Apart from these, the Fund is also inclined to recommend abolition of priority sector lending to agriculture and the small-scale sector.
- The Fund is likely to recommend an exchange rate reform package consisting of currency devaluation, convertibility, substantial trade liberalisation, and the removal of export subsidies. This assumes that domestic producers and consumers must make their decision on the

basis of international prices.

- The right of exit for sick units.
- A broad programme of privatisation, beginning with the service industry. This would be followed with the hiving off of 50 per cent of the shareholding in heavy industry in the public sector.
- Finally, the government would look into avenues to privatise the extraction of mineral resources.

Though the IMF's terms appear sweeping at first sight, there is reason to believe that even with a minority government in place, the country has enough senior bureaucrats who have been in and out of the World Bank and the Fund to negotiate a deal which is not crippling. Again, the Fund is not the bogeyman that it was once thought of. In fact the Fund would rather see countries come up with their own structural adjustment programmes which they would like to approve. In any case, the bulk of the reforms are ones on which there is already a broad consensus in India — of course, on principle.

Over the last few years, the traditional antagonism between bureaucrats and businessmen has broken down and both are speaking the same language. Both sides see the need to make the Indian economy more market driven, outward looking and competitive. There is a broad commonality of vision about what needs to be done.

Reducing deficits

Keshub Mahindra, chairman of the Mahindra group, for instance, does not want to comment on or speculate about what the Fund's terms are likely to be. Yet, he does say that the reported desire of the Fund for a reduction of the fiscal deficit from 8.59 to 6.5 per cent is unexceptionable. He says, "If deficits are reduced everything will fall into place." But deficit reduction is only the first step.

Once deficit reduction is targeted, the IMF's approach of making decontrol of the financial sector a first target makes eminent tactical sense. The government has financed its deficits by either borrowing from the Reserve Bank, effectively creating fresh currency, or by resorting to market borrowings. Taken up by banks to fulfil their statutory credit ratios, treasury bills provided the government with a virtually inexhaustible source of funds. The World Bank has in fact suggested that the credit reserve ratios be reduced, as one way of reducing government borrowing.

Medicines: can they cure industrial sickness?

While there is an enthusiastic response to the Fund's proposal to give greater autonomy to financial institutions, other proposals are being accepted more gingerly. For example, D. Basu, deputy managing director of the State Bank of India, argues that a one-step deregulation of the financial markets could add to the already existing volatility in the money markets. "Would exports be viable if interest rates on export finance reached 20 per cent?" he asks.

There is also broad agreement that trade liberalisation will improve efficiency. Protecting infant industries behind high tariff barriers is clearly unfashionable now. India's high import tariff barriers at an average rate of 117 per cent make imports a totally unattractive option for its entrepreneurs. These again are supplemented by substantial quantitative restrictions. Such restrictions are effected by a screening procedure to license the country's imports, on a case-by-case basis. All this stops the economy from achieving international cost competitiveness.

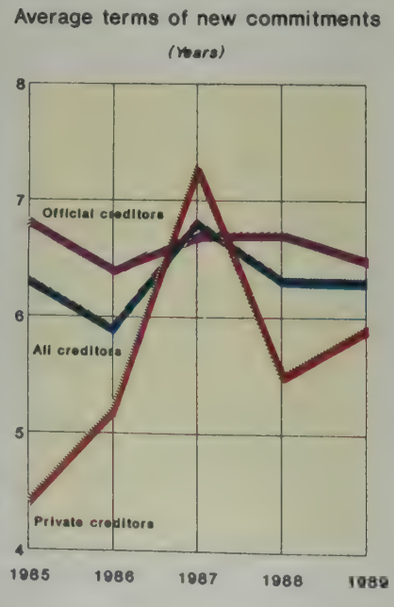
Total exports and imports
($ '000 millions)

If anything inhibits industrialists from being enthusiastic about lowering trade barriers, it is the fact that the playing field is not really level. "Would we get inputs, for example, at international prices?" asks Ishaat Hussain, executive director for finance at Tisco. He is, however, confident about his own company's competitiveness in any case and doesn't see it being overly affected by a reduction in customs duties. "We are already exporting to some of the most competitive markets," he says.

An important component of trade liberalisation might be devaluation of the rupee. The IMF has been known to insist with other countries on devaluation. But, it is well known that a large one-time devaluation may prove politically difficult. While there seems to be some unanimity that a one-time devaluation of the rupee is a more favourable option than the creeping depreciation that we have favoured over the last decade, it might still not be insisted upon. Though convertibility is an issue for the negotiating table, it is unlikely that the IMF would insist on it right away.

On the domestic front, again, there is broad consensus that subsidies to fertiliser and power need to be cut. Kirit Parikh, director of the Indira Gandhi

Institute for Development Research, points out that it would be nearly impossible to cut government salaries; cutting fertiliser and irrigation subsidies is more feasible.



Raising fertiliser prices would force farmers to use it more cost effectively. Part of the money saved thus could be used to extend the area under irrigation. Alternatively, the savings could be utilised to subsidise the fertiliser purchases by small farmers. Even free tubewells could be supplied to the latter out of the savings. Productivity could, in fact, be raised in this manner.

Not anti-poor

Any proposal to cut food or fertiliser subsidies, therefore, is not automatically an anti-poor proposal. Nor is it sensible to label the IMF as anti-poor. The question here is to target subsidies to the neediest of the needy and to let all others sink or swim with their own efforts.

While on the subject of food grains, it must be noted here that their prices have risen in recent months despite the fact that government warehouses are almost bursting with stocks. These stocks could be used to moderate any increase in prices.

On the issue of privatisation too, there is little dispute about its necessity. As N.K.P. Salve, Congress(I) leader and chairman of the ninth finance commission put it, during a discussion on national television a few days after the elections, one of the major objectives of setting up a huge public sector was to provide a revenue base for the government. But the experience has been that, far from providing revenues to the government, the public sector has drained the treasury. Given this, it is imperative that the government should get out of large parts of public sector.

If there is any concern, it comes from the idea that the sale of public sector enterprises might be looked upon only as a revenue-raising exercise and a one-shot deal. "It might be looked upon as a substitute for necessary organisational reform, so as to avoid taking tough decisions on cutting subsidies. If that happens, in three years we will be back where we started," says Parikh of the Indira Gandhi Institute.

Word of caution

Hanumantha Rao, the eminent economist who has been an economic adviser to several Indian prime ministers, also has a word of caution. He feels that privatisation can develop competitiveness in sectors where the public sector has a monopoly or near monopoly. In such situations, a transfer of ownership will accomplish nothing. So, he feels that a closer look at the public sector and serious attempts to develop competitiveness are crucial. He fears that in the general privatisation mood, this will be overlooked.

Oil drilling: selective privatisation needed

Much of what the IMF prescribes makes economic sense; the rest depends on the government's ability to sell the deal, thorns and all, to the people. T.K. Bhaumik, assistant secretary general of the PHD Chamber of Commerce and Industry, points out: "Even if the government is able to cut budgetary deficits through cuts in non-development expenditure (and not development expenditure) employment in the short run will fall. This is because the major portion of employment in the last four years has been created through non-development expenditure — unproductive though it has been."

Many people are worried that the measures suggested will cut growth rates and the economy will go into a recession. But A.M. Khusro, editor of the *Financial Express* and a former member of the Planning Commission, suggests that this need not be so. He points out that fertiliser, food and export subsidies add up to the size of the budget deficit. He asks, "Why does the government want to subsidise three sectors of the economy when this causes the entire economy distress?"

Undoubtedly, there will be recessionary trends in certain sectors of the economy. People in those sectors will suffer; there may even be closures and job losses till the assets are sold and restructured. Also, the government will, in all probability, have to go along with the IMF demand to allow easy entry and exit to companies.

Quick compensation

But the rest of the economy is unlikely to be seriously affected. Parikh feels that growth rates will fall by only 0.5 to 1 per cent. He argues that cuts in government spending will be more than compensated by increases in the efficiency of the economy overall. Others also feel, as has been the experience elsewhere, that a revitalised industrial sector will very quickly create many more jobs than those lost.

The balance of payments should come under control, if the government cuts the fiscal deficit. Aggregate demand, which diverted production to the internal markets, will be reduced and producers will be forced to seek external markets. Yet, even with a stiff dose of currency devaluation, the gap between exports and imports will continue to grow until manafacturers gear themselves up to take on external competitors.

On the financial front, with quantum-related interest rates applying to priority sector lending, a movement to exclude

the relatively medium and large small scale units from concessional finance has already begun. Yet, bankers argue that financial deregulation should be introduced in a phased manner. Otherwise the current spurt in interest rates, as the experiment with market determined interests continues, could be accentuated.

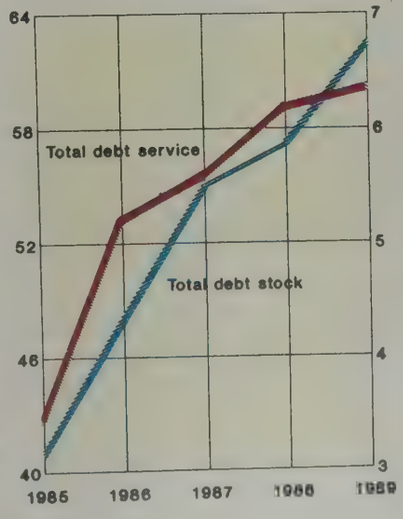
Pent-up potential

Even with all these caveats, the IMF recipe should unleash the pent up potential within the economy. And yet, however desirable the conditionalities may be, it is apparent that the minority government will find it difficult to push through the reforms. Because of the very fact that it is a 'minority' government, the new governement requires the support of the other major parties in this move towards the IMF. Yet it is not clear that the other political parties are in a mood to support that.

Says Janata Dal supremo V.P. Singh: "I can't answer the question whether we will support an IMF loan. It all depends on the economic package that will come along with the loan." BJP president Murli Manohar Joshi too has a similar view. The CPM, with all its reservations against the IMF and the World Bank and its socialist pretensions, can hardly be expected to agree to the conditionalities. Said CPM spokesman, Harkishan Singh Surjeet: "We would like to explore all other possibilities, like raising funds from NRIs, before thinking of approaching the IMF." In fact, there may not be total unanimity even within the ruling party about the IMF conditionalities. A large number of MPs elected are from predominantly rural constituencies. Since a major impact of the IMF conditionalities seem to be affecting the farm sector, such MPs will necessarily resist the idea. Said one such MP: "How can food and fertiliser subsidies, higher costs of farm inputs, and abolition of the differential rate of interest for agriculture be supported. This will only give a handle to Devi Lal and his likes. They will bounce back."

Neither will labour leaders, cutting across party lines, be agreeable to such a package. Says George Fernandes: "Given the compulsions of the Indian polity, will the IMF understand the country's problems and not insist on some of the tougher conditions to allow the Indian government to save face. In other words is there any room for manouverability while negotiating with the IMF?"

Given the experience of our bureaucrats in dealing with institutions like the IMF, it is unlikely that they will be pushed around. Given the magnitude of the problems facing the country, even a majority party would have to take the opposition parties into confidence. Pranab Mukherjee is toying with such an approach. It would make opposition leaders more aware of the gravity of the situation. It would also make them more responsible in their opposition.



A watch factory: no more cheap finance for medium and large units

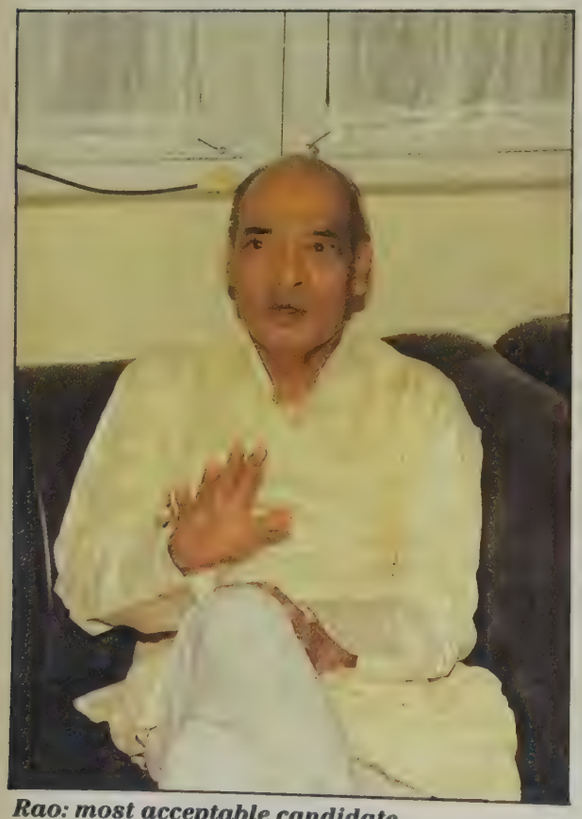
Easier to negotiate

However, for this government, it will be easier to negotiate with the IMF. It has experienced hands and senior leaders, who have been ministers before and know how to deal with the bureaucracy. "We are not as closed as the socialist or the leftists are to what they called imperialist ideas," says Mukherjee.

If, however, the Congress (I) works with the constant fear of a mid-term poll hanging like the Sword of Damocles over its head, its government will prove more unsuccessful than the Janata Dal's. It will have to face up to all opposition, take cognisance of the need of the hour and take tough decisions. It will have to work efficiently and deliver what its late leader Rajiv Gandhi had promised: a government that works.

Total debt stock and service
($ '000 millions)

Agreeing to the IMF conditionalities would, at the very least, signify a recognition of the fact that, in the quest of a self-sufficient India, the leadership of this country has, for all these years, taxed the poorest segments of the population most severely to subsidise protected industries and the protected jobs of the middle and upper classes. Those who flourished did so because they could exploit the weaknesses of an over-regulated system. It is these elements who can be expected to fight hardest to prevent implementation of reforms like the ones likely to be suggested by the IMF. The shift must be to a new situation where we redefine self-sufficiency to mean the ability to pay our way in the world and to be able to earn enough from exports to pay for all our foreign exchange needs. It is only then can we say that we are equals amongst the other nations of an increasingly interdependent world.



It is by no means clear which side will win eventually. What should be clear to everyone by now, though, is this: it is only through the implementation of such reforms that India will be strong enough to avoid having to approach the IMF for help ever again.

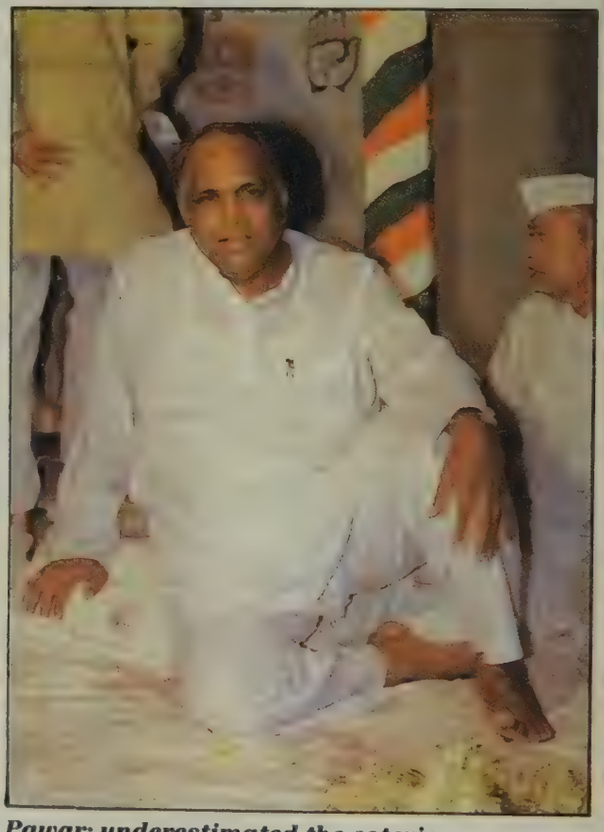
■ ARIF SHARIF, RUCHIRA GUPTA, KINGSHUK NAG and EAPEN THOMAS

The winner and the vanquished

The drama attending P.V. Narasimha Rao's nomination as prime minister by "consensus" last week was a sad reminder that the Congress (I) is yet to come out of the shadows of the politics of the Indira Gandhi era. Patronage and sychophancy rather than intra-party democracy triumphed while the party struggled to find a new leader

Groomed in the Gandhi family school of political patronage for well over two decades, senior Congress leaders forcefully and successfully resisted all attempts to shove aside their atavastic feudalistic ways last week, as they installed — "by consensus" — the 70-year-old P.V. Narasimha Rao as the new prime minister of India.

Rao: most acceptable candidate



Amidst all the gloom that descended on the country last month following the assassination of Rajiv Gandhi, the effect of the tragedy was somewhat mitigated by the comforting thought that it represented a chance for the century-old Congress party to go back to its old and forgotten tradition of being governed by inner party democracy. But that was not to be — as Maharastra chief minister Sharad Pawar found out last week as his efforts at becoming the prime minister through a democratic process was systematically destroyed by his own partymen. And while Pawar, a grassroot politician with a mass base, lost out, Narasimha Rao who, despite his impressive credentials as a Congress party ideologue, had never won an election to the Lok Sabha on his own strength, made it into the South Block.

Despite the fact that he never publicly said so, all through the last month of election campaigning it was quite evident that Sharad Pawar was a serious contender in the race for the prime ministership. In the meetings that he addressed after Rajiv Gandhi's assassination he had suddenly changed tracks from talking about regional Maharashtra-oriented issues to ones about national unity, Punjab and Kashmir. And privately he did admit to close friends and some journalists that moving to Delhi was seriously on his mind.

At that time, Pawar's hopes were bolstered by the fact that many Congress leaders from the south, especially the likes of K. Karunakaran, the Kerala party boss had stood by him when he had mildly resisted the efforts of R.K. Dhawan and company to have Sonia Gandhi installed as Congress president within 24 hours of Rajiv's assassination. And Karunakaran along with Janardhan Reddy of Andhra Pradesh and S. Bangarappa in Karnataka had at one time or the other indicated that they would support him in case of a race for the prime ministership. Pawar's task to announce his candidature in public fora was made easier by foe-turned-friends like A.R. Antulay who had already started proclaiming him as the prime minister of the country.

In retrospect though, Pawar did seem to have made one mistake — of proposing the then-thought-to-be non-controversial P.V.Narasimha Rao for the post of the interim president of the Congress. Rao had, at least in the initial stages, given the impression that he was not interested in continuing in active politics (he did not seek a Congress ticket from Rajiv Gandhi for the 1991 elections on the ground of ill health) and Pawar seems to have readily believed him. In fact, talking to two foreign journalists at his farm at Baramati, near Pune just two days before the elections he had talked about N.D. Tiwari and Arjun Singh being the real competition for him rather than Rao.

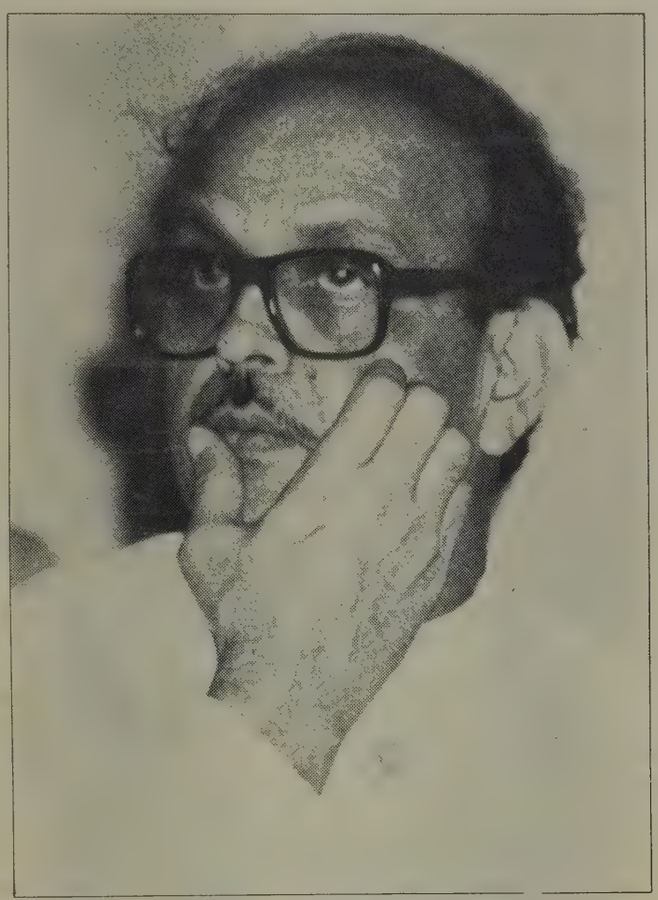
On the evening of Sunday 16 June, as the news from the election counting centres first started flowing in, Pawar sitting at Varsha, his Bombay chief ministerial mansion, seemed a happy man. Early results indicated that the Congress had done better than even he had expected in Maharashtra, and to a friend calling from Delhi he had rightly predicted a rout for the party in Uttar Pradesh and the fact that it would not get a majority. For

Pawar: underestimated the coterie

Pawar this meant one important thing — N.D. Tiwari, at least, was out of the race for the prime ministership.

So, by the time he flew down to Delhi in the early hours of Tuesday morning, Pawar probably was making plans to battle Arjun Singh, rather than Narasimha Rao, in his bid to become prime minister. But the hardworking minds of the likes of R.K. Dhawan, Makhanlal Fotedar, Satish Sharma, Vincent George, Ghulam Nabi Azad, Pranab Kumar Mukherjee, all of whom were till then scared of political demise, had a different kind of reception planned for even as wily a politician as Sharad Pawar.

A vain try



Pawar, some say had lost his bid even before he landed in Delhi considering the kind of intense lobbying undertaken by the so-called coterie. Under no circumstance did they want Pawar, who has his own power base, to take charge in Delhi. On Sunday they got one of their own proteges and Pawar's foe, Shivajirao Nilangekar, the president of the Maharashtra PCC(I), to make a press statement declaring, "anyone but Pawar".

The coterie has had an old enmity with Pawar. After all, a large number of old time Congressmen still consider the Maharashtra CM as a betrayer and an usurper. A Congressman till 1978, he had toppled the Indira Gandhi-appointed Vasantdada Patil ministry in Maharashtra by walking out of the party and teaming up with the opposition to become the state's chief minister for the first time. Mrs Gandhi never forgave him in her life time and it was only after all other efforts to enlarge the Congress(I)'s base in Maharashtra failed that Rajiv Gandhi wooed Pawar back into the party in late 1986.

But the likes of Dhawan and Mukherjee, die-hard Indira loyalists, never really patched up with him. During the 1989 general elections when Pawar flew to Delhi with the list of candidates for the Lok Sabha polls, he was made to wait in the reception room at 7, Race Course road. When, affronted, he decided to go back to Bombay without meeting Rajiv Gandhi he was told by R.K. Dhawan, "You look after your state and we will look after Delhi." His list was not considered and the party fared badly in the elections.

But when the assembly elections came around, Pawar went quietly to Delhi, met Rajiv secretly and got his list through. The party performed much better. Since then the coterie, which was bypassed, has seen Pawar as a potential threat. They worked hard at convincing Rajiv that the Maharashtra chief minister was trying to establish a parallel power centre. They even carried back reports of Pawar taking lessons in English as proof of his growing ambitions.

Now, as Pawar made his prime ministerial intention clear, they worked overtime to check him. They pulled in Rajiv's widow, Sonia, to back their move so. It was, reportedly, at their behest that she began meeting MPs and showing her prefrence for Rao. Earlier, some of these MPs had supported Pawar, but they backed out after meeting Sonia. Part of the strategy was to project Arjun Singh as a dummy candidate to block Pawar and ultimately, as a consensus, appoint Rao to the post. The move for unanimity and consensus in the choice of the candidate for prime ministership was the inspiration of the coterie.

V.P. Singh: the BJP needs to be contained

But what they did not reckon with was that their dummy candidate — Arjun Singh — would suddenly become ambitious himself. He tried to provoke a direct confrontation between Rao and Pawar so that he could emerge as the consensus candidate. Towards this end he got Kamalnath, MP from Chindwara to speak for Rao: "Those who deserted the party in times of crisis (Pawar during the Emergency) should not lead the party now." Later it was learnt that he was appeased with the promise of the party presidentship.

In the three days of the ding-dong battle that followed, Pawar pulled all stops to try and checkmate Narasimha Rao's candidature by raising the issue of democratisation of the party. All Congress leaders who felt that this was the one chance to get rid of the personality cult which had overshadowed the party took his side. "Those who believe in the importance of the MPs over the coterie are with Pawar," explained Suresh Kalmadi, Rajya Sabha MP, and a Pawar supporter.

Surprise support

Also backing Pawar, surprisingly, was Madhavrao Scindia. One of his supporters says the scion of the Gwalior royal family believes that the "secret ballot is the best bet for strengthening the party which has not had elections for 25 years." P. Shivshankar, Najma Heptullah and 30 other RS MPs also rallied around the Maharashtra chief minister. Through the help of Jyoti Basu, Pawar even met another old enemy, industrialist Dhirubhai Ambani over lunch in the hope of bringing some more MPs into his fold.

But what really seems to have worked against Pawar was the fact that Kerala Congress chieftain K. Karunakaran, who had initially promised him support, backed out after the first day and started canvassing actively for Narasimha Rao and the so-called 'consensus' candidature. Apart from being an old-time Congressman, Karunakaran had suddenly acquired importance because of the fact that as many as eighteen Congress MPs were elected from Kerala. He claimed that he had an old-time 'emotional bond' with Rao and could not leave him in the lurch. And when asked why he himself did not stake a claim for the prime ministership, he replied that he preferred to be the king-maker.

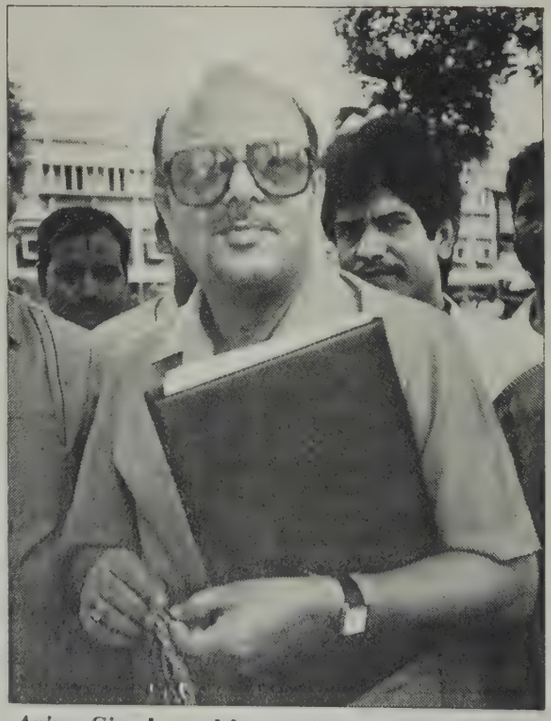
Apart from making sure that in case of a secret ballot a majority of the Congress MPs from Kerala would not back Pawar,

The quiet veteran

Pamulaparti Venkala Narasimha Rao may not have wished for the prime ministership of India as a birthday gift (he turns 70 on 28 June). An offspring of a genteel middle-class family, Rao has never harboured tall ambitions. It is possible that despite his long innings in politics, the idea that he would one day rule the country may never have crossed his mind.

Rao has never posed a threat to any party leaders, who have perhaps perceived him, at best, as an able second-in-command. In fact, he has always moulded himself to the wishes of the party leader, without consulting whom he has never been known to take any decision. To cite an instance: Rao belongs to the old guard in the Congress party. He is of the traditional school of thought which sees a place for the public sector at the commanding height of the entire industrial structure. He vociferously opposed Vasant Sathe's proposal that liberalisation be part of the Congress economic programme in the 1988 Congress Working Committee meeting in Madras. Yet, this year he was involved in drafting the Congress manifesto which has on its agenda privatisation and a reduced role for the public sector!

Self-effacing "draftsman". Communist leaders, therefore, jokingly say that Rao is "just a good draftsman". But this, according to senior Congress leaders, is typical. Rao submerges his own personality to whatever he feels is the party's wishes. In fact, this self-effacing trait could be why he has survived for four decades in a party riddled with cliques and factions without having any support base of his own. He even lost his Hanamkonda Lok Sabha seat in Andhra Pradesh in the 1984 "sympathy wave election" (following Indira Gandhi's assassination) to an obscure BJP candidate. He played safe in 1989 by fighting from Ramtek, Maharashtra, a seat which ironically Sharad Pawar helped him win.



Rao's long innings in the Congress has been marked by steadfast loyalty to Indira Gandhi and her son. To please Rajiv (according to Margaret Alva), he even went to the extent of taking flying lessons and developing an interest in computers — he has three at home, including a laptop. As HRD minister, Rao reportedly told Rajiv that he had prepared the entire national education policy on his PC.

A strong believer in the status quo, Rao is short of ideas but can implement them very well once they are suggested to him. He has not left his mark on any of the important portfolios he held — HRD, foreign affairs, defence, health and family welfare, and of course, the controversial home ministry during the infamous 1984 Delhi riots. However, senior bureaucrats think highly of him. They say he is

the wily Karunakaran also made sure that his old time colleagues like G.K. Moopanar from Tamil Nadu and Janardhan Reddy from Andhra Pradesh also came out in favour of Narasimha Rao. On the other side, members of the coterie went a step further and spread the news that justice and law minister Subramaniam Swamy, also an old time Pawar enemy, had sent files relating to an alleged land scam involving Pawar in Bombay to the President. On Wednesday afternoon Pawar met friend N.K.P. Salve for lunch where the latter told him about the Swamy incident.

Lost support steadily

Eventually, by Wednesday night (19 June), Pawar found that the support for him was whittling away by the hour. The only solid non-Maharashtra leader who was still with him was Madhavrao Scindia, and a rough count indicated that in case of a secret ballot he would get less than a 100 MPs to support him. And so, on Thursday morning he called up Karunakaran at the Kerala House to tell him of his decision to bow out of the race. Soon thereafter, he issued a letter to Narasimha Rao saying that he was opting out of the race in the interests of the party. And a few hours later Rao was, as desired by the coterie and the likes of Karunakaran, elected by 'consensus' as the leader of the Congress parliamentary party. "Sharad Pawar," said an old friend who had camped in Delhi all through the drama, "suffered from the severe handicap of the lack of a strategist like R.K. Dhawan to campaign among the MPs to support him."

Arjun Singh: sudden ambitions

The advantage of having Rao as prime minister is that he has always been a survivor, and, therefore, not displeased or alienated anyone. In that sense, he is the most acceptable and could pull all the different forces of the party together. The shift of the Congress power base to the south now could mean more political patronage to that area. This could lead to discontentment in the North and consequent dissidence in the Ganga-belt cadre. But it could also pull South and North together because now that the region below the Vindhyas will dominate the politics of the ruling party, the South may not feel left out. At the same time it could erode the strength of other regional parties in the South which grew out of a sense of alienation from the national mainstream.

The perceived disadvantage of Rao's prime ministership is that since he is a nominee of the coterie he will be a tool in their hands. Already they have surrounded him and have begun to make him inaccessible. No reporter was allowed to meet him even on days preceding his appointment, and when this correspondent did manage an entry, Rao was found surrounded by Azad, Dhawan and Fotedar. Rao barely answered one question, and a request for a photograph elicited the response, "Please take permission from Azad."

Meanwhile, the next few days promise to witness horsetrading on the grand scale as the Congress party is still short of a majority and neither the Left Front or the National Front is willing to enter into

efficient, painstaking and takes intelligent decisions.

Rao's track record in academics is quite good. He studied at the Osmania, Bombay and Nagpur universities (BA, LLB). (He had wanted to study maths at Cambridge.) Rao topped his school leaving examination but was not allowed admission in a college there because he had taken part in an anti-nizam procession. That led him to Nagpur University where he graduated in science. While receiving his law degree from Bombay University, he earned a gold medal.

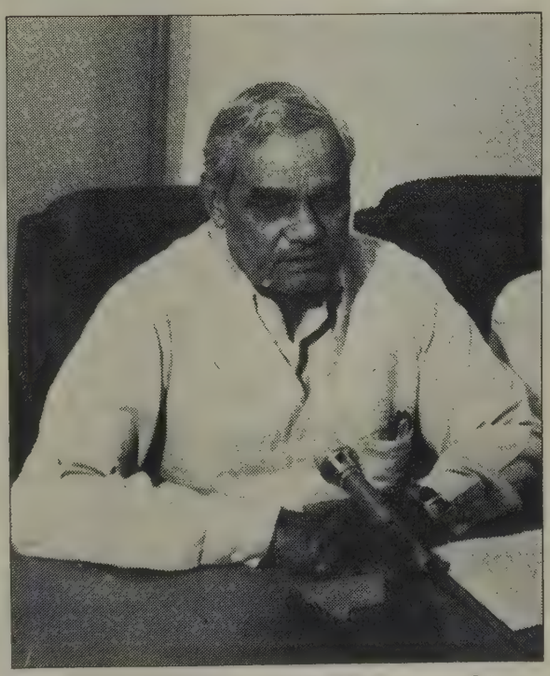
Literary linguist. His academic qualifications are backed by a razor-sharp mind. A Spanish television crew was amazed when PV replied in fluent Spanish to a question put in English. He speaks Telugu, English, Hindi, Marathi, Urdu, Persian, Sanskrit, Arabic, French, Spanish. He has also translated a Telugu book into Hindi and a Marathi novel, *Pan Lakshat Kon Gheto?* (*But who takes notice?*), into Telugu. For six years he was chairman of the Jnanpith award committee.

However, Rao's tenure as Andhra chief minister (1971-73) was marked by the beginning of the separatist Telengana stir following which he resigned. Indira Gandhi then decided to pull him into national politics. He was made party general secretary during the Emergency and external affairs minister in 1980. Since then he has not looked back. He was given the home portfolio a month after Operation Bluestar. Rajiv made him defence minister, then shifted him to the new human resources development ministry.

This was when he allegedly tried to cut to size Rajiv's biggest detractor — V.P. Singh. Rao is believed to be a disciple of Chandraswami, prime accused in the St. Kitts forgery case. Rao's detractors say that as foreign affairs minister he was involved in the forgery which showed that V.P. Singh's son, Ajeya Singh had an illegal account in St Kitts which violated the Foreign Exchange Regulation Act.

A Brahmin by birth, Rao belongs to the community which kept the village land records for centuries in Karimnagar in Andhra Pradesh. He has three sons and five daughters, none among whom live in Delhi. His wife died in 1969. He is not known to be corrupt nor to favour any member of his large family. Jaipal Reddy of the Janata Dal, a close friend of PV's eldest son Ranga Rao, who is now a Congress MLA in Andhra Pradesh, testifies: "As far as I know, he has been relatively clean throughout his career."

Rao decided not to contest the elections on health grounds — he recently underwent a heart bypass surgery. But considering he has now accepted the more taxing task of heading a minority government, he perhaps did not contest because he feared he would lose.



■ RUCHIRA GUPTA

coalition with it. Says V.P. Singh, "If we nter into a partnership with the Congress, we will hand over opposition to the BJP, which will be very dangerous for the ountry." The Left Front is wary of entering into a coalition, in spite of Jyoti Basu rying to persuade the politburo to do so, ecause they remember the time when he CPI supported Mrs Gandhi. "At that ime, the image of Mrs Gandhi and her arty was seen as progressive and the imge of the CPI suffered. In fact it has never ecovered since then," said a CPM politburo member.

Big business tries hard

ndustrialists camping in Delhi were trying very hard for a Congress-CPM coalition. They are also attempting to break away a portion of the Janata Dal. Dhirubhai Ambani camping in a five-star otel in Delhi, according to informed ources, arranged a meeting between Jyoti Basu and R.K. Dhawan. Pranab Mukherjee was also present. Sanjay Dalmia was trying to persuade Ajit Singh to defect. Rajan Pillai of Britannia was also seen camping at Taj Mansingh, and so was a member of the R.P. Goenka family. Bihar chief minister Laloo Yadav was approached by a member of the Birla group but, so far, he has resisted all efforts to get the Janata Dal help the Congress.

Orissa chief minister Biju Patnaik and Ajit Singh were quite keen to join with the

BJP leader Vajpayee: totally opposed to a coalition with the Congress

Congress in some sort of coalition but the Lohiaites in the party — George Fernandes, Sharad Yadav and Ram Vilas Paswan — severely reprimanded them for even thinking that way. "We will lose our entity if we do so," said Madhu Dandavate. However, at the meeting of the party's parliamentary board it was decided that all those who wanted to join the Congress would be allowed to do so and to prevent the anti-defection law from applying to them the party would say, if they liked, that they had been thrown out of the party.

The BJP was not averse to participating in a national government but is totally opposed to a coalition. It feels that its continued projection as the only party who has never had any truck with the Congress or derived any of its leaders from there is an advantage it can build upon. But senior Congress leader Vasant Sathe feels that the BJP's showing in the elections is the maximum it will ever achieve. "It has the free run of UP but if it cannot deliver administration or the temple it will lose the third state in the cow belt and then where will it stand? It will have played its trump card of Ram."

The BJP's leaders have met several times in the last few days to work out their role as the main opposition party. On several counts their manifesto tallies with the conditionality of the IMF loan, and a strange situation could develop in parliament with the opposition parties supporting some of the bills and the parties which have decided to support the ruling party issue by issue opposing its bills. The tenth Lok Sabha promises to be one of the most tumultous parliaments in history, with direct confrontation between the various parties likely on several issues.

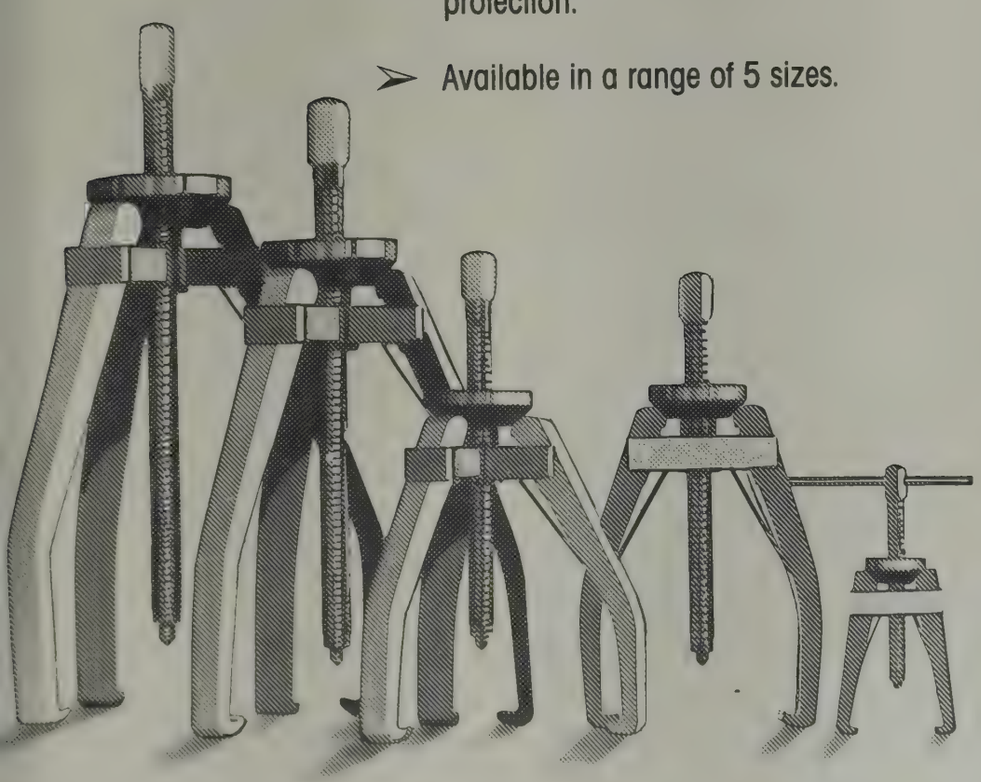
Radha Laxmi Silk Mills.

"To extract small and medium size bearings – SIBCO® Pullers! Or else damage your bearings and shafts too."

During every overhauling operation, invariably one or two bearings got damaged.

In addition, D'Mello found nasty abrasions on the shaft caused by Chisels, Hammers and the other crude substitutes being used to dismount bearings.

Then one afternoon a customer suggested SIBCO® TMMP Pullers, for extracting bearings.



And that signalled 'goodbye' to outdated methods of dismounti small and medium bearings!.

Skefko India Bearing Co. Ltd.
Mahatma Gandhi Memorial Building, Netaji Subhash Road, Bombay-400 002. Phone-313567.

ULLERS FOR CORRECT ISMOUNTING OF SMALL AND EDIUM BEARINGS.

- Suitable for extracting small and medium size bearings from shaft.
- Adjustable span width from 65 mm to 300 mm.
- Easy centering and better distribution of withdrawal forces.
- Convenient and handy to use on the shopfloor.
- Surface treated for corrosion protection.
- Available in a range of 5 sizes.

Yes! I am interested in **Bearing Pullers.**
So please provide me: (Please tick ☑)

1. Price details ☐
2. Technical Specifications ☐
3. Sales Discussion ☐
4. Demonstration ☐

BEARING*PLUS*

I also understand that your 'Bearing Plus' programme covers various other advanced and innovative bearing maintenance products.

I therefore request you to recommend and send detailed information on only those products which will help solve my bearing maintenance problems like: (Please tick ☑)

1. Under/Over lubrication ☐
2. Damage of shaft while dismounting bearings ☐
3. Uneven heating of bearings ☐
4. Mounting/ Dismounting of large bearings ☐
5. Others (specify if possible) ☐

I look forward to welcome this new era of TROUBLE FREE OPERATION. Let me introduce myself:

STEEL

Of controls and clout

The severe foreign exchange crisis which hit the country two months ago has brought to a halt many forward looking proposals of the government of India. One of them is a scheme to deregulate the prices and distribution of steel.

The proposal was at an advanced stage, when last fortnight, the ministry of finance refused to clear a part of it. Specifically, North Block bureaucrats were chary of consenting to that part of the proposal which envisaged freer imports of steel (by putting it on the open general licence) simultaneously with deregulation. This move was obviously to prevent domestic producers from hiking prices after deregulation — a distinct possibility in the prevalent situation of excess demand.

Krishnamurthy: "Decontrol will send prices up"

Overdue move

With that a long overdue move — which has been pressed for by the two main steel producers, SAIL and Tisco — goes to the back burner for the time being. The proposal for decontrol was, in recent years, pushed forth by the then SAIL chairman, V. Krishnamurthy, and Tisco chairman Russi Modi, two years ago. But what brought things to a head in recent months was a report on the subject by the Bureau of Industrial Costs and Prices (BICP).

The BICP study categorically recommended decontrol of steel prices (in a phased manner) and simultaneously reduction in import duties to allow for imports at reasonable price levels. The BICP report itself was based on a study done by the National Council for Applied Economic Research (NCAER) which held that by lowering the import tariff on steel by approximately 50 per cent, Indian steel would become 13 per cent costlier than the landed prices of imports. To decrease domestic prices of steel by 13 per cent and become competitive with imports, the main producers would have to increase their efficiency by 17 per cent, the study stated. Apparently, the BICP checked with SAIL the possibility of increasing efficiencies at this rate and the public sector company's answer was in the affirmative. So, presumably on the basis of this assurance, BICP gave its recommendations.

Even though steel decontrol is now on the back burner, both SAIL and Tisco officials are optimistic that sooner or later the move would be revived, the forex crisis notwithstanding. Says a senior Tisco official: "There is no other way. Had it not been for the fall of the Chandra Shekhar government it would have gone through in the last session of parliament. But we expect that any new government which comes in after the elections will be forced to pass it."

In fact, many steel industry insiders think that if a proper government were in place it could well have approached the World Bank and IMF for a structural loan to finance the imports of steel that would result from its being put on the OGL. This would have obviated the need for putting a draft on the scarce forex resources of the country. "The multilateral agencies would surely have lent for this purpose," says one such advocate of this line of thought, "because linked to the fortunes of steel is the entire industrial edifice of the country."

A SAIL plant: decontrol alone is not the answer

Case for decontrol

However, price and distribution controls do not apply to the whole of Tisco's or SAIL's production, but according to estimates only to 60 and 87 per cent of their output respectively. All this is a result of a process of gradual decontrol since 1964 by which many steel products are outside the purview of controls.

On paper, the case for decontrolling steel prices and its distribution is crystal clear. In the words of former SAIL chairman, V. Krishnamurthy, who during his

tenure vigorously campaigned for decontrol: "In a situation where the supply situation is bad, price and distribution controls have stunted growth in the industry and sapped the enthusiasm of producers. It has also distorted the investment pattern and prevented supplies from keeping pace with demand. Besides, distribution controls have bred corruption."

This is not all. According to a note prepared by SAIL: "(because of controls) capacity creation has remained inadequate. Capacities have been of inefficient scales of production adopting cost ineffective technologies... (simultaneously) controlled imports have insulated the domestic industry from international competition..." All this has led to an adverse impact down the line. Steel production costs and hence price have been higher than what they should have been. In turn this has raised the costs of production of engineering goods.

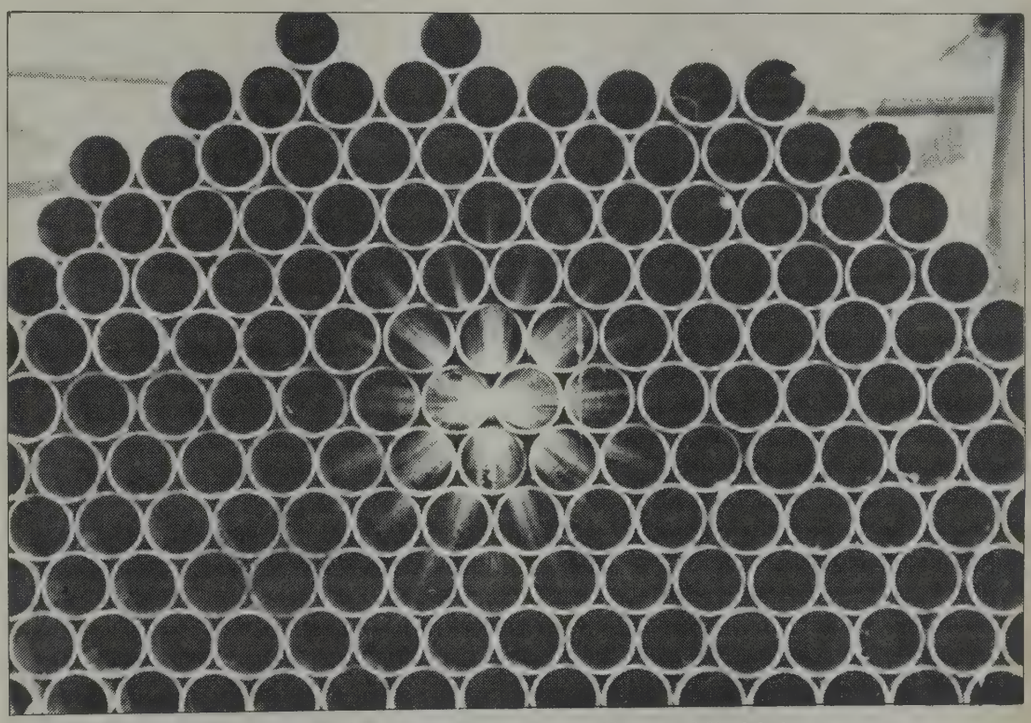
The peculiar thing about controls on steel is that it only applies to the main producers: SAIL and Tisco. The significant amount of steel produced in the secondary sector (the mini-steel plants which use electric arc furnaces) is outside the ambit of any price or distribution controls. Not only this, the main producers are also subject to some additional levies — like contributions for the steel development fund, engineering goods exports assistance fund and JPC cess — which do not apply to the secondary and tertiary sectors. Says a SAIL official who does not want to be named: "As such this policy is discriminatory and perhaps bad in law. How can you justify things like the fact that bars and rods produced by mini-steel plant re-rollers are free of controls, while identical items produced by SAIL and Tisco are controlled. And this is only one example."

The mini plants' view

But the mini-steel units feel that, by and large, there are strong reasons for the products of their plants not coming under price control. For one thing, the product mix and consumer profile of the mini-steel units are quite different from that of the integrated steel plants. The latter mostly concentrate on heavy steel products like rails, heavy structurals for bridges and other construction work.

"Most of the products from mini-steel plants go to a large number of medium-sized consumers in engineering and construction while the products of integrated plants go for large construction and engineering projects," points out R.N. Singh, executive director (commercial), Mahindra Ugine Steel Company (MUSCO). "In fact the government itself is a large purchaser of steel from the main plants and that is one major reason why it wants to control the prices to some extent," he adds. The railways, for example, is one of the large buyers of steel from main plants. The argument is that if the steel prices go up it will create a ripple effect and ultimately the common man will have to bear the higher prices.

Another reason why the mini-steel plants should not come under price control, says Singh, is that the prices of their raw materials like scrap, ferro alloys, electrodes are determined on the basis of market forces, unlike the main inputs like iron ore and coal for the large plants which are mostly controlled by either the central government or the state agencies. "If the government cannot control the input prices how can it control the output prices?" asks Singh.



Operationally, monitoring prices of a mini-steel plant is also very difficult as there are nearly 175 all over the country. The quality of their products also varies widely making standardisation very difficult.

Effect of controls

And above all, even if the products of mini-steel units were brought under price control, it would not have made much of a difference to the large plants because only about 15 per cent of their total production is of products common to those of mini-steel plants.

But this does not mean that mini-steel units are against decontrol. "We wholeheartedly support the withdrawal of price control on steel. Let there be fair competition and let the efficient units reap the benefit," observes a senior official in Mukand Iron & Steel, the largest among the mini-steel units.

A SAIL official points out that controls affect steel companies in other ways too. "For instance, in situations of shortage, the distribution guidelines have to be strictly followed by producers. But in surplus situations there is no basis on which the consumers can be persuaded to increase their offtake. When stocks build up, the steel companies are accused of not being market-oriented."

Steel tubes: Indian production costs are among the world's highest

It is not that controls affect the main steel producers only adversely. They often take advantage of the situation, to the detriment of their consumers. This is only possible in a situation of control. As S.P. Pal, associate director of NCAER and a member of the working group on steel for the Eighth Plan puts it: "Operating under captive market conditions and a situation of perpetual shortages works to the advantage of the main producers. They do not understand the market and neither do they want to. This is especially so in the case of finished products."

In such a situation production plan

ning is faulty. Pal gives an example. He says that in recent years the Bhilai steel plant has added capacities for thick quality plates for which there is no demand. At the same time thinner varieties have to be imported. "In a competitive markets only products in demand would have been produced," says Pal.

Bypassing regulations

Another reason why there should be decontrol is that all the time, and often successfully, SAIL and Tisco are looking for ways to bypass the price regulations. An insider points out: "For the last few months SAIL has not been making enough profits. So it bypassed the JPC control on prices of billets and blooms by decreasing the sizes of billets and blooms and calling them mini billets and blooms. These are being sold in the market to rollers at prices higher than the controlled ones. So what is the use of controls if anyway they will be bypassed?"

Price controls lead to distortions in other forms too. It often leads to cross-subsidisation of certain steel users by others. A steel analyst points out: "For a number of years the construction industry is being subsided by users of steel in the industrial sector. This is because flat products used by the construction industry are under price control and to compensate for the losses due to the unrealistic prices, other products are overpriced, something which is possible because of the monopolistic nature of the producers."

In the final analysis, just decontrol of prices and distribution of steel will do little to revamp the country's steel industry, whose production costs are among the highest in the world, despite the availability of all raw materials locally. Comments an analyst: "So long as there are only two main producers of steel, both of whom enjoy enormous clout with the government, things are not going to change. Only if the monopolistic position of these two companies are eroded can there be genuine decontrol."

Salem steel plant (SAIL): SAIL thinks modernisation is most critical

The government obviously is aware of this. In line with this thinking, last year it allowed the private sector to set up steel plants of up to one million tonnes per annum capacity. But as insiders point out, nothing much has happened with the implementation of the policy, primarily because of the pressures exerted by SAIL to prevent licences being granted. SAIL officials deny this.

Decontrol alone won't help

It is interesting to note that while SAIL and Tisco have been clamouring for decontrol, that alone will hardly put the industry on an even keel. Perceptive analysts point out in a shortage situation prices would shoot up. This is why the main producers are unhappy with the idea of putting steel on the OGL for imports. The thinking in SAIL is that plant modernisation is the most crucial issue confronting the industry. To accomplish that resources of about Rs.13,000 crore are necessary, which will not be forthcoming from the central government budget. The only way that SAIL can raise the necessary resources is by freeing prices which will then escalate, and then finally mopping up the surplus.

This is what it is attempting to do with its Burnpur plant. Its capacity has been derated to between 0.3-0.6 million tonnes so the traditional reason of clamping controls on 1 millon tonne plants does not hold. Then, a substantial proportion of its product range is produced in the private secondary steel sector which is outside the JPC's control. "So why should one manufacturer receive a price twice that of another for the same product," says a SAIL official. More importantly, the Burnpur plant has consistently made losses (not owing to SAIL's management as it was taken up from the private sector) and SAIL hopes that by taking it outside JPC controls the plant will begin making cash profits at least by next year.

Steel consumers are aware of this line of SAIL's thought and that is why they do not unconditionally welcome decontrol. Said a senior official of the Confederation of Engineering Industry (CEI): "As a concept we agree that there should be decontrol and market forces should be allowed to operate. But it has to be ensured that simultaneously imports are on OGL."

Even V. Krishnamurthy confesses: "With decontrol there will be a natural tendency for prices to go up. But I am sure Tisco and SAIL will not take consumers for a ride." And a TISCO official says candidly: "The prices of 30 per cent of the products will go up in the short run."

An indication of things to come may also be had from what has happened to steel prices for that part which is decontrolled. In the last one month prices of billet per tonne have risen from Rs.8,500 to Rs.10,500. All this only points to the need for fresh capacities to give decontrol a genuine meaning. But adequate capacities may not be too easy to put up. The demand-supply gap for steel, which was 14.2 million tonnes in 1990, is expected to go up to 22 million tonnes by 1995 and 32 million tonnes by the turn of the century. ■

KINGSHUK NAG and ARIF SHARIF with DILIP MAITRA in Bombay

VST INDUSTRIES

Seizing the moment

The cigarette manufacturer has turned in a sterling performance in its diamond jubilee year — the culmination of three years' strategic planning. The drive to achieve technological supremacy and its most ambitious move into the premium brand segment reflect the new spirit in the company

Quite often success is a matter of getting timing right. Ravi Bhoothalingam, managing director of the Hyderabad-based VST Industries Ltd, certainly has. A strategic plan, set into motion three years ago, to develop a world class manufacturing base, achieve "quality through technology", was implemented right on the dot. When the final phase is through by December 1991, VST can stake a claim to having one of the most modern cigarette factories in this part of the world.

The benefits of a superior sophisticated manufacturing process have begun to show. In its diamond jubilee year, this cigarette manufacturer, of Charminar and Charms fame, has turned in a sparkling performance. Turnover touched a high of Rs.430 crore, profit before tax zoomed by 60 per cent and the share price scaled an all-time peak of Rs.170. In recent years VST's scrip has changed from a steady to a star performer in the stockmarket. The company's shareholders have other reasons to be pleased: a dividend of 45 per cent (inclusive of a 10 per cent jubilee dividend, it marks a rise from 30 per cent last year), a second 3:5 bonus issue within two years and an earnings per share of Rs.10.11 has crossed the face value. VST's board has assured investors of a minimum 28 per cent dividend in the next financial year.

Renewed confidence

Sheer bravado? Not quite. Rather it is a measure of the renewed confidence that is surging through VST today. The company's financial fundamentals are stronger than ever before and compare well with its competitors (*see table*). In an industry that is both highly taxed and intensely competitive, VST has managed to hold firm to its 18 per cent market share. Last year, following the MRTP Commission's diktat, the company offloaded its equity holding in Bhadrachalam Paperboards Ltd. Now VST is sitting pretty on a pile of cash — Rs.15 crore — which should come in handy given the company's future intent.

That too has now been clearly chalked out: to establish a brand in the premium cigarette segment in which it has not had a presence till now and to diversify into agri-related businesses. Both are in the mould of VST's mightier associate, ITC Ltd which has, over the last 15 years, been consciously attempting to reduce its dependence on the cigarette business by diversifying into the hospitality (hotels) and agro industries.

The commonality in views is only to be expected since both companies have the same overseas connection. BAT Industries, the UK-based multinational, has a 30 per cent shareholding in both. Last month VST's first premium brand, Kingston, a king size filter cigarette, was launched in Bombay. A collaboration for the Rs.30-crore agri-venture should be wrapped up this year. With all this the transformation of the "Charminar company", which began in the mid-eighties, will be complete.

Bhoothalingam: right on the dot

Until the eighties, VST had a narrower outlook and an image as a one-brand company making the cheap, though immensely popular Charminar non-filter cigarettes. Mohammed Vazir and Mohammed Sultan, the two distillery owners who founded the Vazir Sultan Tobacco Company after procuring a royal charter from the nizam which permitted them to brand their product after the famous monument that graces the nawabi city, could have little imagined the future course their company was to take. Bought over by BAT Industries in November 1930, the company continued to exist as an appendage of ITC. With VST's management, production and distribution controlled by ITC it was only natural for decisions to be deferred to Calcutta.

The general perception of the ITC-VST

The primary manufacturing department: overhauled while operational

combine as a monopolistic octopus forced VST to strike out on an independent course. With the launch of Charms, the celebrated, medium-priced Virginia tobacco filter cigarette in 1983, VST acquired a national profile. (The hugely successful marketing and advertising strategy for the "denim"-packed Charms is now considered a case study for the marketing texts.) Charms became the largest selling filter cigarette with volume sales of more than 300 million sticks per month. Today Charms filter's sales are pegged at 100 million and the mini version sells 340 million monthly. At that time the cigarette industry was beset by problems arising from the value based excise structure system introduced in 1982. According to this, excise was computed on the ex-factory price and this formula set off a host of litigations on the issue of post-manufacturing expenses.

Profit vs quality

With enormous pressures on their bottom line, profit rather than market share became the primary focus of cigarette companies. According to finance director and secretary S. Thirumalai, under the old system manufacturers had no choice but to debase the product to survive and "there was a competitive depreciation of the product." Indeed, product upgradation was impossible without the final price cascading to an uncompetitive level.

But the process of investing in quality and what Thirumalai calls "educating the environment" had already begun at VST. It joined ranks with its counterparts in the industry to make a case before the government for changing the excise duty structure from the value based to the present length based system which was eventually announced in the 1987-88 budget. Even though there was no immediate prospect of "the excise lid opening" VST's management began to think in terms of investing in modernisation. "We saw this as a survival investment," recalls Thirumalai. The company began to gear itself for the next phase of change.

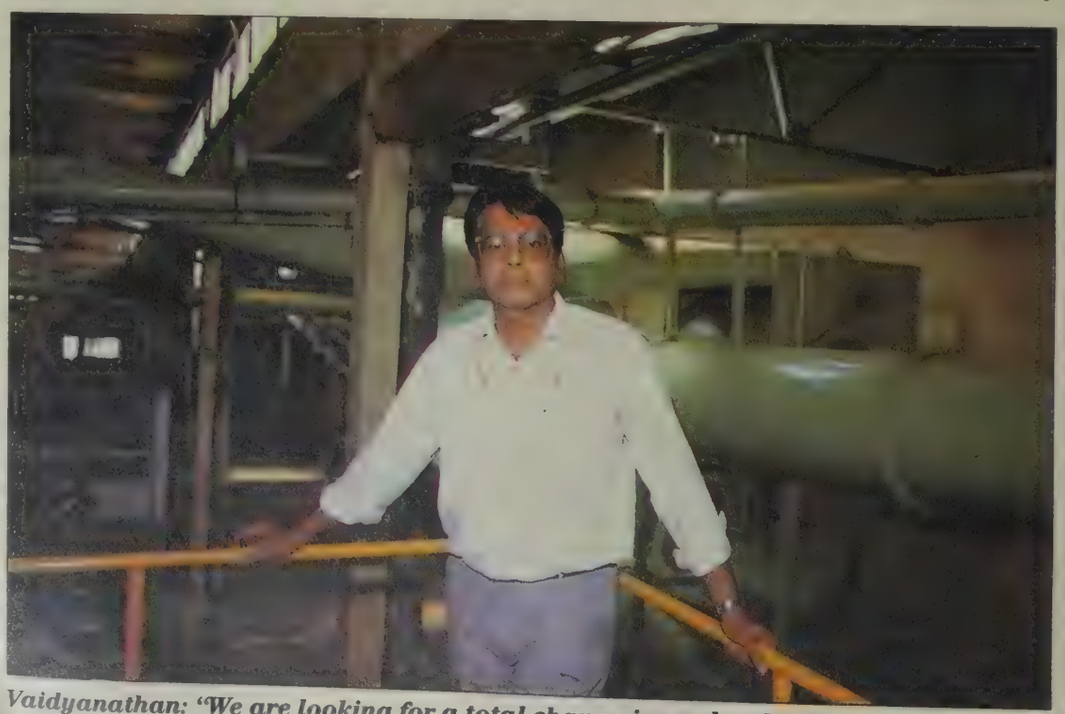
Change was set into motion three years ago and began at the top with the induction of Bhoothalingam (from ITC) as managing director. Until then, the company had been managed and run by the chairman and a board of executive directors. When Bhoothalingam was brought in, four of the executive directors were slated to retire. The time seemed opportune to take the first step towards transition — separating the board from the responsibilities of day-to-day management.

A corporate executive committee of full-time professional managers, senior and middle level, representing each functional area (finance, marketing, technical, personnel) was constituted. "Today our board's role is to provide a strategic overview of the business," points out Bhoothalingam. In fact chairman Abhijit Basu (who is also ex-ITC), continues to be based in Calcutta.

Consolidation and diversification

The new team set about drawing up the blueprint for the second round of perestroika. The objectives were spelled out: to consolidate and strengthen the company's main line of business and to begin preparing the groundwork for diversification.

Ramnath: creating a top trademark



The first call as they saw it was to modernise the plant so as to "develop the capability of producing quality that matched international standards". The Rs.20-crore time-bound modernisation plan (called "Project Phoenix" in-house) got underway at the company's sole manufacturing facility at Azamabad.

The overhauling began in the primary manufacturing department which is the heart of any cigarette factory. This is where the tobacco leaf (called lamina) and stems are treated and blended, a process that imparts that unique flavour to the final smoke. Since this was their sole manufacturing unit the new installations had perforce to be done whilst the factory was operational/running. C.S. Vaidyanathan, general manager (technical), says the overhaul was completed as scheduled by March 1989 without losing a single man-day.

Modern operations

The key machinery was sourced from Germany and the UK and the balance was of indigenous make. Though up to 50 tonnes of tobacco is processed daily, to a visitor the department seems strangely devoid of the hustle and bustle of people that is associated with such large volumes. Reason: it is now a fully computerised operation with the programmable logic control system doing the on-line monitoring.

The next phase, to be completed by

Vaidyanathan: "We are looking for a total change in work culture"

December this year, is the downstream modernisation of the finishing department where the cigarettes are filled and rolled. It involves upgrading the existing machines as well as installing two high speed Loga machines (Rs.4 crore each) being imported from France against an export guarantee. Against a speed of 1.5 million cigarettes per day of the existing machines, the Loga's is 5 million cigarettes per day (6,500 per minute).

The technology leap has already translated into tangible benefits. Enhancement of quality has meant that VST could increase its price, without losing out on volume sales — 33 per cent in recent years. There have also been cost savings on the energy front by over 50 per cent and a marked reduction in wastes. By cutting costs and enhancing value at the same time, VST's bottom-line has become stronger. And operating margins have improved from 2.7 per cent in 1989 to 5.5 per cent by March 1991.

Having addressed the manufacturing technology issue, the operational focus has now shifted to "quality through people." Rajesh Vidyasagar, general manager (personnel), says they realised that transformation could take place only with the voluntary support of the workers. Adds Vaidyanathan, "It wasn't just a matter of bringing in new machinery. We were looking for a total change in work culture." The company could build on its impeccable industrial relations record — no strike in 28 years. "We decided," explains Vidyasagar, "to make the workers joint owners of the process of change." A model of the modernised plant was constructed and a series of communication meetings were held.

On the downside there arose the issue of surplus manpower. In the primary manufacturing department, 200 people were rendered redundant and had to be shifted to other departments. The decision to close down the printing division meant transferring 120 workers. A voluntary retirement scheme in 1987 and 1989 has trimmed the workforce from 2,500 to 2,062 presently.

Changing trends

Prior to Charms, 90 per cent of VST's total volume sales was accounted for by Charminar which continues to account for over half the total volume sales of sticks. Charms itself has undergone a change. With the introduction of the length-based structure, the company moved nimbly to introduce the mini version of its bestselling Charms brand. Charms Mini Kings' stronghold is Eastern India, where it is the number one brand in its category in Bengal and a strong favourite in Bihar too.

But there has undeniably been an erosion of the brand franchise. Dipak Basu, general manager (marketing), Godfrey Phillips India, comments, "The vulnerability of the Charms trademark lies in its image. Being targeted at youth, smokers eventually outgrow it as they change their peer group. There has been no upward line extension from VST in the past five years."

The finishing department: getting the product mix just right

That is precisely the gap the company is now attempting to fill. "Our strategic objective is to create a third trademark — right at the top of the ladder," says K. Ramnath, who was general manager, marketing and sales, before returning to the ITC fold last month. The target: 5 per cent market share of the Rs.400-crore premium segment. Last month saw VST putting all its marketing might behind the launch of Kingston, a double filter cigarette in Bombay which is the largest market for kingsize filters.

A considerable amount of preparatory work has gone into conceiving this upmarket brand. As Bhoothalingam says, "We've always been looked upon as a manufacturer of low priced cigarettes." This however, is not their first attempt. Silver Kings, a kingsized filter cigarette which was launched in 1986 never quite took off. This proved to be a learning experience. "We decided that we'd make our next move only after we got our technology right." Technologically, VST is now well equipped to meet the demanding quality standards of the high value, low volume segment.

Prestige brand

Though the premium segment accounts for only 6 per cent of total volume sales, it carries prestige — and profits too. However, the 'strike' rate according to Ramnath is low — only one out of every 25 brands scores a hit. Besides, the competition is formidable. ITC has a significant presence with Gold Flake and Classic. GPI's Rothmans is now a brand to be reckoned with. More recent introductions are GPI's Jaisalmer which was launched in Delhi and GTC's low tar Legend cigarette. For starters, Kingston's advertising and promotional budget is Rs.50 lakh for the first two months. "New brands eat up a lot of money," admits Ramnath, "but we're prepared to take a long-term view." Kingston's success will mean a radical image shift for VST.

Every care has been taken to get the mix just right this time round. The dual filter for a smooth smoke; the hinged flip-top lid and hot foil metal stamping on the grey and white pack to convey the classy 'Cartier' image; the lifestyle ad campaign showing a couple sunning themselves on a beach in the Seychelles. Though competitively priced at Rs.20 for a 20s pack, to notch up a high trial rate the company has introduced a pack of 10s too.

Morale within the company is high. Senior managers say that Bhoothalingam

* Increase in equity from Rs.6.03 crore to Rs.9.65 crore due to a 3.5 bonus.
** Increase in equity from Rs.33.17 crore to Rs.66.34 crore due to a 1:1 bonus and thereby a lower E.P.S.

has succeeded in revving up team spirit. The new team constituted by him has a fairly young profile — members of the executive committee are in their thirties and forties. Interaction within the executive ranks has an air of easy informality. It's an open door culture and managers point out that, "it's strictly first-name basis here." Old timers at VST say this is a marked change from the earlier days and attribute it to Bhoothalingam's management style/code of conduct. B.P. Singh, an ex-director who retired last year, acknowledges that "He is an excellent human relations person. He has done a remarkable job of implementation." R.A. Poddar, chief executive, GPI, too is all admiration for his competitor. "The decision to invest even when profitability was not too good helped VST to improve their quality considerably."

The ITC connection

A point to note is that despite VST's independence from ITC, the managerial team consists of ex-ITC executives. The tradition of cross movement between the two companies continues. The perception persists that VST and ITC operate on the basis of a 'group' concept. However, K.L. Chugh, vice-chairman ITC Ltd (and erstwhile chairman of VST) refutes this. According to him VST is a totally independent entity with an independent board. As for VST entering ITC's premium turf, Chugh says, "We welcome competition. But we will make sure that we protect our market share."

The next challenge that VST has set for itself is diversification. Though ITC took this route long ago, Bhoothalingam feels that for VST consolidating the base business was a first priority. However, company observers point out that earlier attempts by VST to diversify have been discouraged by big brother ITC. The view in Calcutta was that VST should stick to cigarettes. In the early eighties, VST bought over Vishwarama Hotels Ltd but subsequently transferred its shareholding to ITC. Later, in its bid to take over Solid State Devices Ltd, an electronics company, VST lost out to the Thapar group.

But Bhoothalingam feels it is a matter of timing. "Today we have the financial muscle to undertake a new project," he explains. Perhaps another factor that counts is that ITC itself has taken the strategic decision to reduce its dependence on cigarettes. With the Indian cigarette market shrinking, other cigarette companies have announced their diversification plans into areas as unrelated as real estate (GTC) and retailing tea (Godfrey Phillips).

Agri-business entry

The decision to enter the agri-business field makes sense because the company already has strong links with farmers in its home state. The company formalised its links with tobacco growers in Andhra in 1962 when it decided to support tobacco cultivation in south Andhra. Since then there has been an effort to extend the acreage under cultivation and develop new varieties particularly for the export market. The company's role has always been that of support and development — it does not own any area under cultivation. Leaf manager, T.S.V. Raghavan, points out that the leaf operations cover 30,000 farmers in 2,000 villages with 45,000 hectares under cultivation. The Rs.30-crore project will be finalised this year with an overseas collaborator with whom discussions have reached a fairly advanced stage. The focus will be on value-added products for the export market (such as spices, fruits and vegetables) and those of international quality for the domestic market.

The company has been quietly pushing up its exports of tobacco as well as cigarettes. Last year tobacco exports touched Rs.4.15 crore. Charms has already developed a market base in the Middle East though last year that got a setback. The company also shipped a sizeable quantity of agri-products worth Rs.4.37 crore last year to Europe and the Far East.

In all these efforts the BAT link will no doubt help. David Bishop, BAT's representative on VST's board, affirms: "We are supportive of the agri-business because it is suitable for the environment in which VST operates. We also see an opportunity for synergy between ITC and VST in this area." Rumours that BAT is seeking to disinvest its 34 per cent stake in VST are dismissed by Bishop as just that — rumours. "In India BAT is committed to both VST and ITC," he says. Modernisation notwithstanding, Bishop says that in terms of productivity ratios and quality VST still is far behind African countries like Zambia, Kenya and Uganda. It is perhaps no coincidence that BAT has, unlike in India, a majority shareholding in all these subsidiaries.

Bhoothalingam concludes that while the traditional brands will continue to contribute volumes, the image and capability for exports will come from the premium brands. And if the team at VST continues to seize the moment, time and chance should reveal that secret too. ■

NAAZNEEN KARMALI

The most sophisticated cargo carrier runs the world's most sophisticated cargo complex

The Lufthansa cargo complex in Frankfurt. It is the largest and most sophisticated in the world. Computerised systems, facilities for high speed trans-shipment and over 1600 trained specialists ensure the quick and smooth processing of 1900 metric tonnes or over 6000 shipments a day. Investments like these make Lufthansa the world's leading cargo carrier.

Lufthansa Cargo

MAHENDRA MEHTA GROUP

Plum acquisition

This relatively unknown group outbid the likes of the Hindujas to acquire Assam Co, which ranks among the top five tea companies in the country

Heard of any one paying over a hundred crore rupees for assets he hasn't even seen? Sounds incredible, but the Mehta group, which controls the two Gujarat-based companies, Saurashtra Cement and Cement Corporation of Gujarat, has just gone and done this. Mahendra Mehta's Bermuda-based Mehta International Group (MIG) has paid £30.4 million (Rs.112 crore) to Inchcape Plc of UK for the controlling interest in Assam Company (India) Ltd in Assam. Mehta, the group's chairman, admits that he has not been to the eastern part of the country in the last three years but will soon visit Assam to acquaint himself with the tea gardens and the people in the company he has just bought.

But Mehta didn't buy blind. He put his money on the table only after making reasonably sure that the company was worth the price. "I studied the company with the help of experts, and found that you can't go wrong with the Assam Company." He is probably right. Assam Company is one of the leading tea companies in the country with an excellent track record. In 1989-90 the company made a profit before tax (PBT) of Rs.23 crore on a turnover of Rs.66 crore, (according to the unaudited figures, in 1990-91 the turnover was Rs.77 crore and the profit before tax Rs.24.22 crore). The company's networth at the end of March 1990 was Rs.38 crore (of which Rs.24 crore was free reserves) while its borrowings were only Rs.11 lakh. "It is one of the top five tea companies in the country ranked according to profits," says the finance director of a Calcutta-based tea company.

Best in the country

Assam Company has 7293 hectares of land spread over 16 tea gardens in Assam and produces around 16 million kg of tea annually. With an average yield of 2,225 kg per hectare last year, its gardens were amongst the best in the country. "Six of the company's gardens located around the Dibrugarh area are best suited for tea growing in terms of rainfall and soil fertility. The teas produced there fetch a very good price in the market," observes the owner of another large tea company in Calcutta.

Not surprising, therefore, that there were at least half a dozen Indian and non-resident Indian (NRI) companies in the race for Assam Co when Inchcape Plc of UK, which held 74 per cent of the Indian company's equity, decided to sell its stake. Inchcape, through its subsidiary, Assam Investments Ltd, held 10.3 million equity shares of Assam Co, out of the total of 14 million equity shares of Rs.10 each. Among the bidders, the prominent names were the Hindujas of UK, the Sarafs of Hongkong, S. Krishna Pathak from Dubai, the Mehtas, the Singhanias of the J.K. Group the Jajodias of Delhi, the Ruias of UK and Rajan Pillai of Singapore.

The floor price was fixed by Inchcape at £24 million. The Hindujas, according to sources in London, were willing to go up to £27 million (about Rs.100 crore) but the Mehtas outbid them, offering £30.4 million (about Rs.114 crore). In a package deal, the Mehtas bought over three subsidiaries of Inchcape — Assam Investment (which owns 74 per cent of Assam Co), Duncan Macneill (Inchcape's UK selling agent) and Hankow Batchelor Tea (a blender and packager of tea). The combined net assets of these three companies are estimated to be Rs.50 crore, of which Assam Co accounts for nearly 60 per cent.

If Assam Co has so much going for it, why did Inchcape decide to sell? Only about two years ago, the company's chairman and chief executive, Sir George Turnbull, said in Calcutta, "Inchcape does not believe in selling the family jewels." One possible reason could be the political uncertainty and the militant activities of the ULFA in Assam, which has badly shaken industrialists' confidence in the state. But Inchcape sources maintain that disinvestment is part of the group's overall strategy to get out of the plantations business and focus more strongly on motor dealership, marketing, distribution and services. In fact, after the deal, Inchcape will be left with just one tiny tea garden in Ecuador. Of course, the price offered by the Mehtas was very attractive and Inchcape, being a public company, its directors are bound to strive hard to maximise the returns to shareholders.

Considerable interest generated

The deal has also raised considerable interest in India. More so because the little known Mehtas have outbid the Hindujas, the 11th richest business group in the UK. The Mehta group, headed by its 50-year old chairman, Mahendra Mehta — a soft-spoken person with a pleasant personality — is a truly international group. Both Mehta and his son Jay (who was married to Ashok Birla's daughter Sujata, who died in the 1990 Bangalore plane

Tea garden in Assam: the market continues to boom

crash) are NRI and British citizens. The group has business interests in East Africa, Canada and the US, apart from India. Says Mehta, "My group companies control assets worth Rs.2,000 crore, 75 per cent of which are overseas and 25 per cent in India." Mehta, however, declines to disclose the group's total sales figures.

The Mehta group was founded by Mahendra's father, the late Nanji Kalidas Mehta, in the early years of this century. At the age of 12 he went to Uganda to set up a trading outpost and diversified into plantations — sugarcane, tea, cotton and sisal. Mahendra Mehta, Namji's youngest son, joined the family business in 1951 at the age of 19.

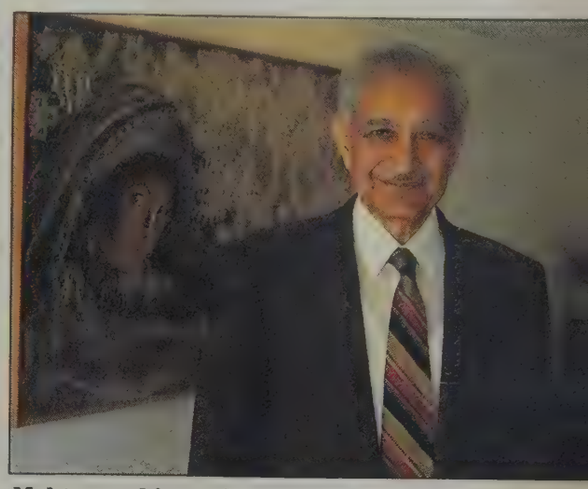
Fresh beginning

The group suffered a major setback when the former Ugandan president, Idi Amin expelled all foreigners from his country in the early seventies. "We had to leave behind 32,000 acres of plantations and sugar and tea factories," recalls Mehta. The expulsion forced the Mehtas to begin afresh in other countries. They started off in Canada, where they now have two large packaging units. The US, Kenya and Cameroon are the other countries where the Mehtas set up new companies *(see table)*.

Interestingly, the Mehtas have now been invited back to Uganda by its present government and are hoping to soon regain control of the business they left behind.

The Mehta group's international interests

	Country	Activity
1.	Uganda	Sugar, tea, coffee, electrical wires and cables.
2.	Kenya	Alcohol, sugar, trading, consultancy
3.	Bermuda	Project development and investments
4.	Cameroon	Electrical cables and electrodes, trading
5.	Canada and USA	Plastic packaging
6.	UK	Agency business
7.	India	Cement and engineering consultancy



In India, the Mehtas own a 35-year-old cement company called Saurashtra Cement and Chemical Industries with a capacity of 863,000 tonnes per annum. In 1990-91 this company's sales touched Rs.102 crore and the company made a net profit of Rs.6.38 crore. (However, it still has an accumulated loss of Rs.10 crore.) The other cement company — Cement Corporation of Gujarat Ltd (CCGL) — is also in Gujarat and was set up in the mid-eighties in the joint sector with the Gujarat government.

But CCGL faced major problems right from its inception. There was a delay in commissioning the one-million tonne plant, which raised the project cost to Rs.167 crore from Rs.110 crore. The plant could not operate at its rated capacity due to technical snags, and a glut in the cement market made things worse. On an equity capital of Rs.30 crore the company is estimated to have made a net loss of Rs.90 crore till the end of March 1991. The BIFR has now worked out a revival plan for the company and has asked other private sector companies to bid for the revival project. The Mehtas had earlier expressed their inability to bring in more money to revive the company.

This has led to the natural question: how did the Mehtas manage to raise the money (over Rs.110 crore) to buy Assam Co. Tea industry sources in Calcutta think a Delhi-based industrialist has actually financed the deal and has only used the Mehtas as frontmen. Mehta, however, dismisses these suggestions as "mere speculation". Mehta says the deal was leveraged (to the extent of 75 per cent, says one source in London) by a consortium of European banks. "Along with some of our African associates, we managed the deal on our own," he claims.

The fact remains that resident Indians or Indian registered companies, using NRIs as "associates", have been involved in several takeovers of companies overseas. Whether resident Indians were actually involved in the present deal will soon become clear depending on who joins the board after the takeover is complete. In the light of these realities, some FERA experts wonder whether there is any sense in allowing tea companies to have a 74 per cent foreign holding while denying even hi-tech companies this facility.

Whatever may be the source of the Mehta money, the huge price paid does not look like a prudent investment when the cost of the money is considered. Even at a lower interest rate of about 8 per cent abroad, the cost of Rs.110 crore works out to Rs.9 crore per annum. The net dividend income earned by the overseas holdings at a high rate of dividend of 55 per cent last year, was only around Rs.5 crore. So, even if the dividends are maintained at such high rates, the Mehtas will still have a shortfall of Rs.4 crore per annum. One possible solution to this would be to sell off the part of the overseas holdings and thus bring down borrowings. But Mehta totally rules out this possibility pointing out that his group acquired Assam Co not for short-term gain but as a long-term investment.

Mehta: making a long-term investment

Financial boost

Sources in the Calcutta tea industry feel that the acquisition of the financially strong Assam Co may also help boost group finances. On a net worth of Rs.38 crore, the company can easily borrow nearly Rs.75 crore (on a debt-equity ratio of 1:2), while its borrowings now are a meagre Rs.11 lakh. Since the sick CCGL needs an infusion of fresh capital this money can come in handy. Mehta, however, maintains that there will be no linkage between the two companies. "I will treat my companies separately," he says. But he does not rule out intercorporate lendings among the units, as permitted under the law.

Whatever he does, says Mehta, will be for the good of the company. This includes allowing the existing management team to continue. Some old tea factories will be modernised and in most gardens old tea bushes will be replaced with newer varieties for higher yield and better quality. "I am sure that with a proper scientific approach, the yield from these gardens can be raised substantially," says Mehta. Given his vast experience in the plantation industry, Mehta is confident of meeting his targets. And the booming tea market — where production continues to keep falling short of demand — will certainly keep the cash registers ringing.

■ DILIP MAITRA

RADIANT ELECTRONICS

A shining success

Amid the welter of telecom product companies, this Orissa-based outfit stands out in several ways. With satisfied customers and quick technology upgrades, Radiant is growing steadily

"When Radiant EPABX talks people listen." So reads the advertisement for Radiant Electronics Ltd. Today, people are not only listening, but noticing this small, growing company. Radiant's growth has led it to form another company, Unisoft (India) Ltd, for 100 per cent software exports in the software technology park at Bhubaneshwar. Says Sangram Mishra, the managing director of Mechem Pvt Ltd, the original company of the group, "Our success has been due to adherence to quality. Moreover, we have been in tune with what is current."

Growth in the EPABX field in the country can be gauged from the fact that 41 licenses were issued in the country (out of which 23 went into production). Seven of these were issued in eastern India, including one each in West Bengal, Assam and Bihar and two in Orissa — Vijay Mallya's Unitel and Radiant. Webelcom (West Bengal), Beltron (Bihar) and Amtron (Assam) could not come up despite substantial investments. Says J.B. Pany, the managing director of Radiant Electronics Ltd, "Those units' project implementation was bad."

Market niche

Radiant adopted C-DoT technology for EPABX manufacture and rural automatic exchanges (RAXs). While Unitel Communications of the UB group is now in the red, Radiant is the only company in this region manufacturing EPABX and RAX systems. The licensed capacity of Radiant for EPABXs is 50,000 lines, and the company has achieved around 60 per cent capacity utilisation.

This joint sector project with Orissa State Electronics Development Corporation, which has a 51 per cent stake, has made its impact. Radiant's client list includes State Bank of India, Industrial Development Corporation, Indian Detonators Limited, Industrial Promotion and Investment Corporation of Orissa Ltd (IPICOL) and Orissa State Financial Corporation (OSFC). Besides, Radiant has supplied RAXs to telecom users in Punjab, UP, Kerala, AP, Assam and West Bengal. This year Radiant expects to sell over 200 RAX systems. At present, the company is executing an order for 13 EPABX networks with specialised software for the Rourkela steel plant. Says Pany, "We had teething troubles. It took us two to three years to assimilate the technology, but we have a committed band of trained engineers."

The Radiant story began when four young entrepreneurs — J.B. Pany, Sangram Mishra, B. Satpathy and J.K. Rath — started Mechem Pvt Ltd in 1982 with a project cost of Rs.2.5 crore. The group turnover in 1989-90 was only Rs.45 lakh but in 1990-91 it jumped to Rs.4.5 crore. "In 1992-93, with full production of the 512-port module RAX, the turnover is expected to touch Rs.10-12 crore," says Pany.

In tune with current telecom technology

Agents and tie-ups

The company is now appointing dealers all over India to sell its EPABX systems. Says Pany, "Our presence in eastern India is fairly strong. In the rest of the country we are negligible or non-existent. So we are going to appoint agents or have tie-ups with companies like UNITEL for sales and service."

Pany admits that the problem is tremendous competition. And there is overcapacity. Whereas the demand is for about 300,000 lines, the total production in the country is about thrice that. While this has caused several units to close down, with more headed to the same end, Radiant — say its promoters — will survive. Its initial and present overheads are very low. It brought project cost down to almost half that of a comparable C-DoT manufacturer.

Mechem Pvt Ltd is progressing slowly but steadily. It manufactures fibreglass boats, and plastic containers. It started off with a low equity base of Rs.98,000 and has now achieved a sales turnover of Rs.1 crore. According to Sangram Mishra, the company's managing director, its turnover is doubling every year. Unisoft will be operational by July and is projected to achieve in the first year itself a turnover of Rs.40 lakh. Explains Pany, "We intend to develop telecom software."

Radiant has a small R&D section for telecom software upgradation and new products. It has developed products like Direct-in-dialing (DID) facility, multiple access hotline facility within the EPABX and transit exchange. All this has become possible in an industrially backward state like Orissa because of the excellent support received from IPICOL, OSFC, ELCO and the local SBI, says Pany.

There is a high level of customer satisfaction with Radiant's EPABX and RAX. Hotel Swosti, one of the largest hotels in Bhubaneshwar, is perfectly happy with the performance of the EPABX and Radiant's after sales service. The chief general manager, Telecom, Orissa circle, P.S. Seran, comments on Radiant's RAX: "Radiant is one of the companies from which we source our RAXs. It is as good as others. There have been no maintenance problems — these RAXs are functioning well in non-AC conditions. This year we will be buying 140 more such systems from them."

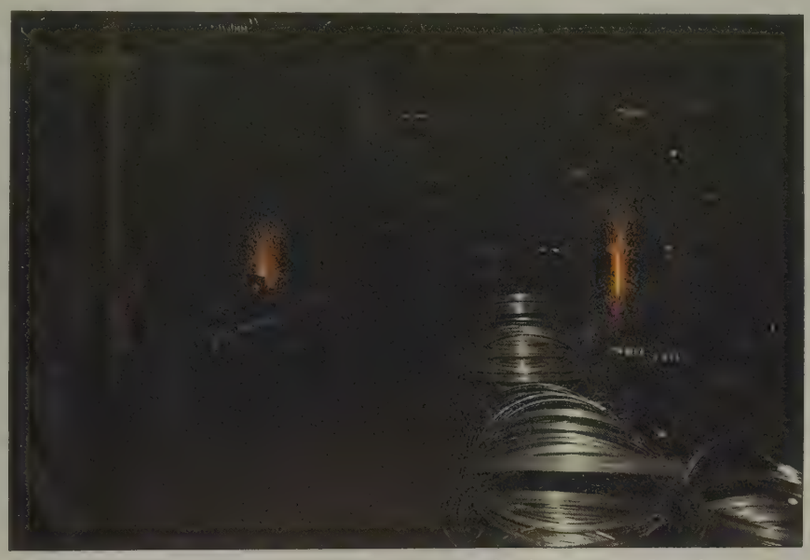
With endorsements such as this, and the continued commitment of its promoters to keep updating its technology, the telecom industry in the country can expect to see a lot more of Radiant in future. ■

NAGESH RAO

HERO CYCLES

The pedal pushers

They tower over almost every aspect of the Indian cycle industry — the ubiquitous Hero roadsters are everywhere. Modern factory automation, growing exports and high productivity have led them to, and kept them at, the top. The Munjals' tight equity control, together with the group's efforts to indigenise and integrate, ensure its position in the industry



They have come a long way, the Munjal brothers of Hero Cycles — from small-time bicycle traders in Ludhiana in 1943 to a place in the Guinness Book of World Records as the largest manufacturers of the machines by 1987. From a manufacturing start of 25 cycles a day in 1956 to 12,000 a day now, with almost all components coming from related or supported ancillary units; from Rs.25 lakh in 1956 to a group turnover of Rs.550 crore today. Hero Cycles' sales topped Rs.224 crore last year, with profits after tax of Rs.5.05 crore, and is growing at something like 15 per cent a year.

In a world gone ga-ga over public issues the Munjals — brothers Brijmohan Lall, Om Prakash, Satyanand, and earlier the late Dayanand — have steadfastly hung on to every bit of Hero Cycles' equity. This has given them tight financial and management control over the companies in the group — these include Hero Cycles itself, Rockman Cycles, Highway Cycles, Majestic Auto, Hero Fibres and Gujarat Cycles and associate companies like Hero Cold Forgings, Munjal Showa and the high-flying Hero Honda.

Cautious growth

Though an equity issue would enable Hero Cycles to expand its size even further, it chooses not to do so. As Om Prakash Munjal, managing director of the company, explains, "We do not want to create capacity that will become difficult to handle or diversify within the company. That will make it untidy for good management. Also, we don't want to expose the company to outsiders as this is the main holding company of the whole group."

Clearly, there is a certain sentiment attached to the ownership of Hero Cycles. The company is the brainchild of Brijmohan Lall, who was well connected with the powers-that-be in Ludhiana even in the early days. Subsequently, in 1956, when the Pratap Singh Kairon government in Punjab distributed a dozen licences for cycle manufacture, the Munjals bagged one. Of the 12 units that came up then, only two have survived, the other being Avon Cycles Ltd, whose production is just about half that of Hero Cycles' 300,000 a year. Competition within the town of Ludhiana itself cooked the others' geese.

The Hero Cycles plant: constant upgradation to modernise

The reluctance to expand to an unmanageable size is simply because the Munjals have a reputation to protect; Om Prakash proudly states that not a single day of production has been lost since inception due to labour disputes. Probably the only major rupture in production schedules followed Operation Blue Star. For this, Om Prakash gives credit to the "hard-working people of Ludhiana district who believe in earning good money through good work and not through factory gate battles".

High productivity

The Ludhiana unit of Hero Cycles, the original and the main unit of the company, has a tremendous productivity level: its 2,500 workers turn out 9,500 cycles each day (the other 2,500 come from Hero's Shahibabad unit in UP). A neat working environment and attractive incentives for targets met have obviously created ideal conditions for both management and workers.

The Hero plant is neatly laid out over a vast area with adequate space for both men and machines. The assembly section is automated with conveyor belts. Om Prakash proudly claims that the plant is constantly upgraded, which has made it as modern as any other in the world.

According to Munjal, the exposure to Japanese management methods during the group's collaboration with Honda Motors Ltd of Japan for Hero Honda Ltd, has introduced a new work ethic in the company. In fact, at the Ludhiana plant, even after the final bell rings in the evening, those who have not met their targets for the day stay on to finish their tasks.

Important factor

In this plant too is the section where wheel rims are made. And this is where a very important factor of the Munjal way becomes evident; the section manufactures rims not only for the cycles but also for the mopeds and motorcycles made by sister companies Majestic Auto and Hero Honda.

In the same manner, the Munjals have, over the years, developed capabilities both in-house and in associate companies to manufacture all the requisite parts, spares and even machinery for their various products: cycles, mopeds or motorcycles. As a result, the Hero Cycles empire is akin to a vast self-sustaining entity, with each part feeding on the other. For instance, freewheels required by Hero Cycles are made by Highway Cycles, a sister company. For the bulk of its requirement of chains and hubs, it is dependent on Rockman Cycles, another group company.

Another step in this direction is being taken with the implementation of a letter of intent for a 500,000-tonne-a-year cold rolled steel strips plant at Hero Nagar in Ludhiana. To be set up at a cost of Rs.27.5 crore, this plant's output will be mainly consumed by the other Hero units. Be-

sides this, an application is pending with the government for a 300,000-tonne hot rolled steel strips plant proposed to be set up at Borai in Madhya Pradesh.

With such capabilities at hand, it is small wonder that Hero Cycles dominates the domestic market the way it does. As a result of extensive ancillarisation, the large economies of scale, and comprehensive infrastructure of Ludhiana, it has been able not only to keep a strict watch over quality but also the price. As a result, its lower end, conventional Roadster model is the cheapest in the country, selling at an average Rs.650 each against Rs.725-750 for those made by Atlas or TI Cycles. More than four out of every five cycles Hero produces every year are Roadsters. In the Indian cycles market (Rs.500 crore), 600,000 cycles are the common "roadster" variety, of which 85 per cent are Hero Roadsters.

Expensive cycles

The ubiquitous black and green Roadsters, however, are not all that there is in today's cycle market. With growing incomes in urban areas, people are turning to the more expensive and sporty cycles like the lighter, rugged-framed, tough-tyred all terrain bikes (ATBs) and the British Motor Cross (BMX) models. Hero Cyles took the lead by introducing ATBs in the country in June last year with its Ranger brand. Ranger took the market by storm and soon the market became a hotbed of competition. Atlas Cycles and TI Cycles quickly jumped into the fray with their Rebel and Street Cat models. Avon too came up with its Montage ATB, aimed at the lower end of the market.

According to R.P. Sharma, marketing manager of Atlas Cycles, sales of Hero's Ranger peaked at 40,000 cycles a month last year. But soon after the launch of Street Cat and Rebel, the Ranger's sales dropped to about 16,000 a month. And this despite the fact that it was the first in the market and is priced at Rs.975 each, while Rebel and Street Cat cost about Rs.1,200 each.

A leading competitor suggests this has happened because Hero Cycles has not been able to sustain the sales momentum generated by its headstart. He recalls that the same fate befell Hero's earlier Royal Hunter and Hero Hawk models. Hero, in fact, has had a rough ride in the light sporty bikes segment, in which the Hero Hawk was offered. A multi-speed racer, the Hawk had to give way to TI Cycles' Mach 1. The latter has now cornered half this market share. Similarly, in the sporty light roadster (SLR) segment — single speed light bikes — another model, the Hero Hansa, had to yield to Atlas and TI Cycles, who almost exclusively fill this segment.

Hero's exercycle

Undeterred by these setbacks, Hero moved recently into the stationary exercise bikes niche by launching the Allegro, the first of its kind in the country. Om Prakash Munjal is optimistic about its market performance though he accepts that volumes may not be very large. The company has also moved into the children's bike segment. This segment has tremendous market potential and has so far been largely dominated by Tobu cycles.

O.P. Munjal on an 'Allegro' exercycle: optimistic about market

As for the export market, besides finished cycles, Hero Cycles has been exporting parts like single- and multi-speed freewheels, hubs and chains, as well as sturdy low priced bicycles to Sri Lanka and African countries for many years. And now it has entered the more competitive markets of the US and Europe as well with fancier models. Its total foreign exchange earnings in 1989-90 topped Rs.24 crore.

To develop the exports of finished cyles further, and in a more focused manner, the company floated Gujarat Cycles Ltd a few years ago, in partnership with Gujarat Industrial Investment Corporation. With a plant in Baroda, this company manufactures multi-speed, non-conventional, new generation bikes aimed at the European and US markets. Technology has been largely indigenous since, as Om Prakash says, "participating at fairs abroad has given us adequate exposure to the new trends in design and it takes no extraordinary technology to build in specifications asked for by buyers abroad." Gujarat Cycles thus developed its own ATB and BMX models, aimed at the affluent western markets.

Then, in October last year, Hero bagged an order worth Rs.100 crore through Impex Zweirad GmbH of Germany for the supply of 300,000 cycles by end-1993. This followed Hero's participation at the IFMA Koln Fair at Cologne, Germany. As per the terms of agreement, a total of 24 new models destined for the German and other European markets are to be manufactured by Gujarat Cycles and marketed by Impex.

Unmet targets?

But now, well into 1991, a senior executive of a leading competitor alleges that of the announced target of 100,000 cycles for this year, Hero Cycles has managed to ship only 2,000 so far to Germany. He also claims that Hero is making losses on its exports. He attributes this to a lack of focus and faulty marketing. The Munjals, he claims, are using the same strategy to sell their upmarket cycles as they do for the lower end models, to the expected and undesirable effect.

And so it goes, the Hero Cycles story, mostly a huge success but with some failures. The Munjals are not, however, sitting on their laurels. Om Prakash is clear that every year the company has to raise its daily production target by 500 bikes. With 3,000-odd dealers who have grown with the company, a Rs.4-crore annual advertising budget, low prices and innovation in models, he is confident of leading the cycles industry in the country for as long as he can foresee. He says, "We do not see any reason why we should not stay at the peak of the Indian and the world cycles industry." With a history of hard work and success behind his family, one can't blame him for sounding so confident.

■

FEROZ AHMED

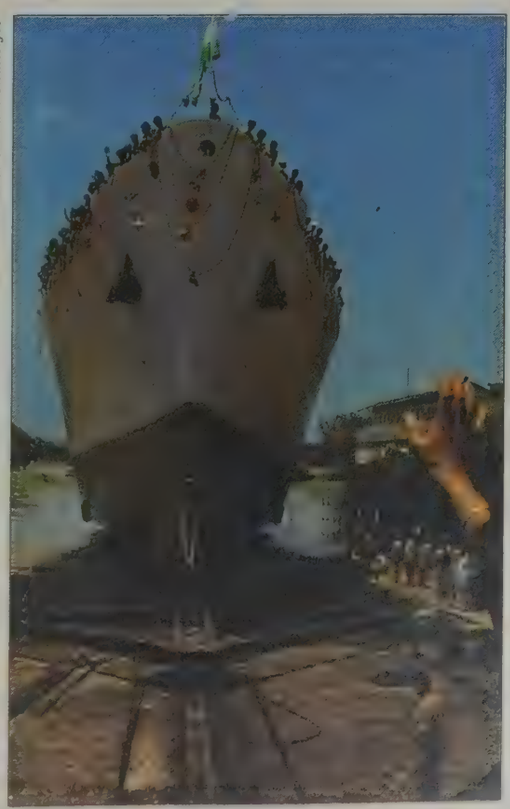
GARDEN REACH SHIPYARD

Finally, full ahead

The fortunes of this public-sector warship builder under the defence ministry are on the upswing, but overmanning continues to be a problem and a cut in government contracts would wreck it

The Calcutta-based Garden Reach Shipbuilders and Engineers (formerly Garden Reach Workshops) seems to have emerged from its bad days and is sailing ahead at full steam. The shipyard, which was taken over by the defence ministry in 1960, has become one of the primary warship builders in the country today with a "value of production" in 1990-91 set at Rs.182 crore with a profit of Rs.14.22 crore. "In 2000 AD we hope to cross the Rs.400-crore mark," said the chairman and managing director, Rear Admiral Dharam Vir Taneja.

For GRSE, this scenario is a far cry from the one only two years ago when it was still surviving on government help even for working capital requirements. Following heavy losses in the early eighties, in 1984 it was granted a three year moratorium by the government on repayment of loan instalment, which was further extended by another three years in 1987. Taneja, however, has since nursed the company back to health and last year decided not to ask the government for any more help. In fact in the two years, 1988-89 and 1989-90, the company repaid almost Rs.20 crore in principal and interest to concerned banks and institutions.



Will wipe losses out

The company, however, is not completely off the shoals yet with its accumulated loss of Rs.99 crore. "We have already reduced this to Rs.78 crore and we will be able to wipe it out in the next few years," Taneja said. The company is likely to set its course by a new landmark later this year when it joins the select club of public sector units which sign performance-linked "memorandums of understanding" with the Union government. As per the understanding, the company guarantees certain financial targets while the government commits certain funds for its growth and, perhaps more importantly, a promise not to hassle the management at every turn.

Ironically, the change in the company's fortunes has been partially because of the cutbacks in government expenditure and the defence budget. "Now we have to competitively bid for warship contracts, whether it is under the fixed price contract as in the repeat orders for certain projects, or under the cost-plus contracts for the evolving designs," Taneja said. "Some customers, like the Coast Guard and BSF, insist on the lowest bid for a standardised design. Our platemaking machinery and our general engineering capability is on a par with the other warship shipyards, but where we score is in the floor space available. This allows us to partially fabricate ships much faster before putting them together on the slipways."

As a general routine, the value added by the shipyard itself is less than 40 per cent of the commissioned cost. Almost everything is fabricated rather than manufactured on the premises. The secret of the shipyard's recent success lies in the co-ordination of the over 2,500 lines of activity required to put together the average ship using inventories that run into tens of thousands of parts. According to the company's latest financial statement, the net fixed and current assets were Rs.595 crore, with work-in-progress valued at Rs.329 crore, Rs.111 crore in raw material inventories, and a mere Rs.6 crore in capital work-in-progress.

Photos: Goutam Chatterjee

Launching a ship: faster fabrication

It has taken GRSE more than 30 years to get its act together and reach such an organised state. Just a decade ago, the mismanagement of the large number of production activities led to a complete mess in GRSE's commercial ventures. The shipyard had been contracted by the erstwhile Mogul Line to build three indigenously designed bulk carriers on commercial terms worth Rs.11 crore in the early eighties. But time and cost overruns left GRSE gasping for breath and the ships ultimately cost Rs.50 crore. By the time the deliveries were made, shipping had gone into a deep recession and Mogul Line almost refused to take delivery. GRSE has yet to make up this loss.

Pioneering efforts

Says Taneja, "Since our waterfront is the river, we cannot build the large ships required by the merchant navy. And, in any case, we are not interested in competing with the Koreans or Japanese in this field. In comparison, the naval corvette is smaller and has a lot more value addition."

Since its first foray into merchant ships GRSE has made many other pioneering efforts. It was the shipyard that built the first Indian warship in 1961. Also, the bridge building division of the company fabricated parts for the highest road bridge in the world at Khardung La (18,380 feet) in Ladakh in 1982. This earned GRSE a place in the Guinness Book of World Records.

GRSE's engineering division, of which bridge building is a part, has become quite strong over the years. Its current turnover is Rs.28.58 crore. It builds easily transportable modular Bailey bridges, machinery like winches, capstans, aluminium telescopic helicopter hangars for ships, marine sewage treatment plants and other shipboard equipment besides high speed pumps and allied machinery. Its project division has also been undertaking turnkey projects including fabrication of the 9-km-long iron ore conveyor belt at Vishakapatnam.

And yet, according to company sources, this division's plant in Baranagar (Calcutta) is to be closed down in keeping with the company's new emphasis on warship production. As a result, the turnover of

the engineering division is likely to fall to Rs.25 crore in the current fiscal year.

Having consciously decided to curtail the piecemeal operation of the engineering division and to streamline it, the new emphasis will be on the engines division at Ranchi in Bihar. The current turnover of this division is Rs.12 crore. It manufactures two lines of marine diesels. The first is with a tie-up with MTU of Germany to produce high speed marine diesels for naval application in patrol vessels. The other is through a tie-up with Berge of Norway for gensets and commercial marine diesels.

Forex restrictions

Taneja says that he hopes to book orders worth Rs.30 crore in the current year for the engines division. This, however, seems to be difficult at the moment because of foreign exchange restrictions. At any rate, Taneja hopes to double the turnover of the division to Rs.25 crore in the current year.

The shipyard's current order book of 15 ships is likely to keep it occupied till 1999. Some of the projects are mammoth. For example, the yard is building a fleet tanker for the Indian Navy. This ship will carry the dozens of specialised fuels and lubes used by the Indian Navy, in the air, on the sea and under it. It is a complex floating network of pipes and tanks. "It's a long project. Conceptualised in 1984, some of the boys who will sail her are still in school," says a company manager.

Part of the long gestation in such projects, as in the new Godavari class missile corvettes, is due to the large amount of reverse engineering and indigenous design commitment. "In the case of the new frigate project — the first Nilgiri was almost entirely imported — the design will be almost totally Indian," said Taneja.

With its slipways already crowded with the first prototypes of newer, nippier and more lethal warships, GRSE is hiving off its older designs to other shipyards. "We built the first ocean-going tug, the first landing ship tank. Now we have left those for other shipyards. We still produce the fast patrol vessels and boats, but that is only to fulfil standing orders," says Taneja.

The shipyard also has a modern fibreglass boat shed. Besides producing lifeboats for the ships it builds, it also builds very sleek high speed cruisers for the BSF and Customs. These are used for routine patrolling in riverine waters, besides being used for interception and anti-smuggling operations.

Taneja says that he has no intention of running for the submarine contracts. He explains, "That contract is nearly sending Mazagon Dock under. The tooling up and training is extensive and unless the orders are firm, it is difficult to amortise the time and expense involved."

Taneja: nursing GRSE to health

Overmanning, however, continues to be a problem for GRSE. The company has 10,080 employees — 1,014 technical and commercial officers and managers, 810 clerks, and the balance on the shop floor. Manning is likely to decrease to 8,000 over the next five years, but the current workforce is aging and losing out in efficiency as new recruitments have been stopped. There is very little fresh talent coming in except at the very top.

The all-weather wet basin: pioneering efforts

The shopfloor is depressing, with clanging machinery and long siestas. Even computerised state-of-the-art machinery, designed to run without an operator, is switched off as the lunch bell rings. The workers often bathe at the nearest fire hydrant, have a wholesome lunch, and fall into an afternoon swoon. There is obviously very little commitment to productivity or excitement on the shopfloor. This is only limited to perhaps a dozen or so of the top management, whose futures depend on it. For the others, including the middle management, their jobs appear to be merely pigeon holes to be filled till it is time to go home. The company does not seem to have any major industrial relations problems except for the by-now monotonous duel over the computer.

As a result of all this, quality is not a major issue. "We rework about 4 to 5 per cent. But that is because of mid-plan changes. The navy people are very stringent on quality and we rarely have a big problem about it," says Taneja.

Surprisingly, though the company buys about 60 per cent of its finished product from outside, there is no scheme for vendor-development. Taneja says, "The department of quality assurance and the directorate of inspection of the defence ministry looks into that."

Says Taneja, "We would probably be cheaper than Europe. But every country struggles to keep its own shipyards afloat. Besides the government has never even thought of exporting ships. There exist no provisions in the export policy. The sum of the individual items on a ship make for insurmountable paperwork. As a result the question of exporting our goods just does not arise."

Thus, even though GRSE is on the upswing, it can survive only as long as government contracts keep coming in. Without the navy and the defence budget, the company would surely sink without a trace.

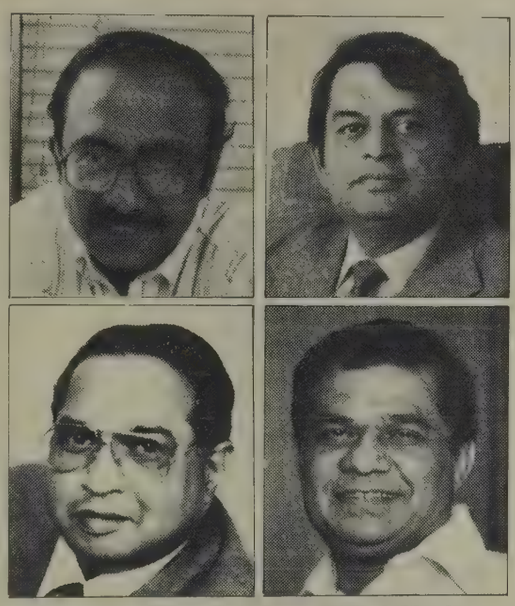
HINDITRON

To each, his own



For Hinditron, the Bombay-based group of computer companies completing 25 years of operations, is only one reason why this year will be memorable. It will also be the year it lost two of its co-promoters, who have been with the group for 15 years. Harish Mehta and Arvind Shah have opted to branch out on their own. Clearly, they left over differences of opinion about the information technology (IT) business and strategy. Today, ownership of the companies in the group has returned to the original promoters, Hemant and Kamlesh Sonawala and Pravin Gandhi.

For this high profile group, having the spotlight turned on it at this juncture is uncomfortable. Three of the promoters hold or have held senior positions in trade associations: Hemant Sonawala was formerly the CSI president, Pravin Gandhi is presently vice-president of MAIT and Harish Mehta is the president of Nasscom. As such, the glare of industry attention is turned full on them. Though the final terms of the departure have not been worked out yet all the parties expect to work together in future.

The Hinditron group, better known for its joint venture with Digital Equipment Corporation (DEC) of the US, ended the financial year 1991 with a turnover of Rs.160 crore. Starting as distributors for electronic instruments from Textronix Inc and Digital's range of computers, it later set up two joint ventures: Digital Equipment India Ltd (DEIL) and Hinditron Textronix Ltd, to manufacture these products. In 1976, Harish Mehta and later Arvind Shah, joined the group. The group's IT business today encompasses four companies. Its lines of business range from software exports to PC vending and agencies for software.

In 1988, when DEIL was formed, the five promoters and their associate companies put up Rs.6 crore for a 30 per cent stake in the venture, placing the company on a financially tight leash. In September, when the operations of DEIL commenced, all activity and staff related to DEC were transferred to the new company. This included all software exports related to DEC, maintenance of its computers, and personnel. Says an industry observer, "When these transfers took place, a lucrative source of income had gone." Saddling Hinditron with 350 extra personnel, an extra infrastucture and a very thin product line, caused it to haemorrhage for a while. At this stage the company decided to redefine its business activities.

By early 1989, the company had decided to strategically focus on the personal computer segment. Up to this point PCs were sold merely as add-ons to mini-computers. Wthout a manufacturing base, Hinditron's entire requirment was sourced from Essen Computers. Packaged software products for the PC segment were also added. These included AutoCad from AutoDesk and Netware from Novell.

Sonawala, Gandhi, Mehta and Shah (clockwise from bottom left): splitting

However, with margins falling in this segment, the move failed to improve the company's liquidity position. The company had to resort increasingly to borrowed funds because the promoters were not willing to inject funds into the company. Consequently, the increased interest burden squeezed profit margins. In the next year, the company ran into a slowdown.

When it came to devising a strategy to correct the situation, differences cropped up over the approach to be adopted. Inability to come to a consensus let the situation drift. Harish Mehta, formerly the joint managing director, in a group company, says, "We were unable to take a decision fast. This was a result of too many partners and you had to carry everybody to create a consensus." In an industry which demands quick decisions, this told on the company. With high leveraging common in the industry and with its liquid resources invested in DEIL the group had to make alternative arrangments for funds. Yet again, a consensus proved elusive. The situation was similar on the question of the company remaining a long term player in the PC segment and also the question of manufacturing these.

Re-assessing strategy

With the IT industry in the throes of a structural change, perceptions varied on the type of business the group should not be in. Says Hemant Sonawala, the vice-chairman of the group, "We are an engineering company, not a commodity trading one. Lately, we drifted into the PC market, which is a commodity market." Pravin Gandhi, the chief operating officer of the IT business in the group, finds margins in the PC business dropping regularly. Since the company does not manufacture PCs it becomes difficult to manage the margins from the manufacturers they buy and the dealers to whom they sell. As a result the company is reassessing its strategy in this segment.

With perceptions varying dramatically, the decision to branch out was inevitable. Pravin Gandhi will be reorganising the group's IT business. He will focus on software projects, both for exports and the domestic market through River Valley Technologies Pvt Ltd, and a closer working relationship with DEIL. Consequently, Hinditron will be the sole outlet for Digital's Unix offering. Mehta will divest his stake in the group, except in DEIL, and will set up three new companies under the Onward Technologies banner. About 220 employees, of whom 120 are engineers, have opted to move over to the new companies. These employees will support about 1,200 existing customers. A number of software companies, like Novell Inc, have opted to move their agencies to the new group.

Arvind Shah, presently vice-president, exports, at DEIL, will most probably take with him Boston Management Technologies Pvt Ltd, a company in the education business set up when he joined the group. Shah, a former professor from Babson College, in Massachusetts in the US, will be launching into specialised training programmes. Mehta, Shah and Gandhi will now have the freedom to pursue their own dreams and visions.

■ AROON SARKER

LENDING RATES

Free for all

Liberalisation of interest rates is expected to be a major priority on the IMF's agenda for India. However, even before IMF could insist on enforcing them, some of the measures — freeing up of interest rates and abolition of concessional lendings — seem to have been pushed through unexpectedly by the tight money conditions last month.

With money becoming dearer, banks found it difficult to lend at the normal 17 and 18 per cent. Taking advantage of the absence of a ceiling, banks began charging a much higher interest rate to corporate borrowrs.

ANZ Grindlays was the first to take the initiative. Fixing the cut-off date as 30 April 1991 for clients' drawing limits, it decided to charge call money rate plus 3 per cent on all excessive drawals. The change affects all borrowers with cash credit limit of Rs.2 lakh and above from 20 May. Standard Chartered soon followed by pegging the rate to the call market, albeit to be announced fortnightly, rather than daily, unlike Grindlays.

Says David Gardiner, Standard Chartered's executive director for corporate banking, "With higher cost of funds, we had already booked significant losses. We had to take this step as we also have a responsibility towards our shareholders." Borrowing at rates as high as 35 and 40 per cent to lend at 17 naturally hurt banks, especially the foreign ones which have a small deposit base, and no access to RBI's cheaper refinance. They have to depend on the markets to fund their assets more often than their nationalised counterparts.

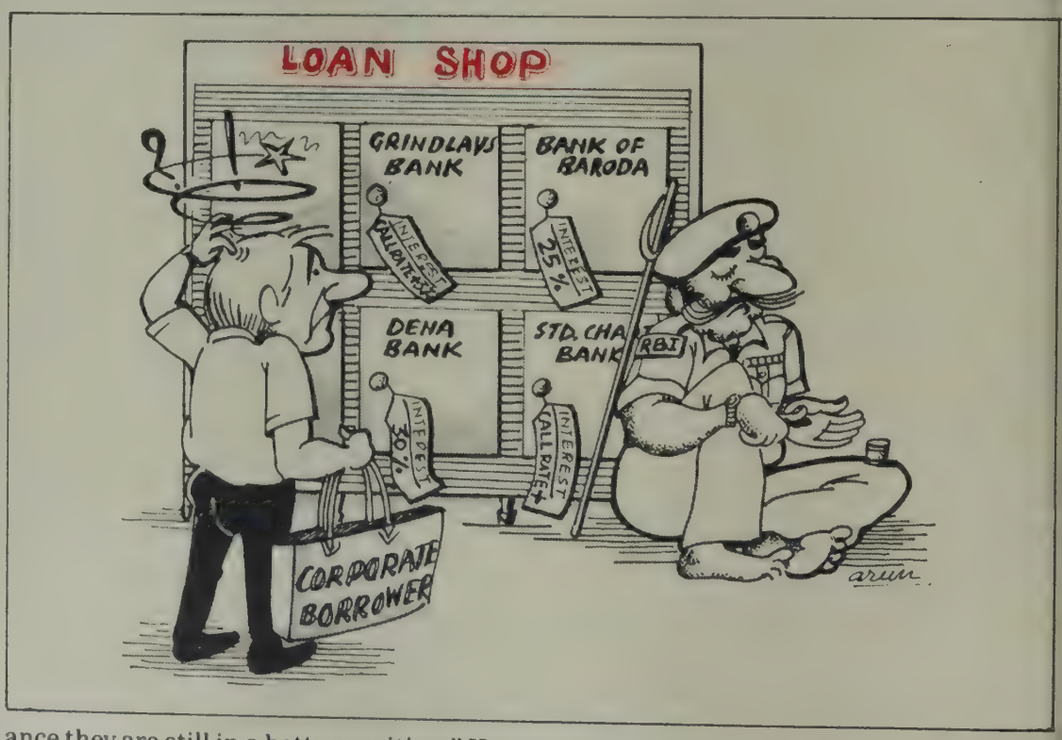
But nationalised banks find their branch network a major hinderance in introducing flexible rates. Says G. S. Dahotre, Dena Bank's chairman, "The large network makes it difficult to communicate changes in rate to all the branches/borrowers on a daily or a fortnightly basis." Bank of Baroda has pegged it to RBI's discretionary refinance rate of 25 per cent. Dena Bank is charging a flat 30 per cent.

Surprisingly, the RBI has not reacted in any way. Banking circles say this is because Grindlays' move had 'tacit approval' from the authority. The catch, however, is in the RBI's own directive issued in 1985 which fixed the floor on lending rates but removed the ceiling.

However, when the rates fall below the stipulated 17 per cent, banks take shelter under RBI's floor rate and express their inability to charge lower rates. "Ideally we would like the floor also to be freed, so that there is a link between lending and funding costs," says a foreign bank official.

Incidentally, banker-customer relations are the first to be affected by the new trend. Ironically, the American banks — notorious for transaction banking — are not jumping onto the bandwagon. This decision is also influenced by the composition of their business. Bank of America's decision, for example, also rests on the fact that only a small proportion of its business is through cash credit, while a major part comes through bills.

Gardiner says that "although some banks have not made any formal announcements of increase in rates, over the years, they have already been charging clients higher rates. Our client may be paying a higher rate now, but on the balance they are still in a better position." He therefore feels that relationships will not be affected. In any case, few borrowers have protested because higher rates are better than a freeze on lendings. They are, however, confused about the varying rates charged by banks.



According to a corporate client, lack of clarity has certainly affected his cash flow management adversely. Bankers on the other hand accuse companies of not planning their fund requirements adequately, and feel that the present system wrongly puts the onus of fund management on them. Hopefully, the current uncertainty will help discipline borrowers.

Meanwhile, the move is affecting industry severely. Though many banks have exempted preferred clients from the higher rates, small borrowers have no respite. Says a small entrepreneur, "I have to pay Rs.4,000 to 5,000 extra per month towards the interest cost. It would be cheaper to borrow from the unorganised sector at 24 per cent." There is hardly any choice now. But he is certainly not going to give his present bank any new business!

As the scene remains confused, a few things emerge clearly. First, the current exorbitant rates are a temporary phenomenon; but even when the rates settle down a bit, the current level of 17 per cent will be a matter of the past. Bankers see the new level between 22 and 24 per cent. Second, an unfixed floor rate, just as there is an unfixed ceiling in lending rates, will be the future scene. Of course, the basis on which the floor or ceiling is decided will have to be seen. Third, concessions built into the present rates will automatically evaporate, leaving banks to lend only the minimum amount at the previous concessional rates and the excess borrowings at the market rates. Probably, this will bring in a simpler, more realistic interest rate structure. For the present, however, the industry is surely entering a stagflationary phase and the banking industry is sure to maintain the bottomline.

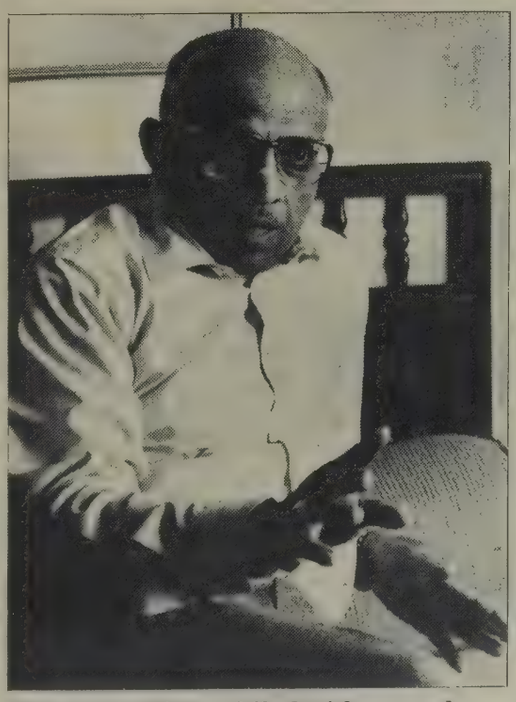
POONAM CHAWLA
with ALPANA KILLAWALA

ANK PROFITS

Will the good times last?

Once again, after the 1984-89 period when banks registered a growth of 41 per ent, bankers have "significantly higher" ank profits to boast about. Almost all he banks which have announced their orking results for March 1991 so far ave registered jumps of not less than 0 per cent in their profits over the ast year.

Canara Bank, for instance, which has he added advantage of links with its cash ow financial subsidiary, has reported a et profit of Rs.76.04 crore as against Rs. 1.27 crore last year — a 24 per cent ump. More significantly, though, even a maller bank like Dena Bank has shown a arked improvement in profits — these ave increased five-fold over the past ear.



G.S. Dahotre, Dena Bank's chairman ttributes this "highest profit in Dena's istory" to "prudent fund management imed at keeping the funds cost at its low- st possible, coupled with profit growth s the focal point of the bank's business lanning". Better recovery management nd close monitoring of operating costs lso contributed to profit growth.

osts cut

ankers cite several reasons for im- roved performance. But the twin acts of ost cutting and better income earning tand out prominently. States the general anager of a medium size nationalised ank, "Banks have now come to realise at unless they manage funds properly, eir future is shaky." Dena Bank is a case point. By consciously reducing its de- endence on market borrowings, Dena as been able to significantly cut its cost f funds. Bank of Baroda too followed a milar strategy. By stressing more on less stly current and savings deposits (0.5 er cent), its cost of funds has reduced ubstantially. Unfortunately, since banks re shielded behind the secrecy law and annot reveal their profits, the full extent f the reduction of cost of funds in the oove cases will remain unknown to the eneral public.

Some policies have also contributed to is year's profits. Increase in service harges, which came into effect from Sep- mber 1990, and increase in lending tes by 1 per cent, (introduced last Octo- er), have helped boost the banks' income. Advances in the form of loans, overdrafts, etc, by Canara Bank have risen by 9.79 per cent whilst interest income has gone up by 12 per cent. A percentage point higher allowed on the Food Corporation of India too has had its share in the profits.

Interestingly, loan waivers, and specially the notorious farm loan waivers of the NF government, is another reason for higher profits. Dena Bank provided relief to the tune of Rs.50.36 crore whilst Indian Overseas Bank gave out Rs.102 crore to 383,000 beneficiaries. Although the government has yet to make the full reimbursement on this count, banks have benefited from it. Most banks have applied interest to the loans eligible for a waiver and then written off the whole amount, showing the amount as outstanding from the government. In many cases, interest for more than one year has been credited to the current year's income when it ordinarily would have been written off over the tenure of the loan.

Prabhu: banks saddled with second class accounts

Moreover, as N.D. Prabhu, chairman and managing director of Canara Bank explains, "Banks have not received the full reimbursement of loans waived but the part payment has improved liquidity." The most significant gain from loan waivers has been to the better managed banks. Banks which follow proper accounting norms for non-performing assets (loans which are considered bad and therefore not worth applying interest to) to the extent of loan reimbursement the non-performing asset account will be reduced and the balance sheet will present a better picture. While accounting for full interest in a single accounting year will artificially inflate the bottomline for a year, for the next year, the bank will have to find another manipulator.

Making a killing

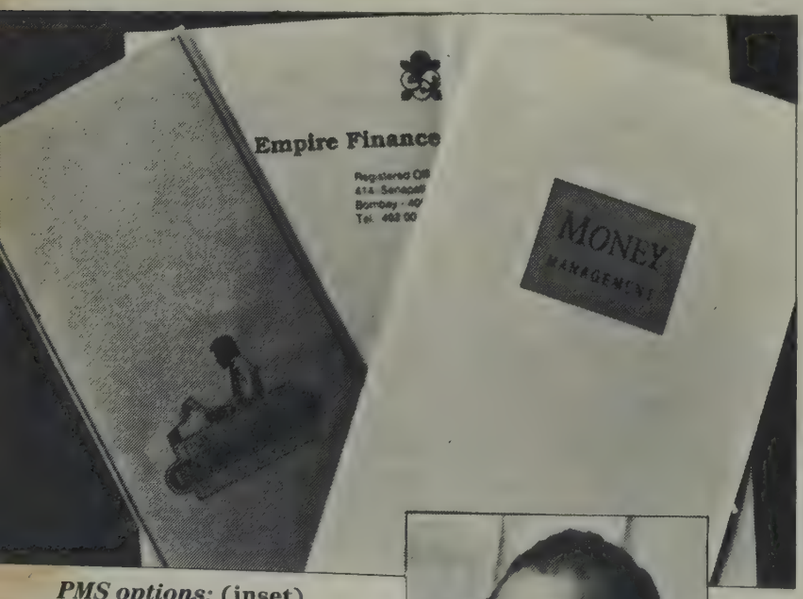
Nevertheless, optimists hope that the positive trend will continue into the next year with banks making a killing in the current 'dear money season' in the financial markets. But Prabhu opines that the new government guidelines for presentation of balance sheets, with special reference to segregation of performing and non-performing assets and not charging interest on the latter, will affect bank performances.

Prabhu further cautions, "With the various instruments available in the market, borrowers now have a choice over bank funds. Because of this, banks are increasingly being saddled with second class accounts which carry proportionately higher risks for the banks." In other words, if banks are not alert enough, this year's high profits may well be just an isolated bright spot.

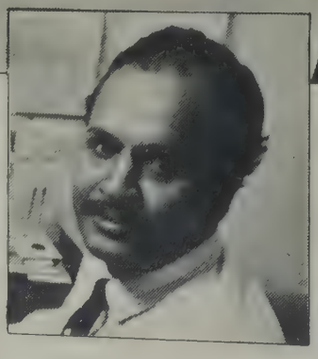
On the positive side, for the fist time (barring Canara Bank which set the trend last year) banks have announced their accounting policies. They may all read alike this year but next year, when banks will have to declare much more in their balance sheets, these policies will provide significant clues to the real picture. The innovation in bank accounting practice has imported a professional finesse to the performance. Also, banks now seem to be less averse to admitting bad debts which were considered to be a reflection of poor credit management all this while. Now banks are not only admitting bad accounts but are making efforts to identify their problems and find effective solutions.

For instance, A.C. Shah, chairman and managing director of Bank of Baroda, has identified better credit management and reduction in non-performing assets as one of the thrust areas for 1991-92. Hopefully, before the next year's results, banks will have aired their cupboards and pre sent a cleaner slate.

■ MANALI RESHAMWALA



PORTFOLIO MANAGEMENT



A new source of investment

Offering portfolio management services (PMS) to individuals is catching on. While a few of the finance companies have already formulated and are actively operating this service, there are about a dozen more gearing up to join the bandwagon.

The idea is not new. "In a sense," says Vivek Seth, assistant vice-president (treasury operations), Empire Finance, "they were earlier offered by leading stockbrokers. But these services were available only to those with high net worth. Today, even a person with Rs.50,000 can get the counselling services with better returns (if he is routing the investment through known companies), now that PMS has been institutionalised."

Empire Finance is among the first few established finance companies to enter PMS. The others in the field at present include Times Guaranty and Kotak Mahindra both of which have formalised PMS. The features of PMS offered by each company vary in terms of the minimum investment, the lock-in period, the risk return and the management fee.

***PMS options;* (inset)**
Shenoy: better returns

For any finance company, the whole exercise of fund raising from the capital market is a costly affair, given the legal channels and various regulatory bodies that have to be crossed before such an exercise can take place. It's here that PMS comes in handy for a finance company to mobilise off-balance sheet short-term borrowings. The funds pooled through the PMS route invariably meet the working capital requirements of finance companies.

The two types of PM services available to the investor are: one, the discretionary portfolio management service (DPMS) (the client parts with his money in favour of the manager, who, in return, handles all the paper work, makes all the decisions and gives a good return on the investment and charges fees) and two, the non-discretionary PMS (the manager functions as a counsellor, but the investor is free to accept or reject the manager's advice; the paper work is also undertaken by the manager for a service charge).

In the discretionary PMS, to maximise the yield, almost all portfolio managers park the funds in money market securities such as overnight market, 182-day treasury bills and 90 days' commercial bills (which can be quickly rediscounted with banks to release the finance company's funds). Normally the return on such investment varies from 14 to 18 per cent, depending on the call money rates prevailing at the time of the investment. The non-discretionary PMS manager concentrates on stockmarket instruments with a portfolio tailor-made to the risk taking ability of the investor.

Empire Finance's discretionary PMS accepts Rs.5,000 as the minimum investment for three months. "For large investments, special terms with regard to the minimum period and return can be negotiated," explains Seth. The funds collected are invested in liquid assets and the returns are distributed among the investors.

Times Guaranty — the most recent entrant — has two schemes both offered on discretionary basis. In the first one, the minimum investment is Rs.1 lakh for a period ranging from 3 to 12 months with an expected assured return varying between 14.5 to 16 per cent depending on the tenure of the investment.

The second service is designed for long-term investors in which a minimum investment of Rs.5 lakh is locked in for one year. Kotak Mahindra Finance Ltd (KMFL) also has a privately placed PMS under their Money Management Service the doors of which is not yet open to the general public.

Thus, for the finance companies, large chunks of money becomes available, and if they manage to earn more, they have the option to share profits with investors. According to B.S. Shenoy, director of Times Guaranty, "PMS is a way to get around the fixed deposit route and give a better return to investors." As per the RBI guidelines, fixed deposit cannot offer more than 14 per cent as interest. As opposed to this, PMS assures profit sharing and to that extent the reward could be higher.

But there are many pitfalls in this scheme. Since the companies running the PMS do not disclose to the investor the assets in which his money is invested, the investor never knows the net asset value of his portfolio. And it is easier for the finance companies to distribute only what they want to and not necessarily what the investment has really earned.

No regulatory body

The basis of portfolio management is a mere agreement signed by the investor and the portfolio manager. Currently there is no regulatory body watching over PMS. The Securities Exchange Board of India (SEBI) has only authorised registered merchant bankers to offer PMS, it has not defined the rules of the game. Hence it is quite easy for the fly-by-night operators to defraud the investors.

Finance companies are quite keen to formalise the services. Once investor protection is ensured, PMS will undoubtedly become a new source of investment with a better return for the small investor. It will also minimise the risks involved in getting into the market directly.

"A good PMS scheme has a lot of potential for the average investor. And for the portfolio manager, it is a step towards the privatisation of mutual funds," says Seth. Adds Shenoy, "We have launched PMS to get a clientele base. This could be used to expand merchant banking activities also, with an eye on private-sector entry into mutual funds."

■ LANCELOT JOSEPH

Drive for world-class quality

ARUN N. MAIRA

Does top management really believe that quality is important? Ask the employees. In surveys in some factories in the US, the employees said they were not convinced their top management really believed in quality. Even though these were factories with quality posters with the CEO's picture and statement that quality was the first priority; where employee newsletters had messages from the CEO explaining why he was committed to quality; and where all employees including the CEO had been to several classroom programmes on quality.

The housekeeping in these factories was appalling; cluttered gangways, material on the floor, rubbish in corners, dirty toilets. The chief executives visited the factories periodically. They saw the conditions but did not do anything to change them. Their words about quality, like their business clothes, were *a la mode* but there was not even a semblance of action.

Changing the culture

In another factory, another chief executive notices a rag and demonstrates what needs to be done. He stoops to remove the offending waste. "Sorry," says an embarrassed lieutenant, "this is just the culture here — very difficult to change." He tries to take the rag from his chief's hand. The chief holds on and wants to dispose of it. There is no trash bin nearby.

"What would you do," asks the chief, "if you were working here, had to dispose of a rag or piece of paper when your supervisor expects you to stay by your machine and you cannot find a bin? Creating a workshop that can be easily kept clean, like laying out a process that can consistently produce quality, is your job, not the uncultured workmen's," the chief says.

The next time he visits, trash bins are everywhere. Yet, paper is on the floor. So he picks it up and puts it into the nearest bin. The lieutenant smirks. "I told you so," his eyes remind the chief, "its these people's upbringing. They are used to throwing their trash out into the street at home." The chief has no words, only action. He picks up a worn hand-glove in another workshop and into a bin it goes. When they come across the next piece of trash, the lieutenants are scurrying, as are supervisors and even some workmen... "You have to show people what you expect them to do when, as you claim, they have not been brought up to do it," says the chief, "and it is not beneath my dignity to do so."

Cleanliness is the foundation for and the first step towards quality in a manufacturing organisation. It also boosts employee morale and inspires customer confidence. To achieve it requires no classroom training, and hardly any expenditure. Everyone can participate to improve housekeeping. The reason a factory continues to remain dirty is in the management philosophy — the "culture" if you will — of the chief executive.

Do they care?

After cleanliness, the next step is completeness. In Indian cities, pavements are broken up by the telephone company to repair cables and left that way. "My job is only to do this much, no more," is the attitude. Incomplete work is poor quality work. Hundreds of such instances can be found in factories and offices. Do senior managers even notice them?

Sumant Moolgaokar, as chief executive of Telco, was a leader of the quality movement in Indian industry. He made no speeches and did not need any banners in his factories to show the world that he was pursuing quality. Yet every employee knew that the top management was committed to quality.

Cleanliness is the foundation for and the first step towards quality... It also boosts employee morale and inspires customer confidence

Years ago, he stood before a newly installed transfer-line in Telco's Pune factory, produced by Telco's own machine tool division. Hundreds of miles of electrical wiring and hydraulic piping and thousands of precision components had been designed and put together to build a machine that was a marvel of craftsmanship and intricacy. It had cost Telco much less than it would have if imported from Japan or Germany and it was produced in record time. But he was visibly disappointed.

He took the general manager to his office and admonished him. The hydraulic pipes on the side of the machine were not all absolutely vertical! "You must notice these little things," he said, "for they all add up to world class quality."

The Telco training school was asked to produce a plumb-bob for every senior manager in the factory. (A plumb-bob is an elementary device: a metal weight on a string to check the vertical lines of buildings). It was simple and symbolic. The trainees who produced the plumb-bobs got the message as did the managers on whose tables they stood. The plumb-bobs carried an inscription: "Trifles make for perfection and perfection is no trifle."

Catchword 'health'

Time was when the most potent marketing catchwords were 'new', 'improved' or 'free' Today's consumer is faced with a new set of phrases — 'fit and trim', 'cholesterol free', 'fibre rich' and 'low calories'.

The health and fitness fetish, till recently a fad among a privileged few, is now becoming more widespread. Note, for example, the surge in business that health clubs are witnessing. Bombay-based Talwalkars, the oldest in the health club business, "are experiencing a 15 per cent rise in annual membership though the fees keeps increasing", says Madhukar Talwalkar of the club. Rajan Prabhu, health club manager, SeaRock Hotel says, "We have to turn down nearly five new memberships per day."

It is this new health-conscious consumer that advertisers are gunning for. Ads which earlier portrayed maternal love have switched to the mother's concern for the family's health (including her own), resulting in drinks which provide vitamin C, biscuits with glucose, milk foods which boost stamina and even *ayurvedic* pastes which promise youth.

Prevention is better

Says advertising-marketing consultant Brinston Miranda, "Today a health related marketing angle catches the eye of anyone with even a little disposable income, the psychology being that it is better to spend on being healthy and fit than on recovery from illnesses. This applies even to products not directly related to health such as cheese, milk and oil."

Five years ago, when Marico labelled their cooking oil as being good for the heart, Saffola gained a major slice of the market share, selling 425 to 450 tonnes per month. Users of Postman oil began to wonder whether their choice was unhealthy. "So we launched a three-phase educative campaign to inform the consumers about what a healthy oil means and that Postman was as healthy as any other oil having the right balance of fats," says Urmila Zutshi, marketing manager, Ahmed Oil Mills. Where earlier the oil sold on the concept that it was being used for generations, the company had to change its stance to cater to health-conscious consumers. Labelled as a 'healthy cooking medium', it now faces competition from the various other, 'healthier' sunflower, safflower and low density oils.

If matters stopped at Hero Cycles launching an 'exercycle' (Allegro) and cornering the fitness equipment market even at a price like Rs.2,800 per cycle, or at gyms with long waiting lists, it would perhaps be understandable. But the introduction of calcium toothpaste and low nicotine, low tar cigarettes seems to indicate that other products too have caught on to the new USP (unique selling point) — health and fitness.

Show an educated mother another method of depositing calcium on her children's teeth and she will buy it. This is exactly why Prudent Calcium, the 'good for you' toothpaste, is doing well though it has been launched only in Bombay, Maharashtra and Goa. "Calcium toothpaste has existed for years all over the world. We have been able to pre-empt competition by taking out a research-based product for which the market is very receptive," says Kamal Kapadia, marketing manager, Parle Products Ltd.

Smokers have a 'healthy' option too, the low nicotine, low tar cigarette, one Legend, which sells one million sticks per month. Says Harsh Wardhan, vice-president, marketing, Golden Tobacco Co, "Internationally, there is a trend towards low tar and nicotine cigarettes. We saw a niche here and went for it. Our sales figures are encouraging and we will soon go national. People are definitely buying health."

Healthier alternatives

Kavita Mukhi, who runs her 'Health Shop' in Bombay, too finds the trend catching on as she is in the business of providing "healthier alternatives to everything you get in the market". Her stocklist ranges from soya and whole wheat noodles to herbal cosmetics. The shop, now a huge success making close to Rs.1,200 a day, would have died a conceptual death had it not been for Nari Gandhi, an 'environment architect', loaning her the premises. Today, if Mukhi closes shop even for a day she has to face irate customers demanding why. She is also selling land in the form of 'Health Communities Touched by Nature' in the Western ghats.

Beer is another example. In 1981, Associated Breweries launched a diet beer. "Initially diet beer constituted 10 per cent of our production but now at 25,000 to 30,000 dozen bottles per month, the beer is always in short supply even for the Bombay market. In Calcutta, it is sold like gold with bartenders reserving it for their regular customers. If we were allowed to advertise, promote and increase productivity, I think I could really use the health and calorie aspect and have a great market," says Zeenia Lawyer, partner, Associated Breweries.

Most marketeers say it is still an upmarket, urban concept but one with a lot of potential. Once it really filters down to the wide base at the bottom, the sales that can be generated with a few health-related words is mind boggling. But for now mass markets are still a long way off.

■ NEERU NANDA

Travelling salesmen

A fresh MBA joins a leading advertising agency as account executive — not a very senior position. Within six months, well before he has had time to learn the ropes, he is virtually managing the branch, most of the other executives having left in search of better prospects. Two years later, he's in a senior position in another agency — his third. And at a salary that would normally have made sure that he stays there for the rest of his career, if this was any other industry.

Not so in high tension, high profile advertising. Nothing prevents another agency from dangling yet another carrot in front of this management hotshot, putting him in a financial bracket higher than what he would get in most other professions. The perks too make all but the most hardened loyalist give in to temptation — and switch jobs.

Put up or opt out

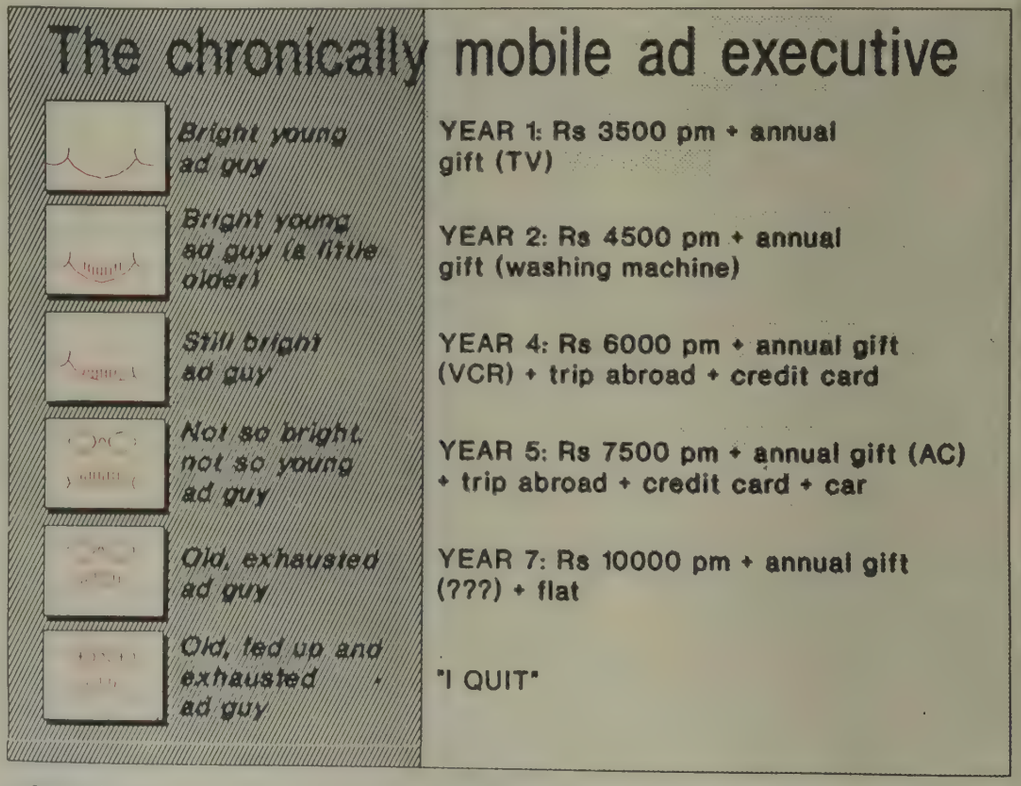
Industry sources estimate an average personnel turnover of over 30 per cent annually in most Indian advertising agencies: almost twice that of agencies in the west, where the industry is more developed. Very high salaries and an unnaturally high growth rate in turn puts a tremendous amount of pressure on the adman leading to several dropping out either to switch professions or to start out on their own. Says Prem Mehta, deputy chief executive of Lintas India: "The kind of work pressure advertising people have to live with are the opportunity costs they have to pay for the growth the industry offers them."

But inflated salaries, job-hopping, high designations and the resultant burnout are all but a symptom of a larger problem — the problem of demand for advertising professionals being far more than the supply. The problem begins, according to Ajit Balakrishnan of Rediffusion, because the industry is young. It has not yet been able to define its exact needs. What exactly should a copywriter's background be? What qualifications should a client service person have? No wonder there are frequent changes in job functions — such as client service people switching to copywriting.

In the absence of training programmes, youngsters who opt for advertising have no clear view as to what their careers involve. The ones with potential get trained on the job and are promptly snatched by other agencies. Agencies are obliged also to look for people to fill senior positions constantly being thrown open by people leaving. Says Sumit Roy of Lintas, who handles human resource development: "Our trainees are trained for a year before they are deemed fit to fill the position for which they have been chosen." However, he admits that it is important to plan for a 10-15 per cent rotation "because often trainees get picked up by other agencies even before they have finished their training with us".

How do agencies guard against personnel turnover? Many agencies abroad offer employees shares, which they feel might be the only way to retain people. A good starting salary is one obvious way of retaining personnel, although there is always another agency willing to pay more. Says Mehta: "Lintas was perhaps the first to recognise the need for marketing professionals in advertising. And we began recruiting straight from management schools." Every year, Lintas employs an average of 30 freshers a year — management trainees starting with a salary of up to Rs.4,500 a month. Compare that to Rs.2,000 for a sales trainee in a medium to large marketing company.

The creative area, which includes art direction and copywriting, is another matter. Apart from high salaries and perks, copywriters and art directors have employers' blessings to freelance. Their total earnings can go up to Rs.50,000 a month. Says Anjan Chatterjee, chief executive of Situations Advertising: "It makes a lot more sense for smaller agencies to hire senior creative people either on a freelance basis or as consultants."



No comprehensive training

Chatterjee believes that it isn't just advertising professionals who are scarce, but "thinkers". "It's difficult to find people who look beyond their specific role into the overall synergistic communication. And this is possibly because there is no comprehensive training course that will supply such professionals."

One obvious solution is an institute. While many agencies do look upon themselves as universities and Mudra Advertising appears to be moving in the direction, there isn't yet any recognised institution. How can an institute make up for experience on the job, sceptics may ask? Much like management schools do, one might say, with students being sent to agencies on training stints.

Whether it is an institute funded jointly by agencies or an independent set-up, a training school will definitely help. Not only to enable students to understand advertising and plan their careers better, but also to help agencies in getting and retaining good people.

■ SONIA and DUSHYANT MEHTA

Rule Polynesia.

At The Outrigger. You are the chief.

Host a business lunch. Celebrate a special occasion with an exotic dinner. Or just nurse a cool Mai Tai as you bask in the glorious warmth of the South Seas.

Every corner at The Outrigger is a reflection of the Polynesian way of life.

The simple but elegant bamboo cane roof, the traditional masks on the walls, the bamboo furniture. Even the 20-foot-long canoe at the entrance.

Perfectly stylish environs for an international buffet lunch.

This languorous ambience is further enhanced by the warm and graceful service and the soft, romantic music.

For dinner, savour Prawn Ming Sha, Pomfret Havoli, Chicken Kala Kua and Pipi Kon-Tiki, amongst other unique offerings.

Accompanied by Casian strumming softly on his guitar. As he serenades your discovery of Polynesia.

A sense of wonder, charm and excitement, all combined into the purest of pleasures.

At the Outrigger.

Make a visitation.

And leave feeling like a king.

Lunch 12:30 pm to 3 pm, Dinner 8 pm to midnight. For reservations, please call 2025757 Ext 6384.

Destination Iran

While most western countries are busy making tracks into Iraq and Kuwait to grab the reconstruction orders after the recent Gulf war, India and other Third World countries are quietly moving into Iran.

A pariah for nearly a decade, battered by eight years of war with Iraq, Iran still holds a lot of promise. Especially now since the country's pragmatic president, Hashemi Rafsanjani, has decided to reach out for help to rebuild its economy. Says a senior official of Rallis India , "Today, the Iranian market is ripe for the picking. One must only know how to grab a piece of the action." Rallis has recently taken on a contract worth nearly Rs.21 crore with the National Petrochemical Company (NPC) in Iran for setting up a pesticide intermediate plant.

Two other Indian companies will be associated with NPC. The Indian Petrochemical Corporation Ltd (IPCL) is setting up a subsidiary company, IPCL Videsh Ltd, to handle a Rs.9-crore contract for training NPC personnel. And Transpek Industries Ltd has bagged an export order worth Rs. 26 crore from the NPC. The Baroda-based company will set up a 1,500 tonnes per annum plant for manufacturing chloroacetyl chloride, a raw material for herbicides.

When in Iran ...

The Indian companies who have sent out feelers to Iran fall mainly in the engineering and service sectors. Delhi-based Engineers India Ltd (EIL), for instance, has just bagged an export order worth Rs.35 crore from Tabriz Petrochemical Company for providing project management and co-ordination services. The Indian company is planning to send about 100 experts from its various engineering divisions to Iran.

There are many more such business opportunities especially now that the Iranian government is opening up its economy. Nearly 400 companies are being privatised in Tehran alone. Also, a free trade zone has been planned on the island of Qeshm. This is expected to encourage foreign investment.

"One needs a great deal of grit and understanding of the Farsi language and Iranian people to do business there," says a senior official at the Hinduja group of companies. He should know. For it is precisely these qualities that have helped the Hinduja brothers — and their forefathers — successfully conduct business with Iran for over 70 years. The Hindujas represent Indian companies like Bharat Heavy Electricals Ltd (BHEL), Steel Authority of India Ltd (SAIL) and Ashok Leyland in Iran.

Iranians are known to be hard bargainers. "They always want the best at the cheapest price," says the senior Hinduja official quoted earlier. "It always has to be a Mercedes. A Toyota just won't do." That is perhaps why decision-making is so slow and cumbersome. According to one exporter, the Iranians don't believe in normal trade practices like opening letters of credit. "They expect to function in an atmosphere of complete trust. This makes dealings very difficult for businessmen used to formal procedures," he adds.

Honourable people

But on the other hand, the businessmen cannot afford to be fainthearted because the Iranians are also known to be very good pay masters. "They are honourable people and have always kept their commitments, even while they were involved in the war with Iraq," says P.R. Singhvi, chief regional manager, IPCL.

With growth slowing down in the domestic markets, the Indian automobile and allied industry is being forced to look overseas for exports. Mahindra & Mahindra (M&M) has just signed an order worth Rs.73 crore for the supply of 10,000 jeeps in completely knocked down (CKD) condition. According to R.K. Pitamber, managing director, M&M, "The export model has been specially developed by us to suit the rough terrains of Iran." The jeeps will be assembled at a former General Motors plant in Tehran.

Iran is Mecca for Ashok Leyland as well. The truck and bus giant has export orders worth nearly Rs.30 crore for the supply of diesel engines, leather and miscellaneous items, to be executed in 12 to 15 months. "We have hopped on to the Iranian privatisation bandwagon and hope to make the best of this opportunity," says R. Jagannath, Ashok Leyland's executive director.

Like Ashok Leyland, other Indian companies too can play a significant role in Iran's reconstruction drive. At present, the country needs help right from building houses to setting up sugar and cement plants. "With relatively cheap labour and an adequate infrastrcture for exports, the right symbiotic balance can be struck," says Kishore Shah, chairman, Federation of Indian Export Organisations.

Ashok Leyland's assembly line: helping Iran's reconstruction

Fortunately, the Iranians like doing business with us. "Indians are warm and friendly. Besides, you like *Ghalib*, we too like *Ghalib* — we have so much in common," says a senior diplomat at the Iranian consulate in Bombay. Moreover, the cultural similiarity between the two countries is only going to be an added bonus.

The Indian companies may well find a pot of gold at the end of their Iranian trek. ■

SHAMPA KAR

KWALITY

Going global

A household favourite in India for over 50 years, Kwality icecream is now all set to storm international markets on a bigger scale. After cooling palates in the Middle East, it is now attempting to set up joint ventures in Germany, the USSR, Nepal and Mauritius.

It all began with a chance meeting between N.K. Seth, vice-president of Kwality Frozen Foods Pvt Ltd, and Prince Fazal of Saudi Arabia. They met on a flight from Delhi to Bombay in the early seventies. Their conversation at the time triggered off Kwality's maiden foray into the Middle East.

A Kwality outlet and (inset) *Ghai: making major moves*

At the outset, Kwality conducted an exploratory visit across the entire Gulf, stretching from Muscat to Bahrain. The company realised that before it started, manufacturing any icecream there, it had to first establish a market presence in the region. Hence, the company started exporting icecreams to the UAE, Oman and Saudi Arabia in 1974. "Exporting 9 tonnes of icecream per flight was uneconomical but it was needed," says Ravi Ghai, Kwality's managing director.

Two years later, Kwality set up the Pure Icecream Company in Sharjah, for manufacturing and marketing Kwality icecream. While Ghai has a 14.2 per cent stake in the outfit, the remaining equity is held equally in three chunks — by Dubai-based NRI trader Kishan Bhatia and two companies, International Traders Middle East Ltd and Regal Traders, both also located in Dubai.

"Brand to reckon with"

Set up at a cost of 3 million dirhams, the unit can manufacture 800 litres of icecream in an hour. Competing against Australian, French and British companies, Pure Icecream was able to register profits of 1 million dirhams (after depreciation) till recently. "Kwality is quite a brand to reckon with in the Gulf," admits a senior official at Dharnendra Icecreams, makers of the popular Go Kool icecream.

Ghai attributes the overseas success of Kwality to the "desert climate and superior quality of our product". But that is not all. Indian icecreams have an edge over international brands as they are essentially made from dairy fat as against the others' non-dairy or vegetable fat. The latter leaves an aftertaste not acceptable to many. Besides, Kwality started off with an added advantage: a large number of expatriate Indians were already exposed to this product. And the strong marketing network established over the years enhanced this awareness.

Encouraged by its successful joint venture in Sharjah, Kwality appointed franchises at Jeddah in Saudi Arabia and Aden in South Yemen. The tie-up in Jeddah is a technical one and Kwality receives royalty for the use of its brand name. After the $5-million plant had been commissioned in 1980, the Indian company sent 125 professionals to Jeddah for training the personnel there. Even though the contract was technically over in 1990, the Saudis are likely to renew it again this year.

Kwality's involvement in the Yemen Dairy is less, icecreams being a small part of a much larger operation including fruit juices and processed milk products. Even though Kwality has a tie-up with one of the biggest plants in the area, business is being affected by a sagging Yemeni economy. Yemen ran into major foreign exchange problems in 1988 for supporting Iraq, thus losing vital financial assistance from Iran. However, with the cessation of hostilities, the Yemen Dairy is likely to be revived and Kwality could continue having a strong presence in that country.

Green pastures

Kwality is currently consolidating its position abroad by moving into greener pastures. Negotiations are at an advanced stage with Germany and the USSR. "A lot of groundwork has been done, we have already made sample shipments to both the places and the deals are likely to be finalised in another six to eight months," says Ghai. The company is keen on equity participation in a sophisticated $3-million plant coming up in Germany. The Indian government's approval is awaited on this.

Even though the plant in Uzbekistan, USSR, is slated to be much larger than the one in Germany, Kwality is a little skeptical about the negotiations. The company has already had its share of difficulties while negotiating with the republic of Uzbekistan. "We are dealing mainly with government officials who have no experience at all in international trade. We had to even explain what opening of LCs meant," says Seth.

In Nepal and Mauritius, Kwality is only looking for franchises. These deals are likely to be finalised by mid-1992.

"We have been working on these deals for the last two years and will be glad to see all of them materialise," says Ghai. When that happens, it will be a major move in an Indian company's efforts at globalisation.

JCT FABRICS

Privatisation, UP style

If Sanjay Dalmia is successful in turning around his newly acquired UP Cement Corporation Ltd (UPCC), posterity will record that the process of privatisation was neither smooth nor peaceful. The transfer of this public sector company has left eight workers dead and a score wounded in riotous battles with the police.

The incident occurred on the afternoon of 2 June in Dalla, a sleepy town 125 km south of Varanasi, in the district of Sonbhadra. Some 1,500 employees of the just privatised cement company staged an impromptu *rasta roko*. They were attempting to stop Praveen Kumar, Dalmia's new managing director, from getting to the company's main plant at Churk, 70 km from Dalla.

According to eye-witness accounts, the *rasta roko* was hugely successful. Within two hours, vehicles were stranded for miles on either side of the arterial road. A limited police contingent, assisted by a platoon from the provincial armed constabulary (PAC), then resorted to a lathi charge. The agitators replied with stone-throwing. Finally, at 3.20 pm, the police opened fire, and did not stop till the place was cleared fully 90 minutes later. By then, nine men, including a bystander, were dead, and 27 had to be admitted to hospital — seven with fractures and the rest with bullet injuries.

No inkling

"It is not a labour problem at all. It was a law and order problem which the district administration quelled," says Sanjay Dalmia, chairman of Dalmia Industries Ltd. Adds Praveen Kumar, "It is unfortunate. I had met representatives of the Dalla unit at Churk just 24 hours earlier, but I had no inkling of any such protest action."

In the minds of Dalmia's new employees, who have not reported for work since 2 June, the new management is as much to blame as the police and district authorities for the firing. Says Chandrasekhar Singh, a worker at the Dalla plant, "There can be no excuse for the brutal police action. They were even firing at those who were fleeing the site. This is obviously the handiwork of Dalmia, who is using his political clout against us."

Dalmia shrugs off such allegations, but admits that the incident has made it difficult for the employees to work in harmony with the new management. "I am hoping that the workers will come and restart the plant soon. Our plans of modernisation have been delayed, but all is not lost. We will still turn this company around."

That may be a distant dream yet; for the 2 June incident was but the climax of a long resistance programme of workers and officers of UPCC against the move to privatise it. Talks abouts selling this perennially sick company, along with other similar public sector undertakings, had been in the air for quite some time. Finally, the state government put this company on sale, along with four others, in mid-1990. In October that year, when the Dalmias were just one among 10 bidders for UPCC, the workers petitioned the Allahabad high court, seeking a stay on the grounds that it threatened their service conditions and security.

Dalmia: "We will still turn this company around"

Implementation stayed

The business of scrutinising the bids, short-listing a few, asking each for additional details, and the final decision to come to a deal with Dalmia were all taken in the shadow of the writ petition. The court, while admitting the petition, had stayed the implementation of the decision to privatise the corporation. The government, which had in its MoU with Dalmia agreed to sell 51 per cent of the equity, transferred just 49 per cent of the shares, thereby technically obeying the court's ruling. Consequently, five of Dalmia's representatives joined UPCC's board of directors in April this year, with Praveen Kumar as the new managing director.

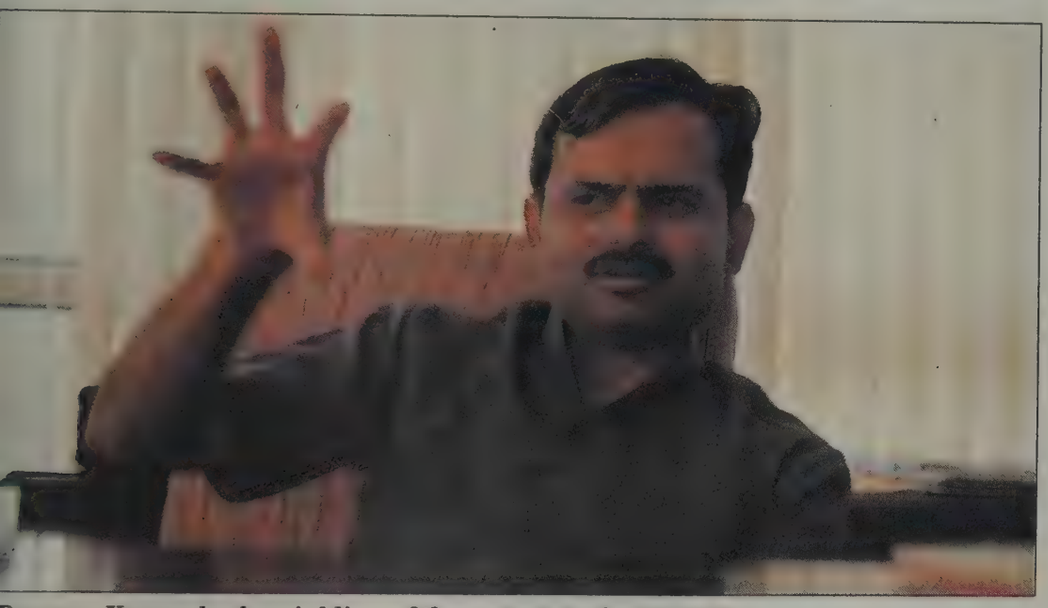
The employees of the corporation, including all senior officers, then decided that they would wait for the court's final decision before they took any orders from the new management. The court meanwhile, was moved by the government on 24 May, and it ordered that if the 49 per cent of equity was indeed transferred as of that date, then the revised board of directors with the Dalmia representatives could function in day-to-day management. The registrar of companies, as directed by the court, issued a certificate on 27 May that the shares had been transferred to Dalmia Industries Ltd and its associates on 9 March 1991.

The officers and workers of the corporation, however, refused to heed even this directive, and continued to ignore the new management. Unauthorised gate passes allowing cement to be taken out of the factories began to be issued. This was later confirmed by the assistant collector. Says Dalmia, "We were very conservative in our approach. But when reports reached us of illegal sale of cement, we had no choice but to take cognisance of the matter." It was then that the Dalmia management sealed the strong rooms storing cash at all three plants in Churk, Dalla and Chunar. Soon after, the excise commissioner officially suspended all movement of cement from UPCC's plants.

Wilful mismanagement

There are allegations of wilful mismanagement on the part of the incumbent senior officers of the company. Says

UP's industry secretary A.V. Singh, "Certain officers have been flourishing at the expense of the company. They obviously are apprehensive now that with the new management, they will not be able to feather their nests. And so this agitation."



The new management claims that even though bank transactions were suspended after 12 April, officers of the company had spent Rs.2 crore in purchases of raw material and equipment in the subsequent 45 days. Further, the strong room at Dalla, which was sealed, was reported to contain Rs.1 crore. Asks Praveen Kumar, "What was the need for so much cash to be kept in hand?" Also, the new management claims that dealers have come complaining that even though they paid in cash, commensurate cement had not reached them. Says Dalmia, "This kind of money-making has to stop."

Praveen Kumar also says that his visits to Churk have highlighted the fact that certain officers are "instigating the workers". "I have talked to the workers. Their only apprehensions are retrenchment and discontinuity of service conditions. We have given in writing to the government that this will not take place. I want to turn this company around with the very same staff," he says.

Meanwhile, the police have arrested the general manager of the Dalla unit, Dharamveer Khushrama, under 13 different sections of the Indian Penal Code (IPC). He was later released on bail. A warrant is also out for the arrest of the finance manager at the Dalla plant, Yashpal Sharma. His whereabouts were, however, unknown till 15 June.

This in part has led to further fears among the officer cadre of an *en masse* dismissal. But says Dalmia, "I have no such intentions. People against whom proper charges are proved will no doubt have to face action, but I am the last to effect any mass dismissal." The employees are hopeful, however, that a new government in the state will retract the privatisation step and restore public sector status to the company.

In the meanwhile, there have been hushed murmurs that the Dalmias were being favoured by the Mulayam Singh government. Counters industry secretary Singh, "Once the decision to sell these sick companies was taken, we went strictly according to the book. Tenders were called in and a privatisation committee set up to look into them. Six of the ten bidders were short-listed in the first round, and two remained in the last round — ACC and Dalmia. ACC withdrew at the very last stage of negotiations, and Dalmia's offer of Rs.75 per share of Rs.100 was found acceptable to the government. The entire process took over eight months."

Praveen Kumar had no inkling of the protest action

Successfully restarted

In sharp contrast to the UPCC case has been the sale of UP Autotractors Ltd to the Bangalore-based Sipanis. The Autotractor unit in Pratapgarh district, which was shut for six months, has been successfully re-started by the new management without much problems. Says Singh, "In fact, we had expected some trouble here and not in the cement unit."

UP Autotractors Ltd, a 12-year-old company deep in the red, was shut down by the government in December last year. Most of its 1,200 workers were paid compensation. When the Sipanis moved in to buy the firm, they promised to take back half the original staff immediately, with an assurance to absorb the rest within two years. Things have been going smoothly there, and the first lot of engines has already rolled out of the factory since the new management took over.

The question now being posed is: how much of a setback has been caused to the move to involve the private sector in managing public sector companies? Says Singh, "Policies may differ from government to government, but one inescapable fact is that the state exchequer can no longer continue to absorb huge losses and waste scarce resources." Adds Dalmia, "I did not expect such a situation (at UPCC) but I am not pessimistic. If there is another sale of a public sector company in which I am interested, I will go for it."

A UPCC worker injured in the firing

Meanwhile, the election results, at the time of going to press, are pointing to a BJP government in Uttar Pradesh. L. K. Advani has gone on record as saying that the "myth that the public sector must deliver everything has proved to be false". Party president M.M. Joshi has also said that "the Indian entrepreneur's spirit, which for long has been suppressed, has to be encouraged." If these are any indicators, the privatisation movement in UP, which ironically began during a socialist chief minister's term, will probably gain momentum.

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance, Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

Aurelec: Quietly building the best.

J.B. CHEMICALS AND PHARMACEUTICALS

Not a happy family

The battle lines are drawn. Next to the company's headquarters in a quiet bylane in central Bombay, 20 medical representatives of J.B. Chemicals and Pharmaceuticals Ltd have settled down on the pavement for an indefinite hunger strike. The bone of contention: the management's refusal to recognise J.B. Chemicals and Pharmaceuticals Ltd Employees Committee (JBPLEC) as the legitimate representative. But J.B. Mody, owner of the company, is unimpressed, calling the hunger strike "illegal and unjustified". Mody, who began as a medical representative three decades ago built up the Rs.60-crore company. Better known as the Unique Group, the company's product range includes Metrogyl, an anti amoebiosis formulation.

The present strike comes after a year of trouble between management and employees. The employee's committee, formed in November 1989, asked for representative status and presented its charter of demands in March 1990. The main demands of the charter included a better paypacket, as the then starting salary for MRs was Rs.900 only, below the industry average.

Deepak Tolani

J.B. Chemicals employees: year long saga

Year long saga

The management refused. "We have various employees' councils in different states. How can we recognise the demands of one council amongst many?" asks Mody. Then began the year long saga of disputes, agitations, allegations and counter allegations.

The new union, affiliated to the National Federation of Sales Representatives Unions (NFSRU) took the dispute to the Labour Commissioner's Office in Bombay in July 1990. After a nine-month delay, the conciliation officer refused to intervene as the union's membership was too low and MRs are not 'workmen'. "We were let down by the labour commissioner's office," says Amal Dey, president of the Federation.

In May, the Industrial Court of Bombay ruled that MRs are classified as 'workmen' under the Industrial Disputes Act. The union then requested the Commissioner's office to review the case, and also met the minister of state for labour. But nothing has been done since then. "This forced us to take this extreme step," says K.R. Aiyar, general secretary, NFSRU.

The union, meanwhile, with the federation's backing, appealed to doctors all over the country to boycott Unique's drugs. And recently, the West Bengal chapter of the Indian Medical Association issued an open appeal against the management, 'to oppose the rule of the rod', signed by a number of doctors and intellectuals, including the vice-chancellor of Calcutta University, B. Roychowdhury.

Mody, however, denies the charges that he pressurised employees to resign from the union. He claims that 76 members left the union voluntarily. He points out that with only 20 members, the union can hardly claim to be representative. Aiyar strongly disagrees. "At the time of registration and when the dispute was first referred to the Commissioner's office, we had 96 members of the total of 220 MRs." The spate of resignations later, he claims, is a result of the management's pressure tactics. For example, the strikers claim that Mody personally coerced union members in Gujarat to resign.

Apart from the rancor over the membership and recognition issue, the union has a host of grievances against the management, including the transfer of four MRs in West Bengal, dismissal of two union activists, and withholding promotional material, salaries and commissions due to union members.

Over the transfers and dismissals, the union moved the Industrial and Labour court, where the cases are still pending. "These disputes are still *sub judice*. If the union dislikes the court's decisions, they are free to move the higher court. Why a hunger strike?" demands Mody.

The management, in turn, is accusing the Federation of interfering in the company's internal matters. According to Mody, the Federation's members, who are promoting competitor's products, have deliberately undermined the company's sales efforts. "We terminated the services of two MRs because they were actively appealing to stockists and doctors to boycott our products. That is tantamount to an act of sabotage," says Mody. In West Bengal, where the agitators were most active, "We were forced to stop supplies of promotional material, as it was being misused by the agitators," he says.

Mody is adamant that he will not give in to the strikers. "Let them go through legal channels. Then we will accept the verdict," he says. The management can afford to remain unfazed as all this has not affected the company's financial performance. In fact, the company improved its sales for the year ended March 1991. At Rs.60 crore, it is 7 per cent over last year's. And net profit for the six months ending September 1990 at Rs. 5.10 crore was more than twice last year's.

The company's performance stayed undisturbed mainly because Metrogyl, which contributes more than 50 per cent of the company's turnover has almost become an over the counter product, and requires very little sales promotion efforts.

The agitators seem to be aware of the the company's strengths. "It has become a prestige issue for J.B. Mody. He will not relent. We can only hope to put pressure through the government. How many deaths can the management tolerate?" says Aiyar. With both parties hardening their respective stands, Unique has a long way to go before it can be the "large happy family" that Mody describes it was.

RAILWAY MODERNISATION

Unfortunate delays

At peak hours, phenomenal crowds throng through south Bombay's two major local train stations — Churchgate (Western Railway-WR) and VT (Central railway-CR). Since 1951, Bombay's commuter traffic has skyrocketed by 450 per cent to 5 million passengers per day, while the number of suburban trains has risen by only 150 per cent.

In response to the urgent need to modernise and expand the system, both CR and WR have taken some major initiatives. Unfortunately court cases and stubborn hutment dwellers are stalling progress. Currently three ambitious plans have been drawn up. But though the suburban system is not being tackled directly, the spillover benefits will be immense.

Practical planning

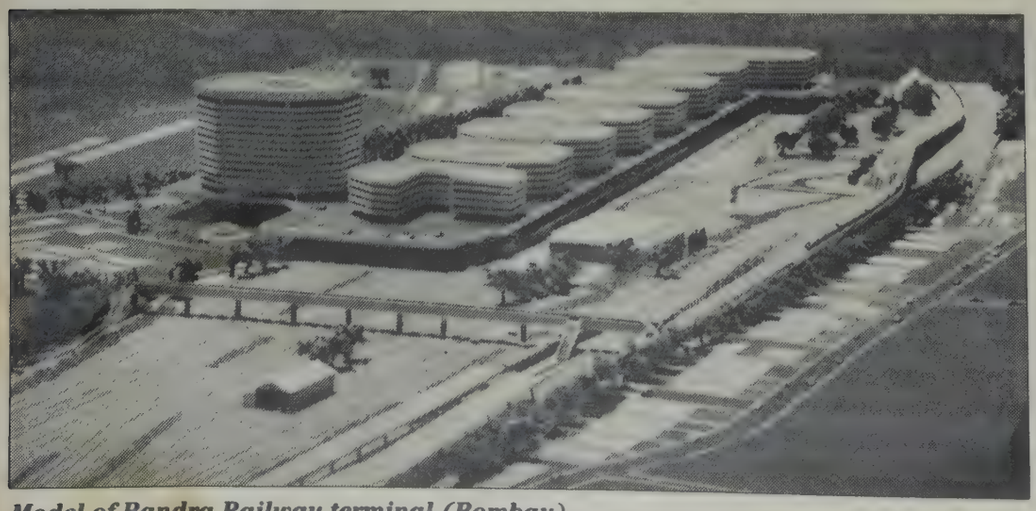
One plan is to close WR's large Carnac Bunder goods depot in south Bombay, and transfer its loading and unloading operations to CR's Wadi Bunder goods depot a kilometre away. The operations can be combined easily, says Vijay Kapoor, WR's divisional railway manager, because the volume of goods handled by the two depots has nearly halved over the years. These two depots were set up several decades ago to serve the growing traffic in Bombay port. With the northern suburbs becoming the hub of commercial activity and the Nhava Sheva port becoming operational, bulk commodities like iron, steel cement and foodgrains have begun being handled at CR's new depots at Kalamboli and Mulund, and the WR depots at Andheri and Jogeshwari. Also, once the Carnac depot closes, its 8-hectare area will be annexed to the adjacent mainline VT station.

This rationalisation will serve a dual purpose. First, all the WR goods trains coming into the Carnac depot, cut through both the CR and WR suburban tracks, delaying local trains. Once Wadi Bunder is the main depot, all goods trains will be routed to this central depot from stations on the city's outskirts. On the WR side, freight trains will come via Vasai and Diva to Wadi Bunder, while those of CR will come via Kalyan and Masjid Bunder, without interfering on suburban lines.

In fact, WR, plans to introduce 35 additional suburban trains taking the total to 901 once the goods trains stop cutting across Dadar station to reach the Carnac depot. Says M.V. Srinivasan, WR's general manager, "From Virar up to Bombay Central, we do not want our freight operations cutting into the suburban traffic."

Second, the additional acreage available from the Carnac depot will be used to expand the mainline VT station. A three-phase, Rs.50-crore programme, subject to the approval of the railway board and spread over five years, has been blueprinted. In the first phase, to be completed in 18 months, the existing parcel office will be relocated and two platforms lengthened. The maintenance and berthing facilities will be shifted from Mazagaon to VT, saving up to 4-6 hours of long-distance trains' lead time. In the second phase, the other platforms will be lengthened and two new ones added, bringing the total to eight. The third phase includes a new entrance terminal on P. D'Mello Road on the east of the station with a parking lot and another ticketing office.

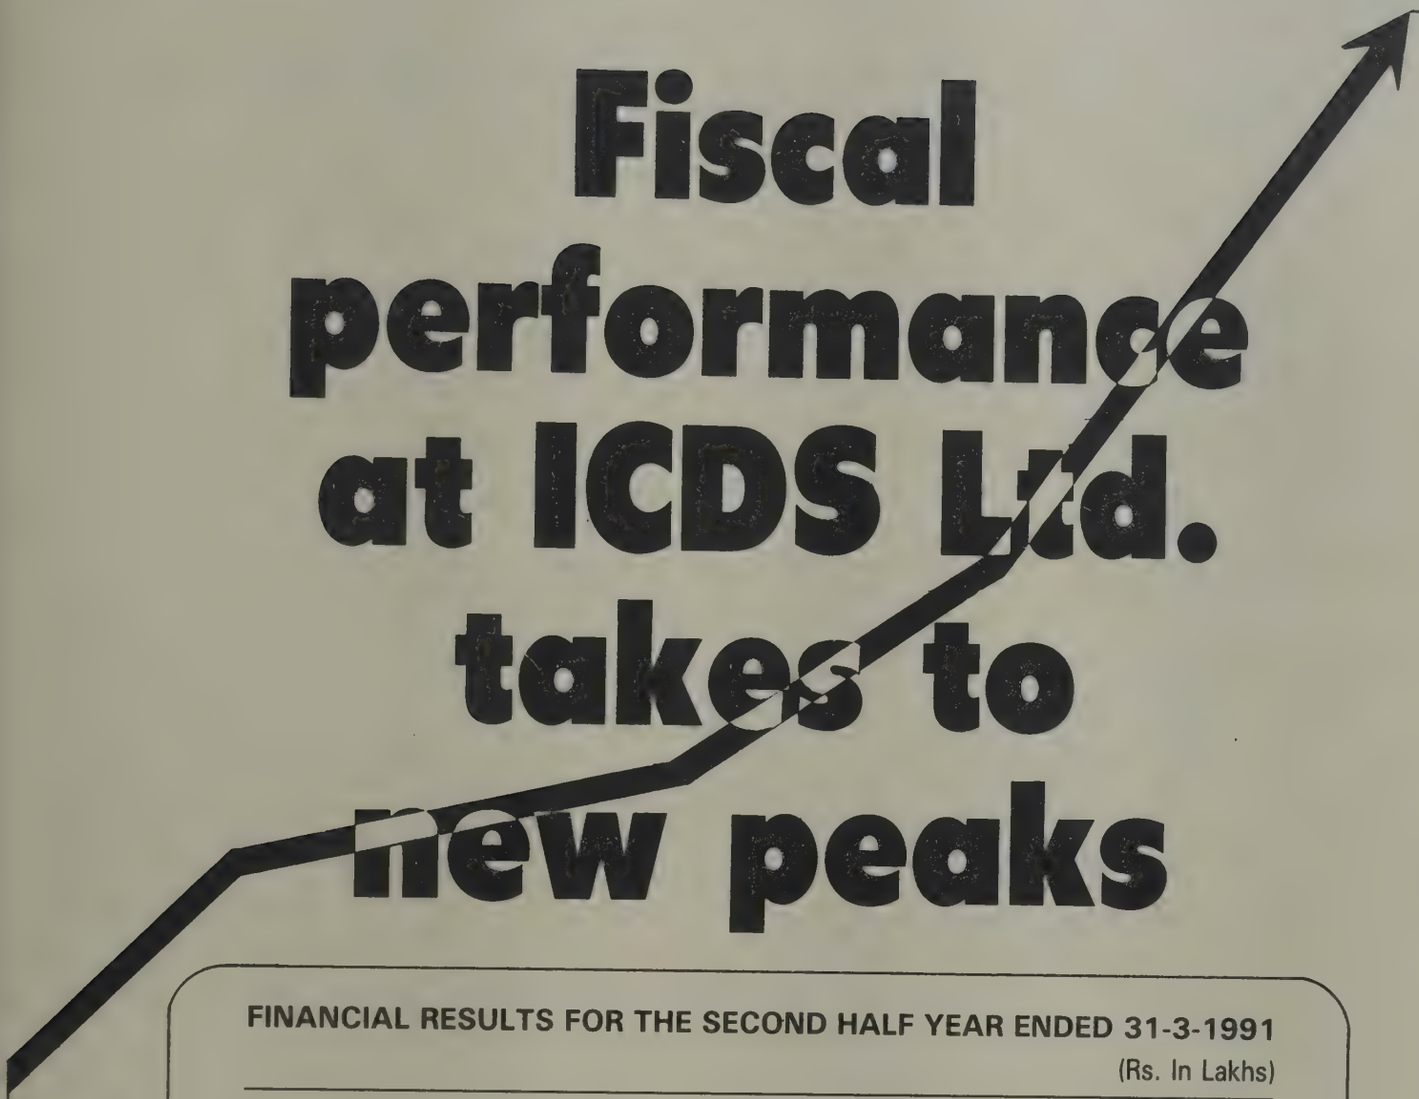
With the lengthening of the platforms CR expects to run longer trains — with 22-24 cars as against the 12-18 cars running now. Capacity will then increase by over 50 per cent without really increasing the number of trains. "Other CR divisions," points out A.N. Shukla, CR's general manager, "have the capacity to handle longer trains. The bottleneck is VT."



A new mainline terminal at Kurla, equipped with longer platforms, is another CR project. This will provide another exit point for long-distance passengers. Similarly, Bombay Central is being supplemented on the WR side, with a new mainline terminal at Bandra east. This will accommodate the longer trains, which Bombay Central cannot.

Practical though the plans are, progress in their implementation has been far from smooth. The remodelling of VT is yet to begin and the other two projects have been stalled midway. At Kurla, hutment dwellers refuse to move from a small area across which new tracks are slated to pass and the issue is now in the courts. The terminal building, started in May 1989, meanwhile, is complete at Bandra east, after an expenditure of over Rs.10 crore. But construction of the approach route to the station remains hampered by 1,400 huts occupying the land.

At Carnac Bridge, meanwhile, the 75-odd clearing and forwarding agents have got a stay order from the courts, soon after WR decided to shut the depot in January this year. According to Bharat Danani, secretary, Carting Agents Association, at Carnac Bridge, "WR is not offering us equivalent facilities at Wadi Bunder." According to Srinivasan, the agents refuse to move because they are transacting business unconnected with the railways there, like road transport. Besides, says Srinivasan, "Where else will they get table space in the city for the princely annual rental of Rs.12 with phone, and Rs.10 without."



Railway officials, however, are optimistic that since the railway ministry and railway board have been supportive, funds will be released promptly and work will start as soon as the court cases are resolved. But till then, 5 million commuters will have to wait out the obstinate refusal of a few hundred to budge from their places.

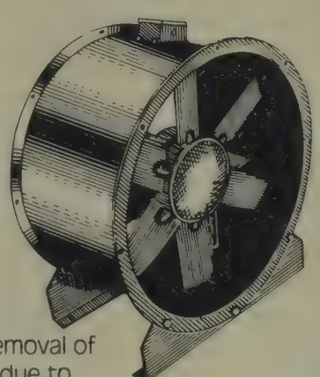
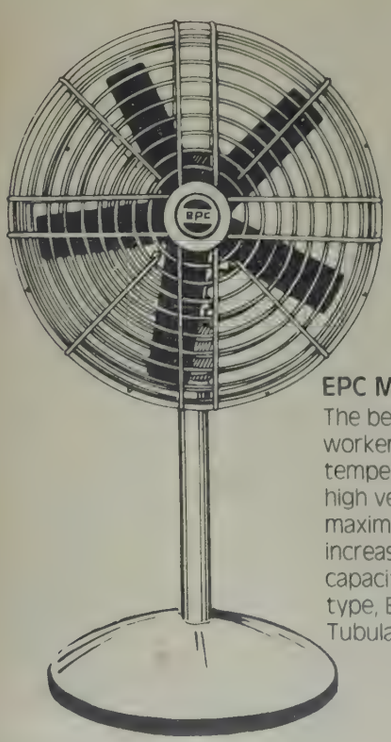
Ultimately, there is only one name in the air that stands for gold.

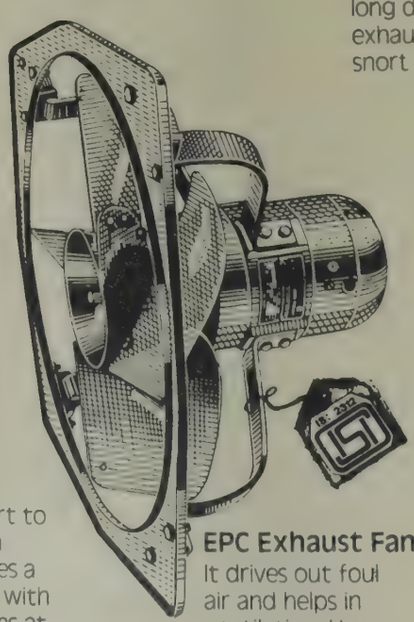


Here they are. The big-air producers exuding confidence, for the entire world to feel. In a stunning, sturdy spectrum. A range EPC holds its own, circulating air untiringly to soothe body and mind. Ensuring larger air coverage.

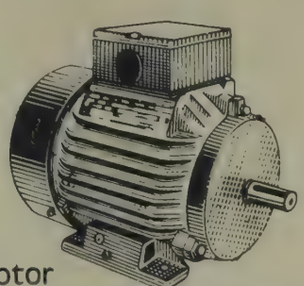
And, building it is not an easy job. It has to look right. Feel right. Above all, it has to perform. With precision. With uncompromising emphasis on quality. Not to mention, the technology ... truly advanced and reliable.



Which is why EPC fans convert your money into an asset.



EPC Typhoon Air Circulator
Its large air delivery covers a distance of little over 15 metres. Available in 2 winged, 4 winged, Pedestal and Bracket types.



EPC Axial Flow Fan
Specially designed for removal of dust and fumes where, due to long ducts, system-resistance is high and conventional exhaust fans prove inadequate. Available in long and short casings, bifurcated type and belt driven type.

EPC Mancooler
The best cooling comfort to workers working in high temperature. It produces a high velocity air stream with maximum reach and aims at increasing productive capacity. Present in Pedestal type, Bracket type and Tubular type.

EPC Exhaust Fan
It drives out foul air and helps in ventilation. Has widest range from 230 mm (9") to 900 mm (36") in both single and three phases.

EPC Motor
Possesses high efficiency, suitable for Industry, Agriculture, Domestic Pumps and other applications. It is totally enclosed fan-cooled squirrel cage and has a cast iron body (international frame)

New swing in LBOs

Over the last few years, leveraged buyouts (LBOs), junk bonds, and Wall Street have become dirty words in corporate America. Donald Trump has had to give up a lot of management control to creditors in order to prevent his overleveraged empire from collapsing.

Some of the most common names in America, such as Greyhound and Bloomingdales, have gone bust in spite of the fact that their management is still very strong. Yet, last year about 900 deals were completed. These were more down-to-earth and reflected a correction from the excesses of the eighties. As a result, life after debt has been a lot easier for management and these deals promise to be more successful.

In the "superbull" environment of the eighties, savvy Wall Street bankers came up with many innovative financial vehicles such as junk bonds, interest rate resets, deferred interest bonds, and other ways of manipulating cash flows to suit the needs of companies and investors. They overstretched as debt ratios increased from 33 to over 50 per cent and interest coverage ratios fell from 2.4 to 1.6. All of a sudden the LBO boom was over.

Drop in activity

To some extent, market psychology and general business woes explain the sudden drop in activity. The recession, Iraq's occupation of Kuwait and the accompanying uncertainty tamed the confidence of the markets. Non-performance of consumer and other business loans, the fall in real estate and stockmarkets, and the regulatory pressure to build capital bases have all resulted in a credit crunch. Specifically, banks are carrying more than $150 billion of residual risky LBO loans on their books and are not even willing to look at fresh proposals.

As a result, Wall Street has cut more than 48,000 jobs. *Mergers and Acquisitions* reports that within a year, the total value of the deals has fallen by more than 17 per cent from $230 billion in 1989 to $45 billion in 1990.

Deals are still happening. But, as mentioned earlier, they reflect a correction. Michael Milken's conviction has aroused anti-greed sentiment and the failure of many of the highly visible deals of the last couple of years is leading to soul-searching. Recent deals demonstrate common sense, business fundamentals and moderation.

Most of the major acquisitions of last year were synergetic and companies focused on the business side as opposed to dry number crunching. Matsushita's $6 billion acquisition of MCA was masterminded, not by a bunch of Wall Street firms such as Wasserstein Perella or First Boston, but by Hollywood movie agent Michael Ovitz.

Philip Morris executives spent more than six months analysing Switzerland's Jacob Suchard. It was only after they were certain that besides reducing its dependence on tobacco, the acquisition would serve as a vehicle for their entry into the fast growing European market, and also provide it with a local base to compete effectively after 1932, they acquired it for $4.2 billion.

Question marks

There was no major hostile takeover. The AT&T bid for NCR is still not complete and there are still question marks in the financing arrangements. When Forstmann Little bought General Instrument for $1.5 billion, Ted Forstmann went out of his way to "sell" himself to the top management of General Instrument.

Many of the deals were the result of restructurings of highly leveraged companies. MNC Financial Services sold its credit card operations to support its mainline banking business. Many similar debt-laden companies have assets to sell. These deals, however, are a lot smaller than the $25 billion RJR Nabisco megadeal of a couple of years ago.

The premiums have fallen from 35 per cent to a more realistic 25 per cent. Swiss pharmaceutical firm Roche Holdings bought 60 per cent of Genetech for $2.1 billion. Just a year ago the price would have been considered a "steal". But today people are asking, "Is it worth the price?"

Buyers also provided more equity. Last year, acquiring companies put up on an average between 25 per cent to 40 per cent of the total price as compared to 10 per cent a year ago. Buyout king Henry Kravis is adding $2 billion in equity to his $1.6 billion treasure chest in order to avoid over-leveraging.

Why then did so many of the leveraged buyouts of the late eighties fail? An analysis of the causes of failure shows three main cotributory cases.

Many of the LBOs have fallen prey to the optimistic forecasts produced by analysts and investment bankers. It was a combination of optimism and blind ambition. When Robert Campeau took over Federated Departmental Stores, he made errors in projecting future cash-flows. The $120 million gain from operational efficiency and synergy proved to be a dream. Critics also argue that First Boston's main interest was in providing a $257 million bridge loan and making sure it got repaid in three months rather than wait for the viability of the deal as a whole.

Serious repercussions

In highly leveraged situations, even a small unforeseen downturn can have a serious negative impact. Debt servicing costs are fixed and typically constitute about 20 per cent of sales of LBO companies. Even a small sales fluctuation can translate into a cash flow crunch. The viability of Al Cheechi's LBO of Northwest Airlines was at an all-time low last year due to high oil prices and low aircraft occupancy, resulting from the uncertainty in the Gulf.

When highly leveraged companies face problems, they find a sudden change in business relationships. Australian entrepreneur Alan Bond found that competitors started aggressive pricing and bankers who once flocked to do business were not interested in a refinancing package and forced bankruptcy.

These LBOs failed not because the concept is flawed. Many companies, such as the cable TV operator Viacom International and the supermarket giant Safeway Stores have successfully managed highly leveraged operations. LBOs failed because of an over-reliance on financial engineering and the managements' inability to deal with the real business issues and risks.

Investment strategists feel that cash rich companies such as Schlumberger and Philip Morris, which only a year ago would have been takeover targets themselves, are today in the best position to make "niche acquisitions". Every cloud has a silver lining.

HINDUJAS

The French connection

In April, the Hindujas formalised a strategic alliance with Credit Lyonnais — the leading French bank — by creating a new financial services company called AMAS — CL S.A. The new company is based in Paris.

The partners involved in the joint venture are two subsidiaries of the two large groups. AMAS Holding S.A.— the Hinduja subsidiary — is a financial services company operating in most countries of Europe and the USA, while Credit Lyonnais Investment — CLINVEST — is the French bank's investment banking unit active in all areas of corporate advisory work. CLINVEST, in fact, manages Credit Lyonnais' substantial portfolio of quoted and unquoted industrial and services investments. AMAS will invest French francs 100 million in the venture. The new company will be managed by a board of directors.

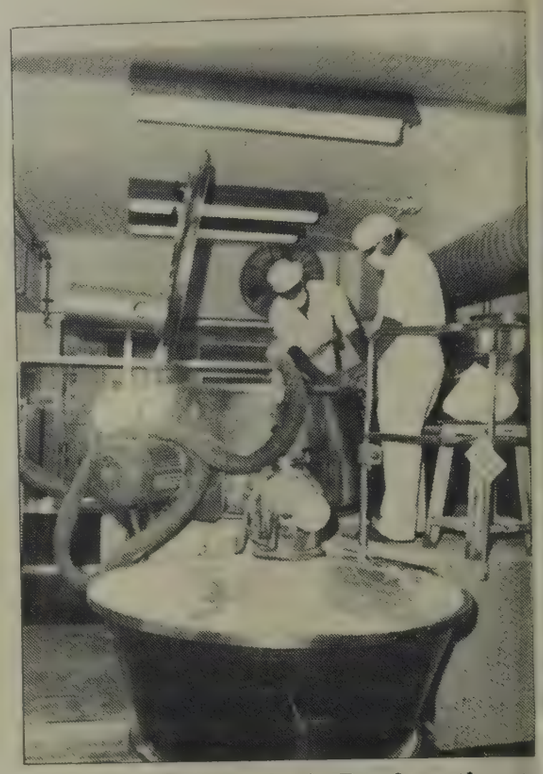
Cosy relationship

It is a cosy relationship that AMAS and Credit Lyonnais have worked out. The purpose of the new venture is to "channelise investments in minority shareholdings in privately held companies." Also, says S. P. Hinduja, "The reason for establishing the joint venture is for diversification of currency, political and commercial risks and to be able to obtain the best opportunity in each country." In other words, make a small inroad into the companies without attempting to gain management control over them.

In this pursuit, CLINVEST will help identify opportunities for joint investment by AMAS and itself. "The opportunities will be found in French industrial and commercial enterprises which offer high growth possibilities," says Hinduja. Interestingly, AMAS will also offer these opportunities to its private and institutional clients, as also the Hinduja group of companies. The joint venture company will examine and recommend investment opportunities presented by both parties. AMAS will draw on the expertise and infrastructure of its partner in each country it operates in, and will complement them with its own marketing strength.

AMAS will derive two benefits from this venture. It will gain access to the expertise and opportunities which Clinvest will provide. Centralisation of the banking relationship between AMAS and Credit Lyonnais through this "legally defined vehicle" will enhance efficiency and the growth of the relationship. Credit Lyonnais, on the other hand, will have an opportunity to develop links with a first class industrial and financial group over a "wider range of activities than those specified in the venture."

■ ALPANA KILLAWALA



Hinduja: seeking the best investment opportunities

ROCHE HOLDINGS

Prized buy

Recently, the Chicago-based Sara Lee, the holding company of Aspro Nicholas, UK, sold it off for $ 821 million to the Swiss pharmaceutical giant, Roche Holdings. The sale was part of a worldwide move away from pharmaceuticals. Sara Lee has gradually been disinvesting in pharmaceuticals and focusing on household and personal care products.

The acquisition marks a shift from Roche Holdings' traditional focus on high technology life-saving drugs. The company has now emerged as Europe's fourth largest OTC (over the counter) drugs company. For its Indian subsidiary, Roche Products Ltd, the move could have been a godsend. With over 80 per cent of its products under the Drug Price Control Act, Roche, which is the country's largest manufacturer of vitamin A, has long faced increasing pressures on its margins. The Indian company has been eyeing the lucrative OTC market for some time as the only way to escape the DPCA yoke. Being a FERA company, though, it had little scope in that area, and at one time was seriously contemplating diluting its foreign stake. Its parent company's takeover of Nicholas, however, will be of hardly any help in the present situation.

Roche Products units in Bombay: the OTC market remains out of reach

Controlling interest

Two years ago, Aspro Nicholas, UK, decided to move out of India and Ajay Piramal bought the controlling interest in Nicholas Laboratories India Ltd, beating back a host of contenders, including G.P. Goenka and the Chhabrias. Along with a 24 per cent stake in the company, he also acquired the rights to use the trade names of the main products, like Aspro and Clear-tone creams. According to Piramal, the sale of Aspro Nicholas will have no effect on the operations of Nicholas Labs here, since the company and more importantly, the trade names, including Aspro, belong to the Piramals. For the moment, at least, the OTC market will remain out of Roche's reach in India.

Would you
a matter of

Castrol

compromise on life ?

Then why on the life of your car ?

Like your body and heart need good blood, an engine needs good engine oil.

The oil in your engine works much like the blood in your body which is continuously pumped around a network of large and small tubes and comes back to be revitalized and filtered. Like blood, a good oil has to keep flowing without clogging or choking, that may cause heart attacks or engine seizure.

Small wonder then, that millions of people around the world depend on Castrol GTX to extend the life of their engine and keep it fighting fit. The international formula of Castrol GTX is engineered to protect your engine through thick and thin, month after month, under engine conditions ranging from Arctic cold to the sizzling engine heat and at pressures ranging upto ten tons per square inch.

That's why we call Castrol GTX formulation, a 'Liquid Engineering' marvel – the lifeblood of your engine. Use Castrol GTX and be assured of silent, smooth running and longer engine life.

ELLO THERMOWARE

Moulded to succeed

he company has come a long way from bangles and footwear to thermoware. nd it has gained a stronghold in the market, both in India and abroad

rom glass and plastic bangles to PVC ootwear to moulded household plastics o thermoware — that, in short, is the oute the Rathods took to success. It reeals the family's keen ability to spot usiness opportunities and move in for he kill. But what it doesn't necessarily xplain is the absolutely dynamic growth f their thermoware division to a turnver of Rs.30 crore, from an unassuming s.40 lakh in a matter of five years.

Says G. Rathod, the man behind it all, Previously we were only into trading. My ather, having imported glass bangles nd sold them in India for several years, nally began to manufacture glass banes at Ferozepur." But soon the age of lastic set in and the Rathod family, movg with the times, shifted its focus to lastic bangles. Having no manufacturing nit of their own, they would get these ade by smalltime job-shops till 1958 hen they bought over a factory which anufactured plastic bangles and mareted it under the brand name Cello.

"It was a small business," says Rathod. ow much can you possibly make from astic bangles? The entire market was st about Rs 10-15 crore in those days. It as logical to look for other areas to diersify." It was at this time that PVC footear was introduced for the first time in dia. Rathod was quick notice the potential d by 1967, Cello, beg already in plastics, d moved into PVC otwear themselves d by the following ar had stopped makg bangles altogether. ys Rathod, "Everying we made got sold d we worked to full pacity."

onfident move

om footwear to oulded household astics was but a step. ed one which Cello ok with confidence, siultaneously manufacring buckets, tubs, pencil boxes, water bottles etc. For the next several years, Cello went strong, achieving a turnover of Rs.2 crore. By 1986, it was time to move on. "It was around this time that my son Pankaj came to me and said he wanted to do something too," Rathod says. He was ready. "Find out how to manufacture thermoware," he told his sons Pankaj and Pradeep, who, in their early twenties, were just about ready to enter the business.

Why thermoware? For Rathod it seems simple enough. "Eagle and Milton were the only ones in the business, and together they could hardly meet 25 per cent of the demand for thermoware." It was a matter of time before they purchased the necessary polyurethane filling machines from Germany, and began to manufacture Cello thermoware.

Rathod gives the entire credit for the setting up of the thermoware unit to his sons, who, he says, did all the spadework. Says Pankaj, "We had no problems finding out about the plastic moulds. The problem was the insulation. We got the machine all right, but in the beginning, we didn't know how to use it." But work teaches you everything, he says, and very soon they were on their way. In May 1986, they made their first thermoware item — a water bottle. Says Rathod, "Till date that has been our best product. It was such an instant success, that not only were they sold out immediately, but people even wanted to buy the seconds during the Diwali season."

Production in those days was just about 500 pieces a day, in a workshop with an area of 3,000 sq ft. Today, Cello produces over 9,000 pieces a day with a range of over 140 items, and have over 60,000 sq ft of factory area including six units in Bombay and a full-fledged manufacturing unit in Daman. Their growth rate, at an average of 100 per cent every year, has enabled them to capture a large chunk of the Rs.150-crore thermoware market in India, in less than five years.

Rathod and sons: short route to success

Available everywhere

With a large sales and distribution network, their products are available in virtually all corners of the country. Says Pradeep, "We tapped all our contacts from the plastic days. Today all those distributors who sold our household plastics, sell thermoware." They have about 60 distributors throughout the country with whom they are in regular touch, meeting them at least four times a year, for feedback from the market. "It helps us keep in touch with the market, with what the consumers want," says Rathod.

Exports are yet

Photos: Pankaj Desai

Production facilities at Bombay

another area where Cello is rapidly gaining a stronghold. "In 1988, we got our first export order thanks to an exhibition in Dubai we participated in. That year we exported Rs.20 lakh worth of goods," recalls Rathod. In April and May this year alone, their exports have touched Rs.90 lakh. Their annual exports today account for over Rs 1.5 crore, covering over seven countries including several Gulf countries, Singapore, Cameroon and Malaysia. According to a senior executive at Milton Plastics, "Cello is popular only in the Gulf where quality is not given enough importance."

"Competition is getting tough in the export market, but we have one major advantage — we are the only people who can deliver an export order, however large, within eight days," explains Pankaj, who is in charge of production. "By hiring four injection moulding machines, we can increase production by 1000 pieces a day. This helps us deliver fast," he adds.

Quick delivery is something that Cello prides itself on. And it is something that is essential especially during the festival season, when thermoware sales hot up to a feverish high. Cello keeps itself fully geared for the festival season, which accounts for over 60 per cent of the total sales. Advertising campaigns break during this period, orders from institutions are bagged two months in advance, and production is stepped up. A marketing and sales team today services the market, with five executives specially handling institutional sales.

Celloware: moving in for the kill

Credit benefits

One of the main things that helped Cello achieve such instant success was their credit policies. Explains Pradeep, who handles this area, "When we started, companies manufacturing thermoware, dealt in cash only, and that too in advance. We started the system of 30 days' credit. It enabled the distributor to order larger stocks and he in turn was able to pass on this credit benefit to the retailer." The result was immediate — distributors ordered more, retailers stocked more and sales went up. Today, other companies too have begun giving credit, but the early advantage Cello gained was enough to provide the springboard they needed.

What do they attribute their phenomenal growth to? Systems, structures, planning, organisation are words dismissed by the wave of a hand. Says Rathod, "Our growth can be attributed to one single factor — the warm, personal relations we share with our staff, our labour, our distributors and our customers." Not for them the American hire-and-fire policies. The 600-strong workforce is treated with care and respect. "We never question loans, we just give people what they need, no matter how long they may take to pay back. We look after our people — we have never given them less than a 20 per cent bonus. We make it a point to attend their family functions, like weddings, births, etc." A free meal is prepared in the company kitchen every day for the entire staff and the Rathods eat along with them.

Distributors too remain staunchly loyal to them, having themselves achieved a phenomenal growth, thanks to Cello. "To us, every distributor is a part of the family, whether he buys Rs.25,000 worth of goods, or Rs.25 lakh," says Rathod. He along with his two sons, is in personal touch with every distributor, making it a point to visit the territory every few months.

An increasing advertising thrust and focus has gone a long way in consolidating Cello's position. Says Rathod candidly, "Initially, I wasn't at all keen on advertising. Maybe I was old fashioned, didn't see the need. My sons convinced me." With a modest initial budget of less than a lakh, Cello released their first ad in 1986. They worked. Their campaign for water bottles that says "Water-relief" with a visual of a man thirstily drinking from a Cello bottle, clicked in the mind of consumers and made a substantial difference to sales.

Building the brand

Today their advertising budget is over Rs.1.50 crore. Says Anjan Chatterjee of Situations, the agency that handles the Cello advertising, "Initially, all advertising was generic. We had to sell the category, rather than the product. Now the awareness is there, the product benefits have been communicated and our thrust now will be single focus — to build the brand Cello.

Product development is being given increasing attention too. Market studies undertaken by them reveal the need in the market. Pankaj and Pradeep make frequent trips abroad to observe trends there and on an average, two new products are introduced every month, throughout the year. But sources say the two main competitors — Milton Plastic and Eagle Flasks — as well as major thermoware dealers accuse the Rathods of imitating Milton and Eagle designs.

Where to, now? — a question that the Rathods have obviously asked themselves. And to which, with instinctive business acumen, they have answers. But they are not about to make their diversification plans known to the public. "Yes, we will diversify. We also intend to move entirely to Daman so that we can streamline our operations," says Rathod. For now, they feel it will be sufficient to say that they intend to go public by 1995.

And when you consider their modest beginning, it has been a long way to have come for someone who manufactured glass bangles.

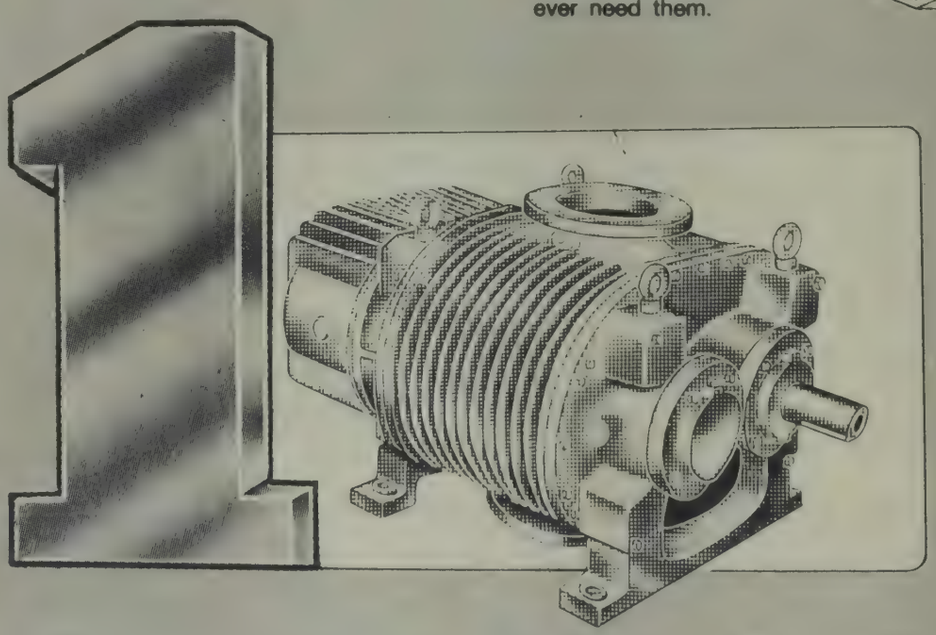
The aces who've made us No. 1

Today with a great sense of pride and a deep commitment, we have reached the coveted position of being the leaders in the manufacture and marketing of Twin Lobe Compressors.



Pride because unstinting hard work, a dynamic vision and a capacity to take on challenges has earned us our place. Commitment to all the industry's leaders who through their consistent faith in us have made us the No. 1

Our customers' faith in us is justified by the eagle eyed care that we take in ensuring that only the best products are called Kay. Products that are manufactured on very advanced imported machines, in a highly sophisticated & streamlined production environment at Sonepat.

- A state of art technology that gives a strong backing to the custom built products.
- Computer Numerically Controlled (CNC) production process to ensure zero defect performance.
- Stringent quality control measures that puts the products through the most vigorous of tests.
- A wide network of after sales service points that makes sure that our engineers are there....should you ever need them.

Our corporate character never allows us to compromise for short term gains. This is the iron strength that's become silver today. 25 years of a dynamic dream turned into reality with our taking on the mantle of the leaders.

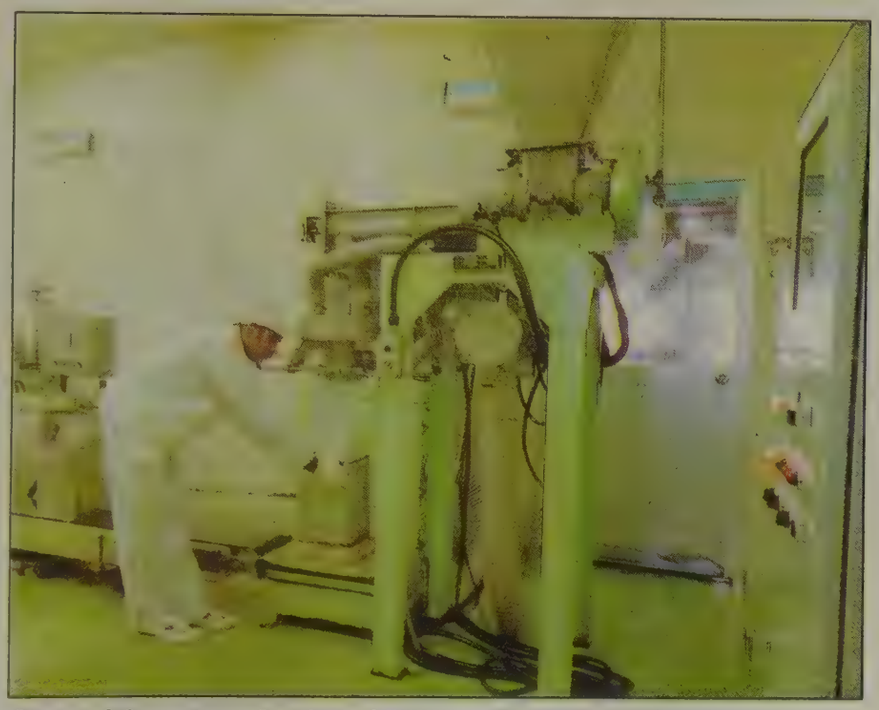
PROTCHEM INDUSTRIES

Wealth from waste

n a manner of speaking, 38-year-old T. Manoharan has succeeded by a hair's breadth. His 100 per cent export-oriented venture Protchem Industries (India) Ltd, based in Pondicherry, converts waste human hair into protein-rich amino acids. Even more surprising is the use to which this derived product is put: as an additive in the pharmaceutical, biochemical and even food industries.

Before you screw up your nose at this revelation, the mild-mannered executive director of Protchem quickly explains that human hair is one of the richest sources of protein, indeed 95 per cent of it is protein rich.

Protein from tresses



n India long luxurious tresses are not nly a symbol of beauty, they are linked to he country's cultural heritage. Hair that s offered at pilgrim centres is supplied to he flourishing wig industries of Korea and Taiwan. ndia also exports hair to apan, which has been aking amino acids from uman hair for more than vo decades. And so, even ough it is difficult to view rotein isolated from hair s a component of food, the romoters of Protchem ere inspired, in their uest for growth, to opt for is proven technology.

The promoters — T. anoharan, T.K. Mohan, K. Ravichandran and S. ndivel — tied up with the apanese company, Union rothers Industries Inc, ngaged in the manufacre of food additives and odstuffs. The Indian venre was to be the sixth in e world to manufacture amino acids om human hair. The closely held techlogy was being used in three units in pan, one in West Germany and one in iwan till then.

Set up in Abhishekapakkam in Pondicherry, Protchem was incorporated as a ivate limited company in 1987, with a tal project cost of Rs.15 crore. The fincial institutions IDBI, IFCI and ICICI tended term loans of about Rs.8 crore.

The plant uses an average of five tonnes of human hair per day, which results in 300 kg of amino acid powder. The venture, according to Manoharan, provides indirect employment to 5,000 people, mainly rag pickers and otherwise unemployed youth, who visit barbers in small towns and villages to collect cut hair. The raw material has no "fixed" value and its export potential has pushed its pricing by 100 per cent in the last few years, from a mere Rs.3 to Rs.6 per kg. Other raw materials include hydrochloric acid, soda ash, caustic soda, active clay, and activated carbon.

Protchem acquired 22 acres of land in Pondicherry for this modern plant, taking advantage of the concessions available in a backward area (they have a similar smaller unit at Salem). As a 100 per cent export-oriented scheme, benefits included exemption from customs duty on import of capital goods, raw materials and components; exemption of central excise duty on indigenous materials and exemption from excise and other central levies on finished goods.

State-of-the-art production plant uses Japanese technology

Products are customised

There are 20 kinds of amino acids, and extensive research in the West has established specific amino acid needs that protein-deficient people may have. Protchem manufactures protein hydrolysates, which possess savoury flavours that blend themselves into a variety of food preparations. Catering to individual tastes and requirements, these are available as spray dried powders with a salt content ranging from 18 to 46 per cent and as hydrolysed protein liquid and pastes with a salt content ranging from 18 to 35 per cent.

The percentage of amino acid powder used varies according to the product — 0.7 to 1.5 per cent for powder soups for instant noodles, 1.5 to 2 per cent for liquid soups for noodles, and 3 to 5 per cent for Japanese and Chinese-style soup stocks. Protein-based amino acids are also used in the baking industry in "doughing". Besides, Protchem manufactures L-cystine and L-tyrosine for the pharmaceutical industry.

Production at Pondicherry began in 1990. So far, products worth Rs.1.8 crore have been exported. They are hopeful of reaching a target of Rs.2 crore this year and have set a figure of Rs.5 crore for the next few years. The exports are mainly to Japan and Europe. Protchem's Japanese collaborator has agreed to buy back the entire output for a period of eight years from the date of commencement of production. Meanwhile, Protchem is confident that the international demand for amino acids will outstrip supply; already amino acid supplies have been affected with the ban on the killing of whales, earlier an important source of the commodity. Moreover, an increasing awareness of nutritional requirements has influenced the local market as well.

Manoharan is simultaneously considering other avenues for diversification but he is still plagued by certain basic problems. He has not succeeded, despite being a green card holder, in getting a telephone connection. "In today's export market, the international customer wants a response instantly on a fax," he sighs. But far from tearing his own hair in frustration, Manoharan is optimistic. He knows by now that for an Indian entrepreneur, diligence is the mother of good luck. ■

bled to Rs.8.74 crore.

During the year under review, work on the prestigious cycle power plant of the National Thermal Power Corporation at Rajasthan was completed. Another project under implementation and also making good progress is the electrical distribution package for the modernisation of the Durgapur steel plant. Sales of switchgear was constant (on annualised basis) at 30,595 switchgears against 23,147 in the previous nine-month period. However, realisation per switchgear improved by 12 per cent to Rs.24,210 (Rs21,463).

Borrowings were reduced by Rs.10.61 crore to Rs.63.41 crore. Debt-equity ratio therefore improved to 1.14 times (1.47 times) and additions to gross block amounted to Rs.3.08 crore. To generate the required funds, the company disposed off its investments in 9 per cent tax-free public sector bonds valued at Rs.5.51 crore. With a payout ratio of 30 per cent, the company ploughed back Rs.6.86 crore.

The order book position at the end of the year was Rs.230.6 crore against Rs.280 crore in the previous year. The company expects 1991 to be a difficult year for both the company as well as the engineering industry in respect of the political uncertainty. No wonder, the scrip has failed to notice the improved working during 1990. It has fallen to Rs.127.50 from Rs.140 when the results were out. However, with bright long-term prospects and a healthy book value of Rs.56, the scrip can be accumulated at declines.

Tata Oil Mills

Lower tax liability and higher income from other sources improves bottomline; exports nosedive by 71 per cent; tax liability of Rs.0.96 crore in respect of earlier years written back; diversification through various new companies under implementation

Tata Oil Mills (Tomco) has maintained 20 per cent dividend for the year ended 31 March 1991. The company had reported 48 per cent growth in net profit during the first half of 1990-91 over the corresponding six months of 1989-90.

However, during the second half of the year under review, net profit was down by 12 per cent over the corresponding second half of 1989-90. This was on account of higher prices of edible and non-edible

oils, the key inputs. Raw materials cost as percentage of sales escalated by 10 points from 62.2 per cent in the first half to 72.4 per cent during the second half of the year under review.

During the year, Tomco's Madras factory was modernised to broadbase the product mix. Supplies of fatty acid from the new Aurangabad plant to other factories started during the year. The company successfully launched, in the southern parts of the country, a neem-based bath soap, Javan. It has also entered the toothpaste market with the launch of Effermint toothpaste in Maharashtra. The company sold 264 tonnes of toothpaste and generated sales of Rs.2.05 crore.

In a competitive market environment, the company's marketing strategy seems to concentrate on achieving higher volumes with lower margins. Sales of detergents recorded a growth of 37 per cent. Exports (mainly to the USSR) suffered a severe setback on account of the Gulf crisis and various problems in the USSR. Exports nosedived by 71 per cent from Rs.28.72 crore to Rs.8.22 crore.

Net profit went up marginally mainly on account of reduced tax liability (by 55 per cent) and higher income from other sources (by 89 per cent). Gross profit during the year under review declined by

8 per cent to Rs.9.73 crore (Rs.10.55 crore). Tax liability was lower as the company wrote back Rs.0.96 crore in respect of tax liability of earlier years. But for this write back, net profit would have been lower by 12.5 per cent.

The company is diversifying by promoting new companies and joint ventures. It has set up Tata Aquatic Farms Orissa Ltd for prawn culture. This 100 per cent EOU has been jointly promoted along with Tisco and the Orissa government. Another 100 per cent EOU, Tata Ceramics Kerala Ltd, has been set up to manufacture bone-china mixed tableware.

Tomco also proposes to diversify into the manufacture of titanium dioxide, an ingredient for the paints industry. A joint venture will be set up in collaboration with an American company to manufacture public and institutional hygiene and other household cleansing products. Tomco will be investing Rs.1.85 crore in Kalyani Soap Industries Ltd, a joint venture with West Bengal Industrial Development Corporation to set up a soap and toiletries factory at Kalyani near Calcutta.

The aggregate of investments to be made in these new projects worked out to Rs.16.48 crore. To finance this and meet long-term working capital requirements, the company issued partly convertible debentures on rights basis aggregating about Rs.45 crore. On part conversion of these debentures, the company's reserves position will improve further.

Oil Country Tubular

Delay in project implementation; 35 per cent rise in project cost; maiden performance results in cash loss of Rs.4.44 crore; borrowings shoot up to Rs.89 crore; rights issue likely

Oil Country Tubular is engaged in the manufacture of casing pipes, drill pipes and production tubing. These products collectively referred to as tubular goods are import substitutes and used by ONGC for oil exploration. The rosy projections made earlier have failed to materialise due to delay in implementation of the project and an over 35 per cent escalation in project cost.

The original project cost of Rs.69 crore has increased to Rs.93.28 crore due to adverse foreign exchange fluctuations, higher investments in land and building;

Low	16.00

Note: Previous year's figures not available as commercial production started in October 1989

higher working capital margins and also due to delay in project implementation. The drill pipes project was to commence in February 1989 but its implementation was delayed by eight months. Implementation of production of the tubing and casing pipes project was delayed by about a year-and-a-half.

The 15-month period ending 31 December 1990 was the first full year of the commercial working. It achieved a total income of Rs.32.73 crore (including export incentives of Rs.2.43 crore). However, the working has resulted in a cash loss of Rs.4.44 crore and a net loss of Rs.7.52 crore. The company imports its entire raw material requirements (mainly green seamless pipes). As the company's products are deemed exports, its imports are duty free. With the RBI putting restrictions on imports, the company's working is likely to be severely affected in the current year.

The 15-month working period has resulted in low capacity utilisation and a higher interest burden. The capacity utilisation of drill pipes and production tubing on an annualised basis was 55 and 2 per cent respectively. The capacity utilisation of casing pipes on an annualised basis was 56 per cent with a production of 17,451 tonnes and sales of 15,850 tonnes. The escalation in project cost has resulted in borrowings, increasing from Rs.46 crore (as stated in the prospectus) to Rs.89 crore. The project was originally proposed to be financed by a debt-equity ratio of 2:1. The debt-equity ratio as on 31 December 1990 stands at 3.6 times. The company will have to make a rights issue to reduce borrowings and to check rising interest costs.

The scrip, currently at Rs.19.50, is close to its 1990 low of Rs.16. With prospects not so encouraging in the short run, investment at the current rate may not yield attractive returns.

Stepan Chemicals

Over threefold increase in sales; higher overheads; lower income from other sources and higher tax liability keep margins under pressure; shares listed at various stock exchanges

Stepan Chemicals, a subsidiary of Hindustan Lever, has reported an over threefold increase in its turnover on an annualised basis from Rs.16.79 crore during the 9-month period ended 31 December 1989 to Rs.93.97 during the year ended 31 December 1990. However, margins came under severe pressure due to reduced income from other sources, higher overheads and increased tax liability.

Annualised total income during 1990 shot up by 246 per cent to Rs.97.71 crore,

** 9 months ** annualised basis*

gainst Rs.21.19 crore in the 9-months nded 31 December 1989. Operating marins declined from 8.35 to 3.23 per cent. s a result, operating profit increased by 4 per cent to Rs.3.16 crore (Rs.1.77 rore). While gross profit went up by 32.4 er cent, net profit improved by a mere .3 per cent. Net margins declined from 3 o 0.91 per cent with tax ratio higher at 7.2 per cent (42.3 per cent). The tax liaility increased by 90 per cent on an anualised basis.

Early in the year under review, the ompany, with the assistance of its holdng company, launched Wheel detergent ar. The brand was later relaunched as uper Wheel Bar during the last quarter f 1990. The company's soaps and deterents plant at Rajpura continues to be on ease with the holding company. However, ue to labour problems for about two nonths, production at the factory was afected. Consequently, processing charges f Rs.3.41 crore (Rs.4.33 crore) received rom the holding company was lower by 1 per cent on an annualised basis.

During the year, the company changed ne basis of calculating gratuity liability rom actuarial to arithmetical basis. As a esult, there was no gratuity liability durng the year, against Rs.31 lakh during 989. Profitability during the year was afcted due to higher provision for doubtul debts at Rs.34 lakh (Rs.2 lakh); dvertisement expenses at Rs.1.85 crore nil); and processing charges of Rs.2.25 rore (Rs.44 lakh).

During 1990, disinvestment by the tma group of its holding in the company as completed. Shareholders of Hinustan Lever were offered equity shares by drawing lots) of the company. The ompany's shares have now been listed at arious stock exchanges and are quoted 13 times its face value.

Videocon Appliances

In the results announced for the six-months ending 31 March 1991, Videocon Appliances Ltd has reported a 74.68 per cent increase in net sales from Rs.29.78 crore in the corresponding period last year to Rs.52.02 crore. But there has been an increase in expenditure with both raw materials costs and salaries and wages showing sharp increases. Interest charges have also increased by 308 per cent.

As a result, gross profit has declined

Transfer Line — monocoque body shell welding.

Latest Mercedes Benz technology

That's what makes Tempo Traveller a world-class vehicle.

Ogilvy & Mather 7747

Whatever it is you're looking for in a ehicle, you'll find that the Tempo Traveller is nmatched. Whether it's in terms of performance, assenger comfort, safety, ruggedness, ease of driving r economy.

Because, after all, the Traveller has been esigned by Mercedes Benz. And manufactured in a lant that's as advanced as any Mercedes Benz plant the world, using the very latest automobile anufacturing technologies.

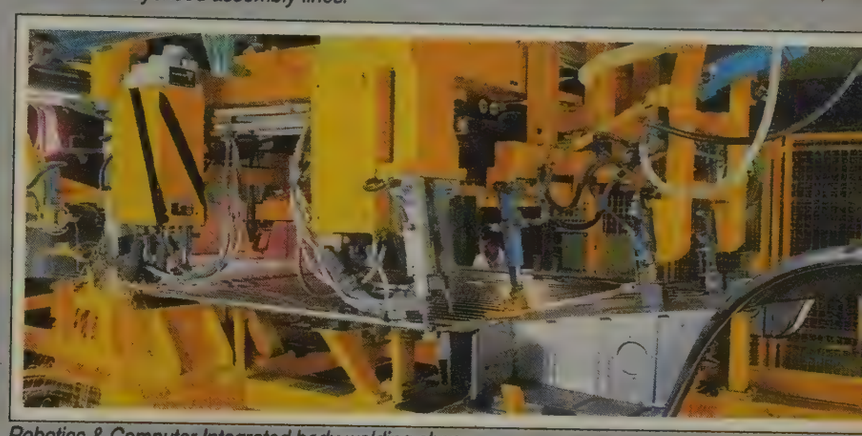
The fact is Tempo's state-of-the-art new ant at Pithampur has been set up at an investment nearly Rs. 50 crores.

Extensive use of robotics and computer tegrated manufacturing systems give the Traveller nparalleled welding precision and welding strength.

An electrophoretic dip process, immersion full body, gives its monocoque body life-long otection against corrosion.

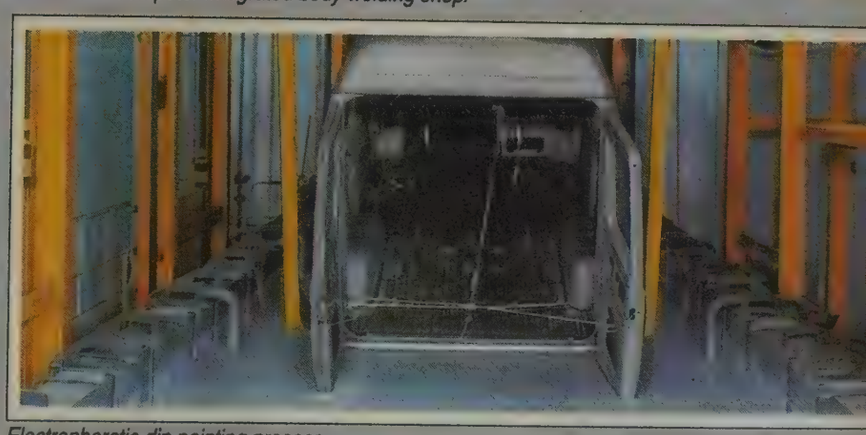
The Traveller plant's assembly environment highly sophisticated. And its overhead conveyor stem, synchronised with a revolving assembly rousel ensures a superb finish (as well as high oductivity).

What's more, the Traveller is powered by a w 72 BHP Mercedes OM 616 engine which is tremely silent, extremely fuel-efficient, as well as tremely reliable. And its indirect injection system sures low pollution.



The Traveller's gearbox too, is a result of gh technology: a 5 speed full synchromesh gearbox ich uses honed gears and a precise hypoid axle... give you superb performance and longer mponent life.

Finally, driving the Traveller is as light and much of a pleasure as driving a modern top-class . (With a turning circle that is smaller than most dian cars.)



Tempo Traveller. Whichever way you look t, it's world class.

Modern conveyorised assembly lines.

Robotics & Computer Integrated body welding shop.

Electrophoretic dip painting process.

slightly from Rs.6.85 crore to Rs.6.71 crore. Net profits however have increased 164.6 per cent from Rs.1.95 crore to Rs.5.16 crore. This is because depreciation declined significantly from Rs.4.5 crore to Rs.1.55 crore and also no provision is made for taxation. Margins have declined considerably. Gross profit margins declined from 23.01 to 12.9 per cent while net profit margins from 9.92 to 6.5 per cent.

Rossel India

Rossel India which was formerly known as Jokai India has declared very good results for the six-months ending March 1991. Net profits have increased more than five times from Rs.0.23 crore in the corresponding period last year to Rs.5.48 crore. Gross profits have increased from Rs.1.92 crore to Rs.10.18 crore.

According to the company, raw materials consumed cannot be ascertained as the production of green leaf from the company's own gardens involves an integrated process having various stages.

Rossel India			(Rs crore)
Year ended	Oct '90-Mar '91	Oct '89-Mar '90	Apr '90-Mar '91
Net sales	34.25	20.66	52.48

Sales has increased by 65.78 per cent to Rs.20.66 crore from 34.25 crore in the corresponding period last year. Also margins have improved significantly. With gross profit margins up from 9.2 to 29.72 per cent net margins increased 1.11 to 16 per cent.

RESULTS ANNOUNCED

Ashok Leyland

Sales, up 34 per cent, yields a gross profit margin of 7.1 per cent (6.2 per cent) for this heavy commercial vehicle manufacturer

For the year ended March 1991, the company earned a gross profit of Rs.65.64 crore (Rs.42.67 crore annualised) on a sales of Rs.922.90 crore (Rs.689.23 crore annualised). EPS edges closer to face value at Rs.8.38 (Rs.5.90 annualised) and the market price at Rs.148 (14 June 1991), discounts these earnings 17.7 times.

Baroda Rayon

Abysmal performance for the year ended March 1991 with a marginal decline in sales but crash in profit margins and the bottomline

Excise duty hike on polyester yarn and viscose filament yarn, two major contributors to Baroda Rayon's turnover, take their toll on performance. With sales at Rs.203.82 crore (down by 1 per cent), gross profit margin slumped to 7.6 per cent (19 per cent). The bottomline fell by 86 per cent to Rs.3.32 crore (Rs.23.82 crore). On ex-bonus equity of Rs.26.96 crore, the company earned Rs.12.31 per share (Rs.132.55), well below its par value of Rs.100. The scrip quotes at Rs.485 discounting these earnings 39 times.

Tamilnadu Petroproducts

Good results for the year ended March 1991 from this joint sector manufacturer of linear alkyl benzene, a detergent base

Net sales up 22 per cent at Rs.199.89 crore gives a gross profit margin of 23.5 per cent (21 per cent). The bottomline is up 72 per cent to Rs.20.33 crore. On a heavy equity base of Rs.48.75 crore, the company earned Rs.4.17 per share (Rs.2.42 annualised) and will distribute Rs.1.50 per share as dividend (Rs.1.20 annualised). Payout, in line with a better bottomline eased to 36 per cent (49 per cent). The scrip quotes at Rs.54 discounting these earnings nearly 13 times.

IN BRIEF

Ganesh Benzoplast has received approval for the manufacture of 8,000 tpa of phenol through the benzonic acid route. The company also plans to manufacture maleic anhydride based on plasticisers.

TPI India, which went public in April 1991, has undertaken capacity expansion of its plastic protective media plant and is diversifying into the manufacture of jumbo containers for which it has entered into technical collaboration with Bulk Lift International of the US.

Tainwala Chemicals & Plastics intends to install injection moulding lines to manufacture plastic articles, for which it has export orders worth Rs. 1 crore. The company has also started manufacturing import substitute plastic sheets.

The Lucknow-based electronic firm, **Uptron**, has tied up with Contech. Under the tie-up Uptron will market Contech systems exclusively in the northern, eastern and central parts of the country.

Indian Organic's joint sector project for the manufacture of acetic acid commenced production recently. The project with a capacity to manufacture 4,500 tpa has been set up in collaboration with the Punjab State Industrial Development Corporation.

BPL Sanyo Technologies started commercial production at its EOU near Bangalore at the end of 1990. It has so far exported 52,300 radio cassette recorders. For the year ended March 1991, the company recorded a turnover of Rs.30 crore, of which exports accounted for Rs. 2 crore.

Deccan Cements produced 152,300 tonnes of cement for the year ended March 1991, reflecting a capacity utilisation of 123 per cent. However, due to the delay in securing additional power and coal linkage, the modernisation-cum expansion programme of the company has yet to be completed.

Gulshan Sugars & Chemicals

Incorporated in May 1980, Gulshan Sugars & Chemicals Ltd (GSCL) is presently engaged in the manufacture of activated and precipitated calcium carbonate, with an installed capacity of 22,500 tonnes per annum.

GSCL procures its major raw materials like limestone from Dehradun, Mussourie, etc and stearic acid from dealers in Delhi.

The company's products find use in cosmetics, pharmaceuticals, PVC wires and cables, paints and varnish, etc. GSCL has established buyers like Colgate, Ponds India, Sandoz and Asian paints amongst others.

According to managing director C.K. Jain, the new programme will generate eight million units of power without any fuel costs. "At full utilisation we will save Rs.1.2 crore," he stated. At present capacity utilisation, GSCL will use 4 to 4.5 million units of power and sell the balance to its sister company. Jain also said that GSCL is the first company in the industry to implement such a programme.

For the year ended March 1991, GSCL achieved a turnover of Rs.9.73 crore, an increase of 53 per cent over its previous years figure of Rs.6.37 crore. Gross profit this year has moved upto Rs.1.52 crore from Rs.1.02 crore. It has also declared a dividend of 18 per cent.

Integrated Finance

The Madras-based Integrated Finance Company Ltd (IFCL), engaged in the hire purchase and leasing business, recently diversified into venture capital funding and factoring services. IFCL's managing director George Kuruvilla expects to strengthen the main business.

For the year ended May 1990, total income at Rs.4.81 crore showed a rise of 19.5 per cent over the previous year. Gross profit and net profit also rose by 29 and 35 per cent, respectively. EPS on an equity capital of Rs.1.97 crore worked out to Rs.4.15 for May 1990. Dividend at 20 per cent was five per cent higher.

Integrated Finance

INDIAN INSTITUTE OF MANAGEMENT CALCUTTA
MANAGEMENT DEVELOPMENT PROGRAMMES

STRATEGIC PLANNING AND HUMAN RESOURCE MANAGEMENT, August 16-19, 1991 at Hotel Clarks, Varanasi

This MDP is designed to provide concepts to supplement discussion of the Indian experience with focus on :
● Linkages between Strategic Planning and Human Resource effectiveness. ● Identification of issues and concerns about employee numbers, work-ethos, employee costs, operational, tactical and strategic flexibility, employee relations in union and non-union contexts, and HRD. ● Alternative decision-making frameworks in a range of contexts such as growth diversification, adversity, technological change, restructuring etc. ● Dimensions of vulnerabilities, internal and external to the organisation. ● Experience of organisations in India in private and public sector.

The programme aims at drawing members from diverse work settings : managers, administrators and professionals in commerce trade or industry, Government Service, trade unions, and other organisations that contribute by providing goods and/or services to satisfy human wants. The last date for receipt of enrolment forms with Cheques/Drafts in favour of "Indian Institute of Management Calcutta" is July 15, 1991. Places on this programme are limited to 25.

Registration Fee :- This is a residential programme and registration fee includes the cost of single room accommodation at the hotel and breakfast, lunch, dinner, morning and afternoon tea/coffee besides covering cost of course materials and other facilities. Travel costs are to be borne by the sponsors. The registration fee is Rs. 7500/- per participant.

Programme Director : Prof. Ajeet N. Mathur

AUTHORITY, ORGANISATION AND LEADERSHIP : MANAGEMENT OF SELF IN ROLE, August 22-29, 1991, at Hotel Clarks, Varanasi

This MDP is called a Working Conference because it is designed to provide participants the opportunity to develop unique insights on the processes of use of authority, of giving and taking of authority, of providing leadership and for exploring assumptions that constrain organisations. The programme is largely experiential with sessions for transferring insights developed to "back home" situations. The programme aims at drawing members from diverse roles.

Registration fee :- This is a residential programme and registration fee includes the cost of single room accommodation at the hotel and breakfast, lunch, dinner, morning and afternoon tea/coffee besides covering cost of course materials and other facilities. Travel costs are to be borne by the sponsors. The registration fee is Rs. 12,000/-.

The last date for receipt of enrolment forms with Cheques/Drafts in favour of "Indian Institute of Management Calcutta" is July 29, 1991.

STOCKMARKET REVIEW

Obstinate markets

(For the fortnight ended 14 June 1991)

	14 June	31 May	percent change over fortnight	year
BSE Sensitive Index	1292.81	1307.34	−1.1	+65.1
BSE National Index	636.44	649.69	−0.9	+51.5
Vol (Rs.cr) fortnt. ended	124.05	129.09	−4.0	+5.6

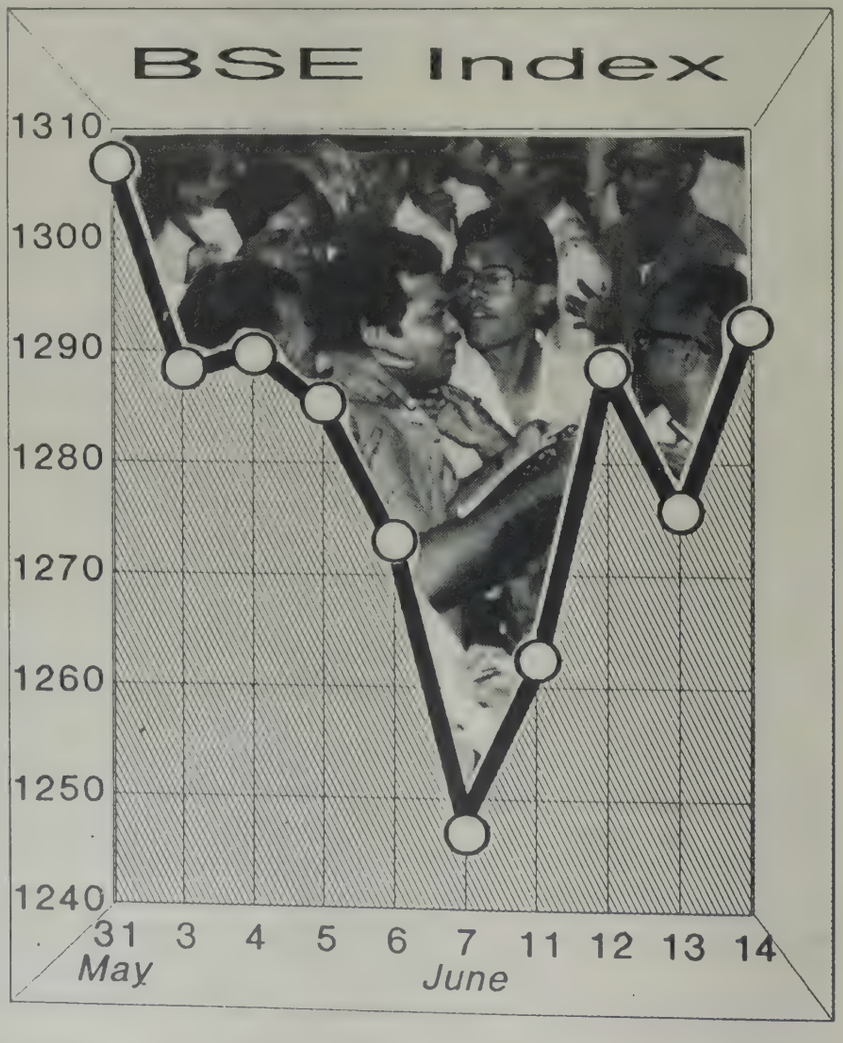
The markets, spurred by mutual fund purchases, stubbornly continued to believe in a better tomorrow that was worth reflecting in today's prices. Consequently, prices remained largely unchanged over the fortnight. As the news of the Congress(I)'s better than expected performance came in late, the market spurted further in kerb and still more in early trading in the new fortnight. As broker Y.C.Pande puts it, "Another election is out of the question; only the Congress can come to power."

This widely held view among the financial services community will sorely be tested by reality very soon. Nevertheless, the election results confirmed that the people's desire for social peace and civic order is what the market also wants.

Volatile scrips. Bombay Dyeing and Reliance emerged as the most volatile scrips of the fortnight, the latter for obvious election-related reasons. Bombay Dyeing was actively traded as rumours of Sharad Pawar's expected bid for prime ministership (Pawar is reportedly close to Dyeing's Wadia) gained currency. Reliance recovered from the fortnight's low of Rs.132.50 to close at Rs.143.50; Bombay Dyeing similarly recovered from Rs.203.75 to Rs.210. The effect of forthcoming corporate results (due by month end in both cases) on these prices will be worth watching. Bombay Dyeing is expected to perform well and declare per share earnings of Rs.16.9 for 1990-91 compared with Rs.9.80 (adjusted for bonus) in the previous year. Reliance, on the other hand, ought to have been heavily affected by trends in the yarn industry that have trashed the results of ICI, Enka and Baroda Rayon already this year. It is expected to declare per share earnings of Rs.7.20 compared with Rs.6 last year. This makes its current price-earnings multiple relatively high at nearly 20 based on 1990-91 earnings compared with Bombay Dyeing's 12.4. As a merchant banker explained, "The issue's the thing. Reliance's Rs.900-crore issue expected in September is the most eagerly awaited issue in stockmarkets this year."

Great Eastern Shipping was also eagerly sought in the market. The scrip gained strongly over the fortnight, closing at Rs.52, up from Rs.43 (+21 per cent). A recommendation in Portfolio Talk (*Business India*, 27 May) a positive interview in a financial daily, and rumoured large purchases by broker Harshad Mehta were attributed by brokers to be the reasons of the change.

Other shares in demand included Wartsila Diesel which rose from Rs.84 to Rs.97. Mastershares declared at 1 for 2 bonus during the fortnight. A bonus ought not to have any effect on the functioning of a mutual fund because its net asset value is the only relevant figure. Since Mastershares is not traded by insiders there is also no other reason for unusual price jumps. Accordingly, the scrip fell over the fortnight from Rs.35.75 to Rs.34.50 in line with the market.



Tea shares could revive

Company	Price on 31 May 90	Price on 14 June 91	Price a year ago 14 June 90
Assam Co.	145.00	135.00	120.00
Assam Fron.	252.50	265.00	218.75
McLeod Russ.	127.50	123.75	89.00
Tata Tea	330.00	330.00	206.00
Tea Estates	162.50	160.00	100.00

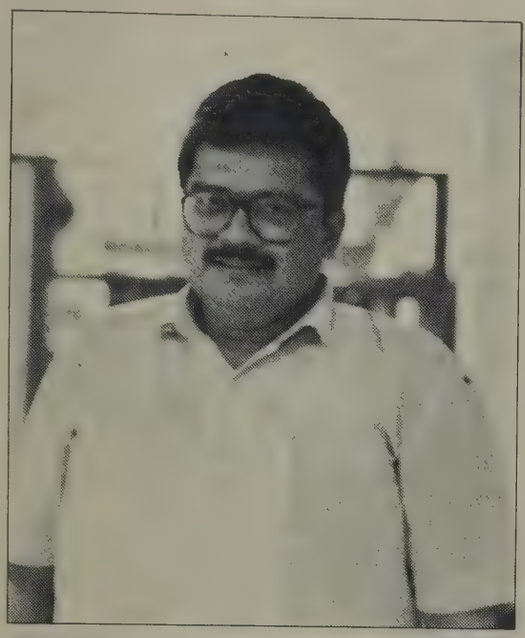
A message. The "downers" included performance reports on dozens of shares whose message the market ought to perhaps listen more closely to. These included such large companies as J.K.Synthetics which lost Rs.45 crore compared with the previous year's net of Rs.7 crore and poorer results from Nocil and Polyolefins. J.K.Synthetics closed the fortnight at Rs.32.25, down by Rs.1.75, Nocil closed at Rs.1,160, down by Rs.135 and Polyolefins closed at Rs.1,150, down by Rs.75. Car leases were also reportedly down for Premier Auto; this has affected the share prices of automobile companies. Premier Auto closed the fortnight at Rs.48, down by Rs.4 and Hindustan Motor closed at Rs.21.75, losing Rs.1.75.

The market's wait for a stable government has been both long and cheerful. A market-relevant choice of the likes of Sharad Pawar could well cheer it further — as long as it does not take too long. ■

RAFIQ DOSSANI

TCEI GUIDELINES

Adding a new dimension



The Over The Counter Exchange of India (OTCEI) could contribute a new range to the existing market system. If and when, that is, it begins operations. As with any new concept, the OTCEI has had its share of starting problems, what with the government issuing its own guidelines periodically in response to modifications sought by the exchange.

The OTCEI was intended as a second tier exchange to the main stockmarkets, for smaller shares not listed on the regular exchanges. By providing institutional support for subscription and market-making for small shares, it was expected that the OTCEI would give small companies access to capital markets. Hence, it was promoted (with 25 institutional members) by institutions like the Industrial Credit and Investment Corporation of India, Industrial Development Bank of India and SBI Capital Markets.

Thorough scrutiny. To be listed on the OTCEI, a company needs a member who will sponsor it by buying the entire portion intended for public issue and then making a market in it on the exchange by quoting two-way buying and selling rates. This is designed both to ensure a thorough scrutiny of the company by the sponsor and provide a ready liquidity in the marketplace. The sponsor's profit would come from the difference in buying and selling rates and any capital gains from its holdings. While the sponsor needs to make a three-year commitment to market making, it needs to find another market-maker in case it wishes to divest the issue after three years.

The investing public would access the market only through approved dealers (75 of whom will be appointed by October) who would charge brokerage for their services. In order to ensure competitive rates, each scrip will have at least one more official market-maker while any member or dealer can also make markets with a minimum three-month commitment.

This mechanism, by avoiding a public issue, could save costs which could run to over 5 per cent of issue size. But, according to S.M. Parande, former executive director, SBI Capital Markets Ltd, "Direct issue to the public could also be a viable alternative, especially since issue costs

Ravimohan: "reduce minimum limits"

like advertising can be kept low."

As R. Ravimohan, OTCEI's chief executive points out, a unique feature about the OTCEI is that there is no trading ring. The transactions will be carried out through communication systems — telephones initially, and trading screens later. Eventually, the OTCEI will have an on-line computer trading system using software from CMC. There will be a central custodian who will function as a depository, making physical share transfers unnecessary. Settlement will be continuous with a span of seven days allowed for banking delays. Certain banks may also tie up with the OTCFI, making immediate settlement possible.

Government inflexible. One reason for the delays in OTCEI's establishment was that the exchange wanted the minimum capital base for listing-eligibility to be Rs.15 lakh. The government has, however, stuck to the Rs.30 lakh minimum, although the Rs.3 crore maximum has been allowed to be extended to Rs.10 crore thus allowing direct competition with the major stock exchanges in the Rs.3 to Rs.10 crore category.

The OTCEI unsuccessfully lobbied to bring the minimum public offering to 20 per cent in order to attract closely-held and control conscious companies. According to an ICICI source, this would have attracted companies like Godrej Soaps who have stayed away from the stock exchanges because of their requirement of a 40 per cent promoter maximum. However, the guidelines retain the 40 per cent rule for companies with capital bases over Rs.3 crore while allowing offerings to be restricted by a further 20 per cent, ie, to a maximum promoter ownership of 60 per cent for companies with lower capital bases. Says Ravimohan, "We have no objection to a common rule with other exchanges for companies with a capital base of more than Rs.3 crore; but it could be reduced where there is no overlap."

Another grey area arises in fixing share premia on listing. According to Ravimohan, the OTCEI would recommend the premium although the final decision rests with the CCI.

The OTC exchange could be a boon to the small investor because of easy accessibility and the relative liquidity promised by the market-makers. But the buy-sell spread in thin markets remains a question, and the present regulations might keep some private companies away.

The exchange is bound to have other teething troubles as well. Markets will initially be made by financial institutions that are inexperienced in this complex activity. Even today, the majority of New York Stock Exchange and New York's OTC market-makers are individuals or small firms. Also, the government has over-regulated the market. In particular, rules on promoter holding and premia determination could have been left to the sponsors' discretion as per international practice.

SEBI

Regulating prospectuses

The Securities and Exchange Board of India's (SEBI) latest salvo, in the cause of investor protection, is directed at merchant bankers. SEBI will now evaluate the performance of the merchant bankers on the basis of their clients' prospectuses. As per a new rule, 15 days prior to filing a prospectus for a public issue with the Controller of Capital Issues (CCI), the company will have to submit the prospectus to SEBI for scrutiny.

Says SEBI chairman, G.V. Ramakrishna, "According to the Companies Act, the prospectus should make a fair and complete disclosure of all facts. But the Act does not specify what is fair or more importantly, what is adequate disclosure." SEBI's role will be to monitor how well the spirit of the law regarding

disclosures of facts, risks as perceived by the management, characteristics of the company and its projects are spelt out in the prospectus.

Grading performance. SEBI's perception is that prospectuses are prepared with the guidance of merchant bankers, so in effect it will be their performance which will be graded.

On their part, merchant bankers appear to have accepted the new rule, though grudgingly. Says one banker, "It would have been better if SEBI was suitably equipped to deal with the grading."

Ramakrishna promises to publish SEBI's evaluation (in grades of A, B, C or D) at periodic intervals. However, the grading will not be for a single issue or a single merchant banker. It will be an evaluation of the aggregate performance of lead managers. Eventually, it will be the lead manager with the highest number of A grade issues who will be able to tout his services and attract more customers.

MUTUAL FUNDS

More options

With nine mutual fund schemes in operation, the investor has several schemes to choose from. With mutual fund companies constantly launching new schemes — Bank of Baroda for instance — there will be more variety.

Fixed income schemes predominate, although growth schemes have given higher returns and offer better tax benefits. For instance, SBI Mutual Fund regularly floats its monthly income Magnum schemes, offering fixed monthly returns of 12-13.5 per cent per annum. Many growth schemes floated earlier, such as BOI Mutual Fund's BOI Double2 Plus will soon be listed. Since most are expected to quote at discounts to the underlying value per share (called net asset value), investors might do better to pick them from secondary markets rather than invest in new growth schemes.

■ MANALI RESHAMWALA

NEW ISSUES

Drought time

Since April this year, public issues have become scarce in the market, with only 20 companies coming out with new issues. During the first half of June, there was only one public issue — Mukesh Steels for Rs.3 crore.

Uncertainty over elections is perceived to be the main reason for the lull. Hemendra Kothari, president of the Bombay Stock Exchange, says, "It is a wait-and-watch phase. There is no cause for concern as this lack of interest in public issues is to be expected. And it's not so bad. All the public issues in the past two months received satisfactory responses. The market, it's hoped, will regain its bouyancy once the elections are over."

Once the new government takes over, by end-July, about 20 new public issues are likely to be offered to the public. The tight credit position will soon encourage a flood of issues, as companies scramble for cheaper equity.

The big ones. The most awaited issues will be from the big companies which plan to raise about Rs.4,000 crore by September. These include Reliance Industries whose Rs.900-crore issue has already been announced. Tata Steel's Rs.1,000-crore issue is less well known, says Manish V. Shah of M.C.Investments, so is a Rs.500-crore issue from Grasim Industries.

The bigger issues will probably be oversubscribed, especially because of the presence of share-hungry mutual funds. But marketing smaller issues may be a problem, especially if the secondary markets suffer due to falling corporate profits in the first half of the financial year, as is expected. According to a merchant banker, investors were greatly concerned about the effect of skyrocketing inflation and high interest rates on corporate performance. They wonder whether their own savings aren't better off in a bank or mutual fund deposit that returns about 14 per cent per annum.

Ongoing political stability also matters. Shah notes that the stockmarket has remained bouyant despite political problems and difficulties within the banking sector. "Once the new government settles in, the market confidence will be revived."

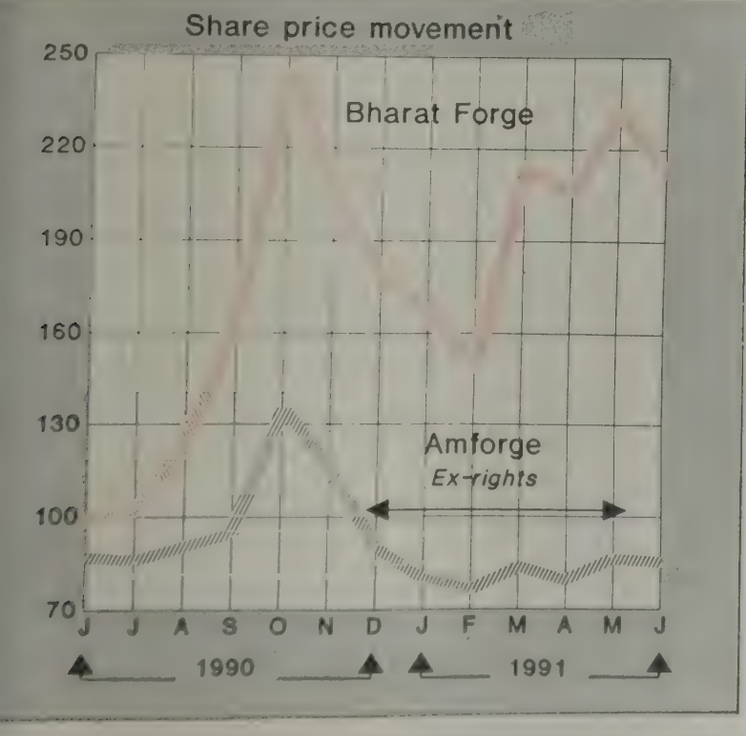
Management can transform companies

Mahendra Doshi, *one of the partners of the stockbroking firm L.K. Pandey, talks to Business India's Rafiq Dossani and Alka Mukundan on portfolio composition*

The critical element determining the current course of markets is, in fact, the outcome of elections. The market has already discounted a hung parliament. In other words, while a hung parliament would have had no adverse impact on market prices, anything different is good news. If any single party (either the Congress or the BJP) had gotten a majority, the BSE sensitive index would have gained 100 to 150 points immediately.



As it is, the Congress is certainly large enough to form a government and will soon do so; but for the index to rise substantially, an easing of the foreign exchange crisis and a definitive direction laid down by the budget is necessary. As for the inherent strengths of the economy, the chief one is substantial underlying demand; this can offset the effects of a credit squeeze whose effect on corporate profits is purely temporary.

Return on investment

The target for portfolio returns for Doshi's largely corporate clientele calls for an expected return of over 23 per cent this year. Historically, returns have ranged between 21 and 23 per cent. With interest rates having risen considerably over the past four months (average call rates have been 35 per cent during this period), the portfolio mix has been reviewed. Currently, about 60 per cent is invested in short-term money market instruments, while the balance is evenly divided between equity and corporate debt instruments (although Doshi disfavours primary subscriptions to non-convertible debentures thanks to their low rates of return).

As a matter of strategy, decisions are made after talking to the management and screening the fundamental and technical position of each individual company. Doshi particularly likes two companies which are into forgings: Amforge & Bharat Forge, both professionally managed companies with a proven track record and a strong export drive.

Amforge managed by the Makars, is working on a technology upgradation and expansion project which will take its installed capacity to 35,000 tonnes per annum on completion. There are some short-term negative factors: earnings per share for the year ended March 1991 dropped to Rs.7.71 (Rs.11.05); project implementation costs and the increased interest burden are likely to exert pressure on margins in the first half of the current year. Equity also has expanded to Rs.7.23 crore (due to conversion).

However, once the project goes on stream, earnings flow would increase substantially. The scrip quotes at Rs.85 (*see chart*) and Doshi feels that it could appreciate to Rs.120 by year end.

Bharat Forge, of the well-managed Kalyani group, is a good scrip for the long term. Its forgings capacity is being expanded from 50,000 tpa to 100,000 tpa this year. While earnings per share for the year ended March 1991 was Rs.9.60 (Rs.6.77), the scrip has, it is true, fallen from its earlier high of Rs.245 last October to Rs.212.50 at present. However, over the year, it has risen substantially. Doshi expects it to appreciate 35 per cent within a year.

Shipping boom

Outside of forgings, Doshi likes the shipping industry which should be firm worldwide — although the Baltic Index tends to be variable and is currently down below 1,500 from its earlier peak of over 1,700. The dry cargo market should be particularly good and Doshi likes current market favourite, Great Eastern Shipping, predicting its price to rise within the year to Rs.80 from its current level of Rs.53.

For the index to rise substantially, an easing of the foreign exchange crisis and a definitive direction laid down by the budget is necessary

There is a third industry group that Doshi likes, one intimately linked with his own line of work — finance companies. Doshi notes that the rise in interest rates has not been uniform as non-corporate lenders have not received the full benefit of the hike. This has increased the spread between the borrowing costs of finance companies and the rate at which they lend money. Doshi particularly likes Cifco, V.B. Desai and 20th Century, all of which tend to be historically underrated by the market.

Good management can always transform an ordinary company into an excellent one, claims Doshi. Citing Jain Irrigation, promoted by the Jain group of Jalgaon, he notes that they are in a difficult area of marketing drip irrigation systems to cash-crop and plantation agriculturists. The scrip which earned Rs.10.23 per share for the year to March 1991 should earn substantially more this year and Doshi expects its price (currently Rs.82) to be good for a 40 per cent rise this year.

ISSUE OPENS ON 2nd JULY 1991

PUBLIC ISSUE OF 12,10,000 EQUITY SHARES OF Rs. 10/- EACH FOR CASH AT PAR AGGREGATING Rs. 1.21 CRORES

- ☑ An established profit making dividend paying Company which has issued Bonus Shares twice.
- ☑ Promoters: A combination of entrepreneurs and technocrats.
- ☑ Established manufacturer of activated and precipitated Calcium Carbonate.
- ☑ Suppliers to well known companies like Colgate Palmolive (India) Ltd., Hindustan Ciba-Geigy Ltd., Balsara Hygiene Products, besides others.
- ☑ Company's product finds applications in varied industries.
- ☑ Embarking on a Modernisation-cum-Energy conservation project expected to result in cost reduction and enhanced profitability.
- ☑ Easy Liquidity. Listing at Kanpur, Ahmedabad, Bombay and Delhi Stock Exchanges.

If the Company does not receive the minimum subscription of 90% of the issued amount, the entire subscription will be refunded to the applicants within 90 days from the closure of this issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest at 15% per annum for the delayed period.

Clea-D

Lone winner

Cement companies continue to occupy number ne slot in investors'portfolio, their share rices having risen by over 10 per cent in May. or the contest under review (IC344) we have lone winner — Mohan Shetty. Congrats!

Scrips	Prices as on Friday 3 May 1991 (Rs.)	Prices as on Friday 31 May 1991 (Rs.)	Ranks
Birla Jute	230.00	280.00	1
G.A. Cements	158.00	172.50	3
Jaiprakash Ind.	33.25	35.50	5
Kesoram	96.00	100.00	6
Mangalam Cement	80.00	86.25	4
Modi Cement	15.00	17.50	2

Given here is a new list of six scrips, and their closing prices on 17 June 1991. Pick the share that you think will rise the most in percentage terms by 15 July 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 15 July 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

les:

There is no entry fee.

The price mentioned last in the official otation list will be taken as correct for the rposes of calculation. If the stock ex-nge remains closed on the stated last , the closing price on the prior day will used.

Entries must be on the printed form given ow. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 11 July, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

PERFORMANCE IS LIMITLESS

Beyond any doubt, the global market is the final frontier for any Indian corporation. But globalisation implies challenges beyond exports — it requires visionary planning at every step of the corporation's progress.

For Escorts, globalisation is a two-way perspective : bringing the best the world has to offer into India, and in turn, through world-class inhouse research and development, giving the world superlative products made in India.

The key to two-way globalisation is building relationships with acknowledged world leaders. Relationships that are not limited to financial or technical collaborations, but are alliances between equals.

Today, our achievements have earned us the ultimate recognition of quality : shared export markets and buy-back agreements with virtually every one of our collaborators. Companies that include JC Bamford, Yamaha, Goetze, Faun, Claas OHG, Herion-Werke KG and Ford. Escorts products have found their way into virtually every major market in the world : from the Near, Middle and Far East to Africa, Europe and the Americas.

For Escorts however, all that has been achieved so far is merely a prelude. The time is here to deliver on the promise; to take a bold leap from acceptance to a formidable international presence. And as we move into the next century, the goal is clear. Nothing less than the global triumph of the power of performance.

TRANSCENDING FRONTIERS WITH A UNIVERSAL CONCEPT OF PERFECTION.

Of what use is Motorola's paging technology to a man whose life hangs by a thread?

There are times when a patient requires urgent attention and a doctor is hard to find. Life is at stake here. Which is why Motorola has just introduced the paging system, for hospitals. It's a people-finder and a potential life-saver. In times of emergencies it helps you page for a doctor immediately. This not only helps to save lives but also gives the doctor the freedom to go about his other businesses and yet be on call. At Motorola we have many such advanced solutions that can better the human experience. So that high-technology isn't just relevant to industry. But also to every Indian.

The uses of information

POWERSHIFT
By Alvin Toffler
Bantam Books, November 1990, distributed by IBD, pp 585, Rs.325

Alvin Toffler has done it again. If *Future Shock* jolted us to the realities of change and *The Third Wave* sucked us into a new vortex of change, *Powershift*, the third part of this awesome trilogy, is guaranteed to fling us into a flight of change beyond one's imagination. *Future Shock* dealt with the process of change and how people and organisations try to orient to the new products and processes, a stressful transition of trying of cope with too much with too little reaction time.

This book influenced millions across the globe to ruminate on change itself — or so many facets of change that we tend to take for granted. *The Third Wave* focused on the direction of this change. *Powershift* is a deeper and more incisive study, a brilliant analysis of who will control change itself in the changed circumstances, and thus ultimately control not only the agents of change but the people and products of change. In short, to whom power will shift.

Spheres of power

In the last decade, we have witnessed entrenched ideologies collapsing, historical antagonists merging and established power bases eroding at the global level. *Powershift* probes deeper, into a more ordinary level, to pinpoint the equally significant shifts of power in the mundane world of people, business, politics, medicine, media and communications.

Toffler starts with three basic ingredients of culture — violence, wealth and knowledge — the three basic mosaics that constantly fuse, diffuse, merge, and coalesce into patterns. Mao Zedong had asserted, "Power grows out of the barrel of a gun"; an anonymous adage says, "money talks" and Francis Bacon was certain "that knowledge itself is power". These three ingredients form Toffler's volatile cocktail of power — muscle, money and mind. They have spawned history and civilisation, subsuming ideologies, culture, politics, economics and the destinies of men.

According to him the quality, quantity and distribution of power have been distinct in the three clear periods of wealth creation. In the first agrarian phase, the ownership of land, the hardest capital, bestowed power, wealth and clout. The second phase followed with the "smokestack era", when industrial power took over economies and the shift of people to industrial societies, power emanated from the manipulation of all forms of capital.

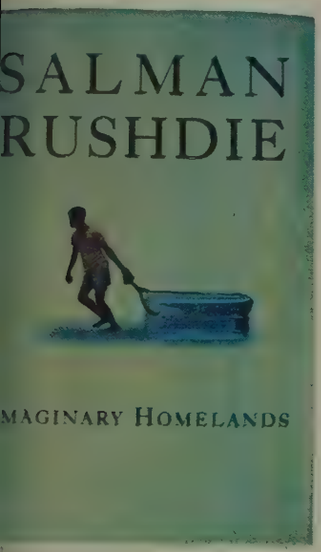
The third phase, the information phase, has brought us to a crucial springboard that will catapult whole societies into a totally new culture. This information phase includes all knowledge, art, science, moral values and misinformation, which will form the basic raw material for wealth creation. We have not even begun to understand the implications of this phase.

Knowledge has real high quality power and is, of the three sources of social control and change, the most versatile

A revolution is sweeping today's post-Bacon world no genius in the past could have imagined. As an example, Toffler traces the devaluation of doctor dominance — the god-in-a-white coat syndrome — that has undergone dramatic changes with millions of people having access to medical knowledge through print and TV. The second more telling example is that of the supermarket "checkout" battles, where for years customers waited patiently for items to be checked and billed. This was where the manufacturing giants like Lever, Nabisco, Gillette and Procter and Gamble held sway over retailers who had to stock their products.

On 3 April 1973, all this changed and power shifted to the consumers and the retailers when the universal product code, or bar code, came into being, allowing millions of products to be checked out faster and efficiently billed. "Now," says a chainstore owner, "we know as much, if not more than, the manufacturer about his product."

Grades of power



Power itself is gradeable — violence is actually a low-quality power, wealth a better quality of power (because payments and pay-offs can be custom-made). Wealth is more flexible than muscle, but it is still a "low octave" power. But knowledge has real high quality power and is of the three sources of social control and change, the most versatile. Claude Shannon and Warren Weaver, who helped found information science, couldn't have foreseen that knowledge would subsume all else, even those who have created it. Data is unconnected facts, information is classified data and knowledge is the most refined kind of information. It is this knowledge that will be manipulated by power seekers. Knowledge is infinitely reproducible.

By their very nature force and wealth are the bastions of the strong and rich, but even the poorest can have access to knowledge. For 300 years, we have witnessed political struggle over the distribution of wealth. Surprisingly, wealth is not the most maldistributed — power is. But in the coming years, the struggle will be over the distribution of knowledge. "This is why, unless we understand how and to whom knowledge flows, we can neither protect ourselves against the abuse of power nor create the better, more democratic society that tomorrow's technologies promise. The control of knowledge is the crux of tomorrow's worldwide struggle for power in every human institution," writes Toffler.

Powershift grips you with the "info wars", "tribal chiefs and commissioners" in board-room battles, the fascinating rise of para-money, with industrial espionage, and with the global "K-factor". It is recommended reading not just for the "I am with it" cocktail circuiters to use as conversational gambits, but to all those who are absolutely fascinated by the sweeping technological changes that man has heralded.

■ PADMA RAMNATH

Writer, whale and weighty essays

AGINARY HOMELANDS:
SAYS AND CRITICISM, 1981-1991
Salman Rushdie
anta Books, 1991.
stributed by Penguin India, pp 432,
295

the 70 essays in this volume, by far the st charming is *The Painter and the t*, the short tale of how an extraordi-ily enthusiastic professor from Ban-ore discovered a brilliant, bitter stract expressionist painter in the st. The professor displays his works to berts in Europe and propels the ob-re artist into much delayed acclaim. tale is dreamlike, but entirely true, man Rushdie tells us.

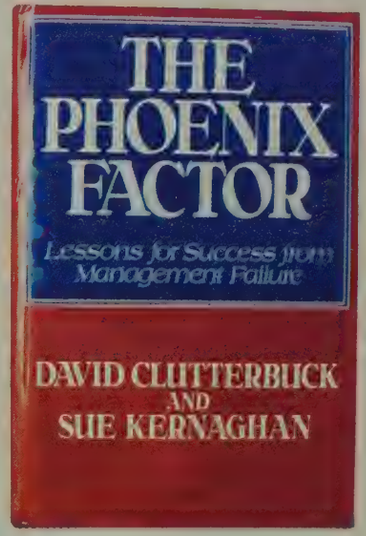
here are, in *Imaginary Homelands*, essays one expects from a multi-tural writer like Rushdie: on common-lth literature (or its non-existence), Raj revival, Indian and American ers, the migrant, a conversation with ard Said, plenty of comment on Rush-s old favourites — Grass, Calvino, quez — and a few rather tiresome ex-nations of sub-continental politics.

ushdie has often explained that the tral theme of *The Satanic Verses* is t he sees as the migrant condition, ticularly in the UK. It reappears in ral stories in *Imaginary Homelands* And, then, there are the Statements. are the god-*Verses*-*fatwa*-agony-essays which have generated un-pable reams of criticism, scholarly ction, debate, etc.

ere is also scathing contempt for the inued portrayal, and acceptance, of a formula colonial India — "the Mahatten-borough did allow a few Indians to be played by Indians" is a comment on Gandhi — and the perpetuation of artificially sepia-toned Raj kitsch courtesy Paul Scott and M. M. Kaye. The essay which contains these views, *Outside The Whale*, is intended to emphasise that literature and art cannot exist solely in isolation, in the belly of the whale.

Rushdie likes this acid remark attributed to Mahatma Gandhi who, when asked what he thought about English civilisation, replied: "I think it would be a good idea." This little quote which ends *The New Empire Within Britain*, certainly couldn't have endeared him to the Thatcherites. "British thought, British society, has never been cleansed of the filth of imperialism," writes Rushdie. He adds, provokingly, that the Third Reich was. Racism, both covert and overt, state-encouraged and individual, dominates this essay.

Novelist comes through



The latter sections also contain many short pieces on Rushdie's contemporaries and favourite authors. Here is the novelist as distinct from the angry social commentator. This section really begins with the enjoyable dialogue between Rushdie and Said, who "reads the world as closely as he reads books".

Further on, Graham Greene is discovered to be a prolific author of letters to editors; Le Carre's spies neither shake nor stir Rushdie; Bruce Chatwin (the Australian writer and Rushdie's dear friend) tells dingoes sick dingo jokes, then Rushdie tells us of Chatwin's travels and the outrageous ideas which formed Chatwin's last book, *Songlines*; he finds Fabulist Italo Calvino's stories mutating endlessly while Umberto Eco's semiotics form impenetrable labyrinths. Garcia Marquez and Vargas Llosa are in a section by themselves — Magic Realism occupies a sacred niche in Rushdie's mind.

As for the weighty essays, the juggernaut that is the *Verses* controversy continues to outdate explanations and refutations. The Muslim scholars who "reclaimed" Rushdie — leading to the *Why I Have Embraced Islam* essay — have cast him from faith again; the Ayatollah's son has renewed the two-year-old *fatwa*; and his wife has, after enduring two years of his exile, divorced him. The creator continues to suffer for the sins of his characters.

■ RAHUL GOSWAMI

Turnaround touch

THE PHOENIX FACTOR:
LESSONS FOR SUCCESS
FROM MANAGEMENT FAILURE
By David Clutterbuck & Sue Kernaghan
Weidenfield & Nicholson, 1990.
Distributed by UBS, pp 215, Rs.525

This book is about proud names like Donald Trump and Hugh Hefner of *Playboy* that collapsed in sudden catastrophe. It is also about stories of partial recovery to full turnaround which are remarkable like the phoenix that rose from its ashes.

The authors take their readers into the psyche of business killers and business winners. These are the men who strive valiantly, who err and may fail again and again because there is no effort without shortcoming. Toughness in business is pride, drive, commitment, and courage to follow things one believes in. It is knowing how to be a gracious winner, and knowing how to rebuild quickly when one loses.

The book shows ways for a partial to a complete turnaround by taking steps such as restructuring the organisation, cost reduction, selective product marketing strategies and repositioning.

Sumitomo of Dunlop Holdings identified four main reasons for his company's collapse — it lost its contacts with markets; it ignored the fact that acquisitions and mergers are not everybody's cup of tea; instead of looking for expansion it should have first put right its own operations; it should have kept its communications open with its people. Positive attitudes, commitment to winning, viable controls and open communication are the most important elements in adopting strategy that is tough yet flexible.

■ ARUN SEKHRI

ONE OF THE MOST PROGRESSIVE GROWTH COMPANIES IN INDIA BELIEVES THAT ALL ITS ACTIVITIES SHOULD SUBSERVE THE BASIC NEEDS OF OUR PEOPLE

"At Century, we are the first to admit that our manufacturing units are not in what most people call glamour or high profile industries. On the contrary, we are in the basic industries: the kind that are at the heart of national economic growth.

Our commitment to the country's economic priorities has made us the largest manufacturer-exporter in India. This year alone, we will earn about Rs. 140 crores in hard currency. And we are progressively expanding our cement production to help bridge the widening demand-supply gap.

We believe that we should strike a harmonious note between our shareholders' and workers' interests and the interest of the nation. Our workers are happy and proud to belong to us.

Often three generations of the same family have been working with the company. Our shareholders too have reason to be happy. After all, the value of Century's shares over the last 40 years has appreciated over 34 times, considering issue of bonus and right shares. And in the last decade alone, Century has contributed over Rs. 660 crores to the national exchequer. And now, to create vitally needed productive assets for the country, we propose to move into the critical areas of power and petrochemicals.

B.K. Birla

A two-point agenda

one of his television serials, Bill Cosby's ughter does poorly in a science project school. She returns home and blames eryone in sight for her poor performance her younger sister for disturbing her, r mother for not letting her use the chen table, her father for releasing only) for the project. But Bill Cosby's rueful servation, "So a whole lot of other peo- ruined this project for you" shakes her t of her bout of self-pity.

Bill Cosby's daughter is the *alter ego* of Indian manager. She helps to identify two landmark challenges before the D profession — externalisation and ra- nalisation. The challenge be- e the HRD profession if it es for a creative turn- und is to undertake a vig- us and urgent marketing' of these traits. herto the profession has ap- d itself largely to the task of eloping people. The new is should be to develop peo- out of certain belief sys- s, thought processes and ntal modes that are ob- acting 'quantum' progress frightening way.

ernalisation

hop floor manager attrib- low production to absen- sm, union interference, hine maintenance or bad ther. A factory manager blames it on haziness of direction from corporate e, poor definition of objectives, incom- nt resources and faulty functioning by lecessors.

t any organisational level, on any issue, manager treats himself as the victim of agmire of problems. And he looks at roblems as something planted on him ociety, peers, superiors, subordinates, nology and other unknown agents. 'victim' syndrome is rampant and rooted amongst Indian managers workmen. The ease with which they ert responsibilities into virtually a that they carry is either the outcome me decadent social process or the cre- Indian genius. This trait of exter- ation has now become such a basic of the Indian pysche that even those cious of it are prone to unconsciously ise it.

This approach robs the most basic tool of management — accountability. When everyone is busy victimising himself, the organisation's moral authority to ask questions of its members is slowly eroded. As a result, standards get set at a level of least resistance and it becomes difficult to then redefine the parameters of performance.

The second impact it has is that it creates the 'conformity code' syndrome. For each function or identifiable group, there always exists a reason for anticipated non-performance. Similarly each function or group, over the years, finalises its list of reasons and those in the group who do not conform to this pattern are not 'team' players! Ostracism is in store for them. Those who claim ownership of a problem and blame themselves soon find themselves physically or psychologically ejected since the 'conformity code' dictates that the blame must always lie externally.

Rationalisation

The source of rationalisation could well be the inherent 'fatalism' in Indian belief systems. However, even that does not excuse the startling lengths one goes to in actualising this trait and the alarming, continuing damage it does.

A boss's explanation as to why an employee did not get promoted, invariably is, "The pyramid narrows at the top." Ask an HRD man why things are going wrong on the people front and he would say, "It's worse elsewhere." The worst form of rationalisation finds its shelter under providence, God and luck. For example, why does someone get the chance in preference to another? The answer: "Because he happened to be at the right place at the right time. It's all a game of luck, my friend."

Rationalisation can be defined as a process which carves out 'apparent' truths justifying the preservation of status quo. It is often sound logic, difficult to impeach or penetrate. While externalisation is lively and alert, rationalisation is deadening. Externalisation is a tool for self-preservation; rationalisation is a tool for slow self-destruction.

If organisational manpower planning commits the error of positioning such a resource in a critical leadership position, he will soon transform his team into a group that is plagued with self-doubt. Since no initiative gets taken and any change from the status quo is rationalised, soon everyone starts moving about carrying a load of self-doubt.

Self-doubt in those who are supposed to manage can have severe repercussions on the organisation. Those who are unable to contemplate effort or initiative thrive on self-doubt. They constantly goad everyone else into a situation where all the negatives on any proposed venture are brought out. They acquire the image of 'mature' managers who can 'think through' a problem. In such an environment, those who itch for action and change find themselves outclassed. They then make a choice. They either quit or rationalise.

Workmen and unions love rationalising managers. They soon learn to play upon the fears of those with self-doubt and always reject a progressive thought with the clever trade-off of not "upsetting the applecart". Over a period, the management loses the initiative and ability to take a lead in any thought process and depends on the union for all thought and action.

Indian corporate entitities are prevented from becoming internationally competitive when teamwork is blocked by externalisation and creativity gets obstructed by rationalisation. If the HRD profession can evolve creative methods by which these two traits can be eliminated people could become an instrument of achieving competitive advantage.

■ NALIN MIGLANI

CHIEF EXECUTIVE

With Skill and Expertise to Germinate Success!

SOUTHERN METRO **EXCELLENT TERMS**

Our Clients – a fast-growing reputed Group with an asset base of over Rs.1000 crores – are committed to expansion by widening their involvement in the agricultural sector and through comprehensive farmer service. They wish to establish modern seed research, production and processing facilities for marketing seeds in the domestic and export markets. For setting up this comprehensive project, they need an individual of outstanding ability for above-mentioned position to initiate, plan, organise and implement the Project.

The Chief Executive will be thoroughly conversant with seed technology, related Government regulations and marketing methods and strategies. He would have successfully managed and run a seed business of a sizable scale. He should be capable of identifying possibilities of collaboration with seed producers abroad for production and export.

The selected candidate will possess a good degree in agriculture or engineering with 10-15 years of experience in this business. He will be capable of coordinating, motivating, and leading his team of men drawn from different disciplines. A strong commercial flair and outstanding integrity are basic requisites. Preferred age is 40-45, but can be relaxed.

The position will be suitably designated in keeping with the high entrepreneurial and managerial skills it calls for.

The compensation package will be comparable to the best in the country for position of this seniority and responsibility, and will not be a constraint for the right candidate.

Please apply within 15 days to:

Mr. G.T. Shahani,
Chairman,

Apex Management Consulting Group Private Limited,
C-1, Rams Square, 2, Village Road, Madras 600 034.

amcon

Billimoria Consultants (P) Limited

We have been retained by a large industrial group of national repute, for the selection of a

CHIEF EXECUTIVE

for one of their major companies located in a Southern Metropolis. The search is on for a dynamic result-oriented Chief Executive with a flair for excellence, a proven track record in senior positions and ability to motivate a team of senior professionals.

AGE AND QUALIFICATIONS:

He should be 45-50 years of age, a graduate in engineering with at least twenty years experience in manufacturing and allied areas. While experience in general management is essential, a background of foundry technology and exposure to running a modern medium-to-large sized Grey Iron, SGI or Aluminium Foundry is desirable.

RESPONSIBILITIES:

The Company, which is a market leader, has ambitious plans for further growth. To this end, it will be investing in upgrading of technology and capacity. The incumbent will be responsible for actualising this and for achieving targetted production and profits.

EMOLUMENTS AND PERQUISITES:

Will be in accordance with the provisions of the Companies Act.

Applications, which will be treated in strictest confidence, should give the following information without which they will not be considered:

Details including educational qualifications, age, work related experience mentioning name of employer, designation held, present emoluments, etc. along with copies of certificates and passport size photograph. The application may be sent within twenty days to:

Chairman and Managing Director
Billimoria Consultants (P) Ltd.
299 Ashok Hotel NEW DELHI - 110 021

AAL

Shilputsi

Shilputsi Consultants have been retained to recruit a

Core

DIVINE MARKETING (BOMBAY) PVT.LTD.

GENERAL SALES MANAGERS

BOMBAY DELHI CALCUTTA MADRAS

The company is engaged in marketing the well-known **Amity** brand of perfumes. These perfumes, developed at the well-equipped Amity laboratory and R&D centre, are based on international fragrances and are manufactured in a modern plant near Bombay. Amity perfumes are aimed at India's vast middle-income group and offer consumers international quality perfumes at affordable prices. The products have been successfully launched in Maharashtra, Gujarat and Goa, and will soon be marketed nationally. Amity perfumes are also exported to Europe and the Middle-East.

The General Sales Managers will head their respective branches. Each region will operate as a profit centre and the incumbents will be responsible for the overall performance of their regions. The total Indian market for perfumes can absorb production worth Rs 200 crores annually, but the market for branded perfumes is new and the incumbents face the challenge of developing this potential. At the moment, the Company does not have infrastructural facilities in these regions and these will have to be set up. This entails organising offices, recruiting sales teams, and appointing distributors. The positions are based in the metros but the jobs entail extensive travel.

Candidates should be graduates in the age group 35-40. Post-graduate management qualifications are not essential, but will be an added advantage. Experience of at least five years in independent regional charge of marketing soft consumer products is necessary. Preference will be given to those who have such experience in cosmetics and personal hygiene products. Candidates should be fully conversant with all aspects of branch management and should be fluent in English and the local languages of the region. Ability to motivate and lead a sales team is essential.

The remuneration and perquisites offered will match the best offered by the Industry.

Applications mentioning salary currently drawn and now expected may be sent in confidence to the Vice-President (Marketing), Divine Marketing (Bombay) Pvt Ltd, 421 Kewal Estate, Senapati Bapat Marg, Bombay 400 013.

Our Client is a large diversified Multiunit/Multicompany group of over Rs. 900 million turnover and units located all over the country. Each unit has a distinct organisation with an absolutely independent Management Structure, operating within the corporate philosophy of Total Quality aimed towards absolute customer satisfaction.

To meet the expansion and growth plans for two of the Group's units located in prime cities, we need the following –

CHIEF EXECUTIVE

This is a Profit Centre Head position. The present turnover of one unit is Rs. 50 crores and the turnover of the second unit is over Rs. 15 crores. The Prime focus is on upgrading technology and sustain market leadership.

We are looking at dynamic result oriented business managers. An established performance base in a professionally managed firm is a must. Exposure to more than two functional areas including commercial operations is desirable.

GENERAL MANAGER MANUFACTURING

The job entails strong techno – commercial background with emphasis on technical skills mainly in the Electrical, Mechanical and Metallurgical engineering disciplines.

GENERAL MANAGER COMMERCIAL

The assignment comprises complete responsibility of the purchase function. The incumbent will be dealing with large budgets for buying and selling of a variety of products/commodities. The position reports to the Chief Executive.

We are looking at maturity and creativity in managing the internal and external environments. The selected candidates should be prepared to work at any of the Group locations. The desired age profile is between 40 to 50 years.

The Compensation and perquisite package will be designed around the selected candidates. The terms are to attract and motivate the finest talent.

Call us at 011-462 5316, 692415 for further details or write to us at:

1002, Rohit House, 3-Tolstoy Marg, NEW DELHI - 110001

MOTOROLA

Motorola is a leading U.S. Multinational Corporation engaged in the manufacture of Communication Systems, Equipments and Electronic components. The Company is a leader in Product Quality and known for its strong business ethics and aggressive professional management practices.

Motorola is now setting up a 100 per cent export oriented Software Design Centre in Bangalore and wishes to recruit,

GM SOFTWARE CENTRE

The ideal candidate would be an MBA, B.E. Electronics or Computer Sciences Graduate with 12 to 15 years in software development and management to real time software development. Thorough understanding of software business and exposure to commercial and administration aspects of software business is necessary.

This position reports directly to the Managing Director. The GM will be responsible for managing, and training professional software developers engaged in the development of real time embedded software and software quality engineering. The GM will develop and implement software development plans including scheduling, budgeting and resource allocation for a variety of products and will be responsible for delivering high quality software.

FINANCE MANAGER

The ideal candidate would be a C.A., ICWA or equivalent with post graduate qualification. Those with Company Secretary qualifications would have an advantage.

He should possess more than 10 years' experience in broad financial management of which at least several years must be in head of department position, with hands-on experience on tax, treasury and investment matters.

This is a very senior position and the appointee will be responsible for all Corporate Finance activities in the country which will include accounting, tax, treasury and investment matters and will act as the controller for all Motorola owned or managed businesses in the country. He would also act as the financial liaison and in-country financial analyst for non-Motorola managed business.

COMPANY ACCOUNTANT

The ideal candidate would be a C.A., ICWA or equivalent with 6 to 9 years all round financial administration experience with strong project accounting background. Preferably, having worked in a supervisory position in USA multinational environment and/or in software development company. Those with hands-on experience of computerised financial systems would have an advantage.

He would report to the General Manager of the Software Design Centre and would be responsible for the overall financial administration of the Software Design Centre. The job would entail preparing, maintaining and reporting of the company accounts, project accounting and job pricing, budget planning and control, payroll, payables, internal control, etc. Appointee is expected to be a self-starting individual contributor.

The compensation package will commensurate with qualifications and experience and would be at par with world class organisations.

TATA ELXSI. TOWARDS BEING THE BEST.

At Tata Elxsi, we constantly measure ourselves against the best in the industry.

Which means our people don't work to fixed standards. They work at setting new ones for the rest to follow.

Helped by the fact that our aim is to emerge as the technology leader in computers, by bringing to India the world's most powerful multi-processor RISC systems.

We now require outstanding professionals for some key positions at Bangalore.

At Tata Elxsi, people aren't limited by standards.

Chief of R & D

You will play a key role by strengthening the company's technological edge. By initiating new product development. Updating products to provide better solutions to our customers. Building relationships with the production and marketing departments. Keeping abreast of international developments. And, naturally, motivating your team of high calibre professionals by personal example.

You would ideally have a Ph D in Computer Science, and at least 12 years related experience in R & D. International recognition in the field would be an advantage.

Manager - TQM

You will head the Total Quality Management programme, and be responsible for improving the quality of all interactions within the organisation, applying TQM concepts to enhance overall efficiency.

You would be an Engineer with an MBA, with at least 5 years' experience in a relevant capacity.

Manager - MIS

You will be responsible for the planning, co-ordinating, designing and implementing of all computerised information systems within the company, with the primary objective of improving the company's internal and external performance.

You would be an MBA with around 8 years experience in a similar capacity, preferably with exposure to the field of Organisation and Methods.

Manager – Finance

You will be responsible for all aspects of Financial Accounting, Treasury functions and Taxation at the Corporate level. You should have the ability to establish procedures and systems and refine them on an ongoing basis.

You would be a CA/ICWA/MBA with around 8 years experience in a similar capacity and be familiar with computerised accounting procedures.

If you think you are the kind of person we are looking for, call or write within 10 days to:

Doraiswamy, *51, is president of al Engineering Company Ltd*

as seen it all at the Madras-based al Engineering Company Ltd CL). During his 13-year tenure at the pany, KECL's turnover rose from Rs.5 to Rs.36 crore. Today, Doraiswamy the helm of KECL's affairs. He is also dent of the Institute of Company taries of India.

ter studying at the Hindu Theologi- High School and Loyola College, as (where he completed his inter- ate in Arts in 1957) Doraiswamy d Indian Oxygen Ltd (IOL) in the -convenented" staff category. In , he took a bachelor's degree in eco- cs and politics through Delhi Uni- y's distance education programme, ng fifth in the university.

raiswamy followed this up with a time course at the Madras Law Col- n 1972. "But," says Doraiswamy, "I ed to become a company secretary, this offered better scope." So, in , he took a diploma in company taryship.

matic working. Throughout all this, iswamy continued to work for IOL. ys, "IOL provided exposure to a very matic way of working. It was a ding ground, and laid down strong al standards."

1975, Parry Confectionary Ltd took n as a company secretary. His tasks were routine — legal and secre- matters, administration, appoint- of dealers, and finalisation of nts. In 1978, Doraiswamy moved ECL. "Being a smaller company — then had a Rs.5-crore turnover — there were opportunities to get involved in other functional areas," he recalls. He also became "part of the team which handled problem-solving". He was promoted to secretary and general manager in 1984, with additional responsibilities relating to materials management.

KECL invested funds in capacity expansion in the early eighties, but was soon caught up in the severe recession in the industry in the mid-eighties. Doraiswamy got involved in the fire-fighting and steered KECL through a rights issue of Rs.63 lakh, which raised the share capital to Rs.2.52 crore in 1985-86. The company's reputation as a manufacturer of quality ensured that the issue was fully subscribed. Later, exports were pursued. "This was a turning point," says Doraiswamy. Loans were rescheduled with the banks but, as he says, "our success is largely due to the fact that we pulled together as a team."

Co-ordinator. "My present role is that of a co-ordinator, one who binds the organisation together," says Doraiswamy. He now wants "to strengthen product quality further, to introduce good business practices, and to build energy conservation features into KECL's products". KECL also plans to get into new areas, like engineering plastics.

Doraiswamy served on the south India regional council of the Institute of Company Secretaries of India for two terms. In 1981-82, he was elected to the national executive council for three years. And, in 1988, he took over as president of the institute. During his tenure, an amendment to the Companies Act recognised the concept of practising company secretaries. Both the financial resources and membership of the institute were strengthened through various measures.

Married and with two children, his interest include reading and listening to classical music. Also, "I am an armchair sports enthusiast," he says. He takes part in social service, through a trust he created in 1986 in memory of his mother. "This activity will increase in importance to me, at a later stage in my life," he says.

■ DHARANI K. PANI

FRONTRUNNERS

At 35, **Shishir R. Agrawal** is the youngest chief executive to head any division of Essar Gujarat Ltd. He started his career in 1981 as head of finance with the Tapadia group of industries. But Agrawal soon realised "a need to move to a bigger oganisation," and so in 1986, joined the Rs.100-crore, energy division of Essar as a finance manager. "My efforts here were rewarded," he says. His climb up the corporate ladder was quite swift.

A graduate in commerce from Bombay University (1977), Agrawal did his Chartered Accountancy and Company Secretaryship later and also took a degree in LLB from Siddharth College. His major achievements in Essar has been securing international contracts. The two on-shore oil exploration contracts in Indonesia are still on while the $20 million deal with Shell Co in Oman has just been completed.

— S.K.

Someday he wants to leave the corporate rate race and teach school. Now, though, **Raymond Moses Nagawkar** revels in his job as sales manager of Castrol India Ltd. "It's fun interacting with different kinds of people," says the 30-year-old Nagawkar, who handles sales of industrial lubricants for Bombay, M.P. and Goa, and of automotive lubricants as well in Gujarat.

A chemical engineer from IIT, Kanpur Nagawkar started his career in 1983 as a management trainee with Hindustan Lever Ltd. During his three year stint he was promoted to production manager of their STPP plant at Haldia. In 1986 he left to join Castrol as marketing executive. On joining Castrol he says, "At the time the company was short-staffed, and I got the opportunity to take up a lot of responsibility."

En route support system

Another long itinerary has been drawn up. Another hectic trip is about to kick off. Another time, you know where you'll find yourself. Between meetings, between hotels, between flights, between places. Literally living out of a suitcase. But now V.I.P. helps you do it in style. With Odyssey — world class ABS luggage. Open it and what you'll see lining the inside is not loud satin but a quiet, sober suede. The packing space of course is not just space, but organised space. For instance, the divider that separates files from clothes also has a zippered pouch for toiletries. A chromium-plated rod keeps ties wrinkle-free and high-grade elastic fasteners hold things in place. The outside is as sophisticated as the inside. With a leather-like finish and a sleek black powder-coated frame that ends up in two exclusives. A stylish combination lock and a soft grip handle. Now tell us, how would you describe the Odyssey. A suitcase... or a support system?

aj, 15, from Sikandra in Agra, ng spinach and cucumber. He approximately Rs.150 per lohammed Rizwan from Bi- lps his father sell tomatoes 5 per *thadi* (5 kgs). "I come to the every day at 3 am and leave at 7 am to attend school. One day y experience and education I will e a big commission agent," he

in 1975, when the old *sabzi* was shifted from the vicinity of Hindu Rao hospital to Azadpur, thought that this would turn out large. With 438 big and 796 small this market has become a national distribution centre. With transactions totalling Rs.94.54 crore during the year ending 1990-91, the market is all set to break its own record. Business has grown 100.40 per cent since 1985-86.

Forty-eight kinds of vegetables passed through the *mandi* last year. There were 423,000 tonnes of potatoes, 308,000 tonnes of onions, 120,000 tonnes of tomatoes, over 31,000 tonnes of peas and 336,000 tonnes of other vegetables. Last year, arrivals of some popular fruits added up to 1.65 million tonnes. Of this apples weighed 495,000 tonnes, bananas 491,000 tonnes, mango 121,000 tonnes, oranges 121,000 tonnes and other fruits, the rest.

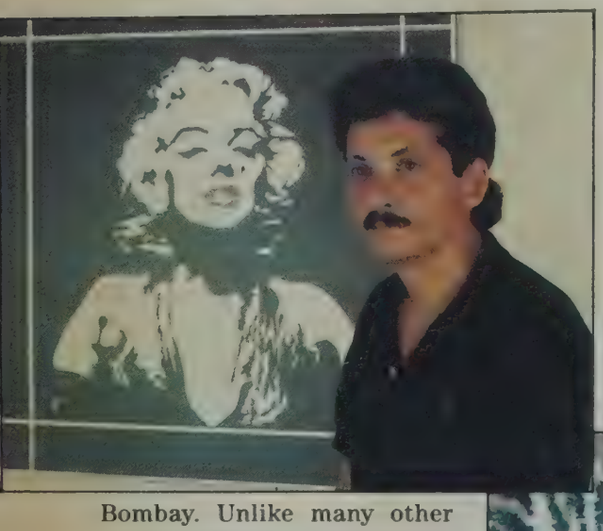
***Watermelons for sale at the* mandi**

About 40 per cent of the vegetables and 20 per cent of fruits entering this market is consumed by Delhi and its adjoining areas. The rest is distributed throughout the country. The flow of goods is monitored by the Agriculture Produce Market Committee (APMC), which also maintains the *mandi*. (APMC came into existence on 15 January 1977.) "An average of about 650 trucks arrive each day from all over India. During the peak season, October and November, the number is anywhere between 700 and 800," says an APMC official.

Clean and organised

The market is divided into four blocks. Block A is for vegetables and a shed is provided for potatoes and onions, block B houses 25 per cent of vegetables and 75 per cent of fruits; block C is exclusively meant for fruits; and block D for vegetables. The market also has a shed for railway wagons, called the *kela siding*. Every day, two train-loads of 65 to 70 bogies of bananas are unloaded here each day.

The APMC attempts to keep the area organised and clean. Commission agents are fined if they do not lift goods within four hours. APMC's sanitation department uses 45 trucks daily to clear garbage. "But still the place is in pathetic condition," says a grower from Punjab.



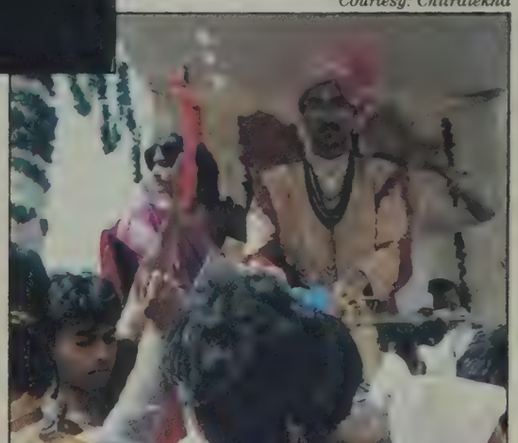
"APMC generated approximately Rs.9.45 crore last year as market fees alone. The organisation has got all the money tucked away in banks. I don't understand why this money can't be spent on expansion," says Rajinder Kumar Sharma, secretary of the Federation of Fruit and Vegetable Trade Associations and Potato and Onion Merchants Association. Unloading of the produce gets delayed due to lack of space which in turn results in weight loss due to water evaporation.

During the year 1990-91, APMC witnessed a growth of 49.57 per cent in its income over the previous year. Despite a second income of Rs.10 crore, expenses were to the tune of Rs.4.20 crore only. APMC charges fees for licences and security.

Sometimes market rates are manipulated by big businessmen. "Its very simple, if we feel that there will be some kind of snag, either in the area where the produce is grown, enroute or here, we sometimes keep goods in cold storage, and sometimes sell at a lower profit margin. And sometimes we incur losses. It's all in the game, we just try to be on the winning side," said one, sitting in his office with three telephones.

■ RAJESH PROTHI

Rusi Ratnagar's business is to transform mirrors and glass into luminous, neon-hued works of art. He has rendered the likes of hotelier M.S. Oberoi and cine star Rekha onto mirrors. His creations adorn the walls and pillars of hotels like the Leela Kempinski and the Oberoi as well as discotheques like Go Bananas and RG's in



Bombay. Unlike many other artists, Ratnagar deals directly with his clients. "I like to see the buyer; I dislike the impersonality of using shops and agents as go-betweens."

She decided to give up the small screen to plunge into politics. But what does husband-to-be Hemant Topiwala have to say? "I was worried since it would involve keeping irregular hours and meeting strange people," says the managing director of lipstick and nail polish manufacturer Tips & Toes about **Deepika "Sita" Chikhalia**'s decision. Now that she has come out victorious at the hustings, however, and will be representing Baroda in the Lok Sabha, the happiest man around is Topiwala. The next big event he is looking forward to: their marriage on 23 November.

In all, 150,000 people were fed on the occasion; 4,500 kg of rice, 6,000 kg of dal and 600 tins of oil consumed. Sporting diamond-studded necklaces, gold rings embedded with diamonds and a crown, **Atulkumar Shah,** scion of one of the wealthiest diamond merchant families in the country, sat in a silver chariot pulled by seven elephants. While about 100,000 people thronged all around, the multi-millionaire diamond merchant threw small diamonds, pearls and silver coins worth nearly Rs.35 lakh along the Ahmedabad thoroughfare — a fitting gesture as he was taking *sanyas* and will hearafter be known as Muni Heetruchi Vijayji Maharaj. But it was not easy winning over the family — it took the young man six long years before he could make them accept his decision to become a monk!

Thirty eight-year-old **Jaideep Mehrotra** is a businessman-turned full-time artist. That perhaps explains why he mostly does commissioned paintings. In fact, he even goes around showing corporate chiefs and art collectors an album full of photographs of his paintings! The quality of his work clearly comes through in his latest show at Bombay's Jehangir Art Gallery. This exhibition, in which sponsor ITC Ltd has poured in Rs.150,000, comes after a th year gap. Mehrotra's list o porate clients includes Ban America, Air India, Ballar Industries and Premier Au mobiles Ltd. "I like to do c missioned paintings only wh have total artistic freed about the content," says young painter, who takes a thing from one month to a y to complete a painting.

Lalitha Mallya, convenor the regional chapter, C cutta, of the Indian Natio Trust for Art and Cultural He tage (INTACH) recently co pleted a monumental task. J setting industrialist Vijay M lya's mother was involved in t restoration of Calcutt Gwalior Monument, a blend of Islamic architectu and European constructi built in 1847. The project, u dertaken to commemorate t city's tercentenary, is INTACH first architechtural reconstru tion effort.

And now the city's pub works department (PWD) is possession of a monument close as possible to the origin including the composition the metals and stones used. B what will the PWD do with Mallya's suggestion is th it be used as a police outpost f the Calcutta Police — to prote it from future vandalis presumably.

ENSE ACCOUNTS

etting too expensive

ng the casualties of these hard times e expense account, long considered ust a necessity but a perquisite. For des, executives have wined and di- on company expense, enjoyed five- holidays and bought gifts — both for ness and for personal pleasure. ly, however, stringent monitoring rols are being applied, particularly in te companies, which are asking for ased accountability. Companies are anding tangible results for money t on entertainment.

hile certain executives in high-profile s like banking, advertising and mar- g still consider their entertainment ances as a perquisite for private

fication, companies are resorting to rtment-wise allocations, which are dically reviewed, and worse, mon- d by eagle-eyed finance directors. ever, the need to entertain suppliers, aucrats, institutional heads and cli- still exists, especially in the face of g competition and corruption.

ng down to first names

s of marketing departments in pub- ons are among those who need to en- in while selling space. Gurpreet ond, general manager for advertising narketing at the *Reader's Digest*, for nce, entertains five or six times a h. "Entertaining can range from ng lunches, parties at home, dinner ocktails at the club or going out, for nce, for a play. The purpose of such taining is to familiarise oneself with the other person, get down to first names."

Luncheon meetings, Seekond says, are used for making presentations, settling problems and discussing potential business. At the parties that he has hosted at home, families are welcome too. But, he adds, "With competition so high, and money so much dearer, gone are the days when you could merely take someone out and expect business. Yet, it still remains the best way to surpass secretaries, and all the other walls you have to face when calling up for appointments."

Not everyone, however, finds entertaining necessary. Take Rajesh Pant, vice-president and marketing director, NRI accounts, at Citibank, who earlier put in many years at Lintas India. "Entertaining, expense account style, is straight out of the story books as far as I'm concerned." He says he has entertained four customers, and been entertained only once.

A senior advertising executive claims that "business lunches and dinners are passe", and there are other forms of entertainment that are not so above board. "Organising a holiday for a client with his family, buying passes for fashion shows for him, or providing cash and gift coupons is also routine," he says.

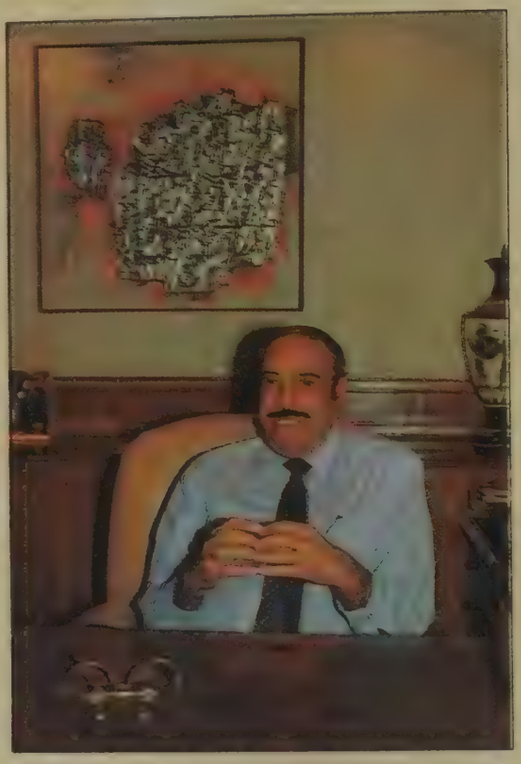
Vineet Kapoor, food and beverages manager at The Oberoi in Bombay, tells a different story. "Almost all our customers residing or dining at The Oberoi are corporate clients." The Belvedere Club, introduced at all The Oberoi hotels in the mid-eighties, is very exclusive. "It's a meeting ground for conducting business or building up associations," he says.

The Taj Mahal Hotel's Chambers too is an exclusive province. The dining room has been "purposely maintained" to accommodate a group of 25 to 30 people. Rustom Dubash, the hotel's assistant food and beverages manager in Bombay, also says that there are three small rooms for more personal business meetings, with space for office files on the table along with the meals.

Discotheque business

Corporate entertaining also goes on in discotheques. In fact, The Oberoi's newly renovated Cellars, scheduled to open later this month, has been all but dedicated to corporate clients. The 1900s at the Taj is let out on Mondays to young executives or companies.

Seekond, like most others, does not reveal the exact nature of his expense account, or the norms for providing one in his organisation. "It's all need based. And though we have to be cautious about extravagance, we do not have to worry about having spent too much in a particular month." According to Bina Thakore, director for public relations at Standard Chartered Bank, expense accounts vary for various levels of the management. "But, as a rule, anything that leads to constructive business activity is facilitated."



One reason why nobody mentions figures while discussing expense accounts is tax. While a senior account manager in an advertising agency may spend over Rs.1 lakh a year on entertainment, a large chunk might come from an inflated conveyance expense. But organisations are becoming more stringent in calculating expense limits. Earlier, some companies met entire club bills of middle-level managers. Now they pay only the club deposit and annual subscriptions with overheads being compensated on request. Often, inter-office meetings are called before a major entertainment expense by an executive is permitted.

"We have restricted expense account facilities to only the top three executives in the company," reveals Sanjiv Makhija, vice-president, production and administration, at All Seasons Foods Ltd. Makhija entertains about 25 times a year. "If the credit card facility is provided, there is ample scope for misuse," he adds. "On the other hand, if one has to fill in a charge slip for every entertainment expense, along with the name of the person entertained, there can be a check on its misuse."

The idea of 'living it up' or entertaining family and friends on company expense is fast ending in these difficult times. Fortunately, for most companies, and indeed as a direct result of growing professionalism, not everyone abuses the privilege of expense accounts anymore.

■ DEVENDRA TAK

"Our reputation is good"

Sushil Ansal, *the well-known developer and builder, has been appointed chairman of the Overseas Construction Council of India (OCCI), an export council set up by the commerce ministry in 1984. His appointment comes at a time when many are sceptical about India contributing substantially towards post war reconstruction in the Gulf. R.S. Venkatesh of* Business India *talks to the new chairman about Indian companies' prospects in overseas projects*

Export earnings from overseas construction has steadily declined in the last five years. What is holding us back?
We need a lot more support and assistance from the government to push up project exports. The facilities and incentives that are given to other exporters are not being extended to us. If we are given the same benefits as are being given to, say, commodity exporters, then our capability to compete with international companies will be enhanced and we can get a bigger slice of the global construction market.

Are you saying the government is not responsive?
We have been going to the government about this discrimination against construction companies for the last three years. We have been repeatedly assured, verbally, that the incentives to us will be brought on a par with other exporters. But it has never been done.

Considering the declining export earnings from overseas construction, do you think OCCI's efforts have been found wanting?
The OCCI was constituted in 1984 because earnings from the Gulf started to drop. And in the last seven years, West Asia, which was the main or rather the only overseas market for us, has dried up completely, thanks to the long Iran-Iraq war and OPEC's increasing influence.

But now, things are looking up. The reconstruction programmes in Iraq and Kuwait should give a big boost to Indian companies. Moreover, the USSR has opened its doors in a big way. While we had virtually no business between 1984 and 1988, now the USSR has earmarked 30 projects exclusively for Indian companies under a bilateral agreement. Three of these have already been awarded. Like the USSR, South-East Asia also offers bright prospects for us. In Thailand, for example, our company is doing four projects now. Malaysia and Indonesia are the others which promise good markets for us.

The big Gulf hope seems to have been belied. Has India been left out of the race?
No, its not like that. I think Western India has already bagged a contract there. The main reason for the delay is that the Kuwait government has not been functioning because of political unrest. They have not awarded contracts yet because the government's policy is not clear. And it's not only us, even companies from Europe and the US have got very little so far. It's not that we have been rejected. The actual tendering work will begin next month and contracts are expected to be finalised by the end of the year.

There are conflicting reports on the size of the Kuwait reconstruction cake. What is your estimate ?
Initially, they were vastly overestimated. People were talking of a $100 billion business. But it is not so. The United Nations did a damage assessment, and their figure is the most accurate. The total billing will be $25 to $27 billion, which $12 billion will be spent on oil well work alone. That leaves $12 to $1 billion for civil and construction work.

How does the capability of Indian companies stand vis-a-vis the requirements of handling giant projects?
You will be surprised. Our reputation very good. And we have specific advantages. Having worked in that region for a decade, our companies know the place and the way things wo there very well. The climate is not alie to us, the language is familiar and we know the markets there. We know exactly where we can get a specific raw material or equipment. And more important, most of us still have our construction equipment and infrastructure installed in these areas. We can mobilise very quickly, like no other foreign company can.

Will OCCI enter the fray as a consortium?
No. A dozen of our members have got together as a consortium. But as an organisation, with approximately 100 members, we are not planning to bid together. It won't be practical.

What do you plan to do about Iraqi payments to Indian companies that have been pending for years?
That has been the bane of overseas work. It's been eight years since Iraq stopped payments to us, and it has hit Indian companies very badly. Our government said it will lift oil from Ira against the money owed to us, but eve that plan has fallen through.

The worst part is that most of us ha borrowed capital to carry out the projects in Iraq and the interest now being offered to us for our deferred payments is 4 per cent less than the ra at which we borrowed. We are in continuous discussion with the government to help us get out of this mess, but nothing has been done so fa And now that Iraq is in a terrible shap it is going to be much longer before th entire Indian payment of $500 millio will be made. But Indian companies a evincing interest in overseas work despite this shattering experience.
